Description of STM32G4 HAL and low-layer drivers

Introduction

STM32Cube is an STMicroelectronics original initiative to significantly improve developer productivity by reducing development effort, time and cost. STM32Cube covers the STM32 portfolio.

STM32Cube includes:

- STM32CubeMX, a graphical software configuration tool that allows the generation of C initialization code using graphical wizards.
- A comprehensive embedded software platform, delivered per Series (such as STM32CubeG4 for STM32G4)
  - The STM32Cube HAL, STM32 abstraction layer embedded software ensuring maximized portability across the STM32 portfolio. HAL APIs are available for all peripherals.
  - Low-layer APIs (LL) offering a fast light-weight expert-oriented layer which is closer to the hardware than the HAL. LL APIs are available only for a set of peripherals.
  - A consistent set of middleware components such as RTOS and USB.
  - All embedded software utilities, delivered with a full set of examples.

The HAL driver layer provides a simple, generic multi-instance set of APIs (application programming interfaces) to interact with the upper layer (application, libraries and stacks).

The HAL driver APIs are split into two categories: generic APIs, which provide common and generic functions for all the STM32 series and extension APIs, which include specific and customized functions for a given line or part number. The HAL drivers include a complete set of ready-to-use APIs that simplify the user application implementation. For example, the communication peripherals contain APIs to initialize and configure the peripheral, manage data transfers in polling mode, handle interrupts or DMA, and manage communication errors.

The HAL drivers are feature-oriented instead of IP-oriented. For example, the timer APIs are split into several categories following the IP functions, such as basic timer, capture and pulse width modulation (PWM). The HAL driver layer implements run-time failure detection by checking the input values of all functions. Such dynamic checking enhances the firmware robustness. Run-time detection is also suitable for user application development and debugging.

The LL drivers offer hardware services based on the available features of the STM32 peripherals. These services reflect exactly the hardware capabilities, and provide atomic operations that must be called by following the programming model described in the product line reference manual. As a result, the LL services are not based on standalone processes and do not require any additional memory resources to save their states, counter or data pointers. All operations are performed by changing the content of the associated peripheral registers. Unlike the HAL, LL APIs are not provided for peripherals for which optimized access is not a key feature, or for those requiring heavy software configuration and/or a complex upper-level stack (such as USB).

The HAL and LL are complementary and cover a wide range of application requirements:

- The HAL offers high-level and feature-oriented APIs with a high-portability level. These hide the MCU and peripheral complexity from the end-user.
- The LL offers low-level APIs at register level, with better optimization but less portability. These require deep knowledge of the MCU and peripheral specifications.

The HAL- and LL-driver source code is developed in Strict ANSI-C, which makes it independent of the development tools. It is checked with the CodeSonar® static analysis tool. It is fully documented.

It is compliant with MISRA C®:2012 standard.

This user manual is structured as follows:

- Overview of HAL drivers
- Overview of low-layer drivers
- Cohabiting of HAL and LL drivers
- Detailed description of each peripheral driver: configuration structures, functions, and how to use the given API to build your application

1 General information

The STM32CubeG4 MCU Package runs on STM32G4 32-bit microcontrollers based on the Arm® Cortex®-M processor.

Note: Arm is a registered trademark of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

2 Acronyms and definitions

Table 1. Acronyms and definitions

Acronym	Definition
ADC	Analog-to-digital converter
AES	Advanced encryption standard
ANSI	American national standards institute
API	Application programming interface
BSP	Board support package
CAN	Controller area network
CEC	Consumer electronic controller
CMSIS	Cortex microcontroller software interface standard
COMP	Comparator
CORDIC	Trigonometric calculation unit
CPU	Central processing unit
CRC	CRC calculation unit
CRYP	Cryptographic processor
CSS	Clock security system
DAC	Digital to analog converter
DLYB	Delay block
DCMI	Digital camera interface
DFSDM	Digital filter sigma delta modulator
DMA	Direct memory access
DMAMUX	Direct memory access request multiplexer
DSI	Display serial interface
DTS	Digital temperature sensor
ETH	Ethernet controller
EXTI	External interrupt/event controller
FDCAN	Flexible data-rate controller area network unit
FLASH	Flash memory
FMAC	Filtering mathematical calculation unit
FMC	Flexible memory controller
FW	Firewall
GFXMMU	Chrom-GRC
GPIO	General purpose I/Os
GTZC	Global TrustZone® controller
GTZC-MPCBB	GTZC block-based memory protection controller
GTZC-MPCWM	GTZC watermark memory protection controller
GTZC-TZIC	GTZC TrustZone illegal access controller
GTZC-TZSC	GTZC TrustZone security controller

Acronym	Definition
HAL	Hardware abstraction layer
HASH	Hash processor
HCD	USB host controller driver
HRTIM	High-resolution timer
I2C	Inter-integrated circuit
I2S	Inter-integrated sound
ICACHE	Instruction cache
IRDA	Infrared data association
IWDG	Independent watchdog
JPEG	Joint photographic experts group
LCD	Liquid crystal display controler
LTDC	LCD TFT Display Controller
LPTIM	Low-power timer
LPUART	Low-power universal asynchronous receiver/transmitter
MCO	Microcontroller clock output
MDIOS	Management data input/output (MDIO) slave
MDMA	Master direct memory access
MMC	MultiMediaCard
MPU	Memory protection unit
MSP	MCU specific package
NAND	NAND Flash memory
NOR	NOR Flash memory
NVIC	Nested vectored interrupt controller
OCTOSPI	Octo-SPI interface
OPAMP	Operational amplifier
OTFDEC	On-the-fly decryption engine
OTG-FS	USB on-the-go full-speed
PKA	Public key accelerator
PCD	USB peripheral controller driver
PPP	STM32 peripheral or block
PSSI	Parallel synchronous slave interface
PWR	Power controller
QSPI	Quad-SPI Flash memory
RAMECC	RAM ECC monitoring
RCC	Reset and clock controller
RNG	Random number generator
RTC	Real-time clock
SAI	Serial audio interface
SD	Secure digital
SDMMC	SD/SDIO/MultiMediaCard card host interface

Acronym	Definition
SMARTCARD	Smartcard IC
SMBUS	System management bus
SPI	Serial peripheral interface
SPDIFRX	SPDIF-RX Receiver interface
SRAM	SRAM external memory
SWPMI	Serial wire protocol master interface
SysTick	System tick timer
TIM	Advanced-control, general-purpose or basic timer
TSC	Touch sensing controller
TZ	Arm TrustZone-M
TZEN	TrustZone enable Flash user option bit
UART	Universal asynchronous receiver/transmitter
UCPD	USB Type-C® and Power Delivery interface
USART	Universal synchronous receiver/transmitter
VREFBUF	Voltage reference buffer
WWDG	Window watchdog
USB	Universal serial bus

3 Overview of HAL drivers

The HAL drivers are designed to offer a rich set of APIs and to interact easily with the application upper layers.

Each driver consists of a set of functions covering the most common peripheral features. The development of each driver is driven by a common API which standardizes the driver structure, the functions and the parameter names.

The HAL drivers include a set of driver modules, each module being linked to a standalone peripheral. However, in some cases, the module is linked to a peripheral functional mode. As an example, several modules exist for the USART peripheral: UART driver module, USART driver module, SMARTCARD driver module and IRDA driver module.

The HAL main features are the following:

- Cross-family portable set of APIs covering the common peripheral features as well as extension APIs in case of specific peripheral features.
- Three API programming models: polling, interrupt and DMA.
- APIs are RTOS compliant:
  - Fully reentrant APIs
  - Systematic usage of timeouts in polling mode
- Support of peripheral multi-instance allowing concurrent API calls for multiple instances of a given peripheral (such as USART1 or USART2)
- All HAL APIs implement user-callback functions mechanism:
  - Peripheral Init/DeInit HAL APIs can call user-callback functions to perform peripheral system level Initialization/De-Initialization (clock, GPIOs, interrupt, DMA)
  - Peripherals interrupt events
  - Error events
- Object locking mechanism: safe hardware access to prevent multiple spurious accesses to shared resources.
- Timeout used for all blocking processes: the timeout can be a simple counter or a timebase.

3.1 HAL and user-application files

3.1.1 HAL driver files

HAL drivers are composed of the following set of files:

Table 2. HAL driver files

File	Description
stm32g4xx_hal_ppp.c	Main peripheral/module driver file. It includes the APIs that are common to all STM32 devices. *Example: stm32g4xx_hal_adc.c, stm32g4xx_hal_irda.c.*
stm32g4xx_hal_ppp.h	Header file of the main driver C file It includes common data, handle and enumeration structures, define statements and macros, as well as the exported generic APIs. *Example:stm32g4xx_hal_adc.h,stm32g4xx_hal_irda.h.*
stm32g4xx_hal_ppp_ex.c	Extension file of a peripheral/module driver. It includes the specific APIs for a given part number or family, as well as the newly defined APIs that overwrite the default generic APIs if the internal process is implemented in different way. *Example:stm32g4xx_hal_adc_ex.c,stm32g4xx_hal_flash_ex.c.*
stm32g4xx_hal_ppp_ex.h	Header file of the extension C file. It includes the specific data and enumeration structures, define statements and macros, as well as the exported device part number specific APIs *Example: stm32g4xx_hal_adc_ex.h,stm32g4xx_hal_flash_ex.h.*
stm32g4xx_hal.c	This file is used for HAL initialization and contains DBGMCU, Remap and Time Delay based on SysTick APIs.
stm32g4xx_hal.h	stm32g4xx_hal.c header file
stm32g4xx_hal_msp_template.c	Template file to be copied to the user application folder. It contains the MSP initialization and de-initialization (main routine and callbacks) of the peripheral used in the user application.
stm32g4xx_hal_conf_template.h	Template file allowing to customize the drivers for a given application.
stm32g4xx_hal_def.h	Common HAL resources such as common define statements, enumerations, structures and macros.

3.1.2 User-application files

The minimum files required to build an application using the HAL are listed in the table below:

Table 3. User-application files

File	Description
system_stm32g4xx.c	This file contains SystemInit() that is called at startup just after reset and before branching to the main program. It does not configure the system clock at startup (contrary to the standard library). This is to be done using the HAL APIs in the user files. It allows relocating the vector table in internal SRAM.
startup_stm32g4xx.s	Toolchain specific file that contains reset handler and exception vectors. For some toolchains, it allows adapting the stack/heap size to fit the application requirements.
stm32g4xx_flash.icf (optional)	Linker file for EWARM toolchain allowing mainly adapting the stack/heap size to fit the application requirements.
stm32g4xx_hal_msp.c	This file contains the MSP initialization and de-initialization (main routine and callbacks) of the peripheral used in the user application.

File	Description
stm32g4xx_hal_conf.h	This file allows the user to customize the HAL drivers for a specific application. It is not mandatory to modify this configuration. The application can use the default configuration without any modification.
stm32g4xx_it.c/.h	This file contains the exceptions handler and peripherals interrupt service routine, and calls HAL_IncTick() at regular time intervals to increment a local variable (declared in *stm32g4xx*_hal.c) used as HAL timebase. By default, this function is called each 1ms in Systick ISR. . The PPP_IRQHandler() routine must call HAL_PPP_IRQHandler() if an interrupt based process is used within the application.
main.c/.h	This file contains the main program routine, mainly: • Call to HAL_Init() • assert_failed() implementation • system clock configuration • peripheral HAL initialization and user application code.

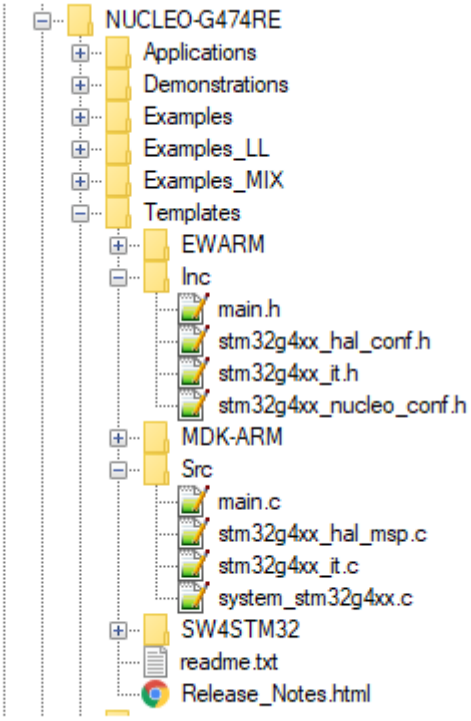
The STM32Cube package comes with ready-to-use project templates, one for each supported board. Each project contains the files listed above and a preconfigured project for the supported toolchains.

Each project template provides empty main loop function and can be used as a starting point to get familiar with project settings for STM32Cube. Its features are the following:

- It contains the sources of HAL, CMSIS and BSP drivers which are the minimal components to develop a code on a given board.
- It contains the include paths for all the firmware components.
- It defines the STM32 device supported, and allows configuring the CMSIS and HAL drivers accordingly.
- It provides ready to use user files preconfigured as defined below:
  - HAL is initialized

Note: If an existing project is copied to another location, then include paths must be updated.

Figure 1. **Example of project template**



3.2 HAL data structures

Each HAL driver can contain the following data structures:

- Peripheral handle structures
- Initialization and configuration structures
- Specific process structures.

3.2.1 Peripheral handle structures

The APIs have a modular generic multi-instance architecture that allows working with several IP instances simultaneously.

PPP_HandleTypeDef *handle is the main structure that is implemented in the HAL drivers. It handles the peripheral/module configuration and registers and embeds all the structures and variables needed to follow the peripheral device flow.

The peripheral handle is used for the following purposes:

- Multi-instance support: each peripheral/module instance has its own handle. As a result instance resources are independent.
- Peripheral process intercommunication: the handle is used to manage shared data resources between the process routines.

  Example: global pointers, DMA handles, state machine.
- Storage : this handle is used also to manage global variables within a given HAL driver.

An example of peripheral structure is shown below:

```
typedef struct
{
USART_TypeDef *Instance; /* USART registers base address */
USART_InitTypeDef Init; /* Usart communication parameters */
uint8_t *pTxBuffPtr;/* Pointer to Usart Tx transfer Buffer */
uint16_t TxXferSize; /* Usart Tx Transfer size */
__IO uint16_t TxXferCount;/* Usart Tx Transfer Counter */
uint8_t *pRxBuffPtr;/* Pointer to Usart Rx transfer Buffer */
uint16_t RxXferSize; /* Usart Rx Transfer size */
__IO uint16_t RxXferCount; /* Usart Rx Transfer Counter */
DMA_HandleTypeDef *hdmatx; /* Usart Tx DMA Handle parameters */
DMA_HandleTypeDef *hdmarx; /* Usart Rx DMA Handle parameters */
HAL_LockTypeDef Lock; /* Locking object */
__IO HAL_USART_StateTypeDef State; /* Usart communication state */
__IO HAL_USART_ErrorTypeDef ErrorCode;/* USART Error code */
}USART_HandleTypeDef;
```

Note:

1. *The multi-instance feature implies that all the APIs used in the application are reentrant and avoid using global variables because subroutines can fail to be reentrant if they rely on a global variable to remain unchanged but that variable is modified when the subroutine is recursively invoked. For this reason, the following rules are respected:*
   - *Reentrant code does not hold any static (or global) non-constant data: reentrant functions can work with global data. For example, a reentrant interrupt service routine can grab a piece of hardware status to work with (for example serial port read buffer) which is not only global, but volatile. Still, typical use of static variables and global data is not advised, in the sense that only atomic read-modify-write instructions should be used in these variables. It should not be possible for an interrupt or signal to occur during the execution of such an instruction.*
   - *Reentrant code does not modify its own code.*
2. *When a peripheral can manage several processes simultaneously using the DMA (full duplex case), the DMA interface handle for each process is added in the PPP_HandleTypeDef.*
3. *For the shared and system peripherals, no handle or instance object is used. The peripherals concerned by this exception are the following:*
   - *GPIO*
   - *SYSTICK*
   - *NVIC*
   - *PWR*
   - *RCC*
   - *FLASH*

3.2.2 Initialization and configuration structure

These structures are defined in the generic driver header file when it is common to all part numbers. When they can change from one part number to another, the structures are defined in the extension header file for each part number.

```
typedef struct
{
  uint32_t BaudRate;                  /*!< This member configures the UART communication
baud rate.
  uint32_t WordLength;                /*!< Specifies the number of data bits transmitted or
received in a frame.
  uint32_t StopBits;                  /*!< Specifies the number of stop bits transmitted.
   uint32_t Parity;                    /*!< Specifies the parity mode.
  uint32_t Mode;                      /*!< Specifies whether the Receive or Transmit mode is
enabled or disabled.
  uint32_t HwFlowCtl;                 /*!< Specifies whether the hardware flow control mode
is enabled
                                           or disabled.
  uint32_t OverSampling;              /*!< Specifies whether the Over sampling 8 is enabled
or disabled, to achieve higher speed (up to f_PCLK/8).
                                           This parameter can be a value of @ref
UART_Over_Sampling. */
  uint32_t OneBitSampling;            /*!< Specifies whether a single sample or three
samples' majority vote is selected.
  uint32_t ClockPrescaler;            /*!< Specifies the prescaler value used to divide the
UART clock source.
                                           This parameter can be a value of @ref
UART_ClockPrescaler. */
} UART_InitTypeDef;
```

Note: The config structure is used to initialize the sub-modules or sub-instances. See below example:

```
HAL_ADC_ConfigChannel (ADC_HandleTypeDef* hadc, ADC_ChannelConfTypeDef* sConfig)
```

3.2.3 Specific process structures

The specific process structures are used for specific process (common APIs). They are defined in the generic driver header file.

Example:

```
HAL_PPP_Process (PPP_HandleTypeDef* hadc,PPP_ProcessConfig* sConfig)
```

3.3 API classification

The HAL APIs are classified into three categories:

- **Generic APIs:** common generic APIs applying to all STM32 devices. These APIs are consequently present in the generic HAL driver files of all STM32 microcontrollers.

```
HAL_StatusTypeDef HAL_ADC_Init(ADC_HandleTypeDef* hadc);
HAL_StatusTypeDef HAL_ADC_DeInit(ADC_HandleTypeDef *hadc);
HAL_StatusTypeDef HAL_ADC_Start(ADC_HandleTypeDef* hadc);
HAL_StatusTypeDef HAL_ADC_Stop(ADC_HandleTypeDef* hadc);
HAL_StatusTypeDef HAL_ADC_Start_IT(ADC_HandleTypeDef* hadc);
HAL_StatusTypeDef HAL_ADC_Stop_IT(ADC_HandleTypeDef* hadc);
void HAL_ADC_IRQHandler(ADC_HandleTypeDef* hadc);
```

- **Extension APIs:**

  This set of API is divided into two sub-categories :

  – **Family specific APIs:** APIs applying to a given family. They are located in the extension HAL driver file (see example below related to the ADC).

```
HAL_StatusTypeDef HAL_ADCEx_Calibration_Start(ADC_HandleTypeDef* hadc,uint32_t
SingleDiff);
uint32_t HAL_ADCEx_Calibration_GetValue(ADC_HandleTypeDef* hadc, uint32_t
SingleDiff);
```

  – **Feature/Device specific APIs**: these APIs are implemented in the extension file and delimited by specific define statements relative to CMSIS bits or features and depending on device part number.

```
#if defined(PWR_SHDW_SUPPORT)
void HAL_PWREx_EnterSHUTDOWNMode(void);
#endif
```

Note: The data structure related to the specific APIs is delimited by the device part number define statement. It is located in the corresponding extension header C file.

The following table summarizes the location of the different categories of HAL APIs in the driver files.

Table 4. API classification

	Generic file	Extension file
Common APIs	X	X
Family specific APIs	-	X
Device specific APIs	-	X

Note: Family specific APIs are only related to a given family. This means that if a specific API is implemented in another family, and the arguments of this latter family are different, additional structures and arguments might need to be added.

Note: The IRQ handlers are used for common and family specific processes.

3.4 Devices supported by HAL drivers

Table 5. **List of devices supported by HAL drivers**

IP/Module	STM32G431xx	STM32G441xx	STM32G471xx	STM32G473xx	STM32G483xx	STM32G474xx	STM32G484xx	STM32GBK1CB	STM32G491xx	STM32G4A1xx

3.5 HAL driver rules

3.5.1 HAL API naming rules

The following naming rules are used in HAL drivers:

Table 6. HAL API naming rules

	Generic	Family specific	Device specific
File names	*stm32g4xx_hal_ppp (c/h)*	*stm32g4xx_hal_ppp_ex (c/h)*	*stm32g4xx_ hal_ppp_ex (c/h)*
Module name	*HAL_PPP_ MODULE*		
Function name	*HAL_PPP_Function* *HAL_PPP_FeatureFunction_MODE*	*HAL_PPPEx_Function* *HAL_PPPEx_FeatureFunction_MODE*	*HAL_PPPEx_Function* *HAL_PPPEx_FeatureFunction_MODE*
Handle name	*PPP_HandleTypedef*	*NA*	*NA*
Init structure name	*PPP_InitTypeDef*	*NA*	*PPP_InitTypeDef*
Enum name	*HAL_PPP_StructnameTypeDef*	*NA*	*NA*

- The **PPP** prefix refers to the peripheral functional mode and not to the peripheral itself. For example, if the USART, PPP can be USART, IRDA, UART or SMARTCARD depending on the peripheral mode.
- The constants used in one file are defined within this file. A constant used in several files is defined in a header file. All constants are written in uppercase, except for peripheral driver function parameters.
- typedef variable names should be suffixed with _TypeDef.
- Registers are considered as constants. In most cases, their name is in uppercase and uses the same acronyms as in the STM32G4 reference manuals.
- Peripheral registers are declared in the PPP_TypeDef structure (for example ADC_TypeDef) in stm32g4xxx.h header file:

  stm32g4xxx.h corresponds to stm32g431xx.h, stm32g441xx.h, stm32g471xx.h, stm32g473xx.h, stm32g483xx.h, stm32g474xx.h, stm32g484xx.h, stm32gbk1cb.h and stm32g491xx.h and stm32g4a1xx.h.
- Peripheral function names are prefixed by HAL_, then the corresponding peripheral acronym in uppercase followed by an underscore. The first letter of each word is in uppercase (for example HAL_UART_Transmit()). Only one underscore is allowed in a function name to separate the peripheral acronym from the rest of the function name.
- The structure containing the PPP peripheral initialization parameters are named PPP_InitTypeDef (for example ADC_InitTypeDef).
- The structure containing the Specific configuration parameters for the PPP peripheral are named PPP_xxxxConfTypeDef (for example ADC_ChannelConfTypeDef).
- Peripheral handle structures are named PPP_HandleTypedef (e.g DMA_HandleTypeDef)
- The functions used to initialize the PPP peripheral according to parameters specified in PPP_InitTypeDef are named HAL_PPP_Init (for example HAL_TIM_Init()).
- The functions used to reset the PPP peripheral registers to their default values are named HAL_PPP_DeInit (for example HAL_TIM_DeInit()).
- The **MODE** suffix refers to the process mode, which can be polling, interrupt or DMA. As an example, when the DMA is used in addition to the native resources, the function should be called: *HAL_PPP_Function_DMA ()*.
- The **Feature** prefix should refer to the new feature.

3.5.2 HAL general naming rules

- For the shared and system peripherals, no handle or instance object is used. This rule applies to the following peripherals:
  - GPIO
  - SYSTICK
  - NVIC
  - RCC
  - FLASH.

Example: The *HAL_GPIO_Init()* requires only the GPIO address and its configuration parameters.

```
HAL_StatusTypeDef HAL_GPIO_Init (GPIO_TypeDef* GPIOx, GPIO_InitTypeDef *Init)
{
/*GPIO Initialization body */
}
```

- The macros that handle interrupts and specific clock configurations are defined in each peripheral/module driver. These macros are exported in the peripheral driver header files so that they can be used by the extension file. The list of these macros is defined below:

Note: This list is not exhaustive and other macros related to peripheral features can be added, so that they can be used in the user application.

Table 7. Macros handling interrupts and specific clock configurations

Macros	Description
__HAL_PPP_ENABLE_IT(__HANDLE__, __INTERRUPT__)	Enables a specific peripheral interrupt
__HAL_PPP_DISABLE_IT(__HANDLE__, __INTERRUPT__)	Disables a specific peripheral interrupt
__HAL_PPP_GET_IT (__HANDLE__, __ INTERRUPT __)	Gets a specific peripheral interrupt status
__HAL_PPP_CLEAR_IT (__HANDLE__, __ INTERRUPT __)	Clears a specific peripheral interrupt status
__HAL_PPP_GET_FLAG (__HANDLE__, __FLAG__)	Gets a specific peripheral flag status
__HAL_PPP_CLEAR_FLAG (__HANDLE__, __FLAG__)	Clears a specific peripheral flag status
__HAL_PPP_ENABLE(__HANDLE__)	Enables a peripheral
__HAL_PPP_DISABLE(__HANDLE__)	Disables a peripheral
__HAL_PPP_XXXX (__HANDLE__, __PARAM__)	Specific PPP HAL driver macro
__HAL_PPP_GET_ IT_SOURCE (__HANDLE__, __ INTERRUPT __)	Checks the source of specified interrupt

- NVIC and SYSTICK are two Arm® Cortex® core features. The APIs related to these features are located in the stm32g4xx_hal_cortex.c file.
- When a status bit or a flag is read from registers, it is composed of shifted values depending on the number of read values and of their size. In this case, the returned status width is 32 bits. Example : STATUS = XX | (YY << 16) or STATUS = XX | (YY << 8) | (YY << 16) | (YY << 24)".
- The PPP handles are valid before using the HAL_PPP_Init() API. The init function performs a check before modifying the handle fields.

```
 HAL_PPP_Init(PPP_HandleTypeDef)
if(hppp == NULL)
 {
 return HAL_ERROR;
 }
```

- The macros defined below are used:
  - Conditional macro:

```
#define ABS(x) (((x) > 0) ? (x) : -(x))
```

  - Pseudo-code macro (multiple instructions macro):

```
#define __HAL_LINKDMA(__HANDLE__, __PPP_DMA_FIELD_, __DMA_HANDLE_) \
do{ \
(__HANDLE__)->__PPP_DMA_FIELD_ = &(__DMA_HANDLE_); \
(__DMA_HANDLE_).Parent = (__HANDLE__); \
} while(0)
```

3.5.3 HAL interrupt handler and callback functions

Besides the APIs, HAL peripheral drivers include:

- HAL_PPP_IRQHandler() peripheral interrupt handler that should be called from stm32g4xx_it.c
- User callback functions.

The user callback functions are defined as empty functions with “weak” attribute. They have to be defined in the user code.

There are three types of user callbacks functions:

- Peripheral system level initialization/ de-Initialization callbacks: HAL_PPP_MspInit() and HAL_PPP_MspDeInit
- Process complete callbacks : HAL_PPP_ProcessCpltCallback
- Error callback: HAL_PPP_ErrorCallback.

Table 8. Callback functions

Callback functions	Example
HAL_PPP_MspInit() / _DeInit()	Example: HAL_USART_MspInit() Called from HAL_PPP_Init() API function to perform peripheral system level initialization (GPIOs, clock, DMA, interrupt)
HAL_PPP_ProcessCpltCallback	Example: HAL_USART_TxCpltCallback Called by peripheral or DMA interrupt handler when the process completes
HAL_PPP_ErrorCallback	Example: HAL_USART_ErrorCallback Called by peripheral or DMA interrupt handler when an error occurs

3.6 HAL generic APIs

The generic APIs provide common generic functions applying to all STM32 devices. They are composed of four APIs groups:

- **Initialization and de-initialization functions:**HAL_PPP_Init(), HAL_PPP_DeInit()
- **IO operation functions**: HAL_PPP_Read(), HAL_PPP_Write(),HAL_PPP_Transmit(), HAL_PPP_Receive()
- **Control functions**: HAL_PPP_Set (), HAL_PPP_Get ().
- **State and Errors functions**: HAL_PPP_GetState (), HAL_PPP_GetError ().

For some peripheral/module drivers, these groups are modified depending on the peripheral/module implementation.

Example: in the timer driver, the API grouping is based on timer features (such as PWM, OC and IC).

The initialization and de-initialization functions allow initializing a peripheral and configuring the low-level resources, mainly clocks, GPIO, alternate functions (AF) and possibly DMA and interrupts. The *HAL_DeInit()*function restores the peripheral default state, frees the low-level resources and removes any direct dependency with the hardware.

The IO operation functions perform a row access to the peripheral payload data in write and read modes.

The control functions are used to change dynamically the peripheral configuration and set another operating mode.

The peripheral state and errors functions allow retrieving in run time the peripheral and data flow states, and identifying the type of errors that occurred. The example below is based on the ADC peripheral. The list of generic APIs is not exhaustive. It is only given as an example.

Table 9. HAL generic APIs

Function group	Common API name	Description
Initialization group	*HAL_ADC_Init()*	This function initializes the peripheral and configures the low -level resources (clocks, GPIO, AF..)
	HAL_ADC_DeInit()	This function restores the peripheral default state, frees the low-level resources and removes any direct dependency with the hardware.
IO operation group	*HAL_ADC_Start ()*	This function starts ADC conversions when the polling method is used

Function group	Common API name	Description
IO operation group	*HAL_ADC_Stop ()*	This function stops ADC conversions when the polling method is used
	HAL_ADC_PollForConversion()	This function allows waiting for the end of conversions when the polling method is used. In this case, a timout value is specified by the user according to the application.
	HAL_ADC_Start_IT()	This function starts ADC conversions when the interrupt method is used
	HAL_ADC_Stop_IT()	This function stops ADC conversions when the interrupt method is used
	HAL_ADC_IRQHandler()	This function handles ADC interrupt requests
	HAL_ADC_ConvCpltCallback()	Callback function called in the IT subroutine to indicate the end of the current process or when a DMA transfer has completed
	HAL_ADC_ErrorCallback()	Callback function called in the IT subroutine if a peripheral error or a DMA transfer error occurred
Control group	*HAL_ADC_ConfigChannel()*	This function configures the selected ADC regular channel, the corresponding rank in the sequencer and the sample time
	HAL_ADC_AnalogWDGConfig	This function configures the analog watchdog for the selected ADC
State and Errors group	*HAL_ADC_GetState()*	This function allows getting in run time the peripheral and the data flow states.
	HAL_ADC_GetError()	This fuction allows getting in run time the error that occurred during IT routine

3.7 HAL extension APIs

3.7.1 HAL extension model overview

The extension APIs provide specific functions or overwrite modified APIs for a specific family (series) or specific part number within the same family.

The extension model consists of an additional file, stm32g4xx_hal_ppp_ex.c, that includes all the specific functions and define statements (stm32g4xx_hal_ppp_ex.h) for a given part number.

Below an example based on the ADC peripheral:

Table 10. HAL extension APIs

Function group	Common API name
HAL_ADCEx_CalibrationStart()	This function is used to start the automatic ADC calibration
HAL_ADCEx_Calibration_GetValue()	This function is used to get the ADC calibration factor

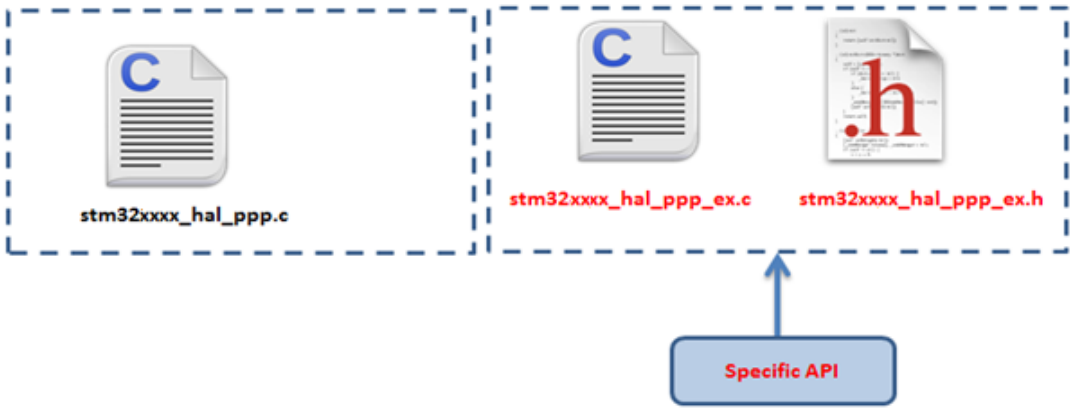
3.7.2 HAL extension model cases

The specific IP features can be handled by the HAL drivers in five different ways. They are described below.

Adding a part number-specific function

When a new feature specific to a given device is required, the new APIs are added in the stm32g4xx_hal_ppp_ex.c extension file. They are named HAL_PPPEx_Function().

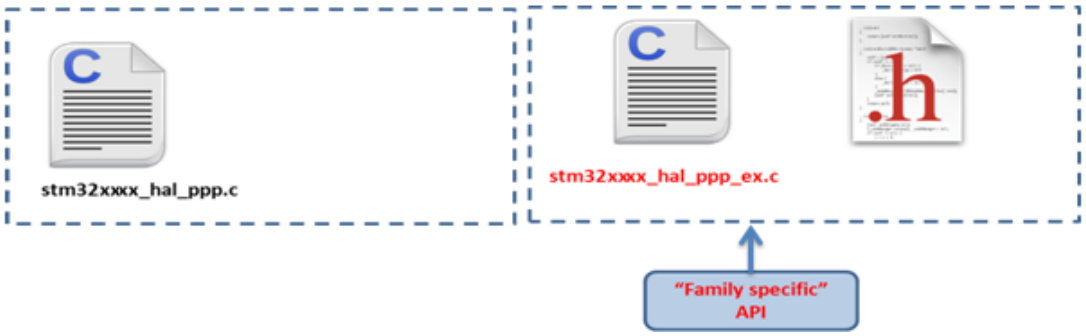
Figure 2. **Adding device-specific functions**



Adding a family-specific function

In this case, the API is added in the extension driver C file and named HAL_PPPEx_Function ().

Figure 3. **Adding family-specific functions**

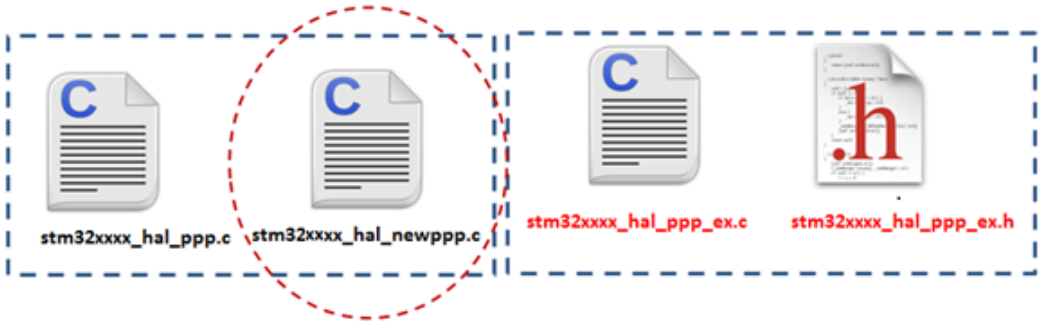


Adding a new peripheral (specific to a device belonging to a given family)

When a peripheral which is available only in a specific device is required, the APIs corresponding to this new peripheral/module (newPPP) are added in a new stm32g4xx_hal_newppp.c. However the inclusion of this file is selected in the stm32g4xx_hal_conf.h using the macro:

```
#define HAL_NEWPPP_MODULE_ENABLED
```

Figure 4. **Adding new peripherals**

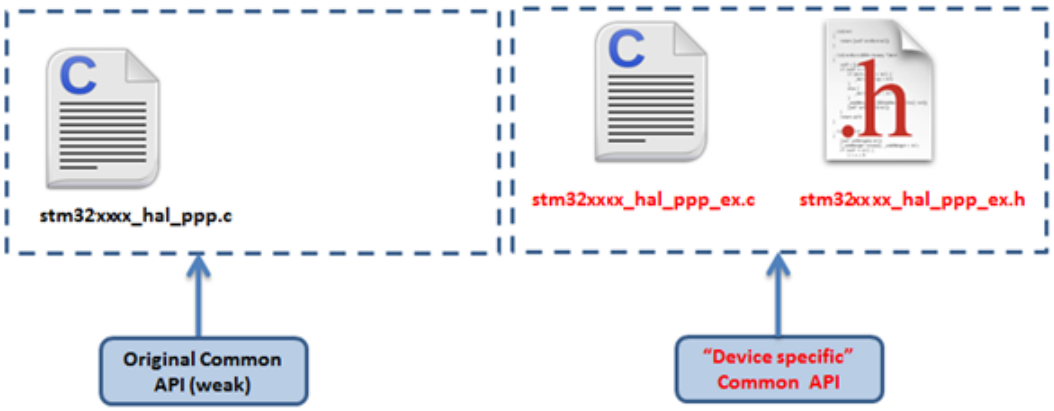


Example: stm32g4xx_hal_adc.c/h

Updating existing common APIs

In this case, the routines are defined with the same names in the stm32g4xx_hal_ppp_ex.c extension file, while the generic API is defined as *weak*, so that the compiler overwrites the original routine by the new defined function.

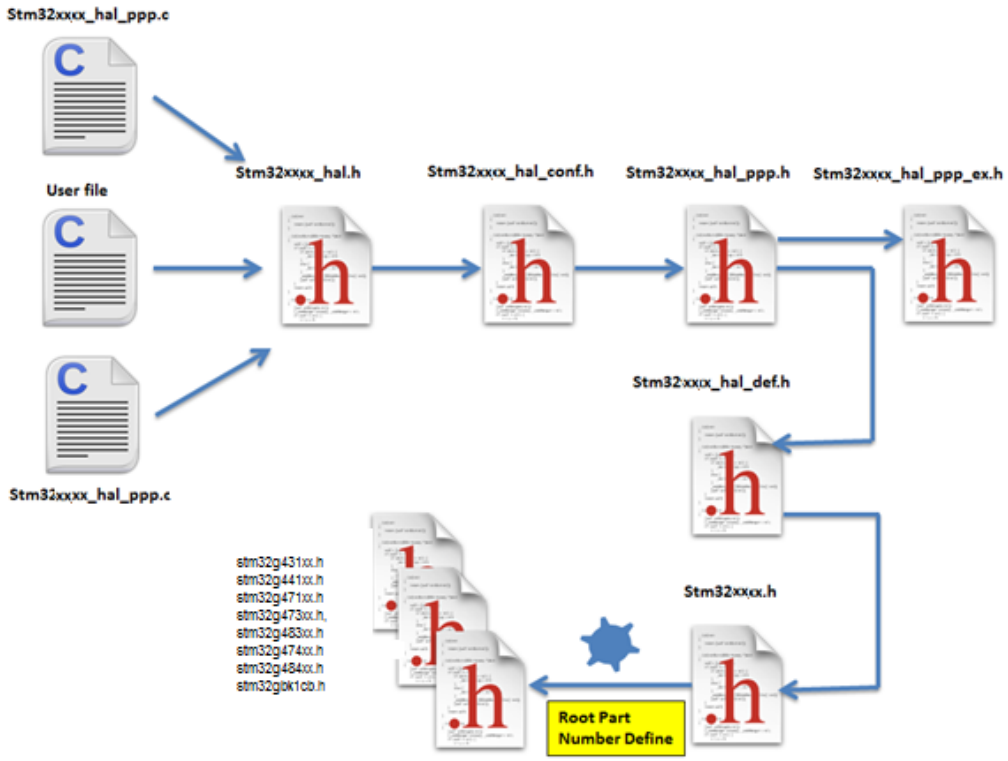
Figure 5. Updating existing APIs



3.8 File inclusion model

The header of the common HAL driver file (stm32g4xx_hal.h) includes the common configurations for the whole HAL library. It is the only header file that is included in the user sources and the HAL C sources files to be able to use the HAL resources.

Figure 6. File inclusion model



A PPP driver is a standalone module which is used in a project. The user must enable the corresponding USE_HAL_PPP_MODULE define statement in the configuration file.

```
/**********************************************************************************
  * @file    stm32g4xx_hal_conf.h
  * @author  MCD Application Team
  * @brief   HAL configuration template file.
  *          This file should be copied to the application folder and renamed
  *          to stm32g4xx_hal_conf.h.
  **********************************************************************************
(…)
#define HAL_USART_MODULE_ENABLED
#define HAL_IRDA_MODULE_ENABLED
#define HAL_DMA_MODULE_ENABLED
#define HAL_RCC_MODULE_ENABLED
(…)
```

3.9 HAL common resources

The common HAL resources, such as common define enumerations, structures and macros, are defined in *stm32g4xx_hal_def.h.*The main common define enumeration is *HAL_StatusTypeDef*.

- **HAL Status**

  The HAL status is used by almost all HAL APIs, except for boolean functions and IRQ handler. It returns the status of the current API operations. It has four possible values as described below:

```
Typedef enum
{
HAL_OK = 0x00,
HAL_ERROR = 0x01,
HAL_BUSY = 0x02,
HAL_TIMEOUT = 0x03
} HAL_StatusTypeDef;
```

- **HAL Locked**

  The HAL lock is used by all HAL APIs to prevent accessing by accident shared resources.

```
typedef enum
{
HAL_UNLOCKED = 0x00, /*!<Resources unlocked */
HAL_LOCKED = 0x01 /*!< Resources locked */
} HAL_LockTypeDef;
```

  In addition to common resources, the stm32g4xx_hal_def.h file calls the stm32g4xx.h file in CMSIS library to get the data structures and the address mapping for all peripherals:

  – Declarations of peripheral registers and bits definition.
  – Macros to access peripheral registers hardware (such as Write register or Read register).

- **Common macros**

  – Macro defining HAL_MAX_DELAY

```
#define HAL_MAX_DELAY 0xFFFFFFFF
```

  – Macro linking a PPP peripheral to a DMA structure pointer:

```
#define __HAL_LINKDMA(__HANDLE__, __PPP_DMA_FIELD_, __DMA_HANDLE_) \
do{ \
  (__HANDLE__)->__PPP_DMA_FIELD_ = &(__DMA_HANDLE_); \
  (__DMA_HANDLE_).Parent = (__HANDLE__); \
} while(0)
```

3.10 HAL configuration

The configuration file, stm32g4xx_hal_conf.h, allows customizing the drivers for the user application. Modifying this configuration is not mandatory: the application can use the default configuration without any modification.

To configure these parameters, the user should enable, disable or modify some options by uncommenting, commenting or modifying the values of the related define statements as described in the table below:

Table 11. Define statements used for HAL configuration

Configuration item	Description	Default Value
HSE_VALUE	Defines the value of the external oscillator (HSE) expressed in Hz. The user must adjust this define statement when using a different crystal value.	8 000 000 Hz
HSE_STARTUP_TIMEOUT	Timeout for HSE start-up, expressed in ms	100
HSI_VALUE	Defines the value of the internal oscillator (HSI) expressed in Hz.	16 000 000 Hz
LSI_VALUE	Defines the default value of the Low-speed internal oscillator (LSI) expressed in Hz.	32000 Hz
LSE_VALUE	Defines the value of the external oscillator (LSE) expressed in Hz. The user must adjust this define statement when using a different crystal value.	32768 Hz

Configuration item	Description	Default Value
LSE_STARTUP_TIMEOUT	Timeout for LSE start-up, expressed in ms	5000
VDD_VALUE	VDD value	3300 (mV)
USE_RTOS	Enables the use of RTOS	FALSE (for future use)
PREFETCH_ENABLE	Enables prefetch feature	FALSE
INSTRUCTION_CACHE_ENABLE	Enables I-cache feature	TRUE
DATA_CACHE_ENABLE	Enables D-cache feature	TRUE

Note: The stm32g4xx_hal_conf_template.h file is located in the HAL drivers Inc folder. It should be copied to the user folder, renamed and modified as described above.

Note: By default, the values defined in the stm32g4xx_hal_conf_template.h file are the same as the ones used for the examples and demonstrations. All HAL include files are enabled so that they can be used in the user code without modifications.

3.11 HAL system peripheral handling

This chapter gives an overview of how the system peripherals are handled by the HAL drivers. The full API list is provided within each peripheral driver description section.

3.11.1 Clock

Two main functions can be used to configure the system clock:

- HAL_RCC_OscConfig (RCC_OscInitTypeDef *RCC_OscInitStruct). This function configures/enables multiple clock sources (HSE, HSI, LSE, LSI, PLL).
- HAL_RCC_ClockConfig (RCC_ClkInitTypeDef *RCC_ClkInitStruct, uint32_t FLatency). This function
  - selects the system clock source
  - configures clock dividers
  - configures the number of Flash memory wait states
  - updates the SysTick configuration when HCLK clock changes.

Some peripheral clocks are not derived from the system clock (such as RTC, USB). In this case, the clock configuration is performed by an extended API defined in stm32g4xx_hal_rcc_ex.c: *HAL_RCCEx_PeriphCLKConfig(RCC_PeriphCLKInitTypeDef *PeriphClkInit)*.

Additional RCC HAL driver functions are available:

- HAL_RCC_DeInit() Clock de-initialization function that returns clock configuration to reset state
- Get clock functions that allow retreiving various clock configurations (such as system clock, HCLK, PCLK1 or PCLK2)
- MCO and CSS configuration functions

A set of macros are defined in stm32g4xx_hal_rcc.h and stm32g4xx_hal_rcc_ex.h. They allow executing elementary operations on RCC block registers, such as peripherals clock gating/reset control:

- __HAL_PPP_CLK_ENABLE/__HAL_PPP_CLK_DISABLE to enable/disable the peripheral clock
- __HAL_PPP_FORCE_RESET/__HAL_PPP_RELEASE_RESET to force/release peripheral reset
- __HAL_PPP_CLK_SLEEP_ENABLE/__HAL_PPP_CLK_SLEEP_DISABLE to enable/disable the peripheral clock during Sleep mode.
- __HAL_PPP_IS_CLK_ENABLED/__HAL_PPP_IS_CLK_DISABLED to query about the enabled/disabled status of the peripheral clock.
- __HAL_PPP_IS_CLK_SLEEP_ENABLED/__HAL_PPP_IS_CLK_SLEEP_DISABLED to query about the enabled/disabled status of the peripheral clock during Sleep mode.

3.11.2 GPIOs

GPIO HAL APIs are the following:

- HAL_GPIO_Init() / HAL_GPIO_DeInit()
- HAL_GPIO_ReadPin() / HAL_GPIO_WritePin()
- HAL_GPIO_TogglePin ().

In addition to standard GPIO modes (input, output, analog), the pin mode can be configured as EXTI with interrupt or event generation.

When selecting EXTI mode with interrupt generation, the user must call HAL_GPIO_EXTI_IRQHandler() from stm32g4xx_it.c and implement HAL_GPIO_EXTI_Callback()

The table below describes the GPIO_InitTypeDef structure field.

Table 12. Description of GPIO_InitTypeDef structure

Structure field	Description
Pin	Specifies the GPIO pins to be configured. Possible values: GPIO_PIN_x or GPIO_PIN_All, where x[0..15]
Mode	Specifies the operating mode for the selected pins: GPIO mode or EXTI mode. Possible values are: • GPIO mode – GPIO_MODE_INPUT : Input floating – GPIO_MODE_OUTPUT_PP : Output push-pull – GPIO_MODE_OUTPUT_OD : Output open drain – GPIO_MODE_AF_PP : Alternate function push-pull – GPIO_MODE_AF_OD : Alternate function open drain – GPIO_MODE_ANALOG : Analog mode • External Interrupt mode – GPIO_MODE_IT_RISING : Rising edge trigger detection – GPIO_MODE_IT_FALLING : Falling edge trigger detection – GPIO_MODE_IT_RISING_FALLING : Rising/Falling edge trigger detection • External Event mode – GPIO_MODE_EVT_RISING : Rising edge trigger detection – GPIO_MODE_EVT_FALLING : Falling edge trigger detection – GPIO_MODE_EVT_RISING_FALLING: Rising/Falling edge trigger detection
Pull	Specifies the Pull-up or Pull-down activation for the selected pins. Possible values are: GPIO_NOPULL GPIO_PULLUP GPIO_PULLDOWN
Speed	Specifies the speed for the selected pins Possible values are: GPIO_SPEED_FREQ_LOW GPIO_SPEED_FREQ_MEDIUM GPIO_SPEED_FREQ_HIGH GPIO_SPEED_FREQ_VERY_HIGH

Please find below typical GPIO configuration examples:

- Configuring GPIOs as output push-pull to drive external LEDs:

```
GPIO_InitStruct.Pin = GPIO_PIN_12 | GPIO_PIN_13 | GPIO_PIN_14 | GPIO_PIN_15;
GPIO_InitStruct.Mode = GPIO_MODE_OUTPUT_PP;
GPIO_InitStruct.Pull = GPIO_PULLUP;
GPIO_InitStruct.Speed = GPIO_SPEED_FREQ_MEDIUM;
HAL_GPIO_Init(GPIOD, &GPIO_InitStruct);
```

- Configuring PA0 as external interrupt with falling edge sensitivity:

```
GPIO_InitStructure.Mode = GPIO_MODE_IT_FALLING;
GPIO_InitStructure.Pull = GPIO_NOPULL;
GPIO_InitStructure.Pin = GPIO_PIN_0;
HAL_GPIO_Init(GPIOA, &GPIO_InitStructure);
```

3.11.3 Cortex® NVIC and SysTick timer

The Cortex® HAL driver, stm32g4xx_hal_cortex.c, provides APIs to handle NVIC and SysTick. The supported APIs include:

- HAL_NVIC_SetPriority()/ HAL_NVIC_SetPriorityGrouping()
- HAL_NVIC_GetPriority() / HAL_NVIC_GetPriorityGrouping()
- HAL_NVIC_EnableIRQ()/HAL_NVIC_DisableIRQ()
- HAL_NVIC_SystemReset()
- HAL_SYSTICK_IRQHandler()
- HAL_NVIC_GetPendingIRQ() / HAL_NVIC_SetPendingIRQ () / HAL_NVIC_ClearPendingIRQ()
- HAL_NVIC_GetActive(IRQn)
- HAL_SYSTICK_Config()
- HAL_SYSTICK_CLKSourceConfig()
- HAL_SYSTICK_Callback()

3.11.4 PWR

The PWR HAL driver handles power management. The features shared between all STM32 Series are listed below:

- PVD configuration, enabling/disabling and interrupt handling
  - HAL_PWR_ConfigPVD()
  - HAL_PWR_EnablePVD() / HAL_PWR_DisablePVD()
  - HAL_PWREx_PVD_PVM_IRQHandler
  - HAL_PWR_PVDCallback()
- Wakeup pin configuration
  - HAL_PWR_EnableWakeUpPin() / HAL_PWR_DisableWakeUpPin()
- Low-power mode entry
  - HAL_PWR_EnterSLEEPMode()
  - HAL_PWR_EnterSTOPMode() (kept for compatibility with other family but identical to HAL_PWREx_EnterSTOP0Mode() or HAL_PWREx_EnterSTOP1Mode() (see hereafter)
  - HAL_PWR_EnterSTANDBYMode()
- STM32G4 low-power management features:
  - HAL_PWREx_EnterSTOP0Mode()
  - HAL_PWREx_EnterSTOP1Mode()
  - HAL_PWREx_EnterSTOP2Mode()
  - HAL_PWREx_EnterSHUTDOWNMode()

3.11.5 EXTI

The EXTI is not considered as a standalone peripheral but rather as a service used by other peripheral, that are handled through EXTI HAL APIs. In addition, each peripheral HAL driver implements the associated EXTI configuration and function as macros in its header file.

The first 16 EXTI lines connected to the GPIOs are managed within the GPIO driver. The GPIO_InitTypeDef structure allows configuring an I/O as external interrupt or external event.

The EXTI lines connected internally to the PVD, RTC, USB, and Ethernet are configured within the HAL drivers of these peripheral through the macros given in the table below.

The EXTI internal connections depend on the targeted STM32 microcontroller (refer to the product datasheet for more details):

Table 13. Description of EXTI configuration macros

Macros	Description
__HAL_PPP_{SUBLOCK}__EXTI_ENABLE_IT()	Enables a given EXTI line interrupt Example: __HAL_PWR_PVD_EXTI_ENABLE_IT()
__HAL_PPP_{SUBLOCK}__EXTI_DISABLE_IT()	Disables a given EXTI line. Example: __HAL_PWR_PVD_EXTI_DISABLE_IT()
__HAL_ PPP_{SUBLOCK}__EXTI_GET_FLAG()	Gets a given EXTI line interrupt flag pending bit status. Example: __HAL_PWR_PVD_EXTI_GET_FLAG()
__HAL_ PPP_{SUBLOCK}_EXTI_CLEAR_FLAG()	Clears a given EXTI line interrupt flag pending bit. Example; __HAL_PWR_PVD_EXTI_CLEAR_FLAG()
__HAL_ PPP_{SUBLOCK}_EXTI_GENERATE_SWIT()	Generates a software interrupt for a given EXTI line. Example: __HAL_PWR_PVD_EXTI_ GENERATE_SWIT ()
__HAL_PPP_SUBBLOCK_EXTI_ENABLE_EVENT()	Enable a given EXTI line event Example: __HAL_RTC_WAKEUP_EXTI_ENABLE_EVENT()
__HAL_PPP_SUBBLOCK_EXTI_DISABLE_EVENT()	Disable a given EXTI line event Example: __HAL_RTC_WAKEUP_EXTI_DISABLE_EVENT()
__HAL_ PPP_SUBBLOCK_EXTI_ENABLE_RISING_EDGE()	Configure an EXTI Interrupt or Event on rising edge
__HAL_ PPP_SUBBLOCK_EXTI_ENABLE_FALLING_EDGE()	Enable an EXTI Interrupt or Event on Falling edge
__HAL_ PPP_SUBBLOCK_EXTI_DISABLE_RISING_EDGE()	Disable an EXTI Interrupt or Event on rising edge
__HAL_ PPP_SUBBLOCK_EXTI_DISABLE_FALLING_EDGE()	Disable an EXTI Interrupt or Event on Falling edge
__HAL_ PPP_SUBBLOCK_EXTI_ENABLE_RISING_FALLING_EDGE()	Enable an EXTI Interrupt or Event on Rising/Falling edge
__HAL_ PPP_SUBBLOCK_EXTI_DISABLE_RISING_FALLING_EDGE()	Disable an EXTI Interrupt or Event on Rising/Falling edge

If the EXTI interrupt mode is selected, the user application must call HAL_PPP_FUNCTION_IRQHandler() (for example HAL_PWR_PVD_IRQHandler()), from stm32g4xx_it.c file, and implement HAL_PPP_FUNCTIONCallback() callback function (for example HAL_PWR_PVDCallback().

3.11.6 DMA

The DMA HAL driver allows enabling and configuring the peripheral to be connected to the DMA Channels (except for internal SRAM/FLASH memory which do not require any initialization). Refer to the product reference manual for details on the DMA request corresponding to each peripheral.

For a given channel, HAL_DMA_Init() API allows programming the required configuration through the following parameters:

- Transfer direction
- Source and destination data formats
- Circular, Normal control mode
- Channel priority level
- Source and destination Increment mode

Two operating modes are available:

- Polling mode I/O operation
  1. Use HAL_DMA_Start() to start DMA transfer when the source and destination addresses and the Length of data to be transferred have been configured.
  2. Use HAL_DMA_PollForTransfer() to poll for the end of current transfer. In this case a fixed timeout can be configured depending on the user application.
- Interrupt mode I/O operation
  1. Configure the DMA interrupt priority using HAL_NVIC_SetPriority()
  2. Enable the DMA IRQ handler using HAL_NVIC_EnableIRQ()
  3. Use HAL_DMA_Start_IT() to start DMA transfer when the source and destination addresses and the length of data to be transferred have been confgured. In this case the DMA interrupt is configured.
  4. Use HAL_DMA_IRQHandler() called under DMA_IRQHandler() Interrupt subroutine
  5. When data transfer is complete, HAL_DMA_IRQHandler() function is executed and a user function can be called by customizing XferCpltCallback and XferErrorCallback function pointer (i.e. a member of DMA handle structure).

Additional functions and macros are available to ensure efficient DMA management:

- Use HAL_DMA_GetState() function to return the DMA state and HAL_DMA_GetError() in case of error detection.
- Use HAL_DMA_Abort() function to abort the current transfer

The most used DMA HAL driver macros are the following:

- __HAL_DMA_ENABLE: enables the specified DMA channel.
- __HAL_DMA_DISABLE: disables the specified DMA channel.
- __HAL_DMA_GET_FLAG: gets the DMA channel pending flags.
- __HAL_DMA_CLEAR_FLAG: clears the DMA channel pending flags.
- __HAL_DMA_ENABLE_IT: enables the specified DMA channel interrupts.
- __HAL_DMA_DISABLE_IT: disables the specified DMA channel interrupts.
- __HAL_DMA_GET_IT_SOURCE: checks whether the specified DMA channel interrupt has been enabled or not.

Note: When a peripheral is used in DMA mode, the DMA initialization should be done in the HAL_PPP_MspInit() callback. In addition, the user application should associate the DMA handle to the PPP handle (refer to section "HAL IO operation functions").

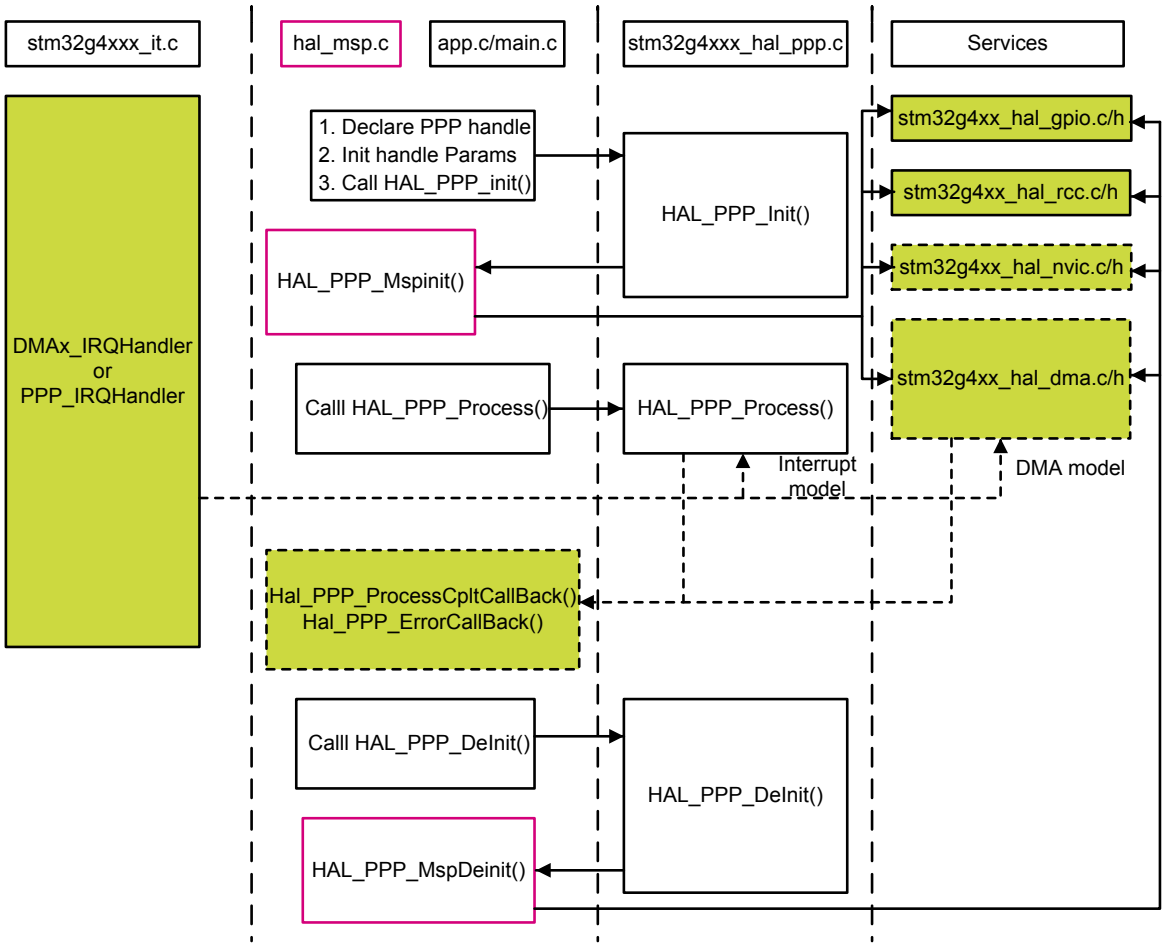
Note: DMA channel callbacks need to be initialized by the user application only in case of memory-to-memory transfer. However when peripheral-to-memory transfers are used, these callbacks are automatically initialized by calling a process API function that uses the DMA.

3.12 How to use HAL drivers

3.12.1 HAL usage models

The following figure shows the typical use of the HAL driver and the interaction between the application user, the HAL driver and the interrupts.

Figure 7. **HAL driver model**



Note: The functions implemented in the HAL driver are shown in green, the functions called from interrupt handlers in dotted lines, and the msp functions implemented in the user application in red. Non-dotted lines represent the interactions between the user application functions.

Basically, the HAL driver APIs are called from user files and optionally from interrupt handlers file when the APIs based on the DMA or the PPP peripheral dedicated interrupts are used.

When DMA or PPP peripheral interrupts are used, the PPP process complete callbacks are called to inform the user about the process completion in real-time event mode (interrupts). Note that the same process completion callbacks are used for DMA in interrupt mode.

3.12.2 HAL initialization

3.12.2.1 HAL global initialization

In addition to the peripheral initialization and de-initialization functions, a set of APIs are provided to initialize the HAL core implemented in file stm32g4xx_hal.c.

- HAL_Init(): this function must be called at application startup to
  - initialize data/instruction cache and pre-fetch queue
  - set SysTick timer to generate an interrupt each 1ms (based on HSI clock) with the lowest priority
  - call HAL_MspInit() user callback function to perform system level initializations (Clock, GPIOs, DMA, interrupts). HAL_MspInit() is defined as “weak” empty function in the HAL drivers.
- HAL_DeInit()
  - resets all peripherals
  - calls function HAL_MspDeInit() which is a user callback function to do system level De-Initializations.

- HAL_GetTick(): this function gets current SysTick counter value (incremented in SysTick interrupt) used by peripherals drivers to handle timeouts.
- HAL_Delay(). this function implements a delay (expressed in milliseconds) using the SysTick timer.

  Care must be taken when using HAL_Delay() since this function provides an accurate delay (expressed in milliseconds) based on a variable incremented in SysTick ISR. This means that if HAL_Delay() is called from a peripheral ISR, then the SysTick interrupt must have highest priority (numerically lower) than the peripheral interrupt, otherwise the caller ISR is blocked.

3.12.2.2 *System clock initialization*

The clock configuration is done at the beginning of the user code. However the user can change the configuration of the clock in his own code.

Please find below the typical Clock configuration sequence to reach the maximum 80 MHz clock frequency based on the HSE clock:

```
void SystemClock_Config(void)
{
RCC_ClkInitTypeDef clkinitstruct = {0};
RCC_OscInitTypeDef oscinitstruct = {0};
/* Configure PLLs------------------------------------------------------*/
/* PLL configuration: PLLCLK = (HSE/PLLM * PLLN) / PLLR = (16/1 * 20) / 2 = 80
MHz*/
/* Enable HSE Oscillator and activate PLL with HSE as source */
oscinitstruct.OscillatorType = RCC_OSCILLATORTYPE_HSE;
oscinitstruct.HSEState = RCC_HSE_ON;
oscinitstruct.PLL.PLLState = RCC_PLL_ON;
oscinitstruct.PLL.PLLSource = RCC_PLLSOURCE_HSE;
oscinitstruct.PLL.PLLM = 1;
oscinitstruct.PLL.PLLN = 20;
oscinitstruct.PLL.PLLR = 2;
oscinitstruct.PLL.PLLL = 7;
oscinitstruct.PLL.PLLQ = 4;
if (HAL_RCC_OscConfig(&oscinitstruct)!= HAL_OK)
Overview of HAL drivers UM1884
64/2232 DocID027704 Rev 7
{
/* Initialization Error */
while(1);
}
/* Select PLL as system clock source and configure the HCLK, PCLK1 and PCLK2
clocks dividers */
clkinitstruct.ClockType = (RCC_CLOCKTYPE_SYSCLK I RCC_CLOCKTYPE_HCLK I
RCC_CLOCKTYPE_PCLK1 I RCC_CLOCKTYPE_PCLK2);
clkinitstruct.SYSCLKSource = RCC_SYSCLKSOURCE_PLLCLK;
clkinitstruct.AHBCLKDivider = RCC_SYSCLK_DIV1;
clkinitstruct.APB2CLKDivider = RCC_HCLK_DIV1;
clkinitstruct.APB1CLKDivider = RCC_HCLK_DIV1;
if
(HAL_RCC_ClockConfig(&clkinitstruct,FLASH_LATENCY_4)!= HAL_OK)
{
/* Initialization Error */
while(1);
}
}
```

3.12.2.3 *HAL MSP initialization process*

The peripheral initialization is done through *HAL_PPP_Init()* while the hardware resources initialization used by a peripheral (PPP) is performed during this initialization by calling MSP callback function *HAL_PPP_MspInit().*

The MspInit callback performs the low level initialization related to the different additional hardware resources: RCC, GPIO, NVIC and DMA.

All the HAL drivers with handles include two MSP callbacks for initialization and de-initialization:

```
/**
* @brief Initializes the PPP MSP.
* @param hppp: PPP handle
* @retval None */
void __weak HAL_PPP_MspInit(PPP_HandleTypeDef *hppp) {
/* NOTE : This function Should not be modified, when the callback is needed,
the HAL_PPP_MspInit could be implemented in the user file */
}
/**
* @brief DeInitializes PPP MSP.
* @param hppp: PPP handle
* @retval None */
void __weak HAL_PPP_MspDeInit(PPP_HandleTypeDef *hppp) {
/* NOTE : This function Should not be modified, when the callback is needed,
the HAL_PPP_MspDeInit could be implemented in the user file */
}
```

The MSP callbacks are declared empty as weak functions in each peripheral driver. The user can use them to set the low level initialization code or omit them and use his own initialization routine.

The HAL MSP callback is implemented inside the *stm32g4xx_hal_msp.c* file in the user folders. An *stm32g4xx_hal_msp.c* file template is located in the HAL folder and should be copied to the user folder. It can be generated automatically by STM32CubeMX tool and further modified. Note that all the routines are declared as weak functions and could be overwritten or removed to use user low level initialization code.

stm32g4xx_hal_msp.c file contains the following functions:

Table 14. MSP functions

Routine	Description
void HAL_MspInit()	Global MSP initialization routine
void HAL_MspDeInit()	Global MSP de-initialization routine
void HAL_PPP_MspInit()	PPP MSP initialization routine
void HAL_PPP_MspDeInit()	PPP MSP de-initialization routine

By default, if no peripheral needs to be de-initialized during the program execution, the whole MSP initialization is done in *Hal_MspInit()* and MSP De-Initialization in the *Hal_MspDeInit()*. In this case the *HAL_PPP_MspInit()* and *HAL_PPP_MspDeInit()* are not implemented.

When one or more peripherals needs to be de-initialized in run time and the low level resources of a given peripheral need to be released and used by another peripheral, HAL_PPP_MspDeInit() and *HAL_PPP_MspInit()* are implemented for the concerned peripheral and other peripherals initialization and de-Initialization are kept in the global *HAL_MspInit()* and the *HAL_MspDeInit()*.

If there is nothing to be initialized by the global *HAL_MspInit()* and *HAL_MspDeInit()*, the two routines can simply be omitted.

3.12.3 HAL I/O operation process

The HAL functions with internal data processing like transmit, receive, write and read are generally provided with three data processing modes as follows:

- Polling mode
- Interrupt mode
- DMA mode

3.12.3.1 Polling mode

In Polling mode, the HAL functions return the process status when the data processing in blocking mode is complete. The operation is considered complete when the function returns the HAL_OK status, otherwise an error status is returned. The user can get more information through the *HAL_PPP_GetState()* function. The data processing is handled internally in a loop. A timeout (expressed in ms) is used to prevent process hanging.

The example below shows the typical Polling mode processing sequence :

```
HAL_StatusTypeDef HAL_PPP_Transmit ( PPP_HandleTypeDef * phandle, uint8_t pData,
int16_tSize,uint32_tTimeout)
{
if((pData == NULL ) || (Size == 0))
{
return HAL_ERROR;
}
(…) while (data processing is running)
{
if( timeout reached )
{
return HAL_TIMEOUT;
}
}
(…)
return HAL_OK; }
```

3.12.3.2 *Interrupt mode*

In Interrupt mode, the HAL function returns the process status after starting the data processing and enabling the appropriate interruption. The end of the operation is indicated by a callback declared as a weak function. It can be customized by the user to be informed in real-time about the process completion. The user can also get the process status through the *HAL_PPP_GetState()* function.

In Interrupt mode, four functions are declared in the driver:

- *HAL_PPP_Process_IT()*: launches the process
- *HAL_PPP_IRQHandler()*: global PPP peripheral interruption
- *__weak HAL_PPP_ProcessCpltCallback ()*: callback relative to the process completion.
- *__weak HAL_PPP_ProcessErrorCallback()*: callback relative to the process Error.

To use a process in Interrupt mode, *HAL_PPP_Process_IT()* is called in the user file and HAL_PPP_IRQHandler in *stm32g4xx_it.c.*

The *HAL_PPP_ProcessCpltCallback()* function is declared as weak function in the driver. This means that the user can declare it again in the application. The function in the driver is not modified.

An example of use is illustrated below:

main.c file:

```
UART_HandleTypeDef UartHandle;
int main(void)
{
/* Set User Parameters */
UartHandle.Init.BaudRate = 9600;
UartHandle.Init.WordLength = UART_DATABITS_8;
UartHandle.Init.StopBits = UART_STOPBITS_1;
UartHandle.Init.Parity = UART_PARITY_NONE;
UartHandle.Init.HwFlowCtl = UART_HWCONTROL_NONE;
UartHandle.Init.Mode = UART_MODE_TX_RX;
UartHandle.Init.Instance = USART1;
HAL_UART_Init(&UartHandle);
HAL_UART_SendIT(&UartHandle, TxBuffer, sizeof(TxBuffer));
while (1);
}
void HAL_UART_TxCpltCallback(UART_HandleTypeDef *huart)
{
}
void HAL_UART_ErrorCallback(UART_HandleTypeDef *huart)
{
}
```

*stm32g4xx_it.c*file:

```
extern UART_HandleTypeDef UartHandle;
void USART1_IRQHandler(void)
{
HAL_UART_IRQHandler(&UartHandle);
}
```

3.12.3.3 DMA mode

In DMA mode, the HAL function returns the process status after starting the data processing through the DMA and after enabling the appropriate DMA interruption. The end of the operation is indicated by a callback declared as a weak function and can be customized by the user to be informed in real-time about the process completion. The user can also get the process status through the *HAL_PPP_GetState()* function. For the DMA mode, three functions are declared in the driver:

- *HAL_PPP_Process_DMA()*: launch the process
- *HAL_PPP_DMA_IRQHandler()*: the DMA interruption used by the PPP peripheral
- *__weak HAL_PPP_ProcessCpltCallback()*: the callback relative to the process completion.
- *__weak HAL_PPP_ErrorCpltCallback()*: the callback relative to the process Error.

To use a process in DMA mode, *HAL_PPP_Process_DMA()* is called in the user file and the *HAL_PPP_DMA_IRQHandler()* is placed in the *stm32g4xx_it.c*. When DMA mode is used, the DMA initialization is done in the *HAL_PPP_MspInit()* callback. The user should also associate the DMA handle to the PPP handle. For this purpose, the handles of all the peripheral drivers that use the DMA must be declared as follows:

```
typedef struct
{
PPP_TypeDef *Instance; /* Register base address */
PPP_InitTypeDef Init; /* PPP communication parameters */
HAL_StateTypeDef State; /* PPP communication state */
(…)
DMA_HandleTypeDef *hdma; /* associated DMA handle */
} PPP_HandleTypeDef;
```

The initialization is done as follows (UART example):

```
int main(void)
{
/* Set User Parameters */
UartHandle.Init.BaudRate = 9600;
UartHandle.Init.WordLength = UART_DATABITS_8;
UartHandle.Init.StopBits = UART_STOPBITS_1;
UartHandle.Init.Parity = UART_PARITY_NONE;
UartHandle.Init.HwFlowCtl = UART_HWCONTROL_NONE;
UartHandle.Init.Mode = UART_MODE_TX_RX;
UartHandle.Init.Instance = UART1;
HAL_UART_Init(&UartHandle);
(..)
}
void HAL_USART_MspInit (UART_HandleTypeDef * huart)
{
static DMA_HandleTypeDef hdma_tx;
static DMA_HandleTypeDef hdma_rx;
(…)
__HAL_LINKDMA(UartHandle, DMA_Handle_tx, hdma_tx);
__HAL_LINKDMA(UartHandle, DMA_Handle_rx, hdma_rx);
(…)
}
```

The *HAL_PPP_ProcessCpltCallback()* function is declared as weak function in the driver that means, the user can declare it again in the application code. The function in the driver should not be modified.

An example of use is illustrated below:

main.c file:

```
UART_HandleTypeDef UartHandle;
int main(void)
{
/* Set User Paramaters */
UartHandle.Init.BaudRate = 9600;
UartHandle.Init.WordLength = UART_DATABITS_8;
UartHandle.Init.StopBits = UART_STOPBITS_1;
UartHandle.Init.Parity = UART_PARITY_NONE;
UartHandle.Init.HwFlowCtl = UART_HWCONTROL_NONE;
UartHandle.Init.Mode = UART_MODE_TX_RX; UartHandle.Init.Instance = USART1;
HAL_UART_Init(&UartHandle);
HAL_UART_Send_DMA(&UartHandle, TxBuffer, sizeof(TxBuffer));
while (1);
}
void HAL_UART_TxCpltCallback(UART_HandleTypeDef *phuart)
{
}
void HAL_UART_TxErrorCallback(UART_HandleTypeDef *phuart)
{
}
```

stm32g4xx_it.c file:

```
extern UART_HandleTypeDef UartHandle;
void DMAx_IRQHandler(void)
{
HAL_DMA_IRQHandler(&UartHandle.DMA_Handle_tx);
}
```

HAL_USART_TxCpltCallback() and *HAL_USART_ErrorCallback()* should be linked in the *HAL_PPP_Process_DMA()* function to the DMA transfer complete callback and the DMA transfer Error callback by using the following statement:

```
HAL_PPP_Process_DMA (PPP_HandleTypeDef *hppp, Params….)
{
(…)
hppp->DMA_Handle->XferCpltCallback = HAL_UART_TxCpltCallback ;
hppp->DMA_Handle->XferErrorCallback = HAL_UART_ErrorCallback ;
(…)
}
```

3.12.4 Timeout and error management

3.12.4.1 Timeout management

The timeout is often used for the APIs that operate in Polling mode. It defines the delay during which a blocking process should wait till an error is returned. An example is provided below:

```
HAL_StatusTypeDef HAL_DMA_PollForTransfer(DMA_HandleTypeDef *hdma, uint32_t CompleteLevel,
uint32_t Timeout)
```

The timeout possible values are the following:

Table 15. Timeout values

Timeout value	Description
0	No poll : Immediate process check and exit
1 ... (HAL_MAX_DELAY -1) (1)	Timeout in ms
HAL_MAX_DELAY	Infinite poll till process is successful

1. *HAL_MAX_DELAY is defined in the stm32g4xx_hal_def.h as 0xFFFFFFFF*

However, in some cases, a fixed timeout is used for system peripherals or internal HAL driver processes. In these cases, the timeout has the same meaning and is used in the same way, except when it is defined locally in the drivers and cannot be modified or introduced as an argument in the user application.

Example of fixed timeout:

```
#define LOCAL_PROCESS_TIMEOUT 100
HAL_StatusTypeDef HAL_PPP_Process(PPP_HandleTypeDef)
{
(…)
timeout = HAL_GetTick() + LOCAL_PROCESS_TIMEOUT;
(…)
while(ProcessOngoing)
{
(…)
if(HAL_GetTick() ≥ timeout)
{
/* Process unlocked */
__HAL_UNLOCK(hppp);
hppp->State= HAL_PPP_STATE_TIMEOUT;
return HAL_PPP_STATE_TIMEOUT;
}
}
(…)
}
```

The following example shows how to use the timeout inside the polling functions:

```
HAL_PPP_StateTypeDef HAL_PPP_Poll (PPP_HandleTypeDef *hppp, uint32_t Timeout)
{
(…)
timeout = HAL_GetTick() + Timeout;
(…)
while(ProcessOngoing)
{
(…)
if(Timeout != HAL_MAX_DELAY)
{
if(HAL_GetTick() ≥ timeout)
{
/* Process unlocked */
__HAL_UNLOCK(hppp);
hppp->State= HAL_PPP_STATE_TIMEOUT;
return hppp->State;
}
}
(…)
}
```

3.12.4.2 *Error management*

The HAL drivers implement a check on the following items:

- Valid parameters: for some process the used parameters should be valid and already defined, otherwise the system may crash or go into an undefined state. These critical parameters are checked before being used (see example below).

```
HAL_StatusTypeDef HAL_PPP_Process(PPP_HandleTypeDef* hppp, uint32_t *pdata, uint32
Size)
{
if ((pData == NULL ) || (Size == 0))
{
return HAL_ERROR;
}
}
```

- Valid handle: the PPP peripheral handle is the most important argument since it keeps the PPP driver vital parameters. It is always checked in the beginning of the *HAL_PPP_Init()* function.

```
HAL_StatusTypeDef HAL_PPP_Init(PPP_HandleTypeDef* hppp)
{
if (hppp == NULL) //the handle should be already allocated
{
return HAL_ERROR;
}
}
```

- Timeout error: the following statement is used when a timeout error occurs:

```
while (Process ongoing)
{
timeout = HAL_GetTick() + Timeout; while (data processing is running)
{
if(timeout) { return HAL_TIMEOUT;
}
}
```

When an error occurs during a peripheral process, *HAL_PPP_Process ()* returns with a *HAL_ERROR* status. The HAL PPP driver implements the *HAL_PPP_GetError ()* to allow retrieving the origin of the error.

```
HAL_PPP_ErrorTypeDef HAL_PPP_GetError (PPP_HandleTypeDef *hppp);
```

In all peripheral handles, a *HAL_PPP_ErrorTypeDef* is defined and used to store the last error code.

```
typedef struct
{
PPP_TypeDef * Instance; /* PPP registers base address */
PPP_InitTypeDef Init; /* PPP initialization parameters */
HAL_LockTypeDef Lock; /* PPP locking object */
__IO HAL_PPP_StateTypeDef State; /* PPP state */
__IO HAL_PPP_ErrorTypeDef ErrorCode; /* PPP Error code */
(…)
/* PPP specific parameters */
}
PPP_HandleTypeDef;
```

The error state and the peripheral global state are always updated before returning an error:

```
PPP->State = HAL_PPP_READY;  /* Set the peripheral ready */
PP->ErrorCode = HAL_ERRORCODE ; /* Set the error code */
_HAL_UNLOCK(PPP) ; /* Unlock the PPP resources */
return HAL_ERROR;  /*return with HAL error */
```

HAL_PPP_GetError () must be used in interrupt mode in the error callback:

```
void HAL_PPP_ProcessCpltCallback(PPP_HandleTypeDef *hspi)
{
ErrorCode = HAL_PPP_GetError (hppp); /* retreive error code */
}
```

3.12.4.3 *Run-time checking*

The HAL implements run-time failure detection by checking the input values of all HAL driver functions. The run-time checking is achieved by using an *assert_param* macro. This macro is used in all the HAL driver functions which have an input parameter. It allows verifying that the input value lies within the parameter allowed values.

To enable the run-time checking, use the *assert_param* macro, and leave the define ***USE_FULL_ASSERT*** uncommented in *stm32g4xx_hal_conf.h* file.

```
void HAL_UART_Init(UART_HandleTypeDef *huart)
{
(..) /* Check the parameters */
assert_param(IS_UART_INSTANCE(huart->Instance));
assert_param(IS_UART_BAUDRATE(huart->Init.BaudRate));
assert_param(IS_UART_WORD_LENGTH(huart->Init.WordLength));
assert_param(IS_UART_STOPBITS(huart->Init.StopBits));
assert_param(IS_UART_PARITY(huart->Init.Parity));
assert_param(IS_UART_MODE(huart->Init.Mode));
assert_param(IS_UART_HARDWARE_FLOW_CONTROL(huart->Init.HwFlowCtl));
(..)
```

```
/** @defgroup UART_Word_Length *
@{
*/
#define UART_WORDLENGTH_8B ((uint32_t)0x00000000)
#define UART_WORDLENGTH_9B ((uint32_t)USART_CR1_M)
#define IS_UART_WORD_LENGTH(LENGTH) (((LENGTH) == UART_WORDLENGTH_8B) ||
\ ((LENGTH) == UART_WORDLENGTH_9B))
```

If the expression passed to the assert_param macro is false, the*assert_failed* function is called and returns the name of the source file and the source line number of the call that failed. If the expression is true, no value is returned.

The *assert_param* macro is implemented in stm32g4xx_hal_conf.h:

```
/* Exported macro ------------------------------------------------------------*/
#ifdef USE_FULL_ASSERT
/**
* @brief The assert_param macro is used for function's parameters check.
* @param expr: If expr is false, it calls assert_failed function
* which reports the name of the source file and the source
* line number of the call that failed.
* If expr is true, it returns no value.
* @retval None */
#define assert_param(expr) ((expr)?(void)0:assert_failed((uint8_t *)__FILE__, __LINE__))
/* Exported functions ------------------------------------*/
void assert_failed(uint8_t* file, uint32_t line);
#else
#define assert_param(expr)((void)0)
#endif /* USE_FULL_ASSERT */
```

The *assert_failed* function is implemented in the main.c file or in any other user C file:

```
#ifdef USE_FULL_ASSERT /**
* @brief Reports the name of the source file and the source line number
* where the assert_param error has occurred.
* @param file: pointer to the source file name
* @param line: assert_param error line source number
* @retval None */
void assert_failed(uint8_t* file, uint32_t line)
{
/* User can add his own implementation to report the file name and line number,
ex: printf("Wrong parameters value: file %s on line %d\r\n", file, line) */
/* Infinite loop */
while (1)
{
}
}
```

Note: ***Because of the overhead run-time checking introduces, it is recommended to use it during application code development and debugging, and to remove it from the final application to improve code size and speed.***

4 Overview of low-layer drivers

The low-layer (LL) drivers are designed to offer a fast light-weight expert-oriented layer which is closer to the hardware than the HAL. Contrary to the HAL, LL APIs are not provided for peripherals where optimized access is not a key feature, or those requiring heavy software configuration and/or complex upper-level stack (such as USB).

The LL drivers feature:

- A set of functions to initialize peripheral main features according to the parameters specified in data structures
- A set of functions used to fill initialization data structures with the reset values of each field
- Functions to perform peripheral de-initialization (peripheral registers restored to their default values)
- A set of inline functions for direct and atomic register access
- Full independence from HAL since LL drivers can be used either in standalone mode (without HAL drivers) or in mixed mode (with HAL drivers)
- Full coverage of the supported peripheral features.

The low-layer drivers provide hardware services based on the available features of the STM32 peripherals. These services reflect exactly the hardware capabilities and provide one-shot operations that must be called following the programming model described in the microcontroller line reference manual. As a result, the LL services do not implement any processing and do not require any additional memory resources to save their states, counter or data pointers: all the operations are performed by changing the associated peripheral registers content.

4.1 Low-layer files

The low-layer drivers are built around header/C files (one per each supported peripheral) plus five header files for some System and Cortex related features.

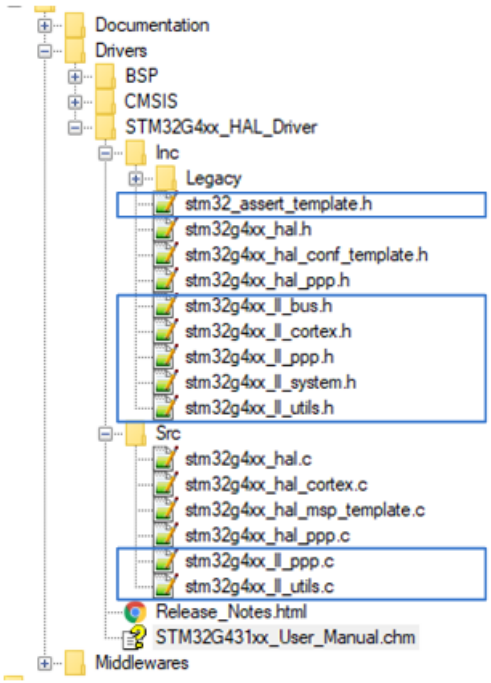
Table 16. LL driver files

File	Description
stm32g4xx_ll_bus.h	This is the h-source file for core bus control and peripheral clock activation and deactivation *Example: LL_AHB2_GRP1_EnableClock*
stm32g4xx_ll_ppp.h/.c	stm32g4xx_ll_ppp.c provides peripheral initialization functions such as LL_PPP_Init(), LL_PPP_StructInit(), LL_PPP_DeInit(). All the other APIs are definined within stm32g4xx_ll_ppp.h file. The low-layer PPP driver is a standalone module. To use it, the application must include it in the stm32g4xx_ll_ppp.h file.
stm32g4xx_ll_cortex.h	Cortex-M related register operation APIs including the Systick, Low power (such as LL_SYSTICK_xxxxx and LL_LPM_xxxxx "Low Power Mode")
stm32g4xx_ll_utils.h/.c	This file covers the generic APIs: • Read of device unique ID and electronic signature • Timebase and delay management • System clock configuration.
stm32g4xx_ll_system.h	System related operations. Example: LL_SYSCFG_xxx, LL_DBGMCU_xxx and LL_FLASH_xxx and LL_VREFBUF_xxx
stm32_assert_template.h	Template file allowing to define the assert_param macro, that is used when run-time checking is enabled. This file is required only when the LL drivers are used in standalone mode (without calling the HAL APIs). It should be copied to the application folder and renamed to stm32_assert.h.

Note: There is no configuration file for the LL drivers.

The low-layer files are located in the same HAL driver folder.

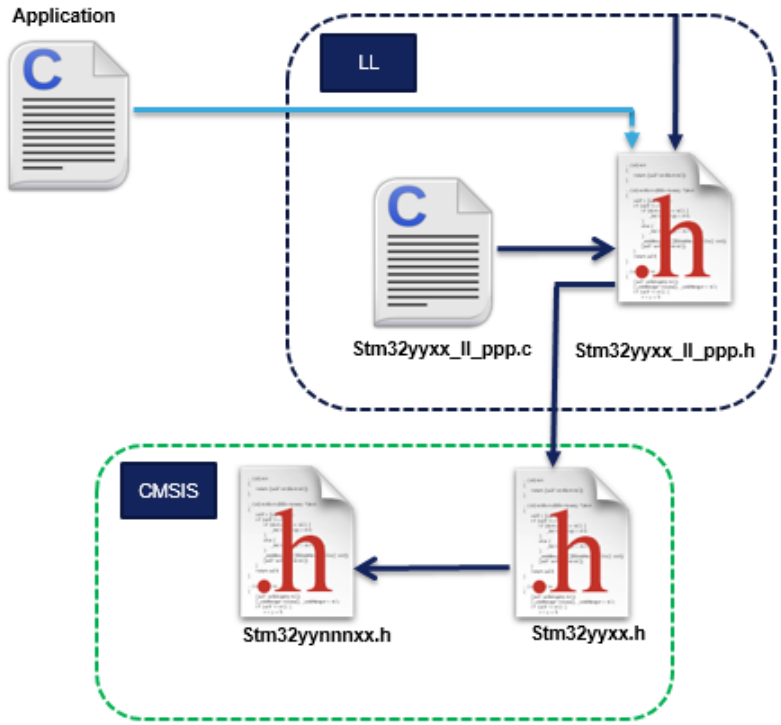
Figure 8. Low-layer driver folders



In general, low-layer drivers include only the STM32 CMSIS device file.

```
#include "stm32yyxx.h"
```

Figure 9. **Low-layer driver CMSIS files**



Application files have to include only the used low-layer driver header files.

4.2 Overview of low-layer APIs and naming rules

4.2.1 Peripheral initialization functions

The LL drivers offer three sets of initialization functions. They are defined in stm32g4xx_ll_ppp.c file:

- Functions to initialize peripheral main features according to the parameters specified in data structures
- A set of functions used to fill initialization data structures with the reset values of each field
- Function for peripheral de-initialization (peripheral registers restored to their default values)

The definition of these LL initialization functions and associated resources (structure, literals and prototypes) is conditioned by a compilation switch: *USE_FULL_LL_DRIVER*. To use these functions, this switch must be added in the toolchain compiler preprocessor or to any generic header file which is processed before the LL drivers.

The below table shows the list of the common functions provided for all the supported peripherals:

Table 17. Common peripheral initialization functions

Functions	Return Type	Parameters	Description
LL_PPP_Init	*ErrorStatus*	• *PPP_TypeDef* PPPx* • *LL_PPP_InitTypeDef* PPP_InitStruct*	Initializes the peripheral main features according to the parameters specified in PPP_InitStruct. Example: LL_USART_Init(USART_TypeDef *USARTx, LL_USART_InitTypeDef *USART_InitStruct)
LL_PPP_StructInit	*void*	• *LL_PPP_InitTypeDef* PPP_InitStruct*	Fills each PPP_InitStruct member with its default value. Example. LL_USART_StructInit(LL_USART_InitTypeDef *USART_InitStruct)
LL_PPP_DeInit	*ErrorStatus*	• *PPP_TypeDef* PPPx*	De-initializes the peripheral registers, that is restore them to their default reset values. Example. LL_USART_DeInit(USART_TypeDef *USARTx)

Additional functions are available for some peripherals (refer to Table 18. Optional peripheral initialization functions).

Table 18. Optional peripheral initialization functions

Functions	Return Type	Parameters	Examples
LL_PPP{_CATEGORY}_Init	*ErrorStatus*	• *PPP_TypeDef* PPPx* • *LL_PPP{_CATEGORY}_InitTypeDef* PPP{_CATEGORY}_InitStruct*	Initializes peripheral features according to the parameters specified in PPP_InitStruct. Example: LL_ADC_INJ_Init(ADC_TypeDef *ADCx, LL_ADC_INJ_InitTypeDef *ADC_INJ_InitStruct) LL_RTC_TIME_Init(RTC_TypeDef *RTCx, uint32_t RTC_Format, LL_RTC_TimeTypeDef *RTC_TimeStruct) LL_RTC_DATE_Init(RTC_TypeDef *RTCx, uint32_t RTC_Format, LL_RTC_DateTypeDef *RTC_DateStruct) LL_TIM_IC_Init(TIM_TypeDef* TIMx, uint32_t Channel, LL_TIM_IC_InitTypeDef* TIM_IC_InitStruct) LL_TIM_ENCODER_Init(TIM_TypeDef* TIMx, LL_TIM_ENCODER_InitTypeDef* TIM_EncoderInitStruct)
LL_PPP{_CATEGORY}_StructInit	*void*	*LL_PPP{_CATEGORY}_InitTypeDef* PPP{_CATEGORY}_InitStruct*	Fills each *PPP{_CATEGORY}_InitStruct* member with its default value. Example: LL_ADC_INJ_StructInit(LL_ADC_INJ_InitTypeDef *ADC_INJ_InitStruct)
LL_PPP_CommonInit	*ErrorStatus*	• *PPP_TypeDef* PPPx* • *LL_PPP_CommonInitTypeDef* PPP_CommonInitStruct*	Initializes the common features shared between different instances of the same peripheral. Example: LL_ADC_CommonInit(ADC_Common_TypeDef *ADCxy_COMMON, LL_ADC_CommonInitTypeDef *ADC_CommonInitStruct)
LL_PPP_CommonStructInit	*void*	*LL_PPP_CommonInitTypeDef* PPP_CommonInitStruct*	Fills each *PPP_CommonInitStruct* member with its default value Example: LL_ADC_CommonStructInit(LL_ADC_CommonInitTypeDef *ADC_CommonInitStruct)
LL_PPP_ClockInit	*ErrorStatus*	• *PPP_TypeDef* PPPx*	Initializes the peripheral clock configuration in synchronous mode.

Functions	Return Type	Parameters	Examples
		• *LL_PPP_ClockInitTypeDef* PPP_ClockInitStruct*	Example: LL_USART_ClockInit(USART_TypeDef *USARTx, LL_USART_ClockInitTypeDef *USART_ClockInitStruct)
LL_PPP_ClockStructInit	*void*	*LL_PPP_ClockInitTypeDef* PPP_ClockInitStruct*	Fills each *PPP_ClockInitStruct* member with its default value Example: LL_USART_ClockStructInit(LL_USART_ClockInitTypeDef *USART_ClockInitStruct)

4.2.1.1 *Run-time checking*

Like HAL drivers, LL initialization functions implement run-time failure detection by checking the input values of all LL driver functions. For more details please refer to Section 3.12.4.3 Run-time checking.

When using the LL drivers in standalone mode (without calling HAL functions), the following actions are required to use run-time checking:

1. Copy stm32_assert_template.h to the application folder and rename it to stm32_assert.h. This file defines the assert_param macro which is used when run-time checking is enabled.
2. Include stm32_assert.h file within the application main header file.
3. Add the USE_FULL_ASSERT compilation switch in the toolchain compiler preprocessor or in any generic header file which is processed before the stm32_assert.h driver.

Note: Run-time checking is not available for LL inline functions.

4.2.2 Peripheral register-level configuration functions

On top of the peripheral initialization functions, the LL drivers offer a set of inline functions for direct atomic register access. Their format is as follows:

```
__STATIC_INLINE return_type LL_PPP_Function (PPPx_TypeDef *PPPx, args)
```

The “Function” naming is defined depending to the action category:

- **Specific Interrupt, DMA request and status flags management**: Set/Get/Clear/Enable/Disable flags on interrupt and status registers

Table 19. Specific Interrupt, DMA request and status flags management

Name	Examples
LL_PPP_{_CATEGORY}_ActionItem_BITNAME *LL_PPP{_CATEGORY}_IsItem_BITNAME_Action*	• LL_RCC_IsActiveFlag_LSIRDY • LL_RCC_IsActiveFlag_FWRST() • LL_ADC_ClearFlag_EOC(ADC1) • LL_DMA_ClearFlag_TCx(DMA_TypeDef* DMAx)

Table 20. Available function formats

Item	Action	Format
Flag	Get	*LL_PPP_IsActiveFlag_BITNAME*
	Clear	*LL_PPP_ClearFlag_BITNAME*
Interrupts	Enable	*LL_PPP_EnableIT_BITNAME*
	Disable	*LL_PPP_DisableIT_BITNAME*
	Get	*LL_PPP_IsEnabledIT_BITNAME*
DMA	Enable	*LL_PPP_EnableDMAReq_BITNAME*
	Disable	*LL_PPP_DisableDMAReq_BITNAME*
	Get	*LL_PPP_IsEnabledDMAReq_BITNAME*

Note: BITNAME refers to the peripheral register bit name as described in the product line reference manual.

- **Peripheral clock activation/deactivation management**: Enable/Disable/Reset a peripheral clock

Table 21. Peripheral clock activation/deactivation management

Name	Examples
LL_BUS_GRPx_ActionClock{Mode}	• *LL_AHB2_GRP1_EnableClock (LL_AHB2_GRP1_PERIPH_GPIOA| LL_AHB2_GRP1_PERIPH_GPIOB)* • *LL_APB1_GRP1_EnableClockSleep (LL_APB1_GRP1_PERIPH_DAC1)*

Note: 'x' corresponds to the group index and refers to the index of the modified register on a given bus. 'bus' corresponds to the bus name.

- ***Peripheral activation/deactivation management*** : Enable/disable a peripheral or activate/deactivate specific peripheral features

Table 22. Peripheral activation/deactivation management

Name	Examples
LL_PPP{_CATEGORY}_Action{Item} *LL_PPP{_CATEGORY}_IsItemAction*	• *LL_ADC_Enable ()* • *LL_ADC_StartCalibration();* • *LL_ADC_IsCalibrationOnGoing;* • *LL_RCC_HSI_Enable ()* • *LL_RCC_HSI_IsReady()*

- ***Peripheral configuration management*** : Set/get a peripheral configuration settings

Table 23. Peripheral configuration management

Name	Examples
LL_PPP{_CATEGORY}_Set{ or Get}ConfigItem	*LL_USART_SetBaudRate (USART2, Clock, LL_USART_BAUDRATE_9600)*

- ***Peripheral register management*** : Write/read the content of a register/retrun DMA relative register address

Table 24. Peripheral register management

Name
LL_PPP_WriteReg(__INSTANCE__, __REG__, __VALUE__)
LL_PPP_ReadReg(__INSTANCE__, __REG__)
*LL_PPP_DMA_GetRegAddr (PPP_TypeDef *PPPx,{Sub Instance if any ex: Channel} , {uint32_t Propriety})*

Note: The Propriety is a variable used to identify the DMA transfer direction or the data register type.

5 Cohabiting of HAL and LL

The low-ayer APIs are designed to be used in standalone mode or combined with the HAL. They cannot be automatically used with the HAL for the same peripheral instance. If you use the LL APIs for a specific instance, you can still use the HAL APIs for other instances. Be careful that the low-layer APIs might overwrite some registers which content is mirrored in the HAL handles.

5.1 Low-layer driver used in Standalone mode

The low-layer APIs can be used without calling the HAL driver services. This is done by simply including stm32g4xx_ll_ppp.h in the application files. The LL APIs for a given peripheral are called by executing the same sequence as the one recommended by the programming model in the corresponding product line reference manual. In this case the HAL drivers associated to the used peripheral can be removed from the workspace. However the STM32CubeG4 framework should be used in the same way as in the HAL drivers case which means that System file, startup file and CMSIS should always be used.

Note: When the BSP drivers are included, the used HAL drivers associated with the BSP functions drivers should be included in the workspace, even if they are not used by the application layer.

5.2 Mixed use of low-layer APIs and HAL drivers

In this case the low-layer APIs are used in conjunction with the HAL drivers to achieve direct and register level based operations.

Mixed use is allowed, however some consideration should be taken into account:

- It is recommended to avoid using simultaneously the HAL APIs and the combination of low-layer APIs for a given peripheral instance. If this is the case, one or more private fields in the HAL PPP handle structure should be updated accordingly.
- For operations and processes that do not alter the handle fields including the initialization structure, the HAL driver APIs and the low-layer services can be used together for the same peripheral instance.
- The low-layer drivers can be used without any restriction with all the HAL drivers that are not based on handle objects (RCC, common HAL, flash and GPIO).

Several examples showing how to use HAL and LL in the same application are provided within stm32g4 firmware package (refer to Examples_MIX projects).

Note:

1. *When the HAL Init/DeInit APIs are not used and are replaced by the low-layer macros, the InitMsp() functions are not called and the MSP initialization should be done in the user application.*
2. *When process APIs are not used and the corresponding function is performed through the low-layer APIs, the callbacks are not called and post processing or error management should be done by the user application.*
3. *When the LL APIs is used for process operations, the IRQ handler HAL APIs cannot be called and the IRQ should be implemented by the user application. Each LL driver implements the macros needed to read and clear the associated interrupt flags.*

6 HAL System Driver

6.1 HAL Firmware driver API description

The following section lists the various functions of the HAL library.

6.1.1 How to use this driver

The common HAL driver contains a set of generic and common APIs that can be used by the PPP peripheral drivers and the user to start using the HAL.

The HAL contains two APIs' categories:

- Common HAL APIs
- Services HAL APIs

6.1.2 Initialization and Configuration functions

This section provides functions allowing to:

- Initialize the Flash interface the NVIC allocation and initial time base clock configuration.
- De-Initialize common part of the HAL.
- Configure the time base source to have 1ms time base with a dedicated Tick interrupt priority.
  - SysTick timer is used by default as source of time base, but user can eventually implement his proper time base source (a general purpose timer for example or other time source), keeping in mind that Time base duration should be kept 1ms since PPP_TIMEOUT_VALUEs are defined and handled in milliseconds basis.
  - Time base configuration function (HAL_InitTick ()) is called automatically at the beginning of the program after reset by HAL_Init() or at any time when clock is configured, by HAL_RCC_ClockConfig().
  - Source of time base is configured to generate interrupts at regular time intervals. Care must be taken if HAL_Delay() is called from a peripheral ISR process, the Tick interrupt line must have higher priority (numerically lower) than the peripheral interrupt. Otherwise the caller ISR process will be blocked.
  - functions affecting time base configurations are declared as __weak to make override possible in case of other implementations in user file.

This section contains the following APIs:

- ***HAL_Init***
- ***HAL_DeInit***
- ***HAL_MspInit***
- ***HAL_MspDeInit***
- ***HAL_InitTick***

6.1.3 HAL Control functions

This section provides functions allowing to:

- Provide a tick value in millisecond
- Provide a blocking delay in millisecond
- Suspend the time base source interrupt
- Resume the time base source interrupt
- Get the HAL API driver version
- Get the device identifier
- Get the device revision identifier

This section contains the following APIs:

- ***HAL_IncTick***
- ***HAL_GetTick***
- ***HAL_GetTickPrio***
- ***HAL_SetTickFreq***

- *HAL_GetTickFreq*
- *HAL_Delay*
- *HAL_SuspendTick*
- *HAL_ResumeTick*
- *HAL_GetHalVersion*
- *HAL_GetREVID*
- *HAL_GetDEVID*

6.1.4 HAL Debug functions

This section provides functions allowing to:

- Enable/Disable Debug module during SLEEP mode
- Enable/Disable Debug module during STOP0/STOP1/STOP2 modes
- Enable/Disable Debug module during STANDBY mode

This section contains the following APIs:

- *HAL_DBGMCU_EnableDBGSleepMode*
- *HAL_DBGMCU_DisableDBGSleepMode*
- *HAL_DBGMCU_EnableDBGStopMode*
- *HAL_DBGMCU_DisableDBGStopMode*
- *HAL_DBGMCU_EnableDBGStandbyMode*
- *HAL_DBGMCU_DisableDBGStandbyMode*

6.1.5 HAL SYSCFG configuration functions

This section provides functions allowing to:

- Start a hardware CCMSRAM erase operation
- Enable/Disable the Internal FLASH Bank Swapping
- Configure the Voltage reference buffer
- Enable/Disable the Voltage reference buffer
- Enable/Disable the I/O analog switch voltage booster

This section contains the following APIs:

- *HAL_SYSCFG_CCMSRAMErase*
- *HAL_SYSCFG_EnableMemorySwappingBank*
- *HAL_SYSCFG_DisableMemorySwappingBank*
- *HAL_SYSCFG_VREFBUF_VoltageScalingConfig*
- *HAL_SYSCFG_VREFBUF_HighImpedanceConfig*
- *HAL_SYSCFG_VREFBUF_TrimmingConfig*
- *HAL_SYSCFG_EnableVREFBUF*
- *HAL_SYSCFG_DisableVREFBUF*
- *HAL_SYSCFG_EnableIOSwitchBooster*
- *HAL_SYSCFG_DisableIOSwitchBooster*
- *HAL_SYSCFG_EnableIOSwitchVDD*
- *HAL_SYSCFG_DisableIOSwitchVDD*
- *HAL_SYSCFG_CCMSRAM_WriteProtectionEnable*

6.1.6 Detailed description of functions

HAL_Init

Function name

HAL_StatusTypeDef HAL_Init (void)

Function description

This function is used to configure the Flash prefetch, the Instruction and Data caches, the time base source, NVIC and any required global low level hardware by calling the HAL_MspInit() callback function to be optionally defined in user file stm32g4xx_hal_msp.c.

Return values

- **HAL:** status

Notes

- HAL_Init() function is called at the beginning of program after reset and before the clock configuration.
- In the default implementation the System Timer (Systick) is used as source of time base. The Systick configuration is based on HSI clock, as HSI is the clock used after a system Reset and the NVIC configuration is set to Priority group 4. Once done, time base tick starts incrementing: the tick variable counter is incremented each 1ms in the SysTick_Handler() interrupt handler.

HAL_DeInit

Function name

HAL_StatusTypeDef HAL_DeInit (void)

Function description

This function de-initializes common part of the HAL and stops the source of time base.

Return values

- **HAL:** status

Notes

- This function is optional.

HAL_MspInit

Function name

void HAL_MspInit (void)

Function description

Initialize the MSP.

Return values

- **None:**

HAL_MspDeInit

Function name

void HAL_MspDeInit (void)

Function description

DeInitializes the MSP.

Return values

- **None:**

HAL_InitTick

Function name

HAL_StatusTypeDef HAL_InitTick (uint32_t TickPriority)

Function description

This function configures the source of the time base: The time source is configured to have 1ms time base with a dedicated Tick interrupt priority.

Parameters

- **TickPriority:** Tick interrupt priority.

Return values

- **HAL:** status

Notes

- This function is called automatically at the beginning of program after reset by HAL_Init() or at any time when clock is reconfigured by HAL_RCC_ClockConfig().
- In the default implementation, SysTick timer is the source of time base. It is used to generate interrupts at regular time intervals. Care must be taken if HAL_Delay() is called from a peripheral ISR process, The SysTick interrupt must have higher priority (numerically lower) than the peripheral interrupt. Otherwise the caller ISR process will be blocked. The function is declared as __weak to be overwritten in case of other implementation in user file.

HAL_IncTick

Function name

void HAL_IncTick (void)

Function description

This function is called to increment a global variable "uwTick" used as application time base.

Return values

- **None:**

Notes

- In the default implementation, this variable is incremented each 1ms in SysTick ISR.
- This function is declared as __weak to be overwritten in case of other implementations in user file.

HAL_Delay

Function name

void HAL_Delay (uint32_t Delay)

Function description

This function provides minimum delay (in milliseconds) based on variable incremented.

Parameters

- **Delay:** specifies the delay time length, in milliseconds.

Return values

- **None:**

Notes

- In the default implementation , SysTick timer is the source of time base. It is used to generate interrupts at regular time intervals where uwTick is incremented.
- This function is declared as __weak to be overwritten in case of other implementations in user file.

HAL_GetTick

Function name

uint32_t HAL_GetTick (void)

Function description

Provides a tick value in millisecond.

Return values

- **tick:** value

Notes

- This function is declared as __weak to be overwritten in case of other implementations in user file.

HAL_GetTickPrio

Function name

uint32_t HAL_GetTickPrio (void)

Function description

This function returns a tick priority.

Return values

- **tick:** priority

HAL_SetTickFreq

Function name

HAL_StatusTypeDef HAL_SetTickFreq (uint32_t Freq)

Function description

Set new tick Freq.

Return values

- **status:**

HAL_GetTickFreq

Function name

uint32_t HAL_GetTickFreq (void)

Function description

Returns tick frequency.

Return values

- **tick:** period in Hz

HAL_SuspendTick

Function name

void HAL_SuspendTick (void)

Function description

Suspends Tick increment.

Return values

- **None:**

Notes

- In the default implementation , SysTick timer is the source of time base. It is used to generate interrupts at regular time intervals. Once HAL_SuspendTick() is called, the SysTick interrupt will be disabled and so Tick increment is suspended.
- This function is declared as __weak to be overwritten in case of other implementations in user file.

HAL_ResumeTick

Function name

void HAL_ResumeTick (void)

Function description

Resume Tick increment.

Return values

- **None:**

Notes

- In the default implementation , SysTick timer is the source of time base. It is used to generate interrupts at regular time intervals. Once HAL_ResumeTick() is called, the SysTick interrupt will be enabled and so Tick increment is resumed.
- This function is declared as __weak to be overwritten in case of other implementations in user file.

HAL_GetHalVersion

Function name

uint32_t HAL_GetHalVersion (void)

Function description

Returns the HAL revision.

Return values

- **version:** : 0xXYZR (8bits for each decimal, R for RC)

HAL_GetREVID

Function name

uint32_t HAL_GetREVID (void)

Function description

Returns the device revision identifier.

Return values

- **Device:** revision identifier

HAL_GetDEVID

Function name

uint32_t HAL_GetDEVID (void)

Function description

Returns the device identifier.

Return values

- **Device:** identifier

HAL_DBGMCU_EnableDBGSleepMode

Function name

void HAL_DBGMCU_EnableDBGSleepMode (void)

Function description

Enable the Debug Module during SLEEP mode.

Return values

- **None:**

HAL_DBGMCU_DisableDBGSleepMode

Function name

void HAL_DBGMCU_DisableDBGSleepMode (void)

Function description

Disable the Debug Module during SLEEP mode.

Return values

- **None:**

HAL_DBGMCU_EnableDBGStopMode

Function name

void HAL_DBGMCU_EnableDBGStopMode (void)

Function description

Enable the Debug Module during STOP0/STOP1/STOP2 modes.

Return values

- **None:**

HAL_DBGMCU_DisableDBGStopMode

Function name

void HAL_DBGMCU_DisableDBGStopMode (void)

Function description

Disable the Debug Module during STOP0/STOP1/STOP2 modes.

Return values

- **None:**

HAL_DBGMCU_EnableDBGStandbyMode

Function name

void HAL_DBGMCU_EnableDBGStandbyMode (void)

Function description

Enable the Debug Module during STANDBY mode.

Return values

- **None:**

HAL_DBGMCU_DisableDBGStandbyMode

Function name

void HAL_DBGMCU_DisableDBGStandbyMode (void)

Function description

Disable the Debug Module during STANDBY mode.

Return values

- **None:**

HAL_SYSCFG_CCMSRAMErase

Function name

void HAL_SYSCFG_CCMSRAMErase (void)

Function description

Start a hardware CCMSRAM erase operation.

Return values

- **None:**

Notes

- As long as CCMSRAM is not erased the CCMER bit will be set. This bit is automatically reset at the end of the CCMSRAM erase operation.

HAL_SYSCFG_EnableMemorySwappingBank

Function name

void HAL_SYSCFG_EnableMemorySwappingBank (void)

Function description

Enable the Internal FLASH Bank Swapping.

Return values

- **None:**

Notes

- This function can be used only for STM32G4xx devices.
- Flash Bank2 mapped at 0x08000000 (and aliased @0x00000000) and Flash Bank1 mapped at 0x08040000 (and aliased at 0x00040000)

HAL_SYSCFG_DisableMemorySwappingBank

Function name

void HAL_SYSCFG_DisableMemorySwappingBank (void)

Function description

Disable the Internal FLASH Bank Swapping.

Return values

- **None:**

Notes

- This function can be used only for STM32G4xx devices.
- The default state : Flash Bank1 mapped at 0x08000000 (and aliased @0x0000 0000) and Flash Bank2 mapped at 0x08040000 (and aliased at 0x00040000)

HAL_SYSCFG_VREFBUF_VoltageScalingConfig

Function name

void HAL_SYSCFG_VREFBUF_VoltageScalingConfig (uint32_t VoltageScaling)

Function description

Configure the internal voltage reference buffer voltage scale.

Parameters

- **VoltageScaling:** specifies the output voltage to achieve This parameter can be one of the following values:
  - SYSCFG_VREFBUF_VOLTAGE_SCALE0: VREFBUF_OUT around 2.048 V. This requires VDDA equal to or higher than 2.4 V.
  - SYSCFG_VREFBUF_VOLTAGE_SCALE1: VREFBUF_OUT around 2.5 V. This requires VDDA equal to or higher than 2.8 V.
  - SYSCFG_VREFBUF_VOLTAGE_SCALE2: VREFBUF_OUT around 2.9 V. This requires VDDA equal to or higher than 3.15 V.

Return values

- **None:**

HAL_SYSCFG_VREFBUF_HighImpedanceConfig

Function name

void HAL_SYSCFG_VREFBUF_HighImpedanceConfig (uint32_t Mode)

Function description

Configure the internal voltage reference buffer high impedance mode.

Parameters

- **Mode:** specifies the high impedance mode This parameter can be one of the following values:
  - SYSCFG_VREFBUF_HIGH_IMPEDANCE_DISABLE: VREF+ pin is internally connect to VREFINT output.
  - SYSCFG_VREFBUF_HIGH_IMPEDANCE_ENABLE: VREF+ pin is high impedance.

Return values

- **None:**

HAL_SYSCFG_VREFBUF_TrimmingConfig

Function name

void HAL_SYSCFG_VREFBUF_TrimmingConfig (uint32_t TrimmingValue)

Function description

Tune the Internal Voltage Reference buffer (VREFBUF).

Parameters

- **TrimmingValue:** specifies trimming code for VREFBUF calibration This parameter can be a number between Min_Data = 0x00 and Max_Data = 0x3F

Return values

- **None:**

HAL_SYSCFG_EnableVREFBUF

Function name

HAL_StatusTypeDef HAL_SYSCFG_EnableVREFBUF (void)

Function description

Enable the Internal Voltage Reference buffer (VREFBUF).

Return values

- **HAL_OK/HAL_TIMEOUT:**

HAL_SYSCFG_DisableVREFBUF

Function name

void HAL_SYSCFG_DisableVREFBUF (void)

Function description

Disable the Internal Voltage Reference buffer (VREFBUF).

Return values

- **None:**

HAL_SYSCFG_EnableIOSwitchBooster

Function name

void HAL_SYSCFG_EnableIOSwitchBooster (void)

Function description

Enable the I/O analog switch voltage booster.

Return values

- **None:**

HAL_SYSCFG_DisableIOSwitchBooster

Function name

void HAL_SYSCFG_DisableIOSwitchBooster (void)

Function description

Disable the I/O analog switch voltage booster.

Return values

- **None:**

HAL_SYSCFG_EnableIOSwitchVDD

Function name

void HAL_SYSCFG_EnableIOSwitchVDD (void)

Function description

Enable the I/O analog switch voltage by VDD.

Return values

- **None:**

HAL_SYSCFG_DisableIOSwitchVDD

Function name

void HAL_SYSCFG_DisableIOSwitchVDD (void)

Function description

Disable the I/O analog switch voltage by VDD.

Return values

- **None:**

HAL_SYSCFG_CCMSRAM_WriteProtectionEnable

Function name

void HAL_SYSCFG_CCMSRAM_WriteProtectionEnable (uint32_t Page)

Function description

CCMSRAM page write protection enable.

Parameters

- **Page:** This parameter is a long 32bit value and can be a value of CCM Write protection

Return values

- **None:**

Notes

- write protection can only be disabled by a system reset

SYSCFG Exported Macros

__HAL_SYSCFG_REMAPMEMORY_FLASH

__HAL_SYSCFG_REMAPMEMORY_SYSTEMFLASH

__HAL_SYSCFG_REMAPMEMORY_SRAM

__HAL_SYSCFG_REMAPMEMORY_FMC

__HAL_SYSCFG_REMAPMEMORY_QUADSPI

__HAL_SYSCFG_GET_BOOT_MODE

Description:

- Return the boot mode as configured by user.

Return value:

- The: boot mode as configured by user. The returned value can be one of the following values:
  - SYSCFG_BOOT_MAINFLASH
  - SYSCFG_BOOT_SYSTEMFLASH
  - SYSCFG_BOOT_FMC (*)
  - SYSCFG_BOOT_QUADSPI (*)
  - SYSCFG_BOOT_SRAM

Notes:

- (*) availability depends on devices

__HAL_SYSCFG_CCMSRAM_WRP_1_31_ENABLE

Description:

- CCMSRAM page write protection enable macro.

Parameters:

- __CCMSRAMWRP__: This parameter can be a value of

Return value:

- None

Notes:

- write protection can only be disabled by a system reset

__HAL_SYSCFG_CCMSRAM_WRP_0_31_ENABLE

__HAL_SYSCFG_CCMSRAM_WRP_UNLOCK

Notes:

- Writing a wrong key reactivates the write protection

__HAL_SYSCFG_CCMSRAM_ERASE

Notes:

- __SYSCFG_GET_FLAG(SYSCFG_FLAG_CCMSRAM_BUSY) may be used to check end of erase

__HAL_SYSCFG_FPU_INTERRUPT_ENABLE

Description:

- Floating Point Unit interrupt enable/disable macros.

Parameters:

- __INTERRUPT__: This parameter can be a value of

__HAL_SYSCFG_FPU_INTERRUPT_DISABLE

__HAL_SYSCFG_BREAK_ECC_LOCK

Notes:

- The selected configuration is locked and can be unlocked only by system reset.

Enable and lock the connection of Flash ECC error connection to TIM1/8/15/16/17 Break input.

__HAL_SYSCFG_BREAK_LOCKUP_LOCK

Notes:

- The selected configuration is locked and can be unlocked only by system reset.

Enable and lock the connection of Cortex-M4 LOCKUP (Hardfault) output to TIM1/8/15/16/17 Break input.

__HAL_SYSCFG_BREAK_PVD_LOCK

Notes:

- The selected configuration is locked and can be unlocked only by system reset.

Enable and lock the PVD connection to Timer1/8/15/16/17 Break input, as well as the PVDE and PLS[2:0] in the PWR_CR2 register.

__HAL_SYSCFG_BREAK_SRAMPARITY_LOCK

Notes:

- The selected configuration is locked and can be unlocked by system reset.

Enable and lock the SRAM parity error (first 32kB of SRAM1 + CCM SRAM) signal connection to TIM1/8/15/16/17 Break input.

__HAL_SYSCFG_GET_FLAG

Description:

- Check SYSCFG flag is set or not.

Parameters:

- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - SYSCFG_FLAG_SRAM_PE SRAM Parity Error Flag
  - SYSCFG_FLAG_CCMSRAM_BUSY CCMSRAM Erase Ongoing

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_SYSCFG_CLEAR_FLAG

__HAL_SYSCFG_FASTMODEPLUS_ENABLE

Description:

- Fast-mode Plus driving capability enable/disable macros.

Parameters:

- __FASTMODEPLUS__: This parameter can be a value of :
  - SYSCFG_FASTMODEPLUS_PB6 Fast-mode Plus driving capability activation on PB6
  - SYSCFG_FASTMODEPLUS_PB7 Fast-mode Plus driving capability activation on PB7
  - SYSCFG_FASTMODEPLUS_PB8 Fast-mode Plus driving capability activation on PB8
  - SYSCFG_FASTMODEPLUS_PB9 Fast-mode Plus driving capability activation on PB9

__HAL_SYSCFG_FASTMODEPLUS_DISABLE

Fast-mode Plus on GPIO

SYSCFG_FASTMODEPLUS_PB6

Enable Fast-mode Plus on PB6

SYSCFG_FASTMODEPLUS_PB7

Enable Fast-mode Plus on PB7

SYSCFG_FASTMODEPLUS_PB8

Enable Fast-mode Plus on PB8

SYSCFG_FASTMODEPLUS_PB9

Enable Fast-mode Plus on PB9

Flags

SYSCFG_FLAG_SRAM_PE

SRAM parity error (first 32kB of SRAM1 + CCM SRAM)

SYSCFG_FLAG_CCMSRAM_BUSY

CCMSRAM busy by erase operation

FPU Interrupts

SYSCFG_IT_FPU_IOC

Floating Point Unit Invalid operation Interrupt

SYSCFG_IT_FPU_DZC

Floating Point Unit Divide-by-zero Interrupt

SYSCFG_IT_FPU_UFC

Floating Point Unit Underflow Interrupt

SYSCFG_IT_FPU_OFC

Floating Point Unit Overflow Interrupt

SYSCFG_IT_FPU_IDC

Floating Point Unit Input denormal Interrupt

SYSCFG_IT_FPU_IXC

Floating Point Unit Inexact Interrupt

VREFBUF High Impedance

SYSCFG_VREFBUF_HIGH_IMPEDANCE_DISABLE

VREF_plus pin is internally connected to Voltage reference buffer output

SYSCFG_VREFBUF_HIGH_IMPEDANCE_ENABLE

VREF_plus pin is high impedance

VREFBUF Voltage Scale

SYSCFG_VREFBUF_VOLTAGE_SCALE0

Voltage reference scale 0 (VREFBUF_OUT = 2.048V)

SYSCFG_VREFBUF_VOLTAGE_SCALE1

Voltage reference scale 1 (VREFBUF_OUT = 2.5V)

SYSCFG_VREFBUF_VOLTAGE_SCALE2

Voltage reference scale 2 (VREFBUF_OUT = 2.9V)

7 HAL ADC Generic Driver

7.1 ADC Firmware driver registers structures

7.1.1 ADC_OversamplingTypeDef

ADC_OversamplingTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***uint32_t Ratio***
- ***uint32_t RightBitShift***
- ***uint32_t TriggeredMode***
- ***uint32_t OversamplingStopReset***

Field Documentation

- ***uint32_t ADC_OversamplingTypeDef::Ratio***
  Configures the oversampling ratio. This parameter can be a value of ***ADC_HAL_EC_OVS_RATIO***
- ***uint32_t ADC_OversamplingTypeDef::RightBitShift***
  Configures the division coefficient for the Oversampler. This parameter can be a value of ***ADC_HAL_EC_OVS_SHIFT***
- ***uint32_t ADC_OversamplingTypeDef::TriggeredMode***
  Selects the regular triggered oversampling mode. This parameter can be a value of ***ADC_HAL_EC_OVS_DISCONT_MODE***
- ***uint32_t ADC_OversamplingTypeDef::OversamplingStopReset***
  Selects the regular oversampling mode. The oversampling is either temporary stopped or reset upon an injected sequence interruption. If oversampling is enabled on both regular and injected groups, this parameter is discarded and forced to setting "ADC_REGOVERSAMPLING_RESUMED_MODE" (the oversampling buffer is zeroed during injection sequence). This parameter can be a value of ***ADC_HAL_EC_OVS_SCOPE_REG***

7.1.2 ADC_InitTypeDef

ADC_InitTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***uint32_t ClockPrescaler***
- ***uint32_t Resolution***
- ***uint32_t DataAlign***
- ***uint32_t GainCompensation***
- ***uint32_t ScanConvMode***
- ***uint32_t EOCSelection***
- ***FunctionalState LowPowerAutoWait***
- ***FunctionalState ContinuousConvMode***
- ***uint32_t NbrOfConversion***
- ***FunctionalState DiscontinuousConvMode***
- ***uint32_t NbrOfDiscConversion***
- ***uint32_t ExternalTrigConv***
- ***uint32_t ExternalTrigConvEdge***
- ***uint32_t SamplingMode***
- ***FunctionalState DMAContinuousRequests***
- ***uint32_t Overrun***
- ***FunctionalState OversamplingMode***
- ***ADC_OversamplingTypeDef Oversampling***

Field Documentation

- ***uint32_t ADC_InitTypeDef::ClockPrescaler***

  Select ADC clock source (synchronous clock derived from APB clock or asynchronous clock derived from system clock or PLL (Refer to reference manual for list of clocks available)) and clock prescaler. This parameter can be a value of ***ADC_HAL_EC_COMMON_CLOCK_SOURCE***. Note: The ADC clock configuration is common to all ADC instances. Note: In case of usage of channels on injected group, ADC frequency should be lower than AHB clock frequency /4 for resolution 12 or 10 bits, AHB clock frequency /3 for resolution 8 bits, AHB clock frequency /2 for resolution 6 bits. Note: In case of synchronous clock mode based on HCLK/1, the configuration must be enabled only if the system clock has a 50% duty clock cycle (APB prescaler configured inside RCC must be bypassed and PCLK clock must have 50% duty cycle). Refer to reference manual for details. Note: In case of usage of asynchronous clock, the selected clock must be preliminarily enabled at RCC top level. Note: This parameter can be modified only if all ADC instances are disabled.

- ***uint32_t ADC_InitTypeDef::Resolution***

  Configure the ADC resolution. This parameter can be a value of ***ADC_HAL_EC_RESOLUTION***

- ***uint32_t ADC_InitTypeDef::DataAlign***

  Specify ADC data alignment in conversion data register (right or left). Refer to reference manual for alignments formats versus resolutions. This parameter can be a value of ***ADC_HAL_EC_DATA_ALIGN***

- ***uint32_t ADC_InitTypeDef::GainCompensation***

  Specify the ADC gain compensation coefficient to be applied to ADC raw conversion data, based on following formula: DATA = DATA(raw) * (gain compensation coef) / 4096 2.12 bit format, unsigned: 2 bits exponents / 12 bits mantissa Gain step is 1/4096 = 0.000244 Gain range is 0.0000 to 3.999756 This parameter value can be 0 Gain compensation will be disabled and coefficient set to 0 1 -> 0x3FFF Gain compensation will be enabled and coefficient set to specified valueNote: Gain compensation when enabled is appied to all channels.

- ***uint32_t ADC_InitTypeDef::ScanConvMode***

  Configure the sequencer of ADC groups regular and injected. This parameter can be associated to parameter 'DiscontinuousConvMode' to have main sequence subdivided in successive parts. If disabled: Conversion is performed in single mode (one channel converted, the one defined in rank 1). Parameters 'NbrOfConversion' and 'InjectedNbrOfConversion' are discarded (equivalent to set to 1). If enabled: Conversions are performed in sequence mode (multiple ranks defined by 'NbrOfConversion' or 'InjectedNbrOfConversion' and rank of each channel in sequencer). Scan direction is upward: from rank 1 to rank 'n'. This parameter can be a value of ***ADC_Scan_mode***

- ***uint32_t ADC_InitTypeDef::EOCSelection***

  Specify which EOC (End Of Conversion) flag is used for conversion by polling and interruption: end of unitary conversion or end of sequence conversions. This parameter can be a value of ***ADC_EOCSelection***.

- ***FunctionalState ADC_InitTypeDef::LowPowerAutoWait***

  Select the dynamic low power Auto Delay: new conversion start only when the previous conversion (for ADC group regular) or previous sequence (for ADC group injected) has been retrieved by user software, using function **HAL_ADC_GetValue()** or **HAL_ADCEx_InjectedGetValue()**. This feature automatically adapts the frequency of ADC conversions triggers to the speed of the system that reads the data. Moreover, this avoids risk of overrun for low frequency applications. This parameter can be set to ENABLE or DISABLE. Note: Do not use with interruption or DMA (**HAL_ADC_Start_IT()**, **HAL_ADC_Start_DMA()**) since they clear immediately the EOC flag to free the IRQ vector sequencer. Do use with polling: 1. Start conversion with **HAL_ADC_Start()**, 2. Later on, when ADC conversion data is needed: use **HAL_ADC_PollForConversion()** to ensure that conversion is completed and **HAL_ADC_GetValue()** to retrieve conversion result and trig another conversion start. (in case of usage of ADC group injected, use the equivalent functions HAL_ADCExInjected_Start(), **HAL_ADCEx_InjectedGetValue()**, ...).

- ***FunctionalState ADC_InitTypeDef::ContinuousConvMode***

  Specify whether the conversion is performed in single mode (one conversion) or continuous mode for ADC group regular, after the first ADC conversion start trigger occurred (software start or external trigger). This parameter can be set to ENABLE or DISABLE.

- ***uint32_t ADC_InitTypeDef::NbrOfConversion***

  Specify the number of ranks that will be converted within the regular group sequencer. To use the regular group sequencer and convert several ranks, parameter 'ScanConvMode' must be enabled. This parameter must be a number between Min_Data = 1 and Max_Data = 16. Note: This parameter must be modified when no conversion is on going on regular group (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***FunctionalState ADC_InitTypeDef::DiscontinuousConvMode***

  Specify whether the conversions sequence of ADC group regular is performed in Complete-sequence/ Discontinuous-sequence (main sequence subdivided in successive parts). Discontinuous mode is used only if sequencer is enabled (parameter 'ScanConvMode'). If sequencer is disabled, this parameter is discarded. Discontinuous mode can be enabled only if continuous mode is disabled. If continuous mode is enabled, this parameter setting is discarded. This parameter can be set to ENABLE or DISABLE.

- ***uint32_t ADC_InitTypeDef::NbrOfDiscConversion***

  Specifies the number of discontinuous conversions in which the main sequence of ADC group regular (parameter NbrOfConversion) will be subdivided. If parameter 'DiscontinuousConvMode' is disabled, this parameter is discarded. This parameter must be a number between Min_Data = 1 and Max_Data = 8.

- ***uint32_t ADC_InitTypeDef::ExternalTrigConv***

  Select the external event source used to trigger ADC group regular conversion start. If set to ADC_SOFTWARE_START, external triggers are disabled and software trigger is used instead. This parameter can be a value of ***ADC_regular_external_trigger_source***. Caution: external trigger source is common to all ADC instances.

- ***uint32_t ADC_InitTypeDef::ExternalTrigConvEdge***

  Select the external event edge used to trigger ADC group regular conversion start. If trigger source is set to ADC_SOFTWARE_START, this parameter is discarded. This parameter can be a value of ***ADC_regular_external_trigger_edge***

- ***uint32_t ADC_InitTypeDef::SamplingMode***

  Select the sampling mode to be used for ADC group regular conversion. This parameter can be a value of ***ADC_regular_sampling_mode***

- ***FunctionalState ADC_InitTypeDef::DMAContinuousRequests***

  Specify whether the DMA requests are performed in one shot mode (DMA transfer stops when number of conversions is reached) or in continuous mode (DMA transfer unlimited, whatever number of conversions). This parameter can be set to ENABLE or DISABLE. Note: In continuous mode, DMA must be configured in circular mode. Otherwise an overrun will be triggered when DMA buffer maximum pointer is reached.

- ***uint32_t ADC_InitTypeDef::Overrun***

  Select the behavior in case of overrun: data overwritten or preserved (default). This parameter applies to ADC group regular only. This parameter can be a value of ***ADC_HAL_EC_REG_OVR_DATA_BEHAVIOR***. Note: In case of overrun set to data preserved and usage with programming model with interruption (HAL_Start_IT()): ADC IRQ handler has to clear end of conversion flags, this induces the release of the preserved data. If needed, this data can be saved in function **HAL_ADC_ConvCpltCallback()**, placed in user program code (called before end of conversion flags clear). Note: Error reporting with respect to the conversion mode:

  – Usage with ADC conversion by polling for event or interruption: Error is reported only if overrun is set to data preserved. If overrun is set to data overwritten, user can willingly not read all the converted data, this is not considered as an erroneous case.

  – Usage with ADC conversion by DMA: Error is reported whatever overrun setting (DMA is expected to process all data from data register).

- ***FunctionalState ADC_InitTypeDef::OversamplingMode***

  Specify whether the oversampling feature is enabled or disabled. This parameter can be set to ENABLE or DISABLE. Note: This parameter can be modified only if there is no conversion is ongoing on ADC groups regular and injected

- ***ADC_OversamplingTypeDef ADC_InitTypeDef::Oversampling***

  Specify the Oversampling parameters. Caution: this setting overwrites the previous oversampling configuration if oversampling is already enabled.

7.1.3 ADC_ChannelConfTypeDef

ADC_ChannelConfTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***uint32_t Channel***
- ***uint32_t Rank***
- ***uint32_t SamplingTime***
- ***uint32_t SingleDiff***
- ***uint32_t OffsetNumber***
- ***uint32_t Offset***
- ***uint32_t OffsetSign***
- ***FunctionalState OffsetSaturation***

Field Documentation

- ***uint32_t ADC_ChannelConfTypeDef::Channel***

  Specify the channel to configure into ADC regular group. This parameter can be a value of ***ADC_HAL_EC_CHANNEL*** Note: Depending on devices and ADC instances, some channels may not be available on device package pins. Refer to device datasheet for channels availability.

- ***uint32_t ADC_ChannelConfTypeDef::Rank***

  Specify the rank in the regular group sequencer. This parameter can be a value of ***ADC_HAL_EC_REG_SEQ_RANKS*** Note: to disable a channel or change order of conversion sequencer, rank containing a previous channel setting can be overwritten by the new channel setting (or parameter number of conversions adjusted)

- ***uint32_t ADC_ChannelConfTypeDef::SamplingTime***

  Sampling time value to be set for the selected channel. Unit: ADC clock cycles Conversion time is the addition of sampling time and processing time (12.5 ADC clock cycles at ADC resolution 12 bits, 10.5 cycles at 10 bits, 8.5 cycles at 8 bits, 6.5 cycles at 6 bits). This parameter can be a value of ***ADC_HAL_EC_CHANNEL_SAMPLINGTIME*** Caution: This parameter applies to a channel that can be used into regular and/or injected group. It overwrites the last setting. Note: In case of usage of internal measurement channels (VrefInt/Vbat/TempSensor), sampling time constraints must be respected (sampling time can be adjusted in function of ADC clock frequency and sampling time setting) Refer to device datasheet for timings values.

- ***uint32_t ADC_ChannelConfTypeDef::SingleDiff***

  Select single-ended or differential input. In differential mode: Differential measurement is carried out between the selected channel 'i' (positive input) and channel 'i+1' (negative input). Only channel 'i' has to be configured, channel 'i+1' is configured automatically. This parameter must be a value of ***ADC_HAL_EC_CHANNEL_SINGLE_DIFF_ENDING*** Caution: This parameter applies to a channel that can be used in a regular and/or injected group. It overwrites the last setting. Note: Refer to Reference Manual to ensure the selected channel is available in differential mode. Note: When configuring a channel 'i' in differential mode, the channel 'i+1' is not usable separately. Note: This parameter must be modified when ADC is disabled (before ADC start conversion or after ADC stop conversion). If ADC is enabled, this parameter setting is bypassed without error reporting (as it can be the expected behavior in case of another parameter update on the fly)

- ***uint32_t ADC_ChannelConfTypeDef::OffsetNumber***

  Select the offset number This parameter can be a value of ***ADC_HAL_EC_OFFSET_NB*** Caution: Only one offset is allowed per channel. This parameter overwrites the last setting.

- ***uint32_t ADC_ChannelConfTypeDef::Offset***

  Define the offset to be applied on the raw converted data. Offset value must be a positive number. Depending of ADC resolution selected (12, 10, 8 or 6 bits), this parameter must be a number between Min_Data = 0x000 and Max_Data = 0xFFF, 0x3FF, 0xFF or 0x3F respectively. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***uint32_t ADC_ChannelConfTypeDef::OffsetSign***

  Define if the offset should be substracted (negative sign) or added (positive sign) from or to the raw converted data. This parameter can be a value of ***ADCEx_OffsetSign***. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***FunctionalState ADC_ChannelConfTypeDef::OffsetSaturation***

  Define if the offset should be saturated upon under or over flow. This parameter value can be ENABLE or DISABLE. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

7.1.4 ADC_AnalogWDGConfTypeDef

ADC_AnalogWDGConfTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***uint32_t WatchdogNumber***
- ***uint32_t WatchdogMode***
- ***uint32_t Channel***
- ***FunctionalState ITMode***
- ***uint32_t HighThreshold***
- ***uint32_t LowThreshold***
- ***uint32_t FilteringConfig***

Field Documentation

- ***uint32_t ADC_AnalogWDGConfTypeDef::WatchdogNumber***

  Select which ADC analog watchdog is monitoring the selected channel. For Analog Watchdog 1: Only 1 channel can be monitored (or overall group of channels by setting parameter 'WatchdogMode') For Analog Watchdog 2 and 3: Several channels can be monitored (by successive calls of '**HAL_ADC_AnalogWDGConfig()**' for each channel) This parameter can be a value of ***ADC_HAL_EC_AWD_NUMBER***.

- ***uint32_t ADC_AnalogWDGConfTypeDef::WatchdogMode***

  Configure the ADC analog watchdog mode: single/all/none channels. For Analog Watchdog 1: Configure the ADC analog watchdog mode: single channel or all channels, ADC groups regular and-or injected. For Analog Watchdog 2 and 3: Several channels can be monitored by applying successively the AWD init structure. Channels on ADC group regular and injected are not differentiated: Set value 'ADC_ANALOGWATCHDOG_SINGLE_xxx' to monitor 1 channel, value 'ADC_ANALOGWATCHDOG_ALL_xxx' to monitor all channels, 'ADC_ANALOGWATCHDOG_NONE' to monitor no channel. This parameter can be a value of ***ADC_analog_watchdog_mode***.

- ***uint32_t ADC_AnalogWDGConfTypeDef::Channel***

  Select which ADC channel to monitor by analog watchdog. For Analog Watchdog 1: this parameter has an effect only if parameter 'WatchdogMode' is configured on single channel (only 1 channel can be monitored). For Analog Watchdog 2 and 3: Several channels can be monitored. To use this feature, call successively the function **HAL_ADC_AnalogWDGConfig()** for each channel to be added (or removed with value 'ADC_ANALOGWATCHDOG_NONE'). This parameter can be a value of ***ADC_HAL_EC_CHANNEL***.

- ***FunctionalState ADC_AnalogWDGConfTypeDef::ITMode***

  Specify whether the analog watchdog is configured in interrupt or polling mode. This parameter can be set to ENABLE or DISABLE

- ***uint32_t ADC_AnalogWDGConfTypeDef::HighThreshold***

  Configure the ADC analog watchdog High threshold value. Depending of ADC resolution selected (12, 10, 8 or 6 bits), this parameter must be a number between Min_Data = 0x000 and Max_Data = 0xFFF, 0x3FF, 0xFF or 0x3F respectively. Note: Analog watchdog 2 and 3 are limited to a resolution of 8 bits: if ADC resolution is 12 bits the 4 LSB are ignored, if ADC resolution is 10 bits the 2 LSB are ignored. Note: If ADC oversampling is enabled, ADC analog watchdog thresholds are impacted: the comparison of analog watchdog thresholds is done on oversampling final computation (after ratio and shift application): ADC data register bitfield [15:4] (12 most significant bits).

- ***uint32_t ADC_AnalogWDGConfTypeDef::LowThreshold***

  Configures the ADC analog watchdog Low threshold value. Depending of ADC resolution selected (12, 10, 8 or 6 bits), this parameter must be a number between Min_Data = 0x000 and Max_Data = 0xFFF, 0x3FF, 0xFF or 0x3F respectively. Note: Analog watchdog 2 and 3 are limited to a resolution of 8 bits: if ADC resolution is 12 bits the 4 LSB are ignored, if ADC resolution is 10 bits the 2 LSB are ignored. Note: If ADC oversampling is enabled, ADC analog watchdog thresholds are impacted: the comparison of analog watchdog thresholds is done on oversampling final computation (after ratio and shift application): ADC data register bitfield [15:4] (12 most significant bits).

- ***uint32_t ADC_AnalogWDGConfTypeDef::FilteringConfig***

  Specify whether filtering should be use and the number of samples to consider. Before setting flag or raising interrupt, analog watchdog can wait to have several consecutive out-of-window samples. This parameter allows to configure this number. This parameter only applies to Analog watchdog 1. For others, use value ADC_AWD_FILTERING_NONE. This parameter can be a value of ***ADC_analog_watchdog_filtering_config***.

7.1.5 ADC_InjectionConfigTypeDef

ADC_InjectionConfigTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***uint32_t ContextQueue***
- ***uint32_t ChannelCount***

Field Documentation

- ***uint32_t ADC_InjectionConfigTypeDef::ContextQueue***

  Injected channel configuration context: build-up over each **HAL_ADCEx_InjectedConfigChannel()** call to finally initialize JSQR register at **HAL_ADCEx_InjectedConfigChannel()** last call

- ***uint32_t ADC_InjectionConfigTypeDef::ChannelCount***

  Number of channels in the injected sequence

7.1.6 ADC_HandleTypeDef

ADC_HandleTypeDef is defined in the stm32g4xx_hal_adc.h

Data Fields

- ***ADC_TypeDef * Instance***
- ***ADC_InitTypeDef Init***
- ***DMA_HandleTypeDef * DMA_Handle***
- ***HAL_LockTypeDef Lock***
- ***__IO uint32_t State***
- ***__IO uint32_t ErrorCode***
- ***ADC_InjectionConfigTypeDef InjectionConfig***

Field Documentation

- ***ADC_TypeDef* ADC_HandleTypeDef::Instance***

  Register base address

- ***ADC_InitTypeDef ADC_HandleTypeDef::Init***

  ADC initialization parameters and regular conversions setting

- ***DMA_HandleTypeDef* ADC_HandleTypeDef::DMA_Handle***

  Pointer DMA Handler

- ***HAL_LockTypeDef ADC_HandleTypeDef::Lock***

  ADC locking object

- ***__IO uint32_t ADC_HandleTypeDef::State***

  ADC communication state (bitmap of ADC states)

- ***__IO uint32_t ADC_HandleTypeDef::ErrorCode***

  ADC Error code

- ***ADC_InjectionConfigTypeDef ADC_HandleTypeDef::InjectionConfig***

  ADC injected channel configuration build-up structure

7.2 ADC Firmware driver API description

The following section lists the various functions of the ADC library.

7.2.1 ADC peripheral features

- 12-bit, 10-bit, 8-bit or 6-bit configurable resolution.
- Interrupt generation at the end of regular conversion and in case of analog watchdog or overrun events.
- Single and continuous conversion modes.
- Scan mode for conversion of several channels sequentially.
- Data alignment with in-built data coherency.
- Programmable sampling time (channel wise)
- External trigger (timer or EXTI) with configurable polarity
- DMA request generation for transfer of conversions data of regular group.
- Configurable delay between conversions in Dual interleaved mode.
- ADC channels selectable single/differential input.
- ADC offset shared on 4 offset instances.
- ADC gain compensation
- ADC calibration
- ADC conversion of regular group.
- ADC supply requirements: 1.62 V to 3.6 V.
- ADC input range: from Vref- (connected to Vssa) to Vref+ (connected to Vdda or to an external voltage reference).

7.2.2 How to use this driver

Configuration of top level parameters related to ADC

1. Enable the ADC interface
   - As prerequisite, ADC clock must be configured at RCC top level.
   - Two clock settings are mandatory:
     - ADC clock (core clock, also possibly conversion clock).
     - ADC clock (conversions clock). Two possible clock sources: synchronous clock derived from AHB clock or asynchronous clock derived from system clock or PLL (output divider P) running up to 75MHz.
     - Example: Into HAL_ADC_MspInit() (recommended code location) or with other device clock parameters configuration:
     - __HAL_RCC_ADC_CLK_ENABLE(); (mandatory) RCC_ADCCLKSOURCE_PLL enable: (optional: if asynchronous clock selected)
     - RCC_PeriphClkInitTypeDef RCC_PeriphClkInit;
     - PeriphClkInit.PeriphClockSelection = RCC_PERIPHCLK_ADC;
     - PeriphClkInit.AdcClockSelection = RCC_ADCCLKSOURCE_PLL;
     - HAL_RCCEx_PeriphCLKConfig(&PeriphClkInit);
   - ADC clock source and clock prescaler are configured at ADC level with parameter "ClockPrescaler" using function HAL_ADC_Init().
2. ADC pins configuration
   - Enable the clock for the ADC GPIOs using macro __HAL_RCC_GPIOx_CLK_ENABLE()
   - Configure these ADC pins in analog mode using function HAL_GPIO_Init()
3. Optionally, in case of usage of ADC with interruptions:
   - Configure the NVIC for ADC using function HAL_NVIC_EnableIRQ(ADCx_IRQn)
   - Insert the ADC interruption handler function HAL_ADC_IRQHandler() into the function of corresponding ADC interruption vector ADCx_IRQHandler().

4. Optionally, in case of usage of DMA:
   – Configure the DMA (DMA channel, mode normal or circular, ...) using function HAL_DMA_Init().
   – Configure the NVIC for DMA using function HAL_NVIC_EnableIRQ(DMAx_Channelx_IRQn)
   – Insert the ADC interruption handler function HAL_ADC_IRQHandler() into the function of corresponding DMA interruption vector DMAx_Channelx_IRQHandler().

Configuration of ADC, group regular, channels parameters

1. Configure the ADC parameters (resolution, data alignment, ...) and regular group parameters (conversion trigger, sequencer, ...) using function HAL_ADC_Init().
2. Configure the channels for regular group parameters (channel number, channel rank into sequencer, ..., into regular group) using function HAL_ADC_ConfigChannel().
3. Optionally, configure the analog watchdog parameters (channels monitored, thresholds, ...) using function HAL_ADC_AnalogWDGConfig().

Execution of ADC conversions

1. Optionally, perform an automatic ADC calibration to improve the conversion accuracy using function HAL_ADCEx_Calibration_Start().
2. ADC driver can be used among three modes: polling, interruption, transfer by DMA.
   – ADC conversion by polling:
      ◦ Activate the ADC peripheral and start conversions using function HAL_ADC_Start()
      ◦ Wait for ADC conversion completion using function HAL_ADC_PollForConversion()
      ◦ Retrieve conversion results using function HAL_ADC_GetValue()
      ◦ Stop conversion and disable the ADC peripheral using function HAL_ADC_Stop()
   – ADC conversion by interruption:
      ◦ Activate the ADC peripheral and start conversions using function HAL_ADC_Start_IT()
      ◦ Wait for ADC conversion completion by call of function HAL_ADC_ConvCpltCallback() (this function must be implemented in user program)
      ◦ Retrieve conversion results using function HAL_ADC_GetValue()
      ◦ Stop conversion and disable the ADC peripheral using function HAL_ADC_Stop_IT()
   – ADC conversion with transfer by DMA:
      ◦ Activate the ADC peripheral and start conversions using function HAL_ADC_Start_DMA()
      ◦ Wait for ADC conversion completion by call of function HAL_ADC_ConvCpltCallback() or HAL_ADC_ConvHalfCpltCallback() (these functions must be implemented in user program)
      ◦ Conversion results are automatically transferred by DMA into destination variable address.
      ◦ Stop conversion and disable the ADC peripheral using function HAL_ADC_Stop_DMA()

Note: Callback functions must be implemented in user program:

- *HAL_ADC_ErrorCallback()*
- *HAL_ADC_LevelOutOfWindowCallback() (callback of analog watchdog)*
- *HAL_ADC_ConvCpltCallback()*
- *HAL_ADC_ConvHalfCpltCallback*

Deinitialization of ADC

1. Disable the ADC interface
   - ADC clock can be hard reset and disabled at RCC top level.
   - Hard reset of ADC peripherals using macro __ADCx_FORCE_RESET(), __ADCx_RELEASE_RESET().
   - ADC clock disable using the equivalent macro/functions as configuration step.
     - Example: Into HAL_ADC_MspDeInit() (recommended code location) or with other device clock parameters configuration:
     - RCC_OscInitStructure.OscillatorType = RCC_OSCILLATORTYPE_HSI14;
     - RCC_OscInitStructure.HSI14State = RCC_HSI14_OFF; (if not used for system clock)
     - HAL_RCC_OscConfig(&RCC_OscInitStructure);
2. ADC pins configuration
   - Disable the clock for the ADC GPIOs using macro __HAL_RCC_GPIOx_CLK_DISABLE()
3. Optionally, in case of usage of ADC with interruptions:
   - Disable the NVIC for ADC using function HAL_NVIC_EnableIRQ(ADCx_IRQn)
4. Optionally, in case of usage of DMA:
   - Deinitialize the DMA using function HAL_DMA_Init().
   - Disable the NVIC for DMA using function HAL_NVIC_EnableIRQ(DMAx_Channelx_IRQn)

Callback registration

The compilation flag USE_HAL_ADC_REGISTER_CALLBACKS, when set to 1, allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_ADC_RegisterCallback() to register an interrupt callback.

Function @ref HAL_ADC_RegisterCallback() allows to register following callbacks:

- ConvCpltCallback : ADC conversion complete callback
- ConvHalfCpltCallback : ADC conversion DMA half-transfer callback
- LevelOutOfWindowCallback : ADC analog watchdog 1 callback
- ErrorCallback : ADC error callback
- InjectedConvCpltCallback : ADC group injected conversion complete callback
- InjectedQueueOverflowCallback : ADC group injected context queue overflow callback
- LevelOutOfWindow2Callback : ADC analog watchdog 2 callback
- LevelOutOfWindow3Callback : ADC analog watchdog 3 callback
- EndOfSamplingCallback : ADC end of sampling callback
- MspInitCallback : ADC Msp Init callback
- MspDeInitCallback : ADC Msp DeInit callback This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_ADC_UnRegisterCallback to reset a callback to the default weak function.

@ref HAL_ADC_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- ConvCpltCallback : ADC conversion complete callback
- ConvHalfCpltCallback : ADC conversion DMA half-transfer callback
- LevelOutOfWindowCallback : ADC analog watchdog 1 callback
- ErrorCallback : ADC error callback
- InjectedConvCpltCallback : ADC group injected conversion complete callback
- InjectedQueueOverflowCallback : ADC group injected context queue overflow callback
- LevelOutOfWindow2Callback : ADC analog watchdog 2 callback
- LevelOutOfWindow3Callback : ADC analog watchdog 3 callback
- EndOfSamplingCallback : ADC end of sampling callback
- MspInitCallback : ADC Msp Init callback

- MspDeInitCallback : ADC Msp DeInit callback

By default, after the @ref HAL_ADC_Init() and when the state is @ref HAL_ADC_STATE_RESET all callbacks are set to the corresponding weak functions: examples @ref HAL_ADC_ConvCpltCallback(), @ref HAL_ADC_ErrorCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the @ref HAL_ADC_Init()/ @ref HAL_ADC_DeInit() only when these callbacks are null (not registered beforehand).

If MspInit or MspDeInit are not null, the @ref HAL_ADC_Init()/ @ref HAL_ADC_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in @ref HAL_ADC_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in @ref HAL_ADC_STATE_READY or @ref HAL_ADC_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/ DeInit.

Then, the user first registers the MspInit/MspDeInit user callbacks using @ref HAL_ADC_RegisterCallback() before calling @ref HAL_ADC_DeInit() or @ref HAL_ADC_Init() function.

When the compilation flag USE_HAL_ADC_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

7.2.3 Peripheral Control functions

This section provides functions allowing to:

- Configure channels on regular group
- Configure the analog watchdog

This section contains the following APIs:

- ***HAL_ADC_ConfigChannel***
- ***HAL_ADC_AnalogWDGConfig***

7.2.4 Peripheral state and errors functions

This subsection provides functions to get in run-time the status of the peripheral.

- Check the ADC state
- Check the ADC error code

This section contains the following APIs:

- ***HAL_ADC_GetState***
- ***HAL_ADC_GetError***

7.2.5 Detailed description of functions

HAL_ADC_Init

Function name

HAL_StatusTypeDef HAL_ADC_Init (ADC_HandleTypeDef * hadc)

Function description

Initialize the ADC peripheral and regular group according to parameters specified in structure "ADC_InitTypeDef".

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- As prerequisite, ADC clock must be configured at RCC top level (refer to description of RCC configuration for ADC in header of this file).
- Possibility to update parameters on the fly: This function initializes the ADC MSP (HAL_ADC_MspInit()) only when coming from ADC state reset. Following calls to this function can be used to reconfigure some parameters of ADC_InitTypeDef structure on the fly, without modifying MSP configuration. If ADC MSP has to be modified again, HAL_ADC_DeInit() must be called before HAL_ADC_Init(). The setting of these parameters is conditioned to ADC state. For parameters constraints, see comments of structure "ADC_InitTypeDef".
- This function configures the ADC within 2 scopes: scope of entire ADC and scope of regular group. For parameters details, see comments of structure "ADC_InitTypeDef".
- Parameters related to common ADC registers (ADC clock mode) are set only if all ADCs are disabled. If this is not the case, these common parameters setting are bypassed without error reporting: it can be the intended behaviour in case of update of a parameter of ADC_InitTypeDef on the fly, without disabling the other ADCs.

HAL_ADC_DeInit

Function name

HAL_StatusTypeDef HAL_ADC_DeInit (ADC_HandleTypeDef * hadc)

Function description

Deinitialize the ADC peripheral registers to their default reset values, with deinitialization of the ADC MSP.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- For devices with several ADCs: reset of ADC common registers is done only if all ADCs sharing the same common group are disabled. (function "HAL_ADC_MspDeInit()" is also called under the same conditions: all ADC instances use the same core clock at RCC level, disabling the core clock reset all ADC instances). If this is not the case, reset of these common parameters reset is bypassed without error reporting: it can be the intended behavior in case of reset of a single ADC while the other ADCs sharing the same common group is still running.
- By default, HAL_ADC_DeInit() set ADC in mode deep power-down: this saves more power by reducing leakage currents and is particularly interesting before entering MCU low-power modes.

HAL_ADC_MspInit

Function name

void HAL_ADC_MspInit (ADC_HandleTypeDef * hadc)

Function description

Initialize the ADC MSP.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADC_MspDeInit

Function name

void HAL_ADC_MspDeInit (ADC_HandleTypeDef * hadc)

Function description

DeInitialize the ADC MSP.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

Notes

- All ADC instances use the same core clock at RCC level, disabling the core clock reset all ADC instances).

HAL_ADC_Start

Function name

HAL_StatusTypeDef HAL_ADC_Start (ADC_HandleTypeDef * hadc)

Function description

Enable ADC, start conversion of regular group.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- Interruptions enabled in this function: None.
- Case of multimode enabled (when multimode feature is available): if ADC is Slave, ADC is enabled but conversion is not started, if ADC is master, ADC is enabled and multimode conversion is started.

HAL_ADC_Stop

Function name

HAL_StatusTypeDef HAL_ADC_Stop (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of regular group (and injected channels in case of auto_injection mode), disable ADC peripheral.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- : ADC peripheral disable is forcing stop of potential conversion on injected group. If injected group is under use, it should be preliminarily stopped using HAL_ADCEx_InjectedStop function.

HAL_ADC_PollForConversion

Function name

HAL_StatusTypeDef HAL_ADC_PollForConversion (ADC_HandleTypeDef * hadc, uint32_t Timeout)

Function description

Wait for regular group conversion to be completed.

Parameters

- **hadc:** ADC handle
- **Timeout:** Timeout value in millisecond.

Return values

- **HAL:** status

Notes

- ADC conversion flags EOS (end of sequence) and EOC (end of conversion) are cleared by this function, with an exception: if low power feature "LowPowerAutoWait" is enabled, flags are not cleared to not interfere with this feature until data register is read using function HAL_ADC_GetValue().
- This function cannot be used in a particular setup: ADC configured in DMA mode and polling for end of each conversion (ADC init parameter "EOCSelection" set to ADC_EOC_SINGLE_CONV). In this case, DMA resets the flag EOC and polling cannot be performed on each conversion. Nevertheless, polling can still be performed on the complete sequence (ADC init parameter "EOCSelection" set to ADC_EOC_SEQ_CONV).

HAL_ADC_PollForEvent

Function name

HAL_StatusTypeDef HAL_ADC_PollForEvent (ADC_HandleTypeDef * hadc, uint32_t EventType, uint32_t Timeout)

Function description

Poll for ADC event.

Parameters

- **hadc:** ADC handle
- **EventType:** the ADC event type. This parameter can be one of the following values:
  - ADC_EOSMP_EVENT ADC End of Sampling event
  - ADC_AWD1_EVENT ADC Analog watchdog 1 event (main analog watchdog, present on all STM32 devices)
  - ADC_AWD2_EVENT ADC Analog watchdog 2 event (additional analog watchdog, not present on all STM32 families)
  - ADC_AWD3_EVENT ADC Analog watchdog 3 event (additional analog watchdog, not present on all STM32 families)
  - ADC_OVR_EVENT ADC Overrun event
  - ADC_JQOVF_EVENT ADC Injected context queue overflow event
- **Timeout:** Timeout value in millisecond.

Return values

- **HAL:** status

Notes

- The relevant flag is cleared if found to be set, except for ADC_FLAG_OVR. Indeed, the latter is reset only if hadc->Init.Overrun field is set to ADC_OVR_DATA_OVERWRITTEN. Otherwise, data register may be potentially overwritten by a new converted data as soon as OVR is cleared. To reset OVR flag once the preserved data is retrieved, the user can resort to macro __HAL_ADC_CLEAR_FLAG(hadc, ADC_FLAG_OVR);

HAL_ADC_Start_IT

Function name

HAL_StatusTypeDef HAL_ADC_Start_IT (ADC_HandleTypeDef * hadc)

Function description

Enable ADC, start conversion of regular group with interruption.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- Interruptions enabled in this function according to initialization setting : EOC (end of conversion), EOS (end of sequence), OVR overrun. Each of these interruptions has its dedicated callback function.
- Case of multimode enabled (when multimode feature is available): HAL_ADC_Start_IT() must be called for ADC Slave first, then for ADC Master. For ADC Slave, ADC is enabled only (conversion is not started). For ADC Master, ADC is enabled and multimode conversion is started.
- To guarantee a proper reset of all interruptions once all the needed conversions are obtained, HAL_ADC_Stop_IT() must be called to ensure a correct stop of the IT-based conversions.
- By default, HAL_ADC_Start_IT() does not enable the End Of Sampling interruption. If required (e.g. in case of oversampling with trigger mode), the user must: 1. first clear the EOSMP flag if set with macro __HAL_ADC_CLEAR_FLAG(hadc, ADC_FLAG_EOSMP) 2. then enable the EOSMP interrupt with macro __HAL_ADC_ENABLE_IT(hadc, ADC_IT_EOSMP) before calling HAL_ADC_Start_IT().

HAL_ADC_Stop_IT

Function name

HAL_StatusTypeDef HAL_ADC_Stop_IT (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of regular group (and injected group in case of auto_injection mode), disable interrution of end-of-conversion, disable ADC peripheral.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

HAL_ADC_Start_DMA

Function name

HAL_StatusTypeDef HAL_ADC_Start_DMA (ADC_HandleTypeDef * hadc, uint32_t * pData, uint32_t Length)

Function description

Enable ADC, start conversion of regular group and transfer result through DMA.

Parameters

- **hadc:** ADC handle
- **pData:** Destination Buffer address.
- **Length:** Number of data to be transferred from ADC peripheral to memory

Return values

- **HAL:** status.

Notes

- Interruptions enabled in this function: overrun (if applicable), DMA half transfer, DMA transfer complete. Each of these interruptions has its dedicated callback function.
- Case of multimode enabled (when multimode feature is available): HAL_ADC_Start_DMA() is designed for single-ADC mode only. For multimode, the dedicated HAL_ADCEx_MultiModeStart_DMA() function must be used.

HAL_ADC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_ADC_Stop_DMA (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of regular group (and injected group in case of auto_injection mode), disable ADC DMA transfer, disable ADC peripheral.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- : ADC peripheral disable is forcing stop of potential conversion on ADC group injected. If ADC group injected is under use, it should be preliminarily stopped using HAL_ADCEx_InjectedStop function.
- Case of multimode enabled (when multimode feature is available): HAL_ADC_Stop_DMA() function is dedicated to single-ADC mode only. For multimode, the dedicated HAL_ADCEx_MultiModeStop_DMA() API must be used.

HAL_ADC_GetValue

Function name

uint32_t HAL_ADC_GetValue (ADC_HandleTypeDef * hadc)

Function description

Get ADC regular group conversion result.

Parameters

- **hadc:** ADC handle

Return values

- **ADC:** group regular conversion data

Notes

- Reading register DR automatically clears ADC flag EOC (ADC group regular end of unitary conversion).
- This function does not clear ADC flag EOS (ADC group regular end of sequence conversion). Occurrence of flag EOS rising: If sequencer is composed of 1 rank, flag EOS is equivalent to flag EOC.If sequencer is composed of several ranks, during the scan sequence flag EOC only is raised, at the end of the scan sequence both flags EOC and EOS are raised. To clear this flag, either use function: in programming model IT: HAL_ADC_IRQHandler(), in programming model polling: HAL_ADC_PollForConversion() or __HAL_ADC_CLEAR_FLAG(&hadc, ADC_FLAG_EOS).

HAL_ADC_StartSampling

Function name

HAL_StatusTypeDef HAL_ADC_StartSampling (ADC_HandleTypeDef * hadc)

Function description

Start ADC conversion sampling phase of regular group.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- : This function should only be called to start sampling when ADC_SAMPLING_MODE_TRIGGER_CONTROLED sampling mode has been selectedADC_SOFTWARE_START has been selected as trigger source

HAL_ADC_StopSampling

Function name

HAL_StatusTypeDef HAL_ADC_StopSampling (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion sampling phase of regular group and start conversion.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- : This function should only be called to stop sampling when ADC_SAMPLING_MODE_TRIGGER_CONTROLED sampling mode has been selectedADC_SOFTWARE_START has been selected as trigger sourceafter sampling has been started using HAL_ADC_StartSampling.

HAL_ADC_IRQHandler

Function name

void HAL_ADC_IRQHandler (ADC_HandleTypeDef * hadc)

Function description

Handle ADC interrupt request.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADC_ConvCpltCallback

Function name

void HAL_ADC_ConvCpltCallback (ADC_HandleTypeDef * hadc)

Function description

Conversion complete callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADC_ConvHalfCpltCallback

Function name

void HAL_ADC_ConvHalfCpltCallback (ADC_HandleTypeDef * hadc)

Function description

Conversion DMA half-transfer callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADC_LevelOutOfWindowCallback

Function name

void HAL_ADC_LevelOutOfWindowCallback (ADC_HandleTypeDef * hadc)

Function description

Analog watchdog 1 callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADC_ErrorCallback

Function name

void HAL_ADC_ErrorCallback (ADC_HandleTypeDef * hadc)

Function description

ADC error callback in non-blocking mode (ADC conversion with interruption or transfer by DMA).

Parameters

- **hadc:** ADC handle

Return values

- **None:**

Notes

- In case of error due to overrun when using ADC with DMA transfer (HAL ADC handle parameter "ErrorCode" to state "HAL_ADC_ERROR_OVR"): Reinitialize the DMA using function "HAL_ADC_Stop_DMA()".If needed, restart a new ADC conversion using function "HAL_ADC_Start_DMA()" (this function is also clearing overrun flag)

HAL_ADC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_ADC_ConfigChannel (ADC_HandleTypeDef * hadc, ADC_ChannelConfTypeDef * sConfig)

Function description

Configure a channel to be assigned to ADC group regular.

Parameters

- **hadc:** ADC handle
- **sConfig:** Structure of ADC channel assigned to ADC group regular.

Return values

- **HAL:** status

Notes

- In case of usage of internal measurement channels: Vbat/VrefInt/TempSensor. These internal paths can be disabled using function HAL_ADC_DeInit().
- Possibility to update parameters on the fly: This function initializes channel into ADC group regular, following calls to this function can be used to reconfigure some parameters of structure "ADC_ChannelConfTypeDef" on the fly, without resetting the ADC. The setting of these parameters is conditioned to ADC state: Refer to comments of structure "ADC_ChannelConfTypeDef".

HAL_ADC_AnalogWDGConfig

Function name

HAL_StatusTypeDef HAL_ADC_AnalogWDGConfig (ADC_HandleTypeDef * hadc, ADC_AnalogWDGConfTypeDef * AnalogWDGConfig)

Function description

Configure the analog watchdog.

Parameters

- **hadc:** ADC handle
- **AnalogWDGConfig:** Structure of ADC analog watchdog configuration

Return values

- **HAL:** status

Notes

- Possibility to update parameters on the fly: This function initializes the selected analog watchdog, successive calls to this function can be used to reconfigure some parameters of structure "ADC_AnalogWDGConfTypeDef" on the fly, without resetting the ADC. The setting of these parameters is conditioned to ADC state. For parameters constraints, see comments of structure "ADC_AnalogWDGConfTypeDef".
- On this STM32 serie, analog watchdog thresholds can be modified while ADC conversion is on going. In this case, some constraints must be taken into account: the programmed threshold values are effective from the next ADC EOC (end of unitary conversion). Considering that registers write delay may happen due to bus activity, this might cause an uncertainty on the effective timing of the new programmed threshold values.

HAL_ADC_GetState

Function name

uint32_t HAL_ADC_GetState (ADC_HandleTypeDef * hadc)

Function description

Return the ADC handle state.

Parameters

- **hadc:** ADC handle

Return values

- **ADC:** handle state (bitfield on 32 bits)

Notes

- ADC state machine is managed by bitfields, ADC status must be compared with states bits. For example: " if ((HAL_ADC_GetState(hadc1) & HAL_ADC_STATE_REG_BUSY) != 0UL) " " if ((HAL_ADC_GetState(hadc1) & HAL_ADC_STATE_AWD1) != 0UL) "

HAL_ADC_GetError

Function name

uint32_t HAL_ADC_GetError (ADC_HandleTypeDef * hadc)

Function description

Return the ADC error code.

Parameters

- **hadc:** ADC handle

Return values

- **ADC:** error code (bitfield on 32 bits)

ADC_ConversionStop

Function name

HAL_StatusTypeDef ADC_ConversionStop (ADC_HandleTypeDef * hadc, uint32_t ConversionGroup)

Function description

Stop ADC conversion.

Parameters

- **hadc:** ADC handle
- **ConversionGroup:** ADC group regular and/or injected. This parameter can be one of the following values:
  - ADC_REGULAR_GROUP ADC regular conversion type.
  - ADC_INJECTED_GROUP ADC injected conversion type.
  - ADC_REGULAR_INJECTED_GROUP ADC regular and injected conversion type.

Return values

- **HAL:** status.

ADC_Enable

Function name

HAL_StatusTypeDef ADC_Enable (ADC_HandleTypeDef * hadc)

Function description

Enable the selected ADC.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- Prerequisite condition to use this function: ADC must be disabled and voltage regulator must be enabled (done into HAL_ADC_Init()).

ADC_Disable

Function name

HAL_StatusTypeDef ADC_Disable (ADC_HandleTypeDef * hadc)

Function description

Disable the selected ADC.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- Prerequisite condition to use this function: ADC conversions must be stopped.

ADC_DMAConvCplt

Function name

void ADC_DMAConvCplt (DMA_HandleTypeDef * hdma)

Function description

DMA transfer complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

ADC_DMAHalfConvCplt

Function name

void ADC_DMAHalfConvCplt (DMA_HandleTypeDef * hdma)

Function description

DMA half transfer complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

ADC_DMAError

Function name

void ADC_DMAError (DMA_HandleTypeDef * hdma)

Function description

DMA error callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

7.3 ADC Firmware driver defines

The following section lists the various define and macros of the module.

7.3.1 ADC

ADC

ADC Analog Watchdog filtering configuration

ADC_AWD_FILTERING_NONE

ADC analog wathdog no filtering, one out-of-window sample is needed to raise flag or interrupt

ADC_AWD_FILTERING_2SAMPLES

ADC analog wathdog 2 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_3SAMPLES

ADC analog wathdog 3 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_4SAMPLES

ADC analog wathdog 4 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_5SAMPLES

ADC analog wathdog 5 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_6SAMPLES

ADC analog wathdog 6 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_7SAMPLES

ADC analog wathdog 7 consecutives out-of-window samples are needed to raise flag or interrupt

ADC_AWD_FILTERING_8SAMPLES

ADC analog wathdog 8 consecutives out-of-window samples are needed to raise flag or interrupt

ADC Analog Watchdog Mode

ADC_ANALOGWATCHDOG_NONE

No analog watchdog selected

ADC_ANALOGWATCHDOG_SINGLE_REG

Analog watchdog applied to a regular group single channel

ADC_ANALOGWATCHDOG_SINGLE_INJEC

Analog watchdog applied to an injected group single channel

ADC_ANALOGWATCHDOG_SINGLE_REGINJEC

Analog watchdog applied to a regular and injected groups single channel

ADC_ANALOGWATCHDOG_ALL_REG

Analog watchdog applied to regular group all channels

ADC_ANALOGWATCHDOG_ALL_INJEC

Analog watchdog applied to injected group all channels

ADC_ANALOGWATCHDOG_ALL_REGINJEC

Analog watchdog applied to regular and injected groups all channels

ADCx CFGR fields

ADC_CFGR_FIELDS

ADCx CFGR sub fields

ADC_CFGR_FIELDS_2

ADC sequencer end of unitary conversion or sequence conversions

ADC_EOC_SINGLE_CONV

End of unitary conversion flag

ADC_EOC_SEQ_CONV

End of sequence conversions flag

ADC Error Code

HAL_ADC_ERROR_NONE

No error

HAL_ADC_ERROR_INTERNAL

ADC peripheral internal error (problem of clocking, enable/disable, erroneous state, ...)

HAL_ADC_ERROR_OVR

Overrun error

HAL_ADC_ERROR_DMA

DMA transfer error

HAL_ADC_ERROR_JQOVF

Injected context queue overflow error

ADC Event type

ADC_EOSMP_EVENT

ADC End of Sampling event

ADC_AWD1_EVENT

ADC Analog watchdog 1 event (main analog watchdog, present on all STM32 series)

ADC_AWD2_EVENT

ADC Analog watchdog 2 event (additional analog watchdog, not present on all STM32 series)

ADC_AWD3_EVENT

ADC Analog watchdog 3 event (additional analog watchdog, not present on all STM32 series)

ADC_OVR_EVENT

ADC overrun event

ADC_JQOVF_EVENT

ADC Injected Context Queue Overflow event

ADC Exported Constants

ADC_AWD_EVENT

ADC Analog watchdog 1 event: Naming for compatibility with other STM32 devices having only one analog watchdog

ADC flags definition

ADC_FLAG_RDY

ADC Ready flag

ADC_FLAG_EOSMP

ADC End of Sampling flag

ADC_FLAG_EOC

ADC End of Regular Conversion flag

ADC_FLAG_EOS

ADC End of Regular sequence of Conversions flag

ADC_FLAG_OVR

ADC overrun flag

ADC_FLAG_JEOC

ADC End of Injected Conversion flag

ADC_FLAG_JEOS

ADC End of Injected sequence of Conversions flag

ADC_FLAG_AWD1

ADC Analog watchdog 1 flag (main analog watchdog)

ADC_FLAG_AWD2

ADC Analog watchdog 2 flag (additional analog watchdog)

ADC_FLAG_AWD3

ADC Analog watchdog 3 flag (additional analog watchdog)

ADC_FLAG_JQOVF

ADC Injected Context Queue Overflow flag

Analog watchdog - Analog watchdog number

ADC_ANALOGWATCHDOG_1

ADC analog watchdog number 1

ADC_ANALOGWATCHDOG_2

ADC analog watchdog number 2

ADC_ANALOGWATCHDOG_3

ADC analog watchdog number 3

ADC instance - Channel number

ADC_CHANNEL_0

ADC external channel (channel connected to GPIO pin) ADCx_IN0

ADC_CHANNEL_1

ADC external channel (channel connected to GPIO pin) ADCx_IN1

ADC_CHANNEL_2

ADC external channel (channel connected to GPIO pin) ADCx_IN2

ADC_CHANNEL_3

ADC external channel (channel connected to GPIO pin) ADCx_IN3

ADC_CHANNEL_4

ADC external channel (channel connected to GPIO pin) ADCx_IN4

ADC_CHANNEL_5

ADC external channel (channel connected to GPIO pin) ADCx_IN5

ADC_CHANNEL_6

ADC external channel (channel connected to GPIO pin) ADCx_IN6

ADC_CHANNEL_7

ADC external channel (channel connected to GPIO pin) ADCx_IN7

ADC_CHANNEL_8

ADC external channel (channel connected to GPIO pin) ADCx_IN8

ADC_CHANNEL_9

ADC external channel (channel connected to GPIO pin) ADCx_IN9

ADC_CHANNEL_10

ADC external channel (channel connected to GPIO pin) ADCx_IN10

ADC_CHANNEL_11

ADC external channel (channel connected to GPIO pin) ADCx_IN11

ADC_CHANNEL_12

ADC external channel (channel connected to GPIO pin) ADCx_IN12

ADC_CHANNEL_13

ADC external channel (channel connected to GPIO pin) ADCx_IN13

ADC_CHANNEL_14

ADC external channel (channel connected to GPIO pin) ADCx_IN14

ADC_CHANNEL_15

ADC external channel (channel connected to GPIO pin) ADCx_IN15

ADC_CHANNEL_16

ADC external channel (channel connected to GPIO pin) ADCx_IN16

ADC_CHANNEL_17

ADC external channel (channel connected to GPIO pin) ADCx_IN17

ADC_CHANNEL_18

ADC external channel (channel connected to GPIO pin) ADCx_IN18

ADC_CHANNEL_VREFINT

ADC internal channel connected to VrefInt: Internal voltage reference. On this STM32 serie, ADC channel available on all instances but ADC2.

ADC_CHANNEL_TEMPSENSOR_ADC1

ADC internal channel connected to Temperature sensor. On this STM32 serie, ADC channel available only on ADC1 instance.

ADC_CHANNEL_TEMPSENSOR_ADC5

ADC internal channel connected to Temperature sensor. On this STM32 serie, ADC channel available only on ADC5 instance. Refer to device datasheet for ADC5 availaibility

ADC_CHANNEL_VBAT

ADC internal channel connected to Vbat/3: Vbat voltage through a divider ladder of factor 1/3 to have Vbat always below Vdda. On this STM32 serie, ADC channel available on all ADC instances but ADC2 & ADC4. Refer to device datasheet for ADC4 availaibility

ADC_CHANNEL_VOPAMP1

ADC internal channel connected to OPAMP1 output. On this STM32 serie, ADC channel available only on ADC1 instance.

ADC_CHANNEL_VOPAMP2

ADC internal channel connected to OPAMP2 output. On this STM32 serie, ADC channel available only on ADC2 instance.

ADC_CHANNEL_VOPAMP3_ADC2

ADC internal channel connected to OPAMP3 output. On this STM32 serie, ADC channel available only on ADC2 instance.

ADC_CHANNEL_VOPAMP3_ADC3

ADC internal channel connected to OPAMP3 output. On this STM32 serie, ADC channel available only on ADC3 instance. Refer to device datasheet for ADC3 availability

ADC_CHANNEL_VOPAMP4

ADC internal channel connected to OPAMP4 output. On this STM32 serie, ADC channel available only on ADC5 instance. Refer to device datasheet for ADC5 availability

ADC_CHANNEL_VOPAMP5

ADC internal channel connected to OPAMP5 output. On this STM32 serie, ADC channel available only on ADC5 instance. Refer to device datasheet for ADC5 availability

ADC_CHANNEL_VOPAMP6

ADC internal channel connected to OPAMP6 output. On this STM32 serie, ADC channel available only on ADC4 instance. Refer to device datasheet for ADC4 availability

Channel - Sampling time

ADC_SAMPLETIME_2CYCLES_5

Sampling time 2.5 ADC clock cycles

ADC_SAMPLETIME_6CYCLES_5

Sampling time 6.5 ADC clock cycles

ADC_SAMPLETIME_12CYCLES_5

Sampling time 12.5 ADC clock cycles

ADC_SAMPLETIME_24CYCLES_5

Sampling time 24.5 ADC clock cycles

ADC_SAMPLETIME_47CYCLES_5

Sampling time 47.5 ADC clock cycles

ADC_SAMPLETIME_92CYCLES_5

Sampling time 92.5 ADC clock cycles

ADC_SAMPLETIME_247CYCLES_5

Sampling time 247.5 ADC clock cycles

ADC_SAMPLETIME_640CYCLES_5

Sampling time 640.5 ADC clock cycles

ADC_SAMPLETIME_3CYCLES_5

Sampling time 3.5 ADC clock cycles. If selected, this sampling time replaces all sampling time 2.5 ADC clock cycles. These 2 sampling times cannot be used simultaneously.

Channel - Single or differential ending

ADC_SINGLE_ENDED

ADC channel ending set to single ended (literal also used to set calibration mode)

ADC_DIFFERENTIAL_ENDED

ADC channel ending set to differential (literal also used to set calibration mode)

ADC common - Clock source

ADC_CLOCK_SYNC_PCLK_DIV1

ADC synchronous clock derived from AHB clock without prescaler

ADC_CLOCK_SYNC_PCLK_DIV2

ADC synchronous clock derived from AHB clock with prescaler division by 2

ADC_CLOCK_SYNC_PCLK_DIV4

ADC synchronous clock derived from AHB clock with prescaler division by 4

ADC_CLOCK_ASYNC_DIV1

ADC asynchronous clock without prescaler

ADC_CLOCK_ASYNC_DIV2

ADC asynchronous clock with prescaler division by 2

ADC_CLOCK_ASYNC_DIV4

ADC asynchronous clock with prescaler division by 4

ADC_CLOCK_ASYNC_DIV6

ADC asynchronous clock with prescaler division by 6

ADC_CLOCK_ASYNC_DIV8

ADC asynchronous clock with prescaler division by 8

ADC_CLOCK_ASYNC_DIV10

ADC asynchronous clock with prescaler division by 10

ADC_CLOCK_ASYNC_DIV12

ADC asynchronous clock with prescaler division by 12

ADC_CLOCK_ASYNC_DIV16

ADC asynchronous clock with prescaler division by 16

ADC_CLOCK_ASYNC_DIV32

ADC asynchronous clock with prescaler division by 32

ADC_CLOCK_ASYNC_DIV64

ADC asynchronous clock with prescaler division by 64

ADC_CLOCK_ASYNC_DIV128

ADC asynchronous clock with prescaler division by 128

ADC_CLOCK_ASYNC_DIV256

ADC asynchronous clock with prescaler division by 256

ADC conversion data alignment

ADC_DATAALIGN_RIGHT

ADC conversion data alignment: right aligned (alignment on data register LSB bit 0)

ADC_DATAALIGN_LEFT

ADC conversion data alignment: left aligned (aligment on data register MSB bit 15)

ADC instance - Groups

ADC_REGULAR_GROUP

ADC group regular (available on all STM32 devices)

ADC_INJECTED_GROUP

ADC group injected (not available on all STM32 devices)

ADC_REGULAR_INJECTED_GROUP

ADC both groups regular and injected

Multimode - DMA transfer mode depending on ADC resolution

ADC_DMAACCESSMODE_DISABLED

DMA multimode disabled: each ADC uses its own DMA channel

ADC_DMAACCESSMODE_12_10_BITS

DMA multimode enabled (one DMA channel for both ADC, DMA of ADC master) for 12 and 10 bits resolution

ADC_DMAACCESSMODE_8_6_BITS

DMA multimode enabled (one DMA channel for both ADC, DMA of ADC master) for 8 and 6 bits resolution

Multimode - Mode

ADC_MODE_INDEPENDENT

ADC dual mode disabled (ADC independent mode)

ADC_DUALMODE_REGSIMULT

ADC dual mode enabled: group regular simultaneous

ADC_DUALMODE_INTERL

ADC dual mode enabled: Combined group regular interleaved

ADC_DUALMODE_INJECSIMULT

ADC dual mode enabled: group injected simultaneous

ADC_DUALMODE_ALTERTRIG

ADC dual mode enabled: group injected alternate trigger. Works only with external triggers (not internal SW start)

ADC_DUALMODE_REGSIMULT_INJECSIMULT

ADC dual mode enabled: Combined group regular simultaneous + group injected simultaneous

ADC_DUALMODE_REGSIMULT_ALTERTRIG

ADC dual mode enabled: Combined group regular simultaneous + group injected alternate trigger

ADC_DUALMODE_REGINTERL_INJECSIMULT

ADC dual mode enabled: Combined group regular interleaved + group injected simultaneous

Multimode - Delay between two sampling phases

ADC_TWOSAMPLINGDELAY_1CYCLE

ADC multimode delay between two sampling phases: 1 ADC clock cycle

ADC_TWOSAMPLINGDELAY_2CYCLES

ADC multimode delay between two sampling phases: 2 ADC clock cycles

ADC_TWOSAMPLINGDELAY_3CYCLES

ADC multimode delay between two sampling phases: 3 ADC clock cycles

ADC_TWOSAMPLINGDELAY_4CYCLES

ADC multimode delay between two sampling phases: 4 ADC clock cycles

ADC_TWOSAMPLINGDELAY_5CYCLES

ADC multimode delay between two sampling phases: 5 ADC clock cycles

ADC_TWOSAMPLINGDELAY_6CYCLES

ADC multimode delay between two sampling phases: 6 ADC clock cycles

ADC_TWOSAMPLINGDELAY_7CYCLES

ADC multimode delay between two sampling phases: 7 ADC clock cycles

ADC_TWOSAMPLINGDELAY_8CYCLES

ADC multimode delay between two sampling phases: 8 ADC clock cycles

ADC_TWOSAMPLINGDELAY_9CYCLES

ADC multimode delay between two sampling phases: 9 ADC clock cycles

ADC_TWOSAMPLINGDELAY_10CYCLES

ADC multimode delay between two sampling phases: 10 ADC clock cycles

ADC_TWOSAMPLINGDELAY_11CYCLES

ADC multimode delay between two sampling phases: 11 ADC clock cycles

ADC_TWOSAMPLINGDELAY_12CYCLES

ADC multimode delay between two sampling phases: 12 ADC clock cycles

ADC instance - Offset number

ADC_OFFSET_NONE

ADC offset disabled: no offset correction for the selected ADC channel

ADC_OFFSET_1

ADC offset number 1: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

ADC_OFFSET_2

ADC offset number 2: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

ADC_OFFSET_3

ADC offset number 3: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

ADC_OFFSET_4

ADC offset number 4: ADC channel and offset level to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

Oversampling - Discontinuous mode

ADC_TRIGGEREDMODE_SINGLE_TRIGGER

ADC oversampling discontinuous mode: continuous mode (all conversions of oversampling ratio are done from 1 trigger)

ADC_TRIGGEREDMODE_MULTI_TRIGGER

ADC oversampling discontinuous mode: discontinuous mode (each conversion of oversampling ratio needs a trigger)

Oversampling - Ratio

ADC_OVERSAMPLING_RATIO_2

ADC oversampling ratio of 2 (2 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_4

ADC oversampling ratio of 4 (4 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_8

ADC oversampling ratio of 8 (8 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_16

ADC oversampling ratio of 16 (16 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_32

ADC oversampling ratio of 32 (32 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_64

ADC oversampling ratio of 64 (64 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_128

ADC oversampling ratio of 128 (128 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

ADC_OVERSAMPLING_RATIO_256

ADC oversampling ratio of 256 (256 ADC conversions are performed, sum of these conversions data is computed to result as the ADC oversampling conversion data (before potential shift)

Oversampling - Oversampling scope for ADC group regular

ADC_REGOVERSAMPLING_CONTINUED_MODE

Oversampling buffer maintained during injection sequence

ADC_REGOVERSAMPLING_RESUMED_MODE

Oversampling buffer zeroed during injection sequence

Oversampling - Data shift

ADC_RIGHTBITSHIFT_NONE

ADC oversampling no shift (sum of the ADC conversions data is not divided to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_1

ADC oversampling shift of 1 (sum of the ADC conversions data is divided by 2 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_2

ADC oversampling shift of 2 (sum of the ADC conversions data is divided by 4 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_3

ADC oversampling shift of 3 (sum of the ADC conversions data is divided by 8 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_4

ADC oversampling shift of 4 (sum of the ADC conversions data is divided by 16 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_5

ADC oversampling shift of 5 (sum of the ADC conversions data is divided by 32 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_6

ADC oversampling shift of 6 (sum of the ADC conversions data is divided by 64 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_7

ADC oversampling shift of 7 (sum of the ADC conversions data is divided by 128 to result as the ADC oversampling conversion data)

ADC_RIGHTBITSHIFT_8

ADC oversampling shift of 8 (sum of the ADC conversions data is divided by 256 to result as the ADC oversampling conversion data)

ADC group regular - Overrun behavior on conversion data

ADC_OVR_DATA_PRESERVED

ADC group regular behavior in case of overrun: data preserved

ADC_OVR_DATA_OVERWRITTEN

ADC group regular behavior in case of overrun: data overwritten

ADC group regular - Sequencer ranks

ADC_REGULAR_RANK_1

ADC group regular sequencer rank 1

ADC_REGULAR_RANK_2

ADC group regular sequencer rank 2

ADC_REGULAR_RANK_3

ADC group regular sequencer rank 3

ADC_REGULAR_RANK_4

ADC group regular sequencer rank 4

ADC_REGULAR_RANK_5

ADC group regular sequencer rank 5

ADC_REGULAR_RANK_6

ADC group regular sequencer rank 6

ADC_REGULAR_RANK_7

ADC group regular sequencer rank 7

ADC_REGULAR_RANK_8

ADC group regular sequencer rank 8

ADC_REGULAR_RANK_9

ADC group regular sequencer rank 9

ADC_REGULAR_RANK_10

ADC group regular sequencer rank 10

ADC_REGULAR_RANK_11

ADC group regular sequencer rank 11

ADC_REGULAR_RANK_12

ADC group regular sequencer rank 12

ADC_REGULAR_RANK_13

ADC group regular sequencer rank 13

ADC_REGULAR_RANK_14

ADC group regular sequencer rank 14

ADC_REGULAR_RANK_15

ADC group regular sequencer rank 15

ADC_REGULAR_RANK_16

ADC group regular sequencer rank 16

ADC instance - Resolution

ADC_RESOLUTION_12B

ADC resolution 12 bits

ADC_RESOLUTION_10B

ADC resolution 10 bits

ADC_RESOLUTION_8B

ADC resolution 8 bits

ADC_RESOLUTION_6B

ADC resolution 6 bits

HAL ADC macro to manage HAL ADC handle, IT and flags.

__HAL_ADC_RESET_HANDLE_STATE

Description:

- Reset ADC handle state.

Parameters:

- __HANDLE__: ADC handle

Return value:

- None

__HAL_ADC_ENABLE_IT

Description:

- Enable ADC interrupt.

Parameters:

- __HANDLE__: ADC handle
- __INTERRUPT__: ADC Interrupt This parameter can be one of the following values:
  - ADC_IT_RDY ADC Ready interrupt source
  - ADC_IT_EOSMP ADC End of Sampling interrupt source
  - ADC_IT_EOC ADC End of Regular Conversion interrupt source
  - ADC_IT_EOS ADC End of Regular sequence of Conversions interrupt source
  - ADC_IT_OVR ADC overrun interrupt source
  - ADC_IT_JEOC ADC End of Injected Conversion interrupt source
  - ADC_IT_JEOS ADC End of Injected sequence of Conversions interrupt source
  - ADC_IT_AWD1 ADC Analog watchdog 1 interrupt source (main analog watchdog)
  - ADC_IT_AWD2 ADC Analog watchdog 2 interrupt source (additional analog watchdog)
  - ADC_IT_AWD3 ADC Analog watchdog 3 interrupt source (additional analog watchdog)
  - ADC_IT_JQOVF ADC Injected Context Queue Overflow interrupt source.

Return value:

- None

__HAL_ADC_DISABLE_IT

Description:

- Disable ADC interrupt.

Parameters:

- __HANDLE__: ADC handle
- __INTERRUPT__: ADC Interrupt This parameter can be one of the following values:
  - ADC_IT_RDY ADC Ready interrupt source
  - ADC_IT_EOSMP ADC End of Sampling interrupt source
  - ADC_IT_EOC ADC End of Regular Conversion interrupt source
  - ADC_IT_EOS ADC End of Regular sequence of Conversions interrupt source
  - ADC_IT_OVR ADC overrun interrupt source
  - ADC_IT_JEOC ADC End of Injected Conversion interrupt source
  - ADC_IT_JEOS ADC End of Injected sequence of Conversions interrupt source
  - ADC_IT_AWD1 ADC Analog watchdog 1 interrupt source (main analog watchdog)
  - ADC_IT_AWD2 ADC Analog watchdog 2 interrupt source (additional analog watchdog)
  - ADC_IT_AWD3 ADC Analog watchdog 3 interrupt source (additional analog watchdog)
  - ADC_IT_JQOVF ADC Injected Context Queue Overflow interrupt source.

Return value:

- None

__HAL_ADC_GET_IT_SOURCE

Description:

- Checks if the specified ADC interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: ADC handle
- __INTERRUPT__: ADC interrupt source to check This parameter can be one of the following values:
  - ADC_IT_RDY ADC Ready interrupt source
  - ADC_IT_EOSMP ADC End of Sampling interrupt source
  - ADC_IT_EOC ADC End of Regular Conversion interrupt source
  - ADC_IT_EOS ADC End of Regular sequence of Conversions interrupt source
  - ADC_IT_OVR ADC overrun interrupt source
  - ADC_IT_JEOC ADC End of Injected Conversion interrupt source
  - ADC_IT_JEOS ADC End of Injected sequence of Conversions interrupt source
  - ADC_IT_AWD1 ADC Analog watchdog 1 interrupt source (main analog watchdog)
  - ADC_IT_AWD2 ADC Analog watchdog 2 interrupt source (additional analog watchdog)
  - ADC_IT_AWD3 ADC Analog watchdog 3 interrupt source (additional analog watchdog)
  - ADC_IT_JQOVF ADC Injected Context Queue Overflow interrupt source.

Return value:

- State: of interruption (SET or RESET)

__HAL_ADC_GET_FLAG

Description:

- Check whether the specified ADC flag is set or not.

Parameters:

- __HANDLE__: ADC handle
- __FLAG__: ADC flag This parameter can be one of the following values:
  - ADC_FLAG_RDY ADC Ready flag
  - ADC_FLAG_EOSMP ADC End of Sampling flag
  - ADC_FLAG_EOC ADC End of Regular Conversion flag
  - ADC_FLAG_EOS ADC End of Regular sequence of Conversions flag
  - ADC_FLAG_OVR ADC overrun flag
  - ADC_FLAG_JEOC ADC End of Injected Conversion flag
  - ADC_FLAG_JEOS ADC End of Injected sequence of Conversions flag
  - ADC_FLAG_AWD1 ADC Analog watchdog 1 flag (main analog watchdog)
  - ADC_FLAG_AWD2 ADC Analog watchdog 2 flag (additional analog watchdog)
  - ADC_FLAG_AWD3 ADC Analog watchdog 3 flag (additional analog watchdog)
  - ADC_FLAG_JQOVF ADC Injected Context Queue Overflow flag.

Return value:

- State: of flag (TRUE or FALSE).

__HAL_ADC_CLEAR_FLAG

Description:

- Clear the specified ADC flag.

Parameters:

- __HANDLE__: ADC handle
- __FLAG__: ADC flag This parameter can be one of the following values:
  - ADC_FLAG_RDY ADC Ready flag
  - ADC_FLAG_EOSMP ADC End of Sampling flag
  - ADC_FLAG_EOC ADC End of Regular Conversion flag
  - ADC_FLAG_EOS ADC End of Regular sequence of Conversions flag
  - ADC_FLAG_OVR ADC overrun flag
  - ADC_FLAG_JEOC ADC End of Injected Conversion flag
  - ADC_FLAG_JEOS ADC End of Injected sequence of Conversions flag
  - ADC_FLAG_AWD1 ADC Analog watchdog 1 flag (main analog watchdog)
  - ADC_FLAG_AWD2 ADC Analog watchdog 2 flag (additional analog watchdog)
  - ADC_FLAG_AWD3 ADC Analog watchdog 3 flag (additional analog watchdog)
  - ADC_FLAG_JQOVF ADC Injected Context Queue Overflow flag.

Return value:

- None

HAL ADC helper macro

__HAL_ADC_CHANNEL_TO_DECIMAL_NB

Description:

- Helper macro to get ADC channel number in decimal format from literals ADC_CHANNEL_x.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - ADC_CHANNEL_0
  - ADC_CHANNEL_1 (8)
  - ADC_CHANNEL_2 (8)
  - ADC_CHANNEL_3 (8)
  - ADC_CHANNEL_4 (8)
  - ADC_CHANNEL_5 (8)
  - ADC_CHANNEL_6
  - ADC_CHANNEL_7
  - ADC_CHANNEL_8
  - ADC_CHANNEL_9
  - ADC_CHANNEL_10
  - ADC_CHANNEL_11
  - ADC_CHANNEL_12
  - ADC_CHANNEL_13
  - ADC_CHANNEL_14
  - ADC_CHANNEL_15
  - ADC_CHANNEL_16
  - ADC_CHANNEL_17
  - ADC_CHANNEL_18
  - ADC_CHANNEL_VREFINT (7)
  - ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - ADC_CHANNEL_VBAT (6)
  - ADC_CHANNEL_VOPAMP1 (1)
  - ADC_CHANNEL_VOPAMP2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - ADC_CHANNEL_VOPAMP4 (5)
  - ADC_CHANNEL_VOPAMP5 (5)
  - ADC_CHANNEL_VOPAMP6 (4)
  - On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution.

Return value:

- Value: between Min_Data=0 and Max_Data=18

Notes:

- Example: __HAL_ADC_CHANNEL_TO_DECIMAL_NB(ADC_CHANNEL_4) will return decimal number "4". The input can be a value from functions where a channel number is returned, either defined with number or with bitfield (only one bit must be set).

__HAL_ADC_DECIMAL_NB_TO_CHANNEL

Description:

- Helper macro to get ADC channel in literal format ADC_CHANNEL_x from number in decimal format.

Parameters:

- __DECIMAL_NB__: Value between Min_Data=0 and Max_Data=18

Return value:

- Returned: value can be one of the following values:
  - ADC_CHANNEL_0
  - ADC_CHANNEL_1 (8)
  - ADC_CHANNEL_2 (8)
  - ADC_CHANNEL_3 (8)
  - ADC_CHANNEL_4 (8)
  - ADC_CHANNEL_5 (8)
  - ADC_CHANNEL_6
  - ADC_CHANNEL_7
  - ADC_CHANNEL_8
  - ADC_CHANNEL_9
  - ADC_CHANNEL_10
  - ADC_CHANNEL_11
  - ADC_CHANNEL_12
  - ADC_CHANNEL_13
  - ADC_CHANNEL_14
  - ADC_CHANNEL_15
  - ADC_CHANNEL_16
  - ADC_CHANNEL_17
  - ADC_CHANNEL_18
  - ADC_CHANNEL_VREFINT (7)
  - ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - ADC_CHANNEL_VBAT (6)
  - ADC_CHANNEL_VOPAMP1 (1)
  - ADC_CHANNEL_VOPAMP2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - ADC_CHANNEL_VOPAMP4 (5)
  - ADC_CHANNEL_VOPAMP5 (5)
  - ADC_CHANNEL_VOPAMP6 (4)
  - On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution. (1, 2, 3, 4, 5, 7) For ADC channel read back from ADC register, comparison with internal channel parameter to be done using helper macro __LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL().

Notes:

- Example: __HAL_ADC_DECIMAL_NB_TO_CHANNEL(4) will return a data equivalent to "ADC_CHANNEL_4".

__HAL_ADC_IS_CHANNEL_INTERNAL

Description:

- Helper macro to determine whether the selected channel corresponds to literal definitions of driver.

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - ADC_CHANNEL_0
  - ADC_CHANNEL_1 (8)
  - ADC_CHANNEL_2 (8)
  - ADC_CHANNEL_3 (8)
  - ADC_CHANNEL_4 (8)
  - ADC_CHANNEL_5 (8)
  - ADC_CHANNEL_6
  - ADC_CHANNEL_7
  - ADC_CHANNEL_8
  - ADC_CHANNEL_9
  - ADC_CHANNEL_10
  - ADC_CHANNEL_11
  - ADC_CHANNEL_12
  - ADC_CHANNEL_13
  - ADC_CHANNEL_14
  - ADC_CHANNEL_15
  - ADC_CHANNEL_16
  - ADC_CHANNEL_17
  - ADC_CHANNEL_18
  - ADC_CHANNEL_VREFINT (7)
  - ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - ADC_CHANNEL_VBAT (6)
  - ADC_CHANNEL_VOPAMP1 (1)
  - ADC_CHANNEL_VOPAMP2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - ADC_CHANNEL_VOPAMP4 (5)
  - ADC_CHANNEL_VOPAMP5 (5)
  - ADC_CHANNEL_VOPAMP6 (4)
  - On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution.

Return value:

- Value: "0" if the channel corresponds to a parameter definition of a ADC external channel (channel connected to a GPIO pin). Value "1" if the channel corresponds to a parameter definition of a ADC internal channel.

Notes:

- The different literal definitions of ADC channels are: ADC internal channel: ADC_CHANNEL_VREFINT, ADC_CHANNEL_TEMPSENSOR, ...ADC external channel (channel connected to a GPIO pin): ADC_CHANNEL_1, ADC_CHANNEL_2, ... The channel parameter must be a value defined from literal definition of a ADC internal channel (ADC_CHANNEL_VREFINT, ADC_CHANNEL_TEMPSENSOR, ...), ADC external channel (ADC_CHANNEL_1, ADC_CHANNEL_2, ...), must not be a value from functions where a channel number is returned from ADC registers, because internal and external channels share the same channel number in ADC registers. The differentiation is made only with parameters definitions of driver.

__HAL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL

Description:

- Helper macro to convert a channel defined from parameter definition of a ADC internal channel (ADC_CHANNEL_VREFINT, ADC_CHANNEL_TEMPSENSOR, ...), to its equivalent parameter definition of a ADC external channel (ADC_CHANNEL_1, ADC_CHANNEL_2, ...).

Parameters:

- __CHANNEL__: This parameter can be one of the following values:
  - ADC_CHANNEL_0
  - ADC_CHANNEL_1 (8)
  - ADC_CHANNEL_2 (8)
  - ADC_CHANNEL_3 (8)
  - ADC_CHANNEL_4 (8)
  - ADC_CHANNEL_5 (8)
  - ADC_CHANNEL_6
  - ADC_CHANNEL_7
  - ADC_CHANNEL_8
  - ADC_CHANNEL_9
  - ADC_CHANNEL_10
  - ADC_CHANNEL_11
  - ADC_CHANNEL_12
  - ADC_CHANNEL_13
  - ADC_CHANNEL_14
  - ADC_CHANNEL_15
  - ADC_CHANNEL_16
  - ADC_CHANNEL_17
  - ADC_CHANNEL_18
  - ADC_CHANNEL_VREFINT (7)
  - ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - ADC_CHANNEL_VBAT (6)
  - ADC_CHANNEL_VOPAMP1 (1)
  - ADC_CHANNEL_VOPAMP2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - ADC_CHANNEL_VOPAMP4 (5)
  - ADC_CHANNEL_VOPAMP5 (5)
  - ADC_CHANNEL_VOPAMP6 (4)
  - On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution.

Return value:

- Returned: value can be one of the following values:
  - ADC_CHANNEL_0
  - ADC_CHANNEL_1
  - ADC_CHANNEL_2
  - ADC_CHANNEL_3
  - ADC_CHANNEL_4
  - ADC_CHANNEL_5
  - ADC_CHANNEL_6
  - ADC_CHANNEL_7
  - ADC_CHANNEL_8
  - ADC_CHANNEL_9
  - ADC_CHANNEL_10
  - ADC_CHANNEL_11
  - ADC_CHANNEL_12
  - ADC_CHANNEL_13
  - ADC_CHANNEL_14
  - ADC_CHANNEL_15
  - ADC_CHANNEL_16
  - ADC_CHANNEL_17
  - ADC_CHANNEL_18

Notes:

- The channel parameter can be, additionally to a value defined from parameter definition of a ADC internal channel (ADC_CHANNEL_VREFINT, ADC_CHANNEL_TEMPSENSOR, ...), a value defined from parameter definition of ADC external channel (ADC_CHANNEL_1, ADC_CHANNEL_2, ...) or a value from functions where a channel number is returned from ADC registers.

__HAL_ADC_IS_CHANNEL_INTERNAL_AVAILABLE

Description:

- Helper macro to determine whether the internal channel selected is available on the ADC instance selected.

Parameters:

- __ADC_INSTANCE__: ADC instance
- __CHANNEL__: This parameter can be one of the following values:
  - ADC_CHANNEL_VREFINT (7)
  - ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - ADC_CHANNEL_VBAT (6)
  - ADC_CHANNEL_VOPAMP1 (1)
  - ADC_CHANNEL_VOPAMP2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - ADC_CHANNEL_VOPAMP4 (5)
  - ADC_CHANNEL_VOPAMP5 (5)
  - ADC_CHANNEL_VOPAMP6 (4)
  - On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details.

Return value:

- Value: "0" if the internal channel selected is not available on the ADC instance selected. Value "1" if the internal channel selected is available on the ADC instance selected.

Notes:

- The channel parameter must be a value defined from parameter definition of a ADC internal channel (ADC_CHANNEL_VREFINT, ADC_CHANNEL_TEMPSENSOR, ...), must not be a value defined from parameter definition of ADC external channel (ADC_CHANNEL_1, ADC_CHANNEL_2, ...) or a value from functions where a channel number is returned from ADC registers, because internal and external channels share the same channel number in ADC registers. The differentiation is made only with parameters definitions of driver.

__HAL_ADC_MULTI_CONV_DATA_MASTER_SLAVE

Description:

- Helper macro to get the ADC multimode conversion data of ADC master or ADC slave from raw value with both ADC conversion data concatenated.

Parameters:

- __ADC_MULTI_MASTER_SLAVE__: This parameter can be one of the following values:
  - LL_ADC_MULTI_MASTER
  - LL_ADC_MULTI_SLAVE
- __ADC_MULTI_CONV_DATA__: Value between Min_Data=0x000 and Max_Data=0xFFF

Return value:

- Value: between Min_Data=0x000 and Max_Data=0xFFF

Notes:

- This macro is intended to be used when multimode transfer by DMA is enabled: refer to function LL_ADC_SetMultiDMATransfer(). In this case the transferred data need to processed with this macro to separate the conversion data of ADC master and ADC slave.

__HAL_ADC_COMMON_INSTANCE

Description:

- Helper macro to select the ADC common instance to which is belonging the selected ADC instance.

Parameters:

- __ADCx__: ADC instance

Return value:

- ADC: common register instance

Notes:

- ADC common register instance can be used for: Set parameters common to several ADC instancesMultimode (for devices with several ADC instances) Refer to functions having argument "ADCxy_COMMON" as parameter.

__HAL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE

Description:

- Helper macro to check if all ADC instances sharing the same ADC common instance are disabled.

Parameters:

- __ADCXY_COMMON__: ADC common instance (can be set directly from CMSIS definition or by using helper macro

Return value:

- Value: "0" if all ADC instances sharing the same ADC common instance are disabled. Value "1" if at least one ADC instance sharing the same ADC common instance is enabled.

Notes:

- This check is required by functions with setting conditioned to ADC state: All ADC instances of the ADC common group must be disabled. Refer to functions having argument "ADCxy_COMMON" as parameter. On devices with only 1 ADC common instance, parameter of this macro is useless and can be ignored (parameter kept for compatibility with devices featuring several ADC common instances).

__HAL_ADC_DIGITAL_SCALE

Description:

- Helper macro to define the ADC conversion data full-scale digital value corresponding to the selected ADC resolution.

Parameters:

- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- ADC: conversion data full-scale digital value

Notes:

- ADC conversion data full-scale corresponds to voltage range determined by analog voltage references Vref + and Vref- (refer to reference manual).

__HAL_ADC_CONVERT_DATA_RESOLUTION

Description:

- Helper macro to convert the ADC conversion data from a resolution to another resolution.

Parameters:

- __DATA__: ADC conversion data to be converted
- __ADC_RESOLUTION_CURRENT__: Resolution of to the data to be converted This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B
- __ADC_RESOLUTION_TARGET__: Resolution of the data after conversion This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- ADC: conversion data to the requested resolution

__HAL_ADC_CALC_DATA_TO_VOLTAGE

Description:

- Helper macro to calculate the voltage (unit: mVolt) corresponding to a ADC conversion data (unit: digital value).

Parameters:

- __VREFANALOG_VOLTAGE__: Analog reference voltage (unit: mV)
- __ADC_DATA__: ADC conversion data (resolution 12 bits) (unit: digital value).
- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- ADC: conversion data equivalent voltage value (unit: mVolt)

Notes:

- Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE().

__HAL_ADC_CALC_VREFANALOG_VOLTAGE

Description:

- Helper macro to calculate analog reference voltage (Vref+) (unit: mVolt) from ADC conversion data of internal voltage reference VrefInt.

Parameters:

- __VREFINT_ADC_DATA__: ADC conversion data (resolution 12 bits) of internal voltage reference VrefInt (unit: digital value).
- __ADC_RESOLUTION__: This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- Analog: reference voltage (unit: mV)

Notes:

- Computation is using VrefInt calibration value stored in system memory for each device during production. This voltage depends on user board environment: voltage level connected to pin Vref+. On devices with small package, the pin Vref+ is not present and internally bonded to pin Vdda. On this STM32 serie, calibration data of internal voltage reference VrefInt corresponds to a resolution of 12 bits, this is the recommended ADC resolution to convert voltage of internal voltage reference VrefInt. Otherwise, this macro performs the processing to scale ADC conversion data to 12 bits.

__HAL_ADC_CALC_TEMPERATURE

Description:

- Helper macro to calculate the temperature (unit: degree Celsius) from ADC conversion data of internal temperature sensor.

Parameters:

- __VREFANALOG_VOLTAGE__: Analog reference voltage (unit: mV)
- __TEMPSENSOR_ADC_DATA__: ADC conversion data of internal temperature sensor (unit: digital value).
- __ADC_RESOLUTION__: ADC resolution at which internal temperature sensor voltage has been measured. This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- Temperature: (unit: degree Celsius)

Notes:

- Computation is using temperature sensor calibration values stored in system memory for each device during production. Calculation formula: Temperature = ((TS_ADC_DATA - TS_CAL1) * (TS_CAL2_TEMP - TS_CAL1_TEMP)) / (TS_CAL2 - TS_CAL1) + TS_CAL1_TEMP with TS_ADC_DATA = temperature sensor raw data measured by ADC Avg_Slope = (TS_CAL2 - TS_CAL1) / (TS_CAL2_TEMP - TS_CAL1_TEMP) TS_CAL1 = equivalent TS_ADC_DATA at temperature TEMP_DEGC_CAL1 (calibrated in factory) TS_CAL2 = equivalent TS_ADC_DATA at temperature TEMP_DEGC_CAL2 (calibrated in factory) Caution: Calculation relevancy under reserve that calibration parameters are correct (address and data). To calculate temperature using temperature sensor datasheet typical values (generic values less, therefore less accurate than calibrated values), use helper macro __LL_ADC_CALC_TEMPERATURE_TYP_PARAMS(). As calculation input, the analog reference voltage (Vref+) must be defined as it impacts the ADC LSB equivalent voltage. Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE(). On this STM32 serie, calibration data of temperature sensor corresponds to a resolution of 12 bits, this is the recommended ADC resolution to convert voltage of temperature sensor. Otherwise, this macro performs the processing to scale ADC conversion data to 12 bits.

__HAL_ADC_CALC_TEMPERATURE_TYP_PARAMS

Description:

- Helper macro to calculate the temperature (unit: degree Celsius) from ADC conversion data of internal temperature sensor.

Parameters:

- __TEMPSENSOR_TYP_AVGSLOPE__: Device datasheet data: Temperature sensor slope typical value (unit: uV/DegCelsius). On STM32G4, refer to device datasheet parameter "Avg_Slope".
- __TEMPSENSOR_TYP_CALX_V__: Device datasheet data: Temperature sensor voltage typical value (at temperature and Vref+ defined in parameters below) (unit: mV). On STM32G4, refer to device datasheet parameter "V30" (corresponding to TS_CAL1).
- __TEMPSENSOR_CALX_TEMP__: Device datasheet data: Temperature at which temperature sensor voltage (see parameter above) is corresponding (unit: mV)
- __VREFANALOG_VOLTAGE__: Analog voltage reference (Vref+) voltage (unit: mV)
- __TEMPSENSOR_ADC_DATA__: ADC conversion data of internal temperature sensor (unit: digital value).
- __ADC_RESOLUTION__: ADC resolution at which internal temperature sensor voltage has been measured. This parameter can be one of the following values:
  - ADC_RESOLUTION_12B
  - ADC_RESOLUTION_10B
  - ADC_RESOLUTION_8B
  - ADC_RESOLUTION_6B

Return value:

- Temperature: (unit: degree Celsius)

Notes:

- Computation is using temperature sensor typical values (refer to device datasheet). Calculation formula: Temperature = (TS_TYP_CALx_VOLT(uV) - TS_ADC_DATA * Conversion_uV) / Avg_Slope + CALx_TEMP with TS_ADC_DATA = temperature sensor raw data measured by ADC (unit: digital value) Avg_Slope = temperature sensor slope (unit: uV/Degree Celsius) TS_TYP_CALx_VOLT = temperature sensor digital value at temperature CALx_TEMP (unit: mV) Caution: Calculation relevancy under reserve the temperature sensor of the current device has characteristics in line with datasheet typical values. If temperature sensor calibration values are available on on this device (presence of macro __LL_ADC_CALC_TEMPERATURE()), temperature calculation will be more accurate using helper macro __LL_ADC_CALC_TEMPERATURE(). As calculation input, the analog reference voltage (Vref+) must be defined as it impacts the ADC LSB equivalent voltage. Analog reference voltage (Vref+) must be either known from user board environment or can be calculated using ADC measurement and ADC helper macro __LL_ADC_CALC_VREFANALOG_VOLTAGE(). ADC measurement data must correspond to a resolution of 12bits (full scale digital value 4095). If not the case, the data must be preliminarily rescaled to an equivalent resolution of 12 bits.

ADC group injected trigger edge (when external trigger is selected)

ADC_EXTERNALTRIGINJECCONV_EDGE_NONE

Injected conversions hardware trigger detection disabled

ADC_EXTERNALTRIGINJECCONV_EDGE_RISING

Injected conversions hardware trigger detection on the rising edge

ADC_EXTERNALTRIGINJECCONV_EDGE_FALLING

Injected conversions hardware trigger detection on the falling edge

ADC_EXTERNALTRIGINJECCONV_EDGE_RISINGFALLING

Injected conversions hardware trigger detection on both the rising and falling edges

ADC group injected trigger source

ADC_INJECTED_SOFTWARE_START

Software triggers injected group conversion start

ADC_EXTERNALTRIGINJEC_T1_TRGO

ADC group injected conversion trigger from external peripheral: TIM1 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T1_TRGO2

ADC group injected conversion trigger from external peripheral: TIM1 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T1_CC3

ADC group injected conversion trigger from external peripheral: TIM1 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T1_CC4

ADC group injected conversion trigger from external peripheral: TIM1 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T2_TRGO

ADC group injected conversion trigger from external peripheral: TIM2 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T2_CC1

ADC group injected conversion trigger from external peripheral: TIM2 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T3_TRGO

ADC group injected conversion trigger from external peripheral: TIM3 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T3_CC1

ADC group injected conversion trigger from external peripheral: TIM3 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T3_CC3

ADC group injected conversion trigger from external peripheral: TIM3 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T3_CC4

ADC group injected conversion trigger from external peripheral: TIM3 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T4_TRGO

ADC group injected conversion trigger from external peripheral: TIM4 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T4_CC3

ADC group injected conversion trigger from external peripheral: TIM4 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T4_CC4

ADC group injected conversion trigger from external peripheral: TIM4 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T6_TRGO

ADC group injected conversion trigger from external peripheral: TIM6 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T7_TRGO

ADC group injected conversion trigger from external peripheral: TIM7 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T8_TRGO

ADC group injected conversion trigger from external peripheral: TIM8 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T8_TRGO2

ADC group injected conversion trigger from external peripheral: TIM8 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T8_CC2

ADC group injected conversion trigger from external peripheral: TIM8 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T8_CC4

ADC group injected conversion trigger from external peripheral: TIM8 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T15_TRGO

ADC group injected conversion trigger from external peripheral: TIM15 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T16_CC1

ADC group injected conversion trigger from external peripheral: TIM8 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T20_TRGO

ADC group injected conversion trigger from external peripheral: TIM20 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T20_TRGO2

ADC group injected conversion trigger from external peripheral: TIM20 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T20_CC2

ADC group injected conversion trigger from external peripheral: TIM20 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_T20_CC4

ADC group injected conversion trigger from external peripheral: TIM20 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG1

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 1 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG2

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 2 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG3

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 3 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG4

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 4 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG5

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 5 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG6

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 6 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG7

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 7 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG8

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 8 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG9

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 9 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_HRTIM_TRG10

ADC group injected conversion trigger from external peripheral: HRTIMER ADC trigger 10 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_EXT_IT3

ADC group injected conversion trigger from external peripheral: external interrupt line 3. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_EXT_IT15

ADC group injected conversion trigger from external peripheral: external interrupt line 15. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIGINJEC_LPTIM_OUT

ADC group injected conversion trigger from external peripheral: LPTIMER OUT event. Trigger edge set to rising edge (default setting).

ADC group injected - Sequencer ranks

ADC_INJECTED_RANK_1

ADC group injected sequencer rank 1

ADC_INJECTED_RANK_2

ADC group injected sequencer rank 2

ADC_INJECTED_RANK_3

ADC group injected sequencer rank 3

ADC_INJECTED_RANK_4

ADC group injected sequencer rank 4

ADC interrupts definition

ADC_IT_RDY

ADC Ready interrupt source

ADC_IT_EOSMP

ADC End of sampling interrupt source

ADC_IT_EOC

ADC End of regular conversion interrupt source

ADC_IT_EOS

ADC End of regular sequence of conversions interrupt source

ADC_IT_OVR

ADC overrun interrupt source

ADC_IT_JEOC

ADC End of injected conversion interrupt source

ADC_IT_JEOS

ADC End of injected sequence of conversions interrupt source

ADC_IT_AWD1

ADC Analog watchdog 1 interrupt source (main analog watchdog)

ADC_IT_AWD2

ADC Analog watchdog 2 interrupt source (additional analog watchdog)

ADC_IT_AWD3

ADC Analog watchdog 3 interrupt source (additional analog watchdog)

ADC_IT_JQOVF

ADC Injected Context Queue Overflow interrupt source

ADC_IT_AWD

ADC Analog watchdog 1 interrupt source: naming for compatibility with other STM32 devices having only one analog watchdog

ADC group regular trigger edge (when external trigger is selected)

ADC_EXTERNALTRIGCONVEDGE_NONE

Regular conversions hardware trigger detection disabled

ADC_EXTERNALTRIGCONVEDGE_RISING

ADC group regular conversion trigger polarity set to rising edge

ADC_EXTERNALTRIGCONVEDGE_FALLING

ADC group regular conversion trigger polarity set to falling edge

ADC_EXTERNALTRIGCONVEDGE_RISINGFALLING

ADC group regular conversion trigger polarity set to both rising and falling edges

ADC group regular trigger source

ADC_SOFTWARE_START

ADC group regular conversion trigger internal: SW start.

ADC_EXTERNALTRIG_T1_TRGO

ADC group regular conversion trigger from external peripheral: TIM1 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T1_TRGO2

ADC group regular conversion trigger from external peripheral: TIM1 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T1_CC1

ADC group regular conversion trigger from external peripheral: TIM1 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T1_CC2

ADC group regular conversion trigger from external peripheral: TIM1 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T1_CC3

ADC group regular conversion trigger from external peripheral: TIM1 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T2_TRGO

ADC group regular conversion trigger from external peripheral: TIM2 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T2_CC1

ADC group regular conversion trigger from external peripheral: TIM2 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T2_CC2

ADC group regular conversion trigger from external peripheral: TIM2 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T2_CC3

ADC group regular conversion trigger from external peripheral: TIM2 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T3_TRGO

ADC group regular conversion trigger from external peripheral: TIM3 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T3_CC1

ADC group regular conversion trigger from external peripheral: TIM3 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T3_CC4

ADC group regular conversion trigger from external peripheral: TIM3 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T4_TRGO

ADC group regular conversion trigger from external peripheral: TIM4 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T4_CC1

ADC group regular conversion trigger from external peripheral: TIM4 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T4_CC4

ADC group regular conversion trigger from external peripheral: TIM4 channel 4 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T6_TRGO

ADC group regular conversion trigger from external peripheral: TIM6 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T7_TRGO

ADC group regular conversion trigger from external peripheral: TIM7 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T8_TRGO

ADC group regular conversion trigger from external peripheral: TIM8 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T8_TRGO2

ADC group regular conversion trigger from external peripheral: TIM8 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T8_CC1

ADC group regular conversion trigger from external peripheral: TIM8 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T15_TRGO

ADC group regular conversion trigger from external peripheral: TIM15 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T20_TRGO

ADC group regular conversion trigger from external peripheral: TIM20 TRGO. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T20_TRGO2

ADC group regular conversion trigger from external peripheral: TIM20 TRGO2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T20_CC1

ADC group regular conversion trigger from external peripheral: TIM20 channel 1 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T20_CC2

ADC group regular conversion trigger from external peripheral: TIM20 channel 2 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_T20_CC3

ADC group regular conversion trigger from external peripheral: TIM20 channel 3 event (capture compare: input capture or output capture). Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG1

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 1 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG2

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 2 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG3

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 3 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG4

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 4 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG5

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 5 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG6

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 6 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG7

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 7 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG8

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 8 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG9

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 9 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_HRTIM_TRG10

ADC group regular conversion trigger from external peripheral: HRTIMER ADC trigger 10 event. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_EXT_IT2

ADC group regular conversion trigger from external peripheral: external interrupt line 2. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_EXT_IT11

ADC group regular conversion trigger from external peripheral: external interrupt line 11. Trigger edge set to rising edge (default setting).

ADC_EXTERNALTRIG_LPTIM_OUT

ADC group regular conversion trigger from external peripheral: LPTIMER OUT event. Trigger edge set to rising edge (default setting).

ADC group regular sampling mode

ADC_SAMPLING_MODE_NORMAL

ADC conversions sampling phase duration is defined using

ADC_SAMPLING_MODE_BULB

ADC conversions sampling phase starts immediately after end of conversion, and stops upon trigger event. Note: First conversion is using minimal sampling time (see

ADC_SAMPLING_MODE_TRIGGER_CONTROLED

ADC conversions sampling phase is controlled by trigger events: Trigger rising edge = start sampling Trigger falling edge = stop sampling and start conversion

ADC sequencer scan mode

ADC_SCAN_DISABLE

Scan mode disabled

ADC_SCAN_ENABLE

Scan mode enabled

ADCx SMPR1 fields

ADC_SMPR1_FIELDS

ADC States

HAL_ADC_STATE_RESET

Notes:

- ADC state machine is managed by bitfields, state must be compared with bit by bit. For example: " if ((HAL_ADC_GetState(hadc1) & HAL_ADC_STATE_REG_BUSY) != 0UL) " " if ((HAL_ADC_GetState(hadc1) & HAL_ADC_STATE_AWD1) != 0UL) " ADC not yet initialized or disabled

HAL_ADC_STATE_READY

ADC peripheral ready for use

HAL_ADC_STATE_BUSY_INTERNAL

ADC is busy due to an internal process (initialization, calibration)

HAL_ADC_STATE_TIMEOUT

TimeOut occurrence

HAL_ADC_STATE_ERROR_INTERNAL

Internal error occurrence

HAL_ADC_STATE_ERROR_CONFIG

Configuration error occurrence

HAL_ADC_STATE_ERROR_DMA

DMA error occurrence

HAL_ADC_STATE_REG_BUSY

A conversion on ADC group regular is ongoing or can occur (either by continuous mode, external trigger, low power auto power-on (if feature available), multimode ADC master control (if feature available))

HAL_ADC_STATE_REG_EOC

Conversion data available on group regular

HAL_ADC_STATE_REG_OVR

Overrun occurrence

HAL_ADC_STATE_REG_EOSMP

Not available on this STM32 serie: End Of Sampling flag raised

HAL_ADC_STATE_INJ_BUSY

A conversion on ADC group injected is ongoing or can occur (either by auto-injection mode, external trigger, low power auto power-on (if feature available), multimode ADC master control (if feature available))

HAL_ADC_STATE_INJ_EOC

Conversion data available on group injected

HAL_ADC_STATE_INJ_JQOVF

Injected queue overflow occurrence

HAL_ADC_STATE_AWD1

Out-of-window occurrence of ADC analog watchdog 1

HAL_ADC_STATE_AWD2

Out-of-window occurrence of ADC analog watchdog 2

HAL_ADC_STATE_AWD3

Out-of-window occurrence of ADC analog watchdog 3

HAL_ADC_STATE_MULTIMODE_SLAVE

ADC in multimode slave state, controlled by another ADC master (when feature available)

8 HAL ADC Extension Driver

8.1 ADCEx Firmware driver registers structures

8.1.1 ADC_InjOversamplingTypeDef

ADC_InjOversamplingTypeDef is defined in the stm32g4xx_hal_adc_ex.h

Data Fields

- ***uint32_t Ratio***
- ***uint32_t RightBitShift***

Field Documentation

- ***uint32_t ADC_InjOversamplingTypeDef::Ratio***
  Configures the oversampling ratio. This parameter can be a value of ***ADC_HAL_EC_OVS_RATIO***
- ***uint32_t ADC_InjOversamplingTypeDef::RightBitShift***
  Configures the division coefficient for the Oversampler. This parameter can be a value of ***ADC_HAL_EC_OVS_SHIFT***

8.1.2 ADC_InjectionConfTypeDef

ADC_InjectionConfTypeDef is defined in the stm32g4xx_hal_adc_ex.h

Data Fields

- ***uint32_t InjectedChannel***
- ***uint32_t InjectedRank***
- ***uint32_t InjectedSamplingTime***
- ***uint32_t InjectedSingleDiff***
- ***uint32_t InjectedOffsetNumber***
- ***uint32_t InjectedOffset***
- ***uint32_t InjectedOffsetSign***
- ***FunctionalState InjectedOffsetSaturation***
- ***uint32_t InjectedNbrOfConversion***
- ***FunctionalState InjectedDiscontinuousConvMode***
- ***FunctionalState AutoInjectedConv***
- ***FunctionalState QueueInjectedContext***
- ***uint32_t ExternalTrigInjecConv***
- ***uint32_t ExternalTrigInjecConvEdge***
- ***FunctionalState InjecOversamplingMode***
- ***ADC_InjOversamplingTypeDef InjecOversampling***

Field Documentation

- ***uint32_t ADC_InjectionConfTypeDef::InjectedChannel***
  Specifies the channel to configure into ADC group injected. This parameter can be a value of ***ADC_HAL_EC_CHANNEL*** Note: Depending on devices and ADC instances, some channels may not be available on device package pins. Refer to device datasheet for channels availability.
- ***uint32_t ADC_InjectionConfTypeDef::InjectedRank***
  Specifies the rank in the ADC group injected sequencer. This parameter must be a value of ***ADC_INJ_SEQ_RANKS***. Note: to disable a channel or change order of conversion sequencer, rank containing a previous channel setting can be overwritten by the new channel setting (or parameter number of conversions adjusted)

- ***uint32_t ADC_InjectionConfTypeDef::InjectedSamplingTime***

  Sampling time value to be set for the selected channel. Unit: ADC clock cycles. Conversion time is the addition of sampling time and processing time (12.5 ADC clock cycles at ADC resolution 12 bits, 10.5 cycles at 10 bits, 8.5 cycles at 8 bits, 6.5 cycles at 6 bits). This parameter can be a value of ***ADC_HAL_EC_CHANNEL_SAMPLINGTIME***. Caution: This parameter applies to a channel that can be used in a regular and/or injected group. It overwrites the last setting. Note: In case of usage of internal measurement channels (VrefInt/Vbat/TempSensor), sampling time constraints must be respected (sampling time can be adjusted in function of ADC clock frequency and sampling time setting) Refer to device datasheet for timings values.

- ***uint32_t ADC_InjectionConfTypeDef::InjectedSingleDiff***

  Selection of single-ended or differential input. In differential mode: Differential measurement is between the selected channel 'i' (positive input) and channel 'i+1' (negative input). Only channel 'i' has to be configured, channel 'i+1' is configured automatically. This parameter must be a value of ***ADC_HAL_EC_CHANNEL_SINGLE_DIFF_ENDING***. Caution: This parameter applies to a channel that can be used in a regular and/or injected group. It overwrites the last setting. Note: Refer to Reference Manual to ensure the selected channel is available in differential mode. Note: When configuring a channel 'i' in differential mode, the channel 'i+1' is not usable separately. Note: This parameter must be modified when ADC is disabled (before ADC start conversion or after ADC stop conversion). If ADC is enabled, this parameter setting is bypassed without error reporting (as it can be the expected behavior in case of another parameter update on the fly)

- ***uint32_t ADC_InjectionConfTypeDef::InjectedOffsetNumber***

  Selects the offset number. This parameter can be a value of ***ADC_HAL_EC_OFFSET_NB***. Caution: Only one offset is allowed per channel. This parameter overwrites the last setting.

- ***uint32_t ADC_InjectionConfTypeDef::InjectedOffset***

  Defines the offset to be applied on the raw converted data. Offset value must be a positive number. Depending of ADC resolution selected (12, 10, 8 or 6 bits), this parameter must be a number between Min_Data = 0x000 and Max_Data = 0xFFF, 0x3FF, 0xFF or 0x3F respectively. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***uint32_t ADC_InjectionConfTypeDef::InjectedOffsetSign***

  Define if the offset should be substracted (negative sign) or added (positive sign) from or to the raw converted data. This parameter can be a value of ***ADCEx_OffsetSign***. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***FunctionalState ADC_InjectionConfTypeDef::InjectedOffsetSaturation***

  Define if the offset should be saturated upon under or over flow. This parameter value can be ENABLE or DISABLE. Note: This parameter must be modified when no conversion is on going on both regular and injected groups (ADC disabled, or ADC enabled without continuous mode or external trigger that could launch a conversion).

- ***uint32_t ADC_InjectionConfTypeDef::InjectedNbrOfConversion***

  Specifies the number of ranks that will be converted within the ADC group injected sequencer. To use the injected group sequencer and convert several ranks, parameter 'ScanConvMode' must be enabled. This parameter must be a number between Min_Data = 1 and Max_Data = 4. Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set.

- ***FunctionalState ADC_InjectionConfTypeDef::InjectedDiscontinuousConvMode***

  Specifies whether the conversions sequence of ADC group injected is performed in Complete-sequence/ Discontinuous-sequence (main sequence subdivided in successive parts). Discontinuous mode is used only if sequencer is enabled (parameter 'ScanConvMode'). If sequencer is disabled, this parameter is discarded. Discontinuous mode can be enabled only if continuous mode is disabled. This parameter can be set to ENABLE or DISABLE. Note: This parameter must be modified when ADC is disabled (before ADC start conversion or after ADC stop conversion). Note: For injected group, discontinuous mode converts the sequence channel by channel (discontinuous length fixed to 1 rank). Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set.

- ***FunctionalState ADC_InjectionConfTypeDef::AutoInjectedConv***

  Enables or disables the selected ADC group injected automatic conversion after regular one This parameter can be set to ENABLE or DISABLE. Note: To use Automatic injected conversion, discontinuous mode must be disabled ('DiscontinuousConvMode' and 'InjectedDiscontinuousConvMode' set to DISABLE) Note: To use Automatic injected conversion, injected group external triggers must be disabled ('ExternalTrigInjecConv' set to ADC_INJECTED_SOFTWARE_START) Note: In case of DMA used with regular group: if DMA configured in normal mode (single shot) JAUTO will be stopped upon DMA transfer complete. To maintain JAUTO always enabled, DMA must be configured in circular mode. Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set.
- ***FunctionalState ADC_InjectionConfTypeDef::QueueInjectedContext***

  Specifies whether the context queue feature is enabled. This parameter can be set to ENABLE or DISABLE. If context queue is enabled, injected sequencer&channels configurations are queued on up to 2 contexts. If a new injected context is set when queue is full, error is triggered by interruption and through function 'HAL_ADCEx_InjectedQueueOverflowCallback'. Caution: This feature request that the sequence is fully configured before injected conversion start. Therefore, configure channels with as many calls to **HAL_ADCEx_InjectedConfigChannel()** as the 'InjectedNbrOfConversion' parameter. Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set. Note: This parameter must be modified when ADC is disabled (before ADC start conversion or after ADC stop conversion).
- ***uint32_t ADC_InjectionConfTypeDef::ExternalTrigInjecConv***

  Selects the external event used to trigger the conversion start of injected group. If set to ADC_INJECTED_SOFTWARE_START, external triggers are disabled and software trigger is used instead. This parameter can be a value of ***ADC_injected_external_trigger_source***. Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set.
- ***uint32_t ADC_InjectionConfTypeDef::ExternalTrigInjecConvEdge***

  Selects the external trigger edge of injected group. This parameter can be a value of ***ADC_injected_external_trigger_edge***. If trigger source is set to ADC_INJECTED_SOFTWARE_START, this parameter is discarded. Caution: this setting impacts the entire injected group. Therefore, call of **HAL_ADCEx_InjectedConfigChannel()** to configure a channel on injected group can impact the configuration of other channels previously set.
- ***FunctionalState ADC_InjectionConfTypeDef::InjecOversamplingMode***

  Specifies whether the oversampling feature is enabled or disabled. This parameter can be set to ENABLE or DISABLE. Note: This parameter can be modified only if there is no conversion is ongoing (both ADSTART and JADSTART cleared).
- ***ADC_InjOversamplingTypeDef ADC_InjectionConfTypeDef::InjecOversampling***

  Specifies the Oversampling parameters. Caution: this setting overwrites the previous oversampling configuration if oversampling already enabled. Note: This parameter can be modified only if there is no conversion is ongoing (both ADSTART and JADSTART cleared).

8.1.3 ADC_MultiModeTypeDef

ADC_MultiModeTypeDef is defined in the stm32g4xx_hal_adc_ex.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t DMAAccessMode***
- ***uint32_t TwoSamplingDelay***

Field Documentation

- ***uint32_t ADC_MultiModeTypeDef::Mode***

  Configures the ADC to operate in independent or multimode. This parameter can be a value of ***ADC_HAL_EC_MULTI_MODE***.
- ***uint32_t ADC_MultiModeTypeDef::DMAAccessMode***

  Configures the DMA mode for multimode ADC: selection whether 2 DMA channels (each ADC uses its own DMA channel) or 1 DMA channel (one DMA channel for both ADC, DMA of ADC master) This parameter can be a value of ***ADC_HAL_EC_MULTI_DMA_TRANSFER_RESOLUTION***.

- ***uint32_t ADC_MultiModeTypeDef::TwoSamplingDelay***
  Configures the Delay between 2 sampling phases. This parameter can be a value of ***ADC_HAL_EC_MULTI_TWOSMP_DELAY***. Delay range depends on selected resolution: from 1 to 12 clock cycles for 12 bits, from 1 to 10 clock cycles for 10 bits, from 1 to 8 clock cycles for 8 bits, from 1 to 6 clock cycles for 6 bits.

8.2 ADCEx Firmware driver API description

The following section lists the various functions of the ADCEx library.

8.2.1 IO operation functions

This section provides functions allowing to:

- Perform the ADC self-calibration for single or differential ending.
- Get calibration factors for single or differential ending.
- Set calibration factors for single or differential ending.
- Start conversion of ADC group injected.
- Stop conversion of ADC group injected.
- Poll for conversion complete on ADC group injected.
- Get result of ADC group injected channel conversion.
- Start conversion of ADC group injected and enable interruptions.
- Stop conversion of ADC group injected and disable interruptions.
- When multimode feature is available, start multimode and enable DMA transfer.
- Stop multimode and disable ADC DMA transfer.
- Get result of multimode conversion.

This section contains the following APIs:

- ***HAL_ADCEx_Calibration_Start***
- ***HAL_ADCEx_Calibration_GetValue***
- ***HAL_ADCEx_Calibration_SetValue***
- ***HAL_ADCEx_InjectedStart***
- ***HAL_ADCEx_InjectedStop***
- ***HAL_ADCEx_InjectedPollForConversion***
- ***HAL_ADCEx_InjectedStart_IT***
- ***HAL_ADCEx_InjectedStop_IT***
- ***HAL_ADCEx_MultiModeStart_DMA***
- ***HAL_ADCEx_MultiModeStop_DMA***
- ***HAL_ADCEx_MultiModeGetValue***
- ***HAL_ADCEx_InjectedGetValue***
- ***HAL_ADCEx_InjectedConvCpltCallback***
- ***HAL_ADCEx_InjectedQueueOverflowCallback***
- ***HAL_ADCEx_LevelOutOfWindow2Callback***
- ***HAL_ADCEx_LevelOutOfWindow3Callback***
- ***HAL_ADCEx_EndOfSamplingCallback***
- ***HAL_ADCEx_RegularStop***
- ***HAL_ADCEx_RegularStop_IT***
- ***HAL_ADCEx_RegularStop_DMA***
- ***HAL_ADCEx_RegularMultiModeStop_DMA***

8.2.2 Peripheral Control functions

This section provides functions allowing to:

- Configure channels on injected group
- Configure multimode when multimode feature is available

- Enable or Disable Injected Queue
- Disable ADC voltage regulator
- Enter ADC deep-power-down mode

This section contains the following APIs:

- ***HAL_ADCEx_InjectedConfigChannel***
- ***HAL_ADCEx_MultiModeConfigChannel***
- ***HAL_ADCEx_EnableInjectedQueue***
- ***HAL_ADCEx_DisableInjectedQueue***
- ***HAL_ADCEx_DisableVoltageRegulator***
- ***HAL_ADCEx_EnterADCDeepPowerDownMode***

8.2.3 Detailed description of functions

HAL_ADCEx_Calibration_Start

Function name

HAL_StatusTypeDef HAL_ADCEx_Calibration_Start (ADC_HandleTypeDef * hadc, uint32_t SingleDiff)

Function description

Perform an ADC automatic self-calibration Calibration prerequisite: ADC must be disabled (execute this function before HAL_ADC_Start() or after HAL_ADC_Stop()).

Parameters

- **hadc:** ADC handle
- **SingleDiff:** Selection of single-ended or differential input This parameter can be one of the following values:
  - ADC_SINGLE_ENDED Channel in mode input single ended
  - ADC_DIFFERENTIAL_ENDED Channel in mode input differential ended

Return values

- **HAL:** status

HAL_ADCEx_Calibration_GetValue

Function name

uint32_t HAL_ADCEx_Calibration_GetValue (ADC_HandleTypeDef * hadc, uint32_t SingleDiff)

Function description

Get the calibration factor.

Parameters

- **hadc:** ADC handle.
- **SingleDiff:** This parameter can be only:
  - ADC_SINGLE_ENDED Channel in mode input single ended
  - ADC_DIFFERENTIAL_ENDED Channel in mode input differential ended

Return values

- **Calibration:** value.

HAL_ADCEx_Calibration_SetValue

Function name

HAL_StatusTypeDef HAL_ADCEx_Calibration_SetValue (ADC_HandleTypeDef * hadc, uint32_t SingleDiff, uint32_t CalibrationFactor)

Function description

Set the calibration factor to overwrite automatic conversion result.

Parameters

- **hadc:** ADC handle
- **SingleDiff:** This parameter can be only:
  - ADC_SINGLE_ENDED Channel in mode input single ended
  - ADC_DIFFERENTIAL_ENDED Channel in mode input differential ended
- **CalibrationFactor:** Calibration factor (coded on 7 bits maximum)

Return values

- **HAL:** state

HAL_ADCEx_InjectedStart

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedStart (ADC_HandleTypeDef * hadc)

Function description

Enable ADC, start conversion of injected group.

Parameters

- **hadc:** ADC handle.

Return values

- **HAL:** status

Notes

- Interruptions enabled in this function: None.
- Case of multimode enabled when multimode feature is available: HAL_ADCEx_InjectedStart() API must be called for ADC slave first, then for ADC master. For ADC slave, ADC is enabled only (conversion is not started). For ADC master, ADC is enabled and multimode conversion is started.

HAL_ADCEx_InjectedStop

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedStop (ADC_HandleTypeDef * hadc)

Function description

Stop conversion of injected channels.

Parameters

- **hadc:** ADC handle.

Return values

- **HAL:** status

Notes

- If ADC must be disabled and if conversion is on going on regular group, function HAL_ADC_Stop must be used to stop both injected and regular groups, and disable the ADC.
- If injected group mode auto-injection is enabled, function HAL_ADC_Stop must be used.
- In case of multimode enabled (when multimode feature is available), HAL_ADCEx_InjectedStop() must be called for ADC master first, then for ADC slave. For ADC master, conversion is stopped and ADC is disabled. For ADC slave, ADC is disabled only (conversion stop of ADC master has already stopped conversion of ADC slave).

HAL_ADCEx_InjectedPollForConversion

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedPollForConversion (ADC_HandleTypeDef * hadc, uint32_t Timeout)

Function description

Wait for injected group conversion to be completed.

Parameters

- **hadc:** ADC handle
- **Timeout:** Timeout value in millisecond.

Return values

- **HAL:** status

Notes

- Depending on hadc->Init.EOCSelection, JEOS or JEOC is checked and cleared depending on AUTDLY bit status.

HAL_ADCEx_InjectedStart_IT

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedStart_IT (ADC_HandleTypeDef * hadc)

Function description

Enable ADC, start conversion of injected group with interruption.

Parameters

- **hadc:** ADC handle.

Return values

- **HAL:** status.

Notes

- Interruptions enabled in this function according to initialization setting : JEOC (end of conversion) or JEOS (end of sequence)
- Case of multimode enabled (when multimode feature is enabled): HAL_ADCEx_InjectedStart_IT() API must be called for ADC slave first, then for ADC master. For ADC slave, ADC is enabled only (conversion is not started). For ADC master, ADC is enabled and multimode conversion is started.

HAL_ADCEx_InjectedStop_IT

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedStop_IT (ADC_HandleTypeDef * hadc)

Function description

Stop conversion of injected channels, disable interruption of end-of-conversion.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- If ADC must be disabled and if conversion is on going on regular group, function HAL_ADC_Stop must be used to stop both injected and regular groups, and disable the ADC.
- If injected group mode auto-injection is enabled, function HAL_ADC_Stop must be used.
- Case of multimode enabled (when multimode feature is available): HAL_ADCEx_InjectedStop_IT() API must be called for ADC master first, then for ADC slave. For ADC master, conversion is stopped and ADC is disabled. For ADC slave, ADC is disabled only (conversion stop of ADC master has already stopped conversion of ADC slave).
- In case of auto-injection mode, HAL_ADC_Stop() must be used.

HAL_ADCEx_MultiModeStart_DMA

Function name

HAL_StatusTypeDef HAL_ADCEx_MultiModeStart_DMA (ADC_HandleTypeDef * hadc, uint32_t * pData, uint32_t Length)

Function description

Enable ADC, start MultiMode conversion and transfer regular results through DMA.

Parameters

- **hadc:** ADC handle of ADC master (handle of ADC slave must not be used)
- **pData:** Destination Buffer address.
- **Length:** Length of data to be transferred from ADC peripheral to memory (in bytes).

Return values

- **HAL:** status

Notes

- Multimode must have been previously configured using HAL_ADCEx_MultiModeConfigChannel() function. Interruptions enabled in this function: overrun, DMA half transfer, DMA transfer complete. Each of these interruptions has its dedicated callback function.
- State field of Slave ADC handle is not updated in this configuration: user should not rely on it for information related to Slave regular conversions.

HAL_ADCEx_MultiModeStop_DMA

Function name

HAL_StatusTypeDef HAL_ADCEx_MultiModeStop_DMA (ADC_HandleTypeDef * hadc)

Function description

Stop multimode ADC conversion, disable ADC DMA transfer, disable ADC peripheral.

Parameters

- **hadc:** ADC handle of ADC master (handle of ADC slave must not be used)

Return values

- **HAL:** status

Notes

- Multimode is kept enabled after this function. MultiMode DMA bits (MDMA and DMACFG bits of common CCR register) are maintained. To disable Multimode (set with HAL_ADCEx_MultiModeConfigChannel()), ADC must be reinitialized using HAL_ADC_Init() or HAL_ADC_DeInit(), or the user can resort to HAL_ADCEx_DisableMultiMode() API.
- In case of DMA configured in circular mode, function HAL_ADC_Stop_DMA() must be called after this function with handle of ADC slave, to properly disable the DMA channel.

HAL_ADCEx_MultiModeGetValue

Function name

uint32_t HAL_ADCEx_MultiModeGetValue (ADC_HandleTypeDef * hadc)

Function description

Return the last ADC Master and Slave regular conversions results when in multimode configuration.

Parameters

- **hadc:** ADC handle of ADC Master (handle of ADC Slave must not be used)

Return values

- **The:** converted data values.

HAL_ADCEx_InjectedGetValue

Function name

uint32_t HAL_ADCEx_InjectedGetValue (ADC_HandleTypeDef * hadc, uint32_t InjectedRank)

Function description

Get ADC injected group conversion result.

Parameters

- **hadc:** ADC handle
- **InjectedRank:** the converted ADC injected rank. This parameter can be one of the following values:
  - ADC_INJECTED_RANK_1 ADC group injected rank 1
  - ADC_INJECTED_RANK_2 ADC group injected rank 2
  - ADC_INJECTED_RANK_3 ADC group injected rank 3
  - ADC_INJECTED_RANK_4 ADC group injected rank 4

Return values

- **ADC:** group injected conversion data

Notes

- Reading register JDRx automatically clears ADC flag JEOC (ADC group injected end of unitary conversion).
- This function does not clear ADC flag JEOS (ADC group injected end of sequence conversion) Occurrence of flag JEOS rising: If sequencer is composed of 1 rank, flag JEOS is equivalent to flag JEOC.If sequencer is composed of several ranks, during the scan sequence flag JEOC only is raised, at the end of the scan sequence both flags JEOC and EOS are raised. Flag JEOS must not be cleared by this function because it would not be compliant with low power features (feature low power auto-wait, not available on all STM32 families). To clear this flag, either use function: in programming model IT: HAL_ADC_IRQHandler(), in programming model polling: HAL_ADCEx_InjectedPollForConversion() or __HAL_ADC_CLEAR_FLAG(&hadc, ADC_FLAG_JEOS).

HAL_ADCEx_InjectedConvCpltCallback

Function name

void HAL_ADCEx_InjectedConvCpltCallback (ADC_HandleTypeDef * hadc)

Function description

Injected conversion complete callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADCEx_InjectedQueueOverflowCallback

Function name

void HAL_ADCEx_InjectedQueueOverflowCallback (ADC_HandleTypeDef * hadc)

Function description

Injected context queue overflow callback.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

Notes

- This callback is called if injected context queue is enabled (parameter "QueueInjectedContext" in injected channel configuration) and if a new injected context is set when queue is full (maximum 2 contexts).

HAL_ADCEx_LevelOutOfWindow2Callback

Function name

void HAL_ADCEx_LevelOutOfWindow2Callback (ADC_HandleTypeDef * hadc)

Function description

Analog watchdog 2 callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADCEx_LevelOutOfWindow3Callback

Function name

void HAL_ADCEx_LevelOutOfWindow3Callback (ADC_HandleTypeDef * hadc)

Function description

Analog watchdog 3 callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADCEx_EndOfSamplingCallback

Function name

void HAL_ADCEx_EndOfSamplingCallback (ADC_HandleTypeDef * hadc)

Function description

End Of Sampling callback in non-blocking mode.

Parameters

- **hadc:** ADC handle

Return values

- **None:**

HAL_ADCEx_RegularStop

Function name

HAL_StatusTypeDef HAL_ADCEx_RegularStop (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of regular group (and injected channels in case of auto_injection mode), disable ADC peripheral if no conversion is on going on injected group.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

HAL_ADCEx_RegularStop_IT

Function name

HAL_StatusTypeDef HAL_ADCEx_RegularStop_IT (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of ADC groups regular and injected, disable interrution of end-of-conversion, disable ADC peripheral if no conversion is on going on injected group.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

HAL_ADCEx_RegularStop_DMA

Function name

HAL_StatusTypeDef HAL_ADCEx_RegularStop_DMA (ADC_HandleTypeDef * hadc)

Function description

Stop ADC conversion of regular group (and injected group in case of auto_injection mode), disable ADC DMA transfer, disable ADC peripheral if no conversion is on going on injected group.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status.

Notes

- HAL_ADCEx_RegularStop_DMA() function is dedicated to single-ADC mode only. For multimode (when multimode feature is available), HAL_ADCEx_RegularMultiModeStop_DMA() API must be used.

HAL_ADCEx_RegularMultiModeStop_DMA

Function name

HAL_StatusTypeDef HAL_ADCEx_RegularMultiModeStop_DMA (ADC_HandleTypeDef * hadc)

Function description

Stop DMA-based multimode ADC conversion, disable ADC DMA transfer, disable ADC peripheral if no injected conversion is on-going.

Parameters

- **hadc:** ADC handle of ADC master (handle of ADC slave must not be used)

Return values

- **HAL:** status

Notes

- Multimode is kept enabled after this function. Multimode DMA bits (MDMA and DMACFG bits of common CCR register) are maintained. To disable multimode (set with HAL_ADCEx_MultiModeConfigChannel()), ADC must be reinitialized using HAL_ADC_Init() or HAL_ADC_DeInit(), or the user can resort to HAL_ADCEx_DisableMultiMode() API.
- In case of DMA configured in circular mode, function HAL_ADCEx_RegularStop_DMA() must be called after this function with handle of ADC slave, to properly disable the DMA channel.

HAL_ADCEx_InjectedConfigChannel

Function name

HAL_StatusTypeDef HAL_ADCEx_InjectedConfigChannel (ADC_HandleTypeDef * hadc, ADC_InjectionConfTypeDef * sConfigInjected)

Function description

Configure a channel to be assigned to ADC group injected.

Parameters

- **hadc:** ADC handle
- **sConfigInjected:** Structure of ADC injected group and ADC channel for injected group.

Return values

- **HAL:** status

Notes

- Possibility to update parameters on the fly: This function initializes injected group, following calls to this function can be used to reconfigure some parameters of structure "ADC_InjectionConfTypeDef" on the fly, without resetting the ADC. The setting of these parameters is conditioned to ADC state: Refer to comments of structure "ADC_InjectionConfTypeDef".
- In case of usage of internal measurement channels: Vbat/VrefInt/TempSensor. These internal paths can be disabled using function HAL_ADC_DeInit().
- Caution: For Injected Context Queue use, a context must be fully defined before start of injected conversion. All channels are configured consecutively for the same ADC instance. Therefore, the number of calls to HAL_ADCEx_InjectedConfigChannel() must be equal to the value of parameter InjectedNbrOfConversion for each context. Example 1: If 1 context is intended to be used (or if there is no use of the Injected Queue Context feature) and if the context contains 3 injected ranks (InjectedNbrOfConversion = 3), HAL_ADCEx_InjectedConfigChannel() must be called once for each channel (i.e. 3 times) before starting a conversion. This function must not be called to configure a 4th injected channel: it would start a new context into context queue.Example 2: If 2 contexts are intended to be used and each of them contains 3 injected ranks (InjectedNbrOfConversion = 3), HAL_ADCEx_InjectedConfigChannel() must be called once for each channel and for each context (3 channels x 2 contexts = 6 calls). Conversion can start once the 1st context is set, that is after the first three HAL_ADCEx_InjectedConfigChannel() calls. The 2nd context can be set on the fly.

HAL_ADCEx_MultiModeConfigChannel

Function name

HAL_StatusTypeDef HAL_ADCEx_MultiModeConfigChannel (ADC_HandleTypeDef * hadc, ADC_MultiModeTypeDef * multimode)

Function description

Enable ADC multimode and configure multimode parameters.

Parameters

- **hadc:** Master ADC handle
- **multimode:** Structure of ADC multimode configuration

Return values

- **HAL:** status

Notes

- Possibility to update parameters on the fly: This function initializes multimode parameters, following calls to this function can be used to reconfigure some parameters of structure "ADC_MultiModeTypeDef" on the fly, without resetting the ADCs. The setting of these parameters is conditioned to ADC state. For parameters constraints, see comments of structure "ADC_MultiModeTypeDef".
- To move back configuration from multimode to single mode, ADC must be reset (using function HAL_ADC_Init()).

HAL_ADCEx_EnableInjectedQueue

Function name

HAL_StatusTypeDef HAL_ADCEx_EnableInjectedQueue (ADC_HandleTypeDef * hadc)

Function description

Enable Injected Queue.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- This function resets CFGR register JQDIS bit in order to enable the Injected Queue. JQDIS can be written only when ADSTART and JDSTART are both equal to 0 to ensure that no regular nor injected conversion is ongoing.

HAL_ADCEx_DisableInjectedQueue

Function name

HAL_StatusTypeDef HAL_ADCEx_DisableInjectedQueue (ADC_HandleTypeDef * hadc)

Function description

Disable Injected Queue.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- This function sets CFGR register JQDIS bit in order to disable the Injected Queue. JQDIS can be written only when ADSTART and JDSTART are both equal to 0 to ensure that no regular nor injected conversion is ongoing.

HAL_ADCEx_DisableVoltageRegulator

Function name

HAL_StatusTypeDef HAL_ADCEx_DisableVoltageRegulator (ADC_HandleTypeDef * hadc)

Function description

Disable ADC voltage regulator.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- Disabling voltage regulator allows to save power. This operation can be carried out only when ADC is disabled.
- To enable again the voltage regulator, the user is expected to resort to HAL_ADC_Init() API.

HAL_ADCEx_EnterADCDeepPowerDownMode

Function name

HAL_StatusTypeDef HAL_ADCEx_EnterADCDeepPowerDownMode (ADC_HandleTypeDef * hadc)

Function description

Enter ADC deep-power-down mode.

Parameters

- **hadc:** ADC handle

Return values

- **HAL:** status

Notes

- This mode is achieved in setting DEEPPWD bit and allows to save power in reducing leakage currents. It is particularly interesting before entering stop modes.
- Setting DEEPPWD automatically clears ADVREGEN bit and disables the ADC voltage regulator. This means that this API encompasses HAL_ADCEx_DisableVoltageRegulator(). Additionally, the internal calibration is lost.
- To exit the ADC deep-power-down mode, the user is expected to resort to HAL_ADC_Init() API as well as to relaunch a calibration with HAL_ADCEx_Calibration_Start() API or to re-apply a previously saved calibration factor.

8.3 ADCEx Firmware driver defines

The following section lists the various define and macros of the module.

8.3.1 ADCEx

ADCEx

ADC Extended Exported Macros

ADC_FORCE_MODE_INDEPENDENT

Description:

- Force ADC instance in multimode mode independent (multimode disable).

Parameters:

- __HANDLE__: ADC handle.

Return value:

- None

Notes:

- This macro must be used only in case of transition from multimode to mode independent and in case of unknown previous state, to ensure ADC configuration is in mode independent. Standard way of multimode configuration change is done from HAL ADC handle of ADC master using function "HAL_ADCEx_MultiModeConfigChannel(..., ADC_MODE_INDEPENDENT)")". Usage of this macro is not the Standard way of multimode configuration and can lead to have HAL ADC handles status misaligned. Usage of this macro must be limited to cases mentionned above.

ADC Extended Offset Sign

ADC_OFFSET_SIGN_NEGATIVE

Offset sign negative, offset is substracted

ADC_OFFSET_SIGN_POSITIVE

Offset sign positive, offset is added

9 HAL COMP Generic Driver

9.1 COMP Firmware driver registers structures

9.1.1 COMP_InitTypeDef

COMP_InitTypeDef is defined in the stm32g4xx_hal_comp.h

Data Fields

- ***uint32_t InputPlus***
- ***uint32_t InputMinus***
- ***uint32_t Hysteresis***
- ***uint32_t OutputPol***
- ***uint32_t BlankingSrce***
- ***uint32_t TriggerMode***

Field Documentation

- ***uint32_t COMP_InitTypeDef::InputPlus***
  Set comparator input plus (non-inverting input). This parameter can be a value of ***COMP_InputPlus***
- ***uint32_t COMP_InitTypeDef::InputMinus***
  Set comparator input minus (inverting input). This parameter can be a value of ***COMP_InputMinus***
- ***uint32_t COMP_InitTypeDef::Hysteresis***
  Set comparator hysteresis mode of the input minus. This parameter can be a value of ***COMP_Hysteresis***
- ***uint32_t COMP_InitTypeDef::OutputPol***
  Set comparator output polarity. This parameter can be a value of ***COMP_OutputPolarity***
- ***uint32_t COMP_InitTypeDef::BlankingSrce***
  Set comparator blanking source. This parameter can be a value of ***COMP_BlankingSrce***
- ***uint32_t COMP_InitTypeDef::TriggerMode***
  Set the comparator output triggering External Interrupt Line (EXTI). This parameter can be a value of ***COMP_EXTI_TriggerMode***

9.1.2 COMP_HandleTypeDef

COMP_HandleTypeDef is defined in the stm32g4xx_hal_comp.h

Data Fields

- ***COMP_TypeDef * Instance***
- ***COMP_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_COMP_StateTypeDef State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***COMP_TypeDef* COMP_HandleTypeDef::Instance***
  Register base address
- ***COMP_InitTypeDef COMP_HandleTypeDef::Init***
  COMP required parameters
- ***HAL_LockTypeDef COMP_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_COMP_StateTypeDef COMP_HandleTypeDef::State***
  COMP communication state
- ***__IO uint32_t COMP_HandleTypeDef::ErrorCode***
  COMP error code

9.2 COMP Firmware driver API description

The following section lists the various functions of the COMP library.

9.2.1 COMP Peripheral features

The STM32G4xx device family integrates seven analog comparators instances: COMP1, COMP2, COMP3, COMP4, COMP5, COMP6 and COMP7.

1. Comparators input minus (inverting input) and input plus (non inverting input) can be set to internal references or to GPIO pins (refer to GPIO list in reference manual).
2. Comparators output level is available using HAL_COMP_GetOutputLevel() and can be redirected to other peripherals: GPIO pins (in mode alternate functions for comparator), timers. (refer to GPIO list in reference manual).
3. The comparators have interrupt capability through the EXTI controller with wake-up from sleep and stop modes. From the corresponding IRQ handler, the right interrupt source can be retrieved using macro __HAL_COMP_COMPx_EXTI_GET_FLAG().

9.2.2 How to use this driver

This driver provides functions to configure and program the comparator instances of STM32G4xx devices. To use the comparator, perform the following steps:

1. Initialize the COMP low level resources by implementing the HAL_COMP_MspInit():
   - Configure the GPIO connected to comparator inputs plus and minus in analog mode using HAL_GPIO_Init().
   - If needed, configure the GPIO connected to comparator output in alternate function mode using HAL_GPIO_Init().
   - If required enable the COMP interrupt by configuring and enabling EXTI line in Interrupt mode and selecting the desired sensitivity level using HAL_GPIO_Init() function. After that enable the comparator interrupt vector using HAL_NVIC_EnableIRQ() function.
2. Configure the comparator using HAL_COMP_Init() function:
   - Select the input minus (inverting input)
   - Select the input plus (non-inverting input)
   - Select the hysteresis
   - Select the blanking source
   - Select the output polarity

Note: HAL_COMP_Init() calls internally __HAL_RCC_SYSCFG_CLK_ENABLE() to enable internal control clock of the comparators. However, this is a legacy strategy. In future STM32 families, COMP clock enable must be implemented by user in "HAL_COMP_MspInit()". Therefore, for compatibility anticipation, it is recommended to implement __HAL_RCC_SYSCFG_CLK_ENABLE() in "HAL_COMP_MspInit()".

3. Reconfiguration on-the-fly of comparator can be done by calling again function HAL_COMP_Init() with new input structure parameters values.
4. Enable the comparator using HAL_COMP_Start() function.
5. Use HAL_COMP_TriggerCallback() or HAL_COMP_GetOutputLevel() functions to manage comparator outputs (events and output level).
6. Disable the comparator using HAL_COMP_Stop() function.
7. De-initialize the comparator using HAL_COMP_DeInit() function.
8. For safety purpose, comparator configuration can be locked using HAL_COMP_Lock() function. The only way to unlock the comparator is a device hardware reset.

Callback registration

The compilation flag USE_HAL_COMP_REGISTER_CALLBACKS, when set to 1, allows the user to configure dynamically the driver callbacks. Use Functions HAL_COMP_RegisterCallback() to register an interrupt callback.

Function HAL_COMP_RegisterCallback() allows to register following callbacks:

- TriggerCallback : callback for COMP trigger.
- MspInitCallback : callback for Msp Init.

- MspDeInitCallback : callback for Msp DeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_COMP_UnRegisterCallback to reset a callback to the default weak function.

HAL_COMP_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TriggerCallback : callback for COMP trigger.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit.

By default, after the HAL_COMP_Init() and when the state is HAL_COMP_STATE_RESET all callbacks are set to the corresponding weak functions: example HAL_COMP_TriggerCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the HAL_COMP_Init()/ HAL_COMP_DeInit() only when these callbacks are null (not registered beforehand).

If MspInit or MspDeInit are not null, the HAL_COMP_Init()/ HAL_COMP_DeInit() keep and use the user MspInit/ MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in HAL_COMP_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in HAL_COMP_STATE_READY or HAL_COMP_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/ DeInit.

Then, the user first registers the MspInit/MspDeInit user callbacks using HAL_COMP_RegisterCallback() before calling HAL_COMP_DeInit() or HAL_COMP_Init() function.

When the compilation flag USE_HAL_COMP_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

9.2.3 Initialization and de-initialization functions

This section provides functions to initialize and de-initialize comparators

This section contains the following APIs:

- ***HAL_COMP_Init***
- ***HAL_COMP_DeInit***
- ***HAL_COMP_MspInit***
- ***HAL_COMP_MspDeInit***

9.2.4 IO operation functions

This section provides functions allowing to:

- Start a comparator instance.
- Stop a comparator instance.

This section contains the following APIs:

- ***HAL_COMP_Start***
- ***HAL_COMP_Stop***
- ***HAL_COMP_IRQHandler***

9.2.5 Peripheral Control functions

This subsection provides a set of functions allowing to control the comparators.

This section contains the following APIs:

- ***HAL_COMP_Lock***
- ***HAL_COMP_GetOutputLevel***
- ***HAL_COMP_TriggerCallback***

9.2.6 Peripheral State functions

This subsection permit to get in run-time the status of the peripheral.

This section contains the following APIs:

- ***HAL_COMP_GetState***
- ***HAL_COMP_GetError***

9.2.7 Detailed description of functions

HAL_COMP_Init

Function name

HAL_StatusTypeDef HAL_COMP_Init (COMP_HandleTypeDef * hcomp)

Function description

Initialize the COMP according to the specified parameters in the COMP_InitTypeDef and initialize the associated handle.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** status

Notes

- If the selected comparator is locked, initialization can't be performed. To unlock the configuration, perform a system reset.

HAL_COMP_DeInit

Function name

HAL_StatusTypeDef HAL_COMP_DeInit (COMP_HandleTypeDef * hcomp)

Function description

DeInitialize the COMP peripheral.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** status

Notes

- Deinitialization cannot be performed if the COMP configuration is locked. To unlock the configuration, perform a system reset.

HAL_COMP_MspInit

Function name

void HAL_COMP_MspInit (COMP_HandleTypeDef * hcomp)

Function description

Initialize the COMP MSP.

Parameters

- **hcomp:** COMP handle

Return values

- **None:**

HAL_COMP_MspDeInit

Function name

void HAL_COMP_MspDeInit (COMP_HandleTypeDef * hcomp)

Function description

DeInitialize the COMP MSP.

Parameters

- **hcomp:** COMP handle

Return values

- **None:**

HAL_COMP_Start

Function name

HAL_StatusTypeDef HAL_COMP_Start (COMP_HandleTypeDef * hcomp)

Function description

Start the comparator.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** status

HAL_COMP_Stop

Function name

HAL_StatusTypeDef HAL_COMP_Stop (COMP_HandleTypeDef * hcomp)

Function description

Stop the comparator.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** status

HAL_COMP_IRQHandler

Function name

void HAL_COMP_IRQHandler (COMP_HandleTypeDef * hcomp)

Function description

Comparator IRQ handler.

Parameters

- **hcomp:** COMP handle

Return values

- **None:**

HAL_COMP_Lock

Function name

HAL_StatusTypeDef HAL_COMP_Lock (COMP_HandleTypeDef * hcomp)

Function description

Lock the selected comparator configuration.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** status

Notes

- A system reset is required to unlock the comparator configuration.
- Locking the comparator from reset state is possible if __HAL_RCC_SYSCFG_CLK_ENABLE() is being called before.

HAL_COMP_GetOutputLevel

Function name

uint32_t HAL_COMP_GetOutputLevel (COMP_HandleTypeDef * hcomp)

Function description

Return the output level (high or low) of the selected comparator.

HAL_COMP_TriggerCallback

Function name

void HAL_COMP_TriggerCallback (COMP_HandleTypeDef * hcomp)

Function description

Comparator trigger callback.

Parameters

- **hcomp:** COMP handle

Return values

- **None:**

HAL_COMP_GetState

Function name

HAL_COMP_StateTypeDef HAL_COMP_GetState (COMP_HandleTypeDef * hcomp)

Function description

Return the COMP handle state.

Parameters

- **hcomp:** COMP handle

Return values

- **HAL:** state

HAL_COMP_GetError

Function name

uint32_t HAL_COMP_GetError (COMP_HandleTypeDef * hcomp)

Function description

Return the COMP error code.

Parameters

- **hcomp:** COMP handle

Return values

- **COMP:** error code

9.3 COMP Firmware driver defines

The following section lists the various define and macros of the module.

9.3.1 COMP

COMP

COMP blanking source

COMP_BLANKINGSRC_NONE

Comparator output without blanking

COMP_BLANKINGSRC_TIM1_OC5_COMP1

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP1). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP2

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP2). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP3

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP3). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP4

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP4). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP5

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP5). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP6

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP6). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM1_OC5_COMP7

Comparator output blanking source TIM1 OC5 (specific to COMP instance: COMP7). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM2_OC3_COMP1

Comparator output blanking source TIM2 OC3 (specific to COMP instance: COMP1). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM2_OC3_COMP2

Comparator output blanking source TIM2 OC3 (specific to COMP instance: COMP2). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM2_OC3_COMP5

Comparator output blanking source TIM2 OC3 (specific to COMP instance: COMP5). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM2_OC4_COMP3

Comparator output blanking source TIM2 OC4 (specific to COMP instance: COMP3). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM2_OC4_COMP6

Comparator output blanking source TIM2 OC4 (specific to COMP instance: COMP6). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC3_COMP1

Comparator output blanking source TIM3 OC3 (specific to COMP instance: COMP1). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC3_COMP2

Comparator output blanking source TIM3 OC3 (specific to COMP instance: COMP2). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC3_COMP3

Comparator output blanking source TIM3 OC3 (specific to COMP instance: COMP3). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC3_COMP5

Comparator output blanking source TIM3 OC3 (specific to COMP instance: COMP5). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC3_COMP7

Comparator output blanking source TIM3 OC3 (specific to COMP instance: COMP7). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM3_OC4_COMP4

Comparator output blanking source TIM3 OC4 (specific to COMP instance: COMP4). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP1

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP1). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP2

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP2). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP3

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP3). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP4

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP4). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP5

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP5). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP6

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP6). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM8_OC5_COMP7

Comparator output blanking source TIM8 OC5 (specific to COMP instance: COMP7). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM15_OC1_COMP4

Comparator output blanking source TIM15 OC1 (specific to COMP instance: COMP4). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM15_OC2_COMP6

Comparator output blanking source TIM15 OC2 (specific to COMP instance: COMP6). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM15_OC2_COMP7

Comparator output blanking source TIM15 OC3 (specific to COMP instance: COMP7). Note: For COMPx & TIMx instances availability, please refer to datasheet

COMP_BLANKINGSRC_TIM20_OC5

Comparator output blanking source TIM20 OC5 (Common to all COMP instances)

COMP_BLANKINGSRC_TIM15_OC1

Comparator output blanking source TIM15 OC1 (Common to all COMP instances)

COMP_BLANKINGSRC_TIM4_OC3

Comparator output blanking source TIM4 OC3 (Common to all COMP instances)

COMP Error Code

HAL_COMP_ERROR_NONE

No error

COMP Exported Types

COMP_STATE_BITFIELD_LOCK

COMP EXTI Lines

COMP_EXTI_LINE_COMP1

EXTI line 21 connected to COMP1 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP2

EXTI line 22 connected to COMP2 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP3

EXTI line 29 connected to COMP3 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP4

EXTI line 30 connected to COMP4 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP5

EXTI line 31 connected to COMP5 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP6

EXTI line 32 connected to COMP6 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_LINE_COMP7

EXTI line 33 connected to COMP7 output. Note: For COMPx instance availability, please refer to datasheet

COMP_EXTI_IT

EXTI line event with interruption

COMP_EXTI_EVENT

EXTI line event only (without interruption)

COMP_EXTI_RISING

EXTI line event on rising edge

COMP_EXTI_FALLING

EXTI line event on falling edge

COMP external interrupt line management

__HAL_COMP_COMP1_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP1 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP1 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP1 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP1 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP1 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP1 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP1_EXTI_ENABLE_IT

Description:

- Enable the COMP1 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP1_EXTI_DISABLE_IT

Description:

- Disable the COMP1 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP1_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP1 EXTI line.

Return value:

- None

__HAL_COMP_COMP1_EXTI_ENABLE_EVENT

Description:

- Enable the COMP1 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP1_EXTI_DISABLE_EVENT

Description:

- Disable the COMP1 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP1_EXTI_GET_FLAG

Description:

- Check whether the COMP1 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP1_EXTI_CLEAR_FLAG

Description:

- Clear the COMP1 EXTI flag.

Return value:

- None

__HAL_COMP_COMP2_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP2 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP2 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP2 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP2 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP2 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP2 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP2_EXTI_ENABLE_IT

Description:

- Enable the COMP2 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP2_EXTI_DISABLE_IT

Description:

- Disable the COMP2 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP2_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP2 EXTI line.

Return value:

- None

__HAL_COMP_COMP2_EXTI_ENABLE_EVENT

Description:

- Enable the COMP2 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP2_EXTI_DISABLE_EVENT

Description:

- Disable the COMP2 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP2_EXTI_GET_FLAG

Description:

- Check whether the COMP2 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP2_EXTI_CLEAR_FLAG

Description:

- Clear the COMP2 EXTI flag.

Return value:

- None

__HAL_COMP_COMP3_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP3 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP3 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP3 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP3 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP3 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP3 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP3_EXTI_ENABLE_IT

Description:

- Enable the COMP3 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP3_EXTI_DISABLE_IT

Description:

- Disable the COMP3 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP3_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP3 EXTI line.

Return value:

- None

__HAL_COMP_COMP3_EXTI_ENABLE_EVENT

Description:

- Enable the COMP3 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP3_EXTI_DISABLE_EVENT

Description:

- Disable the COMP3 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP3_EXTI_GET_FLAG

Description:

- Check whether the COMP3 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP3_EXTI_CLEAR_FLAG

Description:

- Clear the COMP3 EXTI flag.

Return value:

- None

__HAL_COMP_COMP4_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP4 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP4 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP4 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP4 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP4 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP4 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP4_EXTI_ENABLE_IT

Description:

- Enable the COMP4 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP4_EXTI_DISABLE_IT

Description:

- Disable the COMP4 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP4_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP4 EXTI line.

Return value:

- None

__HAL_COMP_COMP4_EXTI_ENABLE_EVENT

Description:

- Enable the COMP4 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP4_EXTI_DISABLE_EVENT

Description:

- Disable the COMP4 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP4_EXTI_GET_FLAG

Description:

- Check whether the COMP4 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP4_EXTI_CLEAR_FLAG

Description:

- Clear the COMP4 EXTI flag.

Return value:

- None

__HAL_COMP_COMP5_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP5 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP5 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP5 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP5 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP5 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP5 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP5_EXTI_ENABLE_IT

Description:

- Enable the COMP5 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP5_EXTI_DISABLE_IT

Description:

- Disable the COMP5 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP5_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP5 EXTI line.

Return value:

- None

__HAL_COMP_COMP5_EXTI_ENABLE_EVENT

Description:

- Enable the COMP5 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP5_EXTI_DISABLE_EVENT

Description:

- Disable the COMP5 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP5_EXTI_GET_FLAG

Description:

- Check whether the COMP5 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP5_EXTI_CLEAR_FLAG

Description:

- Clear the COMP5 EXTI flag.

Return value:

- None

__HAL_COMP_COMP6_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP6 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP6 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP6 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP6 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP6 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP6 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP6_EXTI_ENABLE_IT

Description:

- Enable the COMP6 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP6_EXTI_DISABLE_IT

Description:

- Disable the COMP6 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP6_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP6 EXTI line.

Return value:

- None

__HAL_COMP_COMP6_EXTI_ENABLE_EVENT

Description:

- Enable the COMP6 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP6_EXTI_DISABLE_EVENT

Description:

- Disable the COMP6 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP6_EXTI_GET_FLAG

Description:

- Check whether the COMP6 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP6_EXTI_CLEAR_FLAG

Description:

- Clear the COMP6 EXTI flag.

Return value:

- None

__HAL_COMP_COMP7_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the COMP7 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the COMP7 EXTI line rising edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the COMP7 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the COMP7 EXTI line falling edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the COMP7 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the COMP7 EXTI line rising & falling edge trigger.

Return value:

- None

__HAL_COMP_COMP7_EXTI_ENABLE_IT

Description:

- Enable the COMP7 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP7_EXTI_DISABLE_IT

Description:

- Disable the COMP7 EXTI line in interrupt mode.

Return value:

- None

__HAL_COMP_COMP7_EXTI_GENERATE_SWIT

Description:

- Generate a software interrupt on the COMP7 EXTI line.

Return value:

- None

__HAL_COMP_COMP7_EXTI_ENABLE_EVENT

Description:

- Enable the COMP7 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP7_EXTI_DISABLE_EVENT

Description:

- Disable the COMP7 EXTI line in event mode.

Return value:

- None

__HAL_COMP_COMP7_EXTI_GET_FLAG

Description:

- Check whether the COMP7 EXTI line flag is set.

Return value:

- RESET: or SET

__HAL_COMP_COMP7_EXTI_CLEAR_FLAG

Description:

- Clear the COMP7 EXTI flag.

Return value:

- None

COMP output to EXTI

COMP_TRIGGERMODE_NONE

Comparator output triggering no External Interrupt Line

COMP_TRIGGERMODE_IT_RISING

Comparator output triggering External Interrupt Line event with interruption, on rising edge

COMP_TRIGGERMODE_IT_FALLING

Comparator output triggering External Interrupt Line event with interruption, on falling edge

COMP_TRIGGERMODE_IT_RISING_FALLING

Comparator output triggering External Interrupt Line event with interruption, on both rising and falling edges

COMP_TRIGGERMODE_EVENT_RISING

Comparator output triggering External Interrupt Line event only (without interruption), on rising edge

COMP_TRIGGERMODE_EVENT_FALLING

Comparator output triggering External Interrupt Line event only (without interruption), on falling edge

COMP_TRIGGERMODE_EVENT_RISING_FALLING

Comparator output triggering External Interrupt Line event only (without interruption), on both rising and falling edges

COMP private macros to get EXTI line associated with comparators

COMP_GET_EXTI_LINE

Description:

- Get the specified EXTI line for a comparator instance.

Parameters:

- __INSTANCE__: specifies the COMP instance.

Return value:

- value: of

COMP Handle Management

__HAL_COMP_RESET_HANDLE_STATE

Description:

- Reset COMP handle state.

Parameters:

- __HANDLE__: COMP handle

Return value:

- None

COMP_CLEAR_ERRORCODE

Description:

- Clear COMP error code (set it to no error code "HAL_COMP_ERROR_NONE").

Parameters:

- __HANDLE__: COMP handle

Return value:

- None

__HAL_COMP_ENABLE

Description:

- Enable the specified comparator.

Parameters:

- __HANDLE__: COMP handle

Return value:

- None

__HAL_COMP_DISABLE

Description:

- Disable the specified comparator.

Parameters:

- __HANDLE__: COMP handle

Return value:

- None

__HAL_COMP_LOCK

Description:

- Lock the specified comparator configuration.

Parameters:

- __HANDLE__: COMP handle

Return value:

- None

Notes:

- Using this macro induce HAL COMP handle state machine being no more in line with COMP instance state. To keep HAL COMP handle state machine updated, it is recommended to use function "HAL_COMP_Lock')".

__HAL_COMP_IS_LOCKED

Description:

- Check whether the specified comparator is locked.

Parameters:

- __HANDLE__: COMP handle

Return value:

- Value: 0 if COMP instance is not locked, value 1 if COMP instance is locked

COMP hysteresis

COMP_HYSTERESIS_NONE

No hysteresis

COMP_HYSTERESIS_10MV

Hysteresis level 10mV

COMP_HYSTERESIS_20MV

Hysteresis level 20mV

COMP_HYSTERESIS_30MV

Hysteresis level 30mV

COMP_HYSTERESIS_40MV

Hysteresis level 40mV

COMP_HYSTERESIS_50MV

Hysteresis level 50mV

COMP_HYSTERESIS_60MV

Hysteresis level 60mV

COMP_HYSTERESIS_70MV

Hysteresis level 70mV

COMP_HYSTERESIS_LOW

Hysteresis level low

COMP_HYSTERESIS_MEDIUM

Hysteresis level medium

COMP_HYSTERESIS_HIGH

Hysteresis level high

COMP input minus (inverting input)

COMP_INPUT_MINUS_1_4VREFINT

Comparator input minus connected to 1/4 VrefInt

COMP_INPUT_MINUS_1_2VREFINT

Comparator input minus connected to 1/2 VrefInt

COMP_INPUT_MINUS_3_4VREFINT

Comparator input minus connected to 3/4 VrefInt

COMP_INPUT_MINUS_VREFINT

Comparator input minus connected to VrefInt

COMP_INPUT_MINUS_DAC1_CH1

Comparator input minus connected to DAC1 Channel 1 for COMP1/3/4. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC1_CH2

Comparator input minus connected to DAC1 Channel 2 for COMP2/5. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC2_CH1

Comparator input minus connected to DAC2 Channel 1 for COMP6/7. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC3_CH1

Comparator input minus connected to DAC3 Channel 1 for COMP1/3. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC3_CH2

Comparator input minus connected to DAC3 Channel 2 for COMP2/4. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC4_CH1

Comparator input minus connected to DAC4 Channel 1 for COMP5/7. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_DAC4_CH2

Comparator input minus connected to DAC4 Channel 2 for COMP6. Note: For COMPx & DACx instances availability, please refer to datasheet

COMP_INPUT_MINUS_IO1

Comparator input minus connected to IO1 (pin PA4 for COMP1, pin PA5 for COMP2, pin PF1 for COMP3, pin PE8 for COMP4, pin PB10 for COMP5, pin PD10 for COMP6, pin PD15 for COMP7). Note: For COMPx instance availability, please refer to datasheet

COMP_INPUT_MINUS_IO2

Comparator input minus connected to IO2 (pin PA0 for COMP1, pin PA2 for COMP2, pin PC0 for COMP3, pin PB2 for COMP4, pin PD13 for COMP5, pin PB15 for COMP6, pin PB12 for COMP7). Note: For COMPx instance availability, please refer to datasheet

COMP input plus (non-inverting input)

COMP_INPUT_PLUS_IO1

Comparator input plus connected to IO1 (pin PA1 for COMP1, pin PA7 for COMP2, pin PA0 for COMP3, pin PB0 for COMP4, pin PB13 for COMP5, pin PB11 for COMP6, pin PB14 for COMP7). Note: For COMPx instance availability, please refer to datasheet

COMP_INPUT_PLUS_IO2

Comparator input plus connected to IO2 (pin PB1 for COMP1, pin PA3 for COMP2, pin PC1 for COMP3, pin PE7 for COMP4, pin PD12 for COMP5, pin PD11 for COMP6, pin PD14 for COMP7). Note: For COMPx instance availability, please refer to datasheet

COMP Output Level

COMP_OUTPUT_LEVEL_LOW

COMP_OUTPUT_LEVEL_HIGH

COMP output Polarity

COMP_OUTPUTPOL_NONINVERTED

COMP output level is not inverted (comparator output is high when the input plus is at a higher voltage than the input minus)

COMP_OUTPUTPOL_INVERTED

COMP output level is inverted (comparator output is low when the input plus is at a higher voltage than the input minus)

10 HAL CORDIC Generic Driver

10.1 CORDIC Firmware driver registers structures

10.1.1 CORDIC_HandleTypeDef

CORDIC_HandleTypeDef is defined in the stm32g4xx_hal_cordic.h

Data Fields

- ***CORDIC_TypeDef * Instance***
- ***int32_t * pInBuff***
- ***int32_t * pOutBuff***
- ***uint32_t NbCalcToOrder***
- ***uint32_t NbCalcToGet***
- ***uint32_t DMADirection***
- ***DMA_HandleTypeDef * hdmaIn***
- ***DMA_HandleTypeDef * hdmaOut***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_CORDIC_StateTypeDef State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***CORDIC_TypeDef* CORDIC_HandleTypeDef::Instance***
  Register base address
- ***int32_t* CORDIC_HandleTypeDef::pInBuff***
  Pointer to CORDIC input data buffer
- ***int32_t* CORDIC_HandleTypeDef::pOutBuff***
  Pointer to CORDIC output data buffer
- ***uint32_t CORDIC_HandleTypeDef::NbCalcToOrder***
  Remaining number of calculation to order
- ***uint32_t CORDIC_HandleTypeDef::NbCalcToGet***
  Remaining number of calculation result to get
- ***uint32_t CORDIC_HandleTypeDef::DMADirection***
  Direction of CORDIC DMA transfers
- ***DMA_HandleTypeDef* CORDIC_HandleTypeDef::hdmaIn***
  CORDIC peripheral input data DMA handle parameters
- ***DMA_HandleTypeDef* CORDIC_HandleTypeDef::hdmaOut***
  CORDIC peripheral output data DMA handle parameters
- ***HAL_LockTypeDef CORDIC_HandleTypeDef::Lock***
  CORDIC locking object
- ***__IO HAL_CORDIC_StateTypeDef CORDIC_HandleTypeDef::State***
  CORDIC state
- ***__IO uint32_t CORDIC_HandleTypeDef::ErrorCode***
  CORDIC peripheral error code This parameter can be a value of ***CORDIC_Error_Code***

10.1.2 CORDIC_ConfigTypeDef

CORDIC_ConfigTypeDef is defined in the stm32g4xx_hal_cordic.h

Data Fields

- ***uint32_t Function***
- ***uint32_t Scale***

- ***uint32_t InSize***
- ***uint32_t OutSize***
- ***uint32_t NbWrite***
- ***uint32_t NbRead***
- ***uint32_t Precision***

Field Documentation

- ***uint32_t CORDIC_ConfigTypeDef::Function***
  Function This parameter can be a value of ***CORDIC_Function***
- ***uint32_t CORDIC_ConfigTypeDef::Scale***
  Scaling factor This parameter can be a value of ***CORDIC_Scale***
- ***uint32_t CORDIC_ConfigTypeDef::InSize***
  Width of input data This parameter can be a value of ***CORDIC_In_Size***
- ***uint32_t CORDIC_ConfigTypeDef::OutSize***
  Width of output data This parameter can be a value of ***CORDIC_Out_Size***
- ***uint32_t CORDIC_ConfigTypeDef::NbWrite***
  Number of 32-bit write expected for one calculation This parameter can be a value of ***CORDIC_Nb_Write***
- ***uint32_t CORDIC_ConfigTypeDef::NbRead***
  Number of 32-bit read expected after one calculation This parameter can be a value of ***CORDIC_Nb_Read***
- ***uint32_t CORDIC_ConfigTypeDef::Precision***
  Number of cycles for calculation This parameter can be a value of ***CORDIC_Precision_In_Cycles_Number***

10.2 CORDIC Firmware driver API description

The following section lists the various functions of the CORDIC library.

10.2.1 How to use this driver

The CORDIC HAL driver can be used as follows:

1. Initialize the CORDIC low level resources by implementing the HAL_CORDIC_MspInit():
   – Enable the CORDIC interface clock using __HAL_RCC_CORDIC_CLK_ENABLE()
   – In case of using interrupts (e.g. HAL_CORDIC_Calculate_IT())
     ◦ Configure the CORDIC interrupt priority using HAL_NVIC_SetPriority()
     ◦ Enable the CORDIC IRQ handler using HAL_NVIC_EnableIRQ()
     ◦ In CORDIC IRQ handler, call HAL_CORDIC_IRQHandler()
   – In case of using DMA to control data transfer (e.g. HAL_CORDIC_Calculate_DMA())
     ◦ Enable the DMA2 interface clock using __HAL_RCC_DMA2_CLK_ENABLE()
     ◦ Configure and enable two DMA channels one for managing data transfer from memory to peripheral (input channel) and another channel for managing data transfer from peripheral to memory (output channel)
     ◦ Associate the initialized DMA handle to the CORDIC DMA handle using __HAL_LINKDMA()
     ◦ Configure the priority and enable the NVIC for the transfer complete interrupt on the two DMA channels. Resort to HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ()
2. Initialize the CORDIC HAL using HAL_CORDIC_Init(). This function
   – resorts to HAL_CORDIC_MspInit() for low-level initialization,

3. Configure CORDIC processing (calculation) using HAL_CORDIC_Configure(). This function configures:
   – Processing functions: Cosine, Sine, Phase, Modulus, Arctangent, Hyperbolic cosine, Hyperbolic sine, Hyperbolic arctangent, Natural log, Square root
   – Scaling factor: 1 to 2exp(-7)
   – Width of input data: 32 bits input data size (Q1.31 format) or 16 bits input data size (Q1.15 format)
   – Width of output data: 32 bits output data size (Q1.31 format) or 16 bits output data size (Q1.15 format)
   – Number of 32-bit write expected for one calculation: One 32-bits write or Two 32-bit write
   – Number of 32-bit read expected after one calculation: One 32-bits read or Two 32-bit read
   – Precision: 1 to 15 cycles for calculation (the more cycles, the better precision)
4. Four processing (calculation) functions are available:
   – Polling mode: processing API is blocking function i.e. it processes the data and wait till the processing is finished API is HAL_CORDIC_Calculate
   – Polling Zero-overhead mode: processing API is blocking function i.e. it processes the data and wait till the processing is finished A bit faster than standard polling mode, but blocking also AHB bus API is HAL_CORDIC_CalculateZO
   – Interrupt mode: processing API is not blocking functions i.e. it processes the data under interrupt API is HAL_CORDIC_Calculate_IT
   – DMA mode: processing API is not blocking functions and the CPU is not used for data transfer, i.e. the data transfer is ensured by DMA API is HAL_CORDIC_Calculate_DMA
5. Call HAL_CORDIC_DeInit() to de-initialize the CORDIC peripheral. This function
   – resorts to HAL_CORDIC_MspDeInit() for low-level de-initialization,

Callback registration

10.2.2 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize the CORDIC peripheral and the associated handle
- DeInitialize the CORDIC peripheral
- Initialize the CORDIC MSP (MCU Specific Package)
- De-Initialize the CORDIC MSP

This section contains the following APIs:

- ***HAL_CORDIC_Init***
- ***HAL_CORDIC_DeInit***
- ***HAL_CORDIC_MspInit***
- ***HAL_CORDIC_MspDeInit***
- ***HAL_CORDIC_Configure***
- ***HAL_CORDIC_Calculate***
- ***HAL_CORDIC_CalculateZO***
- ***HAL_CORDIC_Calculate_IT***
- ***HAL_CORDIC_Calculate_DMA***

10.2.3 Peripheral Control functions

This section provides functions allowing to:

- Configure the CORDIC peripheral: function, precision, scaling factor, number of input data and output data, size of input data and output data.
- Calculate output data of CORDIC processing on input date, using the existing CORDIC configuration

Four processing functions are available for calculation:

- Polling mode
- Polling mode, with Zero-Overhead register access
- Interrupt mode
- DMA mode

This section contains the following APIs:

- *HAL_CORDIC_Configure*
- *HAL_CORDIC_Calculate*
- *HAL_CORDIC_CalculateZO*
- *HAL_CORDIC_Calculate_IT*
- *HAL_CORDIC_Calculate_DMA*

10.2.4 Callback functions

This section provides Interruption and DMA callback functions:

- DMA or Interrupt calculate complete
- DMA or Interrupt error

This section contains the following APIs:

- *HAL_CORDIC_ErrorCallback*
- *HAL_CORDIC_CalculateCpltCallback*

10.2.5 IRQ handler management

This section provides IRQ handler function.

This section contains the following APIs:

- *HAL_CORDIC_IRQHandler*

10.2.6 Peripheral State functions

This subsection permits to get in run-time the status of the peripheral.

This section contains the following APIs:

- *HAL_CORDIC_GetState*
- *HAL_CORDIC_GetError*

10.2.7 Detailed description of functions

HAL_CORDIC_Init

Function name

HAL_StatusTypeDef HAL_CORDIC_Init (CORDIC_HandleTypeDef * hcordic)

Function description

Initialize the CORDIC peripheral and the associated handle.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure.

Return values

- **HAL:** status

HAL_CORDIC_DeInit

Function name

HAL_StatusTypeDef HAL_CORDIC_DeInit (CORDIC_HandleTypeDef * hcordic)

Function description

DeInitialize the CORDIC peripheral.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure.

Return values

- **HAL:** status

HAL_CORDIC_MspInit

Function name

void HAL_CORDIC_MspInit (CORDIC_HandleTypeDef * hcordic)

Function description

Initialize the CORDIC MSP.

Parameters

- **hcordic:** CORDIC handle

Return values

- **None:**

HAL_CORDIC_MspDeInit

Function name

void HAL_CORDIC_MspDeInit (CORDIC_HandleTypeDef * hcordic)

Function description

DeInitialize the CORDIC MSP.

Parameters

- **hcordic:** CORDIC handle

Return values

- **None:**

HAL_CORDIC_Configure

Function name

HAL_StatusTypeDef HAL_CORDIC_Configure (CORDIC_HandleTypeDef * hcordic, CORDIC_ConfigTypeDef * sConfig)

Function description

Configure the CORDIC processing according to the specified parameters in the CORDIC_ConfigTypeDef structure.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module
- **sConfig:** pointer to a CORDIC_ConfigTypeDef structure that contains the CORDIC configuration information.

Return values

- **HAL:** status

HAL_CORDIC_Calculate

Function name

HAL_StatusTypeDef HAL_CORDIC_Calculate (CORDIC_HandleTypeDef * hcordic, int32_t * pInBuff, int32_t * pOutBuff, uint32_t NbCalc, uint32_t Timeout)

Function description

Carry out data of CORDIC processing in polling mode, according to the existing CORDIC configuration.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module.
- **pInBuff:** Pointer to buffer containing input data for CORDIC processing.
- **pOutBuff:** Pointer to buffer where output data of CORDIC processing will be stored.
- **NbCalc:** Number of CORDIC calculation to process.
- **Timeout:** Specify Timeout value

Return values

- **HAL:** status

HAL_CORDIC_CalculateZO

Function name

HAL_StatusTypeDef HAL_CORDIC_CalculateZO (CORDIC_HandleTypeDef * hcordic, int32_t * pInBuff, int32_t * pOutBuff, uint32_t NbCalc, uint32_t Timeout)

Function description

Carry out data of CORDIC processing in Zero-Overhead mode (output data being read soon as input data are written), according to the existing CORDIC configuration.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module.
- **pInBuff:** Pointer to buffer containing input data for CORDIC processing.
- **pOutBuff:** Pointer to buffer where output data of CORDIC processing will be stored.
- **NbCalc:** Number of CORDIC calculation to process.
- **Timeout:** Specify Timeout value

Return values

- **HAL:** status

HAL_CORDIC_Calculate_IT

Function name

HAL_StatusTypeDef HAL_CORDIC_Calculate_IT (CORDIC_HandleTypeDef * hcordic, int32_t * pInBuff, int32_t * pOutBuff, uint32_t NbCalc)

Function description

Carry out data of CORDIC processing in interrupt mode, according to the existing CORDIC configuration.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module.
- **pInBuff:** Pointer to buffer containing input data for CORDIC processing.
- **pOutBuff:** Pointer to buffer where output data of CORDIC processing will be stored.
- **NbCalc:** Number of CORDIC calculation to process.

Return values

- **HAL:** status

HAL_CORDIC_Calculate_DMA

Function name

HAL_StatusTypeDef HAL_CORDIC_Calculate_DMA (CORDIC_HandleTypeDef * hcordic, int32_t * pInBuff, int32_t * pOutBuff, uint32_t NbCalc, uint32_t DMADirection)

Function description

Carry out input and/or output data of CORDIC processing in DMA mode, according to the existing CORDIC configuration.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module.
- **pInBuff:** Pointer to buffer containing input data for CORDIC processing.
- **pOutBuff:** Pointer to buffer where output data of CORDIC processing will be stored.
- **NbCalc:** Number of CORDIC calculation to process.
- **DMADirection:** Direction of DMA transfers. This parameter can be one of the following values:
  – CORDIC DMA direction CORDIC DMA direction

Return values

- **HAL:** status

Notes

- pInBuff or pOutBuff is unused in case of unique DMADirection transfer, and can be set to NULL value in this case.
- pInBuff and pOutBuff buffers must be 32-bit aligned to ensure a correct DMA transfer to and from the Peripheral.

HAL_CORDIC_ErrorCallback

Function name

void HAL_CORDIC_ErrorCallback (CORDIC_HandleTypeDef * hcordic)

Function description

CORDIC error callback.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module

Return values

- **None:**

HAL_CORDIC_CalculateCpltCallback

Function name

void HAL_CORDIC_CalculateCpltCallback (CORDIC_HandleTypeDef * hcordic)

Function description

CORDIC calculate complete callback.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module

Return values

- **None:**

HAL_CORDIC_IRQHandler

Function name

void HAL_CORDIC_IRQHandler (CORDIC_HandleTypeDef * hcordic)

Function description

Handle CORDIC interrupt request.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module

Return values

- **None:**

HAL_CORDIC_GetState

Function name

HAL_CORDIC_StateTypeDef HAL_CORDIC_GetState (CORDIC_HandleTypeDef * hcordic)

Function description

Return the CORDIC handle state.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module

Return values

- **HAL:** state

HAL_CORDIC_GetError

Function name

uint32_t HAL_CORDIC_GetError (CORDIC_HandleTypeDef * hcordic)

Function description

Return the CORDIC peripheral error.

Parameters

- **hcordic:** pointer to a CORDIC_HandleTypeDef structure that contains the configuration information for CORDIC module

Return values

- **Error:** bit-map

Notes

- The returned error is a bit-map combination of possible errors

10.3 CORDIC Firmware driver defines

The following section lists the various define and macros of the module.

10.3.1 CORDIC

CORDIC

DMA Read Request Enable bit

CORDIC_DMA_REN

DMA Read requests enable

DMA Write Request Enable bit

CORDIC_DMA_WEN

DMA Write channel enable

CORDIC DMA direction

CORDIC_DMA_DIR_NONE

DMA direction : none

CORDIC_DMA_DIR_IN

DMA direction : Input of CORDIC

CORDIC_DMA_DIR_OUT

DMA direction : Output of CORDIC

CORDIC_DMA_DIR_IN_OUT

DMA direction : Input and Output of CORDIC

CORDIC Error code

HAL_CORDIC_ERROR_NONE

No error

HAL_CORDIC_ERROR_PARAM

Wrong parameter error

HAL_CORDIC_ERROR_NOT_READY

Peripheral not ready

HAL_CORDIC_ERROR_TIMEOUT

Timeout error

HAL_CORDIC_ERROR_DMA

DMA error

CORDIC Exported Macros

__HAL_CORDIC_RESET_HANDLE_STATE

Description:

- Reset CORDIC handle state.

Parameters:

- __HANDLE__: CORDIC handle

Return value:

- None

__HAL_CORDIC_ENABLE_IT

Description:

- Enable the CORDIC interrupt when result is ready.

Parameters:

- __HANDLE__: CORDIC handle.
- __INTERRUPT__: CORDIC Interrupt. This parameter can be one of the following values:
  - CORDIC_IT_IEN Enable Interrupt

Return value:

- None

__HAL_CORDIC_DISABLE_IT

Description:

- Disable the CORDIC interrupt.

Parameters:

- __HANDLE__: CORDIC handle.
- __INTERRUPT__: CORDIC Interrupt. This parameter can be one of the following values:
  - CORDIC_IT_IEN Enable Interrupt

Return value:

- None

__HAL_CORDIC_GET_IT

Description:

- Check whether the specified CORDIC interrupt occurred or not.

Parameters:

- __HANDLE__: CORDIC handle.
- __INTERRUPT__: CORDIC interrupt to check

Return value:

- SET: (interrupt occurred) or RESET (interrupt did not occurred)

__HAL_CORDIC_CLEAR_IT

Description:

- Clear specified CORDIC interrupt status.

Parameters:

- __HANDLE__: CORDIC handle.
- __INTERRUPT__: CORDIC interrupt to clear

Return value:

- None

__HAL_CORDIC_GET_FLAG

Description:

- Check whether the specified CORDIC status flag is set or not.

Parameters:

- __HANDLE__: CORDIC handle.
- __FLAG__: CORDIC flag to check This parameter can be one of the following values:
  - CORDIC_FLAG_RRDY Result Ready Flag

Return value:

- SET: (flag is set) or RESET (flag is reset)

__HAL_CORDIC_CLEAR_FLAG

Description:

- Clear specified CORDIC status flag.

Parameters:

- __HANDLE__: CORDIC handle.
- __FLAG__: CORDIC flag to clear This parameter can be one of the following values:
  - CORDIC_FLAG_RRDY Result Ready Flag

Return value:

- None

__HAL_CORDIC_GET_IT_SOURCE

Description:

- Check whether the specified CORDIC interrupt is enabled or not.

Parameters:

- __HANDLE__: CORDIC handle.
- __INTERRUPT__: CORDIC interrupt to check This parameter can be one of the following values:
  - CORDIC_IT_IEN Enable Interrupt

Return value:

- FlagStatus

CORDIC status flags

CORDIC_FLAG_RRDY

Result Ready Flag

CORDIC Function

CORDIC_FUNCTION_COSINE

Cosine

CORDIC_FUNCTION_SINE

Sine

CORDIC_FUNCTION_PHASE

Phase

CORDIC_FUNCTION_MODULUS

Modulus

CORDIC_FUNCTION_ARCTANGENT

Arctangent

CORDIC_FUNCTION_HCOSINE

Hyperbolic Cosine

CORDIC_FUNCTION_HSINE

Hyperbolic Sine

CORDIC_FUNCTION_HARCTANGENT

Hyperbolic Arctangent

CORDIC_FUNCTION_NATURALLOG

Natural Logarithm

CORDIC_FUNCTION_SQUAREROOT

Square Root

CORDIC Interrupts Enable bit

CORDIC_IT_IEN

Result ready interrupt enable

CORDIC input data size

CORDIC_INSIZE_32BITS

32 bits input data size (Q1.31 format)

CORDIC_INSIZE_16BITS

16 bits input data size (Q1.15 format)

CORDIC Number of 32-bit read required after one calculation

CORDIC_NBREAD_1

One 32-bits read containing either only one 32-bit data ouput (Q1.31 format), or two 16-bit data output (Q1.15 format) packed in one 32 bits Data

CORDIC_NBREAD_2

Two 32-bit Data containing two 32-bits data output (Q1.31 format)

CORDIC Number of 32-bit write required for one calculation

CORDIC_NBWRITE_1

One 32-bits write containing either only one 32-bit data input (Q1.31 format), or two 16-bit data input (Q1.15 format) packed in one 32 bits Data

CORDIC_NBWRITE_2

Two 32-bit write containing two 32-bits data input (Q1.31 format)

CORDIC Results Size

CORDIC_OUTSIZE_32BITS

32 bits output data size (Q1.31 format)

CORDIC_OUTSIZE_16BITS

16 bits output data size (Q1.15 format)

CORDIC Precision in Cycles Number

11 HAL CORTEX Generic Driver

11.1 CORTEX Firmware driver registers structures

11.1.1 MPU_Region_InitTypeDef

MPU_Region_InitTypeDef is defined in the stm32g4xx_hal_cortex.h

Data Fields

- ***uint8_t Enable***
- ***uint8_t Number***
- ***uint32_t BaseAddress***
- ***uint8_t Size***
- ***uint8_t SubRegionDisable***
- ***uint8_t TypeExtField***
- ***uint8_t AccessPermission***
- ***uint8_t DisableExec***
- ***uint8_t IsShareable***
- ***uint8_t IsCacheable***
- ***uint8_t IsBufferable***

Field Documentation

- ***uint8_t MPU_Region_InitTypeDef::Enable***
  Specifies the status of the region. This parameter can be a value of ***CORTEX_MPU_Region_Enable***
- ***uint8_t MPU_Region_InitTypeDef::Number***
  Specifies the number of the region to protect. This parameter can be a value of ***CORTEX_MPU_Region_Number***
- ***uint32_t MPU_Region_InitTypeDef::BaseAddress***
  Specifies the base address of the region to protect.
- ***uint8_t MPU_Region_InitTypeDef::Size***
  Specifies the size of the region to protect. This parameter can be a value of ***CORTEX_MPU_Region_Size***
- ***uint8_t MPU_Region_InitTypeDef::SubRegionDisable***
  Specifies the number of the subregion protection to disable. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF
- ***uint8_t MPU_Region_InitTypeDef::TypeExtField***
  Specifies the TEX field level. This parameter can be a value of ***CORTEX_MPU_TEX_Levels***
- ***uint8_t MPU_Region_InitTypeDef::AccessPermission***
  Specifies the region access permission type. This parameter can be a value of ***CORTEX_MPU_Region_Permission_Attributes***
- ***uint8_t MPU_Region_InitTypeDef::DisableExec***
  Specifies the instruction access status. This parameter can be a value of ***CORTEX_MPU_Instruction_Access***
- ***uint8_t MPU_Region_InitTypeDef::IsShareable***
  Specifies the shareability status of the protected region. This parameter can be a value of ***CORTEX_MPU_Access_Shareable***
- ***uint8_t MPU_Region_InitTypeDef::IsCacheable***
  Specifies the cacheable status of the region protected. This parameter can be a value of ***CORTEX_MPU_Access_Cacheable***
- ***uint8_t MPU_Region_InitTypeDef::IsBufferable***
  Specifies the bufferable status of the protected region. This parameter can be a value of ***CORTEX_MPU_Access_Bufferable***

11.2 CORTEX Firmware driver API description

The following section lists the various functions of the CORTEX library.

11.2.1 How to use this driver

How to configure Interrupts using CORTEX HAL driver

This section provides functions allowing to configure the NVIC interrupts (IRQ). The Cortex-M4 exceptions are managed by CMSIS functions.

1. Configure the NVIC Priority Grouping using HAL_NVIC_SetPriorityGrouping() function.
2. Configure the priority of the selected IRQ Channels using HAL_NVIC_SetPriority().
3. Enable the selected IRQ Channels using HAL_NVIC_EnableIRQ().

Note: When the NVIC_PRIORITYGROUP_0 is selected, IRQ pre-emption is no more possible. The pending IRQ priority will be managed only by the sub priority.

Note: IRQ priority order (sorted by highest to lowest priority):

- *Lowest pre-emption priority*
- *Lowest sub priority*
- *Lowest hardware priority (IRQ number)*

How to configure SysTick using CORTEX HAL driver

Setup SysTick Timer for time base.

- The HAL_SYSTICK_Config() function calls the SysTick_Config() function which is a CMSIS function that:
  - Configures the SysTick Reload register with value passed as function parameter.
  - Configures the SysTick IRQ priority to the lowest value (0x0F).
  - Resets the SysTick Counter register.
  - Configures the SysTick Counter clock source to be Core Clock Source (HCLK).
  - Enables the SysTick Interrupt.
  - Starts the SysTick Counter.
- You can change the SysTick Clock source to be HCLK_Div8 by calling the macro __HAL_CORTEX_SYSTICKCLK_CONFIG(SYSTICK_CLKSOURCE_HCLK_DIV8) just after the HAL_SYSTICK_Config() function call. The __HAL_CORTEX_SYSTICKCLK_CONFIG() macro is defined inside the stm32g4xx_hal_cortex.h file.
- You can change the SysTick IRQ priority by calling the HAL_NVIC_SetPriority(SysTick_IRQn,...) function just after the HAL_SYSTICK_Config() function call. The HAL_NVIC_SetPriority() call the NVIC_SetPriority() function which is a CMSIS function.
- To adjust the SysTick time base, use the following formula: Reload Value = SysTick Counter Clock (Hz) x Desired Time base (s)
  - Reload Value is the parameter to be passed for HAL_SYSTICK_Config() function
  - Reload Value should not exceed 0xFFFFFF

11.2.2 Initialization and Configuration functions

This section provides the CORTEX HAL driver functions allowing to configure Interrupts SysTick functionalities

This section contains the following APIs:

- ***HAL_NVIC_SetPriorityGrouping***
- ***HAL_NVIC_SetPriority***
- ***HAL_NVIC_EnableIRQ***
- ***HAL_NVIC_DisableIRQ***
- ***HAL_NVIC_SystemReset***
- ***HAL_SYSTICK_Config***

11.2.3 Peripheral Control functions

This subsection provides a set of functions allowing to control the CORTEX (NVIC, SYSTICK, MPU) functionalities.

This section contains the following APIs:

- *HAL_NVIC_GetPriorityGrouping*
- *HAL_NVIC_GetPriority*
- *HAL_NVIC_SetPendingIRQ*
- *HAL_NVIC_GetPendingIRQ*
- *HAL_NVIC_ClearPendingIRQ*
- *HAL_NVIC_GetActive*
- *HAL_SYSTICK_CLKSourceConfig*
- *HAL_SYSTICK_IRQHandler*
- *HAL_SYSTICK_Callback*
- *HAL_MPU_Enable*
- *HAL_MPU_Disable*
- *HAL_MPU_ConfigRegion*

11.2.4 Detailed description of functions

HAL_NVIC_SetPriorityGrouping

Function name

void HAL_NVIC_SetPriorityGrouping (uint32_t PriorityGroup)

Function description

Set the priority grouping field (pre-emption priority and subpriority) using the required unlock sequence.

Parameters

- **PriorityGroup:** The priority grouping bits length. This parameter can be one of the following values:
  - NVIC_PRIORITYGROUP_0: 0 bit for pre-emption priority, 4 bits for subpriority
  - NVIC_PRIORITYGROUP_1: 1 bit for pre-emption priority, 3 bits for subpriority
  - NVIC_PRIORITYGROUP_2: 2 bits for pre-emption priority, 2 bits for subpriority
  - NVIC_PRIORITYGROUP_3: 3 bits for pre-emption priority, 1 bit for subpriority
  - NVIC_PRIORITYGROUP_4: 4 bits for pre-emption priority, 0 bit for subpriority

Return values

- **None:**

Notes

- When the NVIC_PriorityGroup_0 is selected, IRQ pre-emption is no more possible. The pending IRQ priority will be managed only by the subpriority.

HAL_NVIC_SetPriority

Function name

void HAL_NVIC_SetPriority (IRQn_Type IRQn, uint32_t PreemptPriority, uint32_t SubPriority)

Function description

Set the priority of an interrupt.

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))
- **PreemptPriority:** The pre-emption priority for the IRQn channel. This parameter can be a value between 0 and 15 A lower priority value indicates a higher priority
- **SubPriority:** the subpriority level for the IRQ channel. This parameter can be a value between 0 and 15 A lower priority value indicates a higher priority.

Return values

- **None:**

HAL_NVIC_EnableIRQ

Function name

void HAL_NVIC_EnableIRQ (IRQn_Type IRQn)

Function description

Enable a device specific interrupt in the NVIC interrupt controller.

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **None:**

Notes

- To configure interrupts priority correctly, the NVIC_PriorityGroupConfig() function should be called before.

HAL_NVIC_DisableIRQ

Function name

void HAL_NVIC_DisableIRQ (IRQn_Type IRQn)

Function description

Disable a device specific interrupt in the NVIC interrupt controller.

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **None:**

HAL_NVIC_SystemReset

Function name

void HAL_NVIC_SystemReset (void)

Function description

Initiate a system reset request to reset the MCU.

Return values

- **None:**

HAL_SYSTICK_Config

Function name

uint32_t HAL_SYSTICK_Config (uint32_t TicksNumb)

Function description

Initialize the System Timer with interrupt enabled and start the System Tick Timer (SysTick): Counter is in free running mode to generate periodic interrupts.

Parameters

- **TicksNumb:** Specifies the ticks Number of ticks between two interrupts.

Return values

- **status:** - 0 Function succeeded.
  - 1 Function failed.

HAL_NVIC_GetPriorityGrouping

Function name

uint32_t HAL_NVIC_GetPriorityGrouping (void)

Function description

Get the priority grouping field from the NVIC Interrupt Controller.

Return values

- **Priority:** grouping field (SCB->AIRCR [10:8] PRIGROUP field)

HAL_NVIC_GetPriority

Function name

void HAL_NVIC_GetPriority (IRQn_Type IRQn, uint32_t PriorityGroup, uint32_t * pPreemptPriority, uint32_t * pSubPriority)

Function description

Get the priority of an interrupt.

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))
- **PriorityGroup:** the priority grouping bits length. This parameter can be one of the following values:
  - NVIC_PRIORITYGROUP_0: 0 bit for pre-emption priority, 4 bits for subpriority
  - NVIC_PRIORITYGROUP_1: 1 bit for pre-emption priority, 3 bits for subpriority
  - NVIC_PRIORITYGROUP_2: 2 bits for pre-emption priority, 2 bits for subpriority
  - NVIC_PRIORITYGROUP_3: 3 bits for pre-emption priority, 1 bit for subpriority
  - NVIC_PRIORITYGROUP_4: 4 bits for pre-emption priority, 0 bit for subpriority
- **pPreemptPriority:** Pointer on the Preemptive priority value (starting from 0).
- **pSubPriority:** Pointer on the Subpriority value (starting from 0).

Return values

- **None:**

HAL_NVIC_GetPendingIRQ

Function name

uint32_t HAL_NVIC_GetPendingIRQ (IRQn_Type IRQn)

Function description

Get Pending Interrupt (read the pending register in the NVIC and return the pending bit for the specified interrupt).

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **status:** - 0 Interrupt status is not pending.
  - 1 Interrupt status is pending.

HAL_NVIC_SetPendingIRQ

Function name

void HAL_NVIC_SetPendingIRQ (IRQn_Type IRQn)

Function description

Set Pending bit of an external interrupt.

Parameters

- **IRQn:** External interrupt number This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **None:**

HAL_NVIC_ClearPendingIRQ

Function name

void HAL_NVIC_ClearPendingIRQ (IRQn_Type IRQn)

Function description

Clear the pending bit of an external interrupt.

Parameters

- **IRQn:** External interrupt number. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **None:**

HAL_NVIC_GetActive

Function name

uint32_t HAL_NVIC_GetActive (IRQn_Type IRQn)

Function description

Get active interrupt (read the active register in NVIC and return the active bit).

Parameters

- **IRQn:** External interrupt number This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to the appropriate CMSIS device file (stm32g4xxxx.h))

Return values

- **status:** - 0 Interrupt status is not pending.
  - 1 Interrupt status is pending.

HAL_SYSTICK_CLKSourceConfig

Function name

void HAL_SYSTICK_CLKSourceConfig (uint32_t CLKSource)

Function description

Configure the SysTick clock source.

Parameters

- **CLKSource:** specifies the SysTick clock source. This parameter can be one of the following values:
  - SYSTICK_CLKSOURCE_HCLK_DIV8: AHB clock divided by 8 selected as SysTick clock source.
  - SYSTICK_CLKSOURCE_HCLK: AHB clock selected as SysTick clock source.

Return values

- **None:**

HAL_SYSTICK_IRQHandler

Function name

void HAL_SYSTICK_IRQHandler (void)

Function description

Handle SYSTICK interrupt request.

Return values

- **None:**

HAL_SYSTICK_Callback

Function name

void HAL_SYSTICK_Callback (void)

Function description

SYSTICK callback.

Return values

- **None:**

HAL_MPU_Enable

Function name

void HAL_MPU_Enable (uint32_t MPU_Control)

Function description

Enable the MPU.

Parameters

- **MPU_Control:** Specifies the control mode of the MPU during hard fault, NMI, FAULTMASK and privileged accessto the default memory This parameter can be one of the following values:
  - MPU_HFNMI_PRIVDEF_NONE
  - MPU_HARDFAULT_NMI
  - MPU_PRIVILEGED_DEFAULT
  - MPU_HFNMI_PRIVDEF

Return values

- **None:**

HAL_MPU_Disable

Function name

void HAL_MPU_Disable (void)

Function description

Disable the MPU.

Return values

- **None:**

HAL_MPU_ConfigRegion

Function name

void HAL_MPU_ConfigRegion (MPU_Region_InitTypeDef * MPU_Init)

Function description

Initialize and configure the Region and the memory to be protected.

Parameters

- **MPU_Init:** Pointer to a MPU_Region_InitTypeDef structure that contains the initialization and configuration information.

Return values

- **None:**

11.3 CORTEX Firmware driver defines

12 HAL CRC Generic Driver

12.1 CRC Firmware driver registers structures

12.1.1 CRC_InitTypeDef

CRC_InitTypeDef is defined in the stm32g4xx_hal_crc.h

Data Fields

- ***uint8_t DefaultPolynomialUse***
- ***uint8_t DefaultInitValueUse***
- ***uint32_t GeneratingPolynomial***
- ***uint32_t CRCLength***
- ***uint32_t InitValue***
- ***uint32_t InputDataInversionMode***
- ***uint32_t OutputDataInversionMode***

Field Documentation

- ***uint8_t CRC_InitTypeDef::DefaultPolynomialUse***

  This parameter is a value of ***CRC_Default_Polynomial*** and indicates if default polynomial is used. If set to DEFAULT_POLYNOMIAL_ENABLE, resort to default X^32 + X^26 + X^23 + X^22 + X^16 + X^12 + X^11 + X^10 +X^8 + X^7 + X^5 + X^4 + X^2+ X +1. In that case, there is no need to set GeneratingPolynomial field. If otherwise set to DEFAULT_POLYNOMIAL_DISABLE, GeneratingPolynomial and CRCLength fields must be set.

- ***uint8_t CRC_InitTypeDef::DefaultInitValueUse***

  This parameter is a value of ***CRC_Default_InitValue_Use*** and indicates if default init value is used. If set to DEFAULT_INIT_VALUE_ENABLE, resort to default 0xFFFFFFFF value. In that case, there is no need to set InitValue field. If otherwise set to DEFAULT_INIT_VALUE_DISABLE, InitValue field must be set.

- ***uint32_t CRC_InitTypeDef::GeneratingPolynomial***

  Set CRC generating polynomial as a 7, 8, 16 or 32-bit long value for a polynomial degree respectively equal to 7, 8, 16 or 32. This field is written in normal representation, e.g., for a polynomial of degree 7, X^7 + X^6 + X^5 + X^2 + 1 is written 0x65. No need to specify it if DefaultPolynomialUse is set to DEFAULT_POLYNOMIAL_ENABLE.

- ***uint32_t CRC_InitTypeDef::CRCLength***

  This parameter is a value of ***CRC_Polynomial_Sizes*** and indicates CRC length. Value can be either one of
  - **CRC_POLYLENGTH_32B** (32-bit CRC),
  - **CRC_POLYLENGTH_16B** (16-bit CRC),
  - **CRC_POLYLENGTH_8B** (8-bit CRC),
  - **CRC_POLYLENGTH_7B** (7-bit CRC).

- ***uint32_t CRC_InitTypeDef::InitValue***

  Init value to initiate CRC computation. No need to specify it if DefaultInitValueUse is set to DEFAULT_INIT_VALUE_ENABLE.

- ***uint32_t CRC_InitTypeDef::InputDataInversionMode***

  This parameter is a value of ***CRCEx_Input_Data_Inversion*** and specifies input data inversion mode. Can be either one of the following values
  - **CRC_INPUTDATA_INVERSION_NONE** no input data inversion
  - **CRC_INPUTDATA_INVERSION_BYTE** byte-wise inversion, 0x1A2B3C4D becomes 0x58D43CB2
  - **CRC_INPUTDATA_INVERSION_HALFWORD** halfword-wise inversion, 0x1A2B3C4D becomes 0xD458B23C
  - **CRC_INPUTDATA_INVERSION_WORD** word-wise inversion, 0x1A2B3C4D becomes 0xB23CD458

- ***uint32_t CRC_InitTypeDef::OutputDataInversionMode***
  This parameter is a value of ***CRCEx_Output_Data_Inversion*** and specifies output data (i.e. CRC) inversion mode. Can be either
  - **CRC_OUTPUTDATA_INVERSION_DISABLE** no CRC inversion,
  - **CRC_OUTPUTDATA_INVERSION_ENABLE** CRC 0x11223344 is converted into 0x22CC4488

12.1.2 CRC_HandleTypeDef

CRC_HandleTypeDef is defined in the stm32g4xx_hal_crc.h

Data Fields

- ***CRC_TypeDef * Instance***
- ***CRC_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_CRC_StateTypeDef State***
- ***uint32_t InputDataFormat***

Field Documentation

- ***CRC_TypeDef* CRC_HandleTypeDef::Instance***
  Register base address
- ***CRC_InitTypeDef CRC_HandleTypeDef::Init***
  CRC configuration parameters
- ***HAL_LockTypeDef CRC_HandleTypeDef::Lock***
  CRC Locking object
- ***__IO HAL_CRC_StateTypeDef CRC_HandleTypeDef::State***
  CRC communication state
- ***uint32_t CRC_HandleTypeDef::InputDataFormat***
  This parameter is a value of ***CRC_Input_Buffer_Format*** and specifies input data format. Can be either
  - **CRC_INPUTDATA_FORMAT_BYTES** input data is a stream of bytes (8-bit data)
  - **CRC_INPUTDATA_FORMAT_HALFWORDS** input data is a stream of half-words (16-bit data)
  - **CRC_INPUTDATA_FORMAT_WORDS** input data is a stream of words (32-bit data)

  Note that constant CRC_INPUT_FORMAT_UNDEFINED is defined but an initialization error must occur if InputBufferFormat is not one of the three values listed above

12.2 CRC Firmware driver API description

The following section lists the various functions of the CRC library.

12.2.1 How to use this driver

- Enable CRC AHB clock using __HAL_RCC_CRC_CLK_ENABLE();
- Initialize CRC calculator
  - specify generating polynomial (peripheral default or non-default one)
  - specify initialization value (peripheral default or non-default one)
  - specify input data format
  - specify input or output data inversion mode if any
- Use HAL_CRC_Accumulate() function to compute the CRC value of the input data buffer starting with the previously computed CRC as initialization value
- Use HAL_CRC_Calculate() function to compute the CRC value of the input data buffer starting with the defined initialization value (default or non-default) to initiate CRC calculation

12.2.2 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize the CRC according to the specified parameters in the CRC_InitTypeDef and create the associated handle

- DeInitialize the CRC peripheral
- Initialize the CRC MSP (MCU Specific Package)
- DeInitialize the CRC MSP

This section contains the following APIs:

- ***HAL_CRC_Init***
- ***HAL_CRC_DeInit***
- ***HAL_CRC_MspInit***
- ***HAL_CRC_MspDeInit***

12.2.3 Peripheral Control functions

This section provides functions allowing to:

- compute the 7, 8, 16 or 32-bit CRC value of an 8, 16 or 32-bit data buffer using combination of the previous CRC value and the new one.

or

- compute the 7, 8, 16 or 32-bit CRC value of an 8, 16 or 32-bit data buffer independently of the previous CRC value.

This section contains the following APIs:

- ***HAL_CRC_Accumulate***
- ***HAL_CRC_Calculate***

12.2.4 Peripheral State functions

This subsection permits to get in run-time the status of the peripheral.

This section contains the following APIs:

- ***HAL_CRC_GetState***

12.2.5 Detailed description of functions

HAL_CRC_Init

Function name

HAL_StatusTypeDef HAL_CRC_Init (CRC_HandleTypeDef * hcrc)

Function description

Initialize the CRC according to the specified parameters in the CRC_InitTypeDef and create the associated handle.

Parameters

- **hcrc:** CRC handle

Return values

- **HAL:** status

HAL_CRC_DeInit

Function name

HAL_StatusTypeDef HAL_CRC_DeInit (CRC_HandleTypeDef * hcrc)

Function description

DeInitialize the CRC peripheral.

Parameters

- **hcrc:** CRC handle

Return values

- **HAL:** status

HAL_CRC_MspInit

Function name

void HAL_CRC_MspInit (CRC_HandleTypeDef * hcrc)

Function description

Initializes the CRC MSP.

Parameters

- **hcrc:** CRC handle

Return values

- **None:**

HAL_CRC_MspDeInit

Function name

void HAL_CRC_MspDeInit (CRC_HandleTypeDef * hcrc)

Function description

DeInitialize the CRC MSP.

Parameters

- **hcrc:** CRC handle

Return values

- **None:**

HAL_CRC_Accumulate

Function name

uint32_t HAL_CRC_Accumulate (CRC_HandleTypeDef * hcrc, uint32_t pBuffer, uint32_t BufferLength)

Function description

Compute the 7, 8, 16 or 32-bit CRC value of an 8, 16 or 32-bit data buffer starting with the previously computed CRC as initialization value.

Parameters

- **hcrc:** CRC handle
- **pBuffer:** pointer to the input data buffer, exact input data format is provided by hcrc->InputDataFormat.
- **BufferLength:** input data buffer length (number of bytes if pBuffer type is * uint8_t, number of half-words if pBuffer type is * uint16_t, number of words if pBuffer type is * uint32_t).

Return values

- **uint32_t:** CRC (returned value LSBs for CRC shorter than 32 bits)

Notes

- By default, the API expects a uint32_t pointer as input buffer parameter. Input buffer pointers with other types simply need to be cast in uint32_t and the API will internally adjust its input data processing based on the handle field hcrc->InputDataFormat.

HAL_CRC_Calculate

Function name

uint32_t HAL_CRC_Calculate (CRC_HandleTypeDef * hcrc, uint32_t pBuffer, uint32_t BufferLength)

Function description

Compute the 7, 8, 16 or 32-bit CRC value of an 8, 16 or 32-bit data buffer starting with hcrc->Instance->INIT as initialization value.

Parameters

- **hcrc:** CRC handle
- **pBuffer:** pointer to the input data buffer, exact input data format is provided by hcrc->InputDataFormat.
- **BufferLength:** input data buffer length (number of bytes if pBuffer type is * uint8_t, number of half-words if pBuffer type is * uint16_t, number of words if pBuffer type is * uint32_t).

Return values

- **uint32_t:** CRC (returned value LSBs for CRC shorter than 32 bits)

Notes

- By default, the API expects a uint32_t pointer as input buffer parameter. Input buffer pointers with other types simply need to be cast in uint32_t and the API will internally adjust its input data processing based on the handle field hcrc->InputDataFormat.

HAL_CRC_GetState

Function name

HAL_CRC_StateTypeDef HAL_CRC_GetState (CRC_HandleTypeDef * hcrc)

Function description

Return the CRC handle state.

Parameters

- **hcrc:** CRC handle

Return values

- **HAL:** state

12.3 CRC Firmware driver defines

The following section lists the various define and macros of the module.

12.3.1 CRC

CRC

CRC API aliases

HAL_CRC_Input_Data_Reverse

Aliased to HAL_CRCEx_Input_Data_Reverse for inter STM32 series compatibility

HAL_CRC_Output_Data_Reverse

Aliased to HAL_CRCEx_Output_Data_Reverse for inter STM32 series compatibility

Default CRC computation initialization value

DEFAULT_CRC_INITVALUE

Initial CRC default value

Indicates whether or not default init value is used

DEFAULT_INIT_VALUE_ENABLE

Enable initial CRC default value

DEFAULT_INIT_VALUE_DISABLE

Disable initial CRC default value

Indicates whether or not default polynomial is used

DEFAULT_POLYNOMIAL_ENABLE

Enable default generating polynomial 0x04C11DB7

DEFAULT_POLYNOMIAL_DISABLE

Disable default generating polynomial 0x04C11DB7

Default CRC generating polynomial

DEFAULT_CRC32_POLY

X^32 + X^26 + X^23 + X^22 + X^16 + X^12 + X^11 + X^10 +X^8 + X^7 + X^5 + X^4 + X^2+ X +1

CRC Exported Macros

__HAL_CRC_RESET_HANDLE_STATE

Description:

- Reset CRC handle state.

Parameters:

- __HANDLE__: CRC handle.

Return value:

- None

__HAL_CRC_DR_RESET

Description:

- Reset CRC Data Register.

Parameters:

- __HANDLE__: CRC handle

Return value:

- None

__HAL_CRC_INITIALCRCVALUE_CONFIG

Description:

- Set CRC INIT non-default value.

Parameters:

- __HANDLE__: CRC handle
- __INIT__: 32-bit initial value

Return value:

- None

__HAL_CRC_SET_IDR

Description:

- Store data in the Independent Data (ID) register.

Parameters:

- __HANDLE__: CRC handle
- __VALUE__: Value to be stored in the ID register

Return value:

- None

Notes:

- Refer to the Reference Manual to get the authorized __VALUE__ length in bits

__HAL_CRC_GET_IDR

Description:

- Return the data stored in the Independent Data (ID) register.

Parameters:

- __HANDLE__: CRC handle

Return value:

- Value: of the ID register

Notes:

- Refer to the Reference Manual to get the authorized __VALUE__ length in bits

Input Buffer Format

CRC_INPUTDATA_FORMAT_UNDEFINED

Undefined input data format

CRC_INPUTDATA_FORMAT_BYTES

Input data in byte format

CRC_INPUTDATA_FORMAT_HALFWORDS

Input data in half-word format

CRC_INPUTDATA_FORMAT_WORDS

Input data in word format

Polynomial sizes to configure the peripheral

CRC_POLYLENGTH_32B

Resort to a 32-bit long generating polynomial

CRC_POLYLENGTH_16B

Resort to a 16-bit long generating polynomial

CRC_POLYLENGTH_8B

Resort to a 8-bit long generating polynomial

CRC_POLYLENGTH_7B

Resort to a 7-bit long generating polynomial

CRC polynomial possible sizes actual definitions

HAL_CRC_LENGTH_32B

13 HAL CRC Extension Driver

13.1 CRCEx Firmware driver API description

The following section lists the various functions of the CRCEx library.

13.1.1 How to use this driver

- Set user-defined generating polynomial thru HAL_CRCEx_Polynomial_Set()
- Configure Input or Output data inversion

13.1.2 Extended configuration functions

This section provides functions allowing to:

- Configure the generating polynomial
- Configure the input data inversion
- Configure the output data inversion

This section contains the following APIs:

- ***HAL_CRCEx_Polynomial_Set***
- ***HAL_CRCEx_Input_Data_Reverse***
- ***HAL_CRCEx_Output_Data_Reverse***

13.1.3 Detailed description of functions

HAL_CRCEx_Polynomial_Set

Function name

HAL_StatusTypeDef HAL_CRCEx_Polynomial_Set (CRC_HandleTypeDef * hcrc, uint32_t Pol, uint32_t PolyLength)

Function description

Initialize the CRC polynomial if different from default one.

Parameters

- **hcrc:** CRC handle
- **Pol:** CRC generating polynomial (7, 8, 16 or 32-bit long). This parameter is written in normal representation, e.g.
  - for a polynomial of degree 7, X^7 + X^6 + X^5 + X^2 + 1 is written 0x65
  - for a polynomial of degree 16, X^16 + X^12 + X^5 + 1 is written 0x1021
- **PolyLength:** CRC polynomial length. This parameter can be one of the following values:
  - CRC_POLYLENGTH_7B 7-bit long CRC (generating polynomial of degree 7)
  - CRC_POLYLENGTH_8B 8-bit long CRC (generating polynomial of degree 8)
  - CRC_POLYLENGTH_16B 16-bit long CRC (generating polynomial of degree 16)
  - CRC_POLYLENGTH_32B 32-bit long CRC (generating polynomial of degree 32)

Return values

- **HAL:** status

HAL_CRCEx_Input_Data_Reverse

Function name

HAL_StatusTypeDef HAL_CRCEx_Input_Data_Reverse (CRC_HandleTypeDef * hcrc, uint32_t InputReverseMode)

Function description

Set the Reverse Input data mode.

Parameters

- **hcrc:** CRC handle
- **InputReverseMode:** Input Data inversion mode. This parameter can be one of the following values:
  - CRC_INPUTDATA_INVERSION_NONE no change in bit order (default value)
  - CRC_INPUTDATA_INVERSION_BYTE Byte-wise bit reversal
  - CRC_INPUTDATA_INVERSION_HALFWORD HalfWord-wise bit reversal
  - CRC_INPUTDATA_INVERSION_WORD Word-wise bit reversal

Return values

- **HAL:** status

HAL_CRCEx_Output_Data_Reverse

Function name

HAL_StatusTypeDef HAL_CRCEx_Output_Data_Reverse (CRC_HandleTypeDef * hcrc, uint32_t OutputReverseMode)

Function description

Set the Reverse Output data mode.

Parameters

- **hcrc:** CRC handle
- **OutputReverseMode:** Output Data inversion mode. This parameter can be one of the following values:
  - CRC_OUTPUTDATA_INVERSION_DISABLE no CRC inversion (default value)
  - CRC_OUTPUTDATA_INVERSION_ENABLE bit-level inversion (e.g. for a 8-bit CRC: 0xB5 becomes 0xAD)

Return values

- **HAL:** status

13.2 CRCEx Firmware driver defines

The following section lists the various define and macros of the module.

13.2.1 CRCEx

CRCEx

CRC Extended Exported Macros

__HAL_CRC_OUTPUTREVERSAL_ENABLE

Description:

- Set CRC output reversal.

Parameters:

- __HANDLE__: CRC handle

Return value:

- None

__HAL_CRC_OUTPUTREVERSAL_DISABLE

Description:

- Unset CRC output reversal.

Parameters:

- __HANDLE__: CRC handle

Return value:

- None

__HAL_CRC_POLYNOMIAL_CONFIG

Description:

- Set CRC non-default polynomial.

Parameters:

- __HANDLE__: CRC handle
- __POLYNOMIAL__: 7, 8, 16 or 32-bit polynomial

Return value:

- None

Input Data Inversion Modes

CRC_INPUTDATA_INVERSION_NONE

No input data inversion

CRC_INPUTDATA_INVERSION_BYTE

Byte-wise input data inversion

CRC_INPUTDATA_INVERSION_HALFWORD

HalfWord-wise input data inversion

CRC_INPUTDATA_INVERSION_WORD

Word-wise input data inversion

Output Data Inversion Modes

CRC_OUTPUTDATA_INVERSION_DISABLE

No output data inversion

CRC_OUTPUTDATA_INVERSION_ENABLE

Bit-wise output data inversion

14 HAL CRYP Generic Driver

14.1 CRYP Firmware driver registers structures

14.1.1 CRYP_ConfigTypeDef

CRYP_ConfigTypeDef is defined in the stm32g4xx_hal_cryp.h

Data Fields

- ***uint32_t DataType***
- ***uint32_t KeySize***
- ***uint32_t * pKey***
- ***uint32_t * pInitVect***
- ***uint32_t Algorithm***
- ***uint32_t * Header***
- ***uint32_t HeaderSize***
- ***uint32_t * B0***
- ***uint32_t DataWidthUnit***
- ***uint32_t HeaderWidthUnit***
- ***uint32_t KeyIVConfigSkip***

Field Documentation

- ***uint32_t CRYP_ConfigTypeDef::DataType***
  32-bit data, 16-bit data, 8-bit data or 1-bit string. This parameter can be a value of ***CRYP_Data_Type***
- ***uint32_t CRYP_ConfigTypeDef::KeySize***
  Used only in AES mode : 128, 192 or 256 bit key length in CRYP1. 128 or 256 bit key length in TinyAES This parameter can be a value of ***CRYP_Key_Size***
- ***uint32_t* CRYP_ConfigTypeDef::pKey***
  The key used for encryption/decryption
- ***uint32_t* CRYP_ConfigTypeDef::pInitVect***
  The initialization vector used also as initialization counter in CTR mode
- ***uint32_t CRYP_ConfigTypeDef::Algorithm***
  DES/ TDES Algorithm ECB/CBC AES Algorithm ECB/CBC/CTR/GCM or CCM This parameter can be a value of ***CRYP_Algorithm_Mode***
- ***uint32_t* CRYP_ConfigTypeDef::Header***
  used only in AES GCM and CCM Algorithm for authentication, GCM : also known as Additional Authentication Data CCM : named B1 composed of the associated data length and Associated Data.
- ***uint32_t CRYP_ConfigTypeDef::HeaderSize***
  The size of header buffer
- ***uint32_t* CRYP_ConfigTypeDef::B0***
  B0 is first authentication block used only in AES CCM mode
- ***uint32_t CRYP_ConfigTypeDef::DataWidthUnit***
  Payload Data Width Unit, this parameter can be value of ***CRYP_Data_Width_Unit***
- ***uint32_t CRYP_ConfigTypeDef::HeaderWidthUnit***
  Header Width Unit, this parameter can be value of ***CRYP_Header_Width_Unit***
- ***uint32_t CRYP_ConfigTypeDef::KeyIVConfigSkip***
  CRYP peripheral Key and IV configuration skip, to config Key and Initialization Vector only once and to skip configuration for consecutive processings. This parameter can be a value of ***CRYP_Configuration_Skip***

14.1.2 CRYP_HandleTypeDef

CRYP_HandleTypeDef is defined in the stm32g4xx_hal_cryp.h

Data Fields

- ***AES_TypeDef * Instance***
- ***CRYP_ConfigTypeDef Init***
- ***FunctionalState AutoKeyDerivation***
- ***uint32_t * pCrypInBuffPtr***
- ***uint32_t * pCrypOutBuffPtr***
- ***__IO uint16_t CrypHeaderCount***
- ***__IO uint16_t CrypInCount***
- ***__IO uint16_t CrypOutCount***
- ***uint16_t Size***
- ***uint32_t Phase***
- ***DMA_HandleTypeDef * hdmain***
- ***DMA_HandleTypeDef * hdmaout***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_CRYP_STATETypeDef State***
- ***__IO uint32_t ErrorCode***
- ***uint32_t KeyIVConfig***
- ***uint32_t SizesSum***

Field Documentation

- ***AES_TypeDef* CRYP_HandleTypeDef::Instance***
  AES Register base address
- ***CRYP_ConfigTypeDef CRYP_HandleTypeDef::Init***
  CRYP required parameters
- ***FunctionalState CRYP_HandleTypeDef::AutoKeyDerivation***
  Used only in TinyAES to allow to bypass or not key write-up before decryption. This parameter can be a value of ENABLE/DISABLE
- ***uint32_t* CRYP_HandleTypeDef::pCrypInBuffPtr***
  Pointer to CRYP processing (encryption, decryption,...) buffer
- ***uint32_t* CRYP_HandleTypeDef::pCrypOutBuffPtr***
  Pointer to CRYP processing (encryption, decryption,...) buffer
- ***__IO uint16_t CRYP_HandleTypeDef::CrypHeaderCount***
  Counter of header data
- ***__IO uint16_t CRYP_HandleTypeDef::CrypInCount***
  Counter of input data
- ***__IO uint16_t CRYP_HandleTypeDef::CrypOutCount***
  Counter of output data
- ***uint16_t CRYP_HandleTypeDef::Size***
  length of input data in words
- ***uint32_t CRYP_HandleTypeDef::Phase***
  CRYP peripheral phase
- ***DMA_HandleTypeDef* CRYP_HandleTypeDef::hdmain***
  CRYP In DMA handle parameters
- ***DMA_HandleTypeDef* CRYP_HandleTypeDef::hdmaout***
  CRYP Out DMA handle parameters
- ***HAL_LockTypeDef CRYP_HandleTypeDef::Lock***
  CRYP locking object
- ***__IO HAL_CRYP_STATETypeDef CRYP_HandleTypeDef::State***
  CRYP peripheral state

- ***__IO uint32_t CRYP_HandleTypeDef::ErrorCode***
  CRYP peripheral error code
- ***uint32_t CRYP_HandleTypeDef::KeyIVConfig***
  CRYP peripheral Key and IV configuration flag, used when configuration can be skipped
- ***uint32_t CRYP_HandleTypeDef::SizesSum***
  Sum of successive payloads lengths (in bytes), stored for a single signature computation after several messages processing

14.2 CRYP Firmware driver API description

The following section lists the various functions of the CRYP library.

14.2.1 How to use this driver

The CRYP HAL driver can be used in CRYP or TinyAES peripheral as follows:

1. Initialize the CRYP low level resources by implementing the HAL_CRYP_MspInit():
   a. Enable the CRYP interface clock using __HAL_RCC_CRYP_CLK_ENABLE()or __HAL_RCC_AES_CLK_ENABLE for TinyAES peripheral
   b. In case of using interrupts (e.g. HAL_CRYP_Encrypt_IT())
      - Configure the CRYP interrupt priority using HAL_NVIC_SetPriority()
      - Enable the CRYP IRQ handler using HAL_NVIC_EnableIRQ()
      - In CRYP IRQ handler, call HAL_CRYP_IRQHandler()
   c. In case of using DMA to control data transfer (e.g. HAL_CRYP_Encrypt_DMA())
      - Enable the DMAx interface clock using __RCC_DMAx_CLK_ENABLE()
      - Configure and enable two DMA streams one for managing data transfer from memory to peripheral (input stream) and another stream for managing data transfer from peripheral to memory (output stream)
      - Associate the initialized DMA handle to the CRYP DMA handle using __HAL_LINKDMA()
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the two DMA Streams. The output stream should have higher priority than the input stream HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ()
2. Initialize the CRYP according to the specified parameters :
   a. The data type: 1-bit, 8-bit, 16-bit or 32-bit.
   b. The key size: 128, 192 or 256.
   c. The AlgoMode DES/ TDES Algorithm ECB/CBC or AES Algorithm ECB/CBC/CTR/GCM or CCM.
   d. The initialization vector (counter). It is not used in ECB mode.
   e. The key buffer used for encryption/decryption.
      - In some specific configurations, the key is written by the application code out of the HAL scope. In that case, user can still resort to the HAL APIs as usual but must make sure that pKey pointer is set to NULL.
   f. The Header used only in AES GCM and CCM Algorithm for authentication.
   g. The HeaderSize The size of header buffer in word.
   h. The B0 block is the first authentication block used only in AES CCM mode.
3. Three processing (encryption/decryption) functions are available:
   a. Polling mode: encryption and decryption APIs are blocking functions i.e. they process the data and wait till the processing is finished, e.g. HAL_CRYP_Encrypt & HAL_CRYP_Decrypt
   b. Interrupt mode: encryption and decryption APIs are not blocking functions i.e. they process the data under interrupt, e.g. HAL_CRYP_Encrypt_IT & HAL_CRYP_Decrypt_IT
   c. DMA mode: encryption and decryption APIs are not blocking functions i.e. the data transfer is ensured by DMA, e.g. HAL_CRYP_Encrypt_DMA & HAL_CRYP_Decrypt_DMA
4. When the processing function is called at first time after HAL_CRYP_Init() the CRYP peripheral is configured and processes the buffer in input. At second call, no need to Initialize the CRYP, user have to get current configuration via HAL_CRYP_GetConfig() API, then only HAL_CRYP_SetConfig() is requested to set new parametres, finally user can start encryption/decryption.

5. Call HAL_CRYP_DeInit() to deinitialize the CRYP peripheral.
6. To process a single message with consecutive calls to HAL_CRYP_Encrypt() or HAL_CRYP_Decrypt() without having to configure again the Key or the Initialization Vector between each API call, the field KeyIVConfigSkip of the initialization structure must be set to CRYP_KEYIVCONFIG_ONCE. Same is true for consecutive calls of HAL_CRYP_Encrypt_IT(), HAL_CRYP_Decrypt_IT(), HAL_CRYP_Encrypt_DMA() or HAL_CRYP_Decrypt_DMA().

The cryptographic processor supports following standards:

1. The data encryption standard (DES) and Triple-DES (TDES) supported only by CRYP1 peripheral:
   a. 64-bit data block processing
   b. chaining modes supported :
      - Electronic Code Book(ECB)
      - Cipher Block Chaining (CBC)
   c. keys length supported :64-bit, 128-bit and 192-bit.
2. The advanced encryption standard (AES) supported by CRYP1 & TinyAES peripheral:
   a. 128-bit data block processing
   b. chaining modes supported :
      - Electronic Code Book(ECB)
      - Cipher Block Chaining (CBC)
      - Counter mode (CTR)
      - Galois/counter mode (GCM/GMAC)
      - Counter with Cipher Block Chaining-Message(CCM)
   c. keys length Supported :
      - for CRYP1 peripheral: 128-bit, 192-bit and 256-bit.
      - for TinyAES peripheral: 128-bit and 256-bit

Note: Specific care must be taken to format the key and the Initialization Vector IV!

If the key is defined as a 128-bit long array key[127..0] = {b127 ... b0} where b127 is the MSB and b0 the LSB, the key must be stored in MCU memory

- as a sequence of words where the MSB word comes first (occupies the lowest memory address)
  – address n+0 : 0b b127 .. b120 b119 .. b112 b111 .. b104 b103 .. b96
  – address n+4 : 0b b95 .. b88 b87 .. b80 b79 .. b72 b71 .. b64
  – address n+8 : 0b b63 .. b56 b55 .. b48 b47 .. b40 b39 .. b32
  – address n+C : 0b b31 .. b24 b23 .. b16 b15 .. b8 b7 .. b0

Hereafter, another illustration when considering a 128-bit long key made of 16 bytes {B15..B0}. The 4 32-bit words that make the key must be stored as follows in MCU memory:

- address n+0 : 0x B15 B14 B13 B12
- address n+4 : 0x B11 B10 B9 B8
- address n+8 : 0x B7 B6 B5 B4
- address n+C : 0x B3 B2 B1 B0

which leads to the expected setting

- AES_KEYR3 = 0x B15 B14 B13 B12
- AES_KEYR2 = 0x B11 B10 B9 B8
- AES_KEYR1 = 0x B7 B6 B5 B4
- AES_KEYR0 = 0x B3 B2 B1 B0

Same format must be applied for a 256-bit long key made of 32 bytes {B31..B0}. The 8 32-bit words that make the key must be stored as follows in MCU memory:

- address n+00 : 0x B31 B30 B29 B28
- address n+04 : 0x B27 B26 B25 B24
- address n+08 : 0x B23 B22 B21 B20
- address n+0C : 0x B19 B18 B17 B16

- address n+10 : 0x B15 B14 B13 B12
- address n+14 : 0x B11 B10 B9 B8
- address n+18 : 0x B7 B6 B5 B4
- address n+1C : 0x B3 B2 B1 B0

which leads to the expected setting

- AES_KEYR7 = 0x B31 B30 B29 B28
- AES_KEYR6 = 0x B27 B26 B25 B24
- AES_KEYR5 = 0x B23 B22 B21 B20
- AES_KEYR4 = 0x B19 B18 B17 B16
- AES_KEYR3 = 0x B15 B14 B13 B12
- AES_KEYR2 = 0x B11 B10 B9 B8
- AES_KEYR1 = 0x B7 B6 B5 B4
- AES_KEYR0 = 0x B3 B2 B1 B0

Initialization Vector IV (4 32-bit words) format must follow the same as that of a 128-bit long key.

Note that key and IV registers are not sensitive to swap mode selection.

This section describes the AES Galois/counter mode (GCM) supported by both CRYP1 and TinyAES peripherals:

1. Algorithm supported :
   a. Galois/counter mode (GCM)
   b. Galois message authentication code (GMAC) :is exactly the same as GCM algorithm composed only by an header.
2. Four phases are performed in GCM :
   a. Init phase: peripheral prepares the GCM hash subkey (H) and do the IV processing
   b. Header phase: peripheral processes the Additional Authenticated Data (AAD), with hash computation only.
   c. Payload phase: peripheral processes the plaintext (P) with hash computation + keystream encryption + data XORing. It works in a similar way for ciphertext (C).
   d. Final phase: peripheral generates the authenticated tag (T) using the last block of data.
3. structure of message construction in GCM is defined as below :
   a. 16 bytes Initial Counter Block (ICB)composed of IV and counter
   b. The authenticated header A (also knows as Additional Authentication Data AAD) this part of the message is only authenticated, not encrypted.
   c. The plaintext message P is both authenticated and encrypted as ciphertext. GCM standard specifies that ciphertext has same bit length as the plaintext.
   d. The last block is composed of the length of A (on 64 bits) and the length of ciphertext (on 64 bits)

A more detailed description of the GCM message structure is available below.

This section describe The AES Counter with Cipher Block Chaining-Message Authentication Code (CCM) supported by both CRYP1 and TinyAES peripheral:

1. Specific parameters for CCM :
   a. B0 block : follows NIST Special Publication 800-38C,
   b. B1 block (header)
   c. CTRx block : control blocks

A detailed description of the CCM message structure is available below.

1. Four phases are performed in CCM for CRYP1 peripheral:
   a. Init phase: peripheral prepares the GCM hash subkey (H) and do the IV processing
   b. Header phase: peripheral processes the Additional Authenticated Data (AAD), with hash computation only.
   c. Payload phase: peripheral processes the plaintext (P) with hash computation + keystream encryption + data XORing. It works in a similar way for ciphertext (C).
   d. Final phase: peripheral generates the authenticated tag (T) using the last block of data.

2. CCM in TinyAES peripheral:
   a. To perform message payload encryption or decryption AES is configured in CTR mode.
   b. For authentication two phases are performed : - Header phase: peripheral processes the Additional Authenticated Data (AAD) first, then the cleartext message only cleartext payload (not the ciphertext payload) is used and no outpout.
   c. Final phase: peripheral generates the authenticated tag (T) using the last block of data.

Callback registration

The compilation define USE_HAL_CRYP_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_CRYP_RegisterCallback() or HAL_CRYP_RegisterXXXCallback() to register an interrupt callback.

Function @ref HAL_CRYP_RegisterCallback() allows to register following callbacks:

- InCpltCallback : Input FIFO transfer completed callback.
- OutCpltCallback : Output FIFO transfer completed callback.
- ErrorCallback : callback for error detection.
- MspInitCallback : CRYP MspInit.
- MspDeInitCallback : CRYP MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_CRYP_UnRegisterCallback() to reset a callback to the default weak function. @ref HAL_CRYP_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- InCpltCallback : Input FIFO transfer completed callback.
- OutCpltCallback : Output FIFO transfer completed callback.
- ErrorCallback : callback for error detection.
- MspInitCallback : CRYP MspInit.
- MspDeInitCallback : CRYP MspDeInit.

By default, after the @ref HAL_CRYP_Init() and when the state is HAL_CRYP_STATE_RESET all callbacks are set to the corresponding weak functions : examples @ref HAL_CRYP_InCpltCallback() , @ref HAL_CRYP_OutCpltCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak function in the @ref HAL_CRYP_Init()/ @ref HAL_CRYP_DeInit() only when these callbacks are null (not registered beforehand). if not, MspInit or MspDeInit are not null, the @ref HAL_CRYP_Init() / @ref HAL_CRYP_DeInit() keep and use the user MspInit/MspDeInit functions (registered beforehand)

Callbacks can be registered/unregistered in HAL_CRYP_STATE_READY state only. Exception done MspInit/ MspDeInit callbacks that can be registered/unregistered in HAL_CRYP_STATE_READY or HAL_CRYP_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/ DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_CRYP_RegisterCallback() before calling @ref HAL_CRYP_DeInit() or @ref HAL_CRYP_Init() function.

When The compilation define USE_HAL_CRYP_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

Suspend/Resume feature

The compilation define USE_HAL_CRYP_SUSPEND_RESUME when set to 1 allows the user to resort to the suspend/resume feature. A low priority block processing can be suspended to process a high priority block instead. When the high priority block processing is over, the low priority block processing can be resumed, restarting from the point where it was suspended. This feature is applicable only in non-blocking interrupt mode.

User must resort to HAL_CRYP_Suspend() to suspend the low priority block processing. This API manages the hardware block processing suspension and saves all the internal data that will be needed to restart later on. Upon HAL_CRYP_Suspend() completion, the user can launch the processing of any other block (high priority block processing).

When the high priority block processing is over, user must invoke HAL_CRYP_Resume() to resume the low priority block processing. Ciphering (or deciphering) restarts from the suspension point and ends as usual.

HAL_CRYP_Suspend() reports an error when the suspension request is sent too late (i.e when the low priority block processing is about to end). There is no use to suspend the tag generation processing for authentication algorithms.

Note: If the key is written out of HAL scope (case pKey pointer set to NULL by the user), the block processing suspension/resumption mechanism is NOT applicable.

Note: If the Key and Initialization Vector are configured only once and configuration is skipped for consecutive processings (case KeyIVConfigSkip set to CRYP_KEYIVCONFIG_ONCE), the block processing suspension/ resumption mechanism is NOT applicable.

14.2.2 Initialization, de-initialization and Set and Get configuration functions

This section provides functions allowing to:

- Initialize the CRYP
- DeInitialize the CRYP
- Initialize the CRYP MSP
- DeInitialize the CRYP MSP
- configure CRYP (HAL_CRYP_SetConfig) with the specified parameters in the CRYP_ConfigTypeDef Parameters which are configured in This section are :
- Key size
- Data Type : 32,16, 8 or 1bit
- AlgoMode : - for CRYP1 peripheral : ECB and CBC in DES/TDES Standard ECB,CBC,CTR,GCM/GMAC and CCM in AES Standard. - for TinyAES2 peripheral, only ECB,CBC,CTR,GCM/GMAC and CCM in AES Standard are supported.
- Get CRYP configuration (HAL_CRYP_GetConfig) from the specified parameters in the CRYP_HandleTypeDef

This section contains the following APIs:

- ***HAL_CRYP_Init***
- ***HAL_CRYP_DeInit***
- ***HAL_CRYP_SetConfig***
- ***HAL_CRYP_GetConfig***
- ***HAL_CRYP_MspInit***
- ***HAL_CRYP_MspDeInit***

14.2.3 Encrypt Decrypt functions

This section provides API allowing to Encrypt/Decrypt Data following Standard DES/TDES or AES, and Algorithm configured by the user:

- Standard DES/TDES only supported by CRYP1 peripheral, below list of Algorithm supported : - Electronic Code Book(ECB) - Cipher Block Chaining (CBC)
- Standard AES supported by CRYP1 peripheral & TinyAES, list of Algorithm supported: - Electronic Code Book(ECB) - Cipher Block Chaining (CBC) - Counter mode (CTR) - Cipher Block Chaining (CBC) - Counter mode (CTR) - Galois/counter mode (GCM) - Counter with Cipher Block Chaining-Message(CCM)

Three processing functions are available:

- Polling mode : HAL_CRYP_Encrypt & HAL_CRYP_Decrypt
- Interrupt mode : HAL_CRYP_Encrypt_IT & HAL_CRYP_Decrypt_IT
- DMA mode : HAL_CRYP_Encrypt_DMA & HAL_CRYP_Decrypt_DMA

This section contains the following APIs:

- ***HAL_CRYP_Encrypt***
- ***HAL_CRYP_Decrypt***
- ***HAL_CRYP_Encrypt_IT***
- ***HAL_CRYP_Decrypt_IT***
- ***HAL_CRYP_Encrypt_DMA***
- ***HAL_CRYP_Decrypt_DMA***

14.2.4 CRYP IRQ handler management

This section provides CRYP IRQ handler and callback functions.

- HAL_CRYP_IRQHandler CRYP interrupt request
- HAL_CRYP_InCpltCallback input data transfer complete callback
- HAL_CRYP_OutCpltCallback output data transfer complete callback
- HAL_CRYP_ErrorCallback CRYP error callback
- HAL_CRYP_GetState return the CRYP state
- HAL_CRYP_GetError return the CRYP error code

This section contains the following APIs:

- ***HAL_CRYP_IRQHandler***
- ***HAL_CRYP_GetError***
- ***HAL_CRYP_GetState***
- ***HAL_CRYP_InCpltCallback***

14.2.5 Detailed description of functions

HAL_CRYP_Init

Function name

HAL_StatusTypeDef HAL_CRYP_Init (CRYP_HandleTypeDef * hcryp)

Function description

Initializes the CRYP according to the specified parameters in the CRYP_ConfigTypeDef and creates the associated handle.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **HAL:** status

HAL_CRYP_DeInit

Function name

HAL_StatusTypeDef HAL_CRYP_DeInit (CRYP_HandleTypeDef * hcryp)

Function description

De-Initializes the CRYP peripheral.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **HAL:** status

HAL_CRYP_MspInit

Function name

void HAL_CRYP_MspInit (CRYP_HandleTypeDef * hcryp)

Function description

Initializes the CRYP MSP.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **None:**

HAL_CRYP_MspDeInit

Function name

void HAL_CRYP_MspDeInit (CRYP_HandleTypeDef * hcryp)

Function description

DeInitializes CRYP MSP.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **None:**

HAL_CRYP_SetConfig

Function name

HAL_StatusTypeDef HAL_CRYP_SetConfig (CRYP_HandleTypeDef * hcryp, CRYP_ConfigTypeDef * pConf)

Function description

Configure the CRYP according to the specified parameters in the CRYP_ConfigTypeDef.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure
- **pConf:** pointer to a CRYP_ConfigTypeDef structure that contains the configuration information for CRYP module

Return values

- **HAL:** status

HAL_CRYP_GetConfig

Function name

HAL_StatusTypeDef HAL_CRYP_GetConfig (CRYP_HandleTypeDef * hcryp, CRYP_ConfigTypeDef * pConf)

Function description

Get CRYP Configuration parameters in associated handle.

Parameters

- **pConf:** pointer to a CRYP_ConfigTypeDef structure
- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **HAL:** status

HAL_CRYP_Encrypt

Function name

HAL_StatusTypeDef HAL_CRYP_Encrypt (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output, uint32_t Timeout)

Function description

Encryption mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (plaintext)
- **Size:** Length of the plaintext buffer in word.
- **Output:** Pointer to the output buffer(ciphertext)
- **Timeout:** Specify Timeout value

Return values

- **HAL:** status

HAL_CRYP_Decrypt

Function name

HAL_StatusTypeDef HAL_CRYP_Decrypt (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output, uint32_t Timeout)

Function description

Decryption mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (ciphertext)
- **Size:** Length of the plaintext buffer in word.
- **Output:** Pointer to the output buffer(plaintext)
- **Timeout:** Specify Timeout value

Return values

- **HAL:** status

HAL_CRYP_Encrypt_IT

Function name

HAL_StatusTypeDef HAL_CRYP_Encrypt_IT (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output)

Function description

Encryption in interrupt mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (plaintext)
- **Size:** Length of the plaintext buffer in word
- **Output:** Pointer to the output buffer(ciphertext)

Return values

- **HAL:** status

HAL_CRYP_Decrypt_IT

Function name

HAL_StatusTypeDef HAL_CRYP_Decrypt_IT (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output)

Function description

Decryption in interrupt mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (ciphertext)
- **Size:** Length of the plaintext buffer in word.
- **Output:** Pointer to the output buffer(plaintext)

Return values

- **HAL:** status

HAL_CRYP_Encrypt_DMA

Function name

HAL_StatusTypeDef HAL_CRYP_Encrypt_DMA (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output)

Function description

Encryption in DMA mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (plaintext)
- **Size:** Length of the plaintext buffer in word.
- **Output:** Pointer to the output buffer(ciphertext)

Return values

- **HAL:** status

HAL_CRYP_Decrypt_DMA

Function name

HAL_StatusTypeDef HAL_CRYP_Decrypt_DMA (CRYP_HandleTypeDef * hcryp, uint32_t * Input, uint16_t Size, uint32_t * Output)

Function description

Decryption in DMA mode.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **Input:** Pointer to the input buffer (ciphertext)
- **Size:** Length of the plaintext buffer in word
- **Output:** Pointer to the output buffer(plaintext)

Return values

- **HAL:** status

HAL_CRYP_IRQHandler

Function name

void HAL_CRYP_IRQHandler (CRYP_HandleTypeDef * hcryp)

Function description

This function handles cryptographic interrupt request.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module

Return values

- **None:**

HAL_CRYP_GetState

Function name

HAL_CRYP_STATETypeDef HAL_CRYP_GetState (CRYP_HandleTypeDef * hcryp)

Function description

Returns the CRYP state.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module.

Return values

- **HAL:** state

HAL_CRYP_InCpltCallback

Function name

void HAL_CRYP_InCpltCallback (CRYP_HandleTypeDef * hcryp)

Function description

Input FIFO transfer completed callback.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module.

Return values

- **None:**

HAL_CRYP_OutCpltCallback

Function name

void HAL_CRYP_OutCpltCallback (CRYP_HandleTypeDef * hcryp)

Function description

Output FIFO transfer completed callback.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module.

Return values

- **None:**

HAL_CRYP_ErrorCallback

Function name

void HAL_CRYP_ErrorCallback (CRYP_HandleTypeDef * hcryp)

Function description

CRYP error callback.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module.

Return values

- **None:**

HAL_CRYP_GetError

Function name

uint32_t HAL_CRYP_GetError (CRYP_HandleTypeDef * hcryp)

Function description

Return the CRYP error code.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for the CRYP peripheral

Return values

- **CRYP:** error code

14.3 CRYP Firmware driver defines

The following section lists the various define and macros of the module.

14.3.1 CRYP

CRYP

CRYP Algorithm Mode

CRYP_AES_ECB

Electronic codebook chaining algorithm

CRYP_AES_CBC

Cipher block chaining algorithm

CRYP_AES_CTR

Counter mode chaining algorithm

CRYP_AES_GCM_GMAC

Galois counter mode - Galois message authentication code

CRYP_AES_CCM

Counter with Cipher Mode

CRYP Key and IV Configuration Skip Mode

CRYP_KEYIVCONFIG_ALWAYS

Peripheral Key and IV configuration to do systematically

CRYP_KEYIVCONFIG_ONCE

Peripheral Key and IV configuration to do only once

CRYP Data Type

CRYP_DATATYPE_32B

32-bit data type (no swapping)

CRYP_DATATYPE_16B

16-bit data type (half-word swapping)

CRYP_DATATYPE_8B

8-bit data type (byte swapping)

CRYP_DATATYPE_1B

1-bit data type (bit swapping)

CRYP Data Width Unit

CRYP_DATAWIDTHUNIT_WORD

By default, size unit is word

CRYP_DATAWIDTHUNIT_BYTE

By default, size unit is byte

CRYP Error Definition

HAL_CRYP_ERROR_NONE

No error

HAL_CRYP_ERROR_WRITE

Write error

HAL_CRYP_ERROR_READ

Read error

HAL_CRYP_ERROR_DMA

DMA error

HAL_CRYP_ERROR_BUSY

Busy flag error

HAL_CRYP_ERROR_TIMEOUT

Timeout error

HAL_CRYP_ERROR_NOT_SUPPORTED

Not supported mode

HAL_CRYP_ERROR_AUTH_TAG_SEQUENCE

Sequence are not respected only for GCM or CCM

CRYP Exported Macros

__HAL_CRYP_RESET_HANDLE_STATE

Description:

- Reset CRYP handle state.

Parameters:

- __HANDLE__: specifies the CRYP handle.

Return value:

- None

__HAL_CRYP_ENABLE

Description:

- Enable/Disable the CRYP peripheral.

Parameters:

- __HANDLE__: specifies the CRYP handle.

Return value:

- None

__HAL_CRYP_DISABLE

CRYP_FLAG_MASK

Description:

- Check whether the specified CRYP status flag is set or not.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values for TinyAES:
  - CRYP_FLAG_BUSY GCM process suspension forbidden
  - CRYP_IT_WRERR Write Error
  - CRYP_IT_RDERR Read Error
  - CRYP_IT_CCF Computation Complete This parameter can be one of the following values for CRYP:
  - CRYP_FLAG_BUSY: The CRYP core is currently processing a block of data or a key preparation (for AES decryption).
  - CRYP_FLAG_IFEM: Input FIFO is empty
  - CRYP_FLAG_IFNF: Input FIFO is not full
  - CRYP_FLAG_INRIS: Input FIFO service raw interrupt is pending
  - CRYP_FLAG_OFNE: Output FIFO is not empty
  - CRYP_FLAG_OFFU: Output FIFO is full
  - CRYP_FLAG_OUTRIS: Input FIFO service raw interrupt is pending

Return value:

- The: state of __FLAG__ (TRUE or FALSE).

__HAL_CRYP_GET_FLAG

__HAL_CRYP_CLEAR_FLAG

Description:

- Clear the CRYP pending status flag.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __FLAG__: specifies the flag to clear. This parameter can be one of the following values:
  - CRYP_ERR_CLEAR Read (RDERR) or Write Error (WRERR) Flag Clear
  - CRYP_CCF_CLEAR Computation Complete Flag (CCF) Clear

Return value:

- None

__HAL_CRYP_GET_IT_SOURCE

Description:

- Check whether the specified CRYP interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __INTERRUPT__: CRYP interrupt source to check This parameter can be one of the following values for TinyAES:
  - CRYP_IT_ERRIE Error interrupt (used for RDERR and WRERR)
  - CRYP_IT_CCFIE Computation Complete interrupt

Return value:

- State: of interruption (TRUE or FALSE).

__HAL_CRYP_GET_IT

Description:

- Check whether the specified CRYP interrupt is set or not.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __INTERRUPT__: specifies the interrupt to check. This parameter can be one of the following values for TinyAES:
  - CRYP_IT_WRERR Write Error
  - CRYP_IT_RDERR Read Error
  - CRYP_IT_CCF Computation Complete This parameter can be one of the following values for CRYP:
  - CRYP_IT_INI: Input FIFO service masked interrupt status
  - CRYP_IT_OUTI: Output FIFO service masked interrupt status

Return value:

- The: state of __INTERRUPT__ (TRUE or FALSE).

__HAL_CRYP_ENABLE_IT

Description:

- Enable the CRYP interrupt.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __INTERRUPT__: CRYP Interrupt. This parameter can be one of the following values for TinyAES:
  - CRYP_IT_ERRIE Error interrupt (used for RDERR and WRERR)
  - CRYP_IT_CCFIE Computation Complete interrupt This parameter can be one of the following values for CRYP: @ CRYP_IT_INI : Input FIFO service interrupt mask. @ CRYP_IT_OUTI : Output FIFO service interrupt mask.CRYP interrupt.

Return value:

- None

__HAL_CRYP_DISABLE_IT

Description:

- Disable the CRYP interrupt.

Parameters:

- __HANDLE__: specifies the CRYP handle.
- __INTERRUPT__: CRYP Interrupt. This parameter can be one of the following values for TinyAES:
  - CRYP_IT_ERRIE Error interrupt (used for RDERR and WRERR)
  - CRYP_IT_CCFIE Computation Complete interrupt This parameter can be one of the following values for CRYP: @ CRYP_IT_INI : Input FIFO service interrupt mask. @ CRYP_IT_OUTI : Output FIFO service interrupt mask.CRYP interrupt.

Return value:

- None

CRYP Flags

CRYP_FLAG_BUSY

GCM process suspension forbidden

CRYP_FLAG_WRERR

Write Error

CRYP_FLAG_RDERR

Read error

CRYP_FLAG_CCF

Computation completed

CRYP_CCF_CLEAR

Computation Complete Flag Clear

CRYP_ERR_CLEAR

Error Flag Clear

CRYP Header Width Unit

CRYP_HEADERWIDTHUNIT_WORD

By default, header size unit is word

CRYP_HEADERWIDTHUNIT_BYTE

By default, header size unit is byte

CRYP Interrupt

CRYP_IT_CCFIE

Computation Complete interrupt enable

CRYP_IT_ERRIE

Error interrupt enable

CRYP_IT_WRERR

Write Error

CRYP_IT_RDERR

Read Error

CRYP_IT_CCF

Computation completed

CRYP Private macros to check input parameters

IS_CRYP_ALGORITHM

IS_CRYP_KEYSIZE

IS_CRYP_DATATYPE

IS_CRYP_INIT

IS_CRYP_BUFFERSIZE

CRYP Key Size

CRYP_KEYSIZE_128B

128-bit long key

CRYP_KEYSIZE_256B

256-bit long key

15 HAL CRYP Extension Driver

15.1 CRYPEx Firmware driver API description

The following section lists the various functions of the CRYPEx library.

15.1.1 Extended AES processing functions

This section provides functions allowing to generate the authentication TAG in Polling mode

1. HAL_CRYPEx_AESGCM_GenerateAuthTAG
2. HAL_CRYPEx_AESCCM_GenerateAuthTAG they should be used after Encrypt/Decrypt operation.

This section contains the following APIs:

- ***HAL_CRYPEx_AESGCM_GenerateAuthTAG***
- ***HAL_CRYPEx_AESCCM_GenerateAuthTAG***

15.1.2 Key Derivation functions

This section provides functions allowing to Enable or Disable the the AutoKeyDerivation parameter in CRYP_HandleTypeDef structure These function are allowed only in TinyAES peripheral.

This section contains the following APIs:

- ***HAL_CRYPEx_EnableAutoKeyDerivation***
- ***HAL_CRYPEx_DisableAutoKeyDerivation***

15.1.3 Detailed description of functions

HAL_CRYPEx_AESGCM_GenerateAuthTAG

Function name

HAL_StatusTypeDef HAL_CRYPEx_AESGCM_GenerateAuthTAG (CRYP_HandleTypeDef * hcryp, uint32_t * AuthTag, uint32_t Timeout)

Function description

generate the GCM authentication TAG.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **AuthTag:** Pointer to the authentication buffer
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_CRYPEx_AESCCM_GenerateAuthTAG

Function name

HAL_StatusTypeDef HAL_CRYPEx_AESCCM_GenerateAuthTAG (CRYP_HandleTypeDef * hcryp, uint32_t * AuthTag, uint32_t Timeout)

Function description

AES CCM Authentication TAG generation.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure that contains the configuration information for CRYP module
- **AuthTag:** Pointer to the authentication buffer
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_CRYPEx_EnableAutoKeyDerivation

Function name

void HAL_CRYPEx_EnableAutoKeyDerivation (CRYP_HandleTypeDef * hcryp)

Function description

AES enable key derivation functions.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure.

HAL_CRYPEx_DisableAutoKeyDerivation

Function name

void HAL_CRYPEx_DisableAutoKeyDerivation (CRYP_HandleTypeDef * hcryp)

Function description

AES disable key derivation functions.

Parameters

- **hcryp:** pointer to a CRYP_HandleTypeDef structure.

16 HAL DAC Generic Driver

16.1 DAC Firmware driver registers structures

16.1.1 DAC_HandleTypeDef

DAC_HandleTypeDef is defined in the stm32g4xx_hal_dac.h

Data Fields

- ***DAC_TypeDef * Instance***
- ***__IO HAL_DAC_StateTypeDef State***
- ***HAL_LockTypeDef Lock***
- ***DMA_HandleTypeDef * DMA_Handle1***
- ***DMA_HandleTypeDef * DMA_Handle2***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***DAC_TypeDef* DAC_HandleTypeDef::Instance***
  Register base address
- ***__IO HAL_DAC_StateTypeDef DAC_HandleTypeDef::State***
  DAC communication state
- ***HAL_LockTypeDef DAC_HandleTypeDef::Lock***
  DAC locking object
- ***DMA_HandleTypeDef* DAC_HandleTypeDef::DMA_Handle1***
  Pointer DMA handler for channel 1
- ***DMA_HandleTypeDef* DAC_HandleTypeDef::DMA_Handle2***
  Pointer DMA handler for channel 2
- ***__IO uint32_t DAC_HandleTypeDef::ErrorCode***
  DAC Error code

16.1.2 DAC_SampleAndHoldConfTypeDef

DAC_SampleAndHoldConfTypeDef is defined in the stm32g4xx_hal_dac.h

Data Fields

- ***uint32_t DAC_SampleTime***
- ***uint32_t DAC_HoldTime***
- ***uint32_t DAC_RefreshTime***

Field Documentation

- ***uint32_t DAC_SampleAndHoldConfTypeDef::DAC_SampleTime***
  Specifies the Sample time for the selected channel. This parameter applies when DAC_SampleAndHold is DAC_SAMPLEANDHOLD_ENABLE. This parameter must be a number between Min_Data = 0 and Max_Data = 1023
- ***uint32_t DAC_SampleAndHoldConfTypeDef::DAC_HoldTime***
  Specifies the hold time for the selected channel This parameter applies when DAC_SampleAndHold is DAC_SAMPLEANDHOLD_ENABLE. This parameter must be a number between Min_Data = 0 and Max_Data = 1023
- ***uint32_t DAC_SampleAndHoldConfTypeDef::DAC_RefreshTime***
  Specifies the refresh time for the selected channel This parameter applies when DAC_SampleAndHold is DAC_SAMPLEANDHOLD_ENABLE. This parameter must be a number between Min_Data = 0 and Max_Data = 255

16.1.3 DAC_ChannelConfTypeDef

DAC_ChannelConfTypeDef is defined in the stm32g4xx_hal_dac.h

Data Fields

- ***uint32_t DAC_HighFrequency***
- ***FunctionalState DAC_DMADoubleDataMode***
- ***FunctionalState DAC_SignedFormat***
- ***uint32_t DAC_SampleAndHold***
- ***uint32_t DAC_Trigger***
- ***uint32_t DAC_Trigger2***
- ***uint32_t DAC_OutputBuffer***
- ***uint32_t DAC_ConnectOnChipPeripheral***
- ***uint32_t DAC_UserTrimming***
- ***uint32_t DAC_TrimmingValue***
- ***DAC_SampleAndHoldConfTypeDef DAC_SampleAndHoldConfig***

Field Documentation

- ***uint32_t DAC_ChannelConfTypeDef::DAC_HighFrequency***

  Specifies the frequency interface mode This parameter can be a value of ***DAC_HighFrequency***
- ***FunctionalState DAC_ChannelConfTypeDef::DAC_DMADoubleDataMode***

  Specifies if DMA double data mode should be enabled or not for the selected channel. This parameter can be ENABLE or DISABLE
- ***FunctionalState DAC_ChannelConfTypeDef::DAC_SignedFormat***

  Specifies if signed format should be used or not for the selected channel. This parameter can be ENABLE or DISABLE
- ***uint32_t DAC_ChannelConfTypeDef::DAC_SampleAndHold***

  Specifies whether the DAC mode. This parameter can be a value of ***DAC_SampleAndHold***
- ***uint32_t DAC_ChannelConfTypeDef::DAC_Trigger***

  Specifies the external trigger for the selected DAC channel. This parameter can be a value of ***DAC_trigger_selection***. Note: In case of sawtooth wave generation, this trigger corresponds to the reset trigger.
- ***uint32_t DAC_ChannelConfTypeDef::DAC_Trigger2***

  Specifies the external secondary trigger for the selected DAC channel. This parameter can be a value of ***DAC_trigger_selection***. Note: In case of sawtooth wave generation, this trigger corresponds to the step trigger.
- ***uint32_t DAC_ChannelConfTypeDef::DAC_OutputBuffer***

  Specifies whether the DAC channel output buffer is enabled or disabled. This parameter can be a value of ***DAC_output_buffer***
- ***uint32_t DAC_ChannelConfTypeDef::DAC_ConnectOnChipPeripheral***

  Specifies whether the DAC output is connected or not to on chip peripheral . This parameter can be a value of ***DAC_ConnectOnChipPeripheral***
- ***uint32_t DAC_ChannelConfTypeDef::DAC_UserTrimming***

  Specifies the trimming mode This parameter must be a value of ***DAC_UserTrimming*** DAC_UserTrimming is either factory or user trimming
- ***uint32_t DAC_ChannelConfTypeDef::DAC_TrimmingValue***

  Specifies the offset trimming value i.e. when DAC_SampleAndHold is DAC_TRIMMING_USER. This parameter must be a number between Min_Data = 1 and Max_Data = 31
- ***DAC_SampleAndHoldConfTypeDef DAC_ChannelConfTypeDef::DAC_SampleAndHoldConfig***

  Sample and Hold settings

16.2 DAC Firmware driver API description

The following section lists the various functions of the DAC library.

16.2.1 DAC Peripheral features

DAC Channels

STM32G4 devices integrate up to seven 12-bit Digital Analog Converters, up to six of them grouped by pair forming a DAC instance. The 2 converters of an single instance (i.e. channel1 & channel2) can be used independently or simultaneously (dual mode):

1. DAC channel1 with DAC_OUT1 as output (not for all) or connected to on-chip peripherals (ex. comparators, operational amplifier).
2. DAC channel2 with DAC_OUT2 as output (not for all) or connected to on-chip peripherals (ex. comparators, operational amplifier). Note: when an instance only includes one converter, only independent mode is supported by this converter. STM32G4 instances & converters availability and output PIO mapping (DAC_OUTx): ---------- | DAC1 | DAC2 | DAC3 | DAC4 | ---------- Channel 1 | | YES | YES | YES | YES | DAC_OUT1 | PA4 | PA6 | - | - ---------- Channel 2 | | YES | NO | YES | YES | DAC_OUT2 | PA5 | - | - | - ---------- Note: On this STM32 serie, all devices do not include each DAC instances listed above. Refer to device datasheet for DACx instance availability.

DAC Triggers

Digital to Analog conversion can be non-triggered using DAC_TRIGGER_NONE and DAC_OUT1/DAC_OUT2 is available once writing to DHRx register.

Digital to Analog conversion can be triggered by:

1. External event: EXTI Line 9 (any GPIOx_PIN_9) using DAC_TRIGGER_EXT_IT9. The used pin (GPIOx_PIN_9) must be configured in input mode.
2. Timers TRGO: TIM1, TIM2, TIM3, TIM4, TIM6, TIM7, TIM8 and TIM15 (DAC_TRIGGER_T2_TRGO, DAC_TRIGGER_T3_TRGO...)
3. Software using DAC_TRIGGER_SOFTWARE
4. HRTimer TRGO: HRTIM1 (1) (DAC_TRIGGER_HRTIM_TRG01, DAC_TRIGGER_HRTIM_TRG02...)

Specific triggers for sawtooth generation:

1. External event: EXTI Line 10 (any GPIOx_PIN_10) using DAC_TRIGGER_EXT_IT10. The used pin (GPIOx_PIN_10) must be configured in input mode.
2. HRTimer Step & Reset: HRTIM1 (1) (DAC_TRIGGER_HRTIM_RST_TRG1, DAC_TRIGGER_HRTIM_STEP_TRG1...) Note: On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC Buffer mode feature

Each DAC channel integrates an output buffer that can be used to reduce the output impedance, and to drive external loads directly without having to add an external operational amplifier. To enable, the output buffer use sConfig.DAC_OutputBuffer = DAC_OUTPUTBUFFER_ENABLE;

Note: Refer to the device datasheet for more details about output impedance value with and without output buffer.

DAC connect feature

Each DAC channel can be connected internally. To connect, use sConfig.DAC_ConnectOnChipPeripheral = DAC_CHIPCONNECT_INTERNAL; or sConfig.DAC_ConnectOnChipPeripheral = DAC_CHIPCONNECT_BOTH;

GPIO configurations guidelines

When a DAC channel is used (ex channel1 on PA4) and the other is not (ex channel2 on PA5 is configured in Analog and disabled). Channel1 may disturb channel2 as coupling effect. Note that there is no coupling on channel2 as soon as channel2 is turned on. Coupling on adjacent channel could be avoided as follows: when unused PA5 is configured as INPUT PULL-UP or DOWN. PA5 is configured in ANALOG just before it is turned on.

DAC Sample and Hold feature

For each converter, 2 modes are supported: normal mode and "sample and hold" mode (i.e. low power mode). In the sample and hold mode, the DAC core converts data, then holds the converted voltage on a capacitor. When not converting, the DAC cores and buffer are completely turned off between samples and the DAC output is tri-stated, therefore reducing the overall power consumption. A new stabilization period is needed before each new conversion. The sample and hold allow setting internal or external voltage @ low power consumption cost (output value can be at any given rate either by CPU or DMA). The Sample and hold block and registers uses either LSI & run in several power modes: run mode, sleep mode, low power run, low power sleep mode & stop1 mode. Low power stop1 mode allows only static conversion. To enable Sample and Hold mode Enable LSI using HAL_RCC_OscConfig with RCC_OSCILLATORTYPE_LSI & RCC_LSI_ON parameters. Use DAC_InitStructure.DAC_SampleAndHold = DAC_SAMPLEANDHOLD_ENABLE; & DAC_ChannelConfTypeDef.DAC_SampleAndHoldConfig.DAC_SampleTime, DAC_HoldTime & DAC_RefreshTime;

DAC calibration feature

1. The 2 converters (channel1 & channel2) provide calibration capabilities.
   - Calibration aims at correcting some offset of output buffer.
   - The DAC uses either factory calibration settings OR user defined calibration (trimming) settings (i.e. trimming mode).
   - The user defined settings can be figured out using self calibration handled by HAL_DACEx_SelfCalibrate.
   - HAL_DACEx_SelfCalibrate:
     - Runs automatically the calibration.
     - Enables the user trimming mode
     - Updates a structure with trimming values with fresh calibration results. The user may store the calibration results for larger (ex monitoring the trimming as a function of temperature for instance)

DAC wave generation feature

Both DAC channels can be used to generate

1. Noise wave
2. Triangle wave
3. Sawtooth wave

DAC data format

The DAC data format can be:

1. 8-bit right alignment using DAC_ALIGN_8B_R
2. 12-bit left alignment using DAC_ALIGN_12B_L
3. 12-bit right alignment using DAC_ALIGN_12B_R

DAC data value to voltage correspondence

The analog output voltage on each DAC channel pin is determined by the following equation:

DAC_OUTx = VREF+ * DOR / 4095

- with DOR is the Data Output Register

VEF+ is the input voltage reference (refer to the device datasheet)

e.g. To set DAC_OUT1 to 0.7V, use

- Assuming that VREF+ = 3.3V, DAC_OUT1 = (3.3 * 868) / 4095 = 0.7V

DMA requests

A DMAMUX request can be generated when an external trigger (but not a software trigger) occurs if DMAMUX requests are enabled using HAL_DAC_Start_DMA(). DMAMUX requests are mapped as following:
---------- | DAC1 | DAC2 | DAC3 | DAC4 |
---------- Channel 1 | | 6 | 41 | 102 | 104
---------- Channel 2 | | 7 | - | 103 | 105
---------- Note: On this STM32 serie, all devices do not include each DAC instances listed above. Refer to device datasheet for DACx instance availability.

High frequency interface mode

The high frequency interface informs DAC instance about the bus frequency in use. It is mandatory information for DAC (as internal timing of DAC is bus frequency dependent) provided thanks to parameter DAC_HighFrequency handled in HAL_DAC_ConfigChannel () function. Use of DAC_HIGH_FREQUENCY_INTERFACE_MODE_AUTOMATIC value of DAC_HighFrequency is recommended function figured out the correct setting. The high frequency mode is same for all converters of a same DAC instance. Either same parameter DAC_HighFrequency is used for all DAC converters or again self DAC_HIGH_FREQUENCY_INTERFACE_MODE_AUTOMATIC detection parameter.

Note: For Dual mode and specific signal (Sawtooth, triangle and noise) generation please refer to Extended Features Driver description

16.2.2 How to use this driver

- DAC APB clock must be enabled to get write access to DAC registers using HAL_DAC_Init()
- If available & needed, configure DAC_OUTx (DAC_OUT1, DAC_OUT2) in analog mode.
- Configure the DAC channel using HAL_DAC_ConfigChannel() function.
- Enable the DAC channel using HAL_DAC_Start() or HAL_DAC_Start_DMA() functions.

Calibration mode IO operation

- Retrieve the factory trimming (calibration settings) using HAL_DACEx_GetTrimOffset()
- Run the calibration using HAL_DACEx_SelfCalibrate()
- Update the trimming while DAC running using HAL_DACEx_SetUserTrimming()

Polling mode IO operation

- Start the DAC peripheral using HAL_DAC_Start()
- To read the DAC last data output value, use the HAL_DAC_GetValue() function.
- Stop the DAC peripheral using HAL_DAC_Stop()

DMA mode IO operation

- Start the DAC peripheral using HAL_DAC_Start_DMA(), at this stage the user specify the length of data to be transferred at each end of conversion First issued trigger will start the conversion of the value previously set by HAL_DAC_SetValue().
- At the middle of data transfer HAL_DAC_ConvHalfCpltCallbackCh1() or HAL_DACEx_ConvHalfCpltCallbackCh2() function is executed and user can add his own code by customization of function pointer HAL_DAC_ConvHalfCpltCallbackCh1() or HAL_DACEx_ConvHalfCpltCallbackCh2()
- At The end of data transfer HAL_DAC_ConvCpltCallbackCh1() or HAL_DACEx_ConvHalfCpltCallbackCh2() function is executed and user can add his own code by customization of function pointer HAL_DAC_ConvCpltCallbackCh1() or HAL_DACEx_ConvHalfCpltCallbackCh2()
- In case of transfer Error, HAL_DAC_ErrorCallbackCh1() function is executed and user can add his own code by customization of function pointer HAL_DAC_ErrorCallbackCh1

- In case of DMA underrun, DAC interruption triggers and execute internal function HAL_DAC_IRQHandler. HAL_DAC_DMAUnderrunCallbackCh1() or HAL_DACEx_DMAUnderrunCallbackCh2() function is executed and user can add his own code by customization of function pointer HAL_DAC_DMAUnderrunCallbackCh1() or HAL_DACEx_DMAUnderrunCallbackCh2() and add his own code by customization of function pointer HAL_DAC_ErrorCallbackCh1()
- Stop the DAC peripheral using HAL_DAC_Stop_DMA()

Callback registration

The compilation define USE_HAL_DAC_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_DAC_RegisterCallback() to register a user callback, it allows to register following callbacks:

- ConvCpltCallbackCh1 : callback when a half transfer is completed on Ch1.
- ConvHalfCpltCallbackCh1 : callback when a transfer is completed on Ch1.
- ErrorCallbackCh1 : callback when an error occurs on Ch1.
- DMAUnderrunCallbackCh1 : callback when an underrun error occurs on Ch1.
- ConvCpltCallbackCh2 : callback when a half transfer is completed on Ch2.
- ConvHalfCpltCallbackCh2 : callback when a transfer is completed on Ch2.
- ErrorCallbackCh2 : callback when an error occurs on Ch2.
- DMAUnderrunCallbackCh2 : callback when an underrun error occurs on Ch2.
- MspInitCallback : DAC MspInit.
- MspDeInitCallback : DAC MspdeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function. Use function @ref HAL_DAC_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
- ConvCpltCallbackCh1 : callback when a half transfer is completed on Ch1.
- ConvHalfCpltCallbackCh1 : callback when a transfer is completed on Ch1.
- ErrorCallbackCh1 : callback when an error occurs on Ch1.
- DMAUnderrunCallbackCh1 : callback when an underrun error occurs on Ch1.
- ConvCpltCallbackCh2 : callback when a half transfer is completed on Ch2.
- ConvHalfCpltCallbackCh2 : callback when a transfer is completed on Ch2.
- ErrorCallbackCh2 : callback when an error occurs on Ch2.
- DMAUnderrunCallbackCh2 : callback when an underrun error occurs on Ch2.
- MspInitCallback : DAC MspInit.
- MspDeInitCallback : DAC MspdeInit.
- All Callbacks This function) takes as parameters the HAL peripheral handle and the Callback ID. By default, after the @ref HAL_DAC_Init and if the state is HAL_DAC_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_DAC_Init and @ref HAL_DAC_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_DAC_Init and @ref HAL_DAC_DeInit keep and use the user MspInit/ MspDeInit callbacks (registered beforehand) Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_DAC_RegisterCallback before calling @ref HAL_DAC_DeInit or @ref HAL_DAC_Init function. When The compilation define USE_HAL_DAC_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

DAC HAL driver macros list

Below the list of most used macros in DAC HAL driver.

- __HAL_DAC_ENABLE : Enable the DAC peripheral
- __HAL_DAC_DISABLE : Disable the DAC peripheral
- __HAL_DAC_CLEAR_FLAG: Clear the DAC's pending flags
- __HAL_DAC_GET_FLAG: Get the selected DAC's flag status

Note: You can refer to the DAC HAL driver header file for more useful macros

16.2.3 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize and configure the DAC.
- De-initialize the DAC.

This section contains the following APIs:

- ***HAL_DAC_Init***
- ***HAL_DAC_DeInit***
- ***HAL_DAC_MspInit***
- ***HAL_DAC_MspDeInit***

16.2.4 IO operation functions

This section provides functions allowing to:

- Start conversion.
- Stop conversion.
- Start conversion and enable DMA transfer.
- Stop conversion and disable DMA transfer.
- Get result of conversion.

This section contains the following APIs:

- ***HAL_DAC_Start***
- ***HAL_DAC_Stop***
- ***HAL_DAC_Start_DMA***
- ***HAL_DAC_Stop_DMA***
- ***HAL_DAC_IRQHandler***
- ***HAL_DAC_SetValue***
- ***HAL_DAC_ConvCpltCallbackCh1***
- ***HAL_DAC_ConvHalfCpltCallbackCh1***
- ***HAL_DAC_ErrorCallbackCh1***
- ***HAL_DAC_DMAUnderrunCallbackCh1***

16.2.5 Peripheral Control functions

This section provides functions allowing to:

- Configure channels.
- Set the specified data holding register value for DAC channel.

This section contains the following APIs:

- ***HAL_DAC_GetValue***
- ***HAL_DAC_ConfigChannel***

16.2.6 Peripheral State and Errors functions

This subsection provides functions allowing to

- Check the DAC state.
- Check the DAC Errors.

This section contains the following APIs:

- ***HAL_DAC_GetState***
- ***HAL_DAC_GetError***

16.2.7 Detailed description of functions

HAL_DAC_Init

Function name

HAL_StatusTypeDef HAL_DAC_Init (DAC_HandleTypeDef * hdac)

Function description

Initialize the DAC peripheral according to the specified parameters in the DAC_InitStruct and initialize the associated handle.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **HAL:** status

HAL_DAC_DeInit

Function name

HAL_StatusTypeDef HAL_DAC_DeInit (DAC_HandleTypeDef * hdac)

Function description

Deinitialize the DAC peripheral registers to their default reset values.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **HAL:** status

HAL_DAC_MspInit

Function name

void HAL_DAC_MspInit (DAC_HandleTypeDef * hdac)

Function description

Initialize the DAC MSP.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_MspDeInit

Function name

void HAL_DAC_MspDeInit (DAC_HandleTypeDef * hdac)

Function description

DeInitialize the DAC MSP.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_Start

Function name

HAL_StatusTypeDef HAL_DAC_Start (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Enables DAC and starts conversion of channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

HAL_DAC_Stop

Function name

HAL_StatusTypeDef HAL_DAC_Stop (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Disables DAC and stop conversion of channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

HAL_DAC_Start_DMA

Function name

HAL_StatusTypeDef HAL_DAC_Start_DMA (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t * pData, uint32_t Length, uint32_t Alignment)

Function description

Enables DAC and starts conversion of channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **pData:** The destination peripheral Buffer address.
- **Length:** The length of data to be transferred from memory to DAC peripheral
- **Alignment:** Specifies the data alignment for DAC channel. This parameter can be one of the following values:
  - DAC_ALIGN_8B_R: 8bit right data alignment selected
  - DAC_ALIGN_12B_L: 12bit left data alignment selected
  - DAC_ALIGN_12B_R: 12bit right data alignment selected

Return values

- **HAL:** status

HAL_DAC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_DAC_Stop_DMA (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Disables DAC and stop conversion of channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

HAL_DAC_IRQHandler

Function name

void HAL_DAC_IRQHandler (DAC_HandleTypeDef * hdac)

Function description

Handles DAC interrupt request This function uses the interruption of DMA underrun.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_SetValue

Function name

HAL_StatusTypeDef HAL_DAC_SetValue (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t Alignment, uint32_t Data)

Function description

Set the specified data holding register value for DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **Alignment:** Specifies the data alignment. This parameter can be one of the following values:
  - DAC_ALIGN_8B_R: 8bit right data alignment selected
  - DAC_ALIGN_12B_L: 12bit left data alignment selected
  - DAC_ALIGN_12B_R: 12bit right data alignment selected
- **Data:** Data to be loaded in the selected data holding register.

Return values

- **HAL:** status

HAL_DAC_ConvCpltCallbackCh1

Function name

void HAL_DAC_ConvCpltCallbackCh1 (DAC_HandleTypeDef * hdac)

Function description

Conversion complete callback in non-blocking mode for Channel1.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_ConvHalfCpltCallbackCh1

Function name

void HAL_DAC_ConvHalfCpltCallbackCh1 (DAC_HandleTypeDef * hdac)

Function description

Conversion half DMA transfer callback in non-blocking mode for Channel1.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_ErrorCallbackCh1

Function name

void HAL_DAC_ErrorCallbackCh1 (DAC_HandleTypeDef * hdac)

Function description

Error DAC callback for Channel1.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_DMAUnderrunCallbackCh1

Function name

void HAL_DAC_DMAUnderrunCallbackCh1 (DAC_HandleTypeDef * hdac)

Function description

DMA underrun DAC callback for channel1.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DAC_GetValue

Function name

uint32_t HAL_DAC_GetValue (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Returns the last data output value of the selected DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **The:** selected DAC channel data output value.

HAL_DAC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_DAC_ConfigChannel (DAC_HandleTypeDef * hdac, DAC_ChannelConfTypeDef * sConfig, uint32_t Channel)

Function description

Configures the selected DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **sConfig:** DAC configuration structure.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

Notes

- By calling this function, the high frequency interface mode (HFSEL bits) will be set. This parameter scope is the DAC instance. As the function is called for each channel, the DAC high frequency interface mode of sConfig must be the same at each call. (or DAC_HIGH_FREQUENCY_INTERFACE_MODE_AUTOMATIC self detect).

HAL_DAC_GetState

Function name

HAL_DAC_StateTypeDef HAL_DAC_GetState (DAC_HandleTypeDef * hdac)

Function description

return the DAC handle state

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **HAL:** state

HAL_DAC_GetError

Function name

uint32_t HAL_DAC_GetError (DAC_HandleTypeDef * hdac)

Function description

Return the DAC error code.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **DAC:** Error Code

DAC_DMAConvCpltCh1

Function name

void DAC_DMAConvCpltCh1 (DMA_HandleTypeDef * hdma)

Function description

DMA conversion complete callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

DAC_DMAErrorCh1

Function name

void DAC_DMAErrorCh1 (DMA_HandleTypeDef * hdma)

Function description

DMA error callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

DAC_DMAHalfConvCpltCh1

Function name

void DAC_DMAHalfConvCpltCh1 (DMA_HandleTypeDef * hdma)

Function description

DMA half transfer complete callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

16.3 DAC Firmware driver defines

The following section lists the various define and macros of the module.

16.3.1 DAC

DAC

DAC Channel selection

DAC_CHANNEL_1

DAC_CHANNEL_2

DAC ConnectOnChipPeripheral

DAC_CHIPCONNECT_EXTERNAL

DAC_CHIPCONNECT_INTERNAL

DAC_CHIPCONNECT_BOTH

DAC data alignment

DAC_ALIGN_12B_R

DAC_ALIGN_12B_L

DAC_ALIGN_8B_R

DAC Error Code

HAL_DAC_ERROR_NONE

No error

HAL_DAC_ERROR_DMAUNDERRUNCH1

DAC channel1 DMA underrun error

HAL_DAC_ERROR_DMAUNDERRUNCH2

DAC channel2 DMA underrun error

HAL_DAC_ERROR_DMA

DMA error

HAL_DAC_ERROR_TIMEOUT

Timeout error

DAC Exported Macros

__HAL_DAC_RESET_HANDLE_STATE

Description:

- Reset DAC handle state.

Parameters:

- __HANDLE__: specifies the DAC handle.

Return value:

- None

__HAL_DAC_ENABLE

Description:

- Enable the DAC channel.

Parameters:

- __HANDLE__: specifies the DAC handle.
- __DAC_Channel__: specifies the DAC channel

Return value:

- None

__HAL_DAC_DISABLE

Description:

- Disable the DAC channel.

Parameters:

- __HANDLE__: specifies the DAC handle
- __DAC_Channel__: specifies the DAC channel.

Return value:

- None

DAC_DHR12R1_ALIGNMENT

Description:

- Set DHR12R1 alignment.

Parameters:

- __ALIGNMENT__: specifies the DAC alignment

Return value:

- None

DAC_DHR12R2_ALIGNMENT

Description:

- Set DHR12R2 alignment.

Parameters:

- __ALIGNMENT__: specifies the DAC alignment

Return value:

- None

DAC_DHR12RD_ALIGNMENT

Description:

- Set DHR12RD alignment.

Parameters:

- __ALIGNMENT__: specifies the DAC alignment

Return value:

- None

__HAL_DAC_ENABLE_IT

Description:

- Enable the DAC interrupt.

Parameters:

- __HANDLE__: specifies the DAC handle
- __INTERRUPT__: specifies the DAC interrupt. This parameter can be any combination of the following values:
  - DAC_IT_DMAUDR1: DAC channel 1 DMA underrun interrupt
  - DAC_IT_DMAUDR2: DAC channel 2 DMA underrun interrupt (1)

Return value:

- None

__HAL_DAC_DISABLE_IT

Description:

- Disable the DAC interrupt.

Parameters:

- __HANDLE__: specifies the DAC handle
- __INTERRUPT__: specifies the DAC interrupt. This parameter can be any combination of the following values:
  - DAC_IT_DMAUDR1: DAC channel 1 DMA underrun interrupt
  - DAC_IT_DMAUDR2: DAC channel 2 DMA underrun interrupt (1)

Return value:

- None

__HAL_DAC_GET_IT_SOURCE

Description:

- Check whether the specified DAC interrupt source is enabled or not.

Parameters:

- __HANDLE__: DAC handle
- __INTERRUPT__: DAC interrupt source to check This parameter can be any combination of the following values:
  - DAC_IT_DMAUDR1: DAC channel 1 DMA underrun interrupt
  - DAC_IT_DMAUDR2: DAC channel 2 DMA underrun interrupt (1)

Return value:

- State: of interruption (SET or RESET)

__HAL_DAC_GET_FLAG

Description:

- Get the selected DAC's flag status.

Parameters:

- __HANDLE__: specifies the DAC handle.
- __FLAG__: specifies the DAC flag to get. This parameter can be any combination of the following values:
  - DAC_FLAG_DMAUDR1: DAC channel 1 DMA underrun flag
  - DAC_FLAG_DMAUDR2: DAC channel 2 DMA underrun flag (1)
  - DAC_FLAG_DAC1RDY: DAC channel 1 ready status flag
  - DAC_FLAG_DAC2RDY: DAC channel 2 ready status flag (1)

Return value:

- None

__HAL_DAC_CLEAR_FLAG

Description:

- Clear the DAC's flag.

Parameters:

- __HANDLE__: specifies the DAC handle.
- __FLAG__: specifies the DAC flag to clear. This parameter can be any combination of the following values:
  - DAC_FLAG_DMAUDR1: DAC channel 1 DMA underrun flag
  - DAC_FLAG_DMAUDR2: DAC channel 2 DMA underrun flag (1)

Return value:

- None

DAC_SAMPLEANDHOLD_DISABLE

DAC_SAMPLEANDHOLD_ENABLE

DAC trigger selection

DAC_TRIGGER_NONE

DAC (all) conversion is automatic once the DAC_DHRxxxx register has been loaded, and not by external trigger

DAC_TRIGGER_SOFTWARE

DAC (all) conversion started by software trigger for DAC channel

DAC_TRIGGER_T1_TRGO

DAC3: TIM1 TRGO selected as external conversion trigger for DAC channel.

DAC_TRIGGER_T8_TRGO

DAC1/2/4: TIM8 TRGO selected as external conversion trigger for DAC channel. Refer to device datasheet for DACx availability.

DAC_TRIGGER_T7_TRGO

DAC (all): TIM7 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_T15_TRGO

DAC (all): TIM15 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_T2_TRGO

DAC (all): TIM2 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_T4_TRGO

DAC (all): TIM4 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_EXT_IT9

DAC (all): EXTI Line9 event selected as external conversion trigger for DAC channel. Note: only to be used as update or reset (sawtooth generation) trigger

DAC_TRIGGER_EXT_IT10

DAC (all): EXTI Line10 event selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger

DAC_TRIGGER_T6_TRGO

DAC (all): TIM6 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_T3_TRGO

DAC (all): TIM3 TRGO selected as external conversion trigger for DAC channel

DAC_TRIGGER_HRTIM_RST_TRG1

DAC (all): HRTIM RST TRIG 1 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG1

DAC (all): HRTIM STEP TRIG 1 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_RST_TRG2

DAC (all): HRTIM RST TRIG 2 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG2

DAC (all): HRTIM STEP TRIG 2 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_RST_TRG3

DAC (all): HRTIM RST TRIG 3 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG3

DAC (all): HRTIM STEP TRIG 3 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_RST_TRG4

DAC (all): HRTIM RST TRIG 4 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG4

DAC (all): HRTIM STEP TRIG 4 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_RST_TRG5

DAC (all): HRTIM RST TRIG 5 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG5

DAC (all): HRTIM STEP TRIG 5 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_RST_TRG6

DAC (all): HRTIM RST TRIG 6 selected as external conversion trigger for DAC channel. Note: only to be used as reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_STEP_TRG6

DAC (all): HRTIM STEP TRIG 6 selected as external conversion trigger for DAC channel. Note: only to be used as step (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_TRG01

DAC1&4: HRTIM TRIG OUT 1 selected as external conversion trigger for DAC channel. Note: only to be used as update or reset (sawtooth generation) trigger. Refer to device datasheet for DACx instance availability. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

DAC_TRIGGER_HRTIM_TRG02

DAC2: HRTIM TRIG OUT 1 selected as external conversion trigger for DAC channel. Note: only to be used as update or reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported and DAC2 instance present (refer to device datasheet for supported features list and DAC2 instance availability)

DAC_TRIGGER_HRTIM_TRG03

DAC3: HRTIM TRIG OUT 1 selected as external conversion trigger for DAC channel. Note: only to be used as update or reset (sawtooth generation) trigger. On this STM32 serie, parameter only available if HRTIM feature is supported (refer to device datasheet for supported features list)

User trimming

17 HAL DAC Extension Driver

17.1 DACEx Firmware driver API description

The following section lists the various functions of the DACEx library.

17.1.1 How to use this driver

Dual mode IO operation

- Use HAL_DACEx_DualStart() to enable both channels and start the conversion in dual mode operation.
  If the software trigger is selected, using HAL_DACEx_DualStart() starts the conversion of the value previously set by HAL_DACEx_DualSetValue().
- Use HAL_DACEx_DualStop() to disable both channels and stop the conversion in dual mode operation.
- Use HAL_DACEx_DualStart_DMA() to enable both channels and start the conversion in dual mode operation using the DMA.to feed the DAC converters.
  The first trigger issued starts the conversion of the value previously set by HAL_DACEx_DualSetValue().
  The same callbacks that are used in signel mode are called in dual mode to notify transfer completion (half complte or complete), errors or underrun.
- Use HAL_DACEx_DualStop_DMA() to disable both channels and stop the conversion in dual mode operation using the DMA.to feed the DAC converters.
- When Dual mode is enabled (that is DAC Channel 1 and Channel 2 are used simultaneously), use HAL_DACEx_DualGetValue() to get digital data to be converted and HAL_DACEx_DualSetValue() to set digital value to converted simultaneously on Channel 1 and Channel 2.

Signal generation operation

- Use HAL_DACEx_TriangleWaveGenerate() to generate Triangle signal.
- Use HAL_DACEx_NoiseWaveGenerate() to generate Noise signal.
- Use HAL_DACEx_SawtoothWaveGenerate() to generate sawtooth signal.
- Use HAL_DACEx_SawtoothWaveDataReset() to reset sawtooth wave.
- Use HAL_DACEx_SawtoothWaveDataStep() to step sawtooth wave.
- Use HAL_DACEx_SetCalibrate to calibrate one DAC channel.
- Use HAL_DACEx_SetUserTrimming to set user trimming value.
- Use HAL_DACEx_GetTrimOffset to retrieve trimming value (factory setting after reset, user setting if HAL_DACEx_SetUserTrimming has been used at least once after reset).

17.1.2 Extended features functions

This section provides functions allowing to:

- Start conversion.
- Stop conversion.
- Start conversion and enable DMA transfer.
- Stop conversion and disable DMA transfer.
- Get result of conversion.
- Get result of dual mode conversion.

This section contains the following APIs:

- ***HAL_DACEx_DualStart***
- ***HAL_DACEx_DualStop***
- ***HAL_DACEx_DualStart_DMA***
- ***HAL_DACEx_DualStop_DMA***
- ***HAL_DACEx_TriangleWaveGenerate***

- *HAL_DACEx_NoiseWaveGenerate*
- *HAL_DACEx_SawtoothWaveGenerate*
- *HAL_DACEx_SawtoothWaveDataReset*
- *HAL_DACEx_SawtoothWaveDataStep*
- *HAL_DACEx_DualSetValue*
- *HAL_DACEx_ConvCpltCallbackCh2*
- *HAL_DACEx_ConvHalfCpltCallbackCh2*
- *HAL_DACEx_ErrorCallbackCh2*
- *HAL_DACEx_DMAUnderrunCallbackCh2*
- *HAL_DACEx_SelfCalibrate*
- *HAL_DACEx_SetUserTrimming*
- *HAL_DACEx_GetTrimOffset*
- *HAL_DACEx_DualGetValue*

17.1.3 Peripheral Control functions

This section provides functions allowing to:

- Set the specified data holding register value for DAC channel.

This section contains the following APIs:

- *HAL_DACEx_DualGetValue*
- *HAL_DACEx_SelfCalibrate*
- *HAL_DACEx_SetUserTrimming*
- *HAL_DACEx_GetTrimOffset*

17.1.4 Detailed description of functions

HAL_DACEx_TriangleWaveGenerate

Function name

HAL_StatusTypeDef HAL_DACEx_TriangleWaveGenerate (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t Amplitude)

Function description

Enable or disable the selected DAC channel wave generation.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **Amplitude:** Select max triangle amplitude. This parameter can be one of the following values:
  - DAC_TRIANGLEAMPLITUDE_1: Select max triangle amplitude of 1
  - DAC_TRIANGLEAMPLITUDE_3: Select max triangle amplitude of 3
  - DAC_TRIANGLEAMPLITUDE_7: Select max triangle amplitude of 7
  - DAC_TRIANGLEAMPLITUDE_15: Select max triangle amplitude of 15
  - DAC_TRIANGLEAMPLITUDE_31: Select max triangle amplitude of 31
  - DAC_TRIANGLEAMPLITUDE_63: Select max triangle amplitude of 63
  - DAC_TRIANGLEAMPLITUDE_127: Select max triangle amplitude of 127
  - DAC_TRIANGLEAMPLITUDE_255: Select max triangle amplitude of 255
  - DAC_TRIANGLEAMPLITUDE_511: Select max triangle amplitude of 511
  - DAC_TRIANGLEAMPLITUDE_1023: Select max triangle amplitude of 1023
  - DAC_TRIANGLEAMPLITUDE_2047: Select max triangle amplitude of 2047
  - DAC_TRIANGLEAMPLITUDE_4095: Select max triangle amplitude of 4095

Return values

- **HAL:** status

HAL_DACEx_NoiseWaveGenerate

Function name

HAL_StatusTypeDef HAL_DACEx_NoiseWaveGenerate (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t Amplitude)

Function description

Enable or disable the selected DAC channel wave generation.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **Amplitude:** Unmask DAC channel LFSR for noise wave generation. This parameter can be one of the following values:
  - DAC_LFSRUNMASK_BIT0: Unmask DAC channel LFSR bit0 for noise wave generation
  - DAC_LFSRUNMASK_BITS1_0: Unmask DAC channel LFSR bit[1:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS2_0: Unmask DAC channel LFSR bit[2:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS3_0: Unmask DAC channel LFSR bit[3:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS4_0: Unmask DAC channel LFSR bit[4:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS5_0: Unmask DAC channel LFSR bit[5:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS6_0: Unmask DAC channel LFSR bit[6:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS7_0: Unmask DAC channel LFSR bit[7:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS8_0: Unmask DAC channel LFSR bit[8:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS9_0: Unmask DAC channel LFSR bit[9:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS10_0: Unmask DAC channel LFSR bit[10:0] for noise wave generation
  - DAC_LFSRUNMASK_BITS11_0: Unmask DAC channel LFSR bit[11:0] for noise wave generation

Return values

- **HAL:** status

HAL_DACEx_SawtoothWaveGenerate

Function name

HAL_StatusTypeDef HAL_DACEx_SawtoothWaveGenerate (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t Polarity, uint32_t ResetData, uint32_t StepData)

Function description

Enable or disable the selected DAC channel sawtooth wave generation.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **Polarity:** polarity to be used for wave generation. This parameter can be one of the following values:
  - DAC_SAWTOOTH_POLARITY_DECREMENT
  - DAC_SAWTOOTH_POLARITY_INCREMENT
- **ResetData:** Sawtooth wave reset value. Range is from 0 to DAC full range 4095 (0xFFF)
- **StepData:** Sawtooth wave step value. 12.4 bit format, unsigned: 12 bits exponent / 4 bits mantissa Step value step is 1/16 = 0.0625 Step value range is 0.0000 to 4095.9375 (0xFFF.F)

Return values

- **HAL:** status

Notes

- Sawtooth reset and step triggers are configured by calling HAL_DAC_ConfigChannel

HAL_DACEx_SawtoothWaveDataReset

Function name

HAL_StatusTypeDef HAL_DACEx_SawtoothWaveDataReset (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Trig sawtooth wave reset.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

Notes

- This function allows to reset sawtooth wave in case of SW trigger has been configured for this usage.

HAL_DACEx_SawtoothWaveDataStep

Function name

HAL_StatusTypeDef HAL_DACEx_SawtoothWaveDataStep (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Trig sawtooth wave step.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **HAL:** status

Notes

- This function allows to generate step in sawtooth wave in case of SW trigger has been configured for this usage.

HAL_DACEx_DualStart

Function name

HAL_StatusTypeDef HAL_DACEx_DualStart (DAC_HandleTypeDef * hdac)

Function description

Enables DAC and starts conversion of both channels.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **HAL:** status

HAL_DACEx_DualStop

Function name

HAL_StatusTypeDef HAL_DACEx_DualStop (DAC_HandleTypeDef * hdac)

Function description

Disables DAC and stop conversion of both channels.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **HAL:** status

HAL_DACEx_DualStart_DMA

Function name

HAL_StatusTypeDef HAL_DACEx_DualStart_DMA (DAC_HandleTypeDef * hdac, uint32_t Channel, uint32_t * pData, uint32_t Length, uint32_t Alignment)

Function description

Enables DAC and starts conversion of both channel 1 and 2 of the same DAC.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The DAC channel that will request data from DMA. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected
- **pData:** The destination peripheral Buffer address.
- **Length:** The length of data to be transferred from memory to DAC peripheral
- **Alignment:** Specifies the data alignment for DAC channel. This parameter can be one of the following values:
  - DAC_ALIGN_8B_R: 8bit right data alignment selected
  - DAC_ALIGN_12B_L: 12bit left data alignment selected
  - DAC_ALIGN_12B_R: 12bit right data alignment selected

Return values

- **HAL:** status

HAL_DACEx_DualStop_DMA

Function name

HAL_StatusTypeDef HAL_DACEx_DualStop_DMA (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Disables DAC and stop conversion both channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Channel:** The DAC channel that requests data from DMA. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected

Return values

- **HAL:** status

HAL_DACEx_DualSetValue

Function name

HAL_StatusTypeDef HAL_DACEx_DualSetValue (DAC_HandleTypeDef * hdac, uint32_t Alignment, uint32_t Data1, uint32_t Data2)

Function description

Set the specified data holding register value for dual DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **Alignment:** Specifies the data alignment for dual channel DAC. This parameter can be one of the following values: DAC_ALIGN_8B_R: 8bit right data alignment selected DAC_ALIGN_12B_L: 12bit left data alignment selected DAC_ALIGN_12B_R: 12bit right data alignment selected
- **Data1:** Data for DAC Channel1 to be loaded in the selected data holding register.
- **Data2:** Data for DAC Channel2 to be loaded in the selected data holding register.

Return values

- **HAL:** status

Notes

- In dual mode, a unique register access is required to write in both DAC channels at the same time.

HAL_DACEx_DualGetValue

Function name

uint32_t HAL_DACEx_DualGetValue (DAC_HandleTypeDef * hdac)

Function description

Return the last data output value of the selected DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **The:** selected DAC channel data output value.

HAL_DACEx_ConvCpltCallbackCh2

Function name

void HAL_DACEx_ConvCpltCallbackCh2 (DAC_HandleTypeDef * hdac)

Function description

Conversion complete callback in non-blocking mode for Channel2.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DACEx_ConvHalfCpltCallbackCh2

Function name

void HAL_DACEx_ConvHalfCpltCallbackCh2 (DAC_HandleTypeDef * hdac)

Function description

Conversion half DMA transfer callback in non-blocking mode for Channel2.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DACEx_ErrorCallbackCh2

Function name

void HAL_DACEx_ErrorCallbackCh2 (DAC_HandleTypeDef * hdac)

Function description

Error DAC callback for Channel2.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DACEx_DMAUnderrunCallbackCh2

Function name

void HAL_DACEx_DMAUnderrunCallbackCh2 (DAC_HandleTypeDef * hdac)

Function description

DMA underrun DAC callback for Channel2.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.

Return values

- **None:**

HAL_DACEx_SelfCalibrate

Function name

HAL_StatusTypeDef HAL_DACEx_SelfCalibrate (DAC_HandleTypeDef * hdac, DAC_ChannelConfTypeDef * sConfig, uint32_t Channel)

Function description

Run the self calibration of one DAC channel.

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **sConfig:** DAC channel configuration structure.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **Updates:** DAC_TrimmingValue. , DAC_UserTrimming set to DAC_UserTrimming
- **HAL:** status

Notes

- Calibration runs about 7 ms.

HAL_DACEx_SetUserTrimming

Function name

HAL_StatusTypeDef HAL_DACEx_SetUserTrimming (DAC_HandleTypeDef * hdac, DAC_ChannelConfTypeDef * sConfig, uint32_t Channel, uint32_t NewTrimmingValue)

Function description

Set the trimming mode and trimming value (user trimming mode applied).

Parameters

- **hdac:** pointer to a DAC_HandleTypeDef structure that contains the configuration information for the specified DAC.
- **sConfig:** DAC configuration structure updated with new DAC trimming value.
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.
- **NewTrimmingValue:** DAC new trimming value

Return values

- **HAL:** status

HAL_DACEx_GetTrimOffset

Function name

uint32_t HAL_DACEx_GetTrimOffset (DAC_HandleTypeDef * hdac, uint32_t Channel)

Function description

Return the DAC trimming value.

Parameters

- **hdac:** DAC handle
- **Channel:** The selected DAC channel. This parameter can be one of the following values:
  - DAC_CHANNEL_1: DAC Channel1 selected
  - DAC_CHANNEL_2: DAC Channel2 selected (1)

  (1) On this STM32 serie, parameter not available on all instances. Refer to device datasheet for channels availability.

Return values

- **Trimming:** value : range: 0->31

DAC_DMAConvCpltCh2

Function name

void DAC_DMAConvCpltCh2 (DMA_HandleTypeDef * hdma)

Function description

DMA conversion complete callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

DAC_DMAErrorCh2

Function name

void DAC_DMAErrorCh2 (DMA_HandleTypeDef * hdma)

Function description

DMA error callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

DAC_DMAHalfConvCpltCh2

Function name

void DAC_DMAHalfConvCpltCh2 (DMA_HandleTypeDef * hdma)

Function description

DMA half transfer complete callback.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA module.

Return values

- **None:**

17.2 DACEx Firmware driver defines

The following section lists the various define and macros of the module.

17.2.1 DACEx

DACEx

DACEx lfsrunmask triangle amplitude

DAC_LFSRUNMASK_BIT0

Unmask DAC channel LFSR bit0 for noise wave generation

DAC_LFSRUNMASK_BITS1_0

Unmask DAC channel LFSR bit[1:0] for noise wave generation

DAC_LFSRUNMASK_BITS2_0

Unmask DAC channel LFSR bit[2:0] for noise wave generation

DAC_LFSRUNMASK_BITS3_0

Unmask DAC channel LFSR bit[3:0] for noise wave generation

DAC_LFSRUNMASK_BITS4_0

Unmask DAC channel LFSR bit[4:0] for noise wave generation

DAC_LFSRUNMASK_BITS5_0

Unmask DAC channel LFSR bit[5:0] for noise wave generation

DAC_LFSRUNMASK_BITS6_0

Unmask DAC channel LFSR bit[6:0] for noise wave generation

DAC_LFSRUNMASK_BITS7_0

Unmask DAC channel LFSR bit[7:0] for noise wave generation

DAC_LFSRUNMASK_BITS8_0

Unmask DAC channel LFSR bit[8:0] for noise wave generation

DAC_LFSRUNMASK_BITS9_0

Unmask DAC channel LFSR bit[9:0] for noise wave generation

DAC_LFSRUNMASK_BITS10_0

Unmask DAC channel LFSR bit[10:0] for noise wave generation

DAC_LFSRUNMASK_BITS11_0

Unmask DAC channel LFSR bit[11:0] for noise wave generation

DAC_TRIANGLEAMPLITUDE_1

Select max triangle amplitude of 1

DAC_TRIANGLEAMPLITUDE_3

Select max triangle amplitude of 3

DAC_TRIANGLEAMPLITUDE_7

Select max triangle amplitude of 7

DAC_TRIANGLEAMPLITUDE_15

Select max triangle amplitude of 15

DAC_TRIANGLEAMPLITUDE_31

Select max triangle amplitude of 31

DAC_TRIANGLEAMPLITUDE_63

Select max triangle amplitude of 63

DAC_TRIANGLEAMPLITUDE_127

Select max triangle amplitude of 127

DAC_TRIANGLEAMPLITUDE_255

Select max triangle amplitude of 255

DAC_TRIANGLEAMPLITUDE_511

Select max triangle amplitude of 511

DAC_TRIANGLEAMPLITUDE_1023

Select max triangle amplitude of 1023

DAC_TRIANGLEAMPLITUDE_2047

Select max triangle amplitude of 2047

DAC_TRIANGLEAMPLITUDE_4095

Select max triangle amplitude of 4095

DAC Sawtooth polarity mode

DAC_SAWTOOTH_POLARITY_DECREMENT

Sawtooth wave generation, polarity is decrement

DAC_SAWTOOTH_POLARITY_INCREMENT

Sawtooth wave generation, polarity is increment

18 HAL DMA Generic Driver

18.1 DMA Firmware driver registers structures

18.1.1 DMA_InitTypeDef

DMA_InitTypeDef is defined in the stm32g4xx_hal_dma.h

Data Fields

- ***uint32_t Request***
- ***uint32_t Direction***
- ***uint32_t PeriphInc***
- ***uint32_t MemInc***
- ***uint32_t PeriphDataAlignment***
- ***uint32_t MemDataAlignment***
- ***uint32_t Mode***
- ***uint32_t Priority***

Field Documentation

- ***uint32_t DMA_InitTypeDef::Request***

  Specifies the request selected for the specified channel. This parameter can be a value of ***DMA_request***
- ***uint32_t DMA_InitTypeDef::Direction***

  Specifies if the data will be transferred from memory to peripheral, from memory to memory or from peripheral to memory. This parameter can be a value of ***DMA_Data_transfer_direction***
- ***uint32_t DMA_InitTypeDef::PeriphInc***

  Specifies whether the Peripheral address register should be incremented or not. This parameter can be a value of ***DMA_Peripheral_incremented_mode***
- ***uint32_t DMA_InitTypeDef::MemInc***

  Specifies whether the memory address register should be incremented or not. This parameter can be a value of ***DMA_Memory_incremented_mode***
- ***uint32_t DMA_InitTypeDef::PeriphDataAlignment***

  Specifies the Peripheral data width. This parameter can be a value of ***DMA_Peripheral_data_size***
- ***uint32_t DMA_InitTypeDef::MemDataAlignment***

  Specifies the Memory data width. This parameter can be a value of ***DMA_Memory_data_size***
- ***uint32_t DMA_InitTypeDef::Mode***

  Specifies the operation mode of the DMAy Channelx. This parameter can be a value of ***DMA_mode***

  Note:

  – The circular buffer mode cannot be used if the memory-to-memory data transfer is configured on the selected Channel
- ***uint32_t DMA_InitTypeDef::Priority***

  Specifies the software priority for the DMAy Channelx. This parameter can be a value of ***DMA_Priority_level***

18.1.2 __DMA_HandleTypeDef

__DMA_HandleTypeDef is defined in the stm32g4xx_hal_dma.h

Data Fields

- ***DMA_Channel_TypeDef * Instance***
- ***DMA_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_DMA_StateTypeDef State***
- ***void * Parent***

- ***void(* XferCpltCallback***

18.2 DMA Firmware driver API description

The following section lists the various functions of the DMA library.

18.2.1 How to use this driver

1. Enable and configure the peripheral to be connected to the DMA Channel (except for internal SRAM / FLASH memories: no initialization is necessary). Please refer to the Reference manual for connection between peripherals and DMA requests.
2. For a given Channel, program the required configuration through the following parameters: Channel request, Transfer Direction, Source and Destination data formats, Circular or Normal mode, Channel Priority level, Source and Destination Increment mode using HAL_DMA_Init() function. Prior to HAL_DMA_Init the peripheral clock shall be enabled for both DMA & DMAMUX thanks to:
   a. DMA1 or DMA2: __HAL_RCC_DMA1_CLK_ENABLE() or __HAL_RCC_DMA2_CLK_ENABLE() ;
   b. DMAMUX1: __HAL_RCC_DMAMUX1_CLK_ENABLE();
3. Use HAL_DMA_GetState() function to return the DMA state and HAL_DMA_GetError() in case of error detection.
4. Use HAL_DMA_Abort() function to abort the current transfer

Note: In Memory-to-Memory transfer mode, Circular mode is not allowed.

Polling mode IO operation

- Use HAL_DMA_Start() to start DMA transfer after the configuration of Source address and destination address and the Length of data to be transferred
- Use HAL_DMA_PollForTransfer() to poll for the end of current transfer, in this case a fixed Timeout can be configured by User depending from his application.

Interrupt mode IO operation

- Configure the DMA interrupt priority using HAL_NVIC_SetPriority()
- Enable the DMA IRQ handler using HAL_NVIC_EnableIRQ()
- Use HAL_DMA_Start_IT() to start DMA transfer after the configuration of Source address and destination address and the Length of data to be transferred. In this case the DMA interrupt is configured
- Use HAL_DMA_IRQHandler() called under DMA_IRQHandler() Interrupt subroutine
- At the end of data transfer HAL_DMA_IRQHandler() function is executed and user can add his own function to register callbacks with HAL_DMA_RegisterCallback().

DMA HAL driver macros list

Below the list of macros in DMA HAL driver.

- __HAL_DMA_ENABLE: Enable the specified DMA Channel.
- __HAL_DMA_DISABLE: Disable the specified DMA Channel.
- __HAL_DMA_GET_FLAG: Get the DMA Channel pending flags.
- __HAL_DMA_CLEAR_FLAG: Clear the DMA Channel pending flags.
- __HAL_DMA_ENABLE_IT: Enable the specified DMA Channel interrupts.
- __HAL_DMA_DISABLE_IT: Disable the specified DMA Channel interrupts.
- __HAL_DMA_GET_IT_SOURCE: Check whether the specified DMA Channel interrupt has occurred or not.

Note: You can refer to the DMA HAL driver header file for more useful macros

18.2.2 Initialization and de-initialization functions

This section provides functions allowing to initialize the DMA Channel source and destination addresses, incrementation and data sizes, transfer direction, circular/normal mode selection, memory-to-memory mode selection and Channel priority value.

The HAL_DMA_Init() function follows the DMA configuration procedures as described in reference manual.
This section contains the following APIs:

- *HAL_DMA_Init*
- *HAL_DMA_DeInit*

18.2.3 IO operation functions

This section provides functions allowing to:

- Configure the source, destination address and data length and Start DMA transfer
- Configure the source, destination address and data length and Start DMA transfer with interrupt
- Abort DMA transfer
- Poll for transfer complete
- Handle DMA interrupt request

This section contains the following APIs:

- *HAL_DMA_Start*
- *HAL_DMA_Start_IT*
- *HAL_DMA_Abort*
- *HAL_DMA_Abort_IT*
- *HAL_DMA_PollForTransfer*
- *HAL_DMA_IRQHandler*
- *HAL_DMA_RegisterCallback*
- *HAL_DMA_UnRegisterCallback*

18.2.4 Peripheral State and Errors functions

This subsection provides functions allowing to

- Check the DMA state
- Get error code

This section contains the following APIs:

- *HAL_DMA_GetState*
- *HAL_DMA_GetError*

18.2.5 Detailed description of functions

HAL_DMA_Init

Function name

HAL_StatusTypeDef HAL_DMA_Init (DMA_HandleTypeDef * hdma)

Function description

Initialize the DMA according to the specified parameters in the DMA_InitTypeDef and initialize the associated handle.

Parameters

- **hdma:** Pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **HAL:** status

HAL_DMA_DeInit

Function name

HAL_StatusTypeDef HAL_DMA_DeInit (DMA_HandleTypeDef * hdma)

Function description

DeInitialize the DMA peripheral.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **HAL:** status

HAL_DMA_Start

Function name

HAL_StatusTypeDef HAL_DMA_Start (DMA_HandleTypeDef * hdma, uint32_t SrcAddress, uint32_t DstAddress, uint32_t DataLength)

Function description

Start the DMA Transfer.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.
- **SrcAddress:** The source memory Buffer address
- **DstAddress:** The destination memory Buffer address
- **DataLength:** The length of data to be transferred from source to destination (up to 256Kbytes-1)

Return values

- **HAL:** status

HAL_DMA_Start_IT

Function name

HAL_StatusTypeDef HAL_DMA_Start_IT (DMA_HandleTypeDef * hdma, uint32_t SrcAddress, uint32_t DstAddress, uint32_t DataLength)

Function description

Start the DMA Transfer with interrupt enabled.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.
- **SrcAddress:** The source memory Buffer address
- **DstAddress:** The destination memory Buffer address
- **DataLength:** The length of data to be transferred from source to destination (up to 256Kbytes-1)

Return values

- **HAL:** status

HAL_DMA_Abort

Function name

HAL_StatusTypeDef HAL_DMA_Abort (DMA_HandleTypeDef * hdma)

Function description

Abort the DMA Transfer.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **HAL:** status

HAL_DMA_Abort_IT

Function name

HAL_StatusTypeDef HAL_DMA_Abort_IT (DMA_HandleTypeDef * hdma)

Function description

Aborts the DMA Transfer in Interrupt mode.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **HAL:** status

HAL_DMA_PollForTransfer

Function name

HAL_StatusTypeDef HAL_DMA_PollForTransfer (DMA_HandleTypeDef * hdma, HAL_DMA_LevelCompleteTypeDef CompleteLevel, uint32_t Timeout)

Function description

Polling for transfer complete.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.
- **CompleteLevel:** Specifies the DMA level complete.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

HAL_DMA_IRQHandler

Function name

void HAL_DMA_IRQHandler (DMA_HandleTypeDef * hdma)

Function description

Handle DMA interrupt request.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **None:**

HAL_DMA_RegisterCallback

Function name

HAL_StatusTypeDef HAL_DMA_RegisterCallback (DMA_HandleTypeDef * hdma, HAL_DMA_CallbackIDTypeDef CallbackID, void(*)(DMA_HandleTypeDef *_hdma) pCallback)

Function description

Register callbacks.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.
- **CallbackID:** User Callback identifer a HAL_DMA_CallbackIDTypeDef ENUM as parameter.
- **pCallback:** pointer to private callbacsk function which has pointer to a DMA_HandleTypeDef structure as parameter.

Return values

- **HAL:** status

HAL_DMA_UnRegisterCallback

Function name

HAL_StatusTypeDef HAL_DMA_UnRegisterCallback (DMA_HandleTypeDef * hdma, HAL_DMA_CallbackIDTypeDef CallbackID)

Function description

UnRegister callbacks.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.
- **CallbackID:** User Callback identifer a HAL_DMA_CallbackIDTypeDef ENUM as parameter.

Return values

- **HAL:** status

HAL_DMA_GetState

Function name

HAL_DMA_StateTypeDef HAL_DMA_GetState (DMA_HandleTypeDef * hdma)

Function description

Return the DMA hande state.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **HAL:** state

HAL_DMA_GetError

Function name

uint32_t HAL_DMA_GetError (DMA_HandleTypeDef * hdma)

Function description

Return the DMA error code.

Parameters

- **hdma:** : pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA Channel.

Return values

- **DMA:** Error Code

18.3 DMA Firmware driver defines

The following section lists the various define and macros of the module.

18.3.1 DMA

DMA

DMA Data transfer direction

DMA_PERIPH_TO_MEMORY

Peripheral to memory direction

DMA_MEMORY_TO_PERIPH

Memory to peripheral direction

DMA_MEMORY_TO_MEMORY

Memory to memory direction

DMA Error Code

HAL_DMA_ERROR_NONE

No error

HAL_DMA_ERROR_TE

Transfer error

HAL_DMA_ERROR_NO_XFER

Abort requested with no Xfer ongoing

HAL_DMA_ERROR_TIMEOUT

Timeout error

HAL_DMA_ERROR_NOT_SUPPORTED

Not supported mode

HAL_DMA_ERROR_SYNC

DMAMUX sync overrun error

HAL_DMA_ERROR_REQGEN

DMAMUX request generator overrun error

DMA Exported Macros

__HAL_DMA_RESET_HANDLE_STATE

Description:

- Reset DMA handle state.

Parameters:

- __HANDLE__: DMA handle

Return value:

- None

__HAL_DMA_ENABLE

Description:

- Enable the specified DMA Channel.

Parameters:

- __HANDLE__: DMA handle

Return value:

- None

__HAL_DMA_DISABLE

Description:

- Disable the specified DMA Channel.

Parameters:

- __HANDLE__: DMA handle

Return value:

- None

__HAL_DMA_GET_TC_FLAG_INDEX

Description:

- Return the current DMA Channel transfer complete flag.

Parameters:

- __HANDLE__: DMA handle

Return value:

- The: specified transfer complete flag index.

__HAL_DMA_GET_HT_FLAG_INDEX

Description:

- Return the current DMA Channel half transfer complete flag.

Parameters:

- __HANDLE__: DMA handle

Return value:

- The: specified half transfer complete flag index.

__HAL_DMA_GET_TE_FLAG_INDEX

Description:

- Return the current DMA Channel transfer error flag.

Parameters:

- __HANDLE__: DMA handle

Return value:

- The: specified transfer error flag index.

__HAL_DMA_GET_GI_FLAG_INDEX

Description:

- Return the current DMA Channel Global interrupt flag.

Parameters:

- __HANDLE__: DMA handle

Return value:

- The: specified transfer error flag index.

__HAL_DMA_GET_FLAG

Description:

- Get the DMA Channel pending flags.

Parameters:

- __HANDLE__: DMA handle
- __FLAG__: Get the specified flag. This parameter can be any combination of the following values:
  - DMA_FLAG_TCx Transfer complete flag
  - DMA_FLAG_HTx Half transfer complete flag
  - DMA_FLAG_TEx Transfer error flag
  - DMA_FLAG_GLx Global interrupt flag Where x can be from 1 to 8 to select the DMA Channel x flag.

Return value:

- The: state of FLAG (SET or RESET).

__HAL_DMA_CLEAR_FLAG

Description:

- Clear the DMA Channel pending flags.

Parameters:

- __HANDLE__: DMA handle
- __FLAG__: specifies the flag to clear. This parameter can be any combination of the following values:
  - DMA_FLAG_TCx Transfer complete flag
  - DMA_FLAG_HTx Half transfer complete flag
  - DMA_FLAG_TEx Transfer error flag
  - DMA_FLAG_GLx Global interrupt flag Where x can be from 1 to 8 to select the DMA Channel x flag.

Return value:

- None

__HAL_DMA_ENABLE_IT

Description:

- Enable the specified DMA Channel interrupts.

Parameters:

- __HANDLE__: DMA handle
- __INTERRUPT__: specifies the DMA interrupt sources to be enabled or disabled. This parameter can be any combination of the following values:
  - DMA_IT_TC Transfer complete interrupt mask
  - DMA_IT_HT Half transfer complete interrupt mask
  - DMA_IT_TE Transfer error interrupt mask

Return value:

- None

__HAL_DMA_DISABLE_IT

Description:

- Disable the specified DMA Channel interrupts.

Parameters:

- __HANDLE__: DMA handle
- __INTERRUPT__: specifies the DMA interrupt sources to be enabled or disabled. This parameter can be any combination of the following values:
  - DMA_IT_TC Transfer complete interrupt mask
  - DMA_IT_HT Half transfer complete interrupt mask
  - DMA_IT_TE Transfer error interrupt mask

Return value:

- None

__HAL_DMA_GET_IT_SOURCE

Description:

- Check whether the specified DMA Channel interrupt is enabled or not.

Parameters:

- __HANDLE__: DMA handle
- __INTERRUPT__: specifies the DMA interrupt source to check. This parameter can be one of the following values:
  - DMA_IT_TC Transfer complete interrupt mask
  - DMA_IT_HT Half transfer complete interrupt mask
  - DMA_IT_TE Transfer error interrupt mask

Return value:

- The: state of DMA_IT (SET or RESET).

__HAL_DMA_GET_COUNTER

Description:

- Return the number of remaining data units in the current DMA Channel transfer.

Parameters:

- __HANDLE__: DMA handle

Return value:

- The: number of remaining data units in the current DMA Channel transfer.

19 HAL DMA Extension Driver

19.1 DMAEx Firmware driver registers structures

19.1.1 HAL_DMA_MuxSyncConfigTypeDef

HAL_DMA_MuxSyncConfigTypeDef is defined in the stm32g4xx_hal_dma_ex.h

Data Fields

- ***uint32_t SyncSignalID***
- ***uint32_t SyncPolarity***
- ***FunctionalState SyncEnable***
- ***FunctionalState EventEnable***
- ***uint32_t RequestNumber***

Field Documentation

- ***uint32_t HAL_DMA_MuxSyncConfigTypeDef::SyncSignalID***

  Specifies the synchronization signal gating the DMA request in periodic mode. This parameter can be a value of ***DMAEx_DMAMUX_SyncSignalID_selection***
- ***uint32_t HAL_DMA_MuxSyncConfigTypeDef::SyncPolarity***

  Specifies the polarity of the signal on which the DMA request is synchronized. This parameter can be a value of ***DMAEx_DMAMUX_SyncPolarity_selection***
- ***FunctionalState HAL_DMA_MuxSyncConfigTypeDef::SyncEnable***

  Specifies if the synchronization shall be enabled or disabled This parameter can take the value ENABLE or DISABLE
- ***FunctionalState HAL_DMA_MuxSyncConfigTypeDef::EventEnable***

  Specifies if an event shall be generated once the RequestNumber is reached. This parameter can take the value ENABLE or DISABLE
- ***uint32_t HAL_DMA_MuxSyncConfigTypeDef::RequestNumber***

  Specifies the number of DMA request that will be authorized after a sync event This parameter must be a number between Min_Data = 1 and Max_Data = 32

19.1.2 HAL_DMA_MuxRequestGeneratorConfigTypeDef

HAL_DMA_MuxRequestGeneratorConfigTypeDef is defined in the stm32g4xx_hal_dma_ex.h

Data Fields

- ***uint32_t SignalID***
- ***uint32_t Polarity***
- ***uint32_t RequestNumber***

Field Documentation

- ***uint32_t HAL_DMA_MuxRequestGeneratorConfigTypeDef::SignalID***

  Specifies the ID of the signal used for DMAMUX request generator This parameter can be a value of ***DMAEx_DMAMUX_SignalGeneratorID_selection***
- ***uint32_t HAL_DMA_MuxRequestGeneratorConfigTypeDef::Polarity***

  Specifies the polarity of the signal on which the request is generated. This parameter can be a value of ***DMAEx_DMAMUX_RequestGeneneratorPolarity_selection***
- ***uint32_t HAL_DMA_MuxRequestGeneratorConfigTypeDef::RequestNumber***

  Specifies the number of DMA request that will be generated after a signal event This parameter must be a number between Min_Data = 1 and Max_Data = 32

19.2 DMAEx Firmware driver API description

The following section lists the various functions of the DMAEx library.

19.2.1 How to use this driver

The DMA Extension HAL driver can be used as follows:

- Configure the DMA_MUX Synchronization Block using HAL_DMAEx_ConfigMuxSync function.
- Configure the DMA_MUX Request Generator Block using HAL_DMAEx_ConfigMuxRequestGenerator function. Functions HAL_DMAEx_EnableMuxRequestGenerator and HAL_DMAEx_DisableMuxRequestGenerator can then be used to respectively enable/disable the request generator.
- To handle the DMAMUX Interrupts, the function HAL_DMAEx_MUX_IRQHandler should be called from the DMAMUX IRQ handler i.e DMAMUX1_OVR_IRQHandler. As only one interrupt line is available for all DMAMUX channels and request generators , HAL_DMAEx_MUX_IRQHandler should be called with, as parameter, the appropriate DMA handle as many as used DMAs in the user project (exception done if a given DMA is not using the DMAMUX SYNC block neither a request generator)

19.2.2 Extended features functions

This section provides functions allowing to:

- Configure the DMAMUX Synchronization Block using HAL_DMAEx_ConfigMuxSync function.
- Configure the DMAMUX Request Generator Block using HAL_DMAEx_ConfigMuxRequestGenerator function. Functions HAL_DMAEx_EnableMuxRequestGenerator and HAL_DMAEx_DisableMuxRequestGenerator can then be used to respectively enable/disable the request generator.

This section contains the following APIs:

- ***HAL_DMAEx_ConfigMuxSync***
- ***HAL_DMAEx_ConfigMuxRequestGenerator***
- ***HAL_DMAEx_EnableMuxRequestGenerator***
- ***HAL_DMAEx_DisableMuxRequestGenerator***
- ***HAL_DMAEx_MUX_IRQHandler***

19.2.3 Detailed description of functions

HAL_DMAEx_ConfigMuxRequestGenerator

Function name

HAL_StatusTypeDef HAL_DMAEx_ConfigMuxRequestGenerator (DMA_HandleTypeDef * hdma, HAL_DMA_MuxRequestGeneratorConfigTypeDef * pRequestGeneratorConfig)

Function description

Configure the DMAMUX request generator block used by the given DMA channel (instance).

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA channel.
- **pRequestGeneratorConfig:** : pointer to HAL_DMA_MuxRequestGeneratorConfigTypeDef : contains the request generator parameters.

Return values

- **HAL:** status

HAL_DMAEx_EnableMuxRequestGenerator

Function name

HAL_StatusTypeDef HAL_DMAEx_EnableMuxRequestGenerator (DMA_HandleTypeDef * hdma)

Function description

Enable the DMAMUX request generator block used by the given DMA channel (instance).

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA channel.

Return values

- **HAL:** status

HAL_DMAEx_DisableMuxRequestGenerator

Function name

HAL_StatusTypeDef HAL_DMAEx_DisableMuxRequestGenerator (DMA_HandleTypeDef * hdma)

Function description

Disable the DMAMUX request generator block used by the given DMA channel (instance).

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA channel.

Return values

- **HAL:** status

HAL_DMAEx_ConfigMuxSync

Function name

HAL_StatusTypeDef HAL_DMAEx_ConfigMuxSync (DMA_HandleTypeDef * hdma, HAL_DMA_MuxSyncConfigTypeDef * pSyncConfig)

Function description

Configure the DMAMUX synchronization parameters for a given DMA channel (instance).

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA channel.
- **pSyncConfig:** : pointer to HAL_DMA_MuxSyncConfigTypeDef : contains the DMAMUX synchronization parameters

Return values

- **HAL:** status

HAL_DMAEx_MUX_IRQHandler

Function name

void HAL_DMAEx_MUX_IRQHandler (DMA_HandleTypeDef * hdma)

Function description

Handles DMAMUX interrupt request.

Parameters

- **hdma:** pointer to a DMA_HandleTypeDef structure that contains the configuration information for the specified DMA channel.

Return values

- **None:**

20 HAL EXTI Generic Driver

20.1 EXTI Firmware driver registers structures

20.1.1 EXTI_HandleTypeDef

EXTI_HandleTypeDef is defined in the stm32g4xx_hal_exti.h

Data Fields

- ***uint32_t Line***
- ***void(* PendingCallback***

Field Documentation

- ***uint32_t EXTI_HandleTypeDef::Line***
  Exti line number
- ***void(* EXTI_HandleTypeDef::PendingCallback)(void)***
  Exti pending callback

20.1.2 EXTI_ConfigTypeDef

EXTI_ConfigTypeDef is defined in the stm32g4xx_hal_exti.h

Data Fields

- ***uint32_t Line***
- ***uint32_t Mode***
- ***uint32_t Trigger***
- ***uint32_t GPIOSel***

Field Documentation

- ***uint32_t EXTI_ConfigTypeDef::Line***
  The Exti line to be configured. This parameter can be a value of ***EXTI_Line***
- ***uint32_t EXTI_ConfigTypeDef::Mode***
  The Exit Mode to be configured for a core. This parameter can be a combination of ***EXTI_Mode***
- ***uint32_t EXTI_ConfigTypeDef::Trigger***
  The Exti Trigger to be configured. This parameter can be a value of ***EXTI_Trigger***
- ***uint32_t EXTI_ConfigTypeDef::GPIOSel***
  The Exti GPIO multiplexer selection to be configured. This parameter is only possible for line 0 to 15. It can be a value of ***EXTI_GPIOSel***

20.2 EXTI Firmware driver API description

The following section lists the various functions of the EXTI library.

20.2.1 EXTI Peripheral features

- Each Exti line can be configured within this driver.
- Exti line can be configured in 3 different modes
  - Interrupt
  - Event
  - Both of them
- Configurable Exti lines can be configured with 3 different triggers
  - Rising
  - Falling
  - Both of them

- When set in interrupt mode, configurable Exti lines have two different interrupt pending registers which allow to distinguish which transition occurs:
  - Rising edge pending interrupt
  - Falling
- Exti lines 0 to 15 are linked to gpio pin number 0 to 15. Gpio port can be selected through multiplexer.

20.2.2 How to use this driver

1. Configure the EXTI line using HAL_EXTI_SetConfigLine().
   - Choose the interrupt line number by setting "Line" member from EXTI_ConfigTypeDef structure.
   - Configure the interrupt and/or event mode using "Mode" member from EXTI_ConfigTypeDef structure.
   - For configurable lines, configure rising and/or falling trigger "Trigger" member from EXTI_ConfigTypeDef structure.
   - For Exti lines linked to gpio, choose gpio port using "GPIOSel" member from GPIO_InitTypeDef structure.
2. Get current Exti configuration of a dedicated line using HAL_EXTI_GetConfigLine().
   - Provide exiting handle as parameter.
   - Provide pointer on EXTI_ConfigTypeDef structure as second parameter.
3. Clear Exti configuration of a dedicated line using HAL_EXTI_GetConfigLine().
   - Provide exiting handle as parameter.
4. Register callback to treat Exti interrupts using HAL_EXTI_RegisterCallback().
   - Provide exiting handle as first parameter.
   - Provide which callback will be registered using one value from EXTI_CallbackIDTypeDef.
   - Provide callback function pointer.
5. Get interrupt pending bit using HAL_EXTI_GetPending().
6. Clear interrupt pending bit using HAL_EXTI_ClearPending().
7. Generate software interrupt using HAL_EXTI_GenerateSWI().

20.2.3 Configuration functions

This section contains the following APIs:

- ***HAL_EXTI_SetConfigLine***
- ***HAL_EXTI_GetConfigLine***
- ***HAL_EXTI_ClearConfigLine***
- ***HAL_EXTI_RegisterCallback***
- ***HAL_EXTI_GetHandle***

20.2.4 Detailed description of functions

HAL_EXTI_SetConfigLine

Function name

HAL_StatusTypeDef HAL_EXTI_SetConfigLine (EXTI_HandleTypeDef * hexti, EXTI_ConfigTypeDef * pExtiConfig)

Function description

Set configuration of a dedicated Exti line.

Parameters

- **hexti:** Exti handle.
- **pExtiConfig:** Pointer on EXTI configuration to be set.

Return values

- **HAL:** Status.

HAL_EXTI_GetConfigLine

Function name

HAL_StatusTypeDef HAL_EXTI_GetConfigLine (EXTI_HandleTypeDef * hexti, EXTI_ConfigTypeDef * pExtiConfig)

Function description

Get configuration of a dedicated Exti line.

Parameters

- **hexti:** Exti handle.
- **pExtiConfig:** Pointer on structure to store Exti configuration.

Return values

- **HAL:** Status.

HAL_EXTI_ClearConfigLine

Function name

HAL_StatusTypeDef HAL_EXTI_ClearConfigLine (EXTI_HandleTypeDef * hexti)

Function description

Clear whole configuration of a dedicated Exti line.

Parameters

- **hexti:** Exti handle.

Return values

- **HAL:** Status.

HAL_EXTI_RegisterCallback

Function name

HAL_StatusTypeDef HAL_EXTI_RegisterCallback (EXTI_HandleTypeDef * hexti, EXTI_CallbackIDTypeDef CallbackID, void(*)(void) pPendingCbfn)

Function description

Register callback for a dedicated Exti line.

Parameters

- **hexti:** Exti handle.
- **CallbackID:** User callback identifier. This parameter can be one of
  - EXTI_CallbackIDTypeDef values.
- **pPendingCbfn:** function pointer to be stored as callback.

Return values

- **HAL:** Status.

HAL_EXTI_GetHandle

Function name

HAL_StatusTypeDef HAL_EXTI_GetHandle (EXTI_HandleTypeDef * hexti, uint32_t ExtiLine)

Function description

Store line number as handle private field.

Parameters

- **hexti:** Exti handle.
- **ExtiLine:** Exti line number. This parameter can be from 0 to EXTI_LINE_NB.

Return values

- **HAL:** Status.

HAL_EXTI_IRQHandler

Function name

void HAL_EXTI_IRQHandler (EXTI_HandleTypeDef * hexti)

Function description

Handle EXTI interrupt request.

Parameters

- **hexti:** Exti handle.

Return values

- **none.:**

HAL_EXTI_GetPending

Function name

uint32_t HAL_EXTI_GetPending (EXTI_HandleTypeDef * hexti, uint32_t Edge)

Function description

Get interrupt pending bit of a dedicated line.

Parameters

- **hexti:** Exti handle.
- **Edge:** unused

Return values

- **1:** if interrupt is pending else 0.

HAL_EXTI_ClearPending

Function name

void HAL_EXTI_ClearPending (EXTI_HandleTypeDef * hexti, uint32_t Edge)

Function description

Clear interrupt pending bit of a dedicated line.

Parameters

- **hexti:** Exti handle.
- **Edge:** unused

Return values

- **None.:**

HAL_EXTI_GenerateSWI

Function name

void HAL_EXTI_GenerateSWI (EXTI_HandleTypeDef * hexti)

Function description

Generate a software interrupt for a dedicated line.

Parameters

- **hexti:** Exti handle.

Return values

- **None.:**

20.3 EXTI Firmware driver defines

The following section lists the various define and macros of the module.

20.3.1 EXTI

EXTI

EXTI GPIOSel

EXTI_GPIOA

21 HAL FDCAN Generic Driver

21.1 FDCAN Firmware driver registers structures

21.1.1 FDCAN_InitTypeDef

FDCAN_InitTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t ClockDivider***
- ***uint32_t FrameFormat***
- ***uint32_t Mode***
- ***FunctionalState AutoRetransmission***
- ***FunctionalState TransmitPause***
- ***FunctionalState ProtocolException***
- ***uint32_t NominalPrescaler***
- ***uint32_t NominalSyncJumpWidth***
- ***uint32_t NominalTimeSeg1***
- ***uint32_t NominalTimeSeg2***
- ***uint32_t DataPrescaler***
- ***uint32_t DataSyncJumpWidth***
- ***uint32_t DataTimeSeg1***
- ***uint32_t DataTimeSeg2***
- ***uint32_t StdFiltersNbr***
- ***uint32_t ExtFiltersNbr***
- ***uint32_t TxFifoQueueMode***

Field Documentation

- ***uint32_t FDCAN_InitTypeDef::ClockDivider***

  Specifies the FDCAN kernel clock divider. The clock is common to all FDCAN instances. This parameter is applied only at initialisation of first FDCAN instance. This parameter can be a value of ***FDCAN_clock_divider***.
- ***uint32_t FDCAN_InitTypeDef::FrameFormat***

  Specifies the FDCAN frame format. This parameter can be a value of ***FDCAN_frame_format***
- ***uint32_t FDCAN_InitTypeDef::Mode***

  Specifies the FDCAN mode. This parameter can be a value of ***FDCAN_operating_mode***
- ***FunctionalState FDCAN_InitTypeDef::AutoRetransmission***

  Enable or disable the automatic retransmission mode. This parameter can be set to ENABLE or DISABLE
- ***FunctionalState FDCAN_InitTypeDef::TransmitPause***

  Enable or disable the Transmit Pause feature. This parameter can be set to ENABLE or DISABLE
- ***FunctionalState FDCAN_InitTypeDef::ProtocolException***

  Enable or disable the Protocol Exception Handling. This parameter can be set to ENABLE or DISABLE
- ***uint32_t FDCAN_InitTypeDef::NominalPrescaler***

  Specifies the value by which the oscillator frequency is divided for generating the nominal bit time quanta. This parameter must be a number between 1 and 512
- ***uint32_t FDCAN_InitTypeDef::NominalSyncJumpWidth***

  Specifies the maximum number of time quanta the FDCAN hardware is allowed to lengthen or shorten a bit to perform resynchronization. This parameter must be a number between 1 and 128
- ***uint32_t FDCAN_InitTypeDef::NominalTimeSeg1***

  Specifies the number of time quanta in Bit Segment 1. This parameter must be a number between 2 and 256

- ***uint32_t FDCAN_InitTypeDef::NominalTimeSeg2***
  Specifies the number of time quanta in Bit Segment 2. This parameter must be a number between 2 and 128
- ***uint32_t FDCAN_InitTypeDef::DataPrescaler***
  Specifies the value by which the oscillator frequency is divided for generating the data bit time quanta. This parameter must be a number between 1 and 32
- ***uint32_t FDCAN_InitTypeDef::DataSyncJumpWidth***
  Specifies the maximum number of time quanta the FDCAN hardware is allowed to lengthen or shorten a data bit to perform resynchronization. This parameter must be a number between 1 and 16
- ***uint32_t FDCAN_InitTypeDef::DataTimeSeg1***
  Specifies the number of time quanta in Data Bit Segment 1. This parameter must be a number between 1 and 32
- ***uint32_t FDCAN_InitTypeDef::DataTimeSeg2***
  Specifies the number of time quanta in Data Bit Segment 2. This parameter must be a number between 1 and 16
- ***uint32_t FDCAN_InitTypeDef::StdFiltersNbr***
  Specifies the number of standard Message ID filters. This parameter must be a number between 0 and 28
- ***uint32_t FDCAN_InitTypeDef::ExtFiltersNbr***
  Specifies the number of extended Message ID filters. This parameter must be a number between 0 and 8
- ***uint32_t FDCAN_InitTypeDef::TxFifoQueueMode***
  Tx FIFO/Queue Mode selection. This parameter can be a value of ***FDCAN_txFifoQueue_Mode***

21.1.2 FDCAN_FilterTypeDef

FDCAN_FilterTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t IdType***
- ***uint32_t FilterIndex***
- ***uint32_t FilterType***
- ***uint32_t FilterConfig***
- ***uint32_t FilterID1***
- ***uint32_t FilterID2***

Field Documentation

- ***uint32_t FDCAN_FilterTypeDef::IdType***
  Specifies the identifier type. This parameter can be a value of ***FDCAN_id_type***
- ***uint32_t FDCAN_FilterTypeDef::FilterIndex***
  Specifies the filter which will be initialized. This parameter must be a number between:
  – 0 and (SRAMCAN_FLS_NBR-1), if IdType is FDCAN_STANDARD_ID
  – 0 and (SRAMCAN_FLE_NBR-1), if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_FilterTypeDef::FilterType***
  Specifies the filter type. This parameter can be a value of ***FDCAN_filter_type***. The value FDCAN_FILTER_RANGE_NO_EIDM is permitted only when IdType is FDCAN_EXTENDED_ID.
- ***uint32_t FDCAN_FilterTypeDef::FilterConfig***
  Specifies the filter configuration. This parameter can be a value of ***FDCAN_filter_config***
- ***uint32_t FDCAN_FilterTypeDef::FilterID1***
  Specifies the filter identification 1. This parameter must be a number between:
  – 0 and 0x7FF, if IdType is FDCAN_STANDARD_ID
  – 0 and 0x1FFFFFFF, if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_FilterTypeDef::FilterID2***
  Specifies the filter identification 2. This parameter must be a number between:
  – 0 and 0x7FF, if IdType is FDCAN_STANDARD_ID
  – 0 and 0x1FFFFFFF, if IdType is FDCAN_EXTENDED_ID

21.1.3 FDCAN_TxHeaderTypeDef

FDCAN_TxHeaderTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t Identifier***
- ***uint32_t IdType***
- ***uint32_t TxFrameType***
- ***uint32_t DataLength***
- ***uint32_t ErrorStateIndicator***
- ***uint32_t BitRateSwitch***
- ***uint32_t FDFormat***
- ***uint32_t TxEventFifoControl***
- ***uint32_t MessageMarker***

Field Documentation

- ***uint32_t FDCAN_TxHeaderTypeDef::Identifier***

  Specifies the identifier. This parameter must be a number between:
  - 0 and 0x7FF, if IdType is FDCAN_STANDARD_ID
  - 0 and 0x1FFFFFFF, if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_TxHeaderTypeDef::IdType***

  Specifies the identifier type for the message that will be transmitted. This parameter can be a value of ***FDCAN_id_type***
- ***uint32_t FDCAN_TxHeaderTypeDef::TxFrameType***

  Specifies the frame type of the message that will be transmitted. This parameter can be a value of ***FDCAN_frame_type***
- ***uint32_t FDCAN_TxHeaderTypeDef::DataLength***

  Specifies the length of the frame that will be transmitted. This parameter can be a value of ***FDCAN_data_length_code***
- ***uint32_t FDCAN_TxHeaderTypeDef::ErrorStateIndicator***

  Specifies the error state indicator. This parameter can be a value of ***FDCAN_error_state_indicator***
- ***uint32_t FDCAN_TxHeaderTypeDef::BitRateSwitch***

  Specifies whether the Tx frame will be transmitted with or without bit rate switching. This parameter can be a value of ***FDCAN_bit_rate_switching***
- ***uint32_t FDCAN_TxHeaderTypeDef::FDFormat***

  Specifies whether the Tx frame will be transmitted in classic or FD format. This parameter can be a value of ***FDCAN_format***
- ***uint32_t FDCAN_TxHeaderTypeDef::TxEventFifoControl***

  Specifies the event FIFO control. This parameter can be a value of ***Section 21.3.1 FDCAN_EFC***
- ***uint32_t FDCAN_TxHeaderTypeDef::MessageMarker***

  Specifies the message marker to be copied into Tx Event FIFO element for identification of Tx message status. This parameter must be a number between 0 and 0xFF

21.1.4 FDCAN_RxHeaderTypeDef

FDCAN_RxHeaderTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t Identifier***
- ***uint32_t IdType***
- ***uint32_t RxFrameType***
- ***uint32_t DataLength***
- ***uint32_t ErrorStateIndicator***
- ***uint32_t BitRateSwitch***
- ***uint32_t FDFormat***

- ***uint32_t RxTimestamp***
- ***uint32_t FilterIndex***
- ***uint32_t IsFilterMatchingFrame***

Field Documentation

- ***uint32_t FDCAN_RxHeaderTypeDef::Identifier***
  Specifies the identifier. This parameter must be a number between:
  – 0 and 0x7FF, if IdType is FDCAN_STANDARD_ID
  – 0 and 0x1FFFFFFF, if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_RxHeaderTypeDef::IdType***
  Specifies the identifier type of the received message. This parameter can be a value of ***FDCAN_id_type***
- ***uint32_t FDCAN_RxHeaderTypeDef::RxFrameType***
  Specifies the the received message frame type. This parameter can be a value of ***FDCAN_frame_type***
- ***uint32_t FDCAN_RxHeaderTypeDef::DataLength***
  Specifies the received frame length. This parameter can be a value of ***FDCAN_data_length_code***
- ***uint32_t FDCAN_RxHeaderTypeDef::ErrorStateIndicator***
  Specifies the error state indicator. This parameter can be a value of ***FDCAN_error_state_indicator***
- ***uint32_t FDCAN_RxHeaderTypeDef::BitRateSwitch***
  Specifies whether the Rx frame is received with or without bit rate switching. This parameter can be a value of ***FDCAN_bit_rate_switching***
- ***uint32_t FDCAN_RxHeaderTypeDef::FDFormat***
  Specifies whether the Rx frame is received in classic or FD format. This parameter can be a value of ***FDCAN_format***
- ***uint32_t FDCAN_RxHeaderTypeDef::RxTimestamp***
  Specifies the timestamp counter value captured on start of frame reception. This parameter must be a number between 0 and 0xFFFF
- ***uint32_t FDCAN_RxHeaderTypeDef::FilterIndex***
  Specifies the index of matching Rx acceptance filter element. This parameter must be a number between:
  – 0 and (SRAMCAN_FLS_NBR-1), if IdType is FDCAN_STANDARD_ID
  – 0 and (SRAMCAN_FLE_NBR-1), if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_RxHeaderTypeDef::IsFilterMatchingFrame***
  Specifies whether the accepted frame did not match any Rx filter. Acceptance of non-matching frames may be enabled via **HAL_FDCAN_ConfigGlobalFilter()**. This parameter can be 0 or 1

21.1.5 FDCAN_TxEventFifoTypeDef

FDCAN_TxEventFifoTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t Identifier***
- ***uint32_t IdType***
- ***uint32_t TxFrameType***
- ***uint32_t DataLength***
- ***uint32_t ErrorStateIndicator***
- ***uint32_t BitRateSwitch***
- ***uint32_t FDFormat***
- ***uint32_t TxTimestamp***
- ***uint32_t MessageMarker***
- ***uint32_t EventType***

Field Documentation

- ***uint32_t FDCAN_TxEventFifoTypeDef::Identifier***
  Specifies the identifier. This parameter must be a number between:
  – 0 and 0x7FF, if IdType is FDCAN_STANDARD_ID
  – 0 and 0x1FFFFFFF, if IdType is FDCAN_EXTENDED_ID
- ***uint32_t FDCAN_TxEventFifoTypeDef::IdType***
  Specifies the identifier type for the transmitted message. This parameter can be a value of ***FDCAN_id_type***
- ***uint32_t FDCAN_TxEventFifoTypeDef::TxFrameType***
  Specifies the frame type of the transmitted message. This parameter can be a value of ***FDCAN_frame_type***
- ***uint32_t FDCAN_TxEventFifoTypeDef::DataLength***
  Specifies the length of the transmitted frame. This parameter can be a value of ***FDCAN_data_length_code***
- ***uint32_t FDCAN_TxEventFifoTypeDef::ErrorStateIndicator***
  Specifies the error state indicator. This parameter can be a value of ***FDCAN_error_state_indicator***
- ***uint32_t FDCAN_TxEventFifoTypeDef::BitRateSwitch***
  Specifies whether the Tx frame is transmitted with or without bit rate switching. This parameter can be a value of ***FDCAN_bit_rate_switching***
- ***uint32_t FDCAN_TxEventFifoTypeDef::FDFormat***
  Specifies whether the Tx frame is transmitted in classic or FD format. This parameter can be a value of ***FDCAN_format***
- ***uint32_t FDCAN_TxEventFifoTypeDef::TxTimestamp***
  Specifies the timestamp counter value captured on start of frame transmission. This parameter must be a number between 0 and 0xFFFF
- ***uint32_t FDCAN_TxEventFifoTypeDef::MessageMarker***
  Specifies the message marker copied into Tx Event FIFO element for identification of Tx message status. This parameter must be a number between 0 and 0xFF
- ***uint32_t FDCAN_TxEventFifoTypeDef::EventType***
  Specifies the event type. This parameter can be a value of ***FDCAN_event_type***

21.1.6 FDCAN_HpMsgStatusTypeDef

FDCAN_HpMsgStatusTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t FilterList***
- ***uint32_t FilterIndex***
- ***uint32_t MessageStorage***
- ***uint32_t MessageIndex***

Field Documentation

- ***uint32_t FDCAN_HpMsgStatusTypeDef::FilterList***
  Specifies the filter list of the matching filter element. This parameter can be:
  – 0 : Standard Filter List
  – 1 : Extended Filter List
- ***uint32_t FDCAN_HpMsgStatusTypeDef::FilterIndex***
  Specifies the index of matching filter element. This parameter can be a number between:
  – 0 and (SRAMCAN_FLS_NBR-1), if FilterList is 0 (Standard)
  – 0 and (SRAMCAN_FLE_NBR-1), if FilterList is 1 (Extended)
- ***uint32_t FDCAN_HpMsgStatusTypeDef::MessageStorage***
  Specifies the HP Message Storage. This parameter can be a value of ***FDCAN_hp_msg_storage***
- ***uint32_t FDCAN_HpMsgStatusTypeDef::MessageIndex***
  Specifies the Index of Rx FIFO element to which the message was stored. This parameter is valid only when MessageStorage is: FDCAN_HP_STORAGE_RXFIFO0 or FDCAN_HP_STORAGE_RXFIFO1

21.1.7 FDCAN_ProtocolStatusTypeDef

FDCAN_ProtocolStatusTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t LastErrorCode***
- ***uint32_t DataLastErrorCode***
- ***uint32_t Activity***
- ***uint32_t ErrorPassive***
- ***uint32_t Warning***
- ***uint32_t BusOff***
- ***uint32_t RxESIflag***
- ***uint32_t RxBRSflag***
- ***uint32_t RxFDFflag***
- ***uint32_t ProtocolException***
- ***uint32_t TDCvalue***

Field Documentation

- ***uint32_t FDCAN_ProtocolStatusTypeDef::LastErrorCode***

  Specifies the type of the last error that occurred on the FDCAN bus. This parameter can be a value of ***FDCAN_protocol_error_code***
- ***uint32_t FDCAN_ProtocolStatusTypeDef::DataLastErrorCode***

  Specifies the type of the last error that occurred in the data phase of a CAN FD format frame with its BRS flag set. This parameter can be a value of ***FDCAN_protocol_error_code***
- ***uint32_t FDCAN_ProtocolStatusTypeDef::Activity***

  Specifies the FDCAN module communication state. This parameter can be a value of ***FDCAN_communication_state***
- ***uint32_t FDCAN_ProtocolStatusTypeDef::ErrorPassive***

  Specifies the FDCAN module error status. This parameter can be:
  - 0 : The FDCAN is in Error_Active state
  - 1 : The FDCAN is in Error_Passive state
- ***uint32_t FDCAN_ProtocolStatusTypeDef::Warning***

  Specifies the FDCAN module warning status. This parameter can be:
  - 0 : error counters (RxErrorCnt and TxErrorCnt) are below the Error_Warning limit of 96
  - 1 : at least one of error counters has reached the Error_Warning limit of 96
- ***uint32_t FDCAN_ProtocolStatusTypeDef::BusOff***

  Specifies the FDCAN module Bus_Off status. This parameter can be:
  - 0 : The FDCAN is not in Bus_Off state
  - 1 : The FDCAN is in Bus_Off state
- ***uint32_t FDCAN_ProtocolStatusTypeDef::RxESIflag***

  Specifies ESI flag of last received CAN FD message. This parameter can be:
  - 0 : Last received CAN FD message did not have its ESI flag set
  - 1 : Last received CAN FD message had its ESI flag set
- ***uint32_t FDCAN_ProtocolStatusTypeDef::RxBRSflag***

  Specifies BRS flag of last received CAN FD message. This parameter can be:
  - 0 : Last received CAN FD message did not have its BRS flag set
  - 1 : Last received CAN FD message had its BRS flag set
- ***uint32_t FDCAN_ProtocolStatusTypeDef::RxFDFflag***

  Specifies if CAN FD message (FDF flag set) has been received since last protocol status This parameter can be:
  - 0 : No CAN FD message received
  - 1 : CAN FD message received

- ***uint32_t FDCAN_ProtocolStatusTypeDef::ProtocolException***
  Specifies the FDCAN module Protocol Exception status. This parameter can be:
  – 0 : No protocol exception event occurred since last read access
  – 1 : Protocol exception event occurred
- ***uint32_t FDCAN_ProtocolStatusTypeDef::TDCvalue***
  Specifies the Transmitter Delay Compensation Value. This parameter can be a number between 0 and 127

21.1.8 FDCAN_ErrorCountersTypeDef

FDCAN_ErrorCountersTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t TxErrorCnt***
- ***uint32_t RxErrorCnt***
- ***uint32_t RxErrorPassive***
- ***uint32_t ErrorLogging***

Field Documentation

- ***uint32_t FDCAN_ErrorCountersTypeDef::TxErrorCnt***
  Specifies the Transmit Error Counter Value. This parameter can be a number between 0 and 255
- ***uint32_t FDCAN_ErrorCountersTypeDef::RxErrorCnt***
  Specifies the Receive Error Counter Value. This parameter can be a number between 0 and 127
- ***uint32_t FDCAN_ErrorCountersTypeDef::RxErrorPassive***
  Specifies the Receive Error Passive status. This parameter can be:
  – 0 : The Receive Error Counter (RxErrorCnt) is below the error passive level of 128
  – 1 : The Receive Error Counter (RxErrorCnt) has reached the error passive level of 128
- ***uint32_t FDCAN_ErrorCountersTypeDef::ErrorLogging***
  Specifies the Transmit/Receive error logging counter value. This parameter can be a number between 0 and 255. This counter is incremented each time when a FDCAN protocol error causes the TxErrorCnt or the RxErrorCnt to be incremented. The counter stops at 255; the next increment of TxErrorCnt or RxErrorCnt sets interrupt flag FDCAN_FLAG_ERROR_LOGGING_OVERFLOW

21.1.9 FDCAN_MsgRamAddressTypeDef

FDCAN_MsgRamAddressTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***uint32_t StandardFilterSA***
- ***uint32_t ExtendedFilterSA***
- ***uint32_t RxFIFO0SA***
- ***uint32_t RxFIFO1SA***
- ***uint32_t TxEventFIFOSA***
- ***uint32_t TxFIFOQSA***

Field Documentation

- ***uint32_t FDCAN_MsgRamAddressTypeDef::StandardFilterSA***
  Specifies the Standard Filter List Start Address. This parameter must be a 32-bit word address
- ***uint32_t FDCAN_MsgRamAddressTypeDef::ExtendedFilterSA***
  Specifies the Extended Filter List Start Address. This parameter must be a 32-bit word address
- ***uint32_t FDCAN_MsgRamAddressTypeDef::RxFIFO0SA***
  Specifies the Rx FIFO 0 Start Address. This parameter must be a 32-bit word address
- ***uint32_t FDCAN_MsgRamAddressTypeDef::RxFIFO1SA***
  Specifies the Rx FIFO 1 Start Address. This parameter must be a 32-bit word address
- ***uint32_t FDCAN_MsgRamAddressTypeDef::TxEventFIFOSA***
  Specifies the Tx Event FIFO Start Address. This parameter must be a 32-bit word address

- ***uint32_t FDCAN_MsgRamAddressTypeDef::TxFIFOQSA***
  Specifies the Tx FIFO/Queue Start Address. This parameter must be a 32-bit word address

21.1.10 FDCAN_HandleTypeDef

FDCAN_HandleTypeDef is defined in the stm32g4xx_hal_fdcan.h

Data Fields

- ***FDCAN_GlobalTypeDef * Instance***
- ***FDCAN_InitTypeDef Init***
- ***FDCAN_MsgRamAddressTypeDef msgRam***
- ***uint32_t LatestTxFifoQRequest***
- ***__IO HAL_FDCAN_StateTypeDef State***
- ***HAL_LockTypeDef Lock***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***FDCAN_GlobalTypeDef* FDCAN_HandleTypeDef::Instance***
  Register base address
- ***FDCAN_InitTypeDef FDCAN_HandleTypeDef::Init***
  FDCAN required parameters
- ***FDCAN_MsgRamAddressTypeDef FDCAN_HandleTypeDef::msgRam***
  FDCAN Message RAM blocks
- ***uint32_t FDCAN_HandleTypeDef::LatestTxFifoQRequest***
  FDCAN Tx buffer index of latest Tx FIFO/Queue request
- ***__IO HAL_FDCAN_StateTypeDef FDCAN_HandleTypeDef::State***
  FDCAN communication state
- ***HAL_LockTypeDef FDCAN_HandleTypeDef::Lock***
  FDCAN locking object
- ***__IO uint32_t FDCAN_HandleTypeDef::ErrorCode***
  FDCAN Error code

21.2 FDCAN Firmware driver API description

The following section lists the various functions of the FDCAN library.

21.2.1 How to use this driver

1. Initialize the FDCAN peripheral using HAL_FDCAN_Init function.

2. If needed , configure the reception filters and optional features using the following configuration functions:
   – HAL_FDCAN_ConfigFilter
   – HAL_FDCAN_ConfigGlobalFilter
   – HAL_FDCAN_ConfigExtendedIdMask
   – HAL_FDCAN_ConfigRxFifoOverwrite
   – HAL_FDCAN_ConfigRamWatchdog
   – HAL_FDCAN_ConfigTimestampCounter
   – HAL_FDCAN_EnableTimestampCounter
   – HAL_FDCAN_DisableTimestampCounter
   – HAL_FDCAN_ConfigTimeoutCounter
   – HAL_FDCAN_EnableTimeoutCounter
   – HAL_FDCAN_DisableTimeoutCounter
   – HAL_FDCAN_ConfigTxDelayCompensation
   – HAL_FDCAN_EnableTxDelayCompensation
   – HAL_FDCAN_DisableTxDelayCompensation
   – HAL_FDCAN_EnableISOMode
   – HAL_FDCAN_DisableISOMode
   – HAL_FDCAN_EnableEdgeFiltering
   – HAL_FDCAN_DisableEdgeFiltering
3. Start the FDCAN module using HAL_FDCAN_Start function. At this level the node is active on the bus: it can send and receive messages.
4. The following Tx control functions can only be called when the FDCAN module is started:
   – HAL_FDCAN_AddMessageToTxFifoQ
   – HAL_FDCAN_AbortTxRequest
5. After having submitted a Tx request in Tx Fifo or Queue, it is possible to get Tx buffer location used to place the Tx request thanks to HAL_FDCAN_GetLatestTxFifoQRequestBuffer API. It is then possible to abort later on the corresponding Tx Request using HAL_FDCAN_AbortTxRequest API.
6. When a message is received into the FDCAN message RAM, it can be retrieved using the HAL_FDCAN_GetRxMessage function.
7. Calling the HAL_FDCAN_Stop function stops the FDCAN module by entering it to initialization mode and re-enabling access to configuration registers through the configuration functions listed here above.
8. All other control functions can be called any time after initialization phase, no matter if the FDCAN module is started or stopped.

Polling mode operation

1. Reception and transmission states can be monitored via the following functions:
   – HAL_FDCAN_IsTxBufferMessagePending
   – HAL_FDCAN_GetRxFifoFillLevel
   – HAL_FDCAN_GetTxFifoFreeLevel

Interrupt mode operation

1. There are two interrupt lines: line 0 and 1. By default, all interrupts are assigned to line 0. Interrupt lines can be configured using HAL_FDCAN_ConfigInterruptLines function.
2. Notifications are activated using HAL_FDCAN_ActivateNotification function. Then, the process can be controlled through one of the available user callbacks: HAL_FDCAN_xxxCallback.

Callback registration

21.2.2 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize and configure the FDCAN.

- De-initialize the FDCAN.
- Enter FDCAN peripheral in power down mode.
- Exit power down mode.
- Register callbacks.
- Unregister callbacks.

This section contains the following APIs:

- ***HAL_FDCAN_Init***
- ***HAL_FDCAN_DeInit***
- ***HAL_FDCAN_MspInit***
- ***HAL_FDCAN_MspDeInit***
- ***HAL_FDCAN_EnterPowerDownMode***
- ***HAL_FDCAN_ExitPowerDownMode***

21.2.3 Configuration functions

This section provides functions allowing to:

- HAL_FDCAN_ConfigFilter : Configure the FDCAN reception filters
- HAL_FDCAN_ConfigGlobalFilter : Configure the FDCAN global filter
- HAL_FDCAN_ConfigExtendedIdMask : Configure the extended ID mask
- HAL_FDCAN_ConfigRxFifoOverwrite : Configure the Rx FIFO operation mode
- HAL_FDCAN_ConfigRamWatchdog : Configure the RAM watchdog
- HAL_FDCAN_ConfigTimestampCounter : Configure the timestamp counter
- HAL_FDCAN_EnableTimestampCounter : Enable the timestamp counter
- HAL_FDCAN_DisableTimestampCounter : Disable the timestamp counter
- HAL_FDCAN_GetTimestampCounter : Get the timestamp counter value
- HAL_FDCAN_ResetTimestampCounter : Reset the timestamp counter to zero
- HAL_FDCAN_ConfigTimeoutCounter : Configure the timeout counter
- HAL_FDCAN_EnableTimeoutCounter : Enable the timeout counter
- HAL_FDCAN_DisableTimeoutCounter : Disable the timeout counter
- HAL_FDCAN_GetTimeoutCounter : Get the timeout counter value
- HAL_FDCAN_ResetTimeoutCounter : Reset the timeout counter to its start value
- HAL_FDCAN_ConfigTxDelayCompensation : Configure the transmitter delay compensation
- HAL_FDCAN_EnableTxDelayCompensation : Enable the transmitter delay compensation
- HAL_FDCAN_DisableTxDelayCompensation : Disable the transmitter delay compensation
- HAL_FDCAN_EnableISOMode : Enable ISO 11898-1 protocol mode
- HAL_FDCAN_DisableISOMode : Disable ISO 11898-1 protocol mode
- HAL_FDCAN_EnableEdgeFiltering : Enable edge filtering during bus integration
- HAL_FDCAN_DisableEdgeFiltering : Disable edge filtering during bus integration

This section contains the following APIs:

- ***HAL_FDCAN_ConfigFilter***
- ***HAL_FDCAN_ConfigGlobalFilter***
- ***HAL_FDCAN_ConfigExtendedIdMask***
- ***HAL_FDCAN_ConfigRxFifoOverwrite***
- ***HAL_FDCAN_ConfigRamWatchdog***
- ***HAL_FDCAN_ConfigTimestampCounter***
- ***HAL_FDCAN_EnableTimestampCounter***
- ***HAL_FDCAN_DisableTimestampCounter***
- ***HAL_FDCAN_GetTimestampCounter***
- ***HAL_FDCAN_ResetTimestampCounter***
- ***HAL_FDCAN_ConfigTimeoutCounter***

- *HAL_FDCAN_EnableTimeoutCounter*
- *HAL_FDCAN_DisableTimeoutCounter*
- *HAL_FDCAN_GetTimeoutCounter*
- *HAL_FDCAN_ResetTimeoutCounter*
- *HAL_FDCAN_ConfigTxDelayCompensation*
- *HAL_FDCAN_EnableTxDelayCompensation*
- *HAL_FDCAN_DisableTxDelayCompensation*
- *HAL_FDCAN_EnableISOMode*
- *HAL_FDCAN_DisableISOMode*
- *HAL_FDCAN_EnableEdgeFiltering*
- *HAL_FDCAN_DisableEdgeFiltering*

21.2.4 Control functions

This section provides functions allowing to:

- HAL_FDCAN_Start : Start the FDCAN module
- HAL_FDCAN_Stop : Stop the FDCAN module and enable access to configuration registers
- HAL_FDCAN_AddMessageToTxFifoQ : Add a message to the Tx FIFO/Queue and activate the corresponding transmission request
- HAL_FDCAN_GetLatestTxFifoQRequestBuffer : Get Tx buffer index of latest Tx FIFO/Queue request
- HAL_FDCAN_AbortTxRequest : Abort transmission request
- HAL_FDCAN_GetRxMessage : Get an FDCAN frame from the Rx FIFO zone into the message RAM
- HAL_FDCAN_GetTxEvent : Get an FDCAN Tx event from the Tx Event FIFO zone into the message RAM
- HAL_FDCAN_GetHighPriorityMessageStatus : Get high priority message status
- HAL_FDCAN_GetProtocolStatus : Get protocol status
- HAL_FDCAN_GetErrorCounters : Get error counter values
- HAL_FDCAN_IsTxBufferMessagePending : Check if a transmission request is pending on the selected Tx buffer
- HAL_FDCAN_GetRxFifoFillLevel : Return Rx FIFO fill level
- HAL_FDCAN_GetTxFifoFreeLevel : Return Tx FIFO free level
- HAL_FDCAN_IsRestrictedOperationMode : Check if the FDCAN peripheral entered Restricted Operation Mode
- HAL_FDCAN_ExitRestrictedOperationMode : Exit Restricted Operation Mode

This section contains the following APIs:

- *HAL_FDCAN_Start*
- *HAL_FDCAN_Stop*
- *HAL_FDCAN_AddMessageToTxFifoQ*
- *HAL_FDCAN_GetLatestTxFifoQRequestBuffer*
- *HAL_FDCAN_AbortTxRequest*
- *HAL_FDCAN_GetRxMessage*
- *HAL_FDCAN_GetTxEvent*
- *HAL_FDCAN_GetHighPriorityMessageStatus*
- *HAL_FDCAN_GetProtocolStatus*
- *HAL_FDCAN_GetErrorCounters*
- *HAL_FDCAN_IsTxBufferMessagePending*
- *HAL_FDCAN_GetRxFifoFillLevel*
- *HAL_FDCAN_GetTxFifoFreeLevel*
- *HAL_FDCAN_IsRestrictedOperationMode*
- *HAL_FDCAN_ExitRestrictedOperationMode*

21.2.5 Interrupts management

This section provides functions allowing to:

- HAL_FDCAN_ConfigInterruptLines : Assign interrupts to either Interrupt line 0 or 1
- HAL_FDCAN_ActivateNotification : Enable interrupts
- HAL_FDCAN_DeactivateNotification : Disable interrupts
- HAL_FDCAN_IRQHandler : Handles FDCAN interrupt request

This section contains the following APIs:

- ***HAL_FDCAN_ConfigInterruptLines***
- ***HAL_FDCAN_ActivateNotification***
- ***HAL_FDCAN_DeactivateNotification***
- ***HAL_FDCAN_IRQHandler***

21.2.6 Callback functions

This subsection provides the following callback functions:

- HAL_FDCAN_TxEventFifoCallback
- HAL_FDCAN_RxFifo0Callback
- HAL_FDCAN_RxFifo1Callback
- HAL_FDCAN_TxFifoEmptyCallback
- HAL_FDCAN_TxBufferCompleteCallback
- HAL_FDCAN_TxBufferAbortCallback
- HAL_FDCAN_HighPriorityMessageCallback
- HAL_FDCAN_TimestampWraparoundCallback
- HAL_FDCAN_TimeoutOccurredCallback
- HAL_FDCAN_ErrorCallback
- HAL_FDCAN_ErrorStatusCallback

This section contains the following APIs:

- ***HAL_FDCAN_TxEventFifoCallback***
- ***HAL_FDCAN_RxFifo0Callback***
- ***HAL_FDCAN_RxFifo1Callback***
- ***HAL_FDCAN_TxFifoEmptyCallback***
- ***HAL_FDCAN_TxBufferCompleteCallback***
- ***HAL_FDCAN_TxBufferAbortCallback***
- ***HAL_FDCAN_TimestampWraparoundCallback***
- ***HAL_FDCAN_TimeoutOccurredCallback***
- ***HAL_FDCAN_HighPriorityMessageCallback***
- ***HAL_FDCAN_ErrorCallback***
- ***HAL_FDCAN_ErrorStatusCallback***

21.2.7 Peripheral State functions

This subsection provides functions allowing to :

- HAL_FDCAN_GetState() : Return the FDCAN state.
- HAL_FDCAN_GetError() : Return the FDCAN error code if any.

This section contains the following APIs:

- ***HAL_FDCAN_GetState***
- ***HAL_FDCAN_GetError***

21.2.8 Detailed description of functions

HAL_FDCAN_Init

Function name

HAL_StatusTypeDef HAL_FDCAN_Init (FDCAN_HandleTypeDef * hfdcan)

Function description

Initializes the FDCAN peripheral according to the specified parameters in the FDCAN_InitTypeDef structure.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_DeInit

Function name

HAL_StatusTypeDef HAL_FDCAN_DeInit (FDCAN_HandleTypeDef * hfdcan)

Function description

Deinitializes the FDCAN peripheral registers to their default reset values.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_MspInit

Function name

void HAL_FDCAN_MspInit (FDCAN_HandleTypeDef * hfdcan)

Function description

Initializes the FDCAN MSP.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_MspDeInit

Function name

void HAL_FDCAN_MspDeInit (FDCAN_HandleTypeDef * hfdcan)

Function description

DeInitializes the FDCAN MSP.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_EnterPowerDownMode

Function name

HAL_StatusTypeDef HAL_FDCAN_EnterPowerDownMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Enter FDCAN peripheral in sleep mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_ExitPowerDownMode

Function name

HAL_StatusTypeDef HAL_FDCAN_ExitPowerDownMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Exit power down mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_ConfigFilter

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigFilter (FDCAN_HandleTypeDef * hfdcan, FDCAN_FilterTypeDef * sFilterConfig)

Function description

Configure the FDCAN reception filter according to the specified parameters in the FDCAN_FilterTypeDef structure.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **sFilterConfig:** pointer to an FDCAN_FilterTypeDef structure that contains the filter configuration information

Return values

- **HAL:** status

HAL_FDCAN_ConfigGlobalFilter

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigGlobalFilter (FDCAN_HandleTypeDef * hfdcan, uint32_t NonMatchingStd, uint32_t NonMatchingExt, uint32_t RejectRemoteStd, uint32_t RejectRemoteExt)

Function description

Configure the FDCAN global filter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **NonMatchingStd:** Defines how received messages with 11-bit IDs that do not match any element of the filter list are treated. This parameter can be a value of
  - FDCAN_Non_Matching_Frames.
- **NonMatchingExt:** Defines how received messages with 29-bit IDs that do not match any element of the filter list are treated. This parameter can be a value of
  - FDCAN_Non_Matching_Frames.
- **RejectRemoteStd:** Filter or reject all the remote 11-bit IDs frames. This parameter can be a value of
  - FDCAN_Reject_Remote_Frames.
- **RejectRemoteExt:** Filter or reject all the remote 29-bit IDs frames. This parameter can be a value of
  - FDCAN_Reject_Remote_Frames.

Return values

- **HAL:** status

HAL_FDCAN_ConfigExtendedIdMask

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigExtendedIdMask (FDCAN_HandleTypeDef * hfdcan, uint32_t Mask)

Function description

Configure the extended ID mask.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **Mask:** Extended ID Mask. This parameter must be a number between 0 and 0x1FFFFFFF

Return values

- **HAL:** status

HAL_FDCAN_ConfigRxFifoOverwrite

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigRxFifoOverwrite (FDCAN_HandleTypeDef * hfdcan, uint32_t RxFifo, uint32_t OperationMode)

Function description

Configure the Rx FIFO operation mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **RxFifo:** Rx FIFO. This parameter can be one of the following values:
  - FDCAN_RX_FIFO0: Rx FIFO 0
  - FDCAN_RX_FIFO1: Rx FIFO 1
- **OperationMode:** operation mode. This parameter can be a value of
  - FDCAN_Rx_FIFO_operation_mode.

Return values

- **HAL:** status

HAL_FDCAN_ConfigRamWatchdog

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigRamWatchdog (FDCAN_HandleTypeDef * hfdcan, uint32_t CounterStartValue)

Function description

Configure the RAM watchdog.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **CounterStartValue:** Start value of the Message RAM Watchdog Counter, This parameter must be a number between 0x00 and 0xFF, with the reset value of 0x00 the counter is disabled.

Return values

- **HAL:** status

HAL_FDCAN_ConfigTimestampCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigTimestampCounter (FDCAN_HandleTypeDef * hfdcan, uint32_t TimestampPrescaler)

Function description

Configure the timestamp counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TimestampPrescaler:** Timestamp Counter Prescaler. This parameter can be a value of
  - FDCAN_Timestamp_Prescaler.

Return values

- **HAL:** status

HAL_FDCAN_EnableTimestampCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_EnableTimestampCounter (FDCAN_HandleTypeDef * hfdcan, uint32_t TimestampOperation)

Function description

Enable the timestamp counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TimestampOperation:** Timestamp counter operation. This parameter can be a value of
  - FDCAN_Timestamp.

Return values

- **HAL:** status

HAL_FDCAN_DisableTimestampCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_DisableTimestampCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Disable the timestamp counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_GetTimestampCounter

Function name

uint16_t HAL_FDCAN_GetTimestampCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Get the timestamp counter value.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **Timestamp:** counter value

HAL_FDCAN_ResetTimestampCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_ResetTimestampCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Reset the timestamp counter to zero.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_ConfigTimeoutCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigTimeoutCounter (FDCAN_HandleTypeDef * hfdcan, uint32_t TimeoutOperation, uint32_t TimeoutPeriod)

Function description

Configure the timeout counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TimeoutOperation:** Timeout counter operation. This parameter can be a value of
  – FDCAN_Timeout_Operation.
- **TimeoutPeriod:** Start value of the timeout down-counter. This parameter must be a number between 0x0000 and 0xFFFF

Return values

- **HAL:** status

HAL_FDCAN_EnableTimeoutCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_EnableTimeoutCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Enable the timeout counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_DisableTimeoutCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_DisableTimeoutCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Disable the timeout counter.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_GetTimeoutCounter

Function name

uint16_t HAL_FDCAN_GetTimeoutCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Get the timeout counter value.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **Timeout:** counter value

HAL_FDCAN_ResetTimeoutCounter

Function name

HAL_StatusTypeDef HAL_FDCAN_ResetTimeoutCounter (FDCAN_HandleTypeDef * hfdcan)

Function description

Reset the timeout counter to its start value.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_ConfigTxDelayCompensation

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigTxDelayCompensation (FDCAN_HandleTypeDef * hfdcan, uint32_t TdcOffset, uint32_t TdcFilter)

Function description

Configure the transmitter delay compensation.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TdcOffset:** Transmitter Delay Compensation Offset. This parameter must be a number between 0x00 and 0x7F.
- **TdcFilter:** Transmitter Delay Compensation Filter Window Length. This parameter must be a number between 0x00 and 0x7F.

Return values

- **HAL:** status

HAL_FDCAN_EnableTxDelayCompensation

Function name

HAL_StatusTypeDef HAL_FDCAN_EnableTxDelayCompensation (FDCAN_HandleTypeDef * hfdcan)

Function description

Enable the transmitter delay compensation.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_DisableTxDelayCompensation

Function name

HAL_StatusTypeDef HAL_FDCAN_DisableTxDelayCompensation (FDCAN_HandleTypeDef * hfdcan)

Function description

Disable the transmitter delay compensation.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_EnableISOMode

Function name

HAL_StatusTypeDef HAL_FDCAN_EnableISOMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Enable ISO 11898-1 protocol mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_DisableISOMode

Function name

HAL_StatusTypeDef HAL_FDCAN_DisableISOMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Disable ISO 11898-1 protocol mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_EnableEdgeFiltering

Function name

HAL_StatusTypeDef HAL_FDCAN_EnableEdgeFiltering (FDCAN_HandleTypeDef * hfdcan)

Function description

Enable edge filtering during bus integration.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_DisableEdgeFiltering

Function name

HAL_StatusTypeDef HAL_FDCAN_DisableEdgeFiltering (FDCAN_HandleTypeDef * hfdcan)

Function description

Disable edge filtering during bus integration.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_Start

Function name

HAL_StatusTypeDef HAL_FDCAN_Start (FDCAN_HandleTypeDef * hfdcan)

Function description

Start the FDCAN module.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_Stop

Function name

HAL_StatusTypeDef HAL_FDCAN_Stop (FDCAN_HandleTypeDef * hfdcan)

Function description

Stop the FDCAN module and enable access to configuration registers.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_AddMessageToTxFifoQ

Function name

HAL_StatusTypeDef HAL_FDCAN_AddMessageToTxFifoQ (FDCAN_HandleTypeDef * hfdcan, FDCAN_TxHeaderTypeDef * pTxHeader, uint8_t * pTxData)

Function description

Add a message to the Tx FIFO/Queue and activate the corresponding transmission request.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **pTxHeader:** pointer to a FDCAN_TxHeaderTypeDef structure.
- **pTxData:** pointer to a buffer containing the payload of the Tx frame.

Return values

- **HAL:** status

HAL_FDCAN_GetLatestTxFifoQRequestBuffer

Function name

uint32_t HAL_FDCAN_GetLatestTxFifoQRequestBuffer (FDCAN_HandleTypeDef * hfdcan)

Function description

Get Tx buffer index of latest Tx FIFO/Queue request.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **Tx:** buffer index of last Tx FIFO/Queue request
  - Any value of
    - FDCAN_Tx_location if Tx request has been submitted.
  - 0 if no Tx FIFO/Queue request have been submitted.

HAL_FDCAN_AbortTxRequest

Function name

HAL_StatusTypeDef HAL_FDCAN_AbortTxRequest (FDCAN_HandleTypeDef * hfdcan, uint32_t BufferIndex)

Function description

Abort transmission request.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **BufferIndex:** buffer index. This parameter can be any combination of
  - FDCAN_Tx_location.

Return values

- **HAL:** status

HAL_FDCAN_GetRxMessage

Function name

HAL_StatusTypeDef HAL_FDCAN_GetRxMessage (FDCAN_HandleTypeDef * hfdcan, uint32_t RxLocation, FDCAN_RxHeaderTypeDef * pRxHeader, uint8_t * pRxData)

Function description

Get an FDCAN frame from the Rx FIFO zone into the message RAM.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **RxLocation:** Location of the received message to be read. This parameter can be a value of
  – FDCAN_Rx_location.
- **pRxHeader:** pointer to a FDCAN_RxHeaderTypeDef structure.
- **pRxData:** pointer to a buffer where the payload of the Rx frame will be stored.

Return values

- **HAL:** status

HAL_FDCAN_GetTxEvent

Function name

HAL_StatusTypeDef HAL_FDCAN_GetTxEvent (FDCAN_HandleTypeDef * hfdcan, FDCAN_TxEventFifoTypeDef * pTxEvent)

Function description

Get an FDCAN Tx event from the Tx Event FIFO zone into the message RAM.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **pTxEvent:** pointer to a FDCAN_TxEventFifoTypeDef structure.

Return values

- **HAL:** status

HAL_FDCAN_GetHighPriorityMessageStatus

Function name

HAL_StatusTypeDef HAL_FDCAN_GetHighPriorityMessageStatus (FDCAN_HandleTypeDef * hfdcan, FDCAN_HpMsgStatusTypeDef * HpMsgStatus)

Function description

Get high priority message status.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **HpMsgStatus:** pointer to an FDCAN_HpMsgStatusTypeDef structure.

Return values

- **HAL:** status

HAL_FDCAN_GetProtocolStatus

Function name

HAL_StatusTypeDef HAL_FDCAN_GetProtocolStatus (FDCAN_HandleTypeDef * hfdcan, FDCAN_ProtocolStatusTypeDef * ProtocolStatus)

Function description

Get protocol status.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **ProtocolStatus:** pointer to an FDCAN_ProtocolStatusTypeDef structure.

Return values

- **HAL:** status

HAL_FDCAN_GetErrorCounters

Function name

HAL_StatusTypeDef HAL_FDCAN_GetErrorCounters (FDCAN_HandleTypeDef * hfdcan, FDCAN_ErrorCountersTypeDef * ErrorCounters)

Function description

Get error counter values.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **ErrorCounters:** pointer to an FDCAN_ErrorCountersTypeDef structure.

Return values

- **HAL:** status

HAL_FDCAN_IsTxBufferMessagePending

Function name

uint32_t HAL_FDCAN_IsTxBufferMessagePending (FDCAN_HandleTypeDef * hfdcan, uint32_t TxBufferIndex)

Function description

Check if a transmission request is pending on the selected Tx buffer.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TxBufferIndex:** Tx buffer index. This parameter can be any combination of
  - FDCAN_Tx_location.

Return values

- **Status:**
  - 0 : No pending transmission request on TxBufferIndex list
  - 1 : Pending transmission request on TxBufferIndex.

HAL_FDCAN_GetRxFifoFillLevel

Function name

uint32_t HAL_FDCAN_GetRxFifoFillLevel (FDCAN_HandleTypeDef * hfdcan, uint32_t RxFifo)

Function description

Return Rx FIFO fill level.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **RxFifo:** Rx FIFO. This parameter can be one of the following values:
  - FDCAN_RX_FIFO0: Rx FIFO 0
  - FDCAN_RX_FIFO1: Rx FIFO 1

Return values

- **Rx:** FIFO fill level.

HAL_FDCAN_GetTxFifoFreeLevel

Function name

uint32_t HAL_FDCAN_GetTxFifoFreeLevel (FDCAN_HandleTypeDef * hfdcan)

Function description

Return Tx FIFO free level: number of consecutive free Tx FIFO elements starting from Tx FIFO GetIndex.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **Tx:** FIFO free level.

HAL_FDCAN_IsRestrictedOperationMode

Function name

uint32_t HAL_FDCAN_IsRestrictedOperationMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Check if the FDCAN peripheral entered Restricted Operation Mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **Status:**
  - 0 : Normal FDCAN operation.
  - 1 : Restricted Operation Mode active.

HAL_FDCAN_ExitRestrictedOperationMode

Function name

HAL_StatusTypeDef HAL_FDCAN_ExitRestrictedOperationMode (FDCAN_HandleTypeDef * hfdcan)

Function description

Exit Restricted Operation Mode.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_ConfigInterruptLines

Function name

HAL_StatusTypeDef HAL_FDCAN_ConfigInterruptLines (FDCAN_HandleTypeDef * hfdcan, uint32_t ITList, uint32_t InterruptLine)

Function description

Assign interrupts to either Interrupt line 0 or 1.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **ITList:** indicates which interrupts group will be assigned to the selected interrupt line. This parameter can be any combination of
  - FDCAN_Interrupts_Group.
- **InterruptLine:** Interrupt line. This parameter can be a value of
  - FDCAN_Interrupt_Line.

Return values

- **HAL:** status

HAL_FDCAN_ActivateNotification

Function name

HAL_StatusTypeDef HAL_FDCAN_ActivateNotification (FDCAN_HandleTypeDef * hfdcan, uint32_t ActiveITs, uint32_t BufferIndexes)

Function description

Enable interrupts.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **ActiveITs:** indicates which interrupts will be enabled. This parameter can be any combination of
  - FDCAN_Interrupts.
- **BufferIndexes:** Tx Buffer Indexes. This parameter can be any combination of
  - FDCAN_Tx_location. This parameter is ignored if ActiveITs does not include one of the following:
    - FDCAN_IT_TX_COMPLETE
    - FDCAN_IT_TX_ABORT_COMPLETE

Return values

- **HAL:** status

HAL_FDCAN_DeactivateNotification

Function name

HAL_StatusTypeDef HAL_FDCAN_DeactivateNotification (FDCAN_HandleTypeDef * hfdcan, uint32_t InactiveITs)

Function description

Disable interrupts.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **InactiveITs:** indicates which interrupts will be disabled. This parameter can be any combination of
  - FDCAN_Interrupts.

Return values

- **HAL:** status

HAL_FDCAN_IRQHandler

Function name

void HAL_FDCAN_IRQHandler (FDCAN_HandleTypeDef * hfdcan)

Function description

Handles FDCAN interrupt request.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** status

HAL_FDCAN_TxEventFifoCallback

Function name

void HAL_FDCAN_TxEventFifoCallback (FDCAN_HandleTypeDef * hfdcan, uint32_t TxEventFifoITs)

Function description

Tx Event callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **TxEventFifoITs:** indicates which Tx Event FIFO interrupts are signalled. This parameter can be any combination of
  - FDCAN_Tx_Event_Fifo_Interrupts.

Return values

- **None:**

HAL_FDCAN_RxFifo0Callback

Function name

void HAL_FDCAN_RxFifo0Callback (FDCAN_HandleTypeDef * hfdcan, uint32_t RxFifo0ITs)

Function description

Rx FIFO 0 callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **RxFifo0ITs:** indicates which Rx FIFO 0 interrupts are signalled. This parameter can be any combination of
  - FDCAN_Rx_Fifo0_Interrupts.

Return values

- **None:**

HAL_FDCAN_RxFifo1Callback

Function name

void HAL_FDCAN_RxFifo1Callback (FDCAN_HandleTypeDef * hfdcan, uint32_t RxFifo1ITs)

Function description

Rx FIFO 1 callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **RxFifo1ITs:** indicates which Rx FIFO 1 interrupts are signalled. This parameter can be any combination of
  - FDCAN_Rx_Fifo1_Interrupts.

Return values

- **None:**

HAL_FDCAN_TxFifoEmptyCallback

Function name

void HAL_FDCAN_TxFifoEmptyCallback (FDCAN_HandleTypeDef * hfdcan)

Function description

Tx FIFO Empty callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_TxBufferCompleteCallback

Function name

void HAL_FDCAN_TxBufferCompleteCallback (FDCAN_HandleTypeDef * hfdcan, uint32_t BufferIndexes)

Function description

Transmission Complete callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **BufferIndexes:** Indexes of the transmitted buffers. This parameter can be any combination of
  - FDCAN_Tx_location.

Return values

- **None:**

HAL_FDCAN_TxBufferAbortCallback

Function name

void HAL_FDCAN_TxBufferAbortCallback (FDCAN_HandleTypeDef * hfdcan, uint32_t BufferIndexes)

Function description

Transmission Cancellation callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **BufferIndexes:** Indexes of the aborted buffers. This parameter can be any combination of
  – FDCAN_Tx_location.

Return values

- **None:**

HAL_FDCAN_HighPriorityMessageCallback

Function name

void HAL_FDCAN_HighPriorityMessageCallback (FDCAN_HandleTypeDef * hfdcan)

Function description

High Priority Message callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_TimestampWraparoundCallback

Function name

void HAL_FDCAN_TimestampWraparoundCallback (FDCAN_HandleTypeDef * hfdcan)

Function description

Timestamp Wraparound callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_TimeoutOccurredCallback

Function name

void HAL_FDCAN_TimeoutOccurredCallback (FDCAN_HandleTypeDef * hfdcan)

Function description

Timeout Occurred callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_ErrorCallback

Function name

void HAL_FDCAN_ErrorCallback (FDCAN_HandleTypeDef * hfdcan)

Function description

Error callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **None:**

HAL_FDCAN_ErrorStatusCallback

Function name

void HAL_FDCAN_ErrorStatusCallback (FDCAN_HandleTypeDef * hfdcan, uint32_t ErrorStatusITs)

Function description

Error status callback.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.
- **ErrorStatusITs:** indicates which Error Status interrupts are signaled. This parameter can be any combination of
  - FDCAN_Error_Status_Interrupts.

Return values

- **None:**

HAL_FDCAN_GetError

Function name

uint32_t HAL_FDCAN_GetError (FDCAN_HandleTypeDef * hfdcan)

Function description

Return the FDCAN error code.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **FDCAN:** Error Code

HAL_FDCAN_GetState

Function name

HAL_FDCAN_StateTypeDef HAL_FDCAN_GetState (FDCAN_HandleTypeDef * hfdcan)

Function description

Return the FDCAN state.

Parameters

- **hfdcan:** pointer to an FDCAN_HandleTypeDef structure that contains the configuration information for the specified FDCAN.

Return values

- **HAL:** state

21.3 FDCAN Firmware driver defines

The following section lists the various define and macros of the module.

21.3.1 FDCAN

FDCAN

FDCAN Bit Rate Switching

FDCAN_BRS_OFF

FDCAN frames transmitted/received without bit rate switching

FDCAN_BRS_ON

FDCAN frames transmitted/received with bit rate switching

FDCAN Clock Divider

FDCAN_CLOCK_DIV1

Divide kernel clock by 1

FDCAN_CLOCK_DIV2

Divide kernel clock by 2

FDCAN_CLOCK_DIV4

Divide kernel clock by 4

FDCAN_CLOCK_DIV6

Divide kernel clock by 6

FDCAN_CLOCK_DIV8

Divide kernel clock by 8

FDCAN_CLOCK_DIV10

Divide kernel clock by 10

FDCAN_CLOCK_DIV12

Divide kernel clock by 12

FDCAN_CLOCK_DIV14

Divide kernel clock by 14

FDCAN_CLOCK_DIV16

Divide kernel clock by 16

FDCAN_CLOCK_DIV18

Divide kernel clock by 18

FDCAN_CLOCK_DIV20

Divide kernel clock by 20

FDCAN_CLOCK_DIV22

Divide kernel clock by 22

FDCAN_CLOCK_DIV24

Divide kernel clock by 24

FDCAN_CLOCK_DIV26

Divide kernel clock by 26

FDCAN_CLOCK_DIV28

Divide kernel clock by 28

FDCAN_CLOCK_DIV30

Divide kernel clock by 30

FDCAN communication state

FDCAN_COM_STATE_SYNC

Node is synchronizing on CAN communication

FDCAN_COM_STATE_IDLE

Node is neither receiver nor transmitter

FDCAN_COM_STATE_RX

Node is operating as receiver

FDCAN_COM_STATE_TX

Node is operating as transmitter

FDCAN Counter Interrupts

FDCAN_IT_TIMESTAMP_WRAPAROUND

Timestamp counter wrapped around

FDCAN_IT_TIMEOUT_OCCURRED

Timeout reached

FDCAN Data Length Code

FDCAN_DLC_BYTES_0

0 bytes data field

FDCAN_DLC_BYTES_1

1 bytes data field

FDCAN_DLC_BYTES_2

2 bytes data field

FDCAN_DLC_BYTES_3

3 bytes data field

FDCAN_DLC_BYTES_4

4 bytes data field

FDCAN_DLC_BYTES_5

5 bytes data field

FDCAN_DLC_BYTES_6

6 bytes data field

FDCAN_DLC_BYTES_7

7 bytes data field

FDCAN_DLC_BYTES_8

8 bytes data field

FDCAN_DLC_BYTES_12

12 bytes data field

FDCAN_DLC_BYTES_16

16 bytes data field

FDCAN_DLC_BYTES_20

20 bytes data field

FDCAN_DLC_BYTES_24

24 bytes data field

FDCAN_DLC_BYTES_32

32 bytes data field

FDCAN_DLC_BYTES_48

48 bytes data field

FDCAN_DLC_BYTES_64

64 bytes data field

FDCAN Error Interrupts

FDCAN_IT_RAM_ACCESS_FAILURE

Message RAM access failure occurred

FDCAN_IT_ERROR_LOGGING_OVERFLOW

Overflow of FDCAN Error Logging Counter occurred

FDCAN_IT_RAM_WATCHDOG

Message RAM Watchdog event due to missing READY

FDCAN_IT_ARB_PROTOCOL_ERROR

Protocol error in arbitration phase detected

FDCAN_IT_DATA_PROTOCOL_ERROR

Protocol error in data phase detected

FDCAN_IT_RESERVED_ADDRESS_ACCESS

Access to reserved address occurred

FDCAN Error State Indicator

FDCAN_ESI_ACTIVE

Transmitting node is error active

FDCAN_ESI_PASSIVE

Transmitting node is error passive

FDCAN Error Status Interrupts

FDCAN_IT_ERROR_PASSIVE

Error_Passive status changed

FDCAN_IT_ERROR_WARNING

Error_Warning status changed

FDCAN_IT_BUS_OFF

Bus_Off status changed

FDCAN Event Type

FDCAN_TX_EVENT

Tx event

FDCAN_TX_IN_SPITE_OF_ABORT

Transmission in spite of cancellation

FDCAN Exported Macros

__HAL_FDCAN_RESET_HANDLE_STATE

Description:

- Reset FDCAN handle state.

Parameters:

- __HANDLE__: FDCAN handle.

Return value:

- None

__HAL_FDCAN_ENABLE_IT

Description:

- Enable the specified FDCAN interrupts.

Parameters:

- __HANDLE__: FDCAN handle.
- __INTERRUPT__: FDCAN interrupt. This parameter can be any combination of
  - FDCAN_Interrupts

Return value:

- None

__HAL_FDCAN_DISABLE_IT

Description:

- Disable the specified FDCAN interrupts.

Parameters:

- __HANDLE__: FDCAN handle.
- __INTERRUPT__: FDCAN interrupt. This parameter can be any combination of
  - FDCAN_Interrupts

Return value:

- None

__HAL_FDCAN_GET_IT

Description:

- Check whether the specified FDCAN interrupt is set or not.

Parameters:

- __HANDLE__: FDCAN handle.
- __INTERRUPT__: FDCAN interrupt. This parameter can be one of
  - FDCAN_Interrupts

Return value:

- ITStatus

__HAL_FDCAN_CLEAR_IT

Description:

- Clear the specified FDCAN interrupts.

Parameters:

- __HANDLE__: FDCAN handle.
- __INTERRUPT__: specifies the interrupts to clear. This parameter can be any combination of
  - FDCAN_Interrupts

Return value:

- None

__HAL_FDCAN_GET_FLAG

Description:

- Check whether the specified FDCAN flag is set or not.

Parameters:

- __HANDLE__: FDCAN handle.
- __FLAG__: FDCAN flag. This parameter can be one of
  - FDCAN_flags

Return value:

- FlagStatus

__HAL_FDCAN_CLEAR_FLAG

Description:

- Clear the specified FDCAN flags.

Parameters:

- __HANDLE__: FDCAN handle.
- __FLAG__: specifies the flags to clear. This parameter can be any combination of
  - FDCAN_flags

Return value:

- None

__HAL_FDCAN_GET_IT_SOURCE

Description:

- Check if the specified FDCAN interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: FDCAN handle.
- __INTERRUPT__: specifies the FDCAN interrupt source to check. This parameter can be a value of
  - FDCAN_Interrupts

Return value:

- ITStatus

FDCAN Filter Configuration

FDCAN_FILTER_DISABLE

Disable filter element

FDCAN_FILTER_TO_RXFIFO0

Store in Rx FIFO 0 if filter matches

FDCAN_FILTER_TO_RXFIFO1

Store in Rx FIFO 1 if filter matches

FDCAN_FILTER_REJECT

Reject ID if filter matches

FDCAN_FILTER_HP

Set high priority if filter matches

FDCAN_FILTER_TO_RXFIFO0_HP

Set high priority and store in FIFO 0 if filter matches

FDCAN_FILTER_TO_RXFIFO1_HP

Set high priority and store in FIFO 1 if filter matches

FDCAN Filter Type

FDCAN_FILTER_RANGE

Range filter from FilterID1 to FilterID2

FDCAN_FILTER_DUAL

Dual ID filter for FilterID1 or FilterID2

FDCAN_FILTER_MASK

Classic filter: FilterID1 = filter, FilterID2 = mask

FDCAN_FILTER_RANGE_NO_EIDM

Range filter from FilterID1 to FilterID2, EIDM mask not applied

FDCAN Flags

FDCAN_FLAG_TX_COMPLETE

Transmission Completed

FDCAN_FLAG_TX_ABORT_COMPLETE

Transmission Cancellation Finished

FDCAN_FLAG_TX_FIFO_EMPTY

Tx FIFO Empty

FDCAN_FLAG_RX_HIGH_PRIORITY_MSG

High priority message received

FDCAN_FLAG_TX_EVT_FIFO_ELT_LOST

Tx Event FIFO element lost

FDCAN_FLAG_TX_EVT_FIFO_FULL

Tx Event FIFO full

FDCAN_FLAG_TX_EVT_FIFO_NEW_DATA

Tx Handler wrote Tx Event FIFO element

FDCAN_FLAG_RX_FIFO0_MESSAGE_LOST

Rx FIFO 0 message lost

FDCAN_FLAG_RX_FIFO0_FULL

Rx FIFO 0 full

FDCAN_FLAG_RX_FIFO0_NEW_MESSAGE

New message written to Rx FIFO 0

FDCAN_FLAG_RX_FIFO1_MESSAGE_LOST

Rx FIFO 1 message lost

FDCAN_FLAG_RX_FIFO1_FULL

Rx FIFO 1 full

FDCAN_FLAG_RX_FIFO1_NEW_MESSAGE

New message written to Rx FIFO 1

FDCAN_FLAG_RAM_ACCESS_FAILURE

Message RAM access failure occurred

FDCAN_FLAG_ERROR_LOGGING_OVERFLOW

Overflow of FDCAN Error Logging Counter occurred

FDCAN_FLAG_ERROR_PASSIVE

Error_Passive status changed

FDCAN_FLAG_ERROR_WARNING

Error_Warning status changed

FDCAN_FLAG_BUS_OFF

Bus_Off status changed

FDCAN_FLAG_RAM_WATCHDOG

Message RAM Watchdog event due to missing READY

FDCAN_FLAG_ARB_PROTOCOL_ERROR

Protocol error in arbitration phase detected

FDCAN_FLAG_DATA_PROTOCOL_ERROR

Protocol error in data phase detected

FDCAN_FLAG_RESERVED_ADDRESS_ACCESS

Access to reserved address occurred

FDCAN_FLAG_TIMESTAMP_WRAPAROUND

Timestamp counter wrapped around

FDCAN_FLAG_TIMEOUT_OCCURRED

Timeout reached

FDCAN format

FDCAN_CLASSIC_CAN

Frame transmitted/received in Classic CAN format

FDCAN_FD_CAN

Frame transmitted/received in FDCAN format

FDCAN Frame Format

FDCAN_FRAME_CLASSIC

Classic mode

FDCAN_FRAME_FD_NO_BRS

FD mode without BitRate Switching

FDCAN_FRAME_FD_BRS

FD mode with BitRate Switching

FDCAN Frame Type

FDCAN_DATA_FRAME

Data frame

FDCAN_REMOTE_FRAME

Remote frame

FDCAN High Priority Message Storage

FDCAN_HP_STORAGE_NO_FIFO

No FIFO selected

FDCAN_HP_STORAGE_MSG_LOST

FIFO message lost

FDCAN_HP_STORAGE_RXFIFO0

Message stored in FIFO 0

FDCAN_HP_STORAGE_RXFIFO1

Message stored in FIFO 1

FDCAN ID Type

FDCAN_STANDARD_ID

Standard ID element

FDCAN_EXTENDED_ID

Extended ID element

FDCAN Interrupts Group

FDCAN_IT_GROUP_RX_FIFO0

RX FIFO 0 Interrupts Group: RF0LL: Rx FIFO 0 Message Lost RF0FL: Rx FIFO 0 is Full RF0NL: Rx FIFO 0 Has New Message

FDCAN_IT_GROUP_RX_FIFO1

RX FIFO 1 Interrupts Group: RF1LL: Rx FIFO 1 Message Lost RF1FL: Rx FIFO 1 is Full RF1NL: Rx FIFO 1 Has New Message

FDCAN_IT_GROUP_SMSG

Status Message Interrupts Group: TCFL: Transmission Cancellation Finished TCL: Transmission Completed HPML: High Priority Message

FDCAN_IT_GROUP_TX_FIFO_ERROR

TX FIFO Error Interrupts Group: TEFLL: Tx Event FIFO Element Lost TEFFL: Tx Event FIFO Full TEFNL: Tx Event FIFO New Entry TFEL: Tx FIFO Empty Interrupt Line

FDCAN_IT_GROUP_MISC

Misc. Interrupts Group: TOOL: Timeout Occurred MRAFL: Message RAM Access Failure TSWL: Timestamp Wraparound

FDCAN_IT_GROUP_BIT_LINE_ERROR

Bit and Line Error Interrupts Group: EPL: Error Passive ELOL: Error Logging Overflow

FDCAN_IT_GROUP_PROTOCOL_ERROR

Protocol Error Group: ARAL: Access to Reserved Address Line PEDL: Protocol Error in Data Phase Line PEAL: Protocol Error in Arbitration Phase Line WDIL: Watchdog Interrupt Line BOL: Bus_Off Status EWL: Warning Status

FDCAN Interrupts List

FDCAN_IT_LIST_RX_FIFO0

RX FIFO 0 Interrupts List

FDCAN_IT_LIST_RX_FIFO1

RX FIFO 1 Interrupts List

FDCAN_IT_LIST_SMSG

Status Message Interrupts List

FDCAN_IT_LIST_TX_FIFO_ERROR

TX FIFO Error Interrupts List

FDCAN_IT_LIST_MISC

Misc. Interrupts List

FDCAN_IT_LIST_BIT_LINE_ERROR

Bit and Line Error Interrupts List

FDCAN_IT_LIST_PROTOCOL_ERROR

Protocol Error Interrupts List

FDCAN interrupt line

FDCAN_INTERRUPT_LINE0

Interrupt Line 0

FDCAN_INTERRUPT_LINE1

Interrupt Line 1

FDCAN non-matching frames

FDCAN_ACCEPT_IN_RX_FIFO0

Accept in Rx FIFO 0

FDCAN_ACCEPT_IN_RX_FIFO1

Accept in Rx FIFO 1

FDCAN_REJECT

Reject

FDCAN Operating Mode

FDCAN_MODE_NORMAL

Normal mode

FDCAN_MODE_RESTRICTED_OPERATION

Restricted Operation mode

FDCAN_MODE_BUS_MONITORING

Bus Monitoring mode

FDCAN_MODE_INTERNAL_LOOPBACK

Internal LoopBack mode

FDCAN_MODE_EXTERNAL_LOOPBACK

External LoopBack mode

FDCAN protocol error code

FDCAN_PROTOCOL_ERROR_NONE

No error occurred

FDCAN_PROTOCOL_ERROR_STUFF

Stuff error

FDCAN_PROTOCOL_ERROR_FORM

Form error

FDCAN_PROTOCOL_ERROR_ACK

Acknowledge error

FDCAN_PROTOCOL_ERROR_BIT1

Bit 1 (recessive) error

FDCAN_PROTOCOL_ERROR_BIT0

Bit 0 (dominant) error

FDCAN_PROTOCOL_ERROR_CRC

CRC check sum error

FDCAN_PROTOCOL_ERROR_NO_CHANGE

No change since last read

FDCAN reject remote frames

FDCAN_FILTER_REMOTE

Filter remote frames

FDCAN_REJECT_REMOTE

Reject all remote frames

FDCAN Rx FIFO 0 Interrupts

FDCAN_IT_RX_FIFO0_MESSAGE_LOST

Rx FIFO 0 message lost

FDCAN_IT_RX_FIFO0_FULL

Rx FIFO 0 full

FDCAN_IT_RX_FIFO0_NEW_MESSAGE

New message written to Rx FIFO 0

FDCAN Rx FIFO 1 Interrupts

FDCAN_IT_RX_FIFO1_MESSAGE_LOST

Rx FIFO 1 message lost

FDCAN_IT_RX_FIFO1_FULL

Rx FIFO 1 full

FDCAN_IT_RX_FIFO1_NEW_MESSAGE

New message written to Rx FIFO 1

FDCAN FIFO operation mode

FDCAN_RX_FIFO_BLOCKING

Rx FIFO blocking mode

FDCAN_RX_FIFO_OVERWRITE

Rx FIFO overwrite mode

FDCAN Rx Interrupts

FDCAN_IT_RX_HIGH_PRIORITY_MSG

High priority message received

FDCAN Rx Location

FDCAN_RX_FIFO0

Get received message from Rx FIFO 0

FDCAN_RX_FIFO1

Get received message from Rx FIFO 1

FDCAN timeout operation

FDCAN_TIMEOUT_CONTINUOUS

Timeout continuous operation

FDCAN_TIMEOUT_TX_EVENT_FIFO

Timeout controlled by Tx Event FIFO

FDCAN_TIMEOUT_RX_FIFO0

Timeout controlled by Rx FIFO 0

FDCAN_TIMEOUT_RX_FIFO1

Timeout controlled by Rx FIFO 1

FDCAN timestamp

FDCAN_TIMESTAMP_INTERNAL

Timestamp counter value incremented according to TCP

FDCAN_TIMESTAMP_EXTERNAL

External timestamp counter value used

FDCAN timestamp prescaler

FDCAN_TIMESTAMP_PRESC_1

Timestamp counter time unit in equal to CAN bit time

FDCAN_TIMESTAMP_PRESC_2

Timestamp counter time unit in equal to CAN bit time multipled by 2

FDCAN_TIMESTAMP_PRESC_3

Timestamp counter time unit in equal to CAN bit time multipled by 3

FDCAN_TIMESTAMP_PRESC_4

Timestamp counter time unit in equal to CAN bit time multipled by 4

FDCAN_TIMESTAMP_PRESC_5

Timestamp counter time unit in equal to CAN bit time multipled by 5

FDCAN_TIMESTAMP_PRESC_6

Timestamp counter time unit in equal to CAN bit time multipled by 6

FDCAN_TIMESTAMP_PRESC_7

Timestamp counter time unit in equal to CAN bit time multipled by 7

FDCAN_TIMESTAMP_PRESC_8

Timestamp counter time unit in equal to CAN bit time multipled by 8

FDCAN_TIMESTAMP_PRESC_9

Timestamp counter time unit in equal to CAN bit time multipled by 9

FDCAN_TIMESTAMP_PRESC_10

Timestamp counter time unit in equal to CAN bit time multipled by 10

FDCAN_TIMESTAMP_PRESC_11

Timestamp counter time unit in equal to CAN bit time multipled by 11

FDCAN_TIMESTAMP_PRESC_12

Timestamp counter time unit in equal to CAN bit time multipled by 12

FDCAN_TIMESTAMP_PRESC_13

Timestamp counter time unit in equal to CAN bit time multipled by 13

FDCAN_TIMESTAMP_PRESC_14

Timestamp counter time unit in equal to CAN bit time multipled by 14

FDCAN_TIMESTAMP_PRESC_15

Timestamp counter time unit in equal to CAN bit time multipled by 15

FDCAN_TIMESTAMP_PRESC_16

Timestamp counter time unit in equal to CAN bit time multipled by 16

FDCAN Tx FIFO/Queue Mode

FDCAN_TX_FIFO_OPERATION

FIFO mode

FDCAN_TX_QUEUE_OPERATION

Queue mode

FDCAN Tx Event FIFO Interrupts

FDCAN_IT_TX_EVT_FIFO_ELT_LOST

Tx Event FIFO element lost

FDCAN_IT_TX_EVT_FIFO_FULL

Tx Event FIFO full

FDCAN_IT_TX_EVT_FIFO_NEW_DATA

Tx Handler wrote Tx Event FIFO element

FDCAN Tx Interrupts

FDCAN_IT_TX_COMPLETE

Transmission Completed

FDCAN_IT_TX_ABORT_COMPLETE

Transmission Cancellation Finished

FDCAN_IT_TX_FIFO_EMPTY

Tx FIFO Empty

FDCAN Tx Location

FDCAN_TX_BUFFER0

Add message to Tx Buffer 0

FDCAN_TX_BUFFER1

Add message to Tx Buffer 1

FDCAN_TX_BUFFER2

Add message to Tx Buffer 2

22 HAL FLASH Generic Driver

22.1 FLASH Firmware driver registers structures

22.1.1 FLASH_EraseInitTypeDef

FLASH_EraseInitTypeDef is defined in the stm32g4xx_hal_flash.h

Data Fields

- ***uint32_t TypeErase***
- ***uint32_t Banks***
- ***uint32_t Page***
- ***uint32_t NbPages***

Field Documentation

- ***uint32_t FLASH_EraseInitTypeDef::TypeErase***

  Mass erase or page erase. This parameter can be a value of ***FLASH_Type_Erase***
- ***uint32_t FLASH_EraseInitTypeDef::Banks***

  Select bank to erase. This parameter must be a value of ***FLASH_Banks*** (FLASH_BANK_BOTH should be used only for mass erase)
- ***uint32_t FLASH_EraseInitTypeDef::Page***

  Initial Flash page to erase when page erase is disabled. This parameter must be a value between 0 and (max number of pages in the bank - 1) (eg : 127 for 512KB dual bank)
- ***uint32_t FLASH_EraseInitTypeDef::NbPages***

  Number of pages to be erased. This parameter must be a value between 1 and (max number of pages in the bank - value of initial page)

22.1.2 FLASH_OBProgramInitTypeDef

FLASH_OBProgramInitTypeDef is defined in the stm32g4xx_hal_flash.h

Data Fields

- ***uint32_t OptionType***
- ***uint32_t WRPArea***
- ***uint32_t WRPStartOffset***
- ***uint32_t WRPEndOffset***
- ***uint32_t RDPLevel***
- ***uint32_t USERType***
- ***uint32_t USERConfig***
- ***uint32_t PCROPConfig***
- ***uint32_t PCROPStartAddr***
- ***uint32_t PCROPEndAddr***
- ***uint32_t BootEntryPoint***
- ***uint32_t SecBank***
- ***uint32_t SecSize***

Field Documentation

- ***uint32_t FLASH_OBProgramInitTypeDef::OptionType***

  Option byte to be configured. This parameter can be a combination of the values of ***FLASH_OB_Type***
- ***uint32_t FLASH_OBProgramInitTypeDef::WRPArea***

  Write protection area to be programmed (used for OPTIONBYTE_WRP). Only one WRP area could be programmed at the same time. This parameter can be value of ***FLASH_OB_WRP_Area***

- ***uint32_t FLASH_OBProgramInitTypeDef::WRPStartOffset***

  Write protection start offset (used for OPTIONBYTE_WRP). This parameter must be a value between 0 and (max number of pages in the bank - 1)
- ***uint32_t FLASH_OBProgramInitTypeDef::WRPEndOffset***

  Write protection end offset (used for OPTIONBYTE_WRP). This parameter must be a value between WRPStartOffset and (max number of pages in the bank - 1)
- ***uint32_t FLASH_OBProgramInitTypeDef::RDPLevel***

  Set the read protection level.. (used for OPTIONBYTE_RDP). This parameter can be a value of ***FLASH_OB_Read_Protection***
- ***uint32_t FLASH_OBProgramInitTypeDef::USERType***

  User option byte(s) to be configured (used for OPTIONBYTE_USER). This parameter can be a combination of ***FLASH_OB_USER_Type***
- ***uint32_t FLASH_OBProgramInitTypeDef::USERConfig***

  Value of the user option byte (used for OPTIONBYTE_USER). This parameter can be a combination of ***FLASH_OB_USER_BOR_LEVEL***, ***FLASH_OB_USER_nRST_STOP***, ***FLASH_OB_USER_nRST_STANDBY***, ***FLASH_OB_USER_nRST_SHUTDOWN***, ***FLASH_OB_USER_IWDG_SW***, ***FLASH_OB_USER_IWDG_STOP***, ***FLASH_OB_USER_IWDG_STANDBY***, ***FLASH_OB_USER_WWDG_SW***, ***FLASH_OB_USER_BFB2*** (*), ***FLASH_OB_USER_nBOOT1***, ***FLASH_OB_USER_SRAM_PE***, ***FLASH_OB_USER_CCMSRAM_RST***

  Note:

  – (*) availability depends on devices
- ***uint32_t FLASH_OBProgramInitTypeDef::PCROPConfig***

  Configuration of the PCROP (used for OPTIONBYTE_PCROP). This parameter must be a combination of ***FLASH_Banks*** (except FLASH_BANK_BOTH) and ***FLASH_OB_PCROP_RDP***
- ***uint32_t FLASH_OBProgramInitTypeDef::PCROPStartAddr***

  PCROP Start address (used for OPTIONBYTE_PCROP). This parameter must be a value between begin and end of bank => Be careful of the bank swapping for the address
- ***uint32_t FLASH_OBProgramInitTypeDef::PCROPEndAddr***

  PCROP End address (used for OPTIONBYTE_PCROP). This parameter must be a value between PCROP Start address and end of bank
- ***uint32_t FLASH_OBProgramInitTypeDef::BootEntryPoint***

  Set the Boot Lock (used for OPTIONBYTE_BOOT_LOCK). This parameter can be a value of ***FLASH_OB_Boot_Lock***
- ***uint32_t FLASH_OBProgramInitTypeDef::SecBank***

  Bank of securable memory area to be programmed (used for OPTIONBYTE_SEC). Only one securable memory area could be programmed at the same time. This parameter can be one of the following values: FLASH_BANK_1: Securable memory area to be programmed in bank 1 FLASH_BANK_2: Securable memory area to be programmed in bank 2 (*)

  Note:

  – (*) availability depends on devices
- ***uint32_t FLASH_OBProgramInitTypeDef::SecSize***

  Size of securable memory area to be programmed (used for OPTIONBYTE_SEC), in number of pages. Securable memory area is starting from first page of the bank. Only one securable memory could be programmed at the same time. This parameter must be a value between 0 and (max number of pages in the bank - 1)

22.1.3 FLASH_ProcessTypeDef

FLASH_ProcessTypeDef is defined in the stm32g4xx_hal_flash.h

Data Fields

- ***HAL_LockTypeDef Lock***
- ***__IO uint32_t ErrorCode***
- ***__IO FLASH_ProcedureTypeDef ProcedureOnGoing***
- ***__IO uint32_t Address***

- ***__IO uint32_t Bank***
- ***__IO uint32_t Page***
- ***__IO uint32_t NbPagesToErase***
- ***__IO FLASH_CacheTypeDef CacheToReactivate***

Field Documentation

- ***__IO uint32_t FLASH_ProcessTypeDef::NbPagesToErase***
- ***__IO FLASH_CacheTypeDef FLASH_ProcessTypeDef::CacheToReactivate***

22.2 FLASH Firmware driver API description

The following section lists the various functions of the FLASH library.

22.2.1 FLASH peripheral features

The Flash memory interface manages CPU AHB I-Code and D-Code accesses to the Flash memory. It implements the erase and program Flash memory operations and the read and write protection mechanisms.

The Flash memory interface accelerates code execution with a system of instruction prefetch and cache lines.

The FLASH main features are:

- Flash memory read operations
- Flash memory program/erase operations
- Read / write protections
- Option bytes programming
- Prefetch on I-Code
- 32 cache lines of 4*64 or 2*128 bits on I-Code
- 8 cache lines of 4*64 or 2*128 bits on D-Code
- Error code correction (ECC) : Data in flash are 72-bits word (8 bits added per double word)

22.2.2 How to use this driver

This driver provides functions and macros to configure and program the FLASH memory of all STM32G4xx devices.

1. Flash Memory IO Programming functions:
   - Lock and Unlock the FLASH interface using HAL_FLASH_Unlock() and HAL_FLASH_Lock() functions
   - Program functions: double word and fast program (full row programming)
   - There are two modes of programming :
     - Polling mode using HAL_FLASH_Program() function
     - Interrupt mode using HAL_FLASH_Program_IT() function
2. Interrupts and flags management functions:
   - Handle FLASH interrupts by calling HAL_FLASH_IRQHandler()
   - Callback functions are called when the flash operations are finished : HAL_FLASH_EndOfOperationCallback() when everything is ok, otherwise HAL_FLASH_OperationErrorCallback()
   - Get error flag status by calling HAL_GetError()

3. Option bytes management functions:
   – Lock and Unlock the option bytes using HAL_FLASH_OB_Unlock() and HAL_FLASH_OB_Lock() functions
   – Launch the reload of the option bytes using HAL_FLASH_Launch() function. In this case, a reset is generated

In addition to these functions, this driver includes a set of macros allowing to handle the following operations:

- Set the latency
- Enable/Disable the prefetch buffer
- Enable/Disable the Instruction cache and the Data cache
- Reset the Instruction cache and the Data cache
- Enable/Disable the Flash power-down during low-power run and sleep modes
- Enable/Disable the Flash interrupts
- Monitor the Flash flags status

22.2.3 Programming operation functions

This subsection provides a set of functions allowing to manage the FLASH program operations.

This section contains the following APIs:

- ***HAL_FLASH_Program***
- ***HAL_FLASH_Program_IT***
- ***HAL_FLASH_IRQHandler***
- ***HAL_FLASH_EndOfOperationCallback***
- ***HAL_FLASH_OperationErrorCallback***

22.2.4 Peripheral Control functions

This subsection provides a set of functions allowing to control the FLASH memory operations.

This section contains the following APIs:

- ***HAL_FLASH_Unlock***
- ***HAL_FLASH_Lock***
- ***HAL_FLASH_OB_Unlock***
- ***HAL_FLASH_OB_Lock***
- ***HAL_FLASH_OB_Launch***

22.2.5 Peripheral Errors functions

This subsection permits to get in run-time Errors of the FLASH peripheral.

This section contains the following APIs:

- ***HAL_FLASH_GetError***

22.2.6 Detailed description of functions

HAL_FLASH_Program

Function name

HAL_StatusTypeDef HAL_FLASH_Program (uint32_t TypeProgram, uint32_t Address, uint64_t Data)

Function description

Program double word or fast program of a row at a specified address.

Parameters

- **TypeProgram:** Indicate the way to program at a specified address. This parameter can be a value of FLASH Program Type.
- **Address:** specifies the address to be programmed.
- **Data:** specifies the data to be programmed. This parameter is the data for the double word program and the address where are stored the data for the row fast program.

Return values

- **HAL_Status:**

HAL_FLASH_Program_IT

Function name

HAL_StatusTypeDef HAL_FLASH_Program_IT (uint32_t TypeProgram, uint32_t Address, uint64_t Data)

Function description

Program double word or fast program of a row at a specified address with interrupt enabled.

Parameters

- **TypeProgram:** Indicate the way to program at a specified address. This parameter can be a value of FLASH Program Type.
- **Address:** specifies the address to be programmed.
- **Data:** specifies the data to be programmed. This parameter is the data for the double word program and the address where are stored the data for the row fast program.

Return values

- **HAL_Status:**

HAL_FLASH_IRQHandler

Function name

void HAL_FLASH_IRQHandler (void)

Function description

Handle FLASH interrupt request.

Return values

- **None:**

HAL_FLASH_EndOfOperationCallback

Function name

void HAL_FLASH_EndOfOperationCallback (uint32_t ReturnValue)

Function description

FLASH end of operation interrupt callback.

Parameters

- **ReturnValue:** The value saved in this parameter depends on the ongoing procedure:
  - Mass Erase: Bank number which has been requested to erase
  - Page Erase: Page which has been erased (if 0xFFFFFFFF, it means that all the selected pages have been erased)
  - Program: Address which was selected for data program

Return values

- **None:**

HAL_FLASH_OperationErrorCallback

Function name

void HAL_FLASH_OperationErrorCallback (uint32_t ReturnValue)

Function description

FLASH operation error interrupt callback.

Parameters

- **ReturnValue:** The value saved in this parameter depends on the ongoing procedure:
  - Mass Erase: Bank number which has been requested to erase
  - Page Erase: Page number which returned an error
  - Program: Address which was selected for data program

Return values

- **None:**

HAL_FLASH_Unlock

Function name

HAL_StatusTypeDef HAL_FLASH_Unlock (void)

Function description

Unlock the FLASH control register access.

Return values

- **HAL_Status:**

HAL_FLASH_Lock

Function name

HAL_StatusTypeDef HAL_FLASH_Lock (void)

Function description

Lock the FLASH control register access.

Return values

- **HAL_Status:**

HAL_FLASH_OB_Unlock

Function name

HAL_StatusTypeDef HAL_FLASH_OB_Unlock (void)

Function description

Unlock the FLASH Option Bytes Registers access.

Return values

- **HAL_Status:**

HAL_FLASH_OB_Lock

Function name

HAL_StatusTypeDef HAL_FLASH_OB_Lock (void)

Function description

Lock the FLASH Option Bytes Registers access.

Return values

- **HAL_Status:**

HAL_FLASH_OB_Launch

Function name

HAL_StatusTypeDef HAL_FLASH_OB_Launch (void)

Function description

Launch the option byte loading.

Return values

- **HAL_Status:**

HAL_FLASH_GetError

Function name

uint32_t HAL_FLASH_GetError (void)

Function description

Get the specific FLASH error flag.

Return values

- **FLASH_ErrorCode.:** The returned value can be:
  - HAL_FLASH_ERROR_RD: FLASH Read Protection error flag (PCROP)
  - HAL_FLASH_ERROR_PGS: FLASH Programming Sequence error flag
  - HAL_FLASH_ERROR_PGP: FLASH Programming Parallelism error flag
  - HAL_FLASH_ERROR_PGA: FLASH Programming Alignment error flag
  - HAL_FLASH_ERROR_WRP: FLASH Write protected error flag
  - HAL_FLASH_ERROR_OPERATION: FLASH operation Error flag
  - HAL_FLASH_ERROR_NONE: No error set
  - HAL_FLASH_ERROR_OP: FLASH Operation error
  - HAL_FLASH_ERROR_PROG: FLASH Programming error
  - HAL_FLASH_ERROR_WRP: FLASH Write protection error
  - HAL_FLASH_ERROR_PGA: FLASH Programming alignment error
  - HAL_FLASH_ERROR_SIZ: FLASH Size error
  - HAL_FLASH_ERROR_PGS: FLASH Programming sequence error
  - HAL_FLASH_ERROR_MIS: FLASH Fast programming data miss error
  - HAL_FLASH_ERROR_FAST: FLASH Fast programming error
  - HAL_FLASH_ERROR_RD: FLASH PCROP read error
  - HAL_FLASH_ERROR_OPTV: FLASH Option validity error

FLASH_WaitForLastOperation

Function name

HAL_StatusTypeDef FLASH_WaitForLastOperation (uint32_t Timeout)

Function description

Wait for a FLASH operation to complete.

Parameters

- **Timeout:** maximum flash operation timeout.

Return values

- **HAL_Status:**

22.3 FLASH Firmware driver defines

The following section lists the various define and macros of the module.

22.3.1 FLASH

FLASH

FLASH Banks

HAL_FLASH_ERROR_ECCC2

HAL_FLASH_ERROR_ECCD2

FLASH Exported Macros

__HAL_FLASH_SET_LATENCY

Description:

- Set the FLASH Latency.

Parameters:

- __LATENCY__: FLASH Latency. This parameter can be one of the following values :
  - FLASH_LATENCY_0: FLASH Zero wait state
  - FLASH_LATENCY_1: FLASH One wait state
  - FLASH_LATENCY_2: FLASH Two wait states
  - FLASH_LATENCY_3: FLASH Three wait states
  - FLASH_LATENCY_4: FLASH Four wait states
  - FLASH_LATENCY_5: FLASH Five wait states
  - FLASH_LATENCY_6: FLASH Six wait states
  - FLASH_LATENCY_7: FLASH Seven wait states
  - FLASH_LATENCY_8: FLASH Eight wait states
  - FLASH_LATENCY_9: FLASH Nine wait states
  - FLASH_LATENCY_10: FLASH Ten wait state
  - FLASH_LATENCY_11: FLASH Eleven wait state
  - FLASH_LATENCY_12: FLASH Twelve wait states
  - FLASH_LATENCY_13: FLASH Thirteen wait states
  - FLASH_LATENCY_14: FLASH Fourteen wait states
  - FLASH_LATENCY_15: FLASH Fifteen wait states

Return value:

- None

__HAL_FLASH_GET_LATENCY

Description:

- Get the FLASH Latency.

Return value:

- FLASH_Latency.: This parameter can be one of the following values :
  - FLASH_LATENCY_0: FLASH Zero wait state
  - FLASH_LATENCY_1: FLASH One wait state
  - FLASH_LATENCY_2: FLASH Two wait states
  - FLASH_LATENCY_3: FLASH Three wait states
  - FLASH_LATENCY_4: FLASH Four wait states
  - FLASH_LATENCY_5: FLASH Five wait states
  - FLASH_LATENCY_6: FLASH Six wait states
  - FLASH_LATENCY_7: FLASH Seven wait states
  - FLASH_LATENCY_8: FLASH Eight wait states
  - FLASH_LATENCY_9: FLASH Nine wait states
  - FLASH_LATENCY_10: FLASH Ten wait state
  - FLASH_LATENCY_11: FLASH Eleven wait state
  - FLASH_LATENCY_12: FLASH Twelve wait states
  - FLASH_LATENCY_13: FLASH Thirteen wait states
  - FLASH_LATENCY_14: FLASH Fourteen wait states
  - FLASH_LATENCY_15: FLASH Fifteen wait states

__HAL_FLASH_PREFETCH_BUFFER_ENABLE

Description:

- Enable the FLASH prefetch buffer.

Return value:

- None

__HAL_FLASH_PREFETCH_BUFFER_DISABLE

Description:

- Disable the FLASH prefetch buffer.

Return value:

- None

__HAL_FLASH_INSTRUCTION_CACHE_ENABLE

Description:

- Enable the FLASH instruction cache.

Return value:

- none

__HAL_FLASH_INSTRUCTION_CACHE_DISABLE

Description:

- Disable the FLASH instruction cache.

Return value:

- none

__HAL_FLASH_DATA_CACHE_ENABLE

Description:

- Enable the FLASH data cache.

Return value:

- none

__HAL_FLASH_DATA_CACHE_DISABLE

Description:

- Disable the FLASH data cache.

Return value:

- none

__HAL_FLASH_INSTRUCTION_CACHE_RESET

Description:

- Reset the FLASH instruction Cache.

Return value:

- None

Notes:

- This function must be used only when the Instruction Cache is disabled.

__HAL_FLASH_DATA_CACHE_RESET

Description:

- Reset the FLASH data Cache.

Return value:

- None

Notes:

- This function must be used only when the data Cache is disabled.

__HAL_FLASH_POWER_DOWN_ENABLE

Notes:

- Writing this bit to 1, automatically the keys are lost and a new unlock sequence is necessary to re-write it to 0.

__HAL_FLASH_POWER_DOWN_DISABLE

Notes:

- Writing this bit to 0, automatically the keys are lost and a new unlock sequence is necessary to re-write it to 1.

__HAL_FLASH_SLEEP_POWERDOWN_ENABLE

Description:

- Enable the FLASH power down during Low-Power sleep mode.

Return value:

- none

__HAL_FLASH_SLEEP_POWERDOWN_DISABLE

Description:

- Disable the FLASH power down during Low-Power sleep mode.

Return value:

- none

FLASH Flags Definition

FLASH_FLAG_EOP

FLASH End of operation flag

FLASH_FLAG_OPERR

FLASH Operation error flag

FLASH_FLAG_PROGERR

FLASH Programming error flag

FLASH_FLAG_WRPERR

FLASH Write protection error flag

FLASH_FLAG_PGAERR

FLASH Programming alignment error flag

FLASH_FLAG_SIZERR

FLASH Size error flag

FLASH_FLAG_PGSERR

FLASH Programming sequence error flag

FLASH_FLAG_MISERR

FLASH Fast programming data miss error flag

FLASH_FLAG_FASTERR

FLASH Fast programming error flag

FLASH_FLAG_RDERR

FLASH PCROP read error flag

FLASH_FLAG_OPTVERR

FLASH Option validity error flag

FLASH_FLAG_BSY

FLASH Busy flag

FLASH_FLAG_ECCC

FLASH ECC correction in 64 LSB bits

FLASH_FLAG_ECCD

FLASH ECC detection in 64 LSB bits

FLASH_FLAG_ECCC2

FLASH ECC correction in 64 MSB bits (mode 128 bits only)

FLASH_FLAG_ECCD2

FLASH ECC detection in 64 MSB bits (mode 128 bits only)

FLASH_FLAG_SR_ERRORS

FLASH_FLAG_ECCR_ERRORS

FLASH_FLAG_ALL_ERRORS

FLASH Interrupts Macros

__HAL_FLASH_ENABLE_IT

Description:

- Enable the specified FLASH interrupt.

Parameters:

- __INTERRUPT__: FLASH interrupt This parameter can be any combination of the following values:
  - FLASH_IT_EOP: End of FLASH Operation Interrupt
  - FLASH_IT_OPERR: Error Interrupt
  - FLASH_IT_RDERR: PCROP Read Error Interrupt
  - FLASH_IT_ECCC: ECC Correction Interrupt

Return value:

- none

__HAL_FLASH_DISABLE_IT

Description:

- Disable the specified FLASH interrupt.

Parameters:

- __INTERRUPT__: FLASH interrupt This parameter can be any combination of the following values:
  - FLASH_IT_EOP: End of FLASH Operation Interrupt
  - FLASH_IT_OPERR: Error Interrupt
  - FLASH_IT_RDERR: PCROP Read Error Interrupt
  - FLASH_IT_ECCC: ECC Correction Interrupt

Return value:

- none

__HAL_FLASH_GET_FLAG

Description:

- Check whether the specified FLASH flag is set or not.

Parameters:

- __FLAG__: specifies the FLASH flag to check. This parameter can be one of the following values:
  - FLASH_FLAG_EOP: FLASH End of Operation flag
  - FLASH_FLAG_OPERR: FLASH Operation error flag
  - FLASH_FLAG_PROGERR: FLASH Programming error flag
  - FLASH_FLAG_WRPERR: FLASH Write protection error flag
  - FLASH_FLAG_PGAERR: FLASH Programming alignment error flag
  - FLASH_FLAG_SIZERR: FLASH Size error flag
  - FLASH_FLAG_PGSERR: FLASH Programming sequence error flag
  - FLASH_FLAG_MISERR: FLASH Fast programming data miss error flag
  - FLASH_FLAG_FASTERR: FLASH Fast programming error flag
  - FLASH_FLAG_RDERR: FLASH PCROP read error flag
  - FLASH_FLAG_OPTVERR: FLASH Option validity error flag
  - FLASH_FLAG_BSY: FLASH write/erase operations in progress flag
  - FLASH_FLAG_ECCC: FLASH one ECC error has been detected and corrected in 64 LSB bits
  - FLASH_FLAG_ECCD: FLASH two ECC errors have been detected in 64 LSB bits
  - FLASH_FLAG_ECCC2(*): FLASH one ECC error has been detected and corrected in 64 MSB bits (mode 128 bits only)
  - FLASH_FLAG_ECCD2(*): FLASH two ECC errors have been detected in 64 MSB bits (mode 128 bits only)

Return value:

- The: new state of FLASH_FLAG (SET or RESET).

Notes:

- (*) availability depends on devices

__HAL_FLASH_CLEAR_FLAG

Description:

- Clear the FLASH's pending flags.

Parameters:

- __FLAG__: specifies the FLASH flags to clear. This parameter can be any combination of the following values:
  - FLASH_FLAG_EOP: FLASH End of Operation flag
  - FLASH_FLAG_OPERR: FLASH Operation error flag
  - FLASH_FLAG_PROGERR: FLASH Programming error flag
  - FLASH_FLAG_WRPERR: FLASH Write protection error flag
  - FLASH_FLAG_PGAERR: FLASH Programming alignment error flag
  - FLASH_FLAG_SIZERR: FLASH Size error flag
  - FLASH_FLAG_PGSERR: FLASH Programming sequence error flag
  - FLASH_FLAG_MISERR: FLASH Fast programming data miss error flag
  - FLASH_FLAG_FASTERR: FLASH Fast programming error flag
  - FLASH_FLAG_RDERR: FLASH PCROP read error flag
  - FLASH_FLAG_OPTVERR: FLASH Option validity error flag
  - FLASH_FLAG_ECCC: FLASH one ECC error has been detected and corrected in 64 LSB bits
  - FLASH_FLAG_ECCD: FLASH two ECC errors have been detected in 64 LSB bits
  - FLASH_FLAG_ECCC2(*): FLASH one ECC error has been detected and corrected in 64 MSB bits (mode 128 bits only)
  - FLASH_FLAG_ECCD2(*): FLASH two ECC errors have been detected in 64 MSB bits (mode 128 bits only)
  - FLASH_FLAG_SR_ERRORS: FLASH All SR errors flags
  - FLASH_FLAG_ECCR_ERRORS: FLASH All ECCR errors flags

Return value:

- None

Notes:

- (*) availability depends on devices

Pages erase only

FLASH_TYPEERASE_MASSERASE

Flash mass erase activation

FLASH Program Type

FLASH_TYPEPROGRAM_DOUBLEWORD

Program a double-word (64-bit) at a specified address.

FLASH_TYPEPROGRAM_FAST

Fast program a 32 row double-word (64-bit) at a specified address. And another 32 row double-word (64-bit) will be programmed

FLASH_TYPEPROGRAM_FAST_AND_LAST

Fast program a 32 row double-word (64-bit) at a specified address. And this is the last 32 row double-word (64-bit) programmed

23 HAL FLASH Extension Driver

23.1 FLASHEx Firmware driver API description

The following section lists the various functions of the FLASHEx library.

23.1.1 Flash Extended features

Comparing to other previous devices, the FLASH interface for STM32G4xx devices contains the following additional features

- Capacity up to 512 Kbytes with dual bank architecture supporting read-while-write capability (RWW)
- Dual bank 64-bits memory organization with possibility of single bank 128-bits
- Protected areas including WRP, PCROP and Securable memory

23.1.2 How to use this driver

This driver provides functions to configure and program the FLASH memory of all STM32G4xx devices. It includes

1. Flash Memory Erase functions:
   - Lock and Unlock the FLASH interface using HAL_FLASH_Unlock() and HAL_FLASH_Lock() functions
   - Erase function: Erase pages, or mass erase banks
   - There are two modes of erase :
     - Polling Mode using HAL_FLASHEx_Erase()
     - Interrupt Mode using HAL_FLASHEx_Erase_IT()
2. Option Bytes Programming function: Use HAL_FLASHEx_OBProgram() to:
   - Configure the write protection areas (WRP)
   - Set the Read protection Level (RDP)
   - Program the user Option Bytes
   - Configure the Proprietary Code ReadOut protection areas (PCROP)
   - Configure the Securable memory areas
   - Configure the Boot Lock
3. Get Option Bytes Configuration function: Use HAL_FLASHEx_OBGetConfig() to:
   - Get the configuration of write protection areas (WRP)
   - Get the level of read protection (RDP)
   - Get the value of the user Option Bytes
   - Get the configuration of Proprietary Code ReadOut Protection areas (PCROP)
   - Get the configuration of Securable memory areas
   - Get the status of Boot Lock
4. Activation of Securable memory area: Use HAL_FLASHEx_EnableSecMemProtection()
   - Deny the access to securable memory area
5. Enable or disable debugger: Use HAL_FLASHEx_EnableDebugger() or HAL_FLASHEx_DisableDebugger()

23.1.3 Extended programming operation functions

This subsection provides a set of functions allowing to manage the Extended FLASH programming operations Operations.

This section contains the following APIs:

- ***HAL_FLASHEx_Erase***
- ***HAL_FLASHEx_Erase_IT***
- ***HAL_FLASHEx_OBProgram***
- ***HAL_FLASHEx_OBGetConfig***
- ***HAL_FLASHEx_EnableSecMemProtection***

- *HAL_FLASHEx_EnableDebugger*
- *HAL_FLASHEx_DisableDebugger*

23.1.4 Detailed description of functions

HAL_FLASHEx_Erase

Function name

HAL_StatusTypeDef HAL_FLASHEx_Erase (FLASH_EraseInitTypeDef * pEraseInit, uint32_t * PageError)

Function description

Perform a mass erase or erase the specified FLASH memory pages.

Parameters

- **pEraseInit:** pointer to an FLASH_EraseInitTypeDef structure that contains the configuration information for the erasing.
- **PageError:** pointer to variable that contains the configuration information on faulty page in case of error (0xFFFFFFFF means that all the pages have been correctly erased).

Return values

- **HAL_Status:**

HAL_FLASHEx_Erase_IT

Function name

HAL_StatusTypeDef HAL_FLASHEx_Erase_IT (FLASH_EraseInitTypeDef * pEraseInit)

Function description

Perform a mass erase or erase the specified FLASH memory pages with interrupt enabled.

Parameters

- **pEraseInit:** pointer to an FLASH_EraseInitTypeDef structure that contains the configuration information for the erasing.

Return values

- **HAL_Status:**

HAL_FLASHEx_OBProgram

Function name

HAL_StatusTypeDef HAL_FLASHEx_OBProgram (FLASH_OBProgramInitTypeDef * pOBInit)

Function description

Program Option bytes.

Parameters

- **pOBInit:** pointer to an FLASH_OBInitStruct structure that contains the configuration information for the programming.

Return values

- **HAL_Status:**

Notes

- To configure any option bytes, the option lock bit OPTLOCK must be cleared with the call of HAL_FLASH_OB_Unlock() function.
- New option bytes configuration will be taken into account in two cases: after an option bytes launch through the call of HAL_FLASH_OB_Launch()after a power reset (BOR reset or exit from Standby/Shutdown modes)

HAL_FLASHEx_OBGetConfig

Function name

void HAL_FLASHEx_OBGetConfig (FLASH_OBProgramInitTypeDef * pOBInit)

Function description

Get the Option bytes configuration.

Parameters

- **pOBInit:** pointer to an FLASH_OBInitStruct structure that contains the configuration information.

Return values

- **None:**

Notes

- The fields pOBInit->WRPArea and pOBInit->PCROPConfig should indicate which area is requested for the WRP and PCROP, else no information will be returned.

HAL_FLASHEx_EnableSecMemProtection

Function name

HAL_StatusTypeDef HAL_FLASHEx_EnableSecMemProtection (uint32_t Bank)

Function description

Enable the FLASH Securable Memory protection.

Parameters

- **Bank:** Bank to be protected This parameter can be one of the following values:
  - FLASH_BANK_1: Bank1 to be protected
  - FLASH_BANK_2: Bank2 to be protected (*)
  - FLASH_BANK_BOTH: Bank1 and Bank2 to be protected (*)

Return values

- **HAL:** Status

Notes

- (*) availability depends on devices

HAL_FLASHEx_EnableDebugger

Function name

void HAL_FLASHEx_EnableDebugger (void)

Function description

Enable Debugger.

Return values

- **None:**

Notes

- After calling this API, flash interface allow debugger intrusion.

HAL_FLASHEx_DisableDebugger

Function name

void HAL_FLASHEx_DisableDebugger (void)

Function description

Disable Debugger.

Return values

- **None:**

Notes

- After calling this API, Debugger is disabled: it's no more possible to break, see CPU register, etc...

FLASH_PageErase

Function name

void FLASH_PageErase (uint32_t Page, uint32_t Banks)

Function description

Erase the specified FLASH memory page.

Parameters

- **Page:** FLASH page to erase. This parameter must be a value between 0 and (max number of pages in the bank - 1).
- **Banks:** Bank where the page will be erased. This parameter can be one of the following values:
  - FLASH_BANK_1: Page in bank 1 to be erased
  - FLASH_BANK_2: Page in bank 2 to be erased (*)

Return values

- **None:**

Notes

- (*) availability depends on devices

FLASH_FlushCaches

Function name

void FLASH_FlushCaches (void)

Function description

Flush the instruction and data caches.

Return values

- **None:**

24 HAL FLASH__RAMFUNC Generic Driver

24.1 FLASH__RAMFUNC Firmware driver API description

The following section lists the various functions of the FLASH__RAMFUNC library.

24.1.1 Flash RAM functions

ARM Compiler

RAM functions are defined using the toolchain options. Functions that are executed in RAM should reside in a separate source module. Using the 'Options for File' dialog you can simply change the 'Code / Const' area of a module to a memory space in physical RAM. Available memory areas are declared in the 'Target' tab of the Options for Target' dialog.

ICCARM Compiler

RAM functions are defined using a specific toolchain keyword "__ramfunc".

GNU Compiler

RAM functions are defined using a specific toolchain attribute "__attribute__((section(".RamFunc")))".

24.1.2 ramfunc functions

This subsection provides a set of functions that should be executed from RAM.

This section contains the following APIs:

- *HAL_FLASHEx_EnableRunPowerDown*
- *HAL_FLASHEx_DisableRunPowerDown*
- *HAL_FLASHEx_OB_DBankConfig*

24.1.3 Detailed description of functions

HAL_FLASHEx_EnableRunPowerDown

Function name

__RAM_FUNC HAL_StatusTypeDef HAL_FLASHEx_EnableRunPowerDown (void)

Function description

Enable the Power down in Run Mode.

Return values

- **None:**

Notes

- This function should be called and executed from SRAM memory.

HAL_FLASHEx_DisableRunPowerDown

Function name

__RAM_FUNC HAL_StatusTypeDef HAL_FLASHEx_DisableRunPowerDown (void)

Function description

Disable the Power down in Run Mode.

Return values

- **None:**

Notes

- This function should be called and executed from SRAM memory.

HAL_FLASHEx_OB_DBankConfig

Function name

__RAM_FUNC HAL_StatusTypeDef HAL_FLASHEx_OB_DBankConfig (uint32_t DBankConfig)

Function description

Program the FLASH DBANK User Option Byte.

Parameters

- **DBankConfig:** The FLASH DBANK User Option Byte value. This parameter can be one of the following values:
  - OB_DBANK_128_BITS: Single-bank with 128-bits data
  - OB_DBANK_64_BITS: Dual-bank with 64-bits data

Return values

- **HAL_Status:**

Notes

- To configure the user option bytes, the option lock bit OPTLOCK must be cleared with the call of the HAL_FLASH_OB_Unlock() function.
- To modify the DBANK option byte, no PCROP region should be defined. To deactivate PCROP, user should perform RDP changing.

25 HAL FMAC Generic Driver

25.1 FMAC Firmware driver registers structures

25.1.1 FMAC_HandleTypeDef

FMAC_HandleTypeDef is defined in the stm32g4xx_hal_fmac.h

Data Fields

- ***FMAC_TypeDef * Instance***
- ***uint32_t FilterParam***
- ***uint8_t InputAccess***
- ***uint8_t OutputAccess***
- ***int16_t * pInput***
- ***uint16_t InputCurrentSize***
- ***uint16_t * pInputSize***
- ***int16_t * pOutput***
- ***uint16_t OutputCurrentSize***
- ***uint16_t * pOutputSize***
- ***DMA_HandleTypeDef * hdmaIn***
- ***DMA_HandleTypeDef * hdmaOut***
- ***DMA_HandleTypeDef * hdmaPreload***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_FMAC_StateTypeDef State***
- ***__IO HAL_FMAC_StateTypeDef RdState***
- ***__IO HAL_FMAC_StateTypeDef WrState***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***FMAC_TypeDef* FMAC_HandleTypeDef::Instance***
  Register base address
- ***uint32_t FMAC_HandleTypeDef::FilterParam***
  Filter configuration (operation and parameters). Set to 0 if no valid configuration was applied.
- ***uint8_t FMAC_HandleTypeDef::InputAccess***
  Access to the input buffer (internal memory area): DMA, IT, Polling, None. This parameter can be a value of ***FMAC_Buffer_Access***.
- ***uint8_t FMAC_HandleTypeDef::OutputAccess***
  Access to the output buffer (internal memory area): DMA, IT, Polling, None. This parameter can be a value of ***FMAC_Buffer_Access***.
- ***int16_t* FMAC_HandleTypeDef::pInput***
  Pointer to FMAC input data buffer
- ***uint16_t FMAC_HandleTypeDef::InputCurrentSize***
  Number of the input elements already written into FMAC
- ***uint16_t* FMAC_HandleTypeDef::pInputSize***
  Number of input elements to write (memory allocated to pInput). In case of early interruption of the filter operation, its value will be updated.
- ***int16_t* FMAC_HandleTypeDef::pOutput***
  Pointer to FMAC output data buffer
- ***uint16_t FMAC_HandleTypeDef::OutputCurrentSize***
  Number of the output elements already read from FMAC

- ***uint16_t* FMAC_HandleTypeDef::pOutputSize***
  Number of output elements to read (memory allocated to pOutput). In case of early interruption of the filter operation, its value will be updated.
- ***DMA_HandleTypeDef* FMAC_HandleTypeDef::hdmaIn***
  FMAC peripheral input data DMA handle parameters
- ***DMA_HandleTypeDef* FMAC_HandleTypeDef::hdmaOut***
  FMAC peripheral output data DMA handle parameters
- ***DMA_HandleTypeDef* FMAC_HandleTypeDef::hdmaPreload***
  FMAC peripheral preloaded data (X1, X2 and Y) DMA handle parameters
- ***HAL_LockTypeDef FMAC_HandleTypeDef::Lock***
  FMAC locking object
- ***__IO HAL_FMAC_StateTypeDef FMAC_HandleTypeDef::State***
  FMAC state related to global handle management This parameter can be a value of **HAL_FMAC_StateTypeDef**
- ***__IO HAL_FMAC_StateTypeDef FMAC_HandleTypeDef::RdState***
  FMAC state related to read operations (access to Y buffer) This parameter can be a value of **HAL_FMAC_StateTypeDef**
- ***__IO HAL_FMAC_StateTypeDef FMAC_HandleTypeDef::WrState***
  FMAC state related to write operations (access to X1 buffer) This parameter can be a value of **HAL_FMAC_StateTypeDef**
- ***__IO uint32_t FMAC_HandleTypeDef::ErrorCode***
  FMAC peripheral error code This parameter can be a value of ***FMAC_Error_Code***

25.1.2 FMAC_FilterConfigTypeDef

FMAC_FilterConfigTypeDef is defined in the stm32g4xx_hal_fmac.h

Data Fields

- ***uint8_t InputBaseAddress***
- ***uint8_t InputBufferSize***
- ***uint32_t InputThreshold***
- ***uint8_t CoeffBaseAddress***
- ***uint8_t CoeffBufferSize***
- ***uint8_t OutputBaseAddress***
- ***uint8_t OutputBufferSize***
- ***uint32_t OutputThreshold***
- ***int16_t * pCoeffA***
- ***uint8_t CoeffASize***
- ***int16_t * pCoeffB***
- ***uint8_t CoeffBSize***
- ***uint8_t InputAccess***
- ***uint8_t OutputAccess***
- ***uint32_t Clip***
- ***uint32_t Filter***
- ***uint8_t P***
- ***uint8_t Q***
- ***uint8_t R***

Field Documentation

- ***uint8_t FMAC_FilterConfigTypeDef::InputBaseAddress***
  Base address of the input buffer (X1) within the internal memory (0x00 to 0xFF). Ignored if InputBufferSize is set to 0 (previous configuration kept). Note: the buffers can overlap or even coincide exactly.

- ***uint8_t FMAC_FilterConfigTypeDef::InputBufferSize***
  Number of 16-bit words allocated to the input buffer (including the optional "headroom"). 0 if a previous configuration should be kept.
- ***uint32_t FMAC_FilterConfigTypeDef::InputThreshold***
  Input threshold: the buffer full flag will be set if the number of free spaces in the buffer is lower than this threshold. This parameter can be a value of ***FMAC_Data_Buffer_Threshold***.
- ***uint8_t FMAC_FilterConfigTypeDef::CoeffBaseAddress***
  Base address of the coefficient buffer (X2) within the internal memory (0x00 to 0xFF). Ignored if CoeffBufferSize is set to 0 (previous configuration kept). Note: the buffers can overlap or even coincide exactly.
- ***uint8_t FMAC_FilterConfigTypeDef::CoeffBufferSize***
  Number of 16-bit words allocated to the coefficient buffer. 0 if a previous configuration should be kept.
- ***uint8_t FMAC_FilterConfigTypeDef::OutputBaseAddress***
  Base address of the output buffer (Y) within the internal memory (0x00 to 0xFF). Ignored if OuputBufferSize is set to 0 (previous configuration kept). Note: the buffers can overlap or even coincide exactly.
- ***uint8_t FMAC_FilterConfigTypeDef::OutputBufferSize***
  Number of 16-bit words allocated to the output buffer (including the optional "headroom"). 0 if a previous configuration should be kept.
- ***uint32_t FMAC_FilterConfigTypeDef::OutputThreshold***
  Output threshold: the buffer empty flag will be set if the number of unread values in the buffer is lower than this threshold. This parameter can be a value of ***FMAC_Data_Buffer_Threshold***.
- ***int16_t* FMAC_FilterConfigTypeDef::pCoeffA***
  [IIR only] Initialization of the coefficient vector A. If not needed, it should be set to NULL.
- ***uint8_t FMAC_FilterConfigTypeDef::CoeffASize***
  Size of the coefficient vector A.
- ***int16_t* FMAC_FilterConfigTypeDef::pCoeffB***
  Initialization of the coefficient vector B. If not needed (re-use of a previously loaded buffer), it should be set to NULL.
- ***uint8_t FMAC_FilterConfigTypeDef::CoeffBSize***
  Size of the coefficient vector B.
- ***uint8_t FMAC_FilterConfigTypeDef::InputAccess***
  Access to the input buffer (internal memory area): DMA, IT, Polling, None. This parameter can be a value of ***FMAC_Buffer_Access***.
- ***uint8_t FMAC_FilterConfigTypeDef::OutputAccess***
  Access to the output buffer (internal memory area): DMA, IT, Polling, None. This parameter can be a value of ***FMAC_Buffer_Access***.
- ***uint32_t FMAC_FilterConfigTypeDef::Clip***
  Enable or disable the clipping feature. If the q1.15 range is exceeded, wrapping is done when the clipping feature is disabled and saturation is done when the clipping feature is enabled. This parameter can be a value of ***FMAC_Clip_State***.
- ***uint32_t FMAC_FilterConfigTypeDef::Filter***
  Filter type. This parameter can be a value of ***FMAC_Functions*** (filter related values).
- ***uint8_t FMAC_FilterConfigTypeDef::P***
  Parameter P (vector length, number of filter taps, etc.).
- ***uint8_t FMAC_FilterConfigTypeDef::Q***
  Parameter Q (vector length, etc.). Ignored if not needed.
- ***uint8_t FMAC_FilterConfigTypeDef::R***
  Parameter R (gain, etc.). Ignored if not needed.

25.2 FMAC Firmware driver API description

The following section lists the various functions of the FMAC library.

25.2.1 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize the FMAC peripheral and the associated handle
- DeInitialize the FMAC peripheral
- Initialize the FMAC MSP (MCU Specific Package)
- De-Initialize the FMAC MSP
- Register a User FMAC Callback
- Unregister a FMAC CallBack

This section contains the following APIs:

- ***HAL_FMAC_Init***
- ***HAL_FMAC_DeInit***
- ***HAL_FMAC_MspInit***
- ***HAL_FMAC_MspDeInit***

25.2.2 Peripheral Control functions

This section provides functions allowing to:

- Configure the FMAC peripheral: memory area, filter type and parameters, way to access to the input and output memory area (none, polling, IT, DMA).
- Start the FMAC processing (filter).
- Handle the input data that will be provided into FMAC.
- Handle the output data provided by FMAC.
- Stop the FMAC processing (filter).

This section contains the following APIs:

- ***HAL_FMAC_FilterConfig***
- ***HAL_FMAC_FilterConfig_DMA***
- ***HAL_FMAC_FilterPreload***
- ***HAL_FMAC_FilterPreload_DMA***
- ***HAL_FMAC_FilterStart***
- ***HAL_FMAC_AppendFilterData***
- ***HAL_FMAC_ConfigFilterOutputBuffer***
- ***HAL_FMAC_PollFilterData***
- ***HAL_FMAC_FilterStop***

25.2.3 Callback functions

This section provides Interruption and DMA callback functions:

- DMA or Interrupt: the user's input data is half written (DMA only) or completely written.
- DMA or Interrupt: the user's output buffer is half filled (DMA only) or completely filled.
- DMA or Interrupt: error handling.

This section contains the following APIs:

- ***HAL_FMAC_ErrorCallback***
- ***HAL_FMAC_HalfGetDataCallback***
- ***HAL_FMAC_GetDataCallback***
- ***HAL_FMAC_HalfOutputDataReadyCallback***
- ***HAL_FMAC_OutputDataReadyCallback***
- ***HAL_FMAC_FilterConfigCallback***
- ***HAL_FMAC_FilterPreloadCallback***

25.2.4 IRQ handler management

This section provides IRQ handler function.

This section contains the following APIs:

- *HAL_FMAC_IRQHandler*

25.2.5 Peripheral State and Error functions

This subsection provides functions allowing to

- Check the FMAC state
- Get error code

This section contains the following APIs:

- *HAL_FMAC_GetState*
- *HAL_FMAC_GetError*

25.2.6 Detailed description of functions

HAL_FMAC_Init

Function name

HAL_StatusTypeDef HAL_FMAC_Init (FMAC_HandleTypeDef * hfmac)

Function description

Initialize the FMAC peripheral and the associated handle.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure.

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_DeInit

Function name

HAL_StatusTypeDef HAL_FMAC_DeInit (FMAC_HandleTypeDef * hfmac)

Function description

De-initialize the FMAC peripheral.

Parameters

- **hfmac:** pointer to a FMAC structure.

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_MspInit

Function name

void HAL_FMAC_MspInit (FMAC_HandleTypeDef * hfmac)

Function description

Initialize the FMAC MSP.

Parameters

- **hfmac:** FMAC handle.

Return values

- **None:**

HAL_FMAC_MspDeInit

Function name

void HAL_FMAC_MspDeInit (FMAC_HandleTypeDef * hfmac)

Function description

De-initialize the FMAC MSP.

Parameters

- **hfmac:** FMAC handle.

Return values

- **None:**

HAL_FMAC_FilterConfig

Function name

HAL_StatusTypeDef HAL_FMAC_FilterConfig (FMAC_HandleTypeDef * hfmac, FMAC_FilterConfigTypeDef * pConfig)

Function description

Configure the FMAC filter.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pConfig:** pointer to a FMAC_FilterConfigTypeDef structure that contains the FMAC configuration information.

Return values

- **HAL_StatusTypeDef:** HAL status

Notes

- The configuration is done according to the parameters specified in the FMAC_FilterConfigTypeDef structure. The provided data will be loaded using polling mode.

HAL_FMAC_FilterConfig_DMA

Function name

HAL_StatusTypeDef HAL_FMAC_FilterConfig_DMA (FMAC_HandleTypeDef * hfmac, FMAC_FilterConfigTypeDef * pConfig)

Function description

Configure the FMAC filter.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pConfig:** pointer to a FMAC_FilterConfigTypeDef structure that contains the FMAC configuration information.

Return values

- **HAL_StatusTypeDef:** HAL status

Notes

- The configuration is done according to the parameters specified in the FMAC_FilterConfigTypeDef structure. The provided data will be loaded using DMA.

HAL_FMAC_FilterPreload

Function name

HAL_StatusTypeDef HAL_FMAC_FilterPreload (FMAC_HandleTypeDef * hfmac, int16_t * pInput, uint8_t InputSize, int16_t * pOutput, uint8_t OutputSize)

Function description

Preload the input (FIR, IIR) and output data (IIR) of the FMAC filter.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pInput:** Preloading of the first elements of the input buffer (X1). If not needed (no data available when starting), it should be set to NULL.
- **InputSize:** Size of the input vector. As pInput is used for preloading data, it cannot be bigger than the input memory area.
- **pOutput:** [IIR] Preloading of the first elements of the output vector (Y). If not needed, it should be set to NULL.
- **OutputSize:** Size of the output vector. As pOutput is used for preloading data, it cannot be bigger than the output memory area.

Return values

- **HAL_StatusTypeDef:** HAL status

Notes

- The set(s) of data will be used by FMAC as soon as HAL_FMAC_FilterStart is called. The provided data will be loaded using polling mode.
- The input and the output buffers can be filled by calling several times HAL_FMAC_FilterPreload (each call filling partly the buffers). In case of overflow (too much data provided through all these calls), an error will be returned.

HAL_FMAC_FilterPreload_DMA

Function name

HAL_StatusTypeDef HAL_FMAC_FilterPreload_DMA (FMAC_HandleTypeDef * hfmac, int16_t * pInput, uint8_t InputSize, int16_t * pOutput, uint8_t OutputSize)

Function description

Preload the input (FIR, IIR) and output data (IIR) of the FMAC filter.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pInput:** Preloading of the first elements of the input buffer (X1). If not needed (no data available when starting), it should be set to NULL.
- **InputSize:** Size of the input vector. As pInput is used for preloading data, it cannot be bigger than the input memory area.
- **pOutput:** [IIR] Preloading of the first elements of the output vector (Y). If not needed, it should be set to NULL.
- **OutputSize:** Size of the output vector. As pOutput is used for preloading data, it cannot be bigger than the output memory area.

Return values

- **HAL_StatusTypeDef:** HAL status

Notes

- The set(s) of data will be used by FMAC as soon as HAL_FMAC_FilterStart is called. The provided data will be loaded using DMA.
- The input and the output buffers can be filled by calling several times HAL_FMAC_FilterPreload (each call filling partly the buffers). In case of overflow (too much data provided through all these calls), an error will be returned.

HAL_FMAC_FilterStart

Function name

HAL_StatusTypeDef HAL_FMAC_FilterStart (FMAC_HandleTypeDef * hfmac, int16_t * pOutput, uint16_t * pOutputSize)

Function description

Start the FMAC processing according to the existing FMAC configuration.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pOutput:** pointer to buffer where output data of FMAC processing will be stored in the next steps. If it is set to NULL, the output will not be read and it will be up to an external IP to empty the output buffer.
- **pOutputSize:** pointer to the size of the output buffer. The number of read data will be written here.

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_AppendFilterData

Function name

HAL_StatusTypeDef HAL_FMAC_AppendFilterData (FMAC_HandleTypeDef * hfmac, int16_t * pInput, uint16_t * pInputSize)

Function description

Provide a new input buffer that will be loaded into the FMAC input memory area.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pInput:** New input vector (additional input data).
- **pInputSize:** Size of the input vector (if all the data can't be written, it will be updated with the number of data read from FMAC).

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_ConfigFilterOutputBuffer

Function name

HAL_StatusTypeDef HAL_FMAC_ConfigFilterOutputBuffer (FMAC_HandleTypeDef * hfmac, int16_t * pOutput, uint16_t * pOutputSize)

Function description

Provide a new output buffer to be filled with the data computed by FMAC unit.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **pOutput:** New output vector.
- **pOutputSize:** Size of the output vector (if the vector can't be entirely filled, pOutputSize will be updated with the number of data read from FMAC).

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_PollFilterData

Function name

HAL_StatusTypeDef HAL_FMAC_PollFilterData (FMAC_HandleTypeDef * hfmac, uint32_t Timeout)

Function description

Handle the input and/or output data in polling mode.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.
- **Timeout:** timeout value.

Return values

- **HAL_StatusTypeDef:** HAL status

Notes

- This function writes the previously provided user's input data and fills the previously provided user's output buffer, according to the existing FMAC configuration (polling mode only). The function returns when the input data has been handled or when the output data is filled. The possible unused data isn't kept. It will be up to the user to handle it. The previously provided pInputSize and pOutputSize will be used to indicate to the size of the read/written data to the user.

HAL_FMAC_FilterStop

Function name

HAL_StatusTypeDef HAL_FMAC_FilterStop (FMAC_HandleTypeDef * hfmac)

Function description

Stop the FMAC processing.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **HAL_StatusTypeDef:** HAL status

HAL_FMAC_ErrorCallback

Function name

void HAL_FMAC_ErrorCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC error callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_HalfGetDataCallback

Function name

void HAL_FMAC_HalfGetDataCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC get half data callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_GetDataCallback

Function name

void HAL_FMAC_GetDataCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC get data callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_HalfOutputDataReadyCallback

Function name

void HAL_FMAC_HalfOutputDataReadyCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC half output data ready callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_OutputDataReadyCallback

Function name

void HAL_FMAC_OutputDataReadyCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC output data ready callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_FilterConfigCallback

Function name

void HAL_FMAC_FilterConfigCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC filter configuration callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_FilterPreloadCallback

Function name

void HAL_FMAC_FilterPreloadCallback (FMAC_HandleTypeDef * hfmac)

Function description

FMAC filter preload callback.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_IRQHandler

Function name

void HAL_FMAC_IRQHandler (FMAC_HandleTypeDef * hfmac)

Function description

Handle FMAC interrupt request.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **None:**

HAL_FMAC_GetState

Function name

HAL_FMAC_StateTypeDef HAL_FMAC_GetState (FMAC_HandleTypeDef * hfmac)

Function description

Return the FMAC state.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **HAL_FMAC_StateTypeDef:** FMAC state

HAL_FMAC_GetError

Function name

uint32_t HAL_FMAC_GetError (FMAC_HandleTypeDef * hfmac)

Function description

Return the FMAC peripheral error.

Parameters

- **hfmac:** pointer to a FMAC_HandleTypeDef structure that contains the configuration information for FMAC module.

Return values

- **uint32_t:** Error bit-map based on FMAC Error code

Notes

- The returned error is a bit-map combination of possible errors.

25.3 FMAC Firmware driver defines

The following section lists the various define and macros of the module.

25.3.1 FMAC

FMAC

FMAC Buffer Access

FMAC_BUFFER_ACCESS_NONE

Buffer handled by an external IP (ADC for instance)

FMAC_BUFFER_ACCESS_DMA

Buffer accessed through DMA

FMAC_BUFFER_ACCESS_POLLING

Buffer accessed through polling

FMAC_BUFFER_ACCESS_IT

Buffer accessed through interruptions

FMAC Clip State

FMAC_CLIP_DISABLED

Clipping disabled

FMAC_CLIP_ENABLED

Clipping enabled

FMAC Data Buffer Threshold

FMAC_THRESHOLD_1

Input: Buffer full flag set if the number of free spaces in the buffer is less than 1. Output: Buffer empty flag set if the number of unread values in the buffer is less than 1.

FMAC_THRESHOLD_2

Input: Buffer full flag set if the number of free spaces in the buffer is less than 2. Output: Buffer empty flag set if the number of unread values in the buffer is less than 2.

FMAC_THRESHOLD_4

Input: Buffer full flag set if the number of free spaces in the buffer is less than 4. Output: Buffer empty flag set if the number of unread values in the buffer is less than 4.

FMAC_THRESHOLD_8

Input: Buffer full flag set if the number of free spaces in the buffer is less than 8. Output: Buffer empty flag set if the number of unread values in the buffer is less than 8.

FMAC_THRESHOLD_NO_VALUE

The configured threshold value shouldn't be changed

FMAC Error code

HAL_FMAC_ERROR_NONE

No error

HAL_FMAC_ERROR_SAT

Saturation error

HAL_FMAC_ERROR_UNFL

Underflow error

HAL_FMAC_ERROR_OVFL

Overflow error

HAL_FMAC_ERROR_DMA

DMA error

HAL_FMAC_ERROR_RESET

Reset error

HAL_FMAC_ERROR_PARAM

Parameter error

HAL_FMAC_ERROR_TIMEOUT

Timeout error

FMAC Exported Macros

__HAL_FMAC_RESET_HANDLE_STATE

Description:

- Reset FMAC handle state.

Parameters:

- __HANDLE__: FMAC handle.

Return value:

- None

__HAL_FMAC_ENABLE_IT

Description:

- Enable the specified FMAC interrupt.

Parameters:

- __HANDLE__: FMAC handle.
- __INTERRUPT__: FMAC Interrupt. This parameter can be any combination of the following values:
  - FMAC_IT_RIEN Read interrupt enable
  - FMAC_IT_WIEN Write interrupt enable
  - FMAC_IT_OVFLIEN Overflow error interrupt enable
  - FMAC_IT_UNFLIEN Underflow error interrupt enable
  - FMAC_IT_SATIEN Saturation error interrupt enable (this helps in debugging a filter)

Return value:

- None

__HAL_FMAC_DISABLE_IT

Description:

- Disable the FMAC interrupt.

Parameters:

- __HANDLE__: FMAC handle.
- __INTERRUPT__: FMAC Interrupt. This parameter can be any combination of the following values:
  - FMAC_IT_RIEN Read interrupt enable
  - FMAC_IT_WIEN Write interrupt enable
  - FMAC_IT_OVFLIEN Overflow error interrupt enable
  - FMAC_IT_UNFLIEN Underflow error interrupt enable
  - FMAC_IT_SATIEN Saturation error interrupt enable (this helps in debugging a filter)

Return value:

- None

__HAL_FMAC_GET_IT

Description:

- Check whether the specified FMAC interrupt occurred or not.

Parameters:

- __HANDLE__: FMAC handle.
- __INTERRUPT__: FMAC interrupt to check. This parameter can be any combination of the following values:
  - FMAC_FLAG_YEMPTY Y Buffer Empty Flag
  - FMAC_FLAG_X1FULL X1 Buffer Full Flag
  - FMAC_FLAG_OVFL Overflow Error Flag
  - FMAC_FLAG_UNFL Underflow Error Flag
  - FMAC_FLAG_SAT Saturation Error Flag

Return value:

- SET: (interrupt occurred) or RESET (interrupt did not occurred)

__HAL_FMAC_CLEAR_IT

Description:

- Clear specified FMAC interrupt status.

Parameters:

- __HANDLE__: FMAC handle.
- __INTERRUPT__: FMAC interrupt to clear.

Return value:

- None

__HAL_FMAC_GET_FLAG

Description:

- Check whether the specified FMAC status flag is set or not.

Parameters:

- __HANDLE__: FMAC handle.
- __FLAG__: FMAC flag to check. This parameter can be any combination of the following values:
  - FMAC_FLAG_YEMPTY Y Buffer Empty Flag
  - FMAC_FLAG_X1FULL X1 Buffer Full Flag
  - FMAC_FLAG_OVFL Overflow Error Flag
  - FMAC_FLAG_UNFL Underflow Error Flag
  - FMAC_FLAG_SAT Saturation error Flag

Return value:

- SET: (flag is set) or RESET (flag is reset)

__HAL_FMAC_CLEAR_FLAG

Description:

- Clear specified FMAC status flag.

Parameters:

- __HANDLE__: FMAC handle.
- __FLAG__: FMAC flag to clear.

Return value:

- None

__HAL_FMAC_GET_IT_SOURCE

Description:

- Check whether the specified FMAC interrupt is enabled or not.

Parameters:

- __HANDLE__: FMAC handle.
- __INTERRUPT__: FMAC interrupt to check. This parameter can be one of the following values:
  - FMAC_IT_RIEN Read interrupt enable
  - FMAC_IT_WIEN Write interrupt enable
  - FMAC_IT_OVFLIEN Overflow error interrupt enable
  - FMAC_IT_UNFLIEN Underflow error interrupt enable
  - FMAC_IT_SATIEN Saturation error interrupt enable (this helps in debugging a filter)

Return value:

- FlagStatus

FMAC status flags

FMAC_FLAG_YEMPTY

Y Buffer Empty Flag

FMAC_FLAG_X1FULL

X1 Buffer Full Flag

FMAC_FLAG_OVFL

Overflow Error Flag

FMAC_FLAG_UNFL

Underflow Error Flag

FMAC_FLAG_SAT

Saturation Error Flag (this helps in debugging a filter)

FMAC Functions

FMAC_FUNC_LOAD_X1

Load X1 buffer

FMAC_FUNC_LOAD_X2

Load X2 buffer

FMAC_FUNC_LOAD_Y

Load Y buffer

FMAC_FUNC_CONVO_FIR

Convolution (FIR filter)

FMAC_FUNC_IIR_DIRECT_FORM_1

IIR filter (direct form 1)

FMAC Interrupts Enable bit

FMAC_IT_RIEN

Read Interrupt Enable

FMAC_IT_WIEN

Write Interrupt Enable

FMAC_IT_OVFLIEN

Overflow Error Interrupt Enable

FMAC_IT_UNFLIEN

Underflow Error Interrupt Enable

FMAC_IT_SATIEN

Saturation Error Interrupt Enable (this helps in debugging a filter)

26 HAL GPIO Generic Driver

26.1 GPIO Firmware driver registers structures

26.1.1 GPIO_InitTypeDef

GPIO_InitTypeDef is defined in the stm32g4xx_hal_gpio.h

Data Fields

- ***uint32_t Pin***
- ***uint32_t Mode***
- ***uint32_t Pull***
- ***uint32_t Speed***
- ***uint32_t Alternate***

Field Documentation

- ***uint32_t GPIO_InitTypeDef::Pin***
  Specifies the GPIO pins to be configured. This parameter can be any value of ***GPIO_pins***
- ***uint32_t GPIO_InitTypeDef::Mode***
  Specifies the operating mode for the selected pins. This parameter can be a value of ***GPIO_mode***
- ***uint32_t GPIO_InitTypeDef::Pull***
  Specifies the Pull-up or Pull-Down activation for the selected pins. This parameter can be a value of ***GPIO_pull***
- ***uint32_t GPIO_InitTypeDef::Speed***
  Specifies the speed for the selected pins. This parameter can be a value of ***GPIO_speed***
- ***uint32_t GPIO_InitTypeDef::Alternate***
  Peripheral to be connected to the selected pins This parameter can be a value of ***GPIOEx_Alternate_function_selection***

26.2 GPIO Firmware driver API description

The following section lists the various functions of the GPIO library.

26.2.1 GPIO Peripheral features

- Each port bit of the general-purpose I/O (GPIO) ports can be individually configured by software in several modes:
  - Input mode
  - Analog mode
  - Output mode
  - Alternate function mode
  - External interrupt/event lines
- During and just after reset, the alternate functions and external interrupt lines are not active and the I/O ports are configured in input floating mode.
- All GPIO pins have weak internal pull-up and pull-down resistors, which can be activated or not.
- In Output or Alternate mode, each IO can be configured on open-drain or push-pull type and the IO speed can be selected depending on the VDD value.
- The microcontroller IO pins are connected to onboard peripherals/modules through a multiplexer that allows only one peripheral alternate function (AF) connected to an IO pin at a time. In this way, there can be no conflict between peripherals sharing the same IO pin.
- All ports have external interrupt/event capability. To use external interrupt lines, the port must be configured in input mode. All available GPIO pins are connected to the 16 external interrupt/event lines from EXTI0 to EXTI15.

- The external interrupt/event controller consists of up to 44 edge detectors (16 lines are connected to GPIO) for generating event/interrupt requests (each input line can be independently configured to select the type (interrupt or event) and the corresponding trigger event (rising or falling or both). Each line can also be masked independently.

26.2.2 How to use this driver

1. Enable the GPIO AHB clock using the following function: __HAL_RCC_GPIOx_CLK_ENABLE().
2. Configure the GPIO pin(s) using HAL_GPIO_Init().
   - Configure the IO mode using "Mode" member from GPIO_InitTypeDef structure
   - Activate Pull-up, Pull-down resistor using "Pull" member from GPIO_InitTypeDef structure.
   - In case of Output or alternate function mode selection: the speed is configured through "Speed" member from GPIO_InitTypeDef structure.
   - In alternate mode is selection, the alternate function connected to the IO is configured through "Alternate" member from GPIO_InitTypeDef structure.
   - Analog mode is required when a pin is to be used as ADC channel or DAC output.
   - In case of external interrupt/event selection the "Mode" member from GPIO_InitTypeDef structure select the type (interrupt or event) and the corresponding trigger event (rising or falling or both).
3. In case of external interrupt/event mode selection, configure NVIC IRQ priority mapped to the EXTI line using HAL_NVIC_SetPriority() and enable it using HAL_NVIC_EnableIRQ().
4. To get the level of a pin configured in input mode use HAL_GPIO_ReadPin().
5. To set/reset the level of a pin configured in output mode use HAL_GPIO_WritePin()/HAL_GPIO_TogglePin().
6. To lock pin configuration until next reset use HAL_GPIO_LockPin().
7. During and just after reset, the alternate functions are not active and the GPIO pins are configured in input floating mode (except JTAG pins).
8. The LSE oscillator pins OSC32_IN and OSC32_OUT can be used as general purpose (PC14 and PC15, respectively) when the LSE oscillator is off. The LSE has priority over the GPIO function.
9. The HSE oscillator pins OSC_IN/OSC_OUT can be used as general purpose PF0 and PF1, respectively, when the HSE oscillator is off. The HSE has priority over the GPIO function.

26.2.3 Initialization and de-initialization functions

This section contains the following APIs:

- ***HAL_GPIO_Init***
- ***HAL_GPIO_DeInit***

26.2.4 Detailed description of functions

HAL_GPIO_Init

Function name

void HAL_GPIO_Init (GPIO_TypeDef * GPIOx, GPIO_InitTypeDef * GPIO_Init)

Function description

Initialize the GPIOx peripheral according to the specified parameters in the GPIO_Init.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Init:** pointer to a GPIO_InitTypeDef structure that contains the configuration information for the specified GPIO peripheral.

Return values

- **None:**

HAL_GPIO_DeInit

Function name

void HAL_GPIO_DeInit (GPIO_TypeDef * GPIOx, uint32_t GPIO_Pin)

Function description

De-initialize the GPIOx peripheral registers to their default reset values.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Pin:** specifies the port bit to be written. This parameter can be any combination of GPIO_PIN_x where x can be (0..15).

Return values

- **None:**

HAL_GPIO_ReadPin

Function name

GPIO_PinState HAL_GPIO_ReadPin (GPIO_TypeDef * GPIOx, uint16_t GPIO_Pin)

Function description

Read the specified input port pin.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Pin:** specifies the port bit to read. This parameter can be any combination of GPIO_PIN_x where x can be (0..15).

Return values

- **The:** input port pin value.

HAL_GPIO_WritePin

Function name

void HAL_GPIO_WritePin (GPIO_TypeDef * GPIOx, uint16_t GPIO_Pin, GPIO_PinState PinState)

Function description

Set or clear the selected data port bit.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Pin:** specifies the port bit to be written. This parameter can be any combination of GPIO_PIN_x where x can be (0..15).
- **PinState:** specifies the value to be written to the selected bit. This parameter can be one of the GPIO_PinState enum values:
  - GPIO_PIN_RESET: to clear the port pin
  - GPIO_PIN_SET: to set the port pin

Return values

- **None:**

Notes

- This function uses GPIOx_BSRR and GPIOx_BRR registers to allow atomic read/modify accesses. In this way, there is no risk of an IRQ occurring between the read and the modify access.

HAL_GPIO_TogglePin

Function name

void HAL_GPIO_TogglePin (GPIO_TypeDef * GPIOx, uint16_t GPIO_Pin)

Function description

Toggle the specified GPIO pin.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Pin:** specifies the pin to be toggled. This parameter can be any combination of GPIO_PIN_x where x can be (0..15).

Return values

- **None:**

HAL_GPIO_LockPin

Function name

HAL_StatusTypeDef HAL_GPIO_LockPin (GPIO_TypeDef * GPIOx, uint16_t GPIO_Pin)

Function description

Lock GPIO Pins configuration registers.

Parameters

- **GPIOx:** where x can be (A..G) to select the GPIO peripheral for STM32G4xx family
- **GPIO_Pin:** specifies the port bits to be locked. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

- **None:**

Notes

- The locked registers are GPIOx_MODER, GPIOx_OTYPER, GPIOx_OSPEEDR, GPIOx_PUPDR, GPIOx_AFRL and GPIOx_AFRH.
- The configuration of the locked GPIO pins can no longer be modified until the next reset.

HAL_GPIO_EXTI_IRQHandler

Function name

void HAL_GPIO_EXTI_IRQHandler (uint16_t GPIO_Pin)

Function description

Handle EXTI interrupt request.

Parameters

- **GPIO_Pin:** Specifies the port pin connected to corresponding EXTI line.

Return values

- **None:**

HAL_GPIO_EXTI_Callback

Function name

void HAL_GPIO_EXTI_Callback (uint16_t GPIO_Pin)

Function description

EXTI line detection callback.

Parameters

- **GPIO_Pin:** Specifies the port pin connected to corresponding EXTI line.

Return values

- **None:**

26.3 GPIO Firmware driver defines

The following section lists the various define and macros of the module.

26.3.1 GPIO

GPIO

GPIO Exported Macros

__HAL_GPIO_EXTI_GET_FLAG

Description:

- Check whether the specified EXTI line flag is set or not.

Parameters:

- __EXTI_LINE__: specifies the EXTI line flag to check. This parameter can be GPIO_PIN_x where x can be(0..15)

Return value:

- The: new state of __EXTI_LINE__ (SET or RESET).

__HAL_GPIO_EXTI_CLEAR_FLAG

Description:

- Clear the EXTI's line pending flags.

Parameters:

- __EXTI_LINE__: specifies the EXTI lines flags to clear. This parameter can be any combination of GPIO_PIN_x where x can be (0..15)

Return value:

- None

__HAL_GPIO_EXTI_GET_IT

Description:

- Check whether the specified EXTI line is asserted or not.

Parameters:

- __EXTI_LINE__: specifies the EXTI line to check. This parameter can be GPIO_PIN_x where x can be(0..15)

Return value:

- The: new state of __EXTI_LINE__ (SET or RESET).

__HAL_GPIO_EXTI_CLEAR_IT

Description:

- Clear the EXTI's line pending bits.

Parameters:

- __EXTI_LINE__: specifies the EXTI lines to clear. This parameter can be any combination of GPIO_PIN_x where x can be (0..15)

Return value:

- None

__HAL_GPIO_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Parameters:

- __EXTI_LINE__: specifies the EXTI line to check. This parameter can be GPIO_PIN_x where x can be(0..15)

Return value:

- None

GPIO mode

GPIO_MODE_INPUT

Input Floating Mode

GPIO_MODE_OUTPUT_PP

Output Push Pull Mode

GPIO_MODE_OUTPUT_OD

Output Open Drain Mode

GPIO_MODE_AF_PP

Alternate Function Push Pull Mode

28 HAL HRTIM Generic Driver

28.1 HRTIM Firmware driver registers structures

28.1.1 HRTIM_InitTypeDef

HRTIM_InitTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t HRTIMInterruptResquests***
- ***uint32_t SyncOptions***
- ***uint32_t SyncInputSource***
- ***uint32_t SyncOutputSource***
- ***uint32_t SyncOutputPolarity***

Field Documentation

- ***uint32_t HRTIM_InitTypeDef::HRTIMInterruptResquests***

  Specifies which interrupts requests must enabled for the HRTIM instance. This parameter can be any combination of ***HRTIM_Common_Interrupt_Enable***
- ***uint32_t HRTIM_InitTypeDef::SyncOptions***

  Specifies how the HRTIM instance handles the external synchronization signals. The HRTIM instance can be configured to act as a slave (waiting for a trigger to be synchronized) or a master (generating a synchronization signal) or both. This parameter can be a combination of ***HRTIM_Synchronization_Options***.
- ***uint32_t HRTIM_InitTypeDef::SyncInputSource***

  Specifies the external synchronization input source (significant only when the HRTIM instance is configured as a slave). This parameter can be a value of ***HRTIM_Synchronization_Input_Source***.
- ***uint32_t HRTIM_InitTypeDef::SyncOutputSource***

  Specifies the source and event to be sent on the external synchronization outputs (significant only when the HRTIM instance is configured as a master). This parameter can be a value of ***HRTIM_Synchronization_Output_Source***
- ***uint32_t HRTIM_InitTypeDef::SyncOutputPolarity***

  Specifies the conditioning of the event to be sent on the external synchronization outputs (significant only when the HRTIM instance is configured as a master). This parameter can be a value of ***HRTIM_Synchronization_Output_Polarity***

28.1.2 HRTIM_TimerParamTypeDef

HRTIM_TimerParamTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t CaptureTrigger1***
- ***uint32_t CaptureTrigger2***
- ***uint32_t InterruptRequests***
- ***uint32_t DMARequests***
- ***uint32_t DMASrcAddress***
- ***uint32_t DMADstAddress***
- ***uint32_t DMASize***

Field Documentation

- ***uint32_t HRTIM_TimerParamTypeDef::CaptureTrigger1***

  Event(s) triggering capture unit 1. When the timer operates in Simple mode, this parameter can be a value of ***HRTIM_External_Event_Channels***. When the timer operates in Waveform mode, this parameter can be a combination of ***HRTIM_Capture_Unit_Trigger***.

- ***uint32_t HRTIM_TimerParamTypeDef::CaptureTrigger2***
  Event(s) triggering capture unit 2. When the timer operates in Simple mode, this parameter can be a value of ***HRTIM_External_Event_Channels***. When the timer operates in Waveform mode, this parameter can be a combination of ***HRTIM_Capture_Unit_Trigger***.
- ***uint32_t HRTIM_TimerParamTypeDef::InterruptRequests***
  Interrupts requests enabled for the timer.
- ***uint32_t HRTIM_TimerParamTypeDef::DMARequests***
  DMA requests enabled for the timer.
- ***uint32_t HRTIM_TimerParamTypeDef::DMASrcAddress***
  Address of the source address of the DMA transfer.
- ***uint32_t HRTIM_TimerParamTypeDef::DMADstAddress***
  Address of the destination address of the DMA transfer.
- ***uint32_t HRTIM_TimerParamTypeDef::DMASize***
  Size of the DMA transfer

28.1.3 HRTIM_HandleTypeDef

HRTIM_HandleTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***HRTIM_TypeDef * Instance***
- ***HRTIM_InitTypeDef Init***
- ***HRTIM_TimerParamTypeDef TimerParam***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_HRTIM_StateTypeDef State***
- ***DMA_HandleTypeDef * hdmaMaster***
- ***DMA_HandleTypeDef * hdmaTimerA***
- ***DMA_HandleTypeDef * hdmaTimerB***
- ***DMA_HandleTypeDef * hdmaTimerC***
- ***DMA_HandleTypeDef * hdmaTimerD***
- ***DMA_HandleTypeDef * hdmaTimerE***
- ***DMA_HandleTypeDef * hdmaTimerF***

Field Documentation

- ***HRTIM_TypeDef* HRTIM_HandleTypeDef::Instance***
  Register base address
- ***HRTIM_InitTypeDef HRTIM_HandleTypeDef::Init***
  HRTIM required parameters
- ***HRTIM_TimerParamTypeDef HRTIM_HandleTypeDef::TimerParam[MAX_HRTIM_TIMER]***
  HRTIM timers - including the master - parameters
- ***HAL_LockTypeDef HRTIM_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_HRTIM_StateTypeDef HRTIM_HandleTypeDef::State***
  HRTIM communication state
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaMaster***
  Master timer DMA handle parameters
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerA***
  Timer A DMA handle parameters
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerB***
  Timer B DMA handle parameters
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerC***
  Timer C DMA handle parameters

- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerD***
  Timer D DMA handle parameters
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerE***
  Timer E DMA handle parameters
- ***DMA_HandleTypeDef* HRTIM_HandleTypeDef::hdmaTimerF***
  Timer F DMA handle parameters

28.1.4 HRTIM_TimeBaseCfgTypeDef

HRTIM_TimeBaseCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Period***
- ***uint32_t RepetitionCounter***
- ***uint32_t PrescalerRatio***
- ***uint32_t Mode***

Field Documentation

- ***uint32_t HRTIM_TimeBaseCfgTypeDef::Period***
  Specifies the timer period. The period value must be above 3 periods of the fHRTIM clock. Maximum value is = 0xFFDFU
- ***uint32_t HRTIM_TimeBaseCfgTypeDef::RepetitionCounter***
  Specifies the timer repetition period. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF.
- ***uint32_t HRTIM_TimeBaseCfgTypeDef::PrescalerRatio***
  Specifies the timer clock prescaler ratio. This parameter can be any value of ***HRTIM_Prescaler_Ratio***
- ***uint32_t HRTIM_TimeBaseCfgTypeDef::Mode***
  Specifies the counter operating mode. This parameter can be any value of ***HRTIM_Counter_Operating_Mode***

28.1.5 HRTIM_SimpleOCChannelCfgTypeDef

HRTIM_SimpleOCChannelCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t Pulse***
- ***uint32_t Polarity***
- ***uint32_t IdleLevel***

Field Documentation

- ***uint32_t HRTIM_SimpleOCChannelCfgTypeDef::Mode***
  Specifies the output compare mode (toggle, active, inactive). This parameter can be any value of of ***HRTIM_Simple_OC_Mode***
- ***uint32_t HRTIM_SimpleOCChannelCfgTypeDef::Pulse***
  Specifies the compare value to be loaded into the Compare Register. The compare value must be above or equal to 3 periods of the fHRTIM clock
- ***uint32_t HRTIM_SimpleOCChannelCfgTypeDef::Polarity***
  Specifies the output polarity. This parameter can be any value of ***HRTIM_Output_Polarity***
- ***uint32_t HRTIM_SimpleOCChannelCfgTypeDef::IdleLevel***
  Specifies whether the output level is active or inactive when in IDLE state. This parameter can be any value of ***HRTIM_Output_IDLE_Level***

28.1.6 HRTIM_SimplePWMChannelCfgTypeDef

HRTIM_SimplePWMChannelCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Pulse***

- ***uint32_t Polarity***
- ***uint32_t IdleLevel***

Field Documentation

- ***uint32_t HRTIM_SimplePWMChannelCfgTypeDef::Pulse***
  Specifies the compare value to be loaded into the Compare Register. The compare value must be above or equal to 3 periods of the fHRTIM clock
- ***uint32_t HRTIM_SimplePWMChannelCfgTypeDef::Polarity***
  Specifies the output polarity. This parameter can be any value of ***HRTIM_Output_Polarity***
- ***uint32_t HRTIM_SimplePWMChannelCfgTypeDef::IdleLevel***
  Specifies whether the output level is active or inactive when in IDLE state. This parameter can be any value of ***HRTIM_Output_IDLE_Level***

28.1.7 HRTIM_SimpleCaptureChannelCfgTypeDef

HRTIM_SimpleCaptureChannelCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Event***
- ***uint32_t EventPolarity***
- ***uint32_t EventSensitivity***
- ***uint32_t EventFilter***

Field Documentation

- ***uint32_t HRTIM_SimpleCaptureChannelCfgTypeDef::Event***
  Specifies the external event triggering the capture. This parameter can be any 'EEVx' value of ***HRTIM_External_Event_Channels***
- ***uint32_t HRTIM_SimpleCaptureChannelCfgTypeDef::EventPolarity***
  Specifies the polarity of the external event (in case of level sensitivity). This parameter can be a value of ***HRTIM_External_Event_Polarity***
- ***uint32_t HRTIM_SimpleCaptureChannelCfgTypeDef::EventSensitivity***
  Specifies the sensitivity of the external event. This parameter can be a value of ***HRTIM_External_Event_Sensitivity***
- ***uint32_t HRTIM_SimpleCaptureChannelCfgTypeDef::EventFilter***
  Defines the frequency used to sample the External Event and the length of the digital filter. This parameter can be a value of ***HRTIM_External_Event_Filter***

28.1.8 HRTIM_SimpleOnePulseChannelCfgTypeDef

HRTIM_SimpleOnePulseChannelCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Pulse***
- ***uint32_t OutputPolarity***
- ***uint32_t OutputIdleLevel***
- ***uint32_t Event***
- ***uint32_t EventPolarity***
- ***uint32_t EventSensitivity***
- ***uint32_t EventFilter***

Field Documentation

- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::Pulse***
  Specifies the compare value to be loaded into the Compare Register. The compare value must be above or equal to 3 periods of the fHRTIM clock
- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::OutputPolarity***
  Specifies the output polarity. This parameter can be any value of ***HRTIM_Output_Polarity***

- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::OutputIdleLevel***
  Specifies whether the output level is active or inactive when in IDLE state. This parameter can be any value of ***HRTIM_Output_IDLE_Level***
- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::Event***
  Specifies the external event triggering the pulse generation. This parameter can be any 'EEVx' value of ***HRTIM_External_Event_Channels***
- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::EventPolarity***
  Specifies the polarity of the external event (in case of level sensitivity). This parameter can be a value of ***HRTIM_External_Event_Polarity***
- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::EventSensitivity***
  Specifies the sensitivity of the external event. This parameter can be a value of ***HRTIM_External_Event_Sensitivity***.
- ***uint32_t HRTIM_SimpleOnePulseChannelCfgTypeDef::EventFilter***
  Defines the frequency used to sample the External Event and the length of the digital filter. This parameter can be a value of ***HRTIM_External_Event_Filter***

28.1.9 HRTIM_TimerCfgTypeDef

HRTIM_TimerCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t InterruptRequests***
- ***uint32_t DMARequests***
- ***uint32_t DMASrcAddress***
- ***uint32_t DMADstAddress***
- ***uint32_t DMASize***
- ***uint32_t HalfModeEnable***
- ***uint32_t InterleavedMode***
- ***uint32_t StartOnSync***
- ***uint32_t ResetOnSync***
- ***uint32_t DACSynchro***
- ***uint32_t PreloadEnable***
- ***uint32_t UpdateGating***
- ***uint32_t BurstMode***
- ***uint32_t RepetitionUpdate***
- ***uint32_t PushPull***
- ***uint32_t FaultEnable***
- ***uint32_t FaultLock***
- ***uint32_t DeadTimeInsertion***
- ***uint32_t DelayedProtectionMode***
- ***uint32_t BalancedIdleAutomaticResume***
- ***uint32_t UpdateTrigger***
- ***uint32_t ResetTrigger***
- ***uint32_t ResetUpdate***
- ***uint32_t ReSyncUpdate***

Field Documentation

- ***uint32_t HRTIM_TimerCfgTypeDef::InterruptRequests***
  Relevant for all HRTIM timers, including the master. Specifies which interrupts requests must enabled for the timer. This parameter can be any combination of ***HRTIM_Master_Interrupt_Enable*** or ***HRTIM_Timing_Unit_Interrupt_Enable***

- ***uint32_t HRTIM_TimerCfgTypeDef::DMARequests***

  Relevant for all HRTIM timers, including the master. Specifies which DMA requests must be enabled for the timer. This parameter can be any combination of ***HRTIM_Master_DMA_Request_Enable*** or ***HRTIM_Timing_Unit_DMA_Request_Enable***
- ***uint32_t HRTIM_TimerCfgTypeDef::DMASrcAddress***

  Relevant for all HRTIM timers, including the master. Specifies the address of the source address of the DMA transfer
- ***uint32_t HRTIM_TimerCfgTypeDef::DMADstAddress***

  Relevant for all HRTIM timers, including the master. Specifies the address of the destination address of the DMA transfer
- ***uint32_t HRTIM_TimerCfgTypeDef::DMASize***

  Relevant for all HRTIM timers, including the master. Specifies the size of the DMA transfer
- ***uint32_t HRTIM_TimerCfgTypeDef::HalfModeEnable***

  Relevant for all HRTIM timers, including the master. Specifies whether or not half mode is enabled This parameter can be any value of ***HRTIM_Half_Mode_Enable***
- ***uint32_t HRTIM_TimerCfgTypeDef::InterleavedMode***

  Relevant for all HRTIM timers, including the master. Specifies whether or not half mode is enabled This parameter can be any value of ***HRTIM_Interleaved_Mode***
- ***uint32_t HRTIM_TimerCfgTypeDef::StartOnSync***

  Relevant for all HRTIM timers, including the master. Specifies whether or not timer is reset by a rising edge on the synchronization input (when enabled). This parameter can be any value of ***HRTIM_Start_On_Sync_Input_Event***
- ***uint32_t HRTIM_TimerCfgTypeDef::ResetOnSync***

  Relevant for all HRTIM timers, including the master. Specifies whether or not timer is reset by a rising edge on the synchronization input (when enabled). This parameter can be any value of ***HRTIM_Reset_On_Sync_Input_Event***
- ***uint32_t HRTIM_TimerCfgTypeDef::DACSynchro***

  Relevant for all HRTIM timers, including the master. Indicates whether or not the a DAC synchronization event is generated. This parameter can be any value of ***HRTIM_DAC_Synchronization***
- ***uint32_t HRTIM_TimerCfgTypeDef::PreloadEnable***

  Relevant for all HRTIM timers, including the master. Specifies whether or not register preload is enabled. This parameter can be any value of ***HRTIM_Register_Preload_Enable***
- ***uint32_t HRTIM_TimerCfgTypeDef::UpdateGating***

  Relevant for all HRTIM timers, including the master. Specifies how the update occurs with respect to a burst DMA transaction or update enable inputs (Slave timers only). This parameter can be any value of ***HRTIM_Update_Gating***
- ***uint32_t HRTIM_TimerCfgTypeDef::BurstMode***

  Relevant for all HRTIM timers, including the master. Specifies how the timer behaves during a burst mode operation. This parameter can be any value of ***HRTIM_Timer_Burst_Mode***
- ***uint32_t HRTIM_TimerCfgTypeDef::RepetitionUpdate***

  Relevant for all HRTIM timers, including the master. Specifies whether or not registers update is triggered by the repetition event. This parameter can be any value of ***HRTIM_Timer_Repetition_Update***
- ***uint32_t HRTIM_TimerCfgTypeDef::PushPull***

  Relevant for Timer A to Timer F. Specifies whether or not the push-pull mode is enabled. This parameter can be any value of ***HRTIM_Timer_Push_Pull_Mode***
- ***uint32_t HRTIM_TimerCfgTypeDef::FaultEnable***

  Relevant for Timer A to Timer F. Specifies which fault channels are enabled for the timer. This parameter can be a combination of ***HRTIM_Timer_Fault_Enabling***
- ***uint32_t HRTIM_TimerCfgTypeDef::FaultLock***

  Relevant for Timer A to Timer F. Specifies whether or not fault enabling status is write protected. This parameter can be a value of ***HRTIM_Timer_Fault_Lock***

- ***uint32_t HRTIM_TimerCfgTypeDef::DeadTimeInsertion***

  Relevant for Timer A to Timer F. Specifies whether or not dead-time insertion is enabled for the timer. This parameter can be a value of ***HRTIM_Timer_Deadtime_Insertion***
- ***uint32_t HRTIM_TimerCfgTypeDef::DelayedProtectionMode***

  Relevant for Timer A to Timer F. Specifies the delayed protection mode. This parameter can be a value of ***HRTIM_Timer_Delayed_Protection_Mode***
- ***uint32_t HRTIM_TimerCfgTypeDef::BalancedIdleAutomaticResume***

  Indicates whether or not outputs are automatically re-enabled after a balanced idle event. This parameters can be any value of ***HRTIM_Output_Balanced_Idle_Auto_Resume***
- ***uint32_t HRTIM_TimerCfgTypeDef::UpdateTrigger***

  Relevant for Timer A to Timer F. Specifies source(s) triggering the timer registers update. This parameter can be a combination of ***HRTIM_Timer_Update_Trigger***
- ***uint32_t HRTIM_TimerCfgTypeDef::ResetTrigger***

  Relevant for Timer A to Timer F. Specifies source(s) triggering the timer counter reset. This parameter can be a combination of ***HRTIM_Timer_Reset_Trigger***
- ***uint32_t HRTIM_TimerCfgTypeDef::ResetUpdate***

  Relevant for Timer A to Timer F. Specifies whether or not registers update is triggered when the timer counter is reset. This parameter can be a value of ***HRTIM_Timer_Reset_Update***
- ***uint32_t HRTIM_TimerCfgTypeDef::ReSyncUpdate***

  Relevant for Timer A to Timer F. Specifies whether update source is coming from the timing unit ***HRTIM_Timer_ReSyncUpdate***

28.1.10 HRTIM_TimerCtlTypeDef

HRTIM_TimerCtlTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t UpDownMode***
- ***uint32_t TrigHalf***
- ***uint32_t GreaterCMP3***
- ***uint32_t GreaterCMP1***
- ***uint32_t DualChannelDacReset***
- ***uint32_t DualChannelDacStep***
- ***uint32_t DualChannelDacEnable***

Field Documentation

- ***uint32_t HRTIM_TimerCtlTypeDef::UpDownMode***

  Relevant for Timer A to Timer F. Specifies whether or not counter is operating in up or up-down counting mode. This parameter can be a value of ***HRTIM_Timer_UpDown_Mode***
- ***uint32_t HRTIM_TimerCtlTypeDef::TrigHalf***

  Relevant for Timer A to Timer F. Specifies whether or not compare 2 is operating in Trigger half mode. This parameter can be a value of ***HRTIM_Timer_TrigHalf_Mode***
- ***uint32_t HRTIM_TimerCtlTypeDef::GreaterCMP3***

  Relevant for Timer A to Timer F. Specifies whether or not compare 3 is operating in compare match or greater mode. This parameter can be a value of ***HRTIM_Timer_GreaterCMP3_Mode***
- ***uint32_t HRTIM_TimerCtlTypeDef::GreaterCMP1***

  Relevant for Timer A to Timer F. Specifies whether or not compare 1 is operating in compare match or greater mode. This parameter can be a value of ***HRTIM_Timer_GreaterCMP1_Mode***
- ***uint32_t HRTIM_TimerCtlTypeDef::DualChannelDacReset***

  Relevant for Timer A to Timer F. Specifies how the hrtim_dac_reset_trgx trigger is generated. This parameter can be a value of ***HRTIM_Timer_DualChannelDac_Reset***
- ***uint32_t HRTIM_TimerCtlTypeDef::DualChannelDacStep***

  Relevant for Timer A to Timer F. Specifies how the hrtim_dac_step_trgx trigger is generated. This parameter can be a value of ***HRTIM_Timer_DualChannelDac_Step***

- ***uint32_t HRTIM_TimerCtlTypeDef::DualChannelDacEnable***

  Relevant for Timer A to Timer F. Enables or not the dual channel DAC triggering mechanism. This parameter can be a value of ***HRTIM_Timer_DualChannelDac_Enable***

28.1.11 HRTIM_CompareCfgTypeDef

HRTIM_CompareCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t CompareValue***
- ***uint32_t AutoDelayedMode***
- ***uint32_t AutoDelayedTimeout***

Field Documentation

- ***uint32_t HRTIM_CompareCfgTypeDef::CompareValue***

  Specifies the compare value of the timer compare unit. The minimum value must be greater than or equal to 3 periods of the fHRTIM clock. The maximum value must be less than or equal to 0xFFFFU - 1 periods of the fHRTIM clock
- ***uint32_t HRTIM_CompareCfgTypeDef::AutoDelayedMode***

  Specifies the auto delayed mode for compare unit 2 or 4. This parameter can be a value of ***HRTIM_Compare_Unit_Auto_Delayed_Mode***
- ***uint32_t HRTIM_CompareCfgTypeDef::AutoDelayedTimeout***

  Specifies compare value for timing unit 1 or 3 when auto delayed mode with time out is selected. CompareValue + AutoDelayedTimeout must be less than 0xFFFFU

28.1.12 HRTIM_CaptureValueTypeDef

HRTIM_CaptureValueTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Value***
- ***uint32_t Dir***

Field Documentation

- ***uint32_t HRTIM_CaptureValueTypeDef::Value***

  Holds the counter value when the capture event occurred. This parameter can be a number between 0x0 and 0xFFFFU
- ***uint32_t HRTIM_CaptureValueTypeDef::Dir***

  Holds the counting direction value when the capture event occurred. This parameter can be a value of ***HRTIM_Timer_UpDown_Mode***

28.1.13 HRTIM_CaptureCfgTypeDef

HRTIM_CaptureCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint64_t Trigger***

Field Documentation

- ***uint64_t HRTIM_CaptureCfgTypeDef::Trigger***

  Specifies source(s) triggering the capture. This parameter can be a combination of ***HRTIM_Capture_Unit_Trigger***

28.1.14 HRTIM_OutputCfgTypeDef

HRTIM_OutputCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Polarity***
- ***uint32_t SetSource***
- ***uint32_t ResetSource***
- ***uint32_t IdleMode***
- ***uint32_t IdleLevel***

- ***uint32_t FaultLevel***
- ***uint32_t ChopperModeEnable***
- ***uint32_t BurstModeEntryDelayed***

Field Documentation

- ***uint32_t HRTIM_OutputCfgTypeDef::Polarity***
  Specifies the output polarity. This parameter can be any value of ***HRTIM_Output_Polarity***
- ***uint32_t HRTIM_OutputCfgTypeDef::SetSource***
  Specifies the event(s) transitioning the output from its inactive level to its active level. This parameter can be a combination of ***HRTIM_Output_Set_Source***
- ***uint32_t HRTIM_OutputCfgTypeDef::ResetSource***
  Specifies the event(s) transitioning the output from its active level to its inactive level. This parameter can be a combination of ***HRTIM_Output_Reset_Source***
- ***uint32_t HRTIM_OutputCfgTypeDef::IdleMode***
  Specifies whether or not the output is affected by a burst mode operation. This parameter can be any value of ***HRTIM_Output_Idle_Mode***
- ***uint32_t HRTIM_OutputCfgTypeDef::IdleLevel***
  Specifies whether the output level is active or inactive when in IDLE state. This parameter can be any value of ***HRTIM_Output_IDLE_Level***
- ***uint32_t HRTIM_OutputCfgTypeDef::FaultLevel***
  Specifies whether the output level is active or inactive when in FAULT state. This parameter can be any value of ***HRTIM_Output_FAULT_Level***
- ***uint32_t HRTIM_OutputCfgTypeDef::ChopperModeEnable***
  Indicates whether or not the chopper mode is enabled This parameter can be any value of ***HRTIM_Output_Chopper_Mode_Enable***
- ***uint32_t HRTIM_OutputCfgTypeDef::BurstModeEntryDelayed***
  Indicates whether or not dead-time is inserted when entering the IDLE state during a burst mode operation. This parameters can be any value of ***HRTIM_Output_Burst_Mode_Entry_Delayed***

28.1.15 HRTIM_TimerEventFilteringCfgTypeDef

HRTIM_TimerEventFilteringCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Filter***
- ***uint32_t Latch***

Field Documentation

- ***uint32_t HRTIM_TimerEventFilteringCfgTypeDef::Filter***
  Specifies the type of event filtering within the timing unit. This parameter can be a value of ***HRTIM_Timer_External_Event_Filter***
- ***uint32_t HRTIM_TimerEventFilteringCfgTypeDef::Latch***
  Specifies whether or not the signal is latched. This parameter can be a value of ***HRTIM_Timer_External_Event_Latch***

28.1.16 HRTIM_DeadTimeCfgTypeDef

HRTIM_DeadTimeCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t RisingValue***
- ***uint32_t RisingSign***
- ***uint32_t RisingLock***
- ***uint32_t RisingSignLock***
- ***uint32_t FallingValue***
- ***uint32_t FallingSign***

- ***uint32_t FallingLock***
- ***uint32_t FallingSignLock***

Field Documentation

- ***uint32_t HRTIM_DeadTimeCfgTypeDef::Prescaler***
  Specifies the dead-time prescaler. This parameter can be a value of ***HRTIM_Deadtime_Prescaler_Ratio***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::RisingValue***
  Specifies the dead-time following a rising edge. This parameter can be a number between 0x0 and 0x1FFU
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::RisingSign***
  Specifies whether the dead-time is positive or negative on rising edge. This parameter can be a value of ***HRTIM_Deadtime_Rising_Sign***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::RisingLock***
  Specifies whether or not dead-time rising settings (value and sign) are write protected. This parameter can be a value of ***HRTIM_Deadtime_Rising_Lock***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::RisingSignLock***
  Specifies whether or not dead-time rising sign is write protected. This parameter can be a value of ***HRTIM_Deadtime_Rising_Sign_Lock***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::FallingValue***
  Specifies the dead-time following a falling edge. This parameter can be a number between 0x0 and 0x1FFU
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::FallingSign***
  Specifies whether the dead-time is positive or negative on falling edge. This parameter can be a value of ***HRTIM_Deadtime_Falling_Sign***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::FallingLock***
  Specifies whether or not dead-time falling settings (value and sign) are write protected. This parameter can be a value of ***HRTIM_Deadtime_Falling_Lock***
- ***uint32_t HRTIM_DeadTimeCfgTypeDef::FallingSignLock***
  Specifies whether or not dead-time falling sign is write protected. This parameter can be a value of ***HRTIM_Deadtime_Falling_Sign_Lock***

28.1.17 HRTIM_ChopperModeCfgTypeDef

HRTIM_ChopperModeCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t CarrierFreq***
- ***uint32_t DutyCycle***
- ***uint32_t StartPulse***

Field Documentation

- ***uint32_t HRTIM_ChopperModeCfgTypeDef::CarrierFreq***
  Specifies the Timer carrier frequency value. This parameter can be a value of ***HRTIM_Chopper_Frequency***
- ***uint32_t HRTIM_ChopperModeCfgTypeDef::DutyCycle***
  Specifies the Timer chopper duty cycle value. This parameter can be a value of ***HRTIM_Chopper_Duty_Cycle***
- ***uint32_t HRTIM_ChopperModeCfgTypeDef::StartPulse***
  Specifies the Timer pulse width value. This parameter can be a value of ***HRTIM_Chopper_Start_Pulse_Width***

28.1.18 HRTIM_EventCfgTypeDef

HRTIM_EventCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Source***
- ***uint32_t Polarity***
- ***uint32_t Sensitivity***
- ***uint32_t Filter***

- ***uint32_t FastMode***

Field Documentation

- ***uint32_t HRTIM_EventCfgTypeDef::Source***
  Identifies the source of the external event. This parameter can be a value of ***HRTIM_External_Event_Sources***
- ***uint32_t HRTIM_EventCfgTypeDef::Polarity***
  Specifies the polarity of the external event (in case of level sensitivity). This parameter can be a value of ***HRTIM_External_Event_Polarity***
- ***uint32_t HRTIM_EventCfgTypeDef::Sensitivity***
  Specifies the sensitivity of the external event. This parameter can be a value of ***HRTIM_External_Event_Sensitivity***
- ***uint32_t HRTIM_EventCfgTypeDef::Filter***
  Defines the frequency used to sample the External Event and the length of the digital filter. This parameter can be a value of ***HRTIM_External_Event_Filter***
- ***uint32_t HRTIM_EventCfgTypeDef::FastMode***
  Indicates whether or not low latency mode is enabled for the external event. This parameter can be a value of ***HRTIM_External_Event_Fast_Mode***

28.1.19 HRTIM_FaultCfgTypeDef

HRTIM_FaultCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Source***
- ***uint32_t Polarity***
- ***uint32_t Filter***
- ***uint32_t Lock***

Field Documentation

- ***uint32_t HRTIM_FaultCfgTypeDef::Source***
  Identifies the source of the fault. This parameter can be a value of ***HRTIM_Fault_Sources***
- ***uint32_t HRTIM_FaultCfgTypeDef::Polarity***
  Specifies the polarity of the fault event. This parameter can be a value of ***HRTIM_Fault_Polarity***
- ***uint32_t HRTIM_FaultCfgTypeDef::Filter***
  Defines the frequency used to sample the Fault input and the length of the digital filter. This parameter can be a value of ***HRTIM_Fault_Filter***
- ***uint32_t HRTIM_FaultCfgTypeDef::Lock***
  Indicates whether or not fault programming bits are write protected. This parameter can be a value of ***HRTIM_Fault_Lock***

28.1.20 HRTIM_FaultBlankingCfgTypeDef

HRTIM_FaultBlankingCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Threshold***
- ***uint32_t ResetMode***
- ***uint32_t BlankingSource***

Field Documentation

- ***uint32_t HRTIM_FaultBlankingCfgTypeDef::Threshold***
  Specifies the Fault counter Threshold. This parameter can be a number between 0x0 and 0xF
- ***uint32_t HRTIM_FaultBlankingCfgTypeDef::ResetMode***
  Specifies the reset mode of a fault event counter. This parameter can be a value of ***HRTIM_Fault_ResetMode***
- ***uint32_t HRTIM_FaultBlankingCfgTypeDef::BlankingSource***
  Specifies the blanking source of a fault event. This parameter can be a value of ***HRTIM_Fault_Blanking***

28.1.21 HRTIM_BurstModeCfgTypeDef

HRTIM_BurstModeCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t ClockSource***
- ***uint32_t Prescaler***
- ***uint32_t PreloadEnable***
- ***uint32_t Trigger***
- ***uint32_t IdleDuration***
- ***uint32_t Period***

Field Documentation

- ***uint32_t HRTIM_BurstModeCfgTypeDef::Mode***

  Specifies the burst mode operating mode. This parameter can be a value of ***HRTIM_Burst_Mode_Operating_Mode***
- ***uint32_t HRTIM_BurstModeCfgTypeDef::ClockSource***

  Specifies the burst mode clock source. This parameter can be a value of ***HRTIM_Burst_Mode_Clock_Source***
- ***uint32_t HRTIM_BurstModeCfgTypeDef::Prescaler***

  Specifies the burst mode prescaler. This parameter can be a value of ***HRTIM_Burst_Mode_Prescaler***
- ***uint32_t HRTIM_BurstModeCfgTypeDef::PreloadEnable***

  Specifies whether or not preload is enabled for burst mode related registers (HRTIM_BMCMPR and HRTIM_BMPER). This parameter can be a combination of ***HRTIM_Burst_Mode_Register_Preload_Enable***
- ***uint32_t HRTIM_BurstModeCfgTypeDef::Trigger***

  Specifies the event(s) triggering the burst operation. This parameter can be a combination of ***HRTIM_Burst_Mode_Trigger***
- ***uint32_t HRTIM_BurstModeCfgTypeDef::IdleDuration***

  Specifies number of periods during which the selected timers are in idle state. This parameter can be a number between 0x0 and 0xFFFF
- ***uint32_t HRTIM_BurstModeCfgTypeDef::Period***

  Specifies burst mode repetition period. This parameter can be a number between 0x1 and 0xFFFF

28.1.22 HRTIM_ADCTriggerCfgTypeDef

HRTIM_ADCTriggerCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t UpdateSource***
- ***uint32_t Trigger***

Field Documentation

- ***uint32_t HRTIM_ADCTriggerCfgTypeDef::UpdateSource***

  Specifies the ADC trigger update source. This parameter can be a value of ***HRTIM_ADC_Trigger_Update_Source***
- ***uint32_t HRTIM_ADCTriggerCfgTypeDef::Trigger***

  Specifies the event(s) triggering the ADC conversion. This parameter can be a combination of ***HRTIM_ADC_Trigger_Event***

28.1.23 HRTIM_ExternalEventCfgTypeDef

HRTIM_ExternalEventCfgTypeDef is defined in the stm32g4xx_hal_hrtim.h

Data Fields

- ***uint32_t ResetMode***
- ***uint32_t Source***
- ***uint32_t Counter***

Field Documentation

- ***uint32_t HRTIM_ExternalEventCfgTypeDef::ResetMode***

  Specifies the External Event Counter A or B Reset Mode. This parameter can be a value of ***HRTIM_Timer_External_Event_ResetMode***
- ***uint32_t HRTIM_ExternalEventCfgTypeDef::Source***

  Specifies the External Event Counter source selection. This parameter can be one of ***HRTIM_External_Event_Channels***
- ***uint32_t HRTIM_ExternalEventCfgTypeDef::Counter***

  Specifies the External Event Counter Threshold. This parameter can be a number between 0x0 and 0x3F

28.2 HRTIM Firmware driver API description

The following section lists the various functions of the HRTIM library.

28.2.1 Simple mode v.s. waveform mode

The HRTIM HAL API is split into 2 categories:

1. Simple functions: these functions allow for using a HRTIM timer as a general purpose timer with high resolution capabilities. HRTIM simple modes are managed through the set of functions named HAL_HRTIM_Simple<Function>. These functions are similar in name and usage to the one defined for the TIM peripheral. When a HRTIM timer operates in simple mode, only a very limited set of HRTIM features are used. Following simple modes are proposed:
   - Output compare mode,
   - PWM output mode,
   - Input capture mode,
   - One pulse mode.
2. Waveform functions: These functions allow taking advantage of the HRTIM flexibility to produce numerous types of control signal. When a HRTIM timer operates in waveform mode, all the HRTIM features are accessible without any restriction. HRTIM waveform modes are managed through the set of functions named HAL_HRTIM_Waveform<Function>

28.2.2 How to use this driver

1. Initialize the HRTIM low level resources by implementing the HAL_HRTIM_MspInit() function:
   a. Enable the HRTIM clock source using __HRTIMx_CLK_ENABLE()
   b. Connect HRTIM pins to MCU I/Os
      - Enable the clock for the HRTIM GPIOs using the following function: __HAL_RCC_GPIOx_CLK_ENABLE()
      - Configure these GPIO pins in Alternate Function mode using HAL_GPIO_Init()
   c. When using DMA to control data transfer (e.g HAL_HRTIM_SimpleBaseStart_DMA())
      - Enable the DMAx interface clock using __DMAx_CLK_ENABLE()
      - Initialize the DMA handle
      - Associate the initialized DMA handle to the appropriate DMA handle of the HRTIM handle using __HAL_LINKDMA()
      - Initialize the DMA channel using HAL_DMA_Init()
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA channel using HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ()
   d. In case of using interrupt mode (e.g HAL_HRTIM_SimpleBaseStart_IT())
      - Configure the priority and enable the NVIC for the concerned HRTIM interrupt using HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ()
2. Initialize the HRTIM HAL using HAL_HRTIM_Init(). The HRTIM configuration structure (field of the HRTIM handle) specifies which global interrupt of whole HRTIM must be enabled (Burst mode period, System fault, Faults). It also contains the HRTIM external synchronization configuration. HRTIM can act as a master (generating a synchronization signal) or as a slave (waiting for a trigger to be synchronized).

3. Start the high resolution unit using HAL_HRTIM_DLLCalibrationStart(). DLL calibration is executed periodically and compensate for potential voltage and temperature drifts. DLL calibration period is specified by the CalibrationRate argument.
4. HRTIM timers cannot be used until the high resolution unit is ready. This can be checked using HAL_HRTIM_PollForDLLCalibration(): this function returns HAL_OK if DLL calibration is completed or HAL_TIMEOUT if the DLL calibration is still going on when timeout given as argument expires. DLL calibration can also be started in interrupt mode using HAL_HRTIM_DLLCalibrationStart_IT(). In that case an interrupt is generated when the DLL calibration is completed. Note that as DLL calibration is executed on a periodic basis an interrupt will be generated at the end of every DLL calibration operation (worst case: one interrupt every 14 micro seconds !).
5. Configure HRTIM resources shared by all HRTIM timers
   a. Burst Mode Controller:
      - HAL_HRTIM_BurstModeConfig(): configures the HRTIM burst mode controller: operating mode (continuous or one-shot mode), clock (source, prescaler) , trigger(s), period, idle duration.
   b. External Events Conditioning:
      - HAL_HRTIM_EventConfig(): configures the conditioning of an external event channel: source, polarity, edge-sensitivity. External event can be used as triggers (timer reset, input capture, burst mode, ADC triggers, delayed protection) They can also be used to set or reset timer outputs. Up to 10 event channels are available.
      - HAL_HRTIM_EventPrescalerConfig(): configures the external event sampling clock (used for digital filtering).
   c. Fault Conditioning:
      - HAL_HRTIM_FaultConfig(): configures the conditioning of a fault channel: source, polarity, edge-sensitivity. Fault channels are used to disable the outputs in case of an abnormal operation. Up to 6 fault channels are available.
      - HAL_HRTIM_FaultPrescalerConfig(): configures the fault sampling clock (used for digital filtering).
      - HAL_HRTIM_FaultModeCtl(): Enables or disables fault input(s) circuitry. By default all fault inputs are disabled.
   d. ADC trigger:
      - HAL_HRTIM_ADCTriggerConfig(): configures the source triggering the update of the ADC trigger register and the ADC trigger. 4 independent triggers are available to start both the regular and the injected sequencers of the 2 ADCs
6. Configure HRTIM timer time base using HAL_HRTIM_TimeBaseConfig(). This function must be called whatever the HRTIM timer operating mode is (simple v.s. waveform). It configures mainly:
   a. The HRTIM timer counter operating mode (continuous v.s. one shot)
   b. The HRTIM timer clock prescaler
   c. The HRTIM timer period
   d. The HRTIM timer repetition counter

If the HRTIM timer operates in simple mode

1. Start or Stop simple timers
   - Simple time base: HAL_HRTIM_SimpleBaseStart(),HAL_HRTIM_SimpleBaseStop(), HAL_HRTIM_SimpleBaseStart_IT(),HAL_HRTIM_SimpleBaseStop_IT(), HAL_HRTIM_SimpleBaseStart_DMA(),HAL_HRTIM_SimpleBaseStop_DMA().
   - Simple output compare: HAL_HRTIM_SimpleOCChannelConfig(), HAL_HRTIM_SimpleOCStart(),HAL_HRTIM_SimpleOCStop(), HAL_HRTIM_SimpleOCStart_IT(),HAL_HRTIM_SimpleOCStop_IT(), HAL_HRTIM_SimpleOCStart_DMA(),HAL_HRTIM_SimpleOCStop_DMA(),
   - Simple PWM output: HAL_HRTIM_SimplePWMChannelConfig(), HAL_HRTIM_SimplePWMStart(),HAL_HRTIM_SimplePWMStop(), HAL_HRTIM_SimplePWMStart_IT(),HAL_HRTIM_SimplePWMStop_IT(), HAL_HRTIM_SimplePWMStart_DMA(),HAL_HRTIM_SimplePWMStop_DMA(),
   - Simple input capture: HAL_HRTIM_SimpleCaptureChannelConfig(), HAL_HRTIM_SimpleCaptureStart(),HAL_HRTIM_SimpleCaptureStop(), HAL_HRTIM_SimpleCaptureStart_IT(),HAL_HRTIM_SimpleCaptureStop_IT(), HAL_HRTIM_SimpleCaptureStart_DMA(),HAL_HRTIM_SimpleCaptureStop_DMA().
   - Simple one pulse: HAL_HRTIM_SimpleOnePulseChannelConfig(), HAL_HRTIM_SimpleOnePulseStart(),HAL_HRTIM_SimpleOnePulseStop(), HAL_HRTIM_SimpleOnePulseStart_IT(),HAL_HRTIM_SimpleOnePulseStop_It().

If the HRTIM timer operates in waveform mode

1. Completes waveform timer configuration
   - HAL_HRTIM_WaveformTimerConfig(): configuration of a HRTIM timer operating in wave form mode mainly consists in:
     - Enabling the HRTIM timer interrupts and DMA requests.
     - Enabling the half mode for the HRTIM timer.
     - Defining how the HRTIM timer reacts to external synchronization input.
     - Enabling the push-pull mode for the HRTIM timer.
     - Enabling the fault channels for the HRTIM timer.
     - Enabling the dead-time insertion for the HRTIM timer.
     - Setting the delayed protection mode for the HRTIM timer (source and outputs on which the delayed protection are applied).
     - Specifying the HRTIM timer update and reset triggers.
     - Specifying the HRTIM timer registers update policy (e.g. pre-load enabling).
   - HAL_HRTIM_TimerEventFilteringConfig(): configures external event blanking and windowing circuitry of a HRTIM timer:
     - Blanking: to mask external events during a defined time period a defined time period
     - Windowing, to enable external events only during a defined time period
   - HAL_HRTIM_DeadTimeConfig(): configures the dead-time insertion unit for a HRTIM timer. Allows to generate a couple of complementary signals from a single reference waveform, with programmable delays between active state.
   - HAL_HRTIM_ChopperModeConfig(): configures the parameters of the high-frequency carrier signal added on top of the timing unit output. Chopper mode can be enabled or disabled for each timer output separately (see HAL_HRTIM_WaveformOutputConfig()).
   - HAL_HRTIM_BurstDMAConfig(): configures the burst DMA burst controller. Allows having multiple HRTIM registers updated with a single DMA request. The burst DMA operation is started by calling HAL_HRTIM_BurstDMATransfer().
   - HAL_HRTIM_WaveformCompareConfig():configures the compare unit of a HRTIM timer. This operation consists in setting the compare value and possibly specifying the auto delayed mode for compare units 2 and 4 (allows to have compare events generated relatively to capture events). Note that when auto delayed mode is needed, the capture unit associated to the compare unit must be configured separately.
   - HAL_HRTIM_WaveformCaptureConfig(): configures the capture unit of a HRTIM timer. This operation consists in specifying the source(s) triggering the capture (timer register update event, external event, timer output set/reset event, other HRTIM timer related events).
   - HAL_HRTIM_WaveformOutputConfig(): configuration of a HRTIM timer output mainly consists in:
     - Setting the output polarity (active high or active low),
     - Defining the set/reset crossbar for the output,
     - Specifying the fault level (active or inactive) in IDLE and FAULT states.,
2. Set waveform timer output(s) level
   - HAL_HRTIM_WaveformSetOutputLevel(): forces the output to its active or inactive level. For example, when deadtime insertion is enabled it is necessary to force the output level by software to have the outputs in a complementary state as soon as the RUN mode is entered.
3. Enable or Disable waveform timer output(s)
   - HAL_HRTIM_WaveformOutputStart(),HAL_HRTIM_WaveformOutputStop().
4. Start or Stop waveform HRTIM timer(s).
   - HAL_HRTIM_WaveformCountStart(),HAL_HRTIM_WaveformCountStop(),
   - HAL_HRTIM_WaveformCountStart_IT(),HAL_HRTIM_WaveformCountStop_IT(),
   - HAL_HRTIM_WaveformCountStart_DMA(),HAL_HRTIM_WaveformCountStop_DMA(),
5. Burst mode controller enabling:
   - HAL_HRTIM_BurstModeCtl(): activates or de-activates the burst mode controller.

6. Some HRTIM operations can be triggered by software:
   - HAL_HRTIM_BurstModeSoftwareTrigger(): calling this function trigs the burst operation.
   - HAL_HRTIM_SoftwareCapture(): calling this function trigs the capture of the HRTIM timer counter.
   - HAL_HRTIM_SoftwareUpdate(): calling this function trigs the update of the pre-loadable registers of the HRTIM timer
   - HAL_HRTIM_SoftwareReset():calling this function resets the HRTIM timer counter.
7. Some functions can be used any time to retrieve HRTIM timer related information
   - HAL_HRTIM_GetCapturedValue(): returns actual value of the capture register of the designated capture unit.
   - HAL_HRTIM_WaveformGetOutputLevel(): returns actual level (ACTIVE/INACTIVE) of the designated timer output.
   - HAL_HRTIM_WaveformGetOutputState():returns actual state (IDLE/RUN/FAULT) of the designated timer output.
   - HAL_HRTIM_GetDelayedProtectionStatus():returns actual level (ACTIVE/INACTIVE) of the designated output when the delayed protection was triggered.
   - HAL_HRTIM_GetBurstStatus(): returns the actual status (ACTIVE/INACTIVE) of the burst mode controller.
   - HAL_HRTIM_GetCurrentPushPullStatus(): when the push-pull mode is enabled for the HRTIM timer (see HAL_HRTIM_WaveformTimerConfig()), the push-pull status indicates on which output the signal is currently active (e.g signal applied on output 1 and output 2 forced inactive or vice versa).
   - HAL_HRTIM_GetIdlePushPullStatus(): when the push-pull mode is enabled for the HRTIM timer (see HAL_HRTIM_WaveformTimerConfig()), the idle push-pull status indicates during which period the delayed protection request occurred (e.g. protection occurred when the output 1 was active and output 2 forced inactive or vice versa).
8. Some functions can be used any time to retrieve actual HRTIM status
   - HAL_HRTIM_GetState(): returns actual HRTIM instance HAL state.

Callback registration

The compilation flag USE_HAL_HRTIM_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions HAL_HRTIM_RegisterCallback() or HAL_HRTIM_TIMxRegisterCallback() to register an interrupt callback.

Function HAL_HRTIM_RegisterCallback() allows to register following callbacks:

- Fault1Callback : Fault 1 interrupt callback function
- Fault2Callback : Fault 2 interrupt callback function
- Fault3Callback : Fault 3 interrupt callback function
- Fault4Callback : Fault 4 interrupt callback function
- Fault5Callback : Fault 5 interrupt callback function
- Fault6Callback : Fault 6 interrupt callback function
- SystemFaultCallback : System fault interrupt callback function
- DLLCalibrationReadyCallback : DLL Ready interrupt callback function
- BurstModePeriodCallback : Burst mode period interrupt callback function
- SynchronizationEventCallback : Sync Input interrupt callback function
- ErrorCallback : DMA error callback function
- MspInitCallback : HRTIM MspInit callback function
- MspDeInitCallback : HRTIM MspInit callback function

Function HAL_HRTIM_TIMxRegisterCallback() allows to register following callbacks:

- RegistersUpdateCallback : Timer x Update interrupt callback function
- RepetitionEventCallback : Timer x Repetition interrupt callback function
- Compare1EventCallback : Timer x Compare 1 match interrupt callback function
- Compare2EventCallback : Timer x Compare 2 match interrupt callback function
- Compare3EventCallback : Timer x Compare 3 match interrupt callback function

- Compare4EventCallback : Timer x Compare 4 match interrupt callback function
- Capture1EventCallback : Timer x Capture 1 interrupts callback function
- Capture2EventCallback : Timer x Capture 2 interrupts callback function
- DelayedProtectionCallback : Timer x Delayed protection interrupt callback function
- CounterResetCallback : Timer x counter reset/roll-over interrupt callback function
- Output1SetCallback : Timer x output 1 set interrupt callback function
- Output1ResetCallback : Timer x output 1 reset interrupt callback function
- Output2SetCallback : Timer x output 2 set interrupt callback function
- Output2ResetCallback : Timer x output 2 reset interrupt callback function
- BurstDMATransferCallback : Timer x Burst DMA completed interrupt callback function

Both functions take as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function HAL_HRTIM_UnRegisterCallback or HAL_HRTIM_TIMxUnRegisterCallback to reset a callback to the default weak function. Both functions take as parameters the HAL peripheral handle and the Callback ID.

By default, after the HAL_HRTIM_Init() and when the state is HAL_HRTIM_STATE_RESET all callbacks are set to the corresponding weak functions (e.g HAL_HRTIM_Fault1Callback) Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the HAL_HRTIM_Init()/ HAL_HRTIM_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the HAL_HRTIM_Init()/ HAL_HRTIM_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in HAL_HRTIM_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in HAL_HRTIM_STATE_READY or HAL_HRTIM_STATE_RESET states, thus registered (user) MspInit/DeInit callbacks can be used during the Init/ DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using HAL_HRTIM_RegisterCallback() before calling HAL_HRTIM_DeInit() or HAL_HRTIM_Init() function.

When the compilation flag USE_HAL_HRTIM_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

28.2.3 Initialization and Time Base Configuration functions

This section provides functions allowing to:

- Initialize a HRTIM instance
- De-initialize a HRTIM instance
- Initialize the HRTIM MSP
- De-initialize the HRTIM MSP
- Start the high-resolution unit (start DLL calibration)
- Check that the high resolution unit is ready (DLL calibration done)
- Configure the time base unit of a HRTIM timer

This section contains the following APIs:

- ***HAL_HRTIM_Init***
- ***HAL_HRTIM_DeInit***
- ***HAL_HRTIM_MspInit***
- ***HAL_HRTIM_MspDeInit***
- ***HAL_HRTIM_DLLCalibrationStart***
- ***HAL_HRTIM_DLLCalibrationStart_IT***
- ***HAL_HRTIM_PollForDLLCalibration***
- ***HAL_HRTIM_TimeBaseConfig***

28.2.4 Simple time base mode functions

This section provides functions allowing to:

- Start simple time base
- Stop simple time base
- Start simple time base and enable interrupt

- Stop simple time base and disable interrupt
- Start simple time base and enable DMA transfer
- Stop simple time base and disable DMA transfer

Note: When a HRTIM timer operates in simple time base mode, the timer counter counts from 0 to the period value.

This section contains the following APIs:

- ***HAL_HRTIM_SimpleBaseStart***
- ***HAL_HRTIM_SimpleBaseStop***
- ***HAL_HRTIM_SimpleBaseStart_IT***
- ***HAL_HRTIM_SimpleBaseStop_IT***
- ***HAL_HRTIM_SimpleBaseStart_DMA***
- ***HAL_HRTIM_SimpleBaseStop_DMA***

28.2.5 Simple output compare functions

This section provides functions allowing to:

- Configure simple output channel
- Start simple output compare
- Stop simple output compare
- Start simple output compare and enable interrupt
- Stop simple output compare and disable interrupt
- Start simple output compare and enable DMA transfer
- Stop simple output compare and disable DMA transfer

Note: When a HRTIM timer operates in simple output compare mode the output level is set to a programmable value when a match is found between the compare register and the counter. Compare unit 1 is automatically associated to output 1 Compare unit 2 is automatically associated to output 2

This section contains the following APIs:

- ***HAL_HRTIM_SimpleOCChannelConfig***
- ***HAL_HRTIM_SimpleOCStart***
- ***HAL_HRTIM_SimpleOCStop***
- ***HAL_HRTIM_SimpleOCStart_IT***
- ***HAL_HRTIM_SimpleOCStop_IT***
- ***HAL_HRTIM_SimpleOCStart_DMA***
- ***HAL_HRTIM_SimpleOCStop_DMA***

28.2.6 Simple PWM output functions

This section provides functions allowing to:

- Configure simple PWM output channel
- Start simple PWM output
- Stop simple PWM output
- Start simple PWM output and enable interrupt
- Stop simple PWM output and disable interrupt
- Start simple PWM output and enable DMA transfer
- Stop simple PWM output and disable DMA transfer

Note: When a HRTIM timer operates in simple PWM output mode the output level is set to a programmable value when a match is found between the compare register and the counter and reset when the timer period is reached. Duty cycle is determined by the comparison value. Compare unit 1 is automatically associated to output 1 Compare unit 2 is automatically associated to output 2

This section contains the following APIs:

- ***HAL_HRTIM_SimplePWMChannelConfig***
- ***HAL_HRTIM_SimplePWMStart***

- *HAL_HRTIM_SimplePWMStop*
- *HAL_HRTIM_SimplePWMStart_IT*
- *HAL_HRTIM_SimplePWMStop_IT*
- *HAL_HRTIM_SimplePWMStart_DMA*
- *HAL_HRTIM_SimplePWMStop_DMA*

28.2.7 Simple input capture functions

This section provides functions allowing to:

- Configure simple input capture channel
- Start simple input capture
- Stop simple input capture
- Start simple input capture and enable interrupt
- Stop simple input capture and disable interrupt
- Start simple input capture and enable DMA transfer
- Stop simple input capture and disable DMA transfer

Note: When a HRTIM timer operates in simple input capture mode the Capture Register (HRTIM_CPT1/2xR) is used to latch the value of the timer counter counter after a transition detected on a given external event input.

This section contains the following APIs:

- *HAL_HRTIM_SimpleCaptureChannelConfig*
- *HAL_HRTIM_SimpleCaptureStart*
- *HAL_HRTIM_SimpleCaptureStop*
- *HAL_HRTIM_SimpleCaptureStart_IT*
- *HAL_HRTIM_SimpleCaptureStop_IT*
- *HAL_HRTIM_SimpleCaptureStart_DMA*
- *HAL_HRTIM_SimpleCaptureStop_DMA*

28.2.8 Simple one pulse functions

This section provides functions allowing to:

- Configure one pulse channel
- Start one pulse generation
- Stop one pulse generation
- Start one pulse generation and enable interrupt
- Stop one pulse generation and disable interrupt

Note: When a HRTIM timer operates in simple one pulse mode the timer counter is started in response to transition detected on a given external event input to generate a pulse with a programmable length after a programmable delay.

This section contains the following APIs:

- *HAL_HRTIM_SimpleOnePulseChannelConfig*
- *HAL_HRTIM_SimpleOnePulseStart*
- *HAL_HRTIM_SimpleOnePulseStop*
- *HAL_HRTIM_SimpleOnePulseStart_IT*
- *HAL_HRTIM_SimpleOnePulseStop_IT*

28.2.9 HRTIM configuration functions

This section provides functions allowing to configure the HRTIM resources shared by all the HRTIM timers operating in waveform mode:

- Configure the burst mode controller
- Configure an external event conditioning
- Configure the external events sampling clock
- Configure a fault conditioning

- Enable or disable fault inputs
- Configure the faults sampling clock
- Configure an ADC trigger

This section contains the following APIs:

- *HAL_HRTIM_BurstModeConfig*
- *HAL_HRTIM_EventConfig*
- *HAL_HRTIM_EventPrescalerConfig*
- *HAL_HRTIM_FaultConfig*
- *HAL_HRTIM_FaultPrescalerConfig*
- *HAL_HRTIM_FaultBlankingConfigAndEnable*
- *HAL_HRTIM_FaultCounterConfig*
- *HAL_HRTIM_FaultCounterReset*
- *HAL_HRTIM_FaultModeCtl*
- *HAL_HRTIM_ADCTriggerConfig*
- *HAL_HRTIM_ADCPostScalerConfig*
- *HAL_HRTIM_RollOverModeConfig*
- *HAL_HRTIM_SwapTimerOutput*
- *HAL_HRTIM_OutputSwapEnable*
- *HAL_HRTIM_OutputSwapDisable*

28.2.10 HRTIM timer configuration and control functions

This section provides functions used to configure and control a HRTIM timer operating in waveform mode:

- Configure HRTIM timer general behavior
- Configure HRTIM timer event filtering
- Configure HRTIM timer deadtime insertion
- Configure HRTIM timer chopper mode
- Configure HRTIM timer burst DMA
- Configure HRTIM timer compare unit
- Configure HRTIM timer capture unit
- Configure HRTIM timer output
- Set HRTIM timer output level
- Enable HRTIM timer output
- Disable HRTIM timer output
- Start HRTIM timer
- Stop HRTIM timer
- Start HRTIM timer and enable interrupt
- Stop HRTIM timer and disable interrupt
- Start HRTIM timer and enable DMA transfer
- Stop HRTIM timer and disable DMA transfer
- Enable or disable the burst mode controller
- Start the burst mode controller (by software)
- Trigger a Capture (by software)
- Update the HRTIM timer preloadable registers (by software)
- Reset the HRTIM timer counter (by software)
- Start a burst DMA transfer
- Enable timer register update
- Disable timer register update

This section contains the following APIs:

- *HAL_HRTIM_WaveformTimerConfig*

- *HAL_HRTIM_WaveformTimerControl*
- *HAL_HRTIM_TimerDualChannelDacConfig*
- *HAL_HRTIM_TimerEventFilteringConfig*
- *HAL_HRTIM_ExtEventCounterConfig*
- *HAL_HRTIM_ExtEventCounterEnable*
- *HAL_HRTIM_ExtEventCounterDisable*
- *HAL_HRTIM_ExtEventCounterReset*
- *HAL_HRTIM_DeadTimeConfig*
- *HAL_HRTIM_ChopperModeConfig*
- *HAL_HRTIM_BurstDMAConfig*
- *HAL_HRTIM_WaveformCompareConfig*
- *HAL_HRTIM_WaveformCaptureConfig*
- *HAL_HRTIM_WaveformOutputConfig*
- *HAL_HRTIM_WaveformSetOutputLevel*
- *HAL_HRTIM_WaveformOutputStart*
- *HAL_HRTIM_WaveformOutputStop*
- *HAL_HRTIM_WaveformCountStart*
- *HAL_HRTIM_WaveformCountStop*
- *HAL_HRTIM_WaveformCountStart_IT*
- *HAL_HRTIM_WaveformCountStop_IT*
- *HAL_HRTIM_WaveformCountStart_DMA*
- *HAL_HRTIM_WaveformCountStop_DMA*
- *HAL_HRTIM_BurstModeCtl*
- *HAL_HRTIM_BurstModeSoftwareTrigger*
- *HAL_HRTIM_SoftwareCapture*
- *HAL_HRTIM_SoftwareUpdate*
- *HAL_HRTIM_SwapTimerOutput*
- *HAL_HRTIM_SoftwareReset*
- *HAL_HRTIM_OutputSwapEnable*
- *HAL_HRTIM_OutputSwapDisable*
- *HAL_HRTIM_BurstDMATransfer*
- *HAL_HRTIM_UpdateEnable*
- *HAL_HRTIM_UpdateDisable*

28.2.11 Peripheral State functions

This section provides functions used to get HRTIM or HRTIM timer specific information:

- Get HRTIM HAL state
- Get captured value
- Get HRTIM timer output level
- Get HRTIM timer output state
- Get delayed protection status
- Get burst status
- Get current push-pull status
- Get idle push-pull status

This section contains the following APIs:

- *HAL_HRTIM_GetState*
- *HAL_HRTIM_GetCapturedValue*
- *HAL_HRTIM_GetCaptured*
- *HAL_HRTIM_GetCapturedDir*

- *HAL_HRTIM_WaveformGetOutputLevel*
- *HAL_HRTIM_WaveformGetOutputState*
- *HAL_HRTIM_GetDelayedProtectionStatus*
- *HAL_HRTIM_GetBurstStatus*
- *HAL_HRTIM_GetCurrentPushPullStatus*
- *HAL_HRTIM_GetIdlePushPullStatus*

28.2.12 Detailed description of functions

HAL_HRTIM_Init

Function name

HAL_StatusTypeDef HAL_HRTIM_Init (HRTIM_HandleTypeDef * hhrtim)

Function description

Initialize a HRTIM instance.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **HAL:** status

HAL_HRTIM_DeInit

Function name

HAL_StatusTypeDef HAL_HRTIM_DeInit (HRTIM_HandleTypeDef * hhrtim)

Function description

De-initialize a HRTIM instance.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **HAL:** status

HAL_HRTIM_MspInit

Function name

void HAL_HRTIM_MspInit (HRTIM_HandleTypeDef * hhrtim)

Function description

MSP initialization for a HRTIM instance.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_MspDeInit

Function name

void HAL_HRTIM_MspDeInit (HRTIM_HandleTypeDef * hhrtim)

Function description

MSP de-initialization of a HRTIM instance.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_TimeBaseConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_TimeBaseConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_TimeBaseCfgTypeDef * pTimeBaseCfg)

Function description

Configure the time base unit of a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pTimeBaseCfg:** pointer to the time base configuration structure

Return values

- **HAL:** status

Notes

- This function must be called prior starting the timer
- The time-base unit initialization parameters specify: The timer counter operating mode (continuous, one shot), The timer clock prescaler, The timer period, The timer repetition counter.

HAL_HRTIM_DLLCalibrationStart

Function name

HAL_StatusTypeDef HAL_HRTIM_DLLCalibrationStart (HRTIM_HandleTypeDef * hhrtim, uint32_t CalibrationRate)

Function description

Start the DLL calibration.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **CalibrationRate:** DLL calibration period This parameter can be one of the following values:
  - HRTIM_SINGLE_CALIBRATION: One shot DLL calibration
  - HRTIM_CALIBRATIONRATE_0: Periodic DLL calibration. T=6.168 ms
  - HRTIM_CALIBRATIONRATE_1: Periodic DLL calibration. T=0.771 ms
  - HRTIM_CALIBRATIONRATE_2: Periodic DLL calibration. T=0.096 ms
  - HRTIM_CALIBRATIONRATE_3: Periodic DLL calibration. T=0.012 ms

Return values

- **HAL:** status

Notes

- This function locks the HRTIM instance. HRTIM instance is unlocked within the HAL_HRTIM_PollForDLLCalibration function, just before exiting the function.

HAL_HRTIM_DLLCalibrationStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_DLLCalibrationStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t CalibrationRate)

Function description

Start the DLL calibration.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **CalibrationRate:** DLL calibration period This parameter can be one of the following values:
  - HRTIM_SINGLE_CALIBRATION: One shot DLL calibration
  - HRTIM_CALIBRATIONRATE_0: Periodic DLL calibration. T=6.168 ms
  - HRTIM_CALIBRATIONRATE_1: Periodic DLL calibration. T=0.771 ms
  - HRTIM_CALIBRATIONRATE_2: Periodic DLL calibration. T=0.096 ms
  - HRTIM_CALIBRATIONRATE_3: Periodic DLL calibration. T=0.012 ms

Return values

- **HAL:** status

Notes

- This function locks the HRTIM instance. HRTIM instance is unlocked within the IRQ processing function when processing the DLL ready interrupt.
- If this function is called for periodic calibration, the DLLRDY interrupt is generated every time the calibration completes which will significantly increases the overall interrupt rate.

HAL_HRTIM_PollForDLLCalibration

Function name

HAL_StatusTypeDef HAL_HRTIM_PollForDLLCalibration (HRTIM_HandleTypeDef * hhrtim, uint32_t Timeout)

Function description

Poll the DLL calibration ready flag and returns when the flag is set (DLL calibration completed) or upon timeout expiration.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timeout:** Timeout duration in millisecond

Return values

- **HAL:** status

HAL_HRTIM_SimpleBaseStart

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStart (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Start the counter of a timer operating in simple time base mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_SimpleBaseStop

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStop (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Stop the counter of a timer operating in simple time base mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_SimpleBaseStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Start the counter of a timer operating in simple time base mode (Timer repetition interrupt is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_SimpleBaseStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Stop the counter of a timer operating in simple time base mode (Timer repetition interrupt is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_SimpleBaseStart_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStart_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t SrcAddr, uint32_t DestAddr, uint32_t Length)

Function description

Start the counter of a timer operating in simple time base mode (Timer repetition DMA request is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **SrcAddr:** DMA transfer source address
- **DestAddr:** DMA transfer destination address
- **Length:** The length of data items (data size) to be transferred from source to destination

HAL_HRTIM_SimpleBaseStop_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleBaseStop_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Stop the counter of a timer operating in simple time base mode (Timer repetition DMA request is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index. This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_SimpleOCChannelConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCChannelConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel, HRTIM_SimpleOCChannelCfgTypeDef * pSimpleOCChannelCfg)

Function description

Configure an output in simple output compare mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **pSimpleOCChannelCfg:** pointer to the simple output compare output configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in simple output compare mode: Output 1 is implicitly controlled by the compare unit 1 Output 2 is implicitly controlled by the compare unit 2 Output Set/Reset crossbar is set according to the selected output compare mode: Toggle: SETxyR = RSTxyR = CMPy Active: SETxyR = CMPy, RSTxyR = 0 Inactive: SETxy =0, RSTxy = CMPy

HAL_HRTIM_SimpleOCStart

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStart (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel)

Function description

Start the output compare signal generation on the designed timer output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOCStop

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStop (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel)

Function description

Stop the output compare signal generation on the designed timer output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOCStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel)

Function description

Start the output compare signal generation on the designed timer output (Interrupt is enabled (see note note below)).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

Notes

- Interrupt enabling depends on the chosen output compare mode Output toggle: compare match interrupt is enabled Output set active: output set interrupt is enabled Output set inactive: output reset interrupt is enabled

HAL_HRTIM_SimpleOCStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel)

Function description

Stop the output compare signal generation on the designed timer output (Interrupt is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOCStart_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStart_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel, uint32_t SrcAddr, uint32_t DestAddr, uint32_t Length)

Function description

Start the output compare signal generation on the designed timer output (DMA request is enabled (see note below)).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **SrcAddr:** DMA transfer source address
- **DestAddr:** DMA transfer destination address
- **Length:** The length of data items (data size) to be transferred from source to destination

Return values

- **HAL:** status

Notes

- DMA request enabling depends on the chosen output compare mode Output toggle: compare match DMA request is enabled Output set active: output set DMA request is enabled Output set inactive: output reset DMA request is enabled

HAL_HRTIM_SimpleOCStop_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOCStop_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OCChannel)

Function description

Stop the output compare signal generation on the designed timer output (DMA request is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OCChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMChannelConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMChannelConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel, HRTIM_SimplePWMChannelCfgTypeDef * pSimplePWMChannelCfg)

Function description

Configure an output in simple PWM mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **pSimplePWMChannelCfg:** pointer to the simple PWM output configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in simple PWM output mode: Output 1 is implicitly controlled by the compare unit 1 Output 2 is implicitly controlled by the compare unit 2 Output Set/Reset crossbar is set as follows: Output 1: SETx1R = CMP1, RSTx1R = PER Output 2: SETx2R = CMP2, RST2R = PER
- When Simple PWM mode is used the registers preload mechanism is enabled (otherwise the behavior is not guaranteed).

HAL_HRTIM_SimplePWMStart

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStart (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel)

Function description

Start the PWM output signal generation on the designed timer output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMStop

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStop (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel)

Function description

Stop the PWM output signal generation on the designed timer output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel)

Function description

Start the PWM output signal generation on the designed timer output (The compare interrupt is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel)

Function description

Stop the PWM output signal generation on the designed timer output (The compare interrupt is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMStart_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStart_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel, uint32_t SrcAddr, uint32_t DestAddr, uint32_t Length)

Function description

Start the PWM output signal generation on the designed timer output (The compare DMA request is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **SrcAddr:** DMA transfer source address
- **DestAddr:** DMA transfer destination address
- **Length:** The length of data items (data size) to be transferred from source to destination

Return values

- **HAL:** status

HAL_HRTIM_SimplePWMStop_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimplePWMStop_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t PWMChannel)

Function description

Stop the PWM output signal generation on the designed timer output (The compare DMA request is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **PWMChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleCaptureChannelConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureChannelConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel, HRTIM_SimpleCaptureChannelCfgTypeDef * pSimpleCaptureChannelCfg)

Function description

Configure a simple capture.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Capture unit This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2
- **pSimpleCaptureChannelCfg:** pointer to the simple capture configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in simple capture mode the capture is trigerred by the designated external event and GPIO input is implicitly used as event source. The cature can be triggered by a rising edge, a falling edge or both edges on event channel.

HAL_HRTIM_SimpleCaptureStart

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStart (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel)

Function description

Enable a simple capture on the designed capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

Notes

- The external event triggering the capture is available for all timing units. It can be used directly and is active as soon as the timing unit counter is enabled.

HAL_HRTIM_SimpleCaptureStop

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStop (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel)

Function description

Disable a simple capture on the designed capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleCaptureStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel)

Function description

Enable a simple capture on the designed capture unit (Capture interrupt is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleCaptureStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel)

Function description

Disable a simple capture on the designed capture unit (Capture interrupt is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleCaptureStart_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStart_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel, uint32_t SrcAddr, uint32_t DestAddr, uint32_t Length)

Function description

Enable a simple capture on the designed capture unit (Capture DMA request is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2
- **SrcAddr:** DMA transfer source address
- **DestAddr:** DMA transfer destination address
- **Length:** The length of data items (data size) to be transferred from source to destination

Return values

- **HAL:** status

HAL_HRTIM_SimpleCaptureStop_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleCaptureStop_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureChannel)

Function description

Disable a simple capture on the designed capture unit (Capture DMA request is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOnePulseChannelConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOnePulseChannelConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OnePulseChannel, HRTIM_SimpleOnePulseChannelCfgTypeDef * pSimpleOnePulseChannelCfg)

Function description

Configure an output simple one pulse mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OnePulseChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **pSimpleOnePulseChannelCfg:** pointer to the simple one pulse output configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in simple one pulse mode: the timer counter is implicitly started by the reset event, the reset of the timer counter is triggered by the designated external event GPIO input is implicitly used as event source, Output 1 is implicitly controlled by the compare unit 1, Output 2 is implicitly controlled by the compare unit 2. Output Set/Reset crossbar is set as follows: Output 1: SETx1R = CMP1, RSTx1R = PER Output 2: SETx2R = CMP2, RST2R = PER
- If HAL_HRTIM_SimpleOnePulseChannelConfig is called for both timer outputs, the reset event related configuration data provided in the second call will override the reset event related configuration data provided in the first call.

HAL_HRTIM_SimpleOnePulseStart

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOnePulseStart (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OnePulseChannel)

Function description

Enable the simple one pulse signal generation on the designed output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OnePulseChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOnePulseStop

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOnePulseStop (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OnePulseChannel)

Function description

Disable the simple one pulse signal generation on the designed output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OnePulseChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOnePulseStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOnePulseStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OnePulseChannel)

Function description

Enable the simple one pulse signal generation on the designed output (The compare interrupt is enabled (pulse start)).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer E
- **OnePulseChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_SimpleOnePulseStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_SimpleOnePulseStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t OnePulseChannel)

Function description

Disable the simple one pulse signal generation on the designed output (The compare interrupt is disabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **OnePulseChannel:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_BurstModeConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_BurstModeConfig (HRTIM_HandleTypeDef * hhrtim, HRTIM_BurstModeCfgTypeDef * pBurstModeCfg)

Function description

Configure the burst mode feature of the HRTIM.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **pBurstModeCfg:** pointer to the burst mode configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the burst mode controller

HAL_HRTIM_EventConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_EventConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t Event, HRTIM_EventCfgTypeDef * pEventCfg)

Function description

Configure the conditioning of an external event.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Event:** external event to configure This parameter can be one of the following values:
  - HRTIM_EVENT_NONE: no external Event
  - HRTIM_EVENT_1: External event 1
  - HRTIM_EVENT_2: External event 2
  - HRTIM_EVENT_3: External event 3
  - HRTIM_EVENT_4: External event 4
  - HRTIM_EVENT_5: External event 5
  - HRTIM_EVENT_6: External event 6
  - HRTIM_EVENT_7: External event 7
  - HRTIM_EVENT_8: External event 8
  - HRTIM_EVENT_9: External event 9
  - HRTIM_EVENT_10: External event 10
- **pEventCfg:** pointer to the event conditioning configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_EventPrescalerConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_EventPrescalerConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t Prescaler)

Function description

Configure the external event conditioning block prescaler.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Prescaler:** Prescaler value This parameter can be one of the following values:
  - HRTIM_EVENTPRESCALER_DIV1: fEEVS=fHRTIM
  - HRTIM_EVENTPRESCALER_DIV2: fEEVS=fHRTIM / 2
  - HRTIM_EVENTPRESCALER_DIV4: fEEVS=fHRTIM / 4
  - HRTIM_EVENTPRESCALER_DIV8: fEEVS=fHRTIM / 8

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_FaultConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_FaultConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t Fault, HRTIM_FaultCfgTypeDef * pFaultCfg)

Function description

Configure the conditioning of fault input.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Fault:** fault input to configure This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6
- **pFaultCfg:** pointer to the fault conditioning configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer and before enabling faults inputs

HAL_HRTIM_FaultPrescalerConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_FaultPrescalerConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t Prescaler)

Function description

Configure the fault conditioning block prescaler.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Prescaler:** Prescaler value This parameter can be one of the following values:
  - HRTIM_FAULTPRESCALER_DIV1: fFLTS=fHRTIM
  - HRTIM_FAULTPRESCALER_DIV2: fFLTS=fHRTIM / 2
  - HRTIM_FAULTPRESCALER_DIV4: fFLTS=fHRTIM / 4
  - HRTIM_FAULTPRESCALER_DIV8: fFLTS=fHRTIM / 8

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer and before enabling faults inputs

HAL_HRTIM_FaultBlankingConfigAndEnable

Function name

HAL_StatusTypeDef HAL_HRTIM_FaultBlankingConfigAndEnable (HRTIM_HandleTypeDef * hhrtim, uint32_t Fault, HRTIM_FaultBlankingCfgTypeDef * pFaultBlkCfg)

Function description

Configure and Enable the blanking source of a Fault input.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Fault:** fault input to configure This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6
- **pFaultBlkCfg:** pointer to the fault conditioning configuration structure

Return values

- **HAL:** status

Notes

- This function automatically enables the Blanking on Fault
- This function must be called when fault is not enabled

HAL_HRTIM_FaultCounterConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_FaultCounterConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t Fault, HRTIM_FaultBlankingCfgTypeDef * pFaultBlkCfg)

Function description

Configure the Fault Counter (Threshold and Reset Mode)

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Fault:** fault input to configure This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6
- **pFaultBlkCfg:** pointer to the fault conditioning configuration structure

Return values

- **HAL:** status
- **HAL:** status

Notes

- A fault is considered valid when the number of events is equal to the (FLTxCNT[3:0]+1) value

HAL_HRTIM_FaultCounterReset

Function name

HAL_StatusTypeDef HAL_HRTIM_FaultCounterReset (HRTIM_HandleTypeDef * hhrtim, uint32_t Fault)

Function description

Reset the fault Counter Reset.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Fault:** fault input to reset This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6

Return values

- **HAL:** status

HAL_HRTIM_SwapTimerOutput

Function name

HAL_StatusTypeDef HAL_HRTIM_SwapTimerOutput (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Swap the Timer outputs.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** timers concerned with the software register update This parameter can be any combination of the following values:
  - HRTIM_TIMERSWAP_A
  - HRTIM_TIMERSWAP_B
  - HRTIM_TIMERSWAP_C
  - HRTIM_TIMERSWAP_D
  - HRTIM_TIMERSWAP_E
  - HRTIM_TIMERSWAP_F

Return values

- **HAL:** status

Notes

- The function is not significant when the Push-pull mode is enabled (PSHPLL = 1)

HAL_HRTIM_FaultModeCtl

Function name

void HAL_HRTIM_FaultModeCtl (HRTIM_HandleTypeDef * hhrtim, uint32_t Faults, uint32_t Enable)

Function description

Enable or disables the HRTIMx Fault mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Faults:** fault input(s) to enable or disable This parameter can be any combination of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6
- **Enable:** Fault(s) enabling This parameter can be one of the following values:
  - HRTIM_FAULTMODECTL_ENABLED: Fault(s) enabled
  - HRTIM_FAULTMODECTL_DISABLED: Fault(s) disabled

Return values

- **None:**

HAL_HRTIM_ADCTriggerConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_ADCTriggerConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t ADCTrigger, HRTIM_ADCTriggerCfgTypeDef * pADCTriggerCfg)

Function description

Configure both the ADC trigger register update source and the ADC trigger source.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **ADCTrigger:** ADC trigger to configure This parameter can be one of the following values:
  - HRTIM_ADCTRIGGER_1: ADC trigger 1
  - HRTIM_ADCTRIGGER_2: ADC trigger 2
  - HRTIM_ADCTRIGGER_3: ADC trigger 3
  - HRTIM_ADCTRIGGER_4: ADC trigger 4
  - HRTIM_ADCTRIGGER_5: ADC trigger 5
  - HRTIM_ADCTRIGGER_6: ADC trigger 6
  - HRTIM_ADCTRIGGER_7: ADC trigger 7
  - HRTIM_ADCTRIGGER_8: ADC trigger 8
  - HRTIM_ADCTRIGGER_9: ADC trigger 9
  - HRTIM_ADCTRIGGER_10: ADC trigger 10
- **pADCTriggerCfg:** pointer to the ADC trigger configuration structure for Trigger nb (1..4): pADCTriggerCfg->Trigger parameter can be a combination of the following values
  - HRTIM_ADCTRIGGEREVENT13_...
  - HRTIM_ADCTRIGGEREVENT24_... for Trigger nb (5..10): pADCTriggerCfg->Trigger parameter can be one of the following values
  - HRTIM_ADCTRIGGEREVENT579_...
  - HRTIM_ADCTRIGGEREVENT6810_...

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_ADCPostScalerConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_ADCPostScalerConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t ADCTrigger, uint32_t Postscaler)

Function description

Configure the ADC trigger postscaler register of the ADC trigger source.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **ADCTrigger:** ADC trigger to configure This parameter can be one of the following values:
  - HRTIM_ADCTRIGGER_1: ADC trigger 1
  - HRTIM_ADCTRIGGER_2: ADC trigger 2
  - HRTIM_ADCTRIGGER_3: ADC trigger 3
  - HRTIM_ADCTRIGGER_4: ADC trigger 4
  - HRTIM_ADCTRIGGER_5: ADC trigger 5
  - HRTIM_ADCTRIGGER_6: ADC trigger 6
  - HRTIM_ADCTRIGGER_7: ADC trigger 7
  - HRTIM_ADCTRIGGER_8: ADC trigger 8
  - HRTIM_ADCTRIGGER_9: ADC trigger 9
  - HRTIM_ADCTRIGGER_10: ADC trigger 10
- **Postscaler:** value 0..1F

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_RollOverModeConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_RollOverModeConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t RollOverCfg)

Function description

Configure the ADC Roll-Over mode of the ADC trigger source.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **RollOverCfg:** This parameter can be a combination of all the following values:
  - HRTIM_TIM_FEROM_BOTH or HRTIM_TIM_FEROM_CREST or HRTIM_TIM_FEROM_VALLEY
  - HRTIM_TIM_BMROM_BOTH or HRTIM_TIM_BMROM_CREST or HRTIM_TIM_BMROM_VALLEY
  - HRTIM_TIM_ADROM_BOTH or HRTIM_TIM_ADROM_CREST or HRTIM_TIM_ADROM_VALLEY
  - HRTIM_TIM_OUTROM_BOTH or HRTIM_TIM_OUTROM_CREST or HRTIM_TIM_OUTROM_VALLEY
  - HRTIM_TIM_ROM_BOTH or HRTIM_TIM_ROM_CREST or HRTIM_TIM_ROM_VALLEY

Notes

- This function must be called before starting the timer

HAL_HRTIM_OutputSwapEnable

Function name

HAL_StatusTypeDef HAL_HRTIM_OutputSwapEnable (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Swap the output of one or several timers.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** timers concerned with the software register update This parameter can be any combination of the following values:
  - HRTIM_TIMERSWAP_A
  - HRTIM_TIMERSWAP_B
  - HRTIM_TIMERSWAP_C
  - HRTIM_TIMERSWAP_D
  - HRTIM_TIMERSWAP_E
  - HRTIM_TIMERSWAP_F

Return values

- **HAL:** status

HAL_HRTIM_OutputSwapDisable

Function name

HAL_StatusTypeDef HAL_HRTIM_OutputSwapDisable (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Un-swap the output of one or several timers.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** timers concerned with the software register update This parameter can be any combination of the following values:
  - HRTIM_TIMERSWAP_A
  - HRTIM_TIMERSWAP_B
  - HRTIM_TIMERSWAP_C
  - HRTIM_TIMERSWAP_D
  - HRTIM_TIMERSWAP_E
  - HRTIM_TIMERSWAP_F

Return values

- **HAL:** status

HAL_HRTIM_WaveformTimerConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformTimerConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_TimerCfgTypeDef * pTimerCfg)

Function description

Configure the general behavior of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pTimerCfg:** pointer to the timer configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in waveform mode, all the features supported by the HRTIM are available without any limitation.
- This function must be called before starting the timer

HAL_HRTIM_WaveformTimerControl

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformTimerControl (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_TimerCtlTypeDef * pTimerCtl)

Function description

Configure the general behavior of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pTimerCtl:** pointer to the timer configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in waveform mode, all the features supported by the HRTIM are available without any limitation.
- This function must be called before starting the timer

HAL_HRTIM_TimerDualChannelDacConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_TimerDualChannelDacConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_TimerCtlTypeDef * pTimerCtl)

Function description

Configure the Dual Channel Dac behavior of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pTimerCtl:** pointer to the timer DualChannel Dac configuration structure

Return values

- **HAL:** status

Notes

- When the timer operates in waveform mode, all the features supported by the HRTIM are available without any limitation.
- This function must be called before starting the timer

HAL_HRTIM_WaveformCompareConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCompareConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CompareUnit, HRTIM_CompareCfgTypeDef * pCompareCfg)

Function description

Configure the compare unit of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CompareUnit:** Compare unit to configure This parameter can be one of the following values:
  - HRTIM_COMPAREUNIT_1: Compare unit 1
  - HRTIM_COMPAREUNIT_2: Compare unit 2
  - HRTIM_COMPAREUNIT_3: Compare unit 3
  - HRTIM_COMPAREUNIT_4: Compare unit 4
- **pCompareCfg:** pointer to the compare unit configuration structure

Return values

- **HAL:** status

Notes

- When auto delayed mode is required for compare unit 2 or compare unit 4, application has to configure separately the capture unit. Capture unit to configure in that case depends on the compare unit auto delayed mode is applied to (see below): Auto delayed on output compare 2: capture unit 1 must be configured Auto delayed on output compare 4: capture unit 2 must be configured
- This function must be called before starting the timer

HAL_HRTIM_WaveformCaptureConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCaptureConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureUnit, HRTIM_CaptureCfgTypeDef * pCaptureCfg)

Function description

Configure the capture unit of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureUnit:** Capture unit to configure This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2
- **pCaptureCfg:** pointer to the compare unit configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_WaveformOutputConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformOutputConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Output, HRTIM_OutputCfgTypeDef * pOutputCfg)

Function description

Configure the output of a timer operating in waveform mode.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Output:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **pOutputCfg:** pointer to the timer output configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before configuring the timer and after configuring the deadtime insertion feature (if required).

HAL_HRTIM_WaveformSetOutputLevel

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformSetOutputLevel (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Output, uint32_t OutputLevel)

Function description

Force the timer output to its active or inactive state.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Output:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2
- **OutputLevel:** indicates whether the output is forced to its active or inactive level This parameter can be one of the following values:
  - HRTIM_OUTPUTLEVEL_ACTIVE: output is forced to its active level
  - HRTIM_OUTPUTLEVEL_INACTIVE: output is forced to its inactive level

Return values

- **HAL:** status

Notes

- The 'software set/reset trigger' bit in the output set/reset registers is automatically reset by hardware

HAL_HRTIM_TimerEventFilteringConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_TimerEventFilteringConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Event, HRTIM_TimerEventFilteringCfgTypeDef * pTimerEventFilteringCfg)

Function description

Configure the event filtering capabilities of a timer (blanking, windowing)

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Event:** external event for which timer event filtering must be configured This parameter can be one of the following values:
  - HRTIM_EVENT_1: External event 1
  - HRTIM_EVENT_2: External event 2
  - HRTIM_EVENT_3: External event 3
  - HRTIM_EVENT_4: External event 4
  - HRTIM_EVENT_5: External event 5
  - HRTIM_EVENT_6: External event 6
  - HRTIM_EVENT_7: External event 7
  - HRTIM_EVENT_8: External event 8
  - HRTIM_EVENT_9: External event 9
  - HRTIM_EVENT_10: External event 10
- **pTimerEventFilteringCfg:** pointer to the timer event filtering configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_ExtEventCounterConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_ExtEventCounterConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t EventCounter, HRTIM_ExternalEventCfgTypeDef * pTimerExternalEventCfg)

Function description

Configure the external Event Counter A or B of a timer (source, threshold, reset mode) but does not enable : call HAL_HRTIM_ExternalEventCounterEnable afterwards.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **EventCounter:** external event Counter A or B for which timer event must be configured This parameter can be one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B
- **pTimerExternalEventCfg:** pointer to the timer external event configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_ExtEventCounterEnable

Function name

HAL_StatusTypeDef HAL_HRTIM_ExtEventCounterEnable (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t EventCounter)

Function description

Enable the external event Counter A or B of a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **EventCounter:** external Event Counter A or B for which timer event must be configured This parameter can be a one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_ExtEventCounterDisable

Function name

HAL_StatusTypeDef HAL_HRTIM_ExtEventCounterDisable (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t EventCounter)

Function description

Disable the external event Counter A or B of a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **EventCounter:** external event Counter A or B for which timer event must be configured This parameter can be a one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return values

- **HAL:** status

HAL_HRTIM_ExtEventCounterReset

Function name

HAL_StatusTypeDef HAL_HRTIM_ExtEventCounterReset (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t EventCounter)

Function description

Reset the external event Counter A or B of a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **EventCounter:** external event Counter A or B for which timer event must be configured This parameter can be one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_DeadTimeConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_DeadTimeConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_DeadTimeCfgTypeDef * pDeadTimeCfg)

Function description

Configure the dead-time insertion feature for a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pDeadTimeCfg:** pointer to the deadtime insertion configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_ChopperModeConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_ChopperModeConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, HRTIM_ChopperModeCfgTypeDef * pChopperModeCfg)

Function description

Configure the chopper mode feature for a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **pChopperModeCfg:** pointer to the chopper mode configuration structure

Return values

- **HAL:** status

Notes

- This function must be called before configuring the timer output(s)

HAL_HRTIM_BurstDMAConfig

Function name

HAL_StatusTypeDef HAL_HRTIM_BurstDMAConfig (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t RegistersToUpdate)

Function description

Configure the burst DMA controller for a timer.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **RegistersToUpdate:** registers to be written by DMA This parameter can be any combination of the following values:
  - HRTIM_BURSTDMA_CR: HRTIM_MCR or HRTIM_TIMxCR
  - HRTIM_BURSTDMA_ICR: HRTIM_MICR or HRTIM_TIMxICR
  - HRTIM_BURSTDMA_DIER: HRTIM_MDIER or HRTIM_TIMxDIER
  - HRTIM_BURSTDMA_CNT: HRTIM_MCNT or HRTIM_TIMxCNT
  - HRTIM_BURSTDMA_PER: HRTIM_MPER or HRTIM_TIMxPER
  - HRTIM_BURSTDMA_REP: HRTIM_MREP or HRTIM_TIMxREP
  - HRTIM_BURSTDMA_CMP1: HRTIM_MCMP1 or HRTIM_TIMxCMP1
  - HRTIM_BURSTDMA_CMP2: HRTIM_MCMP2 or HRTIM_TIMxCMP2
  - HRTIM_BURSTDMA_CMP3: HRTIM_MCMP3 or HRTIM_TIMxCMP3
  - HRTIM_BURSTDMA_CMP4: HRTIM_MCMP4 or HRTIM_TIMxCMP4
  - HRTIM_BURSTDMA_DTR: HRTIM_TIMxDTR
  - HRTIM_BURSTDMA_SET1R: HRTIM_TIMxSET1R
  - HRTIM_BURSTDMA_RST1R: HRTIM_TIMxRST1R
  - HRTIM_BURSTDMA_SET2R: HRTIM_TIMxSET2R
  - HRTIM_BURSTDMA_RST2R: HRTIM_TIMxRST2R
  - HRTIM_BURSTDMA_EEFR1: HRTIM_TIMxEEFR1
  - HRTIM_BURSTDMA_EEFR2: HRTIM_TIMxEEFR2
  - HRTIM_BURSTDMA_RSTR: HRTIM_TIMxRSTR
  - HRTIM_BURSTDMA_CHPR: HRTIM_TIMxCHPR
  - HRTIM_BURSTDMA_OUTR: HRTIM_TIMxOUTR
  - HRTIM_BURSTDMA_FLTR: HRTIM_TIMxFLTR

Return values

- **HAL:** status

Notes

- This function must be called before starting the timer

HAL_HRTIM_WaveformCountStart

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStart (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Start the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter start.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to start This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_TIMER_A
  - HRTIM_TIMERID_TIMER_B
  - HRTIM_TIMERID_TIMER_C
  - HRTIM_TIMERID_TIMER_D
  - HRTIM_TIMERID_TIMER_E
  - HRTIM_TIMERID_TIMER_F

Return values

- **HAL:** status

HAL_HRTIM_WaveformCountStop

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStop (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Stop the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter stop.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to stop This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_A
  - HRTIM_TIMERID_B
  - HRTIM_TIMERID_C
  - HRTIM_TIMERID_D
  - HRTIM_TIMERID_E
  - HRTIM_TIMERID_F

Return values

- **HAL:** status

Notes

- The counter of a timer is stopped only if all timer outputs are disabled

HAL_HRTIM_WaveformCountStart_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStart_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Start the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter start.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to start This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_A
  - HRTIM_TIMERID_B
  - HRTIM_TIMERID_C
  - HRTIM_TIMERID_D
  - HRTIM_TIMERID_E
  - HRTIM_TIMERID_F

Return values

- **HAL:** status

Notes

- HRTIM interrupts (e.g. faults interrupts) and interrupts related to the timers to start are enabled within this function. Interrupts to enable are selected through HAL_HRTIM_WaveformTimerConfig function.

HAL_HRTIM_WaveformCountStop_IT

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStop_IT (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Stop the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter stop.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to stop This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_A
  - HRTIM_TIMERID_B
  - HRTIM_TIMERID_C
  - HRTIM_TIMERID_D
  - HRTIM_TIMERID_E
  - HRTIM_TIMERID_F

Return values

- **HAL:** status

Notes

- The counter of a timer is stopped only if all timer outputs are disabled
- All enabled timer related interrupts are disabled.

HAL_HRTIM_WaveformCountStart_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStart_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Start the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter start.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to start This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_TIMER_A
  - HRTIM_TIMERID_TIMER_B
  - HRTIM_TIMERID_TIMER_C
  - HRTIM_TIMERID_TIMER_D
  - HRTIM_TIMERID_TIMER_E
  - HRTIM_TIMERID_TIMER_F

Return values

- **HAL:** status

Notes

- This function enables the dma request(s) mentionned in the timer configuration data structure for every timers to start.
- The source memory address, the destination memory address and the size of each DMA transfer are specified at timer configuration time (see HAL_HRTIM_WaveformTimerConfig)

HAL_HRTIM_WaveformCountStop_DMA

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformCountStop_DMA (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Stop the counter of the designated timer(s) operating in waveform mode Timers can be combined (ORed) to allow for simultaneous counter stop.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer counter(s) to stop This parameter can be any combination of the following values:
  - HRTIM_TIMERID_MASTER
  - HRTIM_TIMERID_TIMER_A
  - HRTIM_TIMERID_TIMER_B
  - HRTIM_TIMERID_TIMER_C
  - HRTIM_TIMERID_TIMER_D
  - HRTIM_TIMERID_TIMER_E
  - HRTIM_TIMERID_TIMER_F

Return values

- **HAL:** status

Notes

- The counter of a timer is stopped only if all timer outputs are disabled
- All enabled timer related DMA requests are disabled.

HAL_HRTIM_WaveformOutputStart

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformOutputStart (HRTIM_HandleTypeDef * hhrtim, uint32_t OutputsToStart)

Function description

Enable the generation of the waveform signal on the designated output(s) Outputs can be combined (ORed) to allow for simultaneous output enabling.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **OutputsToStart:** Timer output(s) to enable This parameter can be any combination of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_WaveformOutputStop

Function name

HAL_StatusTypeDef HAL_HRTIM_WaveformOutputStop (HRTIM_HandleTypeDef * hhrtim, uint32_t OutputsToStop)

Function description

Disable the generation of the waveform signal on the designated output(s) Outputs can be combined (ORed) to allow for simultaneous output disabling.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **OutputsToStop:** Timer output(s) to disable This parameter can be any combination of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **HAL:** status

HAL_HRTIM_BurstModeCtl

Function name

HAL_StatusTypeDef HAL_HRTIM_BurstModeCtl (HRTIM_HandleTypeDef * hhrtim, uint32_t Enable)

Function description

Enable or disables the HRTIM burst mode controller.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Enable:** Burst mode controller enabling This parameter can be one of the following values:
  - HRTIM_BURSTMODECTL_ENABLED: Burst mode enabled
  - HRTIM_BURSTMODECTL_DISABLED: Burst mode disabled

Return values

- **HAL:** status

Notes

- This function must be called after starting the timer(s)

HAL_HRTIM_BurstModeSoftwareTrigger

Function name

HAL_StatusTypeDef HAL_HRTIM_BurstModeSoftwareTrigger (HRTIM_HandleTypeDef * hhrtim)

Function description

Trig the burst mode operation.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **HAL:** status

HAL_HRTIM_SoftwareCapture

Function name

HAL_StatusTypeDef HAL_HRTIM_SoftwareCapture (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureUnit)

Function description

Trig a software capture on the designed capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureUnit:** Capture unit to trig This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **HAL:** status

Notes

- The 'software capture' bit in the capure configuration register is automatically reset by hardware

HAL_HRTIM_SoftwareUpdate

Function name

HAL_StatusTypeDef HAL_HRTIM_SoftwareUpdate (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Trig the update of the registers of one or several timers.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** timers concerned with the software register update This parameter can be any combination of the following values:
  - HRTIM_TIMERUPDATE_MASTER
  - HRTIM_TIMERUPDATE_A
  - HRTIM_TIMERUPDATE_B
  - HRTIM_TIMERUPDATE_C
  - HRTIM_TIMERUPDATE_D
  - HRTIM_TIMERUPDATE_E
  - HRTIM_TIMERUPDATE_F

Return values

- **HAL:** status

Notes

- The 'software update' bits in the HRTIM conrol register 2 register are automatically reset by hardware

HAL_HRTIM_SoftwareReset

Function name

HAL_StatusTypeDef HAL_HRTIM_SoftwareReset (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Trig the reset of one or several timers.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** timers concerned with the software counter reset This parameter can be any combination of the following values:
  - HRTIM_TIMERRESET_MASTER
  - HRTIM_TIMERRESET_TIMER_A
  - HRTIM_TIMERRESET_TIMER_B
  - HRTIM_TIMERRESET_TIMER_C
  - HRTIM_TIMERRESET_TIMER_D
  - HRTIM_TIMERRESET_TIMER_E
  - HRTIM_TIMERRESET_TIMER_F

Return values

- **HAL:** status

Notes

- The 'software reset' bits in the HRTIM conrol register 2 are automatically reset by hardware

HAL_HRTIM_BurstDMATransfer

Function name

HAL_StatusTypeDef HAL_HRTIM_BurstDMATransfer (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t BurstBufferAddress, uint32_t BurstBufferLength)

Function description

Start a burst DMA operation to update HRTIM control registers content.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **BurstBufferAddress:** address of the buffer the HRTIM control registers content will be updated from.
- **BurstBufferLength:** size (in WORDS) of the burst buffer.

Return values

- **HAL:** status

Notes

- The TimerIdx parameter determines the dma channel to be used by the DMA burst controller (see below)
  HRTIM_TIMERINDEX_MASTER: DMA channel 2 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_A: DMA channel 3 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_B: DMA channel 4 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_C: DMA channel 5 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_D: DMA channel 6 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_E: DMA channel 7 is used by the DMA burst controller
  HRTIM_TIMERINDEX_TIMER_F: DMA channel 8 is used by the DMA burst controller

HAL_HRTIM_UpdateEnable

Function name

HAL_StatusTypeDef HAL_HRTIM_UpdateEnable (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Enable the transfer from preload to active registers for one or several timing units (including master timer).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer(s) concerned by the register preload enabling command This parameter can be any combination of the following values:
  - HRTIM_TIMERUPDATE_MASTER
  - HRTIM_TIMERUPDATE_A
  - HRTIM_TIMERUPDATE_B
  - HRTIM_TIMERUPDATE_C
  - HRTIM_TIMERUPDATE_D
  - HRTIM_TIMERUPDATE_E
  - HRTIM_TIMERUPDATE_E

Return values

- **HAL:** status

HAL_HRTIM_UpdateDisable

Function name

HAL_StatusTypeDef HAL_HRTIM_UpdateDisable (HRTIM_HandleTypeDef * hhrtim, uint32_t Timers)

Function description

Disable the transfer from preload to active registers for one or several timing units (including master timer).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **Timers:** Timer(s) concerned by the register preload disabling command This parameter can be any combination of the following values:
  - HRTIM_TIMERUPDATE_MASTER
  - HRTIM_TIMERUPDATE_A
  - HRTIM_TIMERUPDATE_B
  - HRTIM_TIMERUPDATE_C
  - HRTIM_TIMERUPDATE_D
  - HRTIM_TIMERUPDATE_E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **HAL:** status

HAL_HRTIM_GetState

Function name

HAL_HRTIM_StateTypeDef HAL_HRTIM_GetState (HRTIM_HandleTypeDef * hhrtim)

Function description

Return the HRTIM HAL state.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **HAL:** state

HAL_HRTIM_GetCapturedValue

Function name

uint32_t HAL_HRTIM_GetCapturedValue (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureUnit)

Function description

Return actual value of the capture register of the designated capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureUnit:** Capture unit to trig This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **Captured:** value

HAL_HRTIM_GetCapturedDir

Function name

uint32_t HAL_HRTIM_GetCapturedDir (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureUnit)

Function description

Return actual direction of the capture register of the designated capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureUnit:** Capture unit to trig This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **captured:** direction
  - This parameter is one HRTIM_Timer_UpDown_Mode :
  - HRTIM_TIMERUPDOWNMODE_UP
  - HRTIM_TIMERUPDOWNMODE_UPDOWN

HAL_HRTIM_GetCaptured

Function name

HRTIM_CaptureValueTypeDef HAL_HRTIM_GetCaptured (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t CaptureUnit)

Function description

Return actual value and direction of the capture register of the designated capture unit.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **CaptureUnit:** Capture unit to trig This parameter can be one of the following values:
  - HRTIM_CAPTUREUNIT_1: Capture unit 1
  - HRTIM_CAPTUREUNIT_2: Capture unit 2

Return values

- **captured:** value and direction structure

HAL_HRTIM_WaveformGetOutputLevel

Function name

uint32_t HAL_HRTIM_WaveformGetOutputLevel (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Output)

Function description

Return actual level (active or inactive) of the designated output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Output:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **Output:** level

Notes

- Returned output level is taken before the output stage (chopper, polarity).

HAL_HRTIM_WaveformGetOutputState

Function name

uint32_t HAL_HRTIM_WaveformGetOutputState (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Output)

Function description

Return actual state (RUN, IDLE, FAULT) of the designated output.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Output:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **Output:** state

HAL_HRTIM_GetDelayedProtectionStatus

Function name

uint32_t HAL_HRTIM_GetDelayedProtectionStatus (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx, uint32_t Output)

Function description

Return the level (active or inactive) of the designated output when the delayed protection was triggered.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F
- **Output:** Timer output This parameter can be one of the following values:
  - HRTIM_OUTPUT_TA1: Timer A - Output 1
  - HRTIM_OUTPUT_TA2: Timer A - Output 2
  - HRTIM_OUTPUT_TB1: Timer B - Output 1
  - HRTIM_OUTPUT_TB2: Timer B - Output 2
  - HRTIM_OUTPUT_TC1: Timer C - Output 1
  - HRTIM_OUTPUT_TC2: Timer C - Output 2
  - HRTIM_OUTPUT_TD1: Timer D - Output 1
  - HRTIM_OUTPUT_TD2: Timer D - Output 2
  - HRTIM_OUTPUT_TE1: Timer E - Output 1
  - HRTIM_OUTPUT_TE2: Timer E - Output 2
  - HRTIM_OUTPUT_TF1: Timer F - Output 1
  - HRTIM_OUTPUT_TF2: Timer F - Output 2

Return values

- **Delayed:** protection status

HAL_HRTIM_GetBurstStatus

Function name

uint32_t HAL_HRTIM_GetBurstStatus (HRTIM_HandleTypeDef * hhrtim)

Function description

Return the actual status (active or inactive) of the burst mode controller.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **Burst:** mode controller status

HAL_HRTIM_GetCurrentPushPullStatus

Function name

uint32_t HAL_HRTIM_GetCurrentPushPullStatus (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Indicate on which output the signal is currently active (when the push pull mode is enabled).

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **Burst:** mode controller status

HAL_HRTIM_GetIdlePushPullStatus

Function name

uint32_t HAL_HRTIM_GetIdlePushPullStatus (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Indicate on which output the signal was applied, in push-pull mode, balanced fault mode or delayed idle mode, when the protection was triggered.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **Idle:** Push Pull Status

HAL_HRTIM_IRQHandler

Function name

void HAL_HRTIM_IRQHandler (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

This function handles HRTIM interrupt request.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be any value of HRTIM_Timer_Index

Return values

- **None:**

HAL_HRTIM_Fault1Callback

Function name

void HAL_HRTIM_Fault1Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 1 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle *

Return values

- **None:**
- **None:**

HAL_HRTIM_Fault2Callback

Function name

void HAL_HRTIM_Fault2Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 2 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_Fault3Callback

Function name

void HAL_HRTIM_Fault3Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 3 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_Fault4Callback

Function name

void HAL_HRTIM_Fault4Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 4 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_Fault5Callback

Function name

void HAL_HRTIM_Fault5Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 5 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_Fault6Callback

Function name

void HAL_HRTIM_Fault6Callback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a fault 6 interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_SystemFaultCallback

Function name

void HAL_HRTIM_SystemFaultCallback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a system fault interrupt occurred.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_DLLCalibrationReadyCallback

Function name

void HAL_HRTIM_DLLCalibrationReadyCallback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when the DLL calibration is completed.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_BurstModePeriodCallback

Function name

void HAL_HRTIM_BurstModePeriodCallback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when the end of the burst mode period is reached.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_SynchronizationEventCallback

Function name

void HAL_HRTIM_SynchronizationEventCallback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a synchronization input event is received.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

HAL_HRTIM_RegistersUpdateCallback

Function name

void HAL_HRTIM_RegistersUpdateCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when timer registers are updated.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_RepetitionEventCallback

Function name

void HAL_HRTIM_RepetitionEventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when timer repetition period has elapsed.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Compare1EventCallback

Function name

void HAL_HRTIM_Compare1EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer counter matches the value programmed in the compare 1 register.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Compare2EventCallback

Function name

void HAL_HRTIM_Compare2EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer counter matches the value programmed in the compare 2 register.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Compare3EventCallback

Function name

void HAL_HRTIM_Compare3EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer counter matches the value programmed in the compare 3 register.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Compare4EventCallback

Function name

void HAL_HRTIM_Compare4EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer counter matches the value programmed in the compare 4 register.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Capture1EventCallback

Function name

void HAL_HRTIM_Capture1EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x capture 1 event occurs.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Capture2EventCallback

Function name

void HAL_HRTIM_Capture2EventCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x capture 2 event occurs.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_DelayedProtectionCallback

Function name

void HAL_HRTIM_DelayedProtectionCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the delayed idle or balanced idle mode is entered.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_CounterResetCallback

Function name

void HAL_HRTIM_CounterResetCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x counter reset/roll-over event occurs.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Output1SetCallback

Function name

void HAL_HRTIM_Output1SetCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x output 1 is set.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Output1ResetCallback

Function name

void HAL_HRTIM_Output1ResetCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x output 1 is reset.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Output2SetCallback

Function name

void HAL_HRTIM_Output2SetCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x output 2 is set.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_Output2ResetCallback

Function name

void HAL_HRTIM_Output2ResetCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when the timer x output 2 is reset.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_BurstDMATransferCallback

Function name

void HAL_HRTIM_BurstDMATransferCallback (HRTIM_HandleTypeDef * hhrtim, uint32_t TimerIdx)

Function description

Callback function invoked when a DMA burst transfer is completed.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle
- **TimerIdx:** Timer index This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_MASTER for master timer
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return values

- **None:**

HAL_HRTIM_ErrorCallback

Function name

void HAL_HRTIM_ErrorCallback (HRTIM_HandleTypeDef * hhrtim)

Function description

Callback function invoked when a DMA error occurs.

Parameters

- **hhrtim:** pointer to HAL HRTIM handle

Return values

- **None:**

28.3 HRTIM Firmware driver defines

The following section lists the various define and macros of the module.

28.3.1 HRTIM

HRTIM Burst Mode Clock Source

HRTIM_BURSTMODECLOCKSOURCE_MASTER

Master timer counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_A

Timer A counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_B

Timer B counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_C

Timer C counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_D

Timer D counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_E

Timer E counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIMER_F

Timer F counter reset/roll-over is used as clock source for the burst mode counter

HRTIM_BURSTMODECLOCKSOURCE_TIM16_OC

On-chip Event 1 (BMClk[1]), acting as a burst mode counter clock

HRTIM_BURSTMODECLOCKSOURCE_TIM17_OC

On-chip Event 2 (BMClk[2]), acting as a burst mode counter clock

HRTIM_BURSTMODECLOCKSOURCE_TIM7_TRGO

On-chip Event 3 (BMClk[3]), acting as a burst mode counter clock

HRTIM_BURSTMODECLOCKSOURCE_FHRTIM

Prescaled fHRTIM clock is used as clock source for the burst mode counter

HRTIM Burst Mode Control

HRTIM_BURSTMODECTL_DISABLED

Burst mode disabled

HRTIM_BURSTMODECTL_ENABLED

Burst mode enabled

HRTIM Burst Mode Operating Mode

HRTIM_BURSTMODE_SINGLESHOT

Burst mode operates in single shot mode

HRTIM_BURSTMODE_CONTINOUS

Burst mode operates in continuous mode

HRTIM Burst Mode Prescaler

HRTIM_BURSTMODEPRESCALER_DIV1

fBRST = fHRTIM

HRTIM_BURSTMODEPRESCALER_DIV2

fBRST = fHRTIM/2U

HRTIM_BURSTMODEPRESCALER_DIV4

fBRST = fHRTIM/4U

HRTIM_BURSTMODEPRESCALER_DIV8

fBRST = fHRTIM/8U

HRTIM_BURSTMODEPRESCALER_DIV16

fBRST = fHRTIM/16U

HRTIM_BURSTMODEPRESCALER_DIV32

fBRST = fHRTIM/32U

HRTIM_BURSTMODEPRESCALER_DIV64

fBRST = fHRTIM/64U

HRTIM_BURSTMODEPRESCALER_DIV128

fBRST = fHRTIM/128U

HRTIM_BURSTMODEPRESCALER_DIV256

fBRST = fHRTIM/256U

HRTIM_BURSTMODEPRESCALER_DIV512

fBRST = fHRTIM/512U

HRTIM_BURSTMODEPRESCALER_DIV1024

fBRST = fHRTIM/1024U

HRTIM_BURSTMODEPRESCALER_DIV2048

fBRST = fHRTIM/2048U

HRTIM_BURSTMODEPRESCALER_DIV4096

fBRST = fHRTIM/4096U

HRTIM_BURSTMODEPRESCALER_DIV8192

fBRST = fHRTIM/8192U

HRTIM_BURSTMODEPRESCALER_DIV16384

fBRST = fHRTIM/16384U

HRTIM_BURSTMODEPRESCALER_DIV32768

fBRST = fHRTIM/32768U

HRTIM Burst Mode Register Preload Enable

HRIM_BURSTMODEPRELOAD_DISABLED

Preload disabled: the write access is directly done into active registers

HRIM_BURSTMODEPRELOAD_ENABLED

Preload enabled: the write access is done into preload registers

HRTIM Burst Mode Status

HRTIM_BURSTMODESTATUS_NORMAL

Normal operation

HRTIM_BURSTMODESTATUS_ONGOING

Burst operation on-going

HRTIM Burst Mode Trigger

HRTIM_BURSTMODETRIGGER_NONE

No trigger

HRTIM_BURSTMODETRIGGER_MASTER_RESET

Master reset

HRTIM_BURSTMODETRIGGER_MASTER_REPETITION

Master repetition

HRTIM_BURSTMODETRIGGER_MASTER_CMP1

Master compare 1U

HRTIM_BURSTMODETRIGGER_MASTER_CMP2

Master compare 2U

HRTIM_BURSTMODETRIGGER_MASTER_CMP3

Master compare 3U

HRTIM_BURSTMODETRIGGER_MASTER_CMP4

Master compare 4U

HRTIM_BURSTMODETRIGGER_TIMERA_RESET

Timer A reset

HRTIM_BURSTMODETRIGGER_TIMERA_REPETITION

Timer A repetition

HRTIM_BURSTMODETRIGGER_TIMERA_CMP1

Timer A compare 1

HRTIM_BURSTMODETRIGGER_TIMERA_CMP2

Timer A compare 2

HRTIM_BURSTMODETRIGGER_TIMERB_RESET

Timer B reset

HRTIM_BURSTMODETRIGGER_TIMERB_REPETITION

Timer B repetition

HRTIM_BURSTMODETRIGGER_TIMERB_CMP1

Timer B compare 1

HRTIM_BURSTMODETRIGGER_TIMERB_CMP2

Timer B compare 2

HRTIM_BURSTMODETRIGGER_TIMERC_RESET

Timer C reset

HRTIM_BURSTMODETRIGGER_TIMERC_REPETITION

Timer C repetition

HRTIM_BURSTMODETRIGGER_TIMERC_CMP1

Timer C compare 1

HRTIM_BURSTMODETRIGGER_TIMERF_RESET

Timer F reset

HRTIM_BURSTMODETRIGGER_TIMERD_RESET

Timer D reset

HRTIM_BURSTMODETRIGGER_TIMERD_REPETITION

Timer D repetition

HRTIM_BURSTMODETRIGGER_TIMERF_REPETITION

Timer F repetition

HRTIM_BURSTMODETRIGGER_TIMERD_CMP2

Timer D compare 2

HRTIM_BURSTMODETRIGGER_TIMERF_CMP1

Timer F compare 1

HRTIM_BURSTMODETRIGGER_TIMERE_REPETITION

Timer E repetition

HRTIM_BURSTMODETRIGGER_TIMERE_CMP1

Timer E compare 1

HRTIM_BURSTMODETRIGGER_TIMERE_CMP2

Timer E compare 2

HRTIM_BURSTMODETRIGGER_TIMERA_EVENT7

Timer A period following External Event 7

HRTIM_BURSTMODETRIGGER_TIMERD_EVENT8

Timer D period following External Event 8

HRTIM_BURSTMODETRIGGER_EVENT_7

External Event 7 (timer A filters applied)

HRTIM_BURSTMODETRIGGER_EVENT_8

External Event 8 (timer D filters applied)

HRTIM_BURSTMODETRIGGER_EVENT_ONCHIP

On-chip Event

HRTIM Capture Unit

HRTIM_CAPTUREUNIT_1

Capture unit 1 identifier

HRTIM_CAPTUREUNIT_2

Capture unit 2 identifier

HRTIM Capture Unit TimerF Trigger

HRTIM_CAPTURETRIGGER_TF1_SET

Capture is triggered by TF1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TF1_RESET

Capture is triggered by TF1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERF_CMP1

Timer F Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERF_CMP2

Timer F Compare 2 triggers Capture

HRTIM Capture Unit Trigger

HRTIM_CAPTURETRIGGER_NONE

Capture trigger is disabled

HRTIM_CAPTURETRIGGER_UPDATE

The update event triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_1

The External event 1 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_2

The External event 2 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_3

The External event 3 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_4

The External event 4 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_5

The External event 5 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_6

The External event 6 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_7

The External event 7 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_8

The External event 8 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_9

The External event 9 triggers the Capture

HRTIM_CAPTURETRIGGER_EEV_10

The External event 10 triggers the Capture

HRTIM_CAPTURETRIGGER_TA1_SET

Capture is triggered by TA1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TA1_RESET

Capture is triggered by TA1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERA_CMP1

Timer A Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERA_CMP2

Timer A Compare 2 triggers Capture

HRTIM_CAPTURETRIGGER_TB1_SET

Capture is triggered by TB1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TB1_RESET

Capture is triggered by TB1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERB_CMP1

Timer B Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERB_CMP2

Timer B Compare 2 triggers Capture

HRTIM_CAPTURETRIGGER_TC1_SET

Capture is triggered by TC1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TC1_RESET

Capture is triggered by TC1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERC_CMP1

Timer C Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERC_CMP2

Timer C Compare 2 triggers Capture

HRTIM_CAPTURETRIGGER_TD1_SET

Capture is triggered by TD1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TD1_RESET

Capture is triggered by TD1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERD_CMP1

Timer D Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERD_CMP2

Timer D Compare 2 triggers Capture

HRTIM_CAPTURETRIGGER_TE1_SET

Capture is triggered by TE1 output inactive to active transition

HRTIM_CAPTURETRIGGER_TE1_RESET

Capture is triggered by TE1 output active to inactive transition

HRTIM_CAPTURETRIGGER_TIMERE_CMP1

Timer E Compare 1 triggers Capture

HRTIM_CAPTURETRIGGER_TIMERE_CMP2

Timer E Compare 2 triggers Capture

HRTIM Chopper Duty Cycle

HRTIM_CHOPPER_DUTYCYCLE_0

Only 1st pulse is present

HRTIM_CHOPPER_DUTYCYCLE_125

Duty cycle of the carrier signal is 12.5U %

HRTIM_CHOPPER_DUTYCYCLE_250

Duty cycle of the carrier signal is 25U %

HRTIM_CHOPPER_DUTYCYCLE_375

Duty cycle of the carrier signal is 37.5U %

HRTIM_CHOPPER_DUTYCYCLE_500

Duty cycle of the carrier signal is 50U %

HRTIM_CHOPPER_DUTYCYCLE_625

Duty cycle of the carrier signal is 62.5U %

HRTIM_CHOPPER_DUTYCYCLE_750

Duty cycle of the carrier signal is 75U %

HRTIM_CHOPPER_DUTYCYCLE_875

Duty cycle of the carrier signal is 87.5U %

HRTIM Chopper Frequency

tSTPW = tHRTIM x 256

HRTIM Common Interrupt Enable

HRTIM_IT_NONE

No interrupt enabled

HRTIM_IT_FLT1

Fault 1 interrupt enable

HRTIM_IT_FLT2

Fault 2 interrupt enable

HRTIM_IT_FLT3

Fault 3 interrupt enable

HRTIM_IT_FLT4

Fault 4 interrupt enable

HRTIM_IT_FLT5

Fault 5 interrupt enable

HRTIM_IT_FLT6

Fault 6 interrupt enable

HRTIM_IT_SYSFLT

System Fault interrupt enable

HRTIM_IT_DLLRDY

DLL ready interrupt enable

HRTIM_IT_BMPER

Burst mode period interrupt enable

HRTIM Common Interrupt Flag

HRTIM_FLAG_FLT1

Fault 1 interrupt flag

HRTIM_FLAG_FLT2

Fault 2 interrupt flag

HRTIM_FLAG_FLT3

Fault 3 interrupt flag

HRTIM_FLAG_FLT4

Fault 4 interrupt flag

HRTIM_FLAG_FLT5

Fault 5 interrupt flag

HRTIM_FLAG_FLT6

Fault 6 interrupt flag

HRTIM_FLAG_SYSFLT

System Fault interrupt flag

HRTIM_FLAG_DLLRDY

DLL ready interrupt flag

HRTIM_FLAG_BMPER

Burst mode period interrupt flag

HRTIM Compare Unit

HRTIM_COMPAREUNIT_1

Compare unit 1 identifier

HRTIM_COMPAREUNIT_2

Compare unit 2 identifier

HRTIM_COMPAREUNIT_3

Compare unit 3 identifier

HRTIM_COMPAREUNIT_4

Compare unit 4 identifier

HRTIM Compare Unit Auto Delayed Mode

HRTIM_AUTODELAYEDMODE_REGULAR

standard compare mode

HRTIM_AUTODELAYEDMODE_AUTODELAYED_NOTIMEOUT

Compare event generated only if a capture has occurred

HRTIM_AUTODELAYEDMODE_AUTODELAYED_TIMEOUTCMP1

Compare event generated if a capture has occurred or after a Compare 1 match (timeout if capture event is missing)

HRTIM_AUTODELAYEDMODE_AUTODELAYED_TIMEOUTCMP3

Compare event generated if a capture has occurred or after a Compare 3 match (timeout if capture event is missing)

HRTIM Counter Operating Mode

HRTIM_MODE_CONTINUOUS

The timer operates in continuous (free-running) mode

HRTIM_MODE_SINGLESHOT

The timer operates in non retriggerable single-shot mode

HRTIM_MODE_SINGLESHOT_RETRIGGERABLE

The timer operates in retriggerable single-shot mode

HRTIM Current Push Pull Status

HRTIM_PUSHPULL_CURRENTSTATUS_OUTPUT1

Signal applied on output 1 and output 2 forced inactive

HRTIM_PUSHPULL_CURRENTSTATUS_OUTPUT2

Signal applied on output 2 and output 1 forced inactive

HRTIM DAC Synchronization

HRTIM_DACSYNC_NONE

No DAC synchronization event generated

HRTIM_DACSYNC_DACTRIGOUT_1

DAC synchronization event generated on DACTrigOut1 output upon timer update

HRTIM_DACSYNC_DACTRIGOUT_2

DAC synchronization event generated on DACTrigOut2 output upon timer update

HRTIM_DACSYNC_DACTRIGOUT_3

DAC update generated on DACTrigOut3 output upon timer update

HRTIM Dead-time Falling Lock

HRTIM_TIMDEADTIME_FALLINGLOCK_WRITE

Dead-time falling value and sign is writeable

HRTIM_TIMDEADTIME_FALLINGLOCK_READONLY

Dead-time falling value and sign is read-only

HRTIM Dead-time Falling Sign

HRTIM_TIMDEADTIME_FALLINGSIGN_POSITIVE

Positive dead-time on falling edge

HRTIM_TIMDEADTIME_FALLINGSIGN_NEGATIVE

Negative dead-time on falling edge

HRTIM Dead-time Falling Sign Lock

HRTIM_TIMDEADTIME_FALLINGSIGNLOCK_WRITE

Dead-time falling sign is writeable

HRTIM_TIMDEADTIME_FALLINGSIGNLOCK_READONLY

Dead-time falling sign is read-only

HRTIM Dead-time Prescaler Ratio

HRTIM_TIMDEADTIME_PRESCALERRATIO_MUL8

fDTG = fHRTIM * 8U

HRTIM_TIMDEADTIME_PRESCALERRATIO_MUL4

fDTG = fHRTIM * 4U

HRTIM_TIMDEADTIME_PRESCALERRATIO_MUL2

fDTG = fHRTIM * 2U

HRTIM_TIMDEADTIME_PRESCALERRATIO_DIV1

fDTG = fHRTIM

HRTIM_TIMDEADTIME_PRESCALERRATIO_DIV2

fDTG = fHRTIM / 2U

HRTIM_TIMDEADTIME_PRESCALERRATIO_DIV4

fDTG = fHRTIM / 4U

HRTIM_TIMDEADTIME_PRESCALERRATIO_DIV8

fDTG = fHRTIM / 8U

HRTIM_TIMDEADTIME_PRESCALERRATIO_DIV16

fDTG = fHRTIM / 16U

HRTIM Dead-time Rising Lock

HRTIM_TIMDEADTIME_RISINGLOCK_WRITE

Dead-time rising value and sign is writeable

HRTIM_TIMDEADTIME_RISINGLOCK_READONLY

Dead-time rising value and sign is read-only

HRTIM Dead-time Rising Sign

HRTIM_TIMDEADTIME_RISINGSIGN_POSITIVE

Positive dead-time on rising edge

HRTIM_TIMDEADTIME_RISINGSIGN_NEGATIVE

Negative dead-time on rising edge

HRTIM Dead-time Rising Sign Lock

HRTIM_TIMDEADTIME_RISINGSIGNLOCK_WRITE

Dead-time rising sign is writeable

HRTIM_TIMDEADTIME_RISINGSIGNLOCK_READONLY

Dead-time rising sign is read-only

HRTIM DLL Calibration Rate

HRTIM_SINGLE_CALIBRATION

Non periodic DLL calibration

HRTIM_CALIBRATIONRATE_0

Periodic DLL calibration: T = 1048576U * tHRTIM (6.168 ms)

HRTIM_CALIBRATIONRATE_1

Periodic DLL calibration: T = 131072U * tHRTIM (0.771 ms)

HRTIM_CALIBRATIONRATE_2

Periodic DLL calibration: T = 16384U * tHRTIM (0.096 ms)

HRTIM_CALIBRATIONRATE_3

Periodic DLL calibration: T = 2048U * tHRTIM (0.012 ms)

HRTIM Exported Macros

__HAL_HRTIM_COUNTER_MODE_UP

Description:

- configures the actual direction of the counter to UP counting mode

Parameters:

- __HANDLE__: : HRTIM handle.
- __TIMER__: : Timer index This parameter can be a combination of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return value:

- none

__HAL_HRTIM_COUNTER_MODE_UPDOWN

Description:

- configures the actual direction of the counter to UP-DOWN counting mode

Parameters:

- __HANDLE__: : HRTIM handle.
- __TIMER__: : Timer index This parameter can be a combination of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return value:

- none

__HAL_HRTIM_TIMER_OUTPUT_SWAP

Description:

- swap the output of the timer HRTIM_SETA1R and HRTIM_RSTA1R are coding for the output A2, HRTIM_SETA2R and HRTIM_RSTA2R are coding for the output A1

Parameters:

- __HANDLE__: : HRTIM handle.
- __TIMER__: : Timer index This parameter can be a combination of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return value:

- none

__HAL_HRTIM_TIMER_OUTPUT_NOSWAP

Description:

- Un-swap the output of the timer HRTIM_SETA1R and HRTIM_RSTA1R are coding for the output A1, HRTIM_SETA2R and HRTIM_RSTA2R are coding for the output A2.

Parameters:

- __HANDLE__: : HRTIM handle.
- __TIMER__: : Timer index This parameter can be a combination of the following values:
  - HRTIM_TIMERINDEX_TIMER_A for timer A
  - HRTIM_TIMERINDEX_TIMER_B for timer B
  - HRTIM_TIMERINDEX_TIMER_C for timer C
  - HRTIM_TIMERINDEX_TIMER_D for timer D
  - HRTIM_TIMERINDEX_TIMER_E for timer E
  - HRTIM_TIMERINDEX_TIMER_F for timer F

Return value:

- none

__HAL_HRTIM_RESET_HANDLE_STATE

Description:

- Reset HRTIM handle state.

Parameters:

- __HANDLE__: HRTIM handle.

Return value:

- None

__HAL_HRTIM_ENABLE

Description:

- Enables or disables the timer counter(s)

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMERS__: timers to enable/disable This parameter can be any combinations of the following values:
  - HRTIM_TIMERID_MASTER: Master timer identifier
  - HRTIM_TIMERID_TIMER_A: Timer A identifier
  - HRTIM_TIMERID_TIMER_B: Timer B identifier
  - HRTIM_TIMERID_TIMER_C: Timer C identifier
  - HRTIM_TIMERID_TIMER_D: Timer D identifier
  - HRTIM_TIMERID_TIMER_E: Timer E identifier
  - HRTIM_TIMERID_TIMER_F: Timer F identifier

Return value:

- None

HRTIM_TAOEN_MASK

HRTIM_TBOEN_MASK

HRTIM_TCOEN_MASK

HRTIM_TDOEN_MASK

HRTIM_TEOEN_MASK

HRTIM_TFOEN_MASK

__HAL_HRTIM_DISABLE

__HAL_HRTIM_EXTERNAL_EVENT_COUNTER_ENABLE

Description:

- Enables the External Event counter.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMERS__: timers to enable/disable This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A: Timer A identifier
  - HRTIM_TIMERINDEX_TIMER_B: Timer B identifier
  - HRTIM_TIMERINDEX_TIMER_C: Timer C identifier
  - HRTIM_TIMERINDEX_TIMER_D: Timer D identifier
  - HRTIM_TIMERINDEX_TIMER_E: Timer E identifier
  - HRTIM_TIMERINDEX_TIMER_F: Timer F identifier
- Event: external event Counter A or B for which timer event must be enabled This parameter can be one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return value:

- None

__HAL_HRTIM_EXTERNAL_EVENT_COUNTER_DISABLE

Description:

- Disables the External Event counter.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMERS__: timers to enable/disable This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A: Timer A identifier
  - HRTIM_TIMERINDEX_TIMER_B: Timer B identifier
  - HRTIM_TIMERINDEX_TIMER_C: Timer C identifier
  - HRTIM_TIMERINDEX_TIMER_D: Timer D identifier
  - HRTIM_TIMERINDEX_TIMER_E: Timer E identifier
  - HRTIM_TIMERINDEX_TIMER_F: Timer F identifier
- Event: external event A or B for which timer event must be disabled This parameter can be one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return value:

- None

__HAL_HRTIM_EXTERNAL_EVENT_COUNTER_RESET

Description:

- Resets the External Event counter.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMERS__: timers to enable/disable This parameter can be one of the following values:
  - HRTIM_TIMERINDEX_TIMER_A: Timer A identifier
  - HRTIM_TIMERINDEX_TIMER_B: Timer B identifier
  - HRTIM_TIMERINDEX_TIMER_C: Timer C identifier
  - HRTIM_TIMERINDEX_TIMER_D: Timer D identifier
  - HRTIM_TIMERINDEX_TIMER_E: Timer E identifier
  - HRTIM_TIMERINDEX_TIMER_F: Timer F identifier
- Event: external event A or B for which timer event must be reset This parameter can be one of the following values:
  - HRTIM_TIMEEVENT_A
  - HRTIM_TIMEEVENT_B

Return value:

- None

__HAL_HRTIM_ENABLE_IT

Description:

- Enables or disables the specified HRTIM common interrupts.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - HRTIM_IT_FLT1: Fault 1 interrupt enable
  - HRTIM_IT_FLT2: Fault 2 interrupt enable
  - HRTIM_IT_FLT3: Fault 3 interrupt enable
  - HRTIM_IT_FLT4: Fault 4 interrupt enable
  - HRTIM_IT_FLT5: Fault 5 interrupt enable
  - HRTIM_IT_FLT6: Fault 6 interrupt enable
  - HRTIM_IT_SYSFLT: System Fault interrupt enable
  - HRTIM_IT_DLLRDY: DLL ready interrupt enable
  - HRTIM_IT_BMPER: Burst mode period interrupt enable

Return value:

- None

__HAL_HRTIM_DISABLE_IT

__HAL_HRTIM_MASTER_ENABLE_IT

Description:

- Enables or disables the specified HRTIM Master timer interrupts.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - HRTIM_MASTER_IT_MCMP1: Master compare 1 interrupt enable
  - HRTIM_MASTER_IT_MCMP2: Master compare 2 interrupt enable
  - HRTIM_MASTER_IT_MCMP3: Master compare 3 interrupt enable
  - HRTIM_MASTER_IT_MCMP4: Master compare 4 interrupt enable
  - HRTIM_MASTER_IT_MREP: Master Repetition interrupt enable
  - HRTIM_MASTER_IT_SYNC: Synchronization input interrupt enable
  - HRTIM_MASTER_IT_MUPD: Master update interrupt enable

Return value:

- None

__HAL_HRTIM_MASTER_DISABLE_IT

__HAL_HRTIM_TIMER_ENABLE_IT

Description:

- Enables or disables the specified HRTIM Timerx interrupts.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMER__: specified the timing unit (Timer A to F)
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - HRTIM_TIM_IT_CMP1: Timer compare 1 interrupt enable
  - HRTIM_TIM_IT_CMP2: Timer compare 2 interrupt enable
  - HRTIM_TIM_IT_CMP3: Timer compare 3 interrupt enable
  - HRTIM_TIM_IT_CMP4: Timer compare 4 interrupt enable
  - HRTIM_TIM_IT_REP: Timer repetition interrupt enable
  - HRTIM_TIM_IT_UPD: Timer update interrupt enable
  - HRTIM_TIM_IT_CPT1: Timer capture 1 interrupt enable
  - HRTIM_TIM_IT_CPT2: Timer capture 2 interrupt enable
  - HRTIM_TIM_IT_SET1: Timer output 1 set interrupt enable
  - HRTIM_TIM_IT_RST1: Timer output 1 reset interrupt enable
  - HRTIM_TIM_IT_SET2: Timer output 2 set interrupt enable
  - HRTIM_TIM_IT_RST2: Timer output 2 reset interrupt enable
  - HRTIM_TIM_IT_RST: Timer reset interrupt enable
  - HRTIM_TIM_IT_DLYPRT: Timer delay protection interrupt enable

Return value:

- None

__HAL_HRTIM_TIMER_DISABLE_IT

__HAL_HRTIM_GET_ITSTATUS

Description:

- Checks if the specified HRTIM common interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt source to check. This parameter can be one of the following values:
  - HRTIM_IT_FLT1: Fault 1 interrupt enable
  - HRTIM_IT_FLT2: Fault 2 interrupt enable
  - HRTIM_IT_FLT3: Fault 3 enable
  - HRTIM_IT_FLT4: Fault 4 enable
  - HRTIM_IT_FLT5: Fault 5 enable
  - HRTIM_IT_FLT6: Fault 6 enable
  - HRTIM_IT_SYSFLT: System Fault interrupt enable
  - HRTIM_IT_DLLRDY: DLL ready interrupt enable
  - HRTIM_IT_BMPER: Burst mode period interrupt enable

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_HRTIM_MASTER_GET_ITSTATUS

Description:

- Checks if the specified HRTIM Master interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt source to check. This parameter can be one of the following values:
  - HRTIM_MASTER_IT_MCMP1: Master compare 1 interrupt enable
  - HRTIM_MASTER_IT_MCMP2: Master compare 2 interrupt enable
  - HRTIM_MASTER_IT_MCMP3: Master compare 3 interrupt enable
  - HRTIM_MASTER_IT_MCMP4: Master compare 4 interrupt enable
  - HRTIM_MASTER_IT_MREP: Master Repetition interrupt enable
  - HRTIM_MASTER_IT_SYNC: Synchronization input interrupt enable
  - HRTIM_MASTER_IT_MUPD: Master update interrupt enable

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_HRTIM_TIMER_GET_ITSTATUS

Description:

- Checks if the specified HRTIM Timerx interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMER__: specified the timing unit (Timer A to F)
- __INTERRUPT__: specifies the interrupt source to check. This parameter can be one of the following values:
  - HRTIM_MASTER_IT_MCMP1: Master compare 1 interrupt enable
  - HRTIM_MASTER_IT_MCMP2: Master compare 2 interrupt enable
  - HRTIM_MASTER_IT_MCMP3: Master compare 3 interrupt enable
  - HRTIM_MASTER_IT_MCMP4: Master compare 4 interrupt enable
  - HRTIM_MASTER_IT_MREP: Master Repetition interrupt enable
  - HRTIM_MASTER_IT_SYNC: Synchronization input interrupt enable
  - HRTIM_MASTER_IT_MUPD: Master update interrupt enable
  - HRTIM_TIM_IT_CMP1: Timer compare 1 interrupt enable
  - HRTIM_TIM_IT_CMP2: Timer compare 2 interrupt enable
  - HRTIM_TIM_IT_CMP3: Timer compare 3 interrupt enable
  - HRTIM_TIM_IT_CMP4: Timer compare 4 interrupt enable
  - HRTIM_TIM_IT_REP: Timer repetition interrupt enable
  - HRTIM_TIM_IT_UPD: Timer update interrupt enable
  - HRTIM_TIM_IT_CPT1: Timer capture 1 interrupt enable
  - HRTIM_TIM_IT_CPT2: Timer capture 2 interrupt enable
  - HRTIM_TIM_IT_SET1: Timer output 1 set interrupt enable
  - HRTIM_TIM_IT_RST1: Timer output 1 reset interrupt enable
  - HRTIM_TIM_IT_SET2: Timer output 2 set interrupt enable
  - HRTIM_TIM_IT_RST2: Timer output 2 reset interrupt enable
  - HRTIM_TIM_IT_RST: Timer reset interrupt enable
  - HRTIM_TIM_IT_DLYPRT: Timer delay protection interrupt enable

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_HRTIM_CLEAR_IT

Description:

- Clears the specified HRTIM common pending flag.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - HRTIM_IT_FLT1: Fault 1 interrupt clear flag
  - HRTIM_IT_FLT2: Fault 2 interrupt clear flag
  - HRTIM_IT_FLT3: Fault 3 clear flag
  - HRTIM_IT_FLT4: Fault 4 clear flag
  - HRTIM_IT_FLT5: Fault 5 clear flag
  - HRTIM_IT_FLT6: Fault 6 clear flag
  - HRTIM_IT_SYSFLT: System Fault interrupt clear flag
  - HRTIM_IT_DLLRDY: DLL ready interrupt clear flag
  - HRTIM_IT_BMPER: Burst mode period interrupt clear flag

Return value:

- None

__HAL_HRTIM_MASTER_CLEAR_IT

Description:

- Clears the specified HRTIM Master pending flag.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - HRTIM_MASTER_IT_MCMP1: Master compare 1 interrupt clear flag
  - HRTIM_MASTER_IT_MCMP2: Master compare 2 interrupt clear flag
  - HRTIM_MASTER_IT_MCMP3: Master compare 3 interrupt clear flag
  - HRTIM_MASTER_IT_MCMP4: Master compare 4 interrupt clear flag
  - HRTIM_MASTER_IT_MREP: Master Repetition interrupt clear flag
  - HRTIM_MASTER_IT_SYNC: Synchronization input interrupt clear flag
  - HRTIM_MASTER_IT_MUPD: Master update interrupt clear flag

Return value:

- None

__HAL_HRTIM_TIMER_CLEAR_IT

Description:

- Clears the specified HRTIM Timerx pending flag.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMER__: specified the timing unit (Timer A to F)
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - HRTIM_TIM_IT_CMP1: Timer compare 1 interrupt clear flag
  - HRTIM_TIM_IT_CMP2: Timer compare 2 interrupt clear flag
  - HRTIM_TIM_IT_CMP3: Timer compare 3 interrupt clear flag
  - HRTIM_TIM_IT_CMP4: Timer compare 4 interrupt clear flag
  - HRTIM_TIM_IT_REP: Timer repetition interrupt clear flag
  - HRTIM_TIM_IT_UPD: Timer update interrupt clear flag
  - HRTIM_TIM_IT_CPT1: Timer capture 1 interrupt clear flag
  - HRTIM_TIM_IT_CPT2: Timer capture 2 interrupt clear flag
  - HRTIM_TIM_IT_SET1: Timer output 1 set interrupt clear flag
  - HRTIM_TIM_IT_RST1: Timer output 1 reset interrupt clear flag
  - HRTIM_TIM_IT_SET2: Timer output 2 set interrupt clear flag
  - HRTIM_TIM_IT_RST2: Timer output 2 reset interrupt clear flag
  - HRTIM_TIM_IT_RST: Timer reset interrupt clear flag
  - HRTIM_TIM_IT_DLYPRT: Timer output 1 delay protection interrupt clear flag

Return value:

- None

__HAL_HRTIM_MASTER_ENABLE_DMA

Description:

- Enables or disables the specified HRTIM Master timer DMA requests.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __DMA__: specifies the DMA request to enable or disable. This parameter can be one of the following values:
  - HRTIM_MASTER_DMA_MCMP1: Master compare 1 DMA request enable
  - HRTIM_MASTER_DMA_MCMP2: Master compare 2 DMA request enable
  - HRTIM_MASTER_DMA_MCMP3: Master compare 3 DMA request enable
  - HRTIM_MASTER_DMA_MCMP4: Master compare 4 DMA request enable
  - HRTIM_MASTER_DMA_MREP: Master Repetition DMA request enable
  - HRTIM_MASTER_DMA_SYNC: Synchronization input DMA request enable
  - HRTIM_MASTER_DMA_MUPD: Master update DMA request enable

Return value:

- None

__HAL_HRTIM_MASTER_DISABLE_DMA

__HAL_HRTIM_TIMER_ENABLE_DMA

Description:

- Enables or disables the specified HRTIM Timerx DMA requests.

Parameters:

- __HANDLE__: specifies the HRTIM Handle.
- __TIMER__: specified the timing unit (Timer A to F)
- __DMA__: specifies the DMA request to enable or disable. This parameter can be one of the following values:
  - HRTIM_TIM_DMA_CMP1: Timer compare 1 DMA request enable
  - HRTIM_TIM_DMA_CMP2: Timer compare 2 DMA request enable
  - HRTIM_TIM_DMA_CMP3: Timer compare 3 DMA request enable
  - HRTIM_TIM_DMA_CMP4: Timer compare 4 DMA request enable
  - HRTIM_TIM_DMA_REP: Timer repetition DMA request enable
  - HRTIM_TIM_DMA_UPD: Timer update DMA request enable
  - HRTIM_TIM_DMA_CPT1: Timer capture 1 DMA request enable
  - HRTIM_TIM_DMA_CPT2: Timer capture 2 DMA request enable
  - HRTIM_TIM_DMA_SET1: Timer output 1 set DMA request enable
  - HRTIM_TIM_DMA_RST1: Timer output 1 reset DMA request enable
  - HRTIM_TIM_DMA_SET2: Timer output 2 set DMA request enable
  - HRTIM_TIM_DMA_RST2: Timer output 2 reset DMA request enable
  - HRTIM_TIM_DMA_RST: Timer reset DMA request enable
  - HRTIM_TIM_DMA_DLYPRT: Timer delay protection DMA request enable

Return value:

- None

__HAL_HRTIM_TIMER_DISABLE_DMA

__HAL_HRTIM_GET_FLAG

__HAL_HRTIM_CLEAR_FLAG

__HAL_HRTIM_MASTER_GET_FLAG

__HAL_HRTIM_MASTER_CLEAR_FLAG

__HAL_HRTIM_TIMER_GET_FLAG

__HAL_HRTIM_TIMER_CLEAR_FLAG

__HAL_HRTIM_SETCOUNTER

Description:

- Sets the HRTIM timer Counter Register value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F
- __COUNTER__: specifies the Counter Register new value.

Return value:

- None

__HAL_HRTIM_GETCOUNTER

Description:

- Gets the HRTIM timer Counter Register value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F

Return value:

- HRTIM: timer Counter Register value

__HAL_HRTIM_SETPERIOD

Description:

- Sets the HRTIM timer Period value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F
- __PERIOD__: specifies the Period Register new value.

Return value:

- None

__HAL_HRTIM_GETPERIOD

Description:

- Gets the HRTIM timer Period Register value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F

Return value:

- timer: Period Register

__HAL_HRTIM_SETCLOCKPRESCALER

Description:

- Sets the HRTIM timer clock prescaler value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F
- __PRESCALER__: specifies the clock prescaler new value. This parameter can be one of the following values:
  - HRTIM_PRESCALERRATIO_MUL32: fHRCK: 4.608 GHz - Resolution: 217 ps - Min PWM frequency: 70.3 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_MUL16: fHRCK: 2.304 GHz - Resolution: 434 ps - Min PWM frequency: 35.1 KHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_MUL8: fHRCK: 1.152 GHz - Resolution: 868 ps - Min PWM frequency: 17.6 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_MUL4: fHRCK: 576 MHz - Resolution: 1.73 ns - Min PWM frequency: 8.8 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_MUL2: fHRCK: 288 MHz - Resolution: 3.47 ns - Min PWM frequency: 4.4 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_DIV1: fHRCK: 144 MHz - Resolution: 6.95 ns - Min PWM frequency: 2.2 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_DIV2: fHRCK: 72 MHz - Resolution: 13.88 ns- Min PWM frequency: 1.1 kHz (fHRTIM=144MHz)
  - HRTIM_PRESCALERRATIO_DIV4: fHRCK: 36 MHz - Resolution: 27.7 ns- Min PWM frequency: 550Hz (fHRTIM=144MHz)

Return value:

- None

__HAL_HRTIM_GETCLOCKPRESCALER

Description:

- Gets the HRTIM timer clock prescaler value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x6 for master timer
  - 0x0 to 0x5 for timers A to F

Return value:

- timer: clock prescaler value

__HAL_HRTIM_SETCOMPARE

Description:

- Sets the HRTIM timer Compare Register value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x0 to 0x5 for timers A to F
- __COMPAREUNIT__: timer compare unit This parameter can be one of the following values:
  - HRTIM_COMPAREUNIT_1: Compare unit 1
  - HRTIM_COMPAREUNIT_2: Compare unit 2
  - HRTIM_COMPAREUNIT_3: Compare unit 3
  - HRTIM_COMPAREUNIT_4: Compare unit 4
- __COMPARE__: specifies the Compare new value.

Return value:

- None

__HAL_HRTIM_GETCOMPARE

Description:

- Gets the HRTIM timer Compare Register value on runtime.

Parameters:

- __HANDLE__: HRTIM Handle.
- __TIMER__: HRTIM timer This parameter can be one of the following values:
  - 0x0 to 0x5 for timers A to F
- __COMPAREUNIT__: timer compare unit This parameter can be one of the following values:
  - HRTIM_COMPAREUNIT_1: Compare unit 1
  - HRTIM_COMPAREUNIT_2: Compare unit 2
  - HRTIM_COMPAREUNIT_3: Compare unit 3
  - HRTIM_COMPAREUNIT_4: Compare unit 4

Return value:

- Compare: value

__HAL_HRTIM_FAULT_BLANKING_ENABLE

Description:

- Enables the Fault Counter.

Parameters:

- hhrtim: pointer to HAL HRTIM handle
- Fault: fault input to enable This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6

Return value:

- HAL: status

Notes:

- This function must be called when fault is not enabled

__HAL_HRTIM_FAULT_BLANKING_DISABLE

Description:

- Disables the Fault Counter.

Parameters:

- hhrtim: pointer to HAL HRTIM handle
- Fault: fault input to disable This parameter can be one of the following values:
  - HRTIM_FAULT_1: Fault input 1
  - HRTIM_FAULT_2: Fault input 2
  - HRTIM_FAULT_3: Fault input 3
  - HRTIM_FAULT_4: Fault input 4
  - HRTIM_FAULT_5: Fault input 5
  - HRTIM_FAULT_6: Fault input 6

Return value:

- HAL: status

HRTIM External Event Channels

HRTIM_EVENT_NONE

Undefined event channel

HRTIM Fault Input Sources

HRTIM_FLTINR1_FLT1SRC

bit 0 of the source input for Fault channel 1

HRTIM_FLTINR1_FLT2SRC

bit 0 of the source input for Fault channel 2

HRTIM_FLTINR1_FLT3SRC

bit 0 of the source input for Fault channel 3

HRTIM_FLTINR1_FLT4SRC

bit 0 of the source input for Fault channel 4

HRTIM_FLTINR2_FLT5SRC

bit 0 of the source input for Fault channel 5

HRTIM_FLTINR2_FLT6SRC

bit 0 of the source input for Fault channel 6

HRTIM Fault Lock

HRTIM_FAULTLOCK_READWRITE

Fault settings bits are read/write

HRTIM_FAULTLOCK_READONLY

Fault settings bits are read only

HRTIM Fault Mode Control

HRTIM_FAULTMODECTL_DISABLED

Fault channel is disabled

HRTIM_FAULTMODECTL_ENABLED

Fault channel is enabled

HRTIM Fault Polarity

HRTIM_FAULTPOLARITY_LOW

Fault input is active low

HRTIM_FAULTPOLARITY_HIGH

Fault input is active high

HRTIM Fault Reset Mode

HRTIM_FAULTCOUNTERRST_UNCONDITIONAL

Fault counter is reset on each reset / roll-over event

HRTIM_FAULTCOUNTERRST_CONDITIONAL

Fault counter is reset on each reset / roll-over event only if no fault occurred during last countingperiod.

HRTIM Fault Sources

HRTIM_FAULTSOURCE_DIGITALINPUT

Fault input is FLT input pin

HRTIM_FAULTSOURCE_INTERNAL

Fault input is FLT_Int signal (e.g. internal comparator)

HRTIM_FAULTSOURCE_EEVINPUT

Fault input is EEV pin

HRTIM Half Mode Enable

HRTIM_HALFMODE_DISABLED

Half mode is disabled

HRTIM_HALFMODE_ENABLED

Half mode is enabled

HRTIM Idle Push Pull Status

HRTIM_PUSHPULL_IDLESTATUS_OUTPUT1

Protection occurred when the output 1 was active and output 2 forced inactive

HRTIM_PUSHPULL_IDLESTATUS_OUTPUT2

Protection occurred when the output 2 was active and output 1 forced inactive

HRTIM Interleaved Mode

HRTIM_INTERLEAVED_MODE_DISABLED

HRTIM interleaved Mode is disabled

HRTIM_INTERLEAVED_MODE_DUAL

HRTIM interleaved Mode is Half

HRTIM_INTERLEAVED_MODE_TRIPLE

HRTIM interleaved Mode is Triple

HRTIM_INTERLEAVED_MODE_QUAD

HRTIM interleaved Mode is Quad

HRTIM Master DMA Request Enable

HRTIM_MASTER_DMA_NONE

No DMA request enable

HRTIM_MASTER_DMA_MCMP1

Master compare 1 DMA request enable

HRTIM_MASTER_DMA_MCMP2

Master compare 2 DMA request enable

HRTIM_MASTER_DMA_MCMP3

Master compare 3 DMA request enable

HRTIM_MASTER_DMA_MCMP4

Master compare 4 DMA request enable

HRTIM_MASTER_DMA_MREP

Master Repetition DMA request enable

HRTIM_MASTER_DMA_SYNC

Synchronization input DMA request enable

HRTIM_MASTER_DMA_MUPD

Master update DMA request enable

HRTIM Master Interrupt Enable

HRTIM_MASTER_IT_NONE

No interrupt enabled

HRTIM_MASTER_IT_MCMP1

Master compare 1 interrupt enable

HRTIM_MASTER_IT_MCMP2

Master compare 2 interrupt enable

HRTIM_MASTER_IT_MCMP3

Master compare 3 interrupt enable

HRTIM_MASTER_IT_MCMP4

Master compare 4 interrupt enable

HRTIM_MASTER_IT_MREP

Master Repetition interrupt enable

HRTIM_MASTER_IT_SYNC

Synchronization input interrupt enable

HRTIM_MASTER_IT_MUPD

Master update interrupt enable

HRTIM Master Interrupt Flag

HRTIM_MASTER_FLAG_MCMP1

Master compare 1 interrupt flag

HRTIM_MASTER_FLAG_MCMP2

Master compare 2 interrupt flag

HRTIM_MASTER_FLAG_MCMP3

Master compare 3 interrupt flag

HRTIM_MASTER_FLAG_MCMP4

Master compare 4 interrupt flag

HRTIM_MASTER_FLAG_MREP

Master Repetition interrupt flag

HRTIM_MASTER_FLAG_SYNC

Synchronization input interrupt flag

HRTIM_MASTER_FLAG_MUPD

Master update interrupt flag

HRTIM Max Timer

MAX_HRTIM_TIMER

HRTIM Output Balanced Idle Automatic Resume

HRTIM_OUTPUTBIAR_DISABLED

output is not automatically re-enabled

HRTIM_OUTPUTBIAR_ENABLED

output is automatically re-enabled

HRTIM Output Burst Mode Entry Delayed

HRTIM_OUTPUTBURSTMODEENTRY_REGULAR

The programmed Idle state is applied immediately to the Output

HRTIM_OUTPUTBURSTMODEENTRY_DELAYED

Dead-time is inserted on output before entering the idle mode

HRTIM Output Chopper Mode Enable

HRTIM_OUTPUTCHOPPERMODE_DISABLED

Output signal is not altered

HRTIM_OUTPUTCHOPPERMODE_ENABLED

Output signal is chopped by a carrier signal

HRTIM Output FAULT Level

HRTIM_OUTPUTFAULTLEVEL_NONE

The output is not affected by the fault input

HRTIM_OUTPUTFAULTLEVEL_ACTIVE

Output at active level when in FAULT state

HRTIM_OUTPUTFAULTLEVEL_INACTIVE

Output at inactive level when in FAULT state

HRTIM_OUTPUTFAULTLEVEL_HIGHZ

Output is tri-stated when in FAULT state

HRTIM Output IDLE Level

HRTIM_OUTPUTIDLELEVEL_INACTIVE

Output at inactive level when in IDLE state

HRTIM_OUTPUTIDLELEVEL_ACTIVE

Output at active level when in IDLE state

HRTIM Output Idle Mode

HRTIM_OUTPUTIDLEMODE_NONE

The output is not affected by the burst mode operation

HRTIM_OUTPUTIDLEMODE_IDLE

The output is in idle state when requested by the burst mode controller

HRTIM Output Level

HRTIM_OUTPUTLEVEL_ACTIVE

Force the output to its active state

HRTIM_OUTPUTLEVEL_INACTIVE

Force the output to its inactive state

IS_HRTIM_OUTPUTLEVEL

HRTIM Output Polarity

HRTIM_OUTPUTPOLARITY_HIGH

Output is acitve HIGH

HRTIM_OUTPUTPOLARITY_LOW

Output is active LOW

HRTIM Output Reset Source

HRTIM_OUTPUTRESET_NONE

Reset the output reset crossbar

HRTIM_OUTPUTRESET_RESYNC

Timer reset event coming solely from software or SYNC input forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMPER

Timer period event forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCMP1

Timer compare 1 event forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCMP2

Timer compare 2 event forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCMP3

Timer compare 3 event forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCMP4

Timer compare 4 event forces the output to its inactive state

HRTIM_OUTPUTRESET_MASTERPER

The master timer period event forces the output to its inactive state

HRTIM_OUTPUTRESET_MASTERCMP1

Master Timer compare 1 event forces the output to its inactive state

HRTIM_OUTPUTRESET_MASTERCMP2

Master Timer compare 2 event forces the output to its inactive state

HRTIM_OUTPUTRESET_MASTERCMP3

Master Timer compare 3 event forces the output to its inactive state

HRTIM_OUTPUTRESET_MASTERCMP4

Master Timer compare 4 event forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV1_TIMBCMP1

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV2_TIMBCMP2

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV3_TIMCCMP2

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV4_TIMCCMP3

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV5_TIMDCMP1

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV6_TIMDCMP2

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV7_TIMECMP3

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV8_TIMECMP4

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMAEV9_TIMFCMP4

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV1_TIMACMP1

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV2_TIMACMP2

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV3_TIMCCMP3

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV4_TIMCCMP4

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV5_TIMDCMP3

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV6_TIMDCMP4

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV7_TIMECMP1

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV8_TIMECMP2

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMBEV9_TIMFCMP3

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV1_TIMACMP2

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV2_TIMACMP3

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV3_TIMBCMP2

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV4_TIMBCMP3

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV5_TIMDCMP2

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV6_TIMDCMP4

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV7_TIMECMP3

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV8_TIMECMP4

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMCEV9_TIMFCMP2

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV1_TIMACMP1

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV2_TIMACMP4

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV3_TIMBCMP2

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV4_TIMBCMP4

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV5_TIMCCMP4

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV6_TIMECMP1

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV7_TIMECMP4

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV8_TIMFCMP1

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMDEV9_TIMFCMP3

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV1_TIMACMP4

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV2_TIMBCMP3

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV3_TIMBCMP4

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV4_TIMCCMP1

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV5_TIMCCMP2

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV6_TIMDCMP1

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV7_TIMDCMP2

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV8_TIMFCMP3

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMEEV9_TIMFCMP4

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV1_TIMACMP3

Timer event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV2_TIMBCMP1

Timer event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV3_TIMBCMP4

Timer event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV4_TIMCCMP1

Timer event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV5_TIMCCMP4

Timer event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV6_TIMDCMP3

Timer event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV7_TIMDCMP4

Timer event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV8_TIMECMP2

Timer event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_TIMFEV9_TIMECMP3

Timer event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_1

External event 1 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_2

External event 2 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_3

External event 3 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_4

External event 4 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_5

External event 5 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_6

External event 6 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_7

External event 7 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_8

External event 8 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_9

External event 9 forces the output to its inactive state

HRTIM_OUTPUTRESET_EEV_10

External event 10 forces the output to its inactive state

HRTIM_OUTPUTRESET_UPDATE

Timer register update event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_NONE

Reset the output reset crossbar

LL_HRTIM_OUTPUTRESET_RESYNC

Timer reset event coming solely from software or SYNC input forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMPER

Timer period event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCMP1

Timer compare 1 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCMP2

Timer compare 2 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCMP3

Timer compare 3 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCMP4

Timer compare 4 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_MASTERPER

The master timer period event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_MASTERCMP1

Master Timer compare 1 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_MASTERCMP2

Master Timer compare 2 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_MASTERCMP3

Master Timer compare 3 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_MASTERCMP4

Master Timer compare 4 event forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV1_TIMBCMP1

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV2_TIMBCMP2

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV3_TIMFCMP4

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV4_TIMCCMP2

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV5_TIMCCMP3

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV6_TIMDCMP1

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV7_TIMDCMP2

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV8_TIMECMP3

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMAEV9_TIMECMP4

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV1_TIMACMP1

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV2_TIMACMP2

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV3_TIMFCMP3

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV4_TIMCCMP3

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV5_TIMCCMP4

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV6_TIMDCMP3

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV7_TIMDCMP4

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV8_TIMECMP1

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMBEV9_TIMECMP2

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV1_TIMACMP2

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV2_TIMACMP3

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV3_TIMBCMP2

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV4_TIMBCMP3

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV5_TIMDCMP2

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV6_TIMDCMP4

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV7_TIMFCMP2

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV8_TIMECMP3

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMCEV9_TIMECMP4

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV1_TIMACMP1

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV2_TIMACMP4

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV3_TIMBCMP2

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV4_TIMBCMP4

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV5_TIMFCMP1

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV6_TIMFCMP3

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV7_TIMCCMP4

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV8_TIMECMP1

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMDEV9_TIMECMP4

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV1_TIMFCMP3

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV2_TIMACMP4

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV3_TIMBCMP3

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV4_TIMBCMP4

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV5_TIMCCMP1

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV6_TIMCCMP2

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV7_TIMDCMP1

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV8_TIMDCMP2

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMEEV9_TIMFCMP4

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV1_TIMACMP3

Timer event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV2_TIMBCMP1

Timer event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV3_TIMBCMP4

Timer event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV4_TIMCCMP1

Timer event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV5_TIMCCMP4

Timer event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV6_TIMDCMP3

Timer event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV7_TIMDCMP4

Timer event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV8_TIMECMP2

Timer event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_TIMFEV9_TIMECMP3

Timer event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_1

External event 1 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_2

External event 2 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_3

External event 3 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_4

External event 4 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_5

External event 5 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_6

External event 6 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_7

External event 7 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_8

External event 8 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_9

External event 9 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_EEV_10

External event 10 forces the output to its inactive state

LL_HRTIM_OUTPUTRESET_UPDATE

Timer register update event forces the output to its inactive state

HRTIM Output Set Source

HRTIM_OUTPUTSET_NONE

Reset the output set crossbar

HRTIM_OUTPUTSET_RESYNC

Timer reset event coming solely from software or SYNC input forces the output to its active state

HRTIM_OUTPUTSET_TIMPER

Timer period event forces the output to its active state

HRTIM_OUTPUTSET_TIMCMP1

Timer compare 1 event forces the output to its active state

HRTIM_OUTPUTSET_TIMCMP2

Timer compare 2 event forces the output to its active state

HRTIM_OUTPUTSET_TIMCMP3

Timer compare 3 event forces the output to its active state

HRTIM_OUTPUTSET_TIMCMP4

Timer compare 4 event forces the output to its active state

HRTIM_OUTPUTSET_MASTERPER

The master timer period event forces the output to its active state

HRTIM_OUTPUTSET_MASTERCMP1

Master Timer compare 1 event forces the output to its active state

HRTIM_OUTPUTSET_MASTERCMP2

Master Timer compare 2 event forces the output to its active state

HRTIM_OUTPUTSET_MASTERCMP3

Master Timer compare 3 event forces the output to its active state

HRTIM_OUTPUTSET_MASTERCMP4

Master Timer compare 4 event forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV1_TIMBCMP1

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV2_TIMBCMP2

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV3_TIMCCMP2

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV4_TIMCCMP3

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV5_TIMDCMP1

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV6_TIMDCMP2

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV7_TIMECMP3

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV8_TIMECMP4

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMAEV9_TIMFCMP4

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV1_TIMACMP1

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV2_TIMACMP2

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV3_TIMCCMP3

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV4_TIMCCMP4

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV5_TIMDCMP3

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV6_TIMDCMP4

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV7_TIMECMP1

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV8_TIMECMP2

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMBEV9_TIMFCMP3

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV1_TIMACMP2

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV2_TIMACMP3

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV3_TIMBCMP2

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV4_TIMBCMP3

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV5_TIMDCMP2

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV6_TIMDCMP4

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV7_TIMECMP3

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV8_TIMECMP4

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMCEV9_TIMFCMP2

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV1_TIMACMP1

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV2_TIMACMP4

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV3_TIMBCMP2

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV4_TIMBCMP4

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV5_TIMCCMP4

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV6_TIMECMP1

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV7_TIMECMP4

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV8_TIMFCMP1

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMDEV9_TIMFCMP3

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV1_TIMACMP4

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV2_TIMBCMP3

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV3_TIMBCMP4

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV4_TIMCCMP1

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV5_TIMCCMP2

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV6_TIMDCMP1

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV7_TIMDCMP2

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV8_TIMFCMP3

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMEEV9_TIMFCMP4

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV1_TIMACMP3

Timer event 1 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV2_TIMBCMP1

Timer event 2 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV3_TIMBCMP4

Timer event 3 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV4_TIMCCMP1

Timer event 4 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV5_TIMCCMP4

Timer event 5 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV6_TIMDCMP3

Timer event 6 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV7_TIMDCMP4

Timer event 7 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV8_TIMECMP2

Timer event 8 forces the output to its active state

HRTIM_OUTPUTSET_TIMFEV9_TIMECMP3

Timer event 9 forces the output to its active state

HRTIM_OUTPUTSET_EEV_1

External event 1 forces the output to its active state

HRTIM_OUTPUTSET_EEV_2

External event 2 forces the output to its active state

HRTIM_OUTPUTSET_EEV_3

External event 3 forces the output to its active state

HRTIM_OUTPUTSET_EEV_4

External event 4 forces the output to its active state

HRTIM_OUTPUTSET_EEV_5

External event 5 forces the output to its active state

HRTIM_OUTPUTSET_EEV_6

External event 6 forces the output to its active state

HRTIM_OUTPUTSET_EEV_7

External event 7 forces the output to its active state

HRTIM_OUTPUTSET_EEV_8

External event 8 forces the output to its active state

HRTIM_OUTPUTSET_EEV_9

External event 9 forces the output to its active state

HRTIM_OUTPUTSET_EEV_10

External event 10 forces the output to its active state

HRTIM_OUTPUTSET_UPDATE

Timer register update event forces the output to its active state

HRTIM Output State

HRTIM_OUTPUTSTATE_IDLE

Main operating mode, where the output can take the active or inactive level as programmed in the crossbar unit

HRTIM_OUTPUTSTATE_RUN

Default operating state (e.g. after an HRTIM reset, when the outputs are disabled by software or during a burst mode operation

HRTIM_OUTPUTSTATE_FAULT

Safety state, entered in case of a shut-down request on FAULTx inputs

HRTIM Prescaler Ratio

HRTIM_PRESCALERRATIO_MUL32

fHRCK: fHRTIM x 32U = 4.608 GHz - Resolution: 217 ps - Min PWM frequency: 70.3 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_MUL16

fHRCK: fHRTIM x 16U = 2.304 GHz - Resolution: 434 ps - Min PWM frequency: 35.1 KHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_MUL8

fHRCK: fHRTIM x 8U = 1.152 GHz - Resolution: 868 ps - Min PWM frequency: 17.6 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_MUL4

fHRCK: fHRTIM x 4U = 576 MHz - Resolution: 1.73 ns - Min PWM frequency: 8.8 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_MUL2

fHRCK: fHRTIM x 2U = 288 MHz - Resolution: 3.47 ns - Min PWM frequency: 4.4 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_DIV1

fHRCK: fHRTIM = 144 MHz - Resolution: 6.95 ns - Min PWM frequency: 2.2 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_DIV2

fHRCK: fHRTIM / 2U = 72 MHz - Resolution: 13.88 ns- Min PWM frequency: 1.1 kHz (fHRTIM=144MHz)

HRTIM_PRESCALERRATIO_DIV4

fHRCK: fHRTIM / 4U = 36 MHz - Resolution: 27.7 ns- Min PWM frequency: 550Hz (fHRTIM=144MHz)

HRTIM Register Preload Enable

HRTIM_PRELOAD_DISABLED

Preload disabled: the write access is directly done into the active register

HRTIM_PRELOAD_ENABLED

Preload enabled: the write access is done into the preload register

HRTIM Reset On Sync Input Event

HRTIM_SYNCRESET_DISABLED

Synchronization input event has effect on the timer

HRTIM_SYNCRESET_ENABLED

Synchronization input event resets the timer

HRTIM Simple OC Mode

HRTIM_BASICOCMODE_TOGGLE

Output toggles when the timer counter reaches the compare value

HRTIM_BASICOCMODE_INACTIVE

Output forced to active level when the timer counter reaches the compare value

HRTIM_BASICOCMODE_ACTIVE

Output forced to inactive level when the timer counter reaches the compare value

IS_HRTIM_BASICOCMODE

HRTIM Software Timer Reset

HRTIM_TIMERRESET_MASTER

Reset the master timer counter

HRTIM_TIMERRESET_TIMER_A

Reset the timer A counter

HRTIM_TIMERRESET_TIMER_B

Reset the timer B counter

HRTIM_TIMERRESET_TIMER_C

Reset the timer C counter

HRTIM_TIMERRESET_TIMER_D

Reset the timer D counter

HRTIM_TIMERRESET_TIMER_E

Reset the timer E counter

HRTIM_TIMERRESET_TIMER_F

Reset the timer F counter

HRTIM Software Timer swap Output

HRTIM_TIMERSWAP_A

Swap the output of the Timer A

HRTIM_TIMERSWAP_B

Swap the output of the Timer B

HRTIM_TIMERSWAP_C

Swap the output of the Timer C

HRTIM_TIMERSWAP_D

Swap the output of the Timer D

HRTIM_TIMERSWAP_E

Swap the output of the Timer E

HRTIM_TIMERSWAP_F

Swap the output of the Timer F

HRTIM Software Timer Update

HRTIM_TIMERUPDATE_MASTER

Force an immediate transfer from the preload to the active register in the master timer

HRTIM_TIMERUPDATE_A

Force an immediate transfer from the preload to the active register in the timer A

HRTIM_TIMERUPDATE_B

Force an immediate transfer from the preload to the active register in the timer B

HRTIM_TIMERUPDATE_C

Force an immediate transfer from the preload to the active register in the timer C

HRTIM_TIMERUPDATE_D

Force an immediate transfer from the preload to the active register in the timer D

HRTIM_TIMERUPDATE_E

Force an immediate transfer from the preload to the active register in the timer E

HRTIM_TIMERUPDATE_F

Forces an immediate transfer from the preload to the active register in the timer F

HRTIM Start On Sync Input Event

HRTIM_SYNCSTART_DISABLED

Synchronization input event has effect on the timer

HRTIM_SYNCSTART_ENABLED

Synchronization input event starts the timer

HRTIM Synchronization Input Source

HRTIM_SYNCINPUTSOURCE_NONE

disabled. HRTIM is not synchronized and runs in standalone mode

HRTIM_SYNCINPUTSOURCE_INTERNALEVENT

The HRTIM is synchronized with the on-chip timer

HRTIM_SYNCINPUTSOURCE_EXTERNALEVENT

A positive pulse on SYNCIN input triggers the HRTIM

HRTIM Synchronization Options

HRTIM_SYNCOPTION_NONE

HRTIM instance doesn't handle external synchronization signals (SYNCIN, SYNCOUT)

HRTIM_SYNCOPTION_MASTER

HRTIM instance acts as a MASTER, i.e. generates external synchronization output (SYNCOUT)

HRTIM_SYNCOPTION_SLAVE

HRTIM instance acts as a SLAVE, i.e. it is synchronized by external sources (SYNCIN)

HRTIM Synchronization Output Polarity

HRTIM_SYNCOUTPUTPOLARITY_NONE

Synchronization output event is disabled

HRTIM_SYNCOUTPUTPOLARITY_POSITIVE

SCOUT pin has a low idle level and issues a positive pulse of 16 fHRTIM clock cycles length for the synchronization

HRTIM_SYNCOUTPUTPOLARITY_NEGATIVE

SCOUT pin has a high idle level and issues a negative pulse of 16 fHRTIM clock cycles length for the synchronization

HRTIM Synchronization Output Source

HRTIM_SYNCOUTPUTSOURCE_MASTER_START

A pulse is sent on the SYNCOUT output upon master timer start event

HRTIM_SYNCOUTPUTSOURCE_MASTER_CMP1

A pulse is sent on the SYNCOUT output upon master timer compare 1 event

HRTIM_SYNCOUTPUTSOURCE_TIMA_START

A pulse is sent on the SYNCOUT output upon timer A start or reset events

HRTIM_SYNCOUTPUTSOURCE_TIMA_CMP1

A pulse is sent on the SYNCOUT output upon timer A compare 1 event

HRTIM Timer Burst Mode

HRTIM_TIMERBURSTMODE_MAINTAINCLOCK

Timer counter clock is maintained and the timer operates normally

HRTIM_TIMERBURSTMODE_RESETCOUNTER

Timer counter clock is stopped and the counter is reset

HRTIM Timer Dead-time Insertion

HRTIM_TIMDEADTIMEINSERTION_DISABLED

Output 1 and output 2 signals are independent

HRTIM_TIMDEADTIMEINSERTION_ENABLED

Dead-time is inserted between output 1 and output 2U

HRTIM Timer Delayed Protection Mode

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DISABLED

No action

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDOUT1_EEV6

Timers A, B, C: Output 1 delayed Idle on external Event 6U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDOUT2_EEV6

Timers A, B, C: Output 2 delayed Idle on external Event 6U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDBOTH_EEV6

Timers A, B, C: Output 1 and output 2 delayed Idle on external Event 6U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_BALANCED_EEV6

Timers A, B, C: Balanced Idle on external Event 6U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDOUT1_DEEV7

Timers A, B, C: Output 1 delayed Idle on external Event 7U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDOUT2_DEEV7

Timers A, B, C: Output 2 delayed Idle on external Event 7U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_DELAYEDBOTH_EEV7

Timers A, B, C: Output 1 and output2 delayed Idle on external Event 7U

HRTIM_TIMER_A_B_C_DELAYEDPROTECTION_BALANCED_EEV7

Timers A, B, C: Balanced Idle on external Event 7U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DISABLED

No action

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDOUT1_EEV8

Timers D, E: Output 1 delayed Idle on external Event 6U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDOUT2_EEV8

Timers D, E: Output 2 delayed Idle on external Event 6U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDBOTH_EEV8

Timers D, E: Output 1 and output 2 delayed Idle on external Event 6U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_BALANCED_EEV8

Timers D, E: Balanced Idle on external Event 6U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDOUT1_DEEV9

Timers D, E: Output 1 delayed Idle on external Event 7U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDOUT2_DEEV9

Timers D, E: Output 2 delayed Idle on external Event 7U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_DELAYEDBOTH_EEV9

Timers D, E: Output 1 and output2 delayed Idle on external Event 7U

HRTIM_TIMER_D_E_DELAYEDPROTECTION_BALANCED_EEV9

Timers D, E: Balanced Idle on external Event 7U

HRTIM_TIMER_F_DELAYEDPROTECTION_DISABLED

No action

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDOUT1_EEV8

Timers F: Output 1 delayed Idle on external Event 6U

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDOUT2_EEV8

Timers F: Output 2 delayed Idle on external Event 6U

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDBOTH_EEV8

Timers F: Output 1 and output 2 delayed Idle on external Event 6U

HRTIM_TIMER_F_DELAYEDPROTECTION_BALANCED_EEV8

Timers F: Balanced Idle on external Event 6U

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDOUT1_DEEV9

Timers F: Output 1 delayed Idle on external Event 7U

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDOUT2_DEEV9

Timers F: Output 2 delayed Idle on external Event 7U

HRTIM_TIMER_F_DELAYEDPROTECTION_DELAYEDBOTH_EEV9

Timers F: Output 1 and output2 delayed Idle on external Event 7U

HRTIM_TIMER_F_DELAYEDPROTECTION_BALANCED_EEV9

Timers F: Balanced Idle on external Event 7U

HRTIM Dual Channel DAC Trigger Enable

HRTIM_TIMER_DCDE_DISABLED

the Dual channel DAC trigger is disabled

HRTIM_TIMER_DCDE_ENABLED

the Dual channel DAC trigger is enabled

HRTIM Dual Channel Dac Reset Trigger

HRTIM_TIMER_DCDR_COUNTER

the trigger is generated on counter reset or roll-over event

HRTIM_TIMER_DCDR_OUT1SET

the trigger is generated on output 1 set event

HRTIM Dual Channel Dac Step Trigger

HRTIM_TIMER_DCDS_CMP2

the trigger is generated on compare 2 event

HRTIM_TIMER_DCDS_OUT1RST

the trigger is generated on output 1 reset event

HRTIM Timer External Event Counter A or B

HRTIM_TIMEEVENT_A

External Event Counter A

HRTIM_TIMEEVENT_B

External Event Counter B

HRTIM Timer External Event Counter

HRTIM_TIMEEVENTCOUNTER_DISABLED

External Event Counter disabled

HRTIM_TIMEEVENTCOUNTER_ENABLED

External Event Counter enabled

HRTIM Timer External Event Filter

HRTIM_TIMEEVFLT_NONE

HRTIM_TIMEEVFLT_BLANKINGCMP1

Blanking from counter reset/roll-over to Compare 1U

HRTIM_TIMEEVFLT_BLANKINGCMP2

Blanking from counter reset/roll-over to Compare 2U

HRTIM_TIMEEVFLT_BLANKINGCMP3

Blanking from counter reset/roll-over to Compare 3U

HRTIM_TIMEEVFLT_BLANKINGCMP4

Blanking from counter reset/roll-over to Compare 4U

HRTIM_TIMEEVFLT_BLANKING_TIMAEEF1_TIMBCMP1

Blanking from another timing unit: TIMFLTR1 source

HRTIM_TIMEEVFLT_BLANKING_TIMAEEF2_TIMBCMP4

Blanking from another timing unit: TIMFLTR2 source

HRTIM_TIMEEVFLT_BLANKING_TIMAEEF3_TIMBOUT2

Blanking from another timing unit: TIMFLTR3 source

HRTIM_TIMEEVFLT_BLANKING_TIMAEEF4_TIMCCMP1

Blanking from another timing unit: TIMFLTR6 source

HRTIM_TIMEEVFLT_BLANKING_TIMDEEF7_TIMECMP4

Blanking from another timing unit: TIMFLTR7 source

HRTIM_TIMEEVFLT_BLANKING_TIMDEEF8_TIMFCMP4

Blanking from another timing unit: TIMFLTR8 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF1_TIMACMP2

Blanking from another timing unit: TIMFLTR1 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF2_TIMBCMP1

Blanking from another timing unit: TIMFLTR2 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF3_TIMCCMP1

Blanking from another timing unit: TIMFLTR3 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF4_TIMFCMP4

Blanking from another timing unit: TIMFLTR4 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF5_TIMFOUT2

Blanking from another timing unit: TIMFLTR5 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF6_TIMDCMP1

Blanking from another timing unit: TIMFLTR6 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF7_TIMDCMP4

Blanking from another timing unit: TIMFLTR7 source

HRTIM_TIMEEVFLT_BLANKING_TIMEEEF8_TIMDOUT2

Blanking from another timing unit: TIMFLTR8 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF1_TIMACMP4

Blanking from another timing unit: TIMFLTR1 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF2_TIMBCMP2

Blanking from another timing unit: TIMFLTR2 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF3_TIMCCMP4

Blanking from another timing unit: TIMFLTR3 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF4_TIMDCMP2

Blanking from another timing unit: TIMFLTR4 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF5_TIMDCMP4

Blanking from another timing unit: TIMFLTR5 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF6_TIMECMP1

Blanking from another timing unit: TIMFLTR6 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF7_TIMECMP4

Blanking from another timing unit: TIMFLTR7 source

HRTIM_TIMEEVFLT_BLANKING_TIMFEEF8_TIMEOUT2

Blanking from another timing unit: TIMFLTR8 source

HRTIM_TIMEEVFLT_WINDOWINGCMP2

Windowing from counter reset/roll-over to Compare 2U

HRTIM_TIMEEVFLT_WINDOWINGCMP3

Windowing from counter reset/roll-over to Compare 3U

HRTIM_TIMEEVFLT_WINDOWINGTIM

Windowing from another timing unit: TIMWIN source

HRTIM Timer External Event Latch

HRTIM_TIMEVENTLATCH_DISABLED

Event is ignored if it happens during a blank, or passed through during a window

HRTIM_TIMEVENTLATCH_ENABLED

Event is latched and delayed till the end of the blanking or windowing period

HRTIM Timer External Counter Reset Mode

HRTIM_TIMEEVENTRESETMODE_UNCONDITIONAL

External Event Counter is reset on each reset / roll-over event

HRTIM_TIMEEVENTRESETMODE_CONDITIONAL

External Event Counter is reset on each reset / roll-over event only if no event occurs during last counting period

HRTIM Timer Fault Enabling

HRTIM_TIMFAULTENABLE_NONE

No fault enabled

HRTIM_TIMFAULTENABLE_FAULT1

Fault 1 enabled

HRTIM_TIMFAULTENABLE_FAULT2

Fault 2 enabled

HRTIM_TIMFAULTENABLE_FAULT3

Fault 3 enabled

HRTIM_TIMFAULTENABLE_FAULT4

Fault 4 enabled

HRTIM_TIMFAULTENABLE_FAULT5

Fault 5 enabled

HRTIM_TIMFAULTENABLE_FAULT6

Fault 6 enabled

HRTIM Timer Fault Lock

HRTIM_TIMFAULTLOCK_READWRITE

Timer fault enabling bits are read/write

HRTIM_TIMFAULTLOCK_READONLY

Timer fault enabling bits are read only

HRTIM Timer Greater than Compare 1 PWM Mode

HRTIM_TIMERGTCMP1_EQUAL

Timer Compare 1 event is generated when counter is equal

HRTIM_TIMERGTCMP1_GREATER

Timer Compare 1 event is generated when counter is greater

HRTIM Timer Greater than Compare 3 PWM Mode

HRTIM_TIMERGTCMP3_EQUAL

Timer Compare 3 event is generated when counter is equal

HRTIM_TIMERGTCMP3_GREATER

Timer Compare 3 Reset event is generated when counter is greater

HRTIM Timer identifier

HRTIM_TIMERID_MASTER

Master identifier

HRTIM_TIMERID_TIMER_A

Timer A identifier

HRTIM_TIMERID_TIMER_B

Timer B identifier

HRTIM_TIMERID_TIMER_C

Timer C identifier

HRTIM_TIMERID_TIMER_D

Timer D identifier

HRTIM_TIMERID_TIMER_E

Timer E identifier

HRTIM_TIMERID_TIMER_F

Timer F identifier

HRTIM Timer Index

HRTIM_TIMERINDEX_TIMER_A

Index used to access timer A registers

HRTIM_TIMERINDEX_TIMER_B

Index used to access timer B registers

HRTIM_TIMERINDEX_TIMER_C

Index used to access timer C registers

HRTIM_TIMERINDEX_TIMER_D

Index used to access timer D registers

HRTIM_TIMERINDEX_TIMER_E

Index used to access timer E registers

HRTIM_TIMERINDEX_TIMER_F

Index used to access timer F registers

HRTIM_TIMERINDEX_MASTER

Index used to access master registers

HRTIM_TIMERINDEX_COMMON

Index used to access HRTIM common registers

HRTIM Timer Output

HRTIM_OUTPUT_TA1

Timer A - Output 1 identifier

HRTIM_OUTPUT_TA2

Timer A - Output 2 identifier

HRTIM_OUTPUT_TB1

Timer B - Output 1 identifier

HRTIM_OUTPUT_TB2

Timer B - Output 2 identifier

HRTIM_OUTPUT_TC1

Timer C - Output 1 identifier

HRTIM_OUTPUT_TC2

Timer C - Output 2 identifier

HRTIM_OUTPUT_TD1

Timer D - Output 1 identifier

HRTIM_OUTPUT_TD2

Timer D - Output 2 identifier

HRTIM_OUTPUT_TE1

Timer E - Output 1 identifier

HRTIM_OUTPUT_TE2

Timer E - Output 2 identifier

HRTIM_OUTPUT_TF1

Timer F - Output 1 identifier

HRTIM_OUTPUT_TF2

Timer F - Output 2 identifier

HRTIM Timer Push Pull Mode

HRTIM_TIMPUSHPULLMODE_DISABLED

Push-Pull mode disabled

HRTIM_TIMPUSHPULLMODE_ENABLED

Push-Pull mode enabled

HRTIM Timer Repetition Update

HRTIM_UPDATEONREPETITION_DISABLED

Update on repetition disabled

HRTIM_UPDATEONREPETITION_ENABLED

Update on repetition enabled

HRTIM Timer Reset Trigger

HRTIM_TIMRESETTRIGGER_NONE

No counter reset trigger

HRTIM_TIMRESETTRIGGER_UPDATE

The timer counter is reset upon update event

HRTIM_TIMRESETTRIGGER_CMP2

The timer counter is reset upon Timer Compare 2 event

HRTIM_TIMRESETTRIGGER_CMP4

The timer counter is reset upon Timer Compare 4 event

HRTIM_TIMRESETTRIGGER_MASTER_PER

The timer counter is reset upon master timer period event

HRTIM_TIMRESETTRIGGER_MASTER_CMP1

The timer counter is reset upon master timer Compare 1 event

HRTIM_TIMRESETTRIGGER_MASTER_CMP2

The timer counter is reset upon master timer Compare 2 event

HRTIM_TIMRESETTRIGGER_MASTER_CMP3

The timer counter is reset upon master timer Compare 3 event

HRTIM_TIMRESETTRIGGER_MASTER_CMP4

The timer counter is reset upon master timer Compare 4 event

HRTIM_TIMRESETTRIGGER_EEV_1

The timer counter is reset upon external event 1U

HRTIM_TIMRESETTRIGGER_EEV_2

The timer counter is reset upon external event 2U

HRTIM_TIMRESETTRIGGER_EEV_3

The timer counter is reset upon external event 3U

HRTIM_TIMRESETTRIGGER_EEV_4

The timer counter is reset upon external event 4U

HRTIM_TIMRESETTRIGGER_EEV_5

The timer counter is reset upon external event 5U

HRTIM_TIMRESETTRIGGER_EEV_6

The timer counter is reset upon external event 6U

HRTIM_TIMRESETTRIGGER_EEV_7

The timer counter is reset upon external event 7U

HRTIM_TIMRESETTRIGGER_EEV_8

The timer counter is reset upon external event 8U

HRTIM_TIMRESETTRIGGER_EEV_9

The timer counter is reset upon external event 9U

HRTIM_TIMRESETTRIGGER_EEV_10

The timer counter is reset upon external event 10U

HRTIM_TIMRESETTRIGGER_OTHER1_CMP1

The timer counter is reset upon other timer Compare 1 event

HRTIM_TIMRESETTRIGGER_OTHER1_CMP2

The timer counter is reset upon other timer Compare 2 event

HRTIM_TIMRESETTRIGGER_OTHER1_CMP4

The timer counter is reset upon other timer Compare 4 event

HRTIM_TIMRESETTRIGGER_OTHER2_CMP1

The timer counter is reset upon other timer Compare 1 event

HRTIM_TIMRESETTRIGGER_OTHER2_CMP2

The timer counter is reset upon other timer Compare 2 event

HRTIM_TIMRESETTRIGGER_OTHER2_CMP4

The timer counter is reset upon other timer Compare 4 event

HRTIM_TIMRESETTRIGGER_OTHER3_CMP1

The timer counter is reset upon other timer Compare 1 event

HRTIM_TIMRESETTRIGGER_OTHER3_CMP2

The timer counter is reset upon other timer Compare 2 event

HRTIM_TIMRESETTRIGGER_OTHER3_CMP4

The timer counter is reset upon other timer Compare 4 event

HRTIM_TIMRESETTRIGGER_OTHER4_CMP1

The timer counter is reset upon other timer Compare 1 event

HRTIM_TIMRESETTRIGGER_OTHER4_CMP2

The timer counter is reset upon other timer Compare 2 event

HRTIM_TIMRESETTRIGGER_OTHER4_CMP4

The timer counter is reset upon other timer Compare 4 event

HRTIM_TIMRESETTRIGGER_OTHER5_CMP1

The timer counter is reset upon other timer Compare 1 event

HRTIM_TIMRESETTRIGGER_OTHER5_CMP2

The timer counter is reset upon other timer Compare 2 event

HRTIM Timer Reset Update

HRTIM_TIMUPDATEONRESET_DISABLED

Update by timer x reset / roll-over disabled

HRTIM_TIMUPDATEONRESET_ENABLED

Update by timer x reset / roll-over enabled

HRTIM Timer Re-Synchronized update

HRTIM_TIMERESYNC_UPDATE_UNCONDITIONAL

update taken into account immediately

HRTIM_TIMERESYNC_UPDATE_CONDITIONAL

update taken into account on the following Reset/Roll-over event

HRTIM Timer RollOver Mode

HRTIM_TIM_FEROM_BOTH

Roll-over event used by

HRTIM_TIM_FEROM_CREST

the Fault and

HRTIM_TIM_FEROM_VALLEY

Event counters

HRTIM_TIM_BMROM_BOTH

Roll-over event used in the Burst mode controller

HRTIM_TIM_BMROM_CREST

as clock

HRTIM_TIM_BMROM_VALLEY

and as burst mode trigger

HRTIM_TIM_ADROM_BOTH

Roll-over event which triggers

HRTIM_TIM_ADROM_CREST

the

HRTIM_TIM_ADROM_VALLEY

ADC

HRTIM_TIM_OUTROM_BOTH

Roll-over event which sets and/or resets the ouputs

HRTIM_TIM_OUTROM_CREST

as per HRTIM_SETxyR

HRTIM_TIM_OUTROM_VALLEY

and HRTIM_RSTxyR settings

HRTIM_TIM_ROM_BOTH

Roll-over event with the following destinations: IRQ and DMA requests,

HRTIM_TIM_ROM_CREST

Update trigger (to transfer content from preload to active registers),

HRTIM_TIM_ROM_VALLEY

repetition counter decrement and External Event filtering

IS_HRTIM_ROLLOVERMODE

HRTIM Re-Synchronized Update

HRTIM_RSYNCUPDATE_DISABLE

The update is taken into account immediately

HRTIM_RSYNCUPDATE_ENABLE

The update is taken into account on the following Reset/Roll-over event.

HRTIM Timer Triggered-Half Mode

HRTIM_TIMERTRIGHALF_DISABLED

Timer Compare 2 register is behaving in standard mode

HRTIM_TIMERTRIGHALF_ENABLED

Timer Compare 2 register is behaving in triggered-half mode

LL_HRTIM_TRIGHALF_DISABLED

Timer Compare 2 register is behaving in standard mode

LL_HRTIM_TRIGHALF_ENABLED

Timer Compare 2 register is behaving in triggered-half mode

HRTIM Timer Update Trigger

HRTIM_TIMUPDATETRIGGER_NONE

Register update is disabled

HRTIM_TIMUPDATETRIGGER_MASTER

Register update is triggered by the master timer update

HRTIM_TIMUPDATETRIGGER_TIMER_A

Register update is triggered by the timer A update

HRTIM_TIMUPDATETRIGGER_TIMER_B

Register update is triggered by the timer B update

HRTIM_TIMUPDATETRIGGER_TIMER_C

Register update is triggered by the timer C update

HRTIM_TIMUPDATETRIGGER_TIMER_D

Register update is triggered by the timer D update

HRTIM_TIMUPDATETRIGGER_TIMER_E

Register update is triggered by the timer E update

HRTIM_TIMUPDATETRIGGER_TIMER_F

Register update is triggered by the timer F update

HRTIM Timer UpDown Mode

HRTIM_TIMERUPDOWNMODE_UP

Timer counter is operating in up-counting mode

HRTIM_TIMERUPDOWNMODE_UPDOWN

Timer counter is operating in up-down counting mode

HRTIM Timing Unit DMA Request Enable

HRTIM_TIM_DMA_NONE

No DMA request enable

HRTIM_TIM_DMA_CMP1

Timer compare 1 DMA request enable

HRTIM_TIM_DMA_CMP2

Timer compare 2 DMA request enable

HRTIM_TIM_DMA_CMP3

Timer compare 3 DMA request enable

HRTIM_TIM_DMA_CMP4

Timer compare 4 DMA request enable

HRTIM_TIM_DMA_REP

Timer repetition DMA request enable

HRTIM_TIM_DMA_UPD

Timer update DMA request enable

HRTIM_TIM_DMA_CPT1

Timer capture 1 DMA request enable

HRTIM_TIM_DMA_CPT2

Timer capture 2 DMA request enable

HRTIM_TIM_DMA_SET1

Timer output 1 set DMA request enable

HRTIM_TIM_DMA_RST1

Timer output 1 reset DMA request enable

HRTIM_TIM_DMA_SET2

Timer output 2 set DMA request enable

HRTIM_TIM_DMA_RST2

Timer output 2 reset DMA request enable

HRTIM_TIM_DMA_RST

Timer reset DMA request enable

HRTIM_TIM_DMA_DLYPRT

Timer delay protection DMA request enable

HRTIM Timing Unit Interrupt Enable

HRTIM_TIM_IT_NONE

No interrupt enabled

HRTIM_TIM_IT_CMP1

Timer compare 1 interrupt enable

HRTIM_TIM_IT_CMP2

Timer compare 2 interrupt enable

HRTIM_TIM_IT_CMP3

Timer compare 3 interrupt enable

HRTIM_TIM_IT_CMP4

Timer compare 4 interrupt enable

HRTIM_TIM_IT_REP

Timer repetition interrupt enable

HRTIM_TIM_IT_UPD

Timer update interrupt enable

HRTIM_TIM_IT_CPT1

Timer capture 1 interrupt enable

HRTIM_TIM_IT_CPT2

Timer capture 2 interrupt enable

HRTIM_TIM_IT_SET1

Timer output 1 set interrupt enable

HRTIM_TIM_IT_RST1

Timer output 1 reset interrupt enable

HRTIM_TIM_IT_SET2

Timer output 2 set interrupt enable

HRTIM_TIM_IT_RST2

Timer output 2 reset interrupt enable

HRTIM_TIM_IT_RST

Timer reset interrupt enable

HRTIM_TIM_IT_DLYPRT

Timer delay protection interrupt enable

HRTIM Timing Unit Interrupt Flag

HRTIM_TIM_FLAG_CMP1

Timer compare 1 interrupt flag

HRTIM_TIM_FLAG_CMP2

Timer compare 2 interrupt flag

HRTIM_TIM_FLAG_CMP3

Timer compare 3 interrupt flag

HRTIM_TIM_FLAG_CMP4

Timer compare 4 interrupt flag

HRTIM_TIM_FLAG_REP

Timer repetition interrupt flag

HRTIM_TIM_FLAG_UPD

Timer update interrupt flag

HRTIM_TIM_FLAG_CPT1

Timer capture 1 interrupt flag

HRTIM_TIM_FLAG_CPT2

Timer capture 2 interrupt flag

HRTIM_TIM_FLAG_SET1

Timer output 1 set interrupt flag

HRTIM_TIM_FLAG_RST1

Timer output 1 reset interrupt flag

HRTIM_TIM_FLAG_SET2

Timer output 2 set interrupt flag

HRTIM_TIM_FLAG_RST2

Timer output 2 reset interrupt flag

HRTIM_TIM_FLAG_RST

Timer reset interrupt flag

HRTIM_TIM_FLAG_DLYPRT

Timer delay protection interrupt flag

HRTIM Update Gating

HRTIM_UPDATEGATING_INDEPENDENT

Update done independently from the DMA burst transfer completion

HRTIM_UPDATEGATING_DMABURST

Update done when the DMA burst transfer is completed

HRTIM_UPDATEGATING_DMABURST_UPDATE

Update done on timer roll-over following a DMA burst transfer completion

HRTIM_UPDATEGATING_UPDEN1

Slave timer only - Update done on a rising edge of HRTIM update enable input 1U

HRTIM_UPDATEGATING_UPDEN2

Slave timer only - Update done on a rising edge of HRTIM update enable input 2U

HRTIM_UPDATEGATING_UPDEN3

Slave timer only - Update done on a rising edge of HRTIM update enable input 3U

HRTIM_UPDATEGATING_UPDEN1_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 1U

HRTIM_UPDATEGATING_UPDEN2_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 2U

HRTIM_UPDATEGATING_UPDEN3_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 3U

29 HAL I2C Generic Driver

29.1 I2C Firmware driver registers structures

29.1.1 I2C_InitTypeDef

I2C_InitTypeDef is defined in the stm32g4xx_hal_i2c.h

Data Fields

- ***uint32_t Timing***
- ***uint32_t OwnAddress1***
- ***uint32_t AddressingMode***
- ***uint32_t DualAddressMode***
- ***uint32_t OwnAddress2***
- ***uint32_t OwnAddress2Masks***
- ***uint32_t GeneralCallMode***
- ***uint32_t NoStretchMode***

Field Documentation

- ***uint32_t I2C_InitTypeDef::Timing***

  Specifies the I2C_TIMINGR_register value. This parameter calculated by referring to I2C initialization section in Reference manual
- ***uint32_t I2C_InitTypeDef::OwnAddress1***

  Specifies the first device own address. This parameter can be a 7-bit or 10-bit address.
- ***uint32_t I2C_InitTypeDef::AddressingMode***

  Specifies if 7-bit or 10-bit addressing mode is selected. This parameter can be a value of ***I2C_ADDRESSING_MODE***
- ***uint32_t I2C_InitTypeDef::DualAddressMode***

  Specifies if dual addressing mode is selected. This parameter can be a value of ***I2C_DUAL_ADDRESSING_MODE***
- ***uint32_t I2C_InitTypeDef::OwnAddress2***

  Specifies the second device own address if dual addressing mode is selected This parameter can be a 7-bit address.
- ***uint32_t I2C_InitTypeDef::OwnAddress2Masks***

  Specifies the acknowledge mask address second device own address if dual addressing mode is selected This parameter can be a value of ***I2C_OWN_ADDRESS2_MASKS***
- ***uint32_t I2C_InitTypeDef::GeneralCallMode***

  Specifies if general call mode is selected. This parameter can be a value of ***I2C_GENERAL_CALL_ADDRESSING_MODE***
- ***uint32_t I2C_InitTypeDef::NoStretchMode***

  Specifies if nostretch mode is selected. This parameter can be a value of ***I2C_NOSTRETCH_MODE***

29.1.2 __I2C_HandleTypeDef

__I2C_HandleTypeDef is defined in the stm32g4xx_hal_i2c.h

Data Fields

- ***I2C_TypeDef * Instance***

- ***HAL_StatusTypeDef(* __I2C_HandleTypeDef::XferISR)(struct __I2C_HandleTypeDef *hi2c, uint32_t ITFlags, uint32_t ITSources)***
  I2C transfer IRQ handler function pointer
- ***DMA_HandleTypeDef* __I2C_HandleTypeDef::hdmatx***
  I2C Tx DMA handle parameters
- ***DMA_HandleTypeDef* __I2C_HandleTypeDef::hdmarx***
  I2C Rx DMA handle parameters
- ***HAL_LockTypeDef __I2C_HandleTypeDef::Lock***
  I2C locking object
- ***__IO HAL_I2C_StateTypeDef __I2C_HandleTypeDef::State***
  I2C communication state
- ***__IO HAL_I2C_ModeTypeDef __I2C_HandleTypeDef::Mode***
  I2C communication mode
- ***__IO uint32_t __I2C_HandleTypeDef::ErrorCode***
  I2C Error code
- ***__IO uint32_t __I2C_HandleTypeDef::AddrEventCount***
  I2C Address Event counter

29.2 I2C Firmware driver API description

The following section lists the various functions of the I2C library.

29.2.1 How to use this driver

The I2C HAL driver can be used as follows:

1. Declare a I2C_HandleTypeDef handle structure, for example: I2C_HandleTypeDef hi2c;

2. Initialize the I2C low level resources by implementing the @ref HAL_I2C_MspInit() API:
   a. Enable the I2Cx interface clock
   b. I2C pins configuration
      - Enable the clock for the I2C GPIOs
      - Configure I2C pins as alternate function open-drain
   c. NVIC configuration if you need to use interrupt process
      - Configure the I2Cx interrupt priority
      - Enable the NVIC I2C IRQ Channel
   d. DMA Configuration if you need to use DMA process
      - Declare a DMA_HandleTypeDef handle structure for the transmit or receive channel
      - Enable the DMAx interface clock using
      - Configure the DMA handle parameters
      - Configure the DMA Tx or Rx channel
      - Associate the initialized DMA handle to the hi2c DMA Tx or Rx handle
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx or Rx channel
3. Configure the Communication Clock Timing, Own Address1, Master Addressing mode, Dual Addressing mode, Own Address2, Own Address2 Mask, General call and Nostretch mode in the hi2c Init structure.
4. Initialize the I2C registers by calling the @ref HAL_I2C_Init(), configures also the low level Hardware (GPIO, CLOCK, NVIC...etc) by calling the customized @ref HAL_I2C_MspInit(&hi2c) API.
5. To check if target device is ready for communication, use the function @ref HAL_I2C_IsDeviceReady()
6. For I2C IO and IO MEM operations, three operation modes are available within this driver :

Polling mode IO operation

- Transmit in master mode an amount of data in blocking mode using @ref HAL_I2C_Master_Transmit()
- Receive in master mode an amount of data in blocking mode using @ref HAL_I2C_Master_Receive()
- Transmit in slave mode an amount of data in blocking mode using @ref HAL_I2C_Slave_Transmit()
- Receive in slave mode an amount of data in blocking mode using @ref HAL_I2C_Slave_Receive()

Polling mode IO MEM operation

- Write an amount of data in blocking mode to a specific memory address using @ref HAL_I2C_Mem_Write()
- Read an amount of data in blocking mode from a specific memory address using @ref HAL_I2C_Mem_Read()

Interrupt mode IO operation

- Transmit in master mode an amount of data in non-blocking mode using @ref HAL_I2C_Master_Transmit_IT()
- At transmission end of transfer, @ref HAL_I2C_MasterTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterTxCpltCallback()
- Receive in master mode an amount of data in non-blocking mode using @ref HAL_I2C_Master_Receive_IT()
- At reception end of transfer, @ref HAL_I2C_MasterRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterRxCpltCallback()
- Transmit in slave mode an amount of data in non-blocking mode using @ref HAL_I2C_Slave_Transmit_IT()
- At transmission end of transfer, @ref HAL_I2C_SlaveTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveTxCpltCallback()
- Receive in slave mode an amount of data in non-blocking mode using @ref HAL_I2C_Slave_Receive_IT()
- At reception end of transfer, @ref HAL_I2C_SlaveRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveRxCpltCallback()
- In case of transfer Error, @ref HAL_I2C_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ErrorCallback()

- Abort a master I2C process communication with Interrupt using @ref HAL_I2C_Master_Abort_IT()
- End of abort process, @ref HAL_I2C_AbortCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_AbortCpltCallback()
- Discard a slave I2C process communication using @ref __HAL_I2C_GENERATE_NACK() macro. This action will inform Master to generate a Stop condition to discard the communication.

Interrupt mode or DMA mode IO sequential operation

Note: These interfaces allow to manage a sequential transfer with a repeated start condition when a direction change during transfer

- A specific option field manage the different steps of a sequential transfer
- Option field values are defined through @ref I2C_XFEROPTIONS and are listed below:
  - I2C_FIRST_AND_LAST_FRAME: No sequential usage, functionnal is same as associated interfaces in no sequential mode
  - I2C_FIRST_FRAME: Sequential usage, this option allow to manage a sequence with start condition, address and data to transfer without a final stop condition
  - I2C_FIRST_AND_NEXT_FRAME: Sequential usage (Master only), this option allow to manage a sequence with start condition, address and data to transfer without a final stop condition, an then permit a call the same master sequential interface several times (like @ref HAL_I2C_Master_Seq_Transmit_IT() then @ref HAL_I2C_Master_Seq_Transmit_IT() or @ref HAL_I2C_Master_Seq_Transmit_DMA() then @ref HAL_I2C_Master_Seq_Transmit_DMA())
  - I2C_NEXT_FRAME: Sequential usage, this option allow to manage a sequence with a restart condition, address and with new data to transfer if the direction change or manage only the new data to transfer if no direction change and without a final stop condition in both cases
  - I2C_LAST_FRAME: Sequential usage, this option allow to manage a sequance with a restart condition, address and with new data to transfer if the direction change or manage only the new data to transfer if no direction change and with a final stop condition in both cases
  - I2C_LAST_FRAME_NO_STOP: Sequential usage (Master only), this option allow to manage a restart condition after several call of the same master sequential interface several times (link with option I2C_FIRST_AND_NEXT_FRAME). Usage can, transfer several bytes one by one using HAL_I2C_Master_Seq_Transmit_IT(option I2C_FIRST_AND_NEXT_FRAME then I2C_NEXT_FRAME) or HAL_I2C_Master_Seq_Receive_IT(option I2C_FIRST_AND_NEXT_FRAME then I2C_NEXT_FRAME) or HAL_I2C_Master_Seq_Transmit_DMA(option I2C_FIRST_AND_NEXT_FRAME then I2C_NEXT_FRAME) or HAL_I2C_Master_Seq_Receive_DMA(option I2C_FIRST_AND_NEXT_FRAME then I2C_NEXT_FRAME). Then usage of this option I2C_LAST_FRAME_NO_STOP at the last Transmit or Receive sequence permit to call the oposite interface Receive or Transmit without stopping the communication and so generate a restart condition.
  - I2C_OTHER_FRAME: Sequential usage (Master only), this option allow to manage a restart condition after each call of the same master sequential interface. Usage can, transfer several bytes one by one with a restart with slave address between each bytes using HAL_I2C_Master_Seq_Transmit_IT(option I2C_FIRST_FRAME then I2C_OTHER_FRAME) or HAL_I2C_Master_Seq_Receive_IT(option I2C_FIRST_FRAME then I2C_OTHER_FRAME) or HAL_I2C_Master_Seq_Transmit_DMA(option I2C_FIRST_FRAME then I2C_OTHER_FRAME) or HAL_I2C_Master_Seq_Receive_DMA(option I2C_FIRST_FRAME then I2C_OTHER_FRAME). Then usage of this option I2C_OTHER_AND_LAST_FRAME at the last frame to help automatic generation of STOP condition.

- Differents sequential I2C interfaces are listed below:
  - Sequential transmit in master I2C mode an amount of data in non-blocking mode using @ref HAL_I2C_Master_Seq_Transmit_IT() or using @ref HAL_I2C_Master_Seq_Transmit_DMA()
    - At transmission end of current frame transfer, @ref HAL_I2C_MasterTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterTxCpltCallback()
  - Sequential receive in master I2C mode an amount of data in non-blocking mode using @ref HAL_I2C_Master_Seq_Receive_IT() or using @ref HAL_I2C_Master_Seq_Receive_DMA()
    - At reception end of current frame transfer, @ref HAL_I2C_MasterRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterRxCpltCallback()
  - Abort a master IT or DMA I2C process communication with Interrupt using @ref HAL_I2C_Master_Abort_IT()
    - End of abort process, @ref HAL_I2C_AbortCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_AbortCpltCallback()
  - Enable/disable the Address listen mode in slave I2C mode using @ref HAL_I2C_EnableListen_IT() @ref HAL_I2C_DisableListen_IT()
    - When address slave I2C match, @ref HAL_I2C_AddrCallback() is executed and user can add his own code to check the Address Match Code and the transmission direction request by master (Write/Read).
    - At Listen mode end @ref HAL_I2C_ListenCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ListenCpltCallback()
  - Sequential transmit in slave I2C mode an amount of data in non-blocking mode using @ref HAL_I2C_Slave_Seq_Transmit_IT() or using @ref HAL_I2C_Slave_Seq_Transmit_DMA()
    - At transmission end of current frame transfer, @ref HAL_I2C_SlaveTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveTxCpltCallback()
  - Sequential receive in slave I2C mode an amount of data in non-blocking mode using @ref HAL_I2C_Slave_Seq_Receive_IT() or using @ref HAL_I2C_Slave_Seq_Receive_DMA()
    - At reception end of current frame transfer, @ref HAL_I2C_SlaveRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveRxCpltCallback()
  - In case of transfer Error, @ref HAL_I2C_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ErrorCallback()
  - Discard a slave I2C process communication using @ref __HAL_I2C_GENERATE_NACK() macro. This action will inform Master to generate a Stop condition to discard the communication.

Interrupt mode IO MEM operation

- Write an amount of data in non-blocking mode with Interrupt to a specific memory address using @ref HAL_I2C_Mem_Write_IT()
- At Memory end of write transfer, @ref HAL_I2C_MemTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MemTxCpltCallback()
- Read an amount of data in non-blocking mode with Interrupt from a specific memory address using @ref HAL_I2C_Mem_Read_IT()
- At Memory end of read transfer, @ref HAL_I2C_MemRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MemRxCpltCallback()
- In case of transfer Error, @ref HAL_I2C_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ErrorCallback()

DMA mode IO operation

- Transmit in master mode an amount of data in non-blocking mode (DMA) using @ref HAL_I2C_Master_Transmit_DMA()
- At transmission end of transfer, @ref HAL_I2C_MasterTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterTxCpltCallback()

- Receive in master mode an amount of data in non-blocking mode (DMA) using @ref HAL_I2C_Master_Receive_DMA()
- At reception end of transfer, @ref HAL_I2C_MasterRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MasterRxCpltCallback()
- Transmit in slave mode an amount of data in non-blocking mode (DMA) using @ref HAL_I2C_Slave_Transmit_DMA()
- At transmission end of transfer, @ref HAL_I2C_SlaveTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveTxCpltCallback()
- Receive in slave mode an amount of data in non-blocking mode (DMA) using @ref HAL_I2C_Slave_Receive_DMA()
- At reception end of transfer, @ref HAL_I2C_SlaveRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_SlaveRxCpltCallback()
- In case of transfer Error, @ref HAL_I2C_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ErrorCallback()
- Abort a master I2C process communication with Interrupt using @ref HAL_I2C_Master_Abort_IT()
- End of abort process, @ref HAL_I2C_AbortCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_AbortCpltCallback()
- Discard a slave I2C process communication using @ref __HAL_I2C_GENERATE_NACK() macro. This action will inform Master to generate a Stop condition to discard the communication.

DMA mode IO MEM operation

- Write an amount of data in non-blocking mode with DMA to a specific memory address using @ref HAL_I2C_Mem_Write_DMA()
- At Memory end of write transfer, @ref HAL_I2C_MemTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MemTxCpltCallback()
- Read an amount of data in non-blocking mode with DMA from a specific memory address using @ref HAL_I2C_Mem_Read_DMA()
- At Memory end of read transfer, @ref HAL_I2C_MemRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_I2C_MemRxCpltCallback()
- In case of transfer Error, @ref HAL_I2C_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_I2C_ErrorCallback()

I2C HAL driver macros list

Below the list of most used macros in I2C HAL driver.

- @ref __HAL_I2C_ENABLE: Enable the I2C peripheral
- @ref __HAL_I2C_DISABLE: Disable the I2C peripheral
- @ref __HAL_I2C_GENERATE_NACK: Generate a Non-Acknowledge I2C peripheral in Slave mode
- @ref __HAL_I2C_GET_FLAG: Check whether the specified I2C flag is set or not
- @ref __HAL_I2C_CLEAR_FLAG: Clear the specified I2C pending flag
- @ref __HAL_I2C_ENABLE_IT: Enable the specified I2C interrupt
- @ref __HAL_I2C_DISABLE_IT: Disable the specified I2C interrupt

Callback registration

The compilation flag USE_HAL_I2C_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_I2C_RegisterCallback() or @ref HAL_I2C_RegisterAddrCallback() to register an interrupt callback.

Function @ref HAL_I2C_RegisterCallback() allows to register following callbacks:

- MasterTxCpltCallback : callback for Master transmission end of transfer.
- MasterRxCpltCallback : callback for Master reception end of transfer.
- SlaveTxCpltCallback : callback for Slave transmission end of transfer.
- SlaveRxCpltCallback : callback for Slave reception end of transfer.
- ListenCpltCallback : callback for end of listen mode.

- MemTxCpltCallback : callback for Memory transmission end of transfer.
- MemRxCpltCallback : callback for Memory reception end of transfer.
- ErrorCallback : callback for error detection.
- AbortCpltCallback : callback for abort completion process.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

For specific callback AddrCallback use dedicated register callbacks : @ref HAL_I2C_RegisterAddrCallback().

Use function @ref HAL_I2C_UnRegisterCallback to reset a callback to the default weak function. @ref HAL_I2C_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- MasterTxCpltCallback : callback for Master transmission end of transfer.
- MasterRxCpltCallback : callback for Master reception end of transfer.
- SlaveTxCpltCallback : callback for Slave transmission end of transfer.
- SlaveRxCpltCallback : callback for Slave reception end of transfer.
- ListenCpltCallback : callback for end of listen mode.
- MemTxCpltCallback : callback for Memory transmission end of transfer.
- MemRxCpltCallback : callback for Memory reception end of transfer.
- ErrorCallback : callback for error detection.
- AbortCpltCallback : callback for abort completion process.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit.

For callback AddrCallback use dedicated register callbacks : @ref HAL_I2C_UnRegisterAddrCallback().

By default, after the @ref HAL_I2C_Init() and when the state is @ref HAL_I2C_STATE_RESET all callbacks are set to the corresponding weak functions: examples @ref HAL_I2C_MasterTxCpltCallback(), @ref HAL_I2C_MasterRxCpltCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the @ref HAL_I2C_Init()/ @ref HAL_I2C_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the @ref HAL_I2C_Init()/ @ref HAL_I2C_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in @ref HAL_I2C_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in @ref HAL_I2C_STATE_READY or @ref HAL_I2C_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using @ref HAL_I2C_RegisterCallback() before calling @ref HAL_I2C_DeInit() or @ref HAL_I2C_Init() function.

When the compilation flag USE_HAL_I2C_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

Note: You can refer to the I2C HAL driver header file for more useful macros

29.2.2 Initialization and de-initialization functions

This subsection provides a set of functions allowing to initialize and deinitialize the I2Cx peripheral:

- User must Implement HAL_I2C_MspInit() function in which he configures all related peripherals resources (CLOCK, GPIO, DMA, IT and NVIC).
- Call the function HAL_I2C_Init() to configure the selected device with the selected configuration:
  - Clock Timing
  - Own Address 1
  - Addressing mode (Master, Slave)
  - Dual Addressing mode
  - Own Address 2
  - Own Address 2 Mask
  - General call mode
  - Nostretch mode

- Call the function HAL_I2C_DeInit() to restore the default configuration of the selected I2Cx peripheral.

This section contains the following APIs:

- ***HAL_I2C_Init***
- ***HAL_I2C_DeInit***
- ***HAL_I2C_MspInit***
- ***HAL_I2C_MspDeInit***

29.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the I2C data transfers.

1. There are two modes of transfer:
   - Blocking mode : The communication is performed in the polling mode. The status of all data processing is returned by the same function after finishing transfer.
   - No-Blocking mode : The communication is performed using Interrupts or DMA. These functions return the status of the transfer startup. The end of the data processing will be indicated through the dedicated I2C IRQ when using Interrupt mode or the DMA IRQ when using DMA mode.
2. Blocking mode functions are :
   - HAL_I2C_Master_Transmit()
   - HAL_I2C_Master_Receive()
   - HAL_I2C_Slave_Transmit()
   - HAL_I2C_Slave_Receive()
   - HAL_I2C_Mem_Write()
   - HAL_I2C_Mem_Read()
   - HAL_I2C_IsDeviceReady()
3. No-Blocking mode functions with Interrupt are :
   - HAL_I2C_Master_Transmit_IT()
   - HAL_I2C_Master_Receive_IT()
   - HAL_I2C_Slave_Transmit_IT()
   - HAL_I2C_Slave_Receive_IT()
   - HAL_I2C_Mem_Write_IT()
   - HAL_I2C_Mem_Read_IT()
   - HAL_I2C_Master_Seq_Transmit_IT()
   - HAL_I2C_Master_Seq_Receive_IT()
   - HAL_I2C_Slave_Seq_Transmit_IT()
   - HAL_I2C_Slave_Seq_Receive_IT()
   - HAL_I2C_EnableListen_IT()
   - HAL_I2C_DisableListen_IT()
   - HAL_I2C_Master_Abort_IT()
4. No-Blocking mode functions with DMA are :
   - HAL_I2C_Master_Transmit_DMA()
   - HAL_I2C_Master_Receive_DMA()
   - HAL_I2C_Slave_Transmit_DMA()
   - HAL_I2C_Slave_Receive_DMA()
   - HAL_I2C_Mem_Write_DMA()
   - HAL_I2C_Mem_Read_DMA()
   - HAL_I2C_Master_Seq_Transmit_DMA()
   - HAL_I2C_Master_Seq_Receive_DMA()
   - HAL_I2C_Slave_Seq_Transmit_DMA()
   - HAL_I2C_Slave_Seq_Receive_DMA()

5. A set of Transfer Complete Callbacks are provided in non Blocking mode:
   - HAL_I2C_MasterTxCpltCallback()
   - HAL_I2C_MasterRxCpltCallback()
   - HAL_I2C_SlaveTxCpltCallback()
   - HAL_I2C_SlaveRxCpltCallback()
   - HAL_I2C_MemTxCpltCallback()
   - HAL_I2C_MemRxCpltCallback()
   - HAL_I2C_AddrCallback()
   - HAL_I2C_ListenCpltCallback()
   - HAL_I2C_ErrorCallback()
   - HAL_I2C_AbortCpltCallback()

This section contains the following APIs:

- ***HAL_I2C_Master_Transmit***
- ***HAL_I2C_Master_Receive***
- ***HAL_I2C_Slave_Transmit***
- ***HAL_I2C_Slave_Receive***
- ***HAL_I2C_Master_Transmit_IT***
- ***HAL_I2C_Master_Receive_IT***
- ***HAL_I2C_Slave_Transmit_IT***
- ***HAL_I2C_Slave_Receive_IT***
- ***HAL_I2C_Master_Transmit_DMA***
- ***HAL_I2C_Master_Receive_DMA***
- ***HAL_I2C_Slave_Transmit_DMA***
- ***HAL_I2C_Slave_Receive_DMA***
- ***HAL_I2C_Mem_Write***
- ***HAL_I2C_Mem_Read***
- ***HAL_I2C_Mem_Write_IT***
- ***HAL_I2C_Mem_Read_IT***
- ***HAL_I2C_Mem_Write_DMA***
- ***HAL_I2C_Mem_Read_DMA***
- ***HAL_I2C_IsDeviceReady***
- ***HAL_I2C_Master_Seq_Transmit_IT***
- ***HAL_I2C_Master_Seq_Transmit_DMA***
- ***HAL_I2C_Master_Seq_Receive_IT***
- ***HAL_I2C_Master_Seq_Receive_DMA***
- ***HAL_I2C_Slave_Seq_Transmit_IT***
- ***HAL_I2C_Slave_Seq_Transmit_DMA***
- ***HAL_I2C_Slave_Seq_Receive_IT***
- ***HAL_I2C_Slave_Seq_Receive_DMA***
- ***HAL_I2C_EnableListen_IT***
- ***HAL_I2C_DisableListen_IT***
- ***HAL_I2C_Master_Abort_IT***

29.2.4 Peripheral State, Mode and Error functions

This subsection permit to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- ***HAL_I2C_GetState***
- ***HAL_I2C_GetMode***
- ***HAL_I2C_GetError***

29.2.5 Detailed description of functions

HAL_I2C_Init

Function name

HAL_StatusTypeDef HAL_I2C_Init (I2C_HandleTypeDef * hi2c)

Function description

Initializes the I2C according to the specified parameters in the I2C_InitTypeDef and initialize the associated handle.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **HAL:** status

HAL_I2C_DeInit

Function name

HAL_StatusTypeDef HAL_I2C_DeInit (I2C_HandleTypeDef * hi2c)

Function description

DeInitialize the I2C peripheral.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **HAL:** status

HAL_I2C_MspInit

Function name

void HAL_I2C_MspInit (I2C_HandleTypeDef * hi2c)

Function description

Initialize the I2C MSP.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_MspDeInit

Function name

void HAL_I2C_MspDeInit (I2C_HandleTypeDef * hi2c)

Function description

DeInitialize the I2C MSP.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_Master_Transmit

Function name

HAL_StatusTypeDef HAL_I2C_Master_Transmit (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Transmits in master mode an amount of data in blocking mode.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_Master_Receive

Function name

HAL_StatusTypeDef HAL_I2C_Master_Receive (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receives in master mode an amount of data in blocking mode.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_Slave_Transmit

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Transmit (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Transmits in slave mode an amount of data in blocking mode.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_Slave_Receive

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Receive (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive in slave mode an amount of data in blocking mode.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_Mem_Write

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Write (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Write an amount of data in blocking mode to a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_Mem_Read

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Read (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Read an amount of data in blocking mode from a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_I2C_IsDeviceReady

Function name

HAL_StatusTypeDef HAL_I2C_IsDeviceReady (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint32_t Trials, uint32_t Timeout)

Function description

Checks if target device is ready for communication.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **Trials:** Number of trials
- **Timeout:** Timeout duration

Return values

- **HAL:** status

Notes

- This function is used with Memory devices

HAL_I2C_Master_Transmit_IT

Function name

HAL_StatusTypeDef HAL_I2C_Master_Transmit_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size)

Function description

Transmit in master mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Master_Receive_IT

Function name

HAL_StatusTypeDef HAL_I2C_Master_Receive_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size)

Function description

Receive in master mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Slave_Transmit_IT

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Transmit_IT (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size)

Function description

Transmit in slave mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Slave_Receive_IT

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Receive_IT (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size)

Function description

Receive in slave mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Mem_Write_IT

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Write_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size)

Function description

Write an amount of data in non-blocking mode with Interrupt to a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Mem_Read_IT

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Read_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size)

Function description

Read an amount of data in non-blocking mode with Interrupt from a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Master_Seq_Transmit_IT

Function name

HAL_StatusTypeDef HAL_I2C_Master_Seq_Transmit_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential transmit in master I2C mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Master_Seq_Receive_IT

Function name

HAL_StatusTypeDef HAL_I2C_Master_Seq_Receive_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential receive in master I2C mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Slave_Seq_Transmit_IT

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Seq_Transmit_IT (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential transmit in slave/device I2C mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Slave_Seq_Receive_IT

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Seq_Receive_IT (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential receive in slave/device I2C mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_EnableListen_IT

Function name

HAL_StatusTypeDef HAL_I2C_EnableListen_IT (I2C_HandleTypeDef * hi2c)

Function description

Enable the Address listen mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **HAL:** status

HAL_I2C_DisableListen_IT

Function name

HAL_StatusTypeDef HAL_I2C_DisableListen_IT (I2C_HandleTypeDef * hi2c)

Function description

Disable the Address listen mode with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C

Return values

- **HAL:** status

HAL_I2C_Master_Abort_IT

Function name

HAL_StatusTypeDef HAL_I2C_Master_Abort_IT (I2C_HandleTypeDef * hi2c, uint16_t DevAddress)

Function description

Abort a master I2C IT or DMA process communication with Interrupt.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface

Return values

- **HAL:** status

HAL_I2C_Master_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Master_Transmit_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size)

Function description

Transmit in master mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Master_Receive_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Master_Receive_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size)

Function description

Receive in master mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Slave_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Transmit_DMA (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size)

Function description

Transmit in slave mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Slave_Receive_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Receive_DMA (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size)

Function description

Receive in slave mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Mem_Write_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Write_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size)

Function description

Write an amount of data in non-blocking mode with DMA to a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_I2C_Mem_Read_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Mem_Read_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint16_t MemAddress, uint16_t MemAddSize, uint8_t * pData, uint16_t Size)

Function description

Reads an amount of data in non-blocking mode with DMA from a specific memory address.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **MemAddress:** Internal memory address
- **MemAddSize:** Size of internal memory address
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be read

Return values

- **HAL:** status

HAL_I2C_Master_Seq_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Master_Seq_Transmit_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential transmit in master I2C mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Master_Seq_Receive_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Master_Seq_Receive_DMA (I2C_HandleTypeDef * hi2c, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential receive in master I2C mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Slave_Seq_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Seq_Transmit_DMA (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential transmit in slave/device I2C mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_Slave_Seq_Receive_DMA

Function name

HAL_StatusTypeDef HAL_I2C_Slave_Seq_Receive_DMA (I2C_HandleTypeDef * hi2c, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Sequential receive in slave/device I2C mode an amount of data in non-blocking mode with DMA.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of I2C Sequential Transfer Options

Return values

- **HAL:** status

Notes

- This interface allow to manage repeated start condition when a direction change during transfer

HAL_I2C_EV_IRQHandler

Function name

void HAL_I2C_EV_IRQHandler (I2C_HandleTypeDef * hi2c)

Function description

This function handles I2C event interrupt request.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_ER_IRQHandler

Function name

void HAL_I2C_ER_IRQHandler (I2C_HandleTypeDef * hi2c)

Function description

This function handles I2C error interrupt request.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_MasterTxCpltCallback

Function name

void HAL_I2C_MasterTxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Master Tx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_MasterRxCpltCallback

Function name

void HAL_I2C_MasterRxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Master Rx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_SlaveTxCpltCallback

Function name

void HAL_I2C_SlaveTxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Slave Tx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_SlaveRxCpltCallback

Function name

void HAL_I2C_SlaveRxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Slave Rx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_AddrCallback

Function name

void HAL_I2C_AddrCallback (I2C_HandleTypeDef * hi2c, uint8_t TransferDirection, uint16_t AddrMatchCode)

Function description

Slave Address Match callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.
- **TransferDirection:** Master request Transfer Direction (Write/Read), value of I2C Transfer Direction Master Point of View
- **AddrMatchCode:** Address Match Code

Return values

- **None:**

HAL_I2C_ListenCpltCallback

Function name

void HAL_I2C_ListenCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Listen Complete callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_MemTxCpltCallback

Function name

void HAL_I2C_MemTxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Memory Tx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_MemRxCpltCallback

Function name

void HAL_I2C_MemRxCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

Memory Rx Transfer completed callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_ErrorCallback

Function name

void HAL_I2C_ErrorCallback (I2C_HandleTypeDef * hi2c)

Function description

I2C error callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_AbortCpltCallback

Function name

void HAL_I2C_AbortCpltCallback (I2C_HandleTypeDef * hi2c)

Function description

I2C abort callback.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **None:**

HAL_I2C_GetState

Function name

HAL_I2C_StateTypeDef HAL_I2C_GetState (I2C_HandleTypeDef * hi2c)

Function description

Return the I2C handle state.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **HAL:** state

HAL_I2C_GetMode

Function name

HAL_I2C_ModeTypeDef HAL_I2C_GetMode (I2C_HandleTypeDef * hi2c)

Function description

Returns the I2C Master, Slave, Memory or no mode.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for I2C module

Return values

- **HAL:** mode

HAL_I2C_GetError

Function name

uint32_t HAL_I2C_GetError (I2C_HandleTypeDef * hi2c)

Function description

Return the I2C error code.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2C.

Return values

- **I2C:** Error Code

29.3 I2C Firmware driver defines

The following section lists the various define and macros of the module.

29.3.1 I2C

I2C

I2C Addressing Mode

I2C_ADDRESSINGMODE_7BIT

I2C_ADDRESSINGMODE_10BIT

I2C Dual Addressing Mode

I2C_DUALADDRESS_DISABLE

I2C_DUALADDRESS_ENABLE

I2C Error Code definition

HAL_I2C_ERROR_NONE

No error

HAL_I2C_ERROR_BERR

BERR error

HAL_I2C_ERROR_ARLO

ARLO error

HAL_I2C_ERROR_AF

ACKF error

HAL_I2C_ERROR_OVR

OVR error

HAL_I2C_ERROR_DMA

DMA transfer error

HAL_I2C_ERROR_TIMEOUT

Timeout error

HAL_I2C_ERROR_SIZE

Size Management error

HAL_I2C_ERROR_DMA_PARAM

DMA Parameter Error

HAL_I2C_ERROR_INVALID_PARAM

Invalid Parameters error

I2C Exported Macros

__HAL_I2C_RESET_HANDLE_STATE

Description:

- Reset I2C handle state.

Parameters:

- __HANDLE__: specifies the I2C Handle.

Return value:

- None

__HAL_I2C_ENABLE_IT

Description:

- Enable the specified I2C interrupt.

Parameters:

- __HANDLE__: specifies the I2C Handle.
- __INTERRUPT__: specifies the interrupt source to enable. This parameter can be one of the following values:
  - I2C_IT_ERRI Errors interrupt enable
  - I2C_IT_TCI Transfer complete interrupt enable
  - I2C_IT_STOPI STOP detection interrupt enable
  - I2C_IT_NACKI NACK received interrupt enable
  - I2C_IT_ADDRI Address match interrupt enable
  - I2C_IT_RXI RX interrupt enable
  - I2C_IT_TXI TX interrupt enable

Return value:

- None

__HAL_I2C_DISABLE_IT

Description:

- Disable the specified I2C interrupt.

Parameters:

- __HANDLE__: specifies the I2C Handle.
- __INTERRUPT__: specifies the interrupt source to disable. This parameter can be one of the following values:
  - I2C_IT_ERRI Errors interrupt enable
  - I2C_IT_TCI Transfer complete interrupt enable
  - I2C_IT_STOPI STOP detection interrupt enable
  - I2C_IT_NACKI NACK received interrupt enable
  - I2C_IT_ADDRI Address match interrupt enable
  - I2C_IT_RXI RX interrupt enable
  - I2C_IT_TXI TX interrupt enable

Return value:

- None

__HAL_I2C_GET_IT_SOURCE

Description:

- Check whether the specified I2C interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the I2C Handle.
- __INTERRUPT__: specifies the I2C interrupt source to check. This parameter can be one of the following values:
  - I2C_IT_ERRI Errors interrupt enable
  - I2C_IT_TCI Transfer complete interrupt enable
  - I2C_IT_STOPI STOP detection interrupt enable
  - I2C_IT_NACKI NACK received interrupt enable
  - I2C_IT_ADDRI Address match interrupt enable
  - I2C_IT_RXI RX interrupt enable
  - I2C_IT_TXI TX interrupt enable

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

I2C_FLAG_MASK

Description:

- Check whether the specified I2C flag is set or not.

Parameters:

- __HANDLE__: specifies the I2C Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - I2C_FLAG_TXE Transmit data register empty
  - I2C_FLAG_TXIS Transmit interrupt status
  - I2C_FLAG_RXNE Receive data register not empty
  - I2C_FLAG_ADDR Address matched (slave mode)
  - I2C_FLAG_AF Acknowledge failure received flag
  - I2C_FLAG_STOPF STOP detection flag
  - I2C_FLAG_TC Transfer complete (master mode)
  - I2C_FLAG_TCR Transfer complete reload
  - I2C_FLAG_BERR Bus error
  - I2C_FLAG_ARLO Arbitration lost
  - I2C_FLAG_OVR Overrun/Underrun
  - I2C_FLAG_PECERR PEC error in reception
  - I2C_FLAG_TIMEOUT Timeout or Tlow detection flag
  - I2C_FLAG_ALERT SMBus alert
  - I2C_FLAG_BUSY Bus busy
  - I2C_FLAG_DIR Transfer direction (slave mode)

Return value:

- The: new state of __FLAG__ (SET or RESET).

__HAL_I2C_GET_FLAG

__HAL_I2C_CLEAR_FLAG

Description:

- Clear the I2C pending flags which are cleared by writing 1 in a specific bit.

Parameters:

- __HANDLE__: specifies the I2C Handle.
- __FLAG__: specifies the flag to clear. This parameter can be any combination of the following values:
  - I2C_FLAG_TXE Transmit data register empty
  - I2C_FLAG_ADDR Address matched (slave mode)
  - I2C_FLAG_AF Acknowledge failure received flag
  - I2C_FLAG_STOPF STOP detection flag
  - I2C_FLAG_BERR Bus error
  - I2C_FLAG_ARLO Arbitration lost
  - I2C_FLAG_OVR Overrun/Underrun
  - I2C_FLAG_PECERR PEC error in reception
  - I2C_FLAG_TIMEOUT Timeout or Tlow detection flag
  - I2C_FLAG_ALERT SMBus alert

Return value:

- None

__HAL_I2C_ENABLE

Description:

- Enable the specified I2C peripheral.

Parameters:

- __HANDLE__: specifies the I2C Handle.

Return value:

- None

__HAL_I2C_DISABLE

Description:

- Disable the specified I2C peripheral.

Parameters:

- __HANDLE__: specifies the I2C Handle.

Return value:

- None

__HAL_I2C_GENERATE_NACK

Description:

- Generate a Non-Acknowledge I2C peripheral in Slave mode.

Parameters:

- __HANDLE__: specifies the I2C Handle.

Return value:

- None

30 HAL I2C Extension Driver

30.1 I2CEx Firmware driver API description

The following section lists the various functions of the I2CEx library.

30.1.1 I2C peripheral Extended features

Comparing to other previous devices, the I2C interface for STM32G4xx devices contains the following additional features

- Possibility to disable or enable Analog Noise Filter
- Use of a configured Digital Noise Filter
- Disable or enable wakeup from Stop mode(s)
- Disable or enable Fast Mode Plus

30.1.2 How to use this driver

This driver provides functions to configure Noise Filter and Wake Up Feature

1. Configure I2C Analog noise filter using the function HAL_I2CEx_ConfigAnalogFilter()
2. Configure I2C Digital noise filter using the function HAL_I2CEx_ConfigDigitalFilter()
3. Configure the enable or disable of I2C Wake Up Mode using the functions :
   - HAL_I2CEx_EnableWakeUp()
   - HAL_I2CEx_DisableWakeUp()
4. Configure the enable or disable of fast mode plus driving capability using the functions :
   - HAL_I2CEx_EnableFastModePlus()
   - HAL_I2CEx_DisableFastModePlus()

30.1.3 Extended features functions

This section provides functions allowing to:

- Configure Noise Filters
- Configure Wake Up Feature
- Configure Fast Mode Plus

This section contains the following APIs:

- ***HAL_I2CEx_ConfigAnalogFilter***
- ***HAL_I2CEx_ConfigDigitalFilter***
- ***HAL_I2CEx_EnableWakeUp***
- ***HAL_I2CEx_DisableWakeUp***
- ***HAL_I2CEx_EnableFastModePlus***
- ***HAL_I2CEx_DisableFastModePlus***

30.1.4 Detailed description of functions

HAL_I2CEx_ConfigAnalogFilter

Function name

HAL_StatusTypeDef HAL_I2CEx_ConfigAnalogFilter (I2C_HandleTypeDef * hi2c, uint32_t AnalogFilter)

Function description

Configure I2C Analog noise filter.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2Cx peripheral.
- **AnalogFilter:** New state of the Analog filter.

Return values

- **HAL:** status

HAL_I2CEx_ConfigDigitalFilter

Function name

HAL_StatusTypeDef HAL_I2CEx_ConfigDigitalFilter (I2C_HandleTypeDef * hi2c, uint32_t DigitalFilter)

Function description

Configure I2C Digital noise filter.

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2Cx peripheral.
- **DigitalFilter:** Coefficient of digital noise filter between Min_Data=0x00 and Max_Data=0x0F.

Return values

- **HAL:** status

HAL_I2CEx_EnableWakeUp

Function name

HAL_StatusTypeDef HAL_I2CEx_EnableWakeUp (I2C_HandleTypeDef * hi2c)

Function description

Enable I2C wakeup from Stop mode(s).

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2Cx peripheral.

Return values

- **HAL:** status

HAL_I2CEx_DisableWakeUp

Function name

HAL_StatusTypeDef HAL_I2CEx_DisableWakeUp (I2C_HandleTypeDef * hi2c)

Function description

Disable I2C wakeup from Stop mode(s).

Parameters

- **hi2c:** Pointer to a I2C_HandleTypeDef structure that contains the configuration information for the specified I2Cx peripheral.

Return values

- **HAL:** status

HAL_I2CEx_EnableFastModePlus

Function name

void HAL_I2CEx_EnableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Enable the I2C fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** Selects the pin. This parameter can be one of the I2C Extended Fast Mode Plus values

Return values

- **None:**

Notes

- For I2C1, fast mode plus driving capability can be enabled on all selected I2C1 pins using I2C_FASTMODEPLUS_I2C1 parameter or independently on each one of the following pins PB6, PB7, PB8 and PB9.
- For remaining I2C1 pins (PA14, PA15...) fast mode plus driving capability can be enabled only by using I2C_FASTMODEPLUS_I2C1 parameter.
- For all I2C2 pins fast mode plus driving capability can be enabled only by using I2C_FASTMODEPLUS_I2C2 parameter.
- For all I2C3 pins fast mode plus driving capability can be enabled only by using I2C_FASTMODEPLUS_I2C3 parameter.
- For all I2C4 pins fast mode plus driving capability can be enabled only by using I2C_FASTMODEPLUS_I2C4 parameter.

HAL_I2CEx_DisableFastModePlus

Function name

void HAL_I2CEx_DisableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Disable the I2C fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** Selects the pin. This parameter can be one of the I2C Extended Fast Mode Plus values

Return values

- **None:**

Notes

- For I2C1, fast mode plus driving capability can be disabled on all selected I2C1 pins using I2C_FASTMODEPLUS_I2C1 parameter or independently on each one of the following pins PB6, PB7, PB8 and PB9.
- For remaining I2C1 pins (PA14, PA15...) fast mode plus driving capability can be disabled only by using I2C_FASTMODEPLUS_I2C1 parameter.
- For all I2C2 pins fast mode plus driving capability can be disabled only by using I2C_FASTMODEPLUS_I2C2 parameter.
- For all I2C3 pins fast mode plus driving capability can be disabled only by using I2C_FASTMODEPLUS_I2C3 parameter.
- For all I2C4 pins fast mode plus driving capability can be disabled only by using I2C_FASTMODEPLUS_I2C4 parameter.

30.2 I2CEx Firmware driver defines

The following section lists the various define and macros of the module.

30.2.1 I2CEx

I2CEx

I2C Extended Analog Filter

I2C_ANALOGFILTER_ENABLE

I2C_ANALOGFILTER_DISABLE

I2C Extended Fast Mode Plus

I2C_FMP_NOT_SUPPORTED

Fast Mode Plus not supported

I2C_FASTMODEPLUS_PB6

Enable Fast Mode Plus on PB6

I2C_FASTMODEPLUS_PB7

Enable Fast Mode Plus on PB7

I2C_FASTMODEPLUS_PB8

Enable Fast Mode Plus on PB8

I2C_FASTMODEPLUS_PB9

Enable Fast Mode Plus on PB9

I2C_FASTMODEPLUS_I2C1

Enable Fast Mode Plus on I2C1 pins

I2C_FASTMODEPLUS_I2C2

Enable Fast Mode Plus on I2C2 pins

I2C_FASTMODEPLUS_I2C3

Enable Fast Mode Plus on I2C3 pins

I2C_FASTMODEPLUS_I2C4

Enable Fast Mode Plus on I2C4 pins

31 HAL I2S Generic Driver

31.1 I2S Firmware driver registers structures

31.1.1 I2S_InitTypeDef

I2S_InitTypeDef is defined in the stm32g4xx_hal_i2s.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t Standard***
- ***uint32_t DataFormat***
- ***uint32_t MCLKOutput***
- ***uint32_t AudioFreq***
- ***uint32_t CPOL***

Field Documentation

- ***uint32_t I2S_InitTypeDef::Mode***
  Specifies the I2S operating mode. This parameter can be a value of ***I2S_Mode***
- ***uint32_t I2S_InitTypeDef::Standard***
  Specifies the standard used for the I2S communication. This parameter can be a value of ***I2S_Standard***
- ***uint32_t I2S_InitTypeDef::DataFormat***
  Specifies the data format for the I2S communication. This parameter can be a value of ***I2S_Data_Format***
- ***uint32_t I2S_InitTypeDef::MCLKOutput***
  Specifies whether the I2S MCLK output is enabled or not. This parameter can be a value of ***I2S_MCLK_Output***
- ***uint32_t I2S_InitTypeDef::AudioFreq***
  Specifies the frequency selected for the I2S communication. This parameter can be a value of ***I2S_Audio_Frequency***
- ***uint32_t I2S_InitTypeDef::CPOL***
  Specifies the idle state of the I2S clock. This parameter can be a value of ***I2S_Clock_Polarity***

31.1.2 I2S_HandleTypeDef

I2S_HandleTypeDef is defined in the stm32g4xx_hal_i2s.h

Data Fields

- ***SPI_TypeDef * Instance***
- ***I2S_InitTypeDef Init***
- ***uint16_t * pTxBuffPtr***
- ***__IO uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***
- ***uint16_t * pRxBuffPtr***
- ***__IO uint16_t RxXferSize***
- ***__IO uint16_t RxXferCount***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***__IO HAL_LockTypeDef Lock***
- ***__IO HAL_I2S_StateTypeDef State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***SPI_TypeDef* I2S_HandleTypeDef::Instance***
  I2S registers base address
- ***I2S_InitTypeDef I2S_HandleTypeDef::Init***
  I2S communication parameters
- ***uint16_t* I2S_HandleTypeDef::pTxBuffPtr***
  Pointer to I2S Tx transfer buffer
- ***__IO uint16_t I2S_HandleTypeDef::TxXferSize***
  I2S Tx transfer size
- ***__IO uint16_t I2S_HandleTypeDef::TxXferCount***
  I2S Tx transfer Counter
- ***uint16_t* I2S_HandleTypeDef::pRxBuffPtr***
  Pointer to I2S Rx transfer buffer
- ***__IO uint16_t I2S_HandleTypeDef::RxXferSize***
  I2S Rx transfer size
- ***__IO uint16_t I2S_HandleTypeDef::RxXferCount***
  I2S Rx transfer counter (This field is initialized at the same value as transfer size at the beginning of the transfer and decremented when a sample is received NbSamplesReceived = RxBufferSize-RxBufferCount)
- ***DMA_HandleTypeDef* I2S_HandleTypeDef::hdmatx***
  I2S Tx DMA handle parameters
- ***DMA_HandleTypeDef* I2S_HandleTypeDef::hdmarx***
  I2S Rx DMA handle parameters
- ***__IO HAL_LockTypeDef I2S_HandleTypeDef::Lock***
  I2S locking object
- ***__IO HAL_I2S_StateTypeDef I2S_HandleTypeDef::State***
  I2S communication state
- ***__IO uint32_t I2S_HandleTypeDef::ErrorCode***
  I2S Error code This parameter can be a value of ***I2S_Error***

31.2 I2S Firmware driver API description

The following section lists the various functions of the I2S library.

31.2.1 How to use this driver

The I2S HAL driver can be used as follow:

1. Declare a I2S_HandleTypeDef handle structure.

2. Initialize the I2S low level resources by implement the HAL_I2S_MspInit() API:
   a. Enable the SPIx interface clock.
   b. I2S pins configuration:
      - Enable the clock for the I2S GPIOs.
      - Configure these I2S pins as alternate function pull-up.
   c. NVIC configuration if you need to use interrupt process (HAL_I2S_Transmit_IT() and HAL_I2S_Receive_IT() APIs).
      - Configure the I2Sx interrupt priority.
      - Enable the NVIC I2S IRQ handle.
   d. DMA Configuration if you need to use DMA process (HAL_I2S_Transmit_DMA() and HAL_I2S_Receive_DMA() APIs:
      - Declare a DMA handle structure for the Tx/Rx Stream/Channel.
      - Enable the DMAx interface clock.
      - Configure the declared DMA handle structure with the required Tx/Rx parameters.
      - Configure the DMA Tx/Rx Stream/Channel.
      - Associate the initialized DMA handle to the I2S DMA Tx/Rx handle.
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx Stream/Channel.
3. Program the Mode, Standard, Data Format, MCLK Output, Audio frequency and Polarity using HAL_I2S_Init() function.

Note: The specific I2S interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_I2S_ENABLE_IT() and __HAL_I2S_DISABLE_IT() inside the transmit and receive process.

Note: Make sure that either:

– *SYSCLK is configured or*
– *PLLADCCLK output is configured or*
– *HSI is enabled or*
– *External clock source is configured after setting correctly the define constant EXTERNAL_CLOCK_VALUE in the stm32g4xx_hal_conf.h file.*

4. Three mode of operations are available within this driver :

Polling mode IO operation

- Send an amount of data in blocking mode using HAL_I2S_Transmit()
- Receive an amount of data in blocking mode using HAL_I2S_Receive()

Interrupt mode IO operation

- Send an amount of data in non blocking mode using HAL_I2S_Transmit_IT()
- At transmission end of half transfer HAL_I2S_TxHalfCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_TxHalfCpltCallback
- At transmission end of transfer HAL_I2S_TxCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_TxCpltCallback
- Receive an amount of data in non blocking mode using HAL_I2S_Receive_IT()
- At reception end of half transfer HAL_I2S_RxHalfCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_RxHalfCpltCallback
- At reception end of transfer HAL_I2S_RxCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_RxCpltCallback
- In case of transfer Error, HAL_I2S_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_I2S_ErrorCallback

DMA mode IO operation

- Send an amount of data in non blocking mode (DMA) using HAL_I2S_Transmit_DMA()

- At transmission end of half transfer HAL_I2S_TxHalfCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_TxHalfCpltCallback
- At transmission end of transfer HAL_I2S_TxCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_TxCpltCallback
- Receive an amount of data in non blocking mode (DMA) using HAL_I2S_Receive_DMA()
- At reception end of half transfer HAL_I2S_RxHalfCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_RxHalfCpltCallback
- At reception end of transfer HAL_I2S_RxCpltCallback is executed and user can add his own code by customization of function pointer HAL_I2S_RxCpltCallback
- In case of transfer Error, HAL_I2S_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_I2S_ErrorCallback
- Pause the DMA Transfer using HAL_I2S_DMAPause()
- Resume the DMA Transfer using HAL_I2S_DMAResume()
- Stop the DMA Transfer using HAL_I2S_DMAStop()

I2S HAL driver macros list

Below the list of most used macros in I2S HAL driver.

- __HAL_I2S_ENABLE: Enable the specified SPI peripheral (in I2S mode)
- __HAL_I2S_DISABLE: Disable the specified SPI peripheral (in I2S mode)
- __HAL_I2S_ENABLE_IT : Enable the specified I2S interrupts
- __HAL_I2S_DISABLE_IT : Disable the specified I2S interrupts
- __HAL_I2S_GET_FLAG: Check whether the specified I2S flag is set or not

Note: You can refer to the I2S HAL driver header file for more useful macros

I2S HAL driver macros list

Callback registration:

1. The compilation flag USE_HAL_I2S_REGISTER_CALLBACKS when set to 1U allows the user to configure dynamically the driver callbacks. Use Functions HAL_I2S_RegisterCallback() to register an interrupt callback. Function HAL_I2S_RegisterCallback() allows to register following callbacks:
   - TxCpltCallback : I2S Tx Completed callback
   - RxCpltCallback : I2S Rx Completed callback
   - TxHalfCpltCallback : I2S Tx Half Completed callback
   - RxHalfCpltCallback : I2S Rx Half Completed callback
   - ErrorCallback : I2S Error callback
   - MspInitCallback : I2S Msp Init callback
   - MspDeInitCallback : I2S Msp DeInit callback This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.
2. Use function HAL_I2S_UnRegisterCallback to reset a callback to the default weak function. HAL_I2S_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:
   - TxCpltCallback : I2S Tx Completed callback
   - RxCpltCallback : I2S Rx Completed callback
   - TxHalfCpltCallback : I2S Tx Half Completed callback
   - RxHalfCpltCallback : I2S Rx Half Completed callback
   - ErrorCallback : I2S Error callback
   - MspInitCallback : I2S Msp Init callback
   - MspDeInitCallback : I2S Msp DeInit callback

By default, after the HAL_I2S_Init() and when the state is HAL_I2S_STATE_RESET all callbacks are set to the corresponding weak functions: examples HAL_I2S_MasterTxCpltCallback(), HAL_I2S_MasterRxCpltCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the HAL_I2S_Init()/ HAL_I2S_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the HAL_I2S_Init()/ HAL_I2S_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in HAL_I2S_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in HAL_I2S_STATE_READY or HAL_I2S_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using HAL_I2S_RegisterCallback() before calling HAL_I2S_DeInit() or HAL_I2S_Init() function.

When the compilation define USE_HAL_I2S_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

31.2.2 Initialization and de-initialization functions

This subsection provides a set of functions allowing to initialize and de-initialize the I2Sx peripheral in simplex mode:

- User must Implement HAL_I2S_MspInit() function in which he configures all related peripherals resources (CLOCK, GPIO, DMA, IT and NVIC).
- Call the function HAL_I2S_Init() to configure the selected device with the selected configuration:
  - Mode
  - Standard
  - Data Format
  - MCLK Output
  - Audio frequency
  - Polarity
- Call the function HAL_I2S_DeInit() to restore the default configuration of the selected I2Sx peripheral.

This section contains the following APIs:

- ***HAL_I2S_Init***
- ***HAL_I2S_DeInit***
- ***HAL_I2S_MspInit***
- ***HAL_I2S_MspDeInit***

31.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the I2S data transfers.

1. There are two modes of transfer:
   - Blocking mode : The communication is performed in the polling mode. The status of all data processing is returned by the same function after finishing transfer.
   - No-Blocking mode : The communication is performed using Interrupts or DMA. These functions return the status of the transfer startup. The end of the data processing will be indicated through the dedicated I2S IRQ when using Interrupt mode or the DMA IRQ when using DMA mode.
2. Blocking mode functions are :
   - HAL_I2S_Transmit()
   - HAL_I2S_Receive()
3. No-Blocking mode functions with Interrupt are :
   - HAL_I2S_Transmit_IT()
   - HAL_I2S_Receive_IT()
4. No-Blocking mode functions with DMA are :
   - HAL_I2S_Transmit_DMA()
   - HAL_I2S_Receive_DMA()

5. A set of Transfer Complete Callbacks are provided in non Blocking mode:
   – HAL_I2S_TxCpltCallback()
   – HAL_I2S_RxCpltCallback()
   – HAL_I2S_ErrorCallback()

This section contains the following APIs:

- ***HAL_I2S_Transmit***
- ***HAL_I2S_Receive***
- ***HAL_I2S_Transmit_IT***
- ***HAL_I2S_Receive_IT***
- ***HAL_I2S_Transmit_DMA***
- ***HAL_I2S_Receive_DMA***
- ***HAL_I2S_DMAPause***
- ***HAL_I2S_DMAResume***
- ***HAL_I2S_DMAStop***
- ***HAL_I2S_IRQHandler***
- ***HAL_I2S_TxHalfCpltCallback***
- ***HAL_I2S_TxCpltCallback***
- ***HAL_I2S_RxHalfCpltCallback***
- ***HAL_I2S_RxCpltCallback***
- ***HAL_I2S_ErrorCallback***

31.2.4 Peripheral State and Errors functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- ***HAL_I2S_GetState***
- ***HAL_I2S_GetError***

31.2.5 Detailed description of functions

HAL_I2S_Init

Function name

HAL_StatusTypeDef HAL_I2S_Init (I2S_HandleTypeDef * hi2s)

Function description

Initializes the I2S according to the specified parameters in the I2S_InitTypeDef and create the associated handle.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** status

HAL_I2S_DeInit

Function name

HAL_StatusTypeDef HAL_I2S_DeInit (I2S_HandleTypeDef * hi2s)

Function description

DeInitializes the I2S peripheral.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** status

HAL_I2S_MspInit

Function name

void HAL_I2S_MspInit (I2S_HandleTypeDef * hi2s)

Function description

I2S MSP Init.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_MspDeInit

Function name

void HAL_I2S_MspDeInit (I2S_HandleTypeDef * hi2s)

Function description

I2S MSP DeInit.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_Transmit

Function name

HAL_StatusTypeDef HAL_I2S_Transmit (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Transmit an amount of data in blocking mode.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to data buffer.
- **Size:** number of data sample to be sent:
- **Timeout:** Timeout duration

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).

HAL_I2S_Receive

Function name

HAL_StatusTypeDef HAL_I2S_Receive (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to data buffer.
- **Size:** number of data sample to be sent:
- **Timeout:** Timeout duration

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).
- In I2S Master Receiver mode, just after enabling the peripheral the clock will be generate in continuous way and as the I2S is not disabled at the end of the I2S transaction.

HAL_I2S_Transmit_IT

Function name

HAL_StatusTypeDef HAL_I2S_Transmit_IT (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to data buffer.
- **Size:** number of data sample to be sent:

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).

HAL_I2S_Receive_IT

Function name

HAL_StatusTypeDef HAL_I2S_Receive_IT (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with Interrupt.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to the Receive data buffer.
- **Size:** number of data sample to be sent:

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).
- It is recommended to use DMA for the I2S receiver to avoid de-synchronization between Master and Slave otherwise the I2S interrupt should be optimized.

HAL_I2S_IRQHandler

Function name

void HAL_I2S_IRQHandler (I2S_HandleTypeDef * hi2s)

Function description

This function handles I2S interrupt request.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_I2S_Transmit_DMA (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with DMA.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to the Transmit data buffer.
- **Size:** number of data sample to be sent:

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).

HAL_I2S_Receive_DMA

Function name

HAL_StatusTypeDef HAL_I2S_Receive_DMA (I2S_HandleTypeDef * hi2s, uint16_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module
- **pData:** a 16-bit pointer to the Receive data buffer.
- **Size:** number of data sample to be sent:

Return values

- **HAL:** status

Notes

- When a 16-bit data frame or a 16-bit data frame extended is selected during the I2S configuration phase, the Size parameter means the number of 16-bit data length in the transaction and when a 24-bit data frame or a 32-bit data frame is selected the Size parameter means the number of 16-bit data length.
- The I2S is kept enabled at the end of transaction to avoid the clock de-synchronization between Master and Slave(example: audio streaming).

HAL_I2S_DMAPause

Function name

HAL_StatusTypeDef HAL_I2S_DMAPause (I2S_HandleTypeDef * hi2s)

Function description

Pauses the audio DMA Stream/Channel playing from the Media.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** status

HAL_I2S_DMAResume

Function name

HAL_StatusTypeDef HAL_I2S_DMAResume (I2S_HandleTypeDef * hi2s)

Function description

Resumes the audio DMA Stream/Channel playing from the Media.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** status

HAL_I2S_DMAStop

Function name

HAL_StatusTypeDef HAL_I2S_DMAStop (I2S_HandleTypeDef * hi2s)

Function description

Stops the audio DMA Stream/Channel playing from the Media.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** status

HAL_I2S_TxHalfCpltCallback

Function name

void HAL_I2S_TxHalfCpltCallback (I2S_HandleTypeDef * hi2s)

Function description

Tx Transfer Half completed callbacks.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_TxCpltCallback

Function name

void HAL_I2S_TxCpltCallback (I2S_HandleTypeDef * hi2s)

Function description

Tx Transfer completed callbacks.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_RxHalfCpltCallback

Function name

void HAL_I2S_RxHalfCpltCallback (I2S_HandleTypeDef * hi2s)

Function description

Rx Transfer half completed callbacks.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_RxCpltCallback

Function name

void HAL_I2S_RxCpltCallback (I2S_HandleTypeDef * hi2s)

Function description

Rx Transfer completed callbacks.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_ErrorCallback

Function name

void HAL_I2S_ErrorCallback (I2S_HandleTypeDef * hi2s)

Function description

I2S error callbacks.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **None:**

HAL_I2S_GetState

Function name

HAL_I2S_StateTypeDef HAL_I2S_GetState (I2S_HandleTypeDef * hi2s)

Function description

Return the I2S state.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **HAL:** state

HAL_I2S_GetError

Function name

uint32_t HAL_I2S_GetError (I2S_HandleTypeDef * hi2s)

Function description

Return the I2S error code.

Parameters

- **hi2s:** pointer to a I2S_HandleTypeDef structure that contains the configuration information for I2S module

Return values

- **I2S:** Error Code

31.3 I2S Firmware driver defines

The following section lists the various define and macros of the module.

31.3.1 I2S

Prescaler Calculation error

I2S Exported Macros

__HAL_I2S_RESET_HANDLE_STATE

Description:

- Reset I2S handle state.

Parameters:

- __HANDLE__: specifies the I2S Handle.

Return value:

- None

__HAL_I2S_ENABLE

Description:

- Enable the specified SPI peripheral (in I2S mode).

Parameters:

- __HANDLE__: specifies the I2S Handle.

Return value:

- None

__HAL_I2S_DISABLE

Description:

- Disable the specified SPI peripheral (in I2S mode).

Parameters:

- __HANDLE__: specifies the I2S Handle.

Return value:

- None

__HAL_I2S_ENABLE_IT

Description:

- Enable the specified I2S interrupts.

Parameters:

- __HANDLE__: specifies the I2S Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - I2S_IT_TXE: Tx buffer empty interrupt enable
  - I2S_IT_RXNE: RX buffer not empty interrupt enable
  - I2S_IT_ERR: Error interrupt enable

Return value:

- None

__HAL_I2S_DISABLE_IT

Description:

- Disable the specified I2S interrupts.

Parameters:

- __HANDLE__: specifies the I2S Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - I2S_IT_TXE: Tx buffer empty interrupt enable
  - I2S_IT_RXNE: RX buffer not empty interrupt enable
  - I2S_IT_ERR: Error interrupt enable

Return value:

- None

__HAL_I2S_GET_IT_SOURCE

Description:

- Checks if the specified I2S interrupt source is enabled or disabled.

Parameters:

- __HANDLE__: specifies the I2S Handle. This parameter can be I2S where x: 1, 2, or 3 to select the I2S peripheral.
- __INTERRUPT__: specifies the I2S interrupt source to check. This parameter can be one of the following values:
  - I2S_IT_TXE: Tx buffer empty interrupt enable
  - I2S_IT_RXNE: RX buffer not empty interrupt enable
  - I2S_IT_ERR: Error interrupt enable

Return value:

- The: new state of __IT__ (TRUE or FALSE).

__HAL_I2S_GET_FLAG

Description:

- Checks whether the specified I2S flag is set or not.

Parameters:

- __HANDLE__: specifies the I2S Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - I2S_FLAG_RXNE: Receive buffer not empty flag
  - I2S_FLAG_TXE: Transmit buffer empty flag
  - I2S_FLAG_UDR: Underrun flag
  - I2S_FLAG_OVR: Overrun flag
  - I2S_FLAG_FRE: Frame error flag
  - I2S_FLAG_CHSIDE: Channel Side flag
  - I2S_FLAG_BSY: Busy flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_I2S_CLEAR_OVRFLAG

Description:

- Clears the I2S OVR pending flag.

Parameters:

- __HANDLE__: specifies the I2S Handle.

Return value:

- None

__HAL_I2S_CLEAR_UDRFLAG

Description:

- Clears the I2S UDR pending flag.

Parameters:

- __HANDLE__: specifies the I2S Handle.

Return value:

- None

32 HAL IRDA Generic Driver

32.1 IRDA Firmware driver registers structures

32.1.1 IRDA_InitTypeDef

IRDA_InitTypeDef is defined in the stm32g4xx_hal_irda.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t Parity***
- ***uint32_t Mode***
- ***uint8_t Prescaler***
- ***uint16_t PowerMode***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t IRDA_InitTypeDef::BaudRate***

  This member configures the IRDA communication baud rate. The baud rate register is computed using the following formula: Baud Rate Register = ((usart_ker_ckpres) / ((hirda->Init.BaudRate))) where usart_ker_ckpres is the IRDA input clock divided by a prescaler
- ***uint32_t IRDA_InitTypeDef::WordLength***

  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***IRDAEx_Word_Length***
- ***uint32_t IRDA_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***IRDA_Parity***

  Note:

  – When parity is enabled, the computed parity is inserted at the MSB position of the transmitted data (9th bit when the word length is set to 9 data bits; 8th bit when the word length is set to 8 data bits).
- ***uint32_t IRDA_InitTypeDef::Mode***

  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***IRDA_Transfer_Mode***
- ***uint8_t IRDA_InitTypeDef::Prescaler***

  Specifies the Prescaler value for dividing the UART/USART source clock to achieve low-power frequency.

  Note:

  – Prescaler value 0 is forbidden
- ***uint16_t IRDA_InitTypeDef::PowerMode***

  Specifies the IRDA power mode. This parameter can be a value of ***IRDA_Low_Power***
- ***uint32_t IRDA_InitTypeDef::ClockPrescaler***

  Specifies the prescaler value used to divide the IRDA clock source. This parameter can be a value of ***IRDA_ClockPrescaler***.

32.1.2 IRDA_HandleTypeDef

IRDA_HandleTypeDef is defined in the stm32g4xx_hal_irda.h

Data Fields

- ***USART_TypeDef * Instance***
- ***IRDA_InitTypeDef Init***
- ***uint8_t * pTxBuffPtr***
- ***uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***

- ***uint8_t * pRxBuffPtr***
- ***uint16_t RxXferSize***

  USART registers base address
- ***IRDA_InitTypeDef IRDA_HandleTypeDef::Init***
  IRDA communication parameters
- ***uint8_t* IRDA_HandleTypeDef::pTxBuffPtr***
  Pointer to IRDA Tx transfer Buffer
- ***uint16_t IRDA_HandleTypeDef::TxXferSize***
  IRDA Tx Transfer size
- ***__IO uint16_t IRDA_HandleTypeDef::TxXferCount***
  IRDA Tx Transfer Counter
- ***uint8_t* IRDA_HandleTypeDef::pRxBuffPtr***
  Pointer to IRDA Rx transfer Buffer
- ***uint16_t IRDA_HandleTypeDef::RxXferSize***
  IRDA Rx Transfer size
- ***__IO uint16_t IRDA_HandleTypeDef::RxXferCount***
  IRDA Rx Transfer Counter
- ***uint16_t IRDA_HandleTypeDef::Mask***
  USART RX RDR register mask
- ***DMA_HandleTypeDef* IRDA_HandleTypeDef::hdmatx***
  IRDA Tx DMA Handle parameters
- ***DMA_HandleTypeDef* IRDA_HandleTypeDef::hdmarx***
  IRDA Rx DMA Handle parameters
- ***HAL_LockTypeDef IRDA_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_IRDA_StateTypeDef IRDA_HandleTypeDef::gState***
  IRDA state information related to global Handle management and also related to Tx operations. This parameter can be a value of **HAL_IRDA_StateTypeDef**
- ***__IO HAL_IRDA_StateTypeDef IRDA_HandleTypeDef::RxState***
  IRDA state information related to Rx operations. This parameter can be a value of **HAL_IRDA_StateTypeDef**
- ***__IO uint32_t IRDA_HandleTypeDef::ErrorCode***
  IRDA Error code

32.2 IRDA Firmware driver API description

The following section lists the various functions of the IRDA library.

32.2.1 How to use this driver

The IRDA HAL driver can be used as follows:

1. Declare a IRDA_HandleTypeDef handle structure (eg. IRDA_HandleTypeDef hirda).
2. Initialize the IRDA low level resources by implementing the HAL_IRDA_MspInit() API in setting the associated USART or UART in IRDA mode:
   - Enable the USARTx/UARTx interface clock.
   - USARTx/UARTx pins configuration:
     - Enable the clock for the USARTx/UARTx GPIOs.
     - Configure these USARTx/UARTx pins (TX as alternate function pull-up, RX as alternate function Input).
   - NVIC configuration if you need to use interrupt process (HAL_IRDA_Transmit_IT() and HAL_IRDA_Receive_IT() APIs):
     - Configure the USARTx/UARTx interrupt priority.
     - Enable the NVIC USARTx/UARTx IRQ handle.
     - The specific IRDA interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_IRDA_ENABLE_IT() and __HAL_IRDA_DISABLE_IT() inside the transmit and receive process.
   - DMA Configuration if you need to use DMA process (HAL_IRDA_Transmit_DMA() and HAL_IRDA_Receive_DMA() APIs):
     - Declare a DMA handle structure for the Tx/Rx channel.
     - Enable the DMAx interface clock.
     - Configure the declared DMA handle structure with the required Tx/Rx parameters.
     - Configure the DMA Tx/Rx channel.
     - Associate the initialized DMA handle to the IRDA DMA Tx/Rx handle.
     - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
3. Program the Baud Rate, Word Length and Parity and Mode(Receiver/Transmitter), the normal or low power mode and the clock prescaler in the hirda handle Init structure.
4. Initialize the IRDA registers by calling the HAL_IRDA_Init() API:
   - This API configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_IRDA_MspInit() API.

Note: The specific IRDA interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_IRDA_ENABLE_IT() and __HAL_IRDA_DISABLE_IT() inside the transmit and receive process.

5. Three operation modes are available within this driver :

Polling mode IO operation

- Send an amount of data in blocking mode using HAL_IRDA_Transmit()
- Receive an amount of data in blocking mode using HAL_IRDA_Receive()

Interrupt mode IO operation

- Send an amount of data in non-blocking mode using HAL_IRDA_Transmit_IT()
- At transmission end of transfer HAL_IRDA_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_TxCpltCallback()
- Receive an amount of data in non-blocking mode using HAL_IRDA_Receive_IT()
- At reception end of transfer HAL_IRDA_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_RxCpltCallback()
- In case of transfer Error, HAL_IRDA_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_IRDA_ErrorCallback()

DMA mode IO operation

- Send an amount of data in non-blocking mode (DMA) using HAL_IRDA_Transmit_DMA()
- At transmission half of transfer HAL_IRDA_TxHalfCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_TxHalfCpltCallback()

- At transmission end of transfer HAL_IRDA_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_TxCpltCallback()
- Receive an amount of data in non-blocking mode (DMA) using HAL_IRDA_Receive_DMA()
- At reception half of transfer HAL_IRDA_RxHalfCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_RxHalfCpltCallback()
- At reception end of transfer HAL_IRDA_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_IRDA_RxCpltCallback()
- In case of transfer Error, HAL_IRDA_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_IRDA_ErrorCallback()

IRDA HAL driver macros list

Below the list of most used macros in IRDA HAL driver.

- __HAL_IRDA_ENABLE: Enable the IRDA peripheral
- __HAL_IRDA_DISABLE: Disable the IRDA peripheral
- __HAL_IRDA_GET_FLAG : Check whether the specified IRDA flag is set or not
- __HAL_IRDA_CLEAR_FLAG : Clear the specified IRDA pending flag
- __HAL_IRDA_ENABLE_IT: Enable the specified IRDA interrupt
- __HAL_IRDA_DISABLE_IT: Disable the specified IRDA interrupt
- __HAL_IRDA_GET_IT_SOURCE: Check whether or not the specified IRDA interrupt is enabled

Note: You can refer to the IRDA HAL driver header file for more useful macros

32.2.2 Callback registration

The compilation define USE_HAL_IRDA_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_IRDA_RegisterCallback() to register a user callback. Function @ref HAL_IRDA_RegisterCallback() allows to register following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- MspInitCallback : IRDA MspInit.
- MspDeInitCallback : IRDA MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_IRDA_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. @ref HAL_IRDA_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- MspInitCallback : IRDA MspInit.
- MspDeInitCallback : IRDA MspDeInit.

By default, after the @ref HAL_IRDA_Init() and when the state is HAL_IRDA_STATE_RESET all callbacks are set to the corresponding weak (surcharged) functions: examples @ref HAL_IRDA_TxCpltCallback(), @ref HAL_IRDA_RxHalfCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_IRDA_Init() and @ref HAL_IRDA_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_IRDA_Init() and @ref HAL_IRDA_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_IRDA_STATE_READY state only. Exception done MspInit/ MspDeInit that can be registered/unregistered in HAL_IRDA_STATE_READY or HAL_IRDA_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_IRDA_RegisterCallback() before calling @ref HAL_IRDA_DeInit() or @ref HAL_IRDA_Init() function.

When The compilation define USE_HAL_IRDA_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak (surcharged) callbacks are used.

32.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx in asynchronous IRDA mode.

- For the asynchronous mode only these parameters can be configured:
  - Baud Rate
  - Word Length
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - Power mode
  - Prescaler setting
  - Receiver/transmitter modes

The HAL_IRDA_Init() API follows the USART asynchronous configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- ***HAL_IRDA_Init***
- ***HAL_IRDA_DeInit***
- ***HAL_IRDA_MspInit***
- ***HAL_IRDA_MspDeInit***

32.2.4 IO operation functions

This subsection provides a set of functions allowing to manage the IRDA data transfers.

IrDA is a half duplex communication protocol. If the Transmitter is busy, any data on the IrDA receive line will be ignored by the IrDA decoder and if the Receiver is busy, data on the TX from the USART to IrDA will not be encoded by IrDA. While receiving data, transmission should be avoided as the data to be transmitted could be corrupted.

1. There are two modes of transfer:
   - Blocking mode: the communication is performed in polling mode. The HAL status of all data processing is returned by the same function after finishing transfer.
   - Non-Blocking mode: the communication is performed using Interrupts or DMA, these API's return the HAL status. The end of the data processing will be indicated through the dedicated IRDA IRQ when using Interrupt mode or the DMA IRQ when using DMA mode. The HAL_IRDA_TxCpltCallback(), HAL_IRDA_RxCpltCallback() user callbacks will be executed respectively at the end of the Transmit or Receive process The HAL_IRDA_ErrorCallback() user callback will be executed when a communication error is detected
2. Blocking mode APIs are :
   - HAL_IRDA_Transmit()
   - HAL_IRDA_Receive()

3. Non Blocking mode APIs with Interrupt are :
   - HAL_IRDA_Transmit_IT()
   - HAL_IRDA_Receive_IT()
   - HAL_IRDA_IRQHandler()
4. Non Blocking mode functions with DMA are :
   - HAL_IRDA_Transmit_DMA()
   - HAL_IRDA_Receive_DMA()
   - HAL_IRDA_DMAPause()
   - HAL_IRDA_DMAResume()
   - HAL_IRDA_DMAStop()
5. A set of Transfer Complete Callbacks are provided in Non Blocking mode:
   - HAL_IRDA_TxHalfCpltCallback()
   - HAL_IRDA_TxCpltCallback()
   - HAL_IRDA_RxHalfCpltCallback()
   - HAL_IRDA_RxCpltCallback()
   - HAL_IRDA_ErrorCallback()
6. Non-Blocking mode transfers could be aborted using Abort API's :
   - HAL_IRDA_Abort()
   - HAL_IRDA_AbortTransmit()
   - HAL_IRDA_AbortReceive()
   - HAL_IRDA_Abort_IT()
   - HAL_IRDA_AbortTransmit_IT()
   - HAL_IRDA_AbortReceive_IT()
7. For Abort services based on interrupts (HAL_IRDA_Abortxxx_IT), a set of Abort Complete Callbacks are provided:
   - HAL_IRDA_AbortCpltCallback()
   - HAL_IRDA_AbortTransmitCpltCallback()
   - HAL_IRDA_AbortReceiveCpltCallback()
8. In Non-Blocking mode transfers, possible errors are split into 2 categories. Errors are handled as follows :
   - Error is considered as Recoverable and non blocking : Transfer could go till end, but error severity is to be evaluated by user : this concerns Frame Error, Parity Error or Noise Error in Interrupt mode reception . Received character is then retrieved and stored in Rx buffer, Error code is set to allow user to identify error type, and HAL_IRDA_ErrorCallback() user callback is executed. Transfer is kept ongoing on IRDA side. If user wants to abort it, Abort services should be called by user.
   - Error is considered as Blocking : Transfer could not be completed properly and is aborted. This concerns Overrun Error In Interrupt mode reception and all errors in DMA mode. Error code is set to allow user to identify error type, and HAL_IRDA_ErrorCallback() user callback is executed.

This section contains the following APIs:

- ***HAL_IRDA_Transmit***
- ***HAL_IRDA_Receive***
- ***HAL_IRDA_Transmit_IT***
- ***HAL_IRDA_Receive_IT***
- ***HAL_IRDA_Transmit_DMA***

32.2.5 Peripheral State and Error functions

This subsection provides a set of functions allowing to return the State of IrDA communication process and also return Peripheral Errors occurred during communication process

- HAL_IRDA_GetState() API can be helpful to check in run-time the state of the IRDA peripheral handle.
- HAL_IRDA_GetError() checks in run-time errors that could occur during communication.

This section contains the following APIs:

- *HAL_IRDA_GetState*
- *HAL_IRDA_GetError*

32.2.6 Detailed description of functions

HAL_IRDA_Init

Function name

HAL_StatusTypeDef HAL_IRDA_Init (IRDA_HandleTypeDef * hirda)

Function description

Initialize the IRDA mode according to the specified parameters in the IRDA_InitTypeDef and initialize the associated handle.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **HAL:** status

HAL_IRDA_DeInit

Function name

HAL_StatusTypeDef HAL_IRDA_DeInit (IRDA_HandleTypeDef * hirda)

Function description

DeInitialize the IRDA peripheral.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **HAL:** status

HAL_IRDA_MspInit

Function name

void HAL_IRDA_MspInit (IRDA_HandleTypeDef * hirda)

Function description

Initialize the IRDA MSP.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_MspDeInit

Function name

void HAL_IRDA_MspDeInit (IRDA_HandleTypeDef * hirda)

Function description

DeInitialize the IRDA MSP.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_Transmit

Function name

HAL_StatusTypeDef HAL_IRDA_Transmit (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Send an amount of data in blocking mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.
- **Timeout:** Specify timeout value.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.

HAL_IRDA_Receive

Function name

HAL_StatusTypeDef HAL_IRDA_Receive (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.
- **Timeout:** Specify timeout value.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.

HAL_IRDA_Transmit_IT

Function name

HAL_StatusTypeDef HAL_IRDA_Transmit_IT (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.

HAL_IRDA_Receive_IT

Function name

HAL_StatusTypeDef HAL_IRDA_Receive_IT (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.

HAL_IRDA_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_IRDA_Transmit_DMA (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.

HAL_IRDA_Receive_DMA

Function name

HAL_StatusTypeDef HAL_IRDA_Receive_DMA (IRDA_HandleTypeDef * hirda, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must reflect the number of u16 available through pData.
- When the IRDA parity is enabled (PCE = 1), the received data contains the parity bit (MSB position).

HAL_IRDA_DMAPause

Function name

HAL_StatusTypeDef HAL_IRDA_DMAPause (IRDA_HandleTypeDef * hirda)

Function description

Pause the DMA Transfer.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **HAL:** status

HAL_IRDA_DMAResume

Function name

HAL_StatusTypeDef HAL_IRDA_DMAResume (IRDA_HandleTypeDef * hirda)

Function description

Resume the DMA Transfer.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_IRDA_DMAStop

Function name

HAL_StatusTypeDef HAL_IRDA_DMAStop (IRDA_HandleTypeDef * hirda)

Function description

Stop the DMA Transfer.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_IRDA_Abort

Function name

HAL_StatusTypeDef HAL_IRDA_Abort (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_IRDA_AbortTransmit

Function name

HAL_StatusTypeDef HAL_IRDA_AbortTransmit (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing Transmit transfer (blocking mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_IRDA_AbortReceive

Function name

HAL_StatusTypeDef HAL_IRDA_AbortReceive (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing Receive transfer (blocking mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_IRDA_Abort_IT

Function name

HAL_StatusTypeDef HAL_IRDA_Abort_IT (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_IRDA_AbortTransmit_IT

Function name

HAL_StatusTypeDef HAL_IRDA_AbortTransmit_IT (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing Transmit transfer (Interrupt mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_IRDA_AbortReceive_IT

Function name

HAL_StatusTypeDef HAL_IRDA_AbortReceive_IT (IRDA_HandleTypeDef * hirda)

Function description

Abort ongoing Receive transfer (Interrupt mode).

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable IRDA Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_IRDA_IRQHandler

Function name

void HAL_IRDA_IRQHandler (IRDA_HandleTypeDef * hirda)

Function description

Handle IRDA interrupt request.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_TxCpltCallback

Function name

void HAL_IRDA_TxCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

Tx Transfer completed callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_RxCpltCallback

Function name

void HAL_IRDA_RxCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

Rx Transfer completed callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_TxHalfCpltCallback

Function name

void HAL_IRDA_TxHalfCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

Tx Half Transfer completed callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified USART module.

Return values

- **None:**

HAL_IRDA_RxHalfCpltCallback

Function name

void HAL_IRDA_RxHalfCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

Rx Half Transfer complete callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_ErrorCallback

Function name

void HAL_IRDA_ErrorCallback (IRDA_HandleTypeDef * hirda)

Function description

IRDA error callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_AbortCpltCallback

Function name

void HAL_IRDA_AbortCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

IRDA Abort Complete callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_AbortTransmitCpltCallback

Function name

void HAL_IRDA_AbortTransmitCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

IRDA Abort Complete callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_AbortReceiveCpltCallback

Function name

void HAL_IRDA_AbortReceiveCpltCallback (IRDA_HandleTypeDef * hirda)

Function description

IRDA Abort Receive Complete callback.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **None:**

HAL_IRDA_GetState

Function name

HAL_IRDA_StateTypeDef HAL_IRDA_GetState (IRDA_HandleTypeDef * hirda)

Function description

Return the IRDA handle state.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **HAL:** state

HAL_IRDA_GetError

Function name

uint32_t HAL_IRDA_GetError (IRDA_HandleTypeDef * hirda)

Function description

Return the IRDA handle error code.

Parameters

- **hirda:** Pointer to a IRDA_HandleTypeDef structure that contains the configuration information for the specified IRDA module.

Return values

- **IRDA:** Error Code

32.3 IRDA Firmware driver defines

The following section lists the various define and macros of the module.

32.3.1 IRDA

IRDA

IRDA Clock Prescaler

IRDA_PRESCALER_DIV1

fclk_pres = fclk

IRDA_PRESCALER_DIV2

fclk_pres = fclk/2

IRDA_PRESCALER_DIV4

fclk_pres = fclk/4

IRDA_PRESCALER_DIV6

fclk_pres = fclk/6

IRDA_PRESCALER_DIV8

fclk_pres = fclk/8

IRDA_PRESCALER_DIV10

fclk_pres = fclk/10

IRDA_PRESCALER_DIV12

fclk_pres = fclk/12

IRDA_PRESCALER_DIV16

fclk_pres = fclk/16

IRDA_PRESCALER_DIV32

fclk_pres = fclk/32

IRDA_PRESCALER_DIV64

fclk_pres = fclk/64

IRDA_PRESCALER_DIV128

fclk_pres = fclk/128

IRDA_PRESCALER_DIV256

fclk_pres = fclk/256

IRDA DMA Rx

IRDA_DMA_RX_DISABLE

IRDA DMA RX disabled

IRDA_DMA_RX_ENABLE

IRDA DMA RX enabled

IRDA DMA Tx

IRDA_DMA_TX_DISABLE

IRDA DMA TX disabled

IRDA_DMA_TX_ENABLE

IRDA DMA TX enabled

IRDA Error Code Definition

HAL_IRDA_ERROR_NONE

No error

HAL_IRDA_ERROR_PE

Parity error

HAL_IRDA_ERROR_NE

Noise error

HAL_IRDA_ERROR_FE

frame error

HAL_IRDA_ERROR_ORE

Overrun error

HAL_IRDA_ERROR_DMA

DMA transfer error

HAL_IRDA_ERROR_BUSY

Busy Error

IRDA Exported Macros

__HAL_IRDA_RESET_HANDLE_STATE

Description:

- Reset IRDA handle state.

Parameters:

- __HANDLE__: IRDA handle.

Return value:

- None

__HAL_IRDA_FLUSH_DRREGISTER

Description:

- Flush the IRDA DR register.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_CLEAR_FLAG

Description:

- Clear the specified IRDA pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - IRDA_CLEAR_PEF
  - IRDA_CLEAR_FEF
  - IRDA_CLEAR_NEF
  - IRDA_CLEAR_OREF
  - IRDA_CLEAR_TCF
  - IRDA_CLEAR_IDLEF

Return value:

- None

__HAL_IRDA_CLEAR_PEFLAG

Description:

- Clear the IRDA PE pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_CLEAR_FEFLAG

Description:

- Clear the IRDA FE pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_CLEAR_NEFLAG

Description:

- Clear the IRDA NE pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_CLEAR_OREFLAG

Description:

- Clear the IRDA ORE pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_CLEAR_IDLEFLAG

Description:

- Clear the IRDA IDLE pending flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_GET_FLAG

Description:

- Check whether the specified IRDA flag is set or not.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - IRDA_FLAG_REACK Receive enable acknowledge flag
  - IRDA_FLAG_TEACK Transmit enable acknowledge flag
  - IRDA_FLAG_BUSY Busy flag
  - IRDA_FLAG_ABRF Auto Baud rate detection flag
  - IRDA_FLAG_ABRE Auto Baud rate detection error flag
  - IRDA_FLAG_TXE Transmit data register empty flag
  - IRDA_FLAG_TC Transmission Complete flag
  - IRDA_FLAG_RXNE Receive data register not empty flag
  - IRDA_FLAG_ORE OverRun Error flag
  - IRDA_FLAG_NE Noise Error flag
  - IRDA_FLAG_FE Framing Error flag
  - IRDA_FLAG_PE Parity Error flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_IRDA_ENABLE_IT

Description:

- Enable the specified IRDA interrupt.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __INTERRUPT__: specifies the IRDA interrupt source to enable. This parameter can be one of the following values:
  - IRDA_IT_TXE Transmit Data Register empty interrupt
  - IRDA_IT_TC Transmission complete interrupt
  - IRDA_IT_RXNE Receive Data register not empty interrupt
  - IRDA_IT_IDLE Idle line detection interrupt
  - IRDA_IT_PE Parity Error interrupt
  - IRDA_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_IRDA_DISABLE_IT

Description:

- Disable the specified IRDA interrupt.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __INTERRUPT__: specifies the IRDA interrupt source to disable. This parameter can be one of the following values:
  - IRDA_IT_TXE Transmit Data Register empty interrupt
  - IRDA_IT_TC Transmission complete interrupt
  - IRDA_IT_RXNE Receive Data register not empty interrupt
  - IRDA_IT_IDLE Idle line detection interrupt
  - IRDA_IT_PE Parity Error interrupt
  - IRDA_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_IRDA_GET_IT

Description:

- Check whether the specified IRDA interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __INTERRUPT__: specifies the IRDA interrupt source to check. This parameter can be one of the following values:
  - IRDA_IT_TXE Transmit Data Register empty interrupt
  - IRDA_IT_TC Transmission complete interrupt
  - IRDA_IT_RXNE Receive Data register not empty interrupt
  - IRDA_IT_IDLE Idle line detection interrupt
  - IRDA_IT_ORE OverRun Error interrupt
  - IRDA_IT_NE Noise Error interrupt
  - IRDA_IT_FE Framing Error interrupt
  - IRDA_IT_PE Parity Error interrupt

Return value:

- The: new state of __IT__ (SET or RESET).

__HAL_IRDA_GET_IT_SOURCE

Description:

- Check whether the specified IRDA interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __INTERRUPT__: specifies the IRDA interrupt source to check. This parameter can be one of the following values:
  - IRDA_IT_TXE Transmit Data Register empty interrupt
  - IRDA_IT_TC Transmission complete interrupt
  - IRDA_IT_RXNE Receive Data register not empty interrupt
  - IRDA_IT_IDLE Idle line detection interrupt
  - IRDA_IT_ERR Framing, overrun or noise error interrupt
  - IRDA_IT_PE Parity Error interrupt

Return value:

- The: new state of __IT__ (SET or RESET).

__HAL_IRDA_CLEAR_IT

Description:

- Clear the specified IRDA ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt This parameter can be one of the following values:
  - IRDA_CLEAR_PEF Parity Error Clear Flag
  - IRDA_CLEAR_FEF Framing Error Clear Flag
  - IRDA_CLEAR_NEF Noise detected Clear Flag
  - IRDA_CLEAR_OREF OverRun Error Clear Flag
  - IRDA_CLEAR_TCF Transmission Complete Clear Flag

Return value:

- None

__HAL_IRDA_SEND_REQ

Description:

- Set a specific IRDA request flag.

Parameters:

- __HANDLE__: specifies the IRDA Handle.
- __REQ__: specifies the request flag to set This parameter can be one of the following values:
  - IRDA_AUTOBAUD_REQUEST Auto-Baud Rate Request
  - IRDA_RXDATA_FLUSH_REQUEST Receive Data flush Request
  - IRDA_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_IRDA_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the IRDA one bit sample method.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the IRDA one bit sample method.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_ENABLE

Description:

- Enable UART/USART associated to IRDA Handle.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

__HAL_IRDA_DISABLE

Description:

- Disable UART/USART associated to IRDA Handle.

Parameters:

- __HANDLE__: specifies the IRDA Handle.

Return value:

- None

IRDA Flags

IRDA_FLAG_REACK

IRDA receive enable acknowledge flag

IRDA_FLAG_TEACK

IRDA transmit enable acknowledge flag

IRDA_FLAG_BUSY

IRDA busy flag

IRDA_FLAG_ABRF

34 HAL IWDG Generic Driver

34.1 IWDG Firmware driver registers structures

34.1.1 IWDG_InitTypeDef

IWDG_InitTypeDef is defined in the stm32g4xx_hal_iwdg.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t Reload***
- ***uint32_t Window***

Field Documentation

- ***uint32_t IWDG_InitTypeDef::Prescaler***
  Select the prescaler of the IWDG. This parameter can be a value of ***IWDG_Prescaler***
- ***uint32_t IWDG_InitTypeDef::Reload***
  Specifies the IWDG down-counter reload value. This parameter must be a number between Min_Data = 0 and Max_Data = 0x0FFF
- ***uint32_t IWDG_InitTypeDef::Window***
  Specifies the window value to be compared to the down-counter. This parameter must be a number between Min_Data = 0 and Max_Data = 0x0FFF

34.1.2 IWDG_HandleTypeDef

IWDG_HandleTypeDef is defined in the stm32g4xx_hal_iwdg.h

Data Fields

- ***IWDG_TypeDef * Instance***
- ***IWDG_InitTypeDef Init***

Field Documentation

- ***IWDG_TypeDef* IWDG_HandleTypeDef::Instance***
  Register base address
- ***IWDG_InitTypeDef IWDG_HandleTypeDef::Init***
  IWDG required parameters

34.2 IWDG Firmware driver API description

The following section lists the various functions of the IWDG library.

34.2.1 IWDG Generic features

- The IWDG can be started by either software or hardware (configurable through option byte).
- The IWDG is clocked by Low-Speed clock (LSI) and thus stays active even if the main clock fails.
- Once the IWDG is started, the LSI is forced ON and both can not be disabled. The counter starts counting down from the reset value (0xFFF). When it reaches the end of count value (0x000) a reset signal is generated (IWDG reset).
- Whenever the key value 0x0000 AAAA is written in the IWDG_KR register, the IWDG_RLR value is reloaded in the counter and the watchdog reset is prevented.
- The IWDG is implemented in the VDD voltage domain that is still functional in STOP and STANDBY mode (IWDG reset can wake-up from STANDBY). IWDGRST flag in RCC_CSR register can be used to inform when an IWDG reset occurs.
- Debug mode : When the microcontroller enters debug mode (core halted), the IWDG counter either continues to work normally or stops, depending on DBG_IWDG_STOP configuration bit in DBG module, accessible through __HAL_DBGMCU_FREEZE_IWDG() and __HAL_DBGMCU_UNFREEZE_IWDG() macros.

Min-max timeout value @32KHz (LSI): ~125us / ~32.7s The IWDG timeout may vary due to LSI frequency dispersion. STM32G4xx devices provide the capability to measure the LSI frequency (LSI clock connected internally to TIM16 CH1 input capture). The measured value can be used to have an IWDG timeout with an acceptable accuracy.

34.2.2 How to use this driver

1. Use IWDG using HAL_IWDG_Init() function to :
   - Enable instance by writing Start keyword in IWDG_KEY register. LSI clock is forced ON and IWDG counter starts counting down.
   - Enable write access to configuration registers: IWDG_PR, IWDG_RLR and IWDG_WINR.
   - Configure the IWDG prescaler and counter reload value. This reload value will be loaded in the IWDG counter each time the watchdog is reloaded, then the IWDG will start counting down from this value.
   - Wait for status flags to be reset.
   - Depending on window parameter:
     - If Window Init parameter is same as Window register value, nothing more is done but reload counter value in order to exit function with exact time base.
     - Else modify Window register. This will automatically reload watchdog counter.
2. Then the application program must refresh the IWDG counter at regular intervals during normal operation to prevent an MCU reset, using HAL_IWDG_Refresh() function.

IWDG HAL driver macros list

Below the list of most used macros in IWDG HAL driver:

- __HAL_IWDG_START: Enable the IWDG peripheral
- __HAL_IWDG_RELOAD_COUNTER: Reloads IWDG counter with value defined in the reload register

34.2.3 Initialization and Start functions

This section provides functions allowing to:

- Initialize the IWDG according to the specified parameters in the IWDG_InitTypeDef of associated handle.
- Manage Window option.
- Once initialization is performed in HAL_IWDG_Init function, Watchdog is reloaded in order to exit function with correct time base.

This section contains the following APIs:

- ***HAL_IWDG_Init***

34.2.4 IO operation functions

This section provides functions allowing to:

- Refresh the IWDG.

This section contains the following APIs:

- ***HAL_IWDG_Refresh***

34.2.5 Detailed description of functions

HAL_IWDG_Init

Function name

HAL_StatusTypeDef HAL_IWDG_Init (IWDG_HandleTypeDef * hiwdg)

Function description

Initialize the IWDG according to the specified parameters in the IWDG_InitTypeDef and start watchdog.

Parameters

- **hiwdg:** pointer to a IWDG_HandleTypeDef structure that contains the configuration information for the specified IWDG module.

Return values

- **HAL:** status

HAL_IWDG_Refresh

Function name

HAL_StatusTypeDef HAL_IWDG_Refresh (IWDG_HandleTypeDef * hiwdg)

Function description

Refresh the IWDG.

Parameters

- **hiwdg:** pointer to a IWDG_HandleTypeDef structure that contains the configuration information for the specified IWDG module.

Return values

- **HAL:** status

34.3 IWDG Firmware driver defines

The following section lists the various define and macros of the module.

34.3.1 IWDG

IWDG

IWDG Exported Macros

__HAL_IWDG_START

Description:

- Enable the IWDG peripheral.

Parameters:

- __HANDLE__: IWDG handle

Return value:

- None

__HAL_IWDG_RELOAD_COUNTER

Description:

- Reload IWDG counter with value defined in the reload register (write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers disabled).

Parameters:

- __HANDLE__: IWDG handle

Return value:

- None

IWDG Prescaler

IWDG_PRESCALER_4

IWDG prescaler set to 4

IWDG_PRESCALER_8

IWDG prescaler set to 8

IWDG_PRESCALER_16

IWDG prescaler set to 16

IWDG_PRESCALER_32

IWDG prescaler set to 32

IWDG_PRESCALER_64

IWDG prescaler set to 64

IWDG_PRESCALER_128

IWDG prescaler set to 128

IWDG_PRESCALER_256

IWDG prescaler set to 256

IWDG Window option

IWDG_WINDOW_DISABLE

35 HAL LPTIM Generic Driver

35.1 LPTIM Firmware driver registers structures

35.1.1 LPTIM_ClockConfigTypeDef

LPTIM_ClockConfigTypeDef is defined in the stm32g4xx_hal_lptim.h

Data Fields

- ***uint32_t Source***
- ***uint32_t Prescaler***

Field Documentation

- ***uint32_t LPTIM_ClockConfigTypeDef::Source***
  Selects the clock source. This parameter can be a value of ***LPTIM_Clock_Source***
- ***uint32_t LPTIM_ClockConfigTypeDef::Prescaler***
  Specifies the counter clock Prescaler. This parameter can be a value of ***LPTIM_Clock_Prescaler***

35.1.2 LPTIM_ULPClockConfigTypeDef

LPTIM_ULPClockConfigTypeDef is defined in the stm32g4xx_hal_lptim.h

Data Fields

- ***uint32_t Polarity***
- ***uint32_t SampleTime***

Field Documentation

- ***uint32_t LPTIM_ULPClockConfigTypeDef::Polarity***
  Selects the polarity of the active edge for the counter unit if the ULPTIM input is selected. Note: This parameter is used only when Ultra low power clock source is used. Note: If the polarity is configured on 'both edges', an auxiliary clock (one of the Low power oscillator) must be active. This parameter can be a value of ***LPTIM_Clock_Polarity***
- ***uint32_t LPTIM_ULPClockConfigTypeDef::SampleTime***
  Selects the clock sampling time to configure the clock glitch filter. Note: This parameter is used only when Ultra low power clock source is used. This parameter can be a value of ***LPTIM_Clock_Sample_Time***

35.1.3 LPTIM_TriggerConfigTypeDef

LPTIM_TriggerConfigTypeDef is defined in the stm32g4xx_hal_lptim.h

Data Fields

- ***uint32_t Source***
- ***uint32_t ActiveEdge***
- ***uint32_t SampleTime***

Field Documentation

- ***uint32_t LPTIM_TriggerConfigTypeDef::Source***
  Selects the Trigger source. This parameter can be a value of ***LPTIM_Trigger_Source***
- ***uint32_t LPTIM_TriggerConfigTypeDef::ActiveEdge***
  Selects the Trigger active edge. Note: This parameter is used only when an external trigger is used. This parameter can be a value of ***LPTIM_External_Trigger_Polarity***
- ***uint32_t LPTIM_TriggerConfigTypeDef::SampleTime***
  Selects the trigger sampling time to configure the clock glitch filter. Note: This parameter is used only when an external trigger is used. This parameter can be a value of ***LPTIM_Trigger_Sample_Time***

35.1.4 LPTIM_InitTypeDef

LPTIM_InitTypeDef is defined in the stm32g4xx_hal_lptim.h

Data Fields

- ***LPTIM_ClockConfigTypeDef Clock***
- ***LPTIM_ULPClockConfigTypeDef UltraLowPowerClock***
- ***LPTIM_TriggerConfigTypeDef Trigger***
- ***uint32_t OutputPolarity***
- ***uint32_t UpdateMode***
- ***uint32_t CounterSource***
- ***uint32_t Input1Source***
- ***uint32_t Input2Source***

Field Documentation

- ***LPTIM_ClockConfigTypeDef LPTIM_InitTypeDef::Clock***
  Specifies the clock parameters
- ***LPTIM_ULPClockConfigTypeDef LPTIM_InitTypeDef::UltraLowPowerClock***
  Specifies the Ultra Low Power clock parameters
- ***LPTIM_TriggerConfigTypeDef LPTIM_InitTypeDef::Trigger***
  Specifies the Trigger parameters
- ***uint32_t LPTIM_InitTypeDef::OutputPolarity***
  Specifies the Output polarity. This parameter can be a value of ***LPTIM_Output_Polarity***
- ***uint32_t LPTIM_InitTypeDef::UpdateMode***
  Specifies whether the update of the autoreload and the compare values is done immediately or after the end of current period. This parameter can be a value of ***LPTIM_Updating_Mode***
- ***uint32_t LPTIM_InitTypeDef::CounterSource***
  Specifies whether the counter is incremented each internal event or each external event. This parameter can be a value of ***LPTIM_Counter_Source***
- ***uint32_t LPTIM_InitTypeDef::Input1Source***
  Specifies source selected for input1 (GPIO or comparator output). This parameter can be a value of ***LPTIM_Input1_Source***
- ***uint32_t LPTIM_InitTypeDef::Input2Source***
  Specifies source selected for input2 (GPIO or comparator output). Note: This parameter is used only for encoder feature so is used only for LPTIM1 instance. This parameter can be a value of ***LPTIM_Input2_Source***

35.1.5 LPTIM_HandleTypeDef

LPTIM_HandleTypeDef is defined in the stm32g4xx_hal_lptim.h

Data Fields

- ***LPTIM_TypeDef * Instance***
- ***LPTIM_InitTypeDef Init***
- ***HAL_StatusTypeDef Status***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_LPTIM_StateTypeDef State***

Field Documentation

- ***LPTIM_TypeDef* LPTIM_HandleTypeDef::Instance***
  Register base address
- ***LPTIM_InitTypeDef LPTIM_HandleTypeDef::Init***
  LPTIM required parameters
- ***HAL_StatusTypeDef LPTIM_HandleTypeDef::Status***
  LPTIM peripheral status
- ***HAL_LockTypeDef LPTIM_HandleTypeDef::Lock***
  LPTIM locking object
- ***__IO HAL_LPTIM_StateTypeDef LPTIM_HandleTypeDef::State***
  LPTIM peripheral state

35.2 LPTIM Firmware driver API description

The following section lists the various functions of the LPTIM library.

35.2.1 How to use this driver

The LPTIM HAL driver can be used as follows:

1. Initialize the LPTIM low level resources by implementing the HAL_LPTIM_MspInit():
   - Enable the LPTIM interface clock using __HAL_RCC_LPTIMx_CLK_ENABLE().
   - In case of using interrupts (e.g. HAL_LPTIM_PWM_Start_IT()):
     - Configure the LPTIM interrupt priority using HAL_NVIC_SetPriority().
     - Enable the LPTIM IRQ handler using HAL_NVIC_EnableIRQ().
     - In LPTIM IRQ handler, call HAL_LPTIM_IRQHandler().
2. Initialize the LPTIM HAL using HAL_LPTIM_Init(). This function configures mainly:
   - The instance: LPTIM1.
   - Clock: the counter clock.
     - Source : it can be either the ULPTIM input (IN1) or one of the internal clock; (APB, LSE or LSI).
     - Prescaler: select the clock divider.
   - UltraLowPowerClock : To be used only if the ULPTIM is selected as counter clock source.
     - Polarity: polarity of the active edge for the counter unit if the ULPTIM input is selected.
     - SampleTime: clock sampling time to configure the clock glitch filter.
   - Trigger: How the counter start.
     - Source: trigger can be software or one of the hardware triggers.
     - ActiveEdge : only for hardware trigger.
     - SampleTime : trigger sampling time to configure the trigger glitch filter.
   - OutputPolarity : 2 opposite polarities are possible.
   - UpdateMode: specifies whether the update of the autoreload and the compare values is done immediately or after the end of current period.
   - Input1Source: Source selected for input1 (GPIO or comparator output).
   - Input2Source: Source selected for input2 (GPIO or comparator output). Input2 is used only for encoder feature so is used only for LPTIM1 instance.
3. Six modes are available:
   - PWM Mode: To generate a PWM signal with specified period and pulse, call HAL_LPTIM_PWM_Start() or HAL_LPTIM_PWM_Start_IT() for interruption mode.
   - One Pulse Mode: To generate pulse with specified width in response to a stimulus, call HAL_LPTIM_OnePulse_Start() or HAL_LPTIM_OnePulse_Start_IT() for interruption mode.
   - Set once Mode: In this mode, the output changes the level (from low level to high level if the output polarity is configured high, else the opposite) when a compare match occurs. To start this mode, call HAL_LPTIM_SetOnce_Start() or HAL_LPTIM_SetOnce_Start_IT() for interruption mode.
   - Encoder Mode: To use the encoder interface call HAL_LPTIM_Encoder_Start() or HAL_LPTIM_Encoder_Start_IT() for interruption mode. Only available for LPTIM1 instance.
   - Time out Mode: an active edge on one selected trigger input rests the counter. The first trigger event will start the timer, any successive trigger event will reset the counter and the timer will restart. To start this mode call HAL_LPTIM_TimeOut_Start_IT() or HAL_LPTIM_TimeOut_Start_IT() for interruption mode.
   - Counter Mode: counter can be used to count external events on the LPTIM Input1 or it can be used to count internal clock cycles. To start this mode, call HAL_LPTIM_Counter_Start() or HAL_LPTIM_Counter_Start_IT() for interruption mode.
4. User can stop any process by calling the corresponding API: HAL_LPTIM_Xxx_Stop() or HAL_LPTIM_Xxx_Stop_IT() if the process is already started in interruption mode.
5. De-initialize the LPTIM peripheral using HAL_LPTIM_DeInit().

Callback registration

The compilation define USE_HAL_LPTIM_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_LPTIM_RegisterCallback() to register a callback. @ref HAL_LPTIM_RegisterCallback() takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_LPTIM_UnRegisterCallback() to reset a callback to the default weak function. @ref HAL_LPTIM_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID.

These functions allow to register/unregister following callbacks:

- MspInitCallback : LPTIM Base Msp Init Callback.
- MspDeInitCallback : LPTIM Base Msp DeInit Callback.
- CompareMatchCallback : Compare match Callback.
- AutoReloadMatchCallback : Auto-reload match Callback.
- TriggerCallback : External trigger event detection Callback.
- CompareWriteCallback : Compare register write complete Callback.
- AutoReloadWriteCallback : Auto-reload register write complete Callback.
- DirectionUpCallback : Up-counting direction change Callback.
- DirectionDownCallback : Down-counting direction change Callback.

By default, after the Init and when the state is HAL_LPTIM_STATE_RESET all interrupt callbacks are set to the corresponding weak functions: examples @ref HAL_LPTIM_TriggerCallback(), @ref HAL_LPTIM_CompareMatchCallback().

Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functionalities in the Init/ DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the Init/DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand)

Callbacks can be registered/unregistered in HAL_LPTIM_STATE_READY state only. Exception done MspInit/ MspDeInit that can be registered/unregistered in HAL_LPTIM_STATE_READY or HAL_LPTIM_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_LPTIM_RegisterCallback() before calling DeInit or Init function.

When The compilation define USE_HAL_LPTIM_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

35.2.2 Initialization and de-initialization functions

This section provides functions allowing to:

- Initialize the LPTIM according to the specified parameters in the LPTIM_InitTypeDef and initialize the associated handle.
- DeInitialize the LPTIM peripheral.
- Initialize the LPTIM MSP.
- DeInitialize the LPTIM MSP.

This section contains the following APIs:

- ***HAL_LPTIM_Init***
- ***HAL_LPTIM_DeInit***
- ***HAL_LPTIM_MspInit***
- ***HAL_LPTIM_MspDeInit***

35.2.3 LPTIM Start Stop operation functions

This section provides functions allowing to:

- Start the PWM mode.
- Stop the PWM mode.
- Start the One pulse mode.
- Stop the One pulse mode.
- Start the Set once mode.

- Stop the Set once mode.
- Start the Encoder mode.
- Stop the Encoder mode.
- Start the Timeout mode.
- Stop the Timeout mode.
- Start the Counter mode.
- Stop the Counter mode.

This section contains the following APIs:

- *HAL_LPTIM_PWM_Start*
- *HAL_LPTIM_PWM_Stop*
- *HAL_LPTIM_PWM_Start_IT*
- *HAL_LPTIM_PWM_Stop_IT*
- *HAL_LPTIM_OnePulse_Start*
- *HAL_LPTIM_OnePulse_Stop*
- *HAL_LPTIM_OnePulse_Start_IT*
- *HAL_LPTIM_OnePulse_Stop_IT*
- *HAL_LPTIM_SetOnce_Start*
- *HAL_LPTIM_SetOnce_Stop*
- *HAL_LPTIM_SetOnce_Start_IT*
- *HAL_LPTIM_SetOnce_Stop_IT*
- *HAL_LPTIM_Encoder_Start*
- *HAL_LPTIM_Encoder_Stop*
- *HAL_LPTIM_Encoder_Start_IT*
- *HAL_LPTIM_Encoder_Stop_IT*
- *HAL_LPTIM_TimeOut_Start*
- *HAL_LPTIM_TimeOut_Stop*
- *HAL_LPTIM_TimeOut_Start_IT*
- *HAL_LPTIM_TimeOut_Stop_IT*
- *HAL_LPTIM_Counter_Start*
- *HAL_LPTIM_Counter_Stop*
- *HAL_LPTIM_Counter_Start_IT*
- *HAL_LPTIM_Counter_Stop_IT*

35.2.4 LPTIM Read operation functions

This section provides LPTIM Reading functions.

- Read the counter value.
- Read the period (Auto-reload) value.
- Read the pulse (Compare)value.

This section contains the following APIs:

- *HAL_LPTIM_ReadCounter*
- *HAL_LPTIM_ReadAutoReload*
- *HAL_LPTIM_ReadCompare*

35.2.5 Peripheral State functions

This subsection permits to get in run-time the status of the peripheral.

This section contains the following APIs:

- *HAL_LPTIM_GetState*

35.2.6 Detailed description of functions

HAL_LPTIM_Init

Function name

HAL_StatusTypeDef HAL_LPTIM_Init (LPTIM_HandleTypeDef * hlptim)

Function description

Initialize the LPTIM according to the specified parameters in the LPTIM_InitTypeDef and initialize the associated handle.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_DeInit

Function name

HAL_StatusTypeDef HAL_LPTIM_DeInit (LPTIM_HandleTypeDef * hlptim)

Function description

DeInitialize the LPTIM peripheral.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_MspInit

Function name

void HAL_LPTIM_MspInit (LPTIM_HandleTypeDef * hlptim)

Function description

Initialize the LPTIM MSP.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_MspDeInit

Function name

void HAL_LPTIM_MspDeInit (LPTIM_HandleTypeDef * hlptim)

Function description

DeInitialize LPTIM MSP.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_PWM_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_PWM_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM PWM generation.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_PWM_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_PWM_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM PWM generation.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_PWM_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_PWM_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM PWM generation in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF

Return values

- **HAL:** status

HAL_LPTIM_PWM_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_PWM_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM PWM generation in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_OnePulse_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_OnePulse_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM One pulse generation.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_OnePulse_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_OnePulse_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM One pulse generation.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_OnePulse_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_OnePulse_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM One pulse generation in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_OnePulse_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_OnePulse_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM One pulse generation in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_SetOnce_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_SetOnce_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM in Set once mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_SetOnce_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_SetOnce_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM Set once mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_SetOnce_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_SetOnce_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Pulse)

Function description

Start the LPTIM Set once mode in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Pulse:** Specifies the compare value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_SetOnce_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_SetOnce_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the LPTIM Set once mode in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_Encoder_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_Encoder_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period)

Function description

Start the Encoder interface.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_Encoder_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_Encoder_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Encoder interface.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_Encoder_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_Encoder_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period)

Function description

Start the Encoder interface in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_Encoder_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_Encoder_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Encoder interface in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_TimeOut_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_TimeOut_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Timeout)

Function description

Start the Timeout function.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Timeout:** Specifies the TimeOut value to reset the counter. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

Notes

- The first trigger event will start the timer, any successive trigger event will reset the counter and the timer restarts.

HAL_LPTIM_TimeOut_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_TimeOut_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Timeout function.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_TimeOut_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_TimeOut_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period, uint32_t Timeout)

Function description

Start the Timeout function in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.
- **Timeout:** Specifies the TimeOut value to reset the counter. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

Notes

- The first trigger event will start the timer, any successive trigger event will reset the counter and the timer restarts.

HAL_LPTIM_TimeOut_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_TimeOut_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Timeout function in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_Counter_Start

Function name

HAL_StatusTypeDef HAL_LPTIM_Counter_Start (LPTIM_HandleTypeDef * hlptim, uint32_t Period)

Function description

Start the Counter mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_Counter_Stop

Function name

HAL_StatusTypeDef HAL_LPTIM_Counter_Stop (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Counter mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_Counter_Start_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_Counter_Start_IT (LPTIM_HandleTypeDef * hlptim, uint32_t Period)

Function description

Start the Counter mode in interrupt mode.

Parameters

- **hlptim:** LPTIM handle
- **Period:** Specifies the Autoreload value. This parameter must be a value between 0x0000 and 0xFFFF.

Return values

- **HAL:** status

HAL_LPTIM_Counter_Stop_IT

Function name

HAL_StatusTypeDef HAL_LPTIM_Counter_Stop_IT (LPTIM_HandleTypeDef * hlptim)

Function description

Stop the Counter mode in interrupt mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** status

HAL_LPTIM_ReadCounter

Function name

uint32_t HAL_LPTIM_ReadCounter (LPTIM_HandleTypeDef * hlptim)

Function description

Return the current counter value.

Parameters

- **hlptim:** LPTIM handle

Return values

- **Counter:** value.

HAL_LPTIM_ReadAutoReload

Function name

uint32_t HAL_LPTIM_ReadAutoReload (LPTIM_HandleTypeDef * hlptim)

Function description

Return the current Autoreload (Period) value.

Parameters

- **hlptim:** LPTIM handle

Return values

- **Autoreload:** value.

HAL_LPTIM_ReadCompare

Function name

uint32_t HAL_LPTIM_ReadCompare (LPTIM_HandleTypeDef * hlptim)

Function description

Return the current Compare (Pulse) value.

Parameters

- **hlptim:** LPTIM handle

Return values

- **Compare:** value.

HAL_LPTIM_IRQHandler

Function name

void HAL_LPTIM_IRQHandler (LPTIM_HandleTypeDef * hlptim)

Function description

Handle LPTIM interrupt request.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_CompareMatchCallback

Function name

void HAL_LPTIM_CompareMatchCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Compare match callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_AutoReloadMatchCallback

Function name

void HAL_LPTIM_AutoReloadMatchCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Autoreload match callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_TriggerCallback

Function name

void HAL_LPTIM_TriggerCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Trigger detected callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_CompareWriteCallback

Function name

void HAL_LPTIM_CompareWriteCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Compare write callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_AutoReloadWriteCallback

Function name

void HAL_LPTIM_AutoReloadWriteCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Autoreload write callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_DirectionUpCallback

Function name

void HAL_LPTIM_DirectionUpCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Direction counter changed from Down to Up callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_DirectionDownCallback

Function name

void HAL_LPTIM_DirectionDownCallback (LPTIM_HandleTypeDef * hlptim)

Function description

Direction counter changed from Up to Down callback in non-blocking mode.

Parameters

- **hlptim:** LPTIM handle

Return values

- **None:**

HAL_LPTIM_GetState

Function name

HAL_LPTIM_StateTypeDef HAL_LPTIM_GetState (LPTIM_HandleTypeDef * hlptim)

Function description

Return the LPTIM handle state.

Parameters

- **hlptim:** LPTIM handle

Return values

- **HAL:** state

LPTIM_Disable

Function name

void LPTIM_Disable (LPTIM_HandleTypeDef * hlptim)

Function description

Disable LPTIM HW instance.

Parameters

- **hlptim:** pointer to a LPTIM_HandleTypeDef structure that contains the configuration information for LPTIM module.

Return values

- **None:**

Notes

- The following sequence is required to solve LPTIM disable HW limitation. Please check Errata Sheet ES0335 for more details under "MCU may remain stuck in LPTIM interrupt when entering Stop mode" section.

LPTIM Exported Macros

__HAL_LPTIM_RESET_HANDLE_STATE

Description:

- Reset LPTIM handle state.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_ENABLE

Description:

- Enable the LPTIM peripheral.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_DISABLE

Description:

- Disable the LPTIM peripheral.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

Notes:

- The following sequence is required to solve LPTIM disable HW limitation. Please check Errata Sheet ES0335 for more details under "MCU may remain stuck in LPTIM interrupt when entering Stop mode" section. Please call HAL_LPTIM_GetState() after a call to __HAL_LPTIM_DISABLE to check for TIMEOUT.

__HAL_LPTIM_START_CONTINUOUS

Description:

- Start the LPTIM peripheral in Continuous mode.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_START_SINGLE

Description:

- Start the LPTIM peripheral in single mode.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_RESET_COUNTER

Description:

- Reset the LPTIM Counter register in synchronous mode.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_RESET_COUNTER_AFTERREAD

Description:

- Reset after read of the LPTIM Counter register in asynchronous mode.

Parameters:

- __HANDLE__: LPTIM handle

Return value:

- None

__HAL_LPTIM_AUTORELOAD_SET

Description:

- Write the passed parameter in the Autoreload register.

Parameters:

- __HANDLE__: LPTIM handle
- __VALUE__: Autoreload value

Return value:

- None

Notes:

- The ARR register can only be modified when the LPTIM instance is enabled.

__HAL_LPTIM_COMPARE_SET

Description:

- Write the passed parameter in the Compare register.

Parameters:

- __HANDLE__: LPTIM handle
- __VALUE__: Compare value

Return value:

- None

Notes:

- The CMP register can only be modified when the LPTIM instance is enabled.

__HAL_LPTIM_GET_FLAG

Description:

- Check whether the specified LPTIM flag is set or not.

Parameters:

- __HANDLE__: LPTIM handle
- __FLAG__: LPTIM flag to check This parameter can be a value of:
  - LPTIM_FLAG_DOWN : Counter direction change up Flag.
  - LPTIM_FLAG_UP : Counter direction change down to up Flag.
  - LPTIM_FLAG_ARROK : Autoreload register update OK Flag.
  - LPTIM_FLAG_CMPOK : Compare register update OK Flag.
  - LPTIM_FLAG_EXTTRIG : External trigger edge event Flag.
  - LPTIM_FLAG_ARRM : Autoreload match Flag.
  - LPTIM_FLAG_CMPM : Compare match Flag.

Return value:

- The: state of the specified flag (SET or RESET).

__HAL_LPTIM_CLEAR_FLAG

Description:

- Clear the specified LPTIM flag.

Parameters:

- __HANDLE__: LPTIM handle.
- __FLAG__: LPTIM flag to clear. This parameter can be a value of:
  - LPTIM_FLAG_DOWN : Counter direction change up Flag.
  - LPTIM_FLAG_UP : Counter direction change down to up Flag.
  - LPTIM_FLAG_ARROK : Autoreload register update OK Flag.
  - LPTIM_FLAG_CMPOK : Compare register update OK Flag.
  - LPTIM_FLAG_EXTTRIG : External trigger edge event Flag.
  - LPTIM_FLAG_ARRM : Autoreload match Flag.
  - LPTIM_FLAG_CMPM : Compare match Flag.

Return value:

- None.

__HAL_LPTIM_ENABLE_IT

Description:

- Enable the specified LPTIM interrupt.

Parameters:

- __HANDLE__: LPTIM handle.
- __INTERRUPT__: LPTIM interrupt to set. This parameter can be a value of:
  - LPTIM_IT_DOWN : Counter direction change up Interrupt.
  - LPTIM_IT_UP : Counter direction change down to up Interrupt.
  - LPTIM_IT_ARROK : Autoreload register update OK Interrupt.
  - LPTIM_IT_CMPOK : Compare register update OK Interrupt.
  - LPTIM_IT_EXTTRIG : External trigger edge event Interrupt.
  - LPTIM_IT_ARRM : Autoreload match Interrupt.
  - LPTIM_IT_CMPM : Compare match Interrupt.

Return value:

- None.

Notes:

- The LPTIM interrupts can only be enabled when the LPTIM instance is disabled.

__HAL_LPTIM_DISABLE_IT

Description:

- Disable the specified LPTIM interrupt.

Parameters:

- __HANDLE__: LPTIM handle.
- __INTERRUPT__: LPTIM interrupt to set. This parameter can be a value of:
  - LPTIM_IT_DOWN : Counter direction change up Interrupt.
  - LPTIM_IT_UP : Counter direction change down to up Interrupt.
  - LPTIM_IT_ARROK : Autoreload register update OK Interrupt.
  - LPTIM_IT_CMPOK : Compare register update OK Interrupt.
  - LPTIM_IT_EXTTRIG : External trigger edge event Interrupt.
  - LPTIM_IT_ARRM : Autoreload match Interrupt.
  - LPTIM_IT_CMPM : Compare match Interrupt.

Return value:

- None.

Notes:

- The LPTIM interrupts can only be disabled when the LPTIM instance is disabled.

__HAL_LPTIM_GET_IT_SOURCE

Description:

- Check whether the specified LPTIM interrupt source is enabled or not.

Parameters:

- __HANDLE__: LPTIM handle.
- __INTERRUPT__: LPTIM interrupt to check. This parameter can be a value of:
  - LPTIM_IT_DOWN : Counter direction change up Interrupt.
  - LPTIM_IT_UP : Counter direction change down to up Interrupt.
  - LPTIM_IT_ARROK : Autoreload register update OK Interrupt.
  - LPTIM_IT_CMPOK : Compare register update OK Interrupt.
  - LPTIM_IT_EXTTRIG : External trigger edge event Interrupt.
  - LPTIM_IT_ARRM : Autoreload match Interrupt.
  - LPTIM_IT_CMPM : Compare match Interrupt.

Return value:

- Interrupt: status.

__HAL_LPTIM_WAKEUPTIMER_EXTI_ENABLE_IT

Description:

- Enable interrupt on the LPTIM Wake-up Timer associated Exti line.

Return value:

- None

__HAL_LPTIM_WAKEUPTIMER_EXTI_DISABLE_IT

Description:

- Disable interrupt on the LPTIM Wake-up Timer associated Exti line.

Return value:

- None

__HAL_LPTIM_WAKEUPTIMER_EXTI_ENABLE_EVENT

Description:

- Enable event on the LPTIM Wake-up Timer associated Exti line.

Return value:

- None.

__HAL_LPTIM_WAKEUPTIMER_EXTI_DISABLE_EVENT

Description:

- Disable event on the LPTIM Wake-up Timer associated Exti line.

Return value:

- None.

36 HAL NAND Generic Driver

36.1 NAND Firmware driver registers structures

36.1.1 NAND_IDTypeDef

NAND_IDTypeDef is defined in the stm32g4xx_hal_nand.h

Data Fields

- ***uint8_t Maker_Id***
- ***uint8_t Device_Id***
- ***uint8_t Third_Id***
- ***uint8_t Fourth_Id***

Field Documentation

- ***uint8_t NAND_IDTypeDef::Maker_Id***
- ***uint8_t NAND_IDTypeDef::Device_Id***
- ***uint8_t NAND_IDTypeDef::Third_Id***
- ***uint8_t NAND_IDTypeDef::Fourth_Id***

36.1.2 NAND_AddressTypeDef

NAND_AddressTypeDef is defined in the stm32g4xx_hal_nand.h

Data Fields

- ***uint16_t Page***
- ***uint16_t Plane***
- ***uint16_t Block***

Field Documentation

- ***uint16_t NAND_AddressTypeDef::Page***
  NAND memory Page address
- ***uint16_t NAND_AddressTypeDef::Plane***
  NAND memory Zone address
- ***uint16_t NAND_AddressTypeDef::Block***
  NAND memory Block address

36.1.3 NAND_DeviceConfigTypeDef

NAND_DeviceConfigTypeDef is defined in the stm32g4xx_hal_nand.h

Data Fields

- ***uint32_t PageSize***
- ***uint32_t SpareAreaSize***
- ***uint32_t BlockSize***
- ***uint32_t BlockNbr***
- ***uint32_t PlaneNbr***
- ***uint32_t PlaneSize***
- ***FunctionalState ExtraCommandEnable***

Field Documentation

- ***uint32_t NAND_DeviceConfigTypeDef::PageSize***
  NAND memory page (without spare area) size measured in bytes for 8 bits adressing or words for 16 bits addressing

- ***uint32_t NAND_DeviceConfigTypeDef::SpareAreaSize***
  NAND memory spare area size measured in bytes for 8 bits adressing or words for 16 bits addressing
- ***uint32_t NAND_DeviceConfigTypeDef::BlockSize***
  NAND memory block size measured in number of pages
- ***uint32_t NAND_DeviceConfigTypeDef::BlockNbr***
  NAND memory number of total blocks
- ***uint32_t NAND_DeviceConfigTypeDef::PlaneNbr***
  NAND memory number of planes
- ***uint32_t NAND_DeviceConfigTypeDef::PlaneSize***
  NAND memory zone size measured in number of blocks
- ***FunctionalState NAND_DeviceConfigTypeDef::ExtraCommandEnable***
  NAND extra command needed for Page reading mode. This parameter is mandatory for some NAND parts after the read command (NAND_CMD_AREA_TRUE1) and before DATA reading sequence. Example: Toshiba THTH58BYG3S0HBAI6. This parameter could be ENABLE or DISABLE Please check the Read Mode sequnece in the NAND device datasheet

36.1.4 NAND_HandleTypeDef

NAND_HandleTypeDef is defined in the stm32g4xx_hal_nand.h

Data Fields

- ***FMC_NAND_TypeDef * Instance***
- ***FMC_NAND_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_NAND_StateTypeDef State***
- ***NAND_DeviceConfigTypeDef Config***

Field Documentation

- ***FMC_NAND_TypeDef* NAND_HandleTypeDef::Instance***
  Register base address
- ***FMC_NAND_InitTypeDef NAND_HandleTypeDef::Init***
  NAND device control configuration parameters
- ***HAL_LockTypeDef NAND_HandleTypeDef::Lock***
  NAND locking object
- ***__IO HAL_NAND_StateTypeDef NAND_HandleTypeDef::State***
  NAND device access state
- ***NAND_DeviceConfigTypeDef NAND_HandleTypeDef::Config***
  NAND phusical characteristic information structure

36.2 NAND Firmware driver API description

The following section lists the various functions of the NAND library.

36.2.1 How to use this driver

This driver is a generic layered driver which contains a set of APIs used to control NAND flash memories. It uses the FMC layer functions to interface with NAND devices. This driver is used as follows:

- NAND flash memory configuration sequence using the function HAL_NAND_Init() with control and timing parameters for both common and attribute spaces.
- Read NAND flash memory maker and device IDs using the function HAL_NAND_Read_ID(). The read information is stored in the NAND_ID_TypeDef structure declared by the function caller.

- Access NAND flash memory by read/write operations using the functions HAL_NAND_Read_Page_8b()/ HAL_NAND_Read_SpareArea_8b(), HAL_NAND_Write_Page_8b()/HAL_NAND_Write_SpareArea_8b(), HAL_NAND_Read_Page_16b()/HAL_NAND_Read_SpareArea_16b(), HAL_NAND_Write_Page_16b()/ HAL_NAND_Write_SpareArea_16b() to read/write page(s)/spare area(s). These functions use specific device information (Block, page size..) predefined by the user in the NAND_DeviceConfigTypeDef structure. The read/write address information is contained by the Nand_Address_Typedef structure passed as parameter.
- Perform NAND flash Reset chip operation using the function HAL_NAND_Reset().
- Perform NAND flash erase block operation using the function HAL_NAND_Erase_Block(). The erase block address information is contained in the Nand_Address_Typedef structure passed as parameter.
- Read the NAND flash status operation using the function HAL_NAND_Read_Status().
- You can also control the NAND device by calling the control APIs HAL_NAND_ECC_Enable()/ HAL_NAND_ECC_Disable() to respectively enable/disable the ECC code correction feature or the function HAL_NAND_GetECC() to get the ECC correction code.
- You can monitor the NAND device HAL state by calling the function HAL_NAND_GetState()

Note: This driver is a set of generic APIs which handle standard NAND flash operations. If a NAND flash device contains different operations and/or implementations, it should be implemented separately.

Callback registration

The compilation define USE_HAL_NAND_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_NAND_RegisterCallback() to register a user callback, it allows to register following callbacks:

- MspInitCallback : NAND MspInit.
- MspDeInitCallback : NAND MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function. Use function @ref HAL_NAND_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
- MspInitCallback : NAND MspInit.
- MspDeInitCallback : NAND MspDeInit. This function) takes as parameters the HAL peripheral handle and the Callback ID. By default, after the @ref HAL_NAND_Init and if the state is HAL_NAND_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_NAND_Init and @ref HAL_NAND_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_NAND_Init and @ref HAL_NAND_DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand) Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_NAND_RegisterCallback before calling @ref HAL_NAND_DeInit or @ref HAL_NAND_Init function. When The compilation define USE_HAL_NAND_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

36.2.2 NAND Initialization and de-initialization functions

This section provides functions allowing to initialize/de-initialize the NAND memory

This section contains the following APIs:

- ***HAL_NAND_Init***
- ***HAL_NAND_DeInit***
- ***HAL_NAND_MspInit***
- ***HAL_NAND_MspDeInit***
- ***HAL_NAND_IRQHandler***
- ***HAL_NAND_ITCallback***
- ***HAL_NAND_ConfigDevice***
- ***HAL_NAND_Read_ID***

36.2.3 NAND Input and Output functions

This section provides functions allowing to use and control the NAND memory

This section contains the following APIs:

- *HAL_NAND_Read_ID*
- *HAL_NAND_Reset*
- *HAL_NAND_ConfigDevice*
- *HAL_NAND_Read_Page_8b*
- *HAL_NAND_Read_Page_16b*
- *HAL_NAND_Write_Page_8b*
- *HAL_NAND_Write_Page_16b*
- *HAL_NAND_Read_SpareArea_8b*
- *HAL_NAND_Read_SpareArea_16b*
- *HAL_NAND_Write_SpareArea_8b*
- *HAL_NAND_Write_SpareArea_16b*
- *HAL_NAND_Erase_Block*
- *HAL_NAND_Address_Inc*

36.2.4 NAND Control functions

This subsection provides a set of functions allowing to control dynamically the NAND interface.

This section contains the following APIs:

- *HAL_NAND_ECC_Enable*
- *HAL_NAND_ECC_Disable*
- *HAL_NAND_GetECC*

36.2.5 NAND State functions

This subsection permits to get in run-time the status of the NAND controller and the data flow.

This section contains the following APIs:

- *HAL_NAND_GetState*
- *HAL_NAND_Read_Status*

36.2.6 Detailed description of functions

HAL_NAND_Init

Function name

HAL_StatusTypeDef HAL_NAND_Init (NAND_HandleTypeDef * hnand, FMC_NAND_PCC_TimingTypeDef * ComSpace_Timing, FMC_NAND_PCC_TimingTypeDef * AttSpace_Timing)

Function description

Perform NAND memory Initialization sequence.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **ComSpace_Timing:** pointer to Common space timing structure
- **AttSpace_Timing:** pointer to Attribute space timing structure

Return values

- **HAL:** status

HAL_NAND_DeInit

Function name

HAL_StatusTypeDef HAL_NAND_DeInit (NAND_HandleTypeDef * hnand)

Function description

Perform NAND memory De-Initialization sequence.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** status

HAL_NAND_ConfigDevice

Function name

HAL_StatusTypeDef HAL_NAND_ConfigDevice (NAND_HandleTypeDef * hnand, NAND_DeviceConfigTypeDef * pDeviceConfig)

Function description

Configure the device: Enter the physical parameters of the device.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pDeviceConfig:** pointer to NAND_DeviceConfigTypeDef structure

Return values

- **HAL:** status

HAL_NAND_Read_ID

Function name

HAL_StatusTypeDef HAL_NAND_Read_ID (NAND_HandleTypeDef * hnand, NAND_IDTypeDef * pNAND_ID)

Function description

Read the NAND memory electronic signature.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pNAND_ID:** NAND ID structure

Return values

- **HAL:** status

HAL_NAND_MspInit

Function name

void HAL_NAND_MspInit (NAND_HandleTypeDef * hnand)

Function description

NAND MSP Init.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **None:**

HAL_NAND_MspDeInit

Function name

void HAL_NAND_MspDeInit (NAND_HandleTypeDef * hnand)

Function description

NAND MSP DeInit.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **None:**

HAL_NAND_IRQHandler

Function name

void HAL_NAND_IRQHandler (NAND_HandleTypeDef * hnand)

Function description

This function handles NAND device interrupt request.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** status

HAL_NAND_ITCallback

Function name

void HAL_NAND_ITCallback (NAND_HandleTypeDef * hnand)

Function description

NAND interrupt feature callback.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **None:**

HAL_NAND_Reset

Function name

HAL_StatusTypeDef HAL_NAND_Reset (NAND_HandleTypeDef * hnand)

Function description

NAND memory reset.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** status

HAL_NAND_Read_Page_8b

Function name

HAL_StatusTypeDef HAL_NAND_Read_Page_8b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint8_t * pBuffer, uint32_t NumPageToRead)

Function description

Read Page(s) from NAND memory block (8-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to destination read buffer
- **NumPageToRead:** number of pages to read from block

Return values

- **HAL:** status

HAL_NAND_Write_Page_8b

Function name

HAL_StatusTypeDef HAL_NAND_Write_Page_8b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint8_t * pBuffer, uint32_t NumPageToWrite)

Function description

Write Page(s) to NAND memory block (8-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write
- **NumPageToWrite:** number of pages to write to block

Return values

- **HAL:** status

HAL_NAND_Read_SpareArea_8b

Function name

HAL_StatusTypeDef HAL_NAND_Read_SpareArea_8b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint8_t * pBuffer, uint32_t NumSpareAreaToRead)

Function description

Read Spare area(s) from NAND memory (8-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write
- **NumSpareAreaToRead:** Number of spare area to read

Return values

- **HAL:** status

HAL_NAND_Write_SpareArea_8b

Function name

HAL_StatusTypeDef HAL_NAND_Write_SpareArea_8b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint8_t * pBuffer, uint32_t NumSpareAreaTowrite)

Function description

Write Spare area(s) to NAND memory (8-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write
- **NumSpareAreaTowrite:** number of spare areas to write to block

Return values

- **HAL:** status

HAL_NAND_Read_Page_16b

Function name

HAL_StatusTypeDef HAL_NAND_Read_Page_16b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint16_t * pBuffer, uint32_t NumPageToRead)

Function description

Read Page(s) from NAND memory block (16-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to destination read buffer. pBuffer should be 16bits aligned
- **NumPageToRead:** number of pages to read from block

Return values

- **HAL:** status

HAL_NAND_Write_Page_16b

Function name

HAL_StatusTypeDef HAL_NAND_Write_Page_16b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint16_t * pBuffer, uint32_t NumPageToWrite)

Function description

Write Page(s) to NAND memory block (16-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write. pBuffer should be 16bits aligned
- **NumPageToWrite:** number of pages to write to block

Return values

- **HAL:** status

HAL_NAND_Read_SpareArea_16b

Function name

HAL_StatusTypeDef HAL_NAND_Read_SpareArea_16b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint16_t * pBuffer, uint32_t NumSpareAreaToRead)

Function description

Read Spare area(s) from NAND memory (16-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write. pBuffer should be 16bits aligned.
- **NumSpareAreaToRead:** Number of spare area to read

Return values

- **HAL:** status

HAL_NAND_Write_SpareArea_16b

Function name

HAL_StatusTypeDef HAL_NAND_Write_SpareArea_16b (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress, uint16_t * pBuffer, uint32_t NumSpareAreaTowrite)

Function description

Write Spare area(s) to NAND memory (16-bits addressing)

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure
- **pBuffer:** pointer to source buffer to write. pBuffer should be 16bits aligned.
- **NumSpareAreaTowrite:** number of spare areas to write to block

Return values

- **HAL:** status

HAL_NAND_Erase_Block

Function name

HAL_StatusTypeDef HAL_NAND_Erase_Block (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress)

Function description

NAND memory Block erase.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure

Return values

- **HAL:** status

HAL_NAND_Address_Inc

Function name

uint32_t HAL_NAND_Address_Inc (NAND_HandleTypeDef * hnand, NAND_AddressTypeDef * pAddress)

Function description

Increment the NAND memory address.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **pAddress:** pointer to NAND address structure

Return values

- **The:** new status of the increment address operation. It can be:
  - NAND_VALID_ADDRESS: When the new address is valid address
  - NAND_INVALID_ADDRESS: When the new address is invalid address

HAL_NAND_ECC_Enable

Function name

HAL_StatusTypeDef HAL_NAND_ECC_Enable (NAND_HandleTypeDef * hnand)

Function description

Enables dynamically NAND ECC feature.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** status

HAL_NAND_ECC_Disable

Function name

HAL_StatusTypeDef HAL_NAND_ECC_Disable (NAND_HandleTypeDef * hnand)

Function description

Disables dynamically FMC_NAND ECC feature.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** status

HAL_NAND_GetECC

Function name

HAL_StatusTypeDef HAL_NAND_GetECC (NAND_HandleTypeDef * hnand, uint32_t * ECCval, uint32_t Timeout)

Function description

Disables dynamically NAND ECC feature.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.
- **ECCval:** pointer to ECC value
- **Timeout:** maximum timeout to wait

Return values

- **HAL:** status

HAL_NAND_GetState

Function name

HAL_NAND_StateTypeDef HAL_NAND_GetState (NAND_HandleTypeDef * hnand)

Function description

return the NAND state

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **HAL:** state

HAL_NAND_Read_Status

Function name

uint32_t HAL_NAND_Read_Status (NAND_HandleTypeDef * hnand)

Function description

NAND memory read status.

Parameters

- **hnand:** pointer to a NAND_HandleTypeDef structure that contains the configuration information for NAND module.

Return values

- **NAND:** status

36.3 NAND Firmware driver defines

The following section lists the various define and macros of the module.

36.3.1 NAND

NAND

NAND Exported Macros

__HAL_NAND_RESET_HANDLE_STATE

Description:

- Reset NAND handle state.

Parameters:

- __HANDLE__: specifies the NAND handle.

Return value:

- None

37 HAL NOR Generic Driver

37.1 NOR Firmware driver registers structures

37.1.1 NOR_IDTypeDef

NOR_IDTypeDef is defined in the stm32g4xx_hal_nor.h

Data Fields

- ***uint16_t Manufacturer_Code***
- ***uint16_t Device_Code1***
- ***uint16_t Device_Code2***
- ***uint16_t Device_Code3***

Field Documentation

- ***uint16_t NOR_IDTypeDef::Manufacturer_Code***
  Defines the device's manufacturer code used to identify the memory
- ***uint16_t NOR_IDTypeDef::Device_Code1***
- ***uint16_t NOR_IDTypeDef::Device_Code2***
- ***uint16_t NOR_IDTypeDef::Device_Code3***
  Defines the device's codes used to identify the memory. These codes can be accessed by performing read operations with specific control signals and addresses set.They can also be accessed by issuing an Auto Select command

37.1.2 NOR_CFITypeDef

NOR_CFITypeDef is defined in the stm32g4xx_hal_nor.h

Data Fields

- ***uint16_t CFI_1***
- ***uint16_t CFI_2***
- ***uint16_t CFI_3***
- ***uint16_t CFI_4***

Field Documentation

- ***uint16_t NOR_CFITypeDef::CFI_1***
  < Defines the information stored in the memory's Common flash interface which contains a description of various electrical and timing parameters, density information and functions supported by the memory
- ***uint16_t NOR_CFITypeDef::CFI_2***
- ***uint16_t NOR_CFITypeDef::CFI_3***
- ***uint16_t NOR_CFITypeDef::CFI_4***

37.1.3 NOR_HandleTypeDef

NOR_HandleTypeDef is defined in the stm32g4xx_hal_nor.h

Data Fields

- ***FMC_NORSRAM_TypeDef * Instance***
- ***FMC_NORSRAM_EXTENDED_TypeDef * Extended***
- ***FMC_NORSRAM_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_NOR_StateTypeDef State***

Field Documentation

- ***FMC_NORSRAM_TypeDef* NOR_HandleTypeDef::Instance***
  Register base address

- ***FMC_NORSRAM_EXTENDED_TypeDef* NOR_HandleTypeDef::Extended***
  Extended mode register base address
- ***FMC_NORSRAM_InitTypeDef NOR_HandleTypeDef::Init***
  NOR device control configuration parameters
- ***HAL_LockTypeDef NOR_HandleTypeDef::Lock***
  NOR locking object
- ***__IO HAL_NOR_StateTypeDef NOR_HandleTypeDef::State***
  NOR device access state

37.2 NOR Firmware driver API description

The following section lists the various functions of the NOR library.

37.2.1 How to use this driver

This driver is a generic layered driver which contains a set of APIs used to control NOR flash memories. It uses the FMC layer functions to interface with NOR devices. This driver is used as follows:

- NOR flash memory configuration sequence using the function HAL_NOR_Init() with control and timing parameters for both normal and extended mode.
- Read NOR flash memory manufacturer code and device IDs using the function HAL_NOR_Read_ID(). The read information is stored in the NOR_ID_TypeDef structure declared by the function caller.
- Access NOR flash memory by read/write data unit operations using the functions HAL_NOR_Read(), HAL_NOR_Program().
- Perform NOR flash erase block/chip operations using the functions HAL_NOR_Erase_Block() and HAL_NOR_Erase_Chip().
- Read the NOR flash CFI (common flash interface) IDs using the function HAL_NOR_Read_CFI(). The read information is stored in the NOR_CFI_TypeDef structure declared by the function caller.
- You can also control the NOR device by calling the control APIs HAL_NOR_WriteOperation_Enable()/ HAL_NOR_WriteOperation_Disable() to respectively enable/disable the NOR write operation
- You can monitor the NOR device HAL state by calling the function HAL_NOR_GetState()

Note: This driver is a set of generic APIs which handle standard NOR flash operations. If a NOR flash device contains different operations and/or implementations, it should be implemented separately.

NOR HAL driver macros list

Below the list of most used macros in NOR HAL driver.

- NOR_WRITE : NOR memory write data to specified address

Callback registration

The compilation define USE_HAL_NOR_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_NOR_RegisterCallback() to register a user callback, it allows to register following callbacks:

- MspInitCallback : NOR MspInit.
- MspDeInitCallback : NOR MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function. Use function @ref HAL_NOR_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
- MspInitCallback : NOR MspInit.

- MspDeInitCallback : NOR MspDeInit. This function) takes as parameters the HAL peripheral handle and the Callback ID. By default, after the @ref HAL_NOR_Init and if the state is HAL_NOR_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_NOR_Init and @ref HAL_NOR_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_NOR_Init and @ref HAL_NOR_DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand) Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_NOR_RegisterCallback before calling @ref HAL_NOR_DeInit or @ref HAL_NOR_Init function. When The compilation define USE_HAL_NOR_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

37.2.2 NOR Initialization and de_initialization functions

This section provides functions allowing to initialize/de-initialize the NOR memory

This section contains the following APIs:

- ***HAL_NOR_Init***
- ***HAL_NOR_DeInit***
- ***HAL_NOR_MspInit***
- ***HAL_NOR_MspDeInit***
- ***HAL_NOR_MspWait***

37.2.3 NOR Input and Output functions

This section provides functions allowing to use and control the NOR memory

This section contains the following APIs:

- ***HAL_NOR_Read_ID***
- ***HAL_NOR_ReturnToReadMode***
- ***HAL_NOR_Read***
- ***HAL_NOR_Program***
- ***HAL_NOR_ReadBuffer***
- ***HAL_NOR_ProgramBuffer***
- ***HAL_NOR_Erase_Block***
- ***HAL_NOR_Erase_Chip***
- ***HAL_NOR_Read_CFI***

37.2.4 NOR Control functions

This subsection provides a set of functions allowing to control dynamically the NOR interface.

This section contains the following APIs:

- ***HAL_NOR_WriteOperation_Enable***
- ***HAL_NOR_WriteOperation_Disable***

37.2.5 NOR State functions

This subsection permits to get in run-time the status of the NOR controller and the data flow.

This section contains the following APIs:

- ***HAL_NOR_GetState***
- ***HAL_NOR_GetStatus***

37.2.6 Detailed description of functions

HAL_NOR_Init

Function name

HAL_StatusTypeDef HAL_NOR_Init (NOR_HandleTypeDef * hnor, FMC_NORSRAM_TimingTypeDef * Timing, FMC_NORSRAM_TimingTypeDef * ExtTiming)

Function description

Perform the NOR memory Initialization sequence.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **Timing:** pointer to NOR control timing structure
- **ExtTiming:** pointer to NOR extended mode timing structure

Return values

- **HAL:** status

HAL_NOR_DeInit

Function name

HAL_StatusTypeDef HAL_NOR_DeInit (NOR_HandleTypeDef * hnor)

Function description

Perform NOR memory De-Initialization sequence.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **HAL:** status

HAL_NOR_MspInit

Function name

void HAL_NOR_MspInit (NOR_HandleTypeDef * hnor)

Function description

NOR MSP Init.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **None:**

HAL_NOR_MspDeInit

Function name

void HAL_NOR_MspDeInit (NOR_HandleTypeDef * hnor)

Function description

NOR MSP DeInit.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **None:**

HAL_NOR_MspWait

Function name

void HAL_NOR_MspWait (NOR_HandleTypeDef * hnor, uint32_t Timeout)

Function description

NOR MSP Wait for Ready/Busy signal.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **Timeout:** Maximum timeout value

Return values

- **None:**

HAL_NOR_Read_ID

Function name

HAL_StatusTypeDef HAL_NOR_Read_ID (NOR_HandleTypeDef * hnor, NOR_IDTypeDef * pNOR_ID)

Function description

Read NOR flash IDs.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **pNOR_ID:** pointer to NOR ID structure

Return values

- **HAL:** status

HAL_NOR_ReturnToReadMode

Function name

HAL_StatusTypeDef HAL_NOR_ReturnToReadMode (NOR_HandleTypeDef * hnor)

Function description

Returns the NOR memory to Read mode.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **HAL:** status

HAL_NOR_Read

Function name

HAL_StatusTypeDef HAL_NOR_Read (NOR_HandleTypeDef * hnor, uint32_t * pAddress, uint16_t * pData)

Function description

Read data from NOR memory.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **pAddress:** pointer to Device address
- **pData:** pointer to read data

Return values

- **HAL:** status

HAL_NOR_Program

Function name

HAL_StatusTypeDef HAL_NOR_Program (NOR_HandleTypeDef * hnor, uint32_t * pAddress, uint16_t * pData)

Function description

Program data to NOR memory.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **pAddress:** Device address
- **pData:** pointer to the data to write

Return values

- **HAL:** status

HAL_NOR_ReadBuffer

Function name

HAL_StatusTypeDef HAL_NOR_ReadBuffer (NOR_HandleTypeDef * hnor, uint32_t uwAddress, uint16_t * pData, uint32_t uwBufferSize)

Function description

Reads a half-word buffer from the NOR memory.

Parameters

- **hnor:** pointer to the NOR handle
- **uwAddress:** NOR memory internal address to read from.
- **pData:** pointer to the buffer that receives the data read from the NOR memory.
- **uwBufferSize:** number of Half word to read.

Return values

- **HAL:** status

HAL_NOR_ProgramBuffer

Function name

HAL_StatusTypeDef HAL_NOR_ProgramBuffer (NOR_HandleTypeDef * hnor, uint32_t uwAddress, uint16_t * pData, uint32_t uwBufferSize)

Function description

Writes a half-word buffer to the NOR memory.

Parameters

- **hnor:** pointer to the NOR handle
- **uwAddress:** NOR memory internal start write address
- **pData:** pointer to source data buffer.
- **uwBufferSize:** Size of the buffer to write

Return values

- **HAL:** status

HAL_NOR_Erase_Block

Function name

HAL_StatusTypeDef HAL_NOR_Erase_Block (NOR_HandleTypeDef * hnor, uint32_t BlockAddress, uint32_t Address)

Function description

Erase the specified block of the NOR memory.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **BlockAddress:** Block to erase address
- **Address:** Device address

Return values

- **HAL:** status

HAL_NOR_Erase_Chip

Function name

HAL_StatusTypeDef HAL_NOR_Erase_Chip (NOR_HandleTypeDef * hnor, uint32_t Address)

Function description

Erase the entire NOR chip.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **Address:** Device address

Return values

- **HAL:** status

HAL_NOR_Read_CFI

Function name

HAL_StatusTypeDef HAL_NOR_Read_CFI (NOR_HandleTypeDef * hnor, NOR_CFITypeDef * pNOR_CFI)

Function description

Read NOR flash CFI IDs.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **pNOR_CFI:** pointer to NOR CFI IDs structure

Return values

- **HAL:** status

HAL_NOR_WriteOperation_Enable

Function name

HAL_StatusTypeDef HAL_NOR_WriteOperation_Enable (NOR_HandleTypeDef * hnor)

Function description

Enables dynamically NOR write operation.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **HAL:** status

HAL_NOR_WriteOperation_Disable

Function name

HAL_StatusTypeDef HAL_NOR_WriteOperation_Disable (NOR_HandleTypeDef * hnor)

Function description

Disables dynamically NOR write operation.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **HAL:** status

HAL_NOR_GetState

Function name

HAL_NOR_StateTypeDef HAL_NOR_GetState (NOR_HandleTypeDef * hnor)

Function description

return the NOR controller state

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.

Return values

- **NOR:** controller state

HAL_NOR_GetStatus

Function name

HAL_NOR_StatusTypeDef HAL_NOR_GetStatus (NOR_HandleTypeDef * hnor, uint32_t Address, uint32_t Timeout)

Function description

Returns the NOR operation status.

Parameters

- **hnor:** pointer to a NOR_HandleTypeDef structure that contains the configuration information for NOR module.
- **Address:** Device address
- **Timeout:** NOR programming Timeout

Return values

- **NOR_Status:** The returned value can be: HAL_NOR_STATUS_SUCCESS, HAL_NOR_STATUS_ERROR or HAL_NOR_STATUS_TIMEOUT

37.3 NOR Firmware driver defines

The following section lists the various define and macros of the module.

37.3.1 NOR

NOR

NOR Exported Macros

__HAL_NOR_RESET_HANDLE_STATE

Description:

- Reset NOR handle state.

Parameters:

- __HANDLE__: specifies the NOR handle.

Return value:

- None

38 HAL OPAMP Generic Driver

38.1 OPAMP Firmware driver registers structures

38.1.1 OPAMP_InitTypeDef

OPAMP_InitTypeDef is defined in the stm32g4xx_hal_opamp.h

Data Fields

- ***uint32_t PowerMode***
- ***uint32_t Mode***
- ***uint32_t InvertingInput***
- ***uint32_t NonInvertingInput***
- ***FunctionalState InternalOutput***
- ***uint32_t TimerControlledMuxmode***
- ***uint32_t InvertingInputSecondary***
- ***uint32_t NonInvertingInputSecondary***
- ***uint32_t PgaConnect***
- ***uint32_t PgaGain***
- ***uint32_t UserTrimming***
- ***uint32_t TrimmingValueP***
- ***uint32_t TrimmingValueN***

Field Documentation

- ***uint32_t OPAMP_InitTypeDef::PowerMode***

  Specifies the power mode Normal or High Speed. This parameter must be a value of ***OPAMP_PowerMode***
- ***uint32_t OPAMP_InitTypeDef::Mode***

  Specifies the OPAMP mode This parameter must be a value of ***OPAMP_Mode*** mode is either Standalone, Follower or PGA
- ***uint32_t OPAMP_InitTypeDef::InvertingInput***

  Specifies the inverting input in Standalone & Pga modes
  - In Standalone mode: i.e when mode is OPAMP_STANDALONE_MODE This parameter must be a value of ***OPAMP_InvertingInput*** InvertingInput is either VINM0 or VINM1
  - In PGA mode: i.e when mode is OPAMP_PGA_MODE & in Follower mode i.e when mode is OPAMP_FOLLOWER_MODE This parameter is Not Applicable
- ***uint32_t OPAMP_InitTypeDef::NonInvertingInput***

  Specifies the non inverting input of the opamp: This parameter must be a value of ***OPAMP_NonInvertingInput*** NonInvertingInput is either VINP0, VINP1, VINP2 or VINP3
- ***FunctionalState OPAMP_InitTypeDef::InternalOutput***

  Specifies the configuration of the internal output from OPAMP to ADC. This parameter can be ENABLE or DISABLE Note: When this output is enabled, regular output to I/O is disabled
- ***uint32_t OPAMP_InitTypeDef::TimerControlledMuxmode***

  Specifies if the Timer controlled Mux mode is enabled or disabled This parameter must be a single value of ***OPAMP_TimerControlledMuxmode*** or a combination of them to build a more complex switch scheme by using different timers

- ***uint32_t OPAMP_InitTypeDef::InvertingInputSecondary***

  Specifies the inverting input (secondary) of the opamp when TimerControlledMuxmode is enabled i.e. when TimerControlledMuxmode is OPAMP_TIMERCONTROLLEDMUXMODE_ENABLE
  - In Standalone mode: i.e when mode is OPAMP_STANDALONE_MODE This parameter must be a value of ***OPAMP_InvertingInputSecondary*** InvertingInputSecondary is either VINM0 or VINM1
  - In PGA mode: i.e when mode is OPAMP_PGA_MODE & in Follower mode i.e when mode is OPAMP_FOLLOWER_MODE This parameter must be a value of ***OPAMP_InvertingInputSecondary*** and is used to choose secondary mode (PGA or follower)
- ***uint32_t OPAMP_InitTypeDef::NonInvertingInputSecondary***

  Specifies the non inverting input (secondary) of the opamp when TimerControlledMuxmode is enabled i.e. when TimerControlledMuxmode is OPAMP_TIMERCONTROLLEDMUXMODE_ENABLE This parameter must be a value of ***OPAMP_NonInvertingInputSecondary*** NonInvertingInput is either VINP0, VINP1, VINP2 or VINP3
- ***uint32_t OPAMP_InitTypeDef::PgaConnect***

  Specifies the inverting pin in PGA mode i.e. when mode is OPAMP_PGA_MODE This parameter must be a value of ***OPAMP_PgaConnect*** Either: not connected, connected to VINM0 In this last case, VINM0 can then be used to input signal (negative gain case with or without bias on VINPx) or to input bias (positive gain case with bias)
- ***uint32_t OPAMP_InitTypeDef::PgaGain***

  Specifies the gain in PGA mode i.e. when mode is OPAMP_PGA_MODE. This parameter must be a value of ***OPAMP_PgaGain*** (2, 4, 8, 16, 32 or 64) for positive gain & (-1, -3 ,-7, -15, -31 or -63) for negative gain
- ***uint32_t OPAMP_InitTypeDef::UserTrimming***

  Specifies the trimming mode This parameter must be a value of ***OPAMP_UserTrimming*** UserTrimming is either factory or user trimming
- ***uint32_t OPAMP_InitTypeDef::TrimmingValueP***

  Specifies the offset trimming value (PMOS) i.e. when UserTrimming is OPAMP_TRIMMING_USER. This parameter must be a number between Min_Data = 1 and Max_Data = 31
- ***uint32_t OPAMP_InitTypeDef::TrimmingValueN***

  Specifies the offset trimming value (NMOS) i.e. when UserTrimming is OPAMP_TRIMMING_USER. This parameter must be a number between Min_Data = 1 and Max_Data = 31

38.1.2 OPAMP_HandleTypeDef

OPAMP_HandleTypeDef is defined in the stm32g4xx_hal_opamp.h

Data Fields

- ***OPAMP_TypeDef * Instance***
- ***OPAMP_InitTypeDef Init***
- ***HAL_StatusTypeDef Status***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_OPAMP_StateTypeDef State***

Field Documentation

- ***OPAMP_TypeDef* OPAMP_HandleTypeDef::Instance***

  OPAMP instance's registers base address
- ***OPAMP_InitTypeDef OPAMP_HandleTypeDef::Init***

  OPAMP required parameters
- ***HAL_StatusTypeDef OPAMP_HandleTypeDef::Status***

  OPAMP peripheral status
- ***HAL_LockTypeDef OPAMP_HandleTypeDef::Lock***

  Locking object
- ***__IO HAL_OPAMP_StateTypeDef OPAMP_HandleTypeDef::State***

  OPAMP communication state

38.2 OPAMP Firmware driver API description

The following section lists the various functions of the OPAMP library.

38.2.1 OPAMP Peripheral Features

The device integrates up to 6 operational amplifiers OPAMP1, OPAMP2, OPAMP3, OPAMP4, OPAMP5 and OPAMP6:

1. The OPAMP(s) provides several exclusive running modes.
   - Standalone mode
   - Programmable Gain Amplifier (PGA) mode (Resistor feedback output)
   - Follower mode
2. The OPAMP(s) provide(s) calibration capabilities.
   - Calibration aims at correcting some offset for running mode.
   - The OPAMP uses either factory calibration settings OR user defined calibration (trimming) settings (i.e. trimming mode).
   - The user defined settings can be figured out using self calibration handled by HAL_OPAMP_SelfCalibrate, HAL_OPAMPEx_SelfCalibrateAll
   - HAL_OPAMP_SelfCalibrate:
   - Runs automatically the calibration in 2 steps. (90% of VDDA for NMOS transistors, 10% of VDDA for PMOS transistors). (As OPAMP is Rail-to-rail input/output, these 2 steps calibration is appropriate and enough in most cases).
   - Enables the user trimming mode
   - Updates the init structure with trimming values with fresh calibration results. The user may store the calibration results for larger (ex monitoring the trimming as a function of temperature for instance)
   - for STM32G4 devices having 6 OPAMPs HAL_OPAMPEx_SelfCalibrateAll runs calibration of 6 OPAMPs in parallel.
3. For any running mode, an additional Timer-controlled Mux (multiplexer) mode can be set on top.
   - Timer-controlled Mux mode allows Automatic switching of inputs configuration (inverting and non inverting).
   - Hence on top of defaults (primary) inverting and non-inverting inputs, the user shall select secondary inverting and non inverting inputs.
   - TIM1 OC6, TIM8 OC6 and TIM20 OC6 provides the alternate switching tempo between defaults (primary) and secondary inputs.
   - These 3 timers (TIM1, TIM8 and TIM20) can be combined to design a more complex switching scheme. So that any of the selected channel can initiate the configuration switch.
4. Running mode: Standalone mode
   - Gain is set externally (gain depends on external loads).
   - Follower mode also possible externally by connecting the inverting input to the output.
5. Running mode: Follower mode
   - Inverting Input is not connected.
6. Running mode: Programmable Gain Amplifier (PGA) mode (Resistor feedback output)
   - The OPAMP(s) output(s) can be internally connected to resistor feedback output.
   - The OPAMP inverting input can be "not" connected, signal to amplify is connected to non inverting input and gain is positive (2,4,8,16,32 or 64)
   - The OPAMP inverting input can be connected to VINM0: If signal is applied to non inverting input, gain is positive (2,4,8,16,32 or 64). If signal is applied to inverting input, gain is negative (-1,-3,-7,-15-,31 or -63). In both cases, the other input can be used as bias.

38.2.2 How to use this driver

High speed / normal power mode

To run in high speed mode:

1. Configure the OPAMP using HAL_OPAMP_Init() function:
   – Select OPAMP_POWERMODE_HIGHSPEED
   – Otherwise select OPAMP_POWERMODE_NORMAL

Calibration

To run the OPAMP calibration self calibration:

1. Start calibration using HAL_OPAMP_SelfCalibrate. Store the calibration results.

Running mode

To use the OPAMP, perform the following steps:

1. Fill in the HAL_OPAMP_MspInit() to
   – Configure the OPAMP input AND output in analog mode using HAL_GPIO_Init() to map the OPAMP output to the GPIO pin.
2. Registrate Callbacks
   – The compilation define USE_HAL_OPAMP_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.
   – Use Functions @ref HAL_OPAMP_RegisterCallback() to register a user callback, it allows to register following callbacks:
     ◦ MspInitCallback : OPAMP MspInit.
     ◦ MspDeInitCallback : OPAMP MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.
   – Use function @ref HAL_OPAMP_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
     ◦ MspInitCallback : OPAMP MspInit.
     ◦ MspDeInitCallback : OPAMP MspDeInit.
     ◦ All Callbacks
3. Configure the OPAMP using HAL_OPAMP_Init() function:
   – Select the mode
   – Select the inverting input
   – Select the non-inverting input
   – Select if the internal ouput should be enabled/disabled (if enabled, regular I/O output is disabled)
   – Select if the Timer controlled Mux is disabled or enabled and controlled by specified timer(s)
   – If the Timer controlled Mux mode is enabled, select the secondary inverting input
   – If the Timer controlled Mux mode is enabled, Select the secondary non-inverting input
   – If PGA mode is enabled, Select if inverting input is connected.
   – If PGA mode is enabled, Select PGA gain to be used.
   – Select either factory or user defined trimming mode.
   – If the user defined trimming mode is enabled, select PMOS & NMOS trimming values (typ. settings returned by HAL_OPAMP_SelfCalibrate function).
4. Enable the OPAMP using HAL_OPAMP_Start() function.
5. Disable the OPAMP using HAL_OPAMP_Stop() function.
6. Lock the OPAMP in running mode using HAL_OPAMP_Lock() & HAL_OPAMP_TimerMuxLock functions. From then the configuration can only be modified
   – After HW reset
   – OR thanks to HAL_OPAMP_MspDeInit called (user defined) from HAL_OPAMP_DeInit.

Running mode: change of configuration while OPAMP ON

To Re-configure OPAMP when OPAMP is ON (change on the fly)

1. If needed, fill in the HAL_OPAMP_MspInit()
   – This is the case for instance if you wish to use new OPAMP I/O

2. Configure the OPAMP using HAL_OPAMP_Init() function:
   – As in configure case, selects first the parameters you wish to modify.
   – If OPAMP control register is locked, it is not possible to modify any values on the fly (even the timer controlled mux parameters).
   – If OPAMP timer controlled mux mode register is locked, it is possible to modify any values of the control register but none on the timer controlled mux mode one.
3. Change from high speed mode to normal power mode (& vice versa) requires first HAL_OPAMP_DeInit() (force OPAMP OFF) and then HAL_OPAMP_Init(). In other words, of OPAMP is ON, HAL_OPAMP_Init can NOT change power mode alone.

38.2.3 Initialization and de-initialization functions

This section provides functions allowing to:

This section contains the following APIs:

- ***HAL_OPAMP_Init***
- ***HAL_OPAMP_DeInit***
- ***HAL_OPAMP_MspInit***
- ***HAL_OPAMP_MspDeInit***

38.2.4 IO operation functions

This subsection provides a set of functions allowing to manage the OPAMP data transfers.

This section contains the following APIs:

- ***HAL_OPAMP_Start***
- ***HAL_OPAMP_Stop***
- ***HAL_OPAMP_SelfCalibrate***

38.2.5 Peripheral Control functions

This subsection provides a set of functions allowing to control the OPAMP data transfers.

This section contains the following APIs:

- ***HAL_OPAMP_Lock***
- ***HAL_OPAMP_LockTimerMux***

38.2.6 Peripheral State functions

This subsection permit to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- ***HAL_OPAMP_GetState***
- ***HAL_OPAMP_GetTrimOffset***

38.2.7 Detailed description of functions

HAL_OPAMP_Init

Function name

HAL_StatusTypeDef HAL_OPAMP_Init (OPAMP_HandleTypeDef * hopamp)

Function description

Initializes the OPAMP according to the specified parameters in the OPAMP_InitTypeDef and initialize the associated handle.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

Notes

- If the selected opamp is locked, initialization can't be performed. To unlock the configuration, perform a system reset.

HAL_OPAMP_DeInit

Function name

HAL_StatusTypeDef HAL_OPAMP_DeInit (OPAMP_HandleTypeDef * hopamp)

Function description

DeInitializes the OPAMP peripheral.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

Notes

- Deinitialization can't be performed if the OPAMP configuration is locked. To unlock the configuration, perform a system reset.

HAL_OPAMP_MspInit

Function name

void HAL_OPAMP_MspInit (OPAMP_HandleTypeDef * hopamp)

Function description

Initialize the OPAMP MSP.

Parameters

- **hopamp:** OPAMP handle

Return values

- **None:**

HAL_OPAMP_MspDeInit

Function name

void HAL_OPAMP_MspDeInit (OPAMP_HandleTypeDef * hopamp)

Function description

DeInitialize OPAMP MSP.

Parameters

- **hopamp:** OPAMP handle

Return values

- **None:**

HAL_OPAMP_Start

Function name

HAL_StatusTypeDef HAL_OPAMP_Start (OPAMP_HandleTypeDef * hopamp)

Function description

Start the opamp.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

HAL_OPAMP_Stop

Function name

HAL_StatusTypeDef HAL_OPAMP_Stop (OPAMP_HandleTypeDef * hopamp)

Function description

Stop the opamp.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

HAL_OPAMP_SelfCalibrate

Function name

HAL_StatusTypeDef HAL_OPAMP_SelfCalibrate (OPAMP_HandleTypeDef * hopamp)

Function description

Run the self calibration of one OPAMP.

Parameters

- **hopamp:** handle

Return values

- **Updated:** offset trimming values (PMOS & NMOS), user trimming is enabled
- **HAL:** status

Notes

- Calibration is performed in the mode specified in OPAMP init structure (mode normal or high-speed).
- Calibration runs about 25 ms.

HAL_OPAMP_Lock

Function name

HAL_StatusTypeDef HAL_OPAMP_Lock (OPAMP_HandleTypeDef * hopamp)

Function description

Lock the selected opamp configuration.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

HAL_OPAMP_LockTimerMux

Function name

HAL_StatusTypeDef HAL_OPAMP_LockTimerMux (OPAMP_HandleTypeDef * hopamp)

Function description

Lock the selected opamp timer controlled mux configuration.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** status

HAL_OPAMP_GetState

Function name

HAL_OPAMP_StateTypeDef HAL_OPAMP_GetState (OPAMP_HandleTypeDef * hopamp)

Function description

Return the OPAMP state.

Parameters

- **hopamp:** OPAMP handle

Return values

- **HAL:** state

HAL_OPAMP_GetTrimOffset

Function name

OPAMP_TrimmingValueTypeDef HAL_OPAMP_GetTrimOffset (OPAMP_HandleTypeDef * hopamp, uint32_t trimmingoffset)

Function description

Return the OPAMP factory trimming value.

Parameters

- **hopamp:** OPAMP handle
- **trimmingoffset:** Trimming offset (P or N)

Return values

- **Trimming:** value (P or N): range: 0->31 or OPAMP_FACTORYTRIMMING_DUMMY if trimming value is not available

38.3 OPAMP Firmware driver defines

The following section lists the various define and macros of the module.

38.3.1 OPAMP

OPAMP

OPAMP Exported Macros

__HAL_OPAMP_RESET_HANDLE_STATE

Description:

- Reset OPAMP handle state.

Parameters:

- __HANDLE__: OPAMP handle.

Return value:

- None

OPAMP Factory Trimming

OPAMP_FACTORYTRIMMING_DUMMY

Dummy trimming value

OPAMP_FACTORYTRIMMING_N

Offset trimming N

OPAMP_FACTORYTRIMMING_P

Offset trimming P

OPAMP Input

OPAMP_INPUT_INVERTING

Inverting input

OPAMP_INPUT_NONINVERTING

Non inverting input

IS_OPAMP_INPUT

OPAMP Inverting Input

OPAMP_INVERTINGINPUT_IO0

Inverting input connected to I/O VINM0 (PA3 for OPAMP1, PA5 for OPAMP2, PB2 for OPAMP3, PB10 for OPAMP4, PB15 for OPAMP5, PA1 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_INVERTINGINPUT_IO1

Inverting input connected to I/0 VINM1 (PC5 for OPAMP1, PC5 for OPAMP2, PB10 for OPAMP3, PB8 for OPAMP4, PA3 for OPAMP5, PB1 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP Inverting Input Secondary

OPAMP_SEC_INVERTINGINPUT_IO0

OPAMP secondary mode is standalone mode - Only applicable if

OPAMP_SEC_INVERTINGINPUT_IO1

OPAMP secondary mode is standalone mode - Only applicable if

OPAMP_SEC_INVERTINGINPUT_PGA

OPAMP secondary mode is PGA mode - Only applicable if configured mode through call to

OPAMP_SEC_INVERTINGINPUT_FOLLOWER

OPAMP secondary mode is Follower mode - Only applicable if configured mode through call to

OPAMP Mode

OPAMP_STANDALONE_MODE

standalone mode

OPAMP_PGA_MODE

PGA mode

OPAMP_FOLLOWER_MODE

follower mode

OPAMP Non Inverting Input

OPAMP_NONINVERTINGINPUT_IO0

Non inverting input connected to I/O VINP0 (PA1 for OPAMP1, PA7 for OPAMP2, PB0 for OPAMP3, PB13 for OPAMP4, PB14 for OPAMP5, PB12 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_NONINVERTINGINPUT_IO1

Non inverting input connected to I/O VINP1 (PA3 for OPAMP1, PB14 for OPAMP2, PB13 for OPAMP3, PD11 for OPAMP4, PD12 for OPAMP5, PD9 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_NONINVERTINGINPUT_IO2

Non inverting input connected to I/O VINP2 (PA7 for OPAMP1, PB0 for OPAMP2, PA1 for OPAMP3, PB11 for OPAMP4, PC3 for OPAMP5, PB13 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_NONINVERTINGINPUT_IO3

Non inverting input connected to I/O VINP3 (PD14 for OPAMP2)

OPAMP_NONINVERTINGINPUT_DAC

Non inverting input connected internally to DAC channel (DAC3_CH1 for OPAMP1, DAC3_CH2 for OPAMP3, DAC4_CH1 for OPAMP4, DAC4_CH2 for OPAMP5, DAC3_CH1 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP Non Inverting Input Secondary

OPAMP_SEC_NONINVERTINGINPUT_IO0

Secondary non inverting input connected to I/O VINP0 (PA1 for OPAMP1, PA7 for OPAMP2, PB0 for OPAMP3, PB13 for OPAMP4, PB14 for OPAMP5, PB12 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_SEC_NONINVERTINGINPUT_IO1

Secondary non inverting input connected to I/O VINP1 (PA3 for OPAMP1, PB14 for OPAMP2, PB13 for OPAMP3, PD11 for OPAMP4, PD12 for OPAMP5, PD9 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_SEC_NONINVERTINGINPUT_IO2

Secondary non inverting input connected to I/O VINP2 (PA7 for OPAMP1, PB0 for OPAMP2, PA1 for OPAMP3, PB11 for OPAMP4, PC3 for OPAMP5, PB13 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP_SEC_NONINVERTINGINPUT_IO3

Secondary non inverting input connected to I/O VINP3 (PD14 for OPAMP2)

OPAMP_SEC_NONINVERTINGINPUT_DAC

Secondary non inverting input connected internally to DAC channel (DAC3_CH1 for OPAMP1, DAC3_CH2 for OPAMP3, DAC4_CH1 for OPAMP4, DAC4_CH2 for OPAMP5, DAC3_CH1 for OPAMP6) Note: On this STM32 serie, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP Pga Connect

OPAMP_PGA_CONNECT_INVERTINGINPUT_NO

In PGA mode, the inverting input is not connected

OPAMP_PGA_CONNECT_INVERTINGINPUT_IO0

In PGA mode, the inverting input is connected to VINM0 for filtering

OPAMP_PGA_CONNECT_INVERTINGINPUT_IO0_BIAS

In PGA mode, the inverting input is connected to VINM0

OPAMP_PGA_CONNECT_INVERTINGINPUT_IO0_IO1_BIAS

In PGA mode, the inverting input is connected to VINM0

OPAMP Pga Gain

OPAMP_PGA_GAIN_2_OR_MINUS_1

PGA gain could be 2 or -1

OPAMP_PGA_GAIN_4_OR_MINUS_3

PGA gain could be 4 or -3

OPAMP_PGA_GAIN_8_OR_MINUS_7

PGA gain could be 8 or -7

OPAMP_PGA_GAIN_16_OR_MINUS_15

PGA gain could be 16 or -15

OPAMP_PGA_GAIN_32_OR_MINUS_31

PGA gain could be 32 or -31

OPAMP_PGA_GAIN_64_OR_MINUS_63

PGA gain could be 64 or -63

OPAMP PowerMode

OPAMP_POWERMODE_NORMAL

Output in normal mode

OPAMP_POWERMODE_HIGHSPEED

Output in highspeed mode

OPAMP Timer Controlled Mux mode

OPAMP_TIMERCONTROLLEDMUXMODE_DISABLE

Timer controlled Mux mode disabled

OPAMP_TIMERCONTROLLEDMUXMODE_TIM1_CH6

Timer controlled Mux mode enabled using TIM1 OC6

OPAMP_TIMERCONTROLLEDMUXMODE_TIM8_CH6

Timer controlled Mux mode enabled using TIM8 OC6

OPAMP_TIMERCONTROLLEDMUXMODE_TIM20_CH6

Timer controlled Mux mode enabled using TIM20 OC6 Note: On this STM32 serie, TIM20 is not available on all devices. Refer to device datasheet for more details

OPAMP User Trimming

OPAMP_TRIMMING_FACTORY

Factory trimming

OPAMP_TRIMMING_USER

User trimming

OPAMP VREF

OPAMP_VREF_3VDDA

OPAMP Vref = 3.3% VDDA

OPAMP_VREF_10VDDA

OPAMP Vref = 10% VDDA

OPAMP_VREF_50VDDA

OPAMP Vref = 50% VDDA

OPAMP_VREF_90VDDA

OPAMP Vref = 90% VDDA

39 HAL OPAMP Extension Driver

39.1 OPAMPEx Firmware driver API description

The following section lists the various functions of the OPAMPEx library.

39.1.1 Detailed description of functions

HAL_OPAMPEx_SelfCalibrateAll

Function name

HAL_StatusTypeDef HAL_OPAMPEx_SelfCalibrateAll (OPAMP_HandleTypeDef * hopamp1, OPAMP_HandleTypeDef * hopamp2, OPAMP_HandleTypeDef * hopamp3, OPAMP_HandleTypeDef * hopamp4, OPAMP_HandleTypeDef * hopamp5, OPAMP_HandleTypeDef * hopamp6)

Function description

Run the self calibration of up to 6 OPAMPs in parallel.

Parameters

- **hopamp1:** handle
- **hopamp2:** handle
- **hopamp3:** handle
- **hopamp4:** handle (1)
- **hopamp5:** handle (1)
- **hopamp6:** handle (1) (1) Parameter not present on STM32GBK1CB/STM32G431xx/STM32G441xx/STM32G471xx devices.

Return values

- **HAL:** status

Notes

- Calibration is performed in the mode specified in OPAMP init structure (mode normal or high-speed).
- Updated offset trimming values (PMOS & NMOS), user trimming is enabled
- Calibration runs about 25 ms.

40 HAL PCD Generic Driver

40.1 PCD Firmware driver registers structures

40.1.1 PCD_HandleTypeDef

PCD_HandleTypeDef is defined in the stm32g4xx_hal_pcd.h

Data Fields

- ***PCD_TypeDef * Instance***
- ***PCD_InitTypeDef Init***
- ***__IO uint8_t USB_Address***
- ***PCD_EPTypeDef IN_ep***
- ***PCD_EPTypeDef OUT_ep***
- ***HAL_LockTypeDef Lock***
- ***__IO PCD_StateTypeDef State***
- ***__IO uint32_t ErrorCode***
- ***uint32_t Setup***
- ***PCD_LPM_StateTypeDef LPM_State***
- ***uint32_t BESL***
- ***uint32_t lpm_active***
- ***uint32_t battery_charging_active***
- ***void * pData***

Field Documentation

- ***PCD_TypeDef* PCD_HandleTypeDef::Instance***
  Register base address
- ***PCD_InitTypeDef PCD_HandleTypeDef::Init***
  PCD required parameters
- ***__IO uint8_t PCD_HandleTypeDef::USB_Address***
  USB Address
- ***PCD_EPTypeDef PCD_HandleTypeDef::IN_ep[8]***
  IN endpoint parameters
- ***PCD_EPTypeDef PCD_HandleTypeDef::OUT_ep[8]***
  OUT endpoint parameters
- ***HAL_LockTypeDef PCD_HandleTypeDef::Lock***
  PCD peripheral status
- ***__IO PCD_StateTypeDef PCD_HandleTypeDef::State***
  PCD communication state
- ***__IO uint32_t PCD_HandleTypeDef::ErrorCode***
  PCD Error code
- ***uint32_t PCD_HandleTypeDef::Setup[12]***
  Setup packet buffer
- ***PCD_LPM_StateTypeDef PCD_HandleTypeDef::LPM_State***
  LPM State
- ***uint32_t PCD_HandleTypeDef::BESL***
- ***uint32_t PCD_HandleTypeDef::lpm_active***
  Enable or disable the Link Power Management . This parameter can be set to ENABLE or DISABLE

- ***uint32_t PCD_HandleTypeDef::battery_charging_active***
  Enable or disable Battery charging. This parameter can be set to ENABLE or DISABLE
- ***void* PCD_HandleTypeDef::pData***
  Pointer to upper stack Handler

40.2 PCD Firmware driver API description

The following section lists the various functions of the PCD library.

40.2.1 How to use this driver

The PCD HAL driver can be used as follows:

1. Declare a PCD_HandleTypeDef handle structure, for example: PCD_HandleTypeDef hpcd;
2. Fill parameters of Init structure in HCD handle
3. Call HAL_PCD_Init() API to initialize the PCD peripheral (Core, Device core, ...)
4. Initialize the PCD low level resources through the HAL_PCD_MspInit() API:
   a. Enable the PCD/USB Low Level interface clock using
      ◦ __HAL_RCC_USB_CLK_ENABLE(); For USB Device only FS peripheral
   b. Initialize the related GPIO clocks
   c. Configure PCD pin-out
   d. Configure PCD NVIC interrupt
5. Associate the Upper USB device stack to the HAL PCD Driver:
   a. hpcd.pData = pdev;
6. Enable PCD transmission and reception:
   a. HAL_PCD_Start();

40.2.2 Initialization and de-initialization functions

This section provides functions allowing to:
This section contains the following APIs:

- ***HAL_PCD_Init***
- ***HAL_PCD_DeInit***
- ***HAL_PCD_MspInit***
- ***HAL_PCD_MspDeInit***

40.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the PCD data transfers.
This section contains the following APIs:

- ***HAL_PCD_Start***
- ***HAL_PCD_Stop***
- ***HAL_PCD_IRQHandler***
- ***HAL_PCD_DataOutStageCallback***
- ***HAL_PCD_DataInStageCallback***
- ***HAL_PCD_SetupStageCallback***
- ***HAL_PCD_SOFCallback***
- ***HAL_PCD_ResetCallback***
- ***HAL_PCD_SuspendCallback***
- ***HAL_PCD_ResumeCallback***
- ***HAL_PCD_ISOOUTIncompleteCallback***
- ***HAL_PCD_ISOINIncompleteCallback***
- ***HAL_PCD_ConnectCallback***
- ***HAL_PCD_DisconnectCallback***

40.2.4 Peripheral Control functions

This subsection provides a set of functions allowing to control the PCD data transfers.

This section contains the following APIs:

- *HAL_PCD_DevConnect*
- *HAL_PCD_DevDisconnect*
- *HAL_PCD_SetAddress*
- *HAL_PCD_EP_Open*
- *HAL_PCD_EP_Close*
- *HAL_PCD_EP_Receive*
- *HAL_PCD_EP_GetRxCount*
- *HAL_PCD_EP_Transmit*
- *HAL_PCD_EP_SetStall*
- *HAL_PCD_EP_ClrStall*
- *HAL_PCD_EP_Flush*
- *HAL_PCD_ActivateRemoteWakeup*
- *HAL_PCD_DeActivateRemoteWakeup*

40.2.5 Peripheral State functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- *HAL_PCD_GetState*

40.2.6 Detailed description of functions

HAL_PCD_Init

Function name

HAL_StatusTypeDef HAL_PCD_Init (PCD_HandleTypeDef * hpcd)

Function description

Initializes the PCD according to the specified parameters in the PCD_InitTypeDef and initialize the associated handle.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_DeInit

Function name

HAL_StatusTypeDef HAL_PCD_DeInit (PCD_HandleTypeDef * hpcd)

Function description

DeInitializes the PCD peripheral.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_MspInit

Function name

void HAL_PCD_MspInit (PCD_HandleTypeDef * hpcd)

Function description

Initializes the PCD MSP.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_MspDeInit

Function name

void HAL_PCD_MspDeInit (PCD_HandleTypeDef * hpcd)

Function description

DeInitializes PCD MSP.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_Start

Function name

HAL_StatusTypeDef HAL_PCD_Start (PCD_HandleTypeDef * hpcd)

Function description

Start the USB device.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_Stop

Function name

HAL_StatusTypeDef HAL_PCD_Stop (PCD_HandleTypeDef * hpcd)

Function description

Stop the USB device.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_IRQHandler

Function name

void HAL_PCD_IRQHandler (PCD_HandleTypeDef * hpcd)

Function description

This function handles PCD interrupt request.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_SOFCallback

Function name

void HAL_PCD_SOFCallback (PCD_HandleTypeDef * hpcd)

Function description

USB Start Of Frame callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_SetupStageCallback

Function name

void HAL_PCD_SetupStageCallback (PCD_HandleTypeDef * hpcd)

Function description

Setup stage callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_ResetCallback

Function name

void HAL_PCD_ResetCallback (PCD_HandleTypeDef * hpcd)

Function description

USB Reset callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_SuspendCallback

Function name

void HAL_PCD_SuspendCallback (PCD_HandleTypeDef * hpcd)

Function description

Suspend event callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_ResumeCallback

Function name

void HAL_PCD_ResumeCallback (PCD_HandleTypeDef * hpcd)

Function description

Resume event callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_ConnectCallback

Function name

void HAL_PCD_ConnectCallback (PCD_HandleTypeDef * hpcd)

Function description

Connection event callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_DisconnectCallback

Function name

void HAL_PCD_DisconnectCallback (PCD_HandleTypeDef * hpcd)

Function description

Disconnection event callback.

Parameters

- **hpcd:** PCD handle

Return values

- **None:**

HAL_PCD_DataOutStageCallback

Function name

void HAL_PCD_DataOutStageCallback (PCD_HandleTypeDef * hpcd, uint8_t epnum)

Function description

Data OUT stage callback.

Parameters

- **hpcd:** PCD handle
- **epnum:** endpoint number

Return values

- **None:**

HAL_PCD_DataInStageCallback

Function name

void HAL_PCD_DataInStageCallback (PCD_HandleTypeDef * hpcd, uint8_t epnum)

Function description

Data IN stage callback.

Parameters

- **hpcd:** PCD handle
- **epnum:** endpoint number

Return values

- **None:**

HAL_PCD_ISOOUTIncompleteCallback

Function name

void HAL_PCD_ISOOUTIncompleteCallback (PCD_HandleTypeDef * hpcd, uint8_t epnum)

Function description

Incomplete ISO OUT callback.

Parameters

- **hpcd:** PCD handle
- **epnum:** endpoint number

Return values

- **None:**

HAL_PCD_ISOINIncompleteCallback

Function name

void HAL_PCD_ISOINIncompleteCallback (PCD_HandleTypeDef * hpcd, uint8_t epnum)

Function description

Incomplete ISO IN callback.

Parameters

- **hpcd:** PCD handle
- **epnum:** endpoint number

Return values

- **None:**

HAL_PCD_DevConnect

Function name

HAL_StatusTypeDef HAL_PCD_DevConnect (PCD_HandleTypeDef * hpcd)

Function description

Connect the USB device.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_DevDisconnect

Function name

HAL_StatusTypeDef HAL_PCD_DevDisconnect (PCD_HandleTypeDef * hpcd)

Function description

Disconnect the USB device.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_SetAddress

Function name

HAL_StatusTypeDef HAL_PCD_SetAddress (PCD_HandleTypeDef * hpcd, uint8_t address)

Function description

Set the USB Device address.

Parameters

- **hpcd:** PCD handle
- **address:** new device address

Return values

- **HAL:** status

HAL_PCD_EP_Open

Function name

HAL_StatusTypeDef HAL_PCD_EP_Open (PCD_HandleTypeDef * hpcd, uint8_t ep_addr, uint16_t ep_mps, uint8_t ep_type)

Function description

Open and configure an endpoint.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address
- **ep_mps:** endpoint max packet size
- **ep_type:** endpoint type

Return values

- **HAL:** status

HAL_PCD_EP_Close

Function name

HAL_StatusTypeDef HAL_PCD_EP_Close (PCD_HandleTypeDef * hpcd, uint8_t ep_addr)

Function description

Deactivate an endpoint.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address

Return values

- **HAL:** status

HAL_PCD_EP_Receive

Function name

HAL_StatusTypeDef HAL_PCD_EP_Receive (PCD_HandleTypeDef * hpcd, uint8_t ep_addr, uint8_t * pBuf, uint32_t len)

Function description

Receive an amount of data.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address
- **pBuf:** pointer to the reception buffer
- **len:** amount of data to be received

Return values

- **HAL:** status

HAL_PCD_EP_Transmit

Function name

HAL_StatusTypeDef HAL_PCD_EP_Transmit (PCD_HandleTypeDef * hpcd, uint8_t ep_addr, uint8_t * pBuf, uint32_t len)

Function description

Send an amount of data.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address
- **pBuf:** pointer to the transmission buffer
- **len:** amount of data to be sent

Return values

- **HAL:** status

HAL_PCD_EP_GetRxCount

Function name

uint32_t HAL_PCD_EP_GetRxCount (PCD_HandleTypeDef * hpcd, uint8_t ep_addr)

Function description

Get Received Data Size.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address

Return values

- **Data:** Size

HAL_PCD_EP_SetStall

Function name

HAL_StatusTypeDef HAL_PCD_EP_SetStall (PCD_HandleTypeDef * hpcd, uint8_t ep_addr)

Function description

Set a STALL condition over an endpoint.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address

Return values

- **HAL:** status

HAL_PCD_EP_ClrStall

Function name

HAL_StatusTypeDef HAL_PCD_EP_ClrStall (PCD_HandleTypeDef * hpcd, uint8_t ep_addr)

Function description

Clear a STALL condition over in an endpoint.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address

Return values

- **HAL:** status

HAL_PCD_EP_Flush

Function name

HAL_StatusTypeDef HAL_PCD_EP_Flush (PCD_HandleTypeDef * hpcd, uint8_t ep_addr)

Function description

Flush an endpoint.

Parameters

- **hpcd:** PCD handle
- **ep_addr:** endpoint address

Return values

- **HAL:** status

HAL_PCD_ActivateRemoteWakeup

Function name

HAL_StatusTypeDef HAL_PCD_ActivateRemoteWakeup (PCD_HandleTypeDef * hpcd)

Function description

Activate remote wakeup signalling.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_DeActivateRemoteWakeup

Function name

HAL_StatusTypeDef HAL_PCD_DeActivateRemoteWakeup (PCD_HandleTypeDef * hpcd)

Function description

De-activate remote wakeup signalling.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCD_GetState

Function name

PCD_StateTypeDef HAL_PCD_GetState (PCD_HandleTypeDef * hpcd)

Function description

Return the PCD handle state.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** state

41 HAL PCD Extension Driver

41.1 PCDEx Firmware driver API description

The following section lists the various functions of the PCDEx library.

41.1.1 Extended features functions

This section provides functions allowing to:

- Update FIFO configuration

This section contains the following APIs:

- *HAL_PCDEx_PMAConfig*
- *HAL_PCDEx_ActivateBCD*
- *HAL_PCDEx_DeActivateBCD*
- *HAL_PCDEx_BCD_VBUSDetect*
- *HAL_PCDEx_ActivateLPM*
- *HAL_PCDEx_DeActivateLPM*
- *HAL_PCDEx_LPM_Callback*
- *HAL_PCDEx_BCD_Callback*

41.1.2 Detailed description of functions

HAL_PCDEx_PMAConfig

Function name

HAL_StatusTypeDef HAL_PCDEx_PMAConfig (PCD_HandleTypeDef * hpcd, uint16_t ep_addr, uint16_t ep_kind, uint32_t pmaadress)

Function description

Configure PMA for EP.

Parameters

- **hpcd:** Device instance
- **ep_addr:** endpoint address
- **ep_kind:** endpoint Kind USB_SNG_BUF: Single Buffer used USB_DBL_BUF: Double Buffer used
- **pmaadress:** EP address in The PMA: In case of single buffer endpoint this parameter is 16-bit value providing the address in PMA allocated to endpoint. In case of double buffer endpoint this parameter is a 32-bit value providing the endpoint buffer 0 address in the LSB part of 32-bit value and endpoint buffer 1 address in the MSB part of 32-bit value.

Return values

- **HAL:** status

HAL_PCDEx_ActivateLPM

Function name

HAL_StatusTypeDef HAL_PCDEx_ActivateLPM (PCD_HandleTypeDef * hpcd)

Function description

Activate LPM feature.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCDEx_DeActivateLPM

Function name

HAL_StatusTypeDef HAL_PCDEx_DeActivateLPM (PCD_HandleTypeDef * hpcd)

Function description

Deactivate LPM feature.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCDEx_ActivateBCD

Function name

HAL_StatusTypeDef HAL_PCDEx_ActivateBCD (PCD_HandleTypeDef * hpcd)

Function description

Activate BatteryCharging feature.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCDEx_DeActivateBCD

Function name

HAL_StatusTypeDef HAL_PCDEx_DeActivateBCD (PCD_HandleTypeDef * hpcd)

Function description

Deactivate BatteryCharging feature.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCDEx_BCD_VBUSDetect

Function name

void HAL_PCDEx_BCD_VBUSDetect (PCD_HandleTypeDef * hpcd)

Function description

Handle BatteryCharging Process.

Parameters

- **hpcd:** PCD handle

Return values

- **HAL:** status

HAL_PCDEx_LPM_Callback

Function name

void HAL_PCDEx_LPM_Callback (PCD_HandleTypeDef * hpcd, PCD_LPM_MsgTypeDef msg)

Function description

Send LPM message to user layer callback.

Parameters

- **hpcd:** PCD handle
- **msg:** LPM message

Return values

- **HAL:** status

HAL_PCDEx_BCD_Callback

Function name

void HAL_PCDEx_BCD_Callback (PCD_HandleTypeDef * hpcd, PCD_BCD_MsgTypeDef msg)

Function description

Send BatteryCharging message to user layer callback.

Parameters

- **hpcd:** PCD handle
- **msg:** LPM message

Return values

- **HAL:** status

42 HAL PWR Generic Driver

42.1 PWR Firmware driver registers structures

42.1.1 PWR_PVDTypeDef

PWR_PVDTypeDef is defined in the stm32g4xx_hal_pwr.h

Data Fields

- ***uint32_t PVDLevel***
- ***uint32_t Mode***

Field Documentation

- ***uint32_t PWR_PVDTypeDef::PVDLevel***

  PVDLevel: Specifies the PVD detection level. This parameter can be a value of ***PWR_PVD_detection_level***.
- ***uint32_t PWR_PVDTypeDef::Mode***

  Mode: Specifies the operating mode for the selected pins. This parameter can be a value of ***PWR_PVD_Mode***.

42.2 PWR Firmware driver API description

The following section lists the various functions of the PWR library.

42.2.1 Initialization and de-initialization functions

This section contains the following APIs:

- ***HAL_PWR_DeInit***
- ***HAL_PWR_EnableBkUpAccess***
- ***HAL_PWR_DisableBkUpAccess***

42.2.2 Peripheral Control functions

PVD configuration

- The PVD is used to monitor the VDD power supply by comparing it to a threshold selected by the PVD Level (PLS[2:0] bits in PWR_CR2 register).
- PVDO flag is available to indicate if VDD/VDDA is higher or lower than the PVD threshold. This event is internally connected to the EXTI line16 and can generate an interrupt if enabled. This is done through __HAL_PVD_EXTI_ENABLE_IT() macro.
- The PVD is stopped in Standby mode.

WakeUp pin configuration

- WakeUp pins are used to wakeup the system from Standby mode or Shutdown mode. The polarity of these pins can be set to configure event detection on high level (rising edge) or low level (falling edge).

Low Power modes configuration

The devices feature 8 low-power modes:

- Low-power Run mode: core and peripherals are running, main regulator off, low power regulator on.
- Sleep mode: Cortex-M4 core stopped, peripherals kept running, main and low power regulators on.
- Low-power Sleep mode: Cortex-M4 core stopped, peripherals kept running, main regulator off, low power regulator on.
- Stop 0 mode: all clocks are stopped except LSI and LSE, main and low power regulators on.
- Stop 1 mode: all clocks are stopped except LSI and LSE, main regulator off, low power regulator on.

- Standby mode with SRAM2: all clocks are stopped except LSI and LSE, SRAM2 content preserved, main regulator off, low power regulator on.
- Standby mode without SRAM2: all clocks are stopped except LSI and LSE, main and low power regulators off.
- Shutdown mode: all clocks are stopped except LSE, main and low power regulators off.

Low-power run mode

- Entry: (from main run mode)
  - set LPR bit with HAL_PWREx_EnableLowPowerRunMode() API after having decreased the system clock below 2 MHz.
- Exit:
  - clear LPR bit then wait for REGLP bit to be reset with HAL_PWREx_DisableLowPowerRunMode() API. Only then can the system clock frequency be increased above 2 MHz.

Sleep mode / Low-power sleep mode

- Entry: The Sleep mode / Low-power Sleep mode is entered thru HAL_PWR_EnterSLEEPMode() API in specifying whether or not the regulator is forced to low-power mode and if exit is interrupt or event-triggered.
  - PWR_MAINREGULATOR_ON: Sleep mode (regulator in main mode).
  - PWR_LOWPOWERREGULATOR_ON: Low-power sleep (regulator in low power mode). In the latter case, the system clock frequency must have been decreased below 2 MHz beforehand.
  - PWR_SLEEPENTRY_WFI: enter SLEEP mode with WFI instruction
  - PWR_SLEEPENTRY_WFE: enter SLEEP mode with WFE instruction
- WFI Exit:
  - Any peripheral interrupt acknowledged by the nested vectored interrupt controller (NVIC) or any wake-up event.
- WFE Exit:
  - Any wake-up event such as an EXTI line configured in event mode.

When exiting the Low-power sleep mode by issuing an interrupt or a wakeup event, the MCU is in Low-power Run mode.

Stop 0, Stop 1 modes

- Entry: The Stop 0, Stop 1 modes are entered thru the following API's:
  - HAL_PWREx_EnterSTOP0Mode() for mode 0 or HAL_PWREx_EnterSTOP1Mode() for mode 1 or for porting reasons HAL_PWR_EnterSTOPMode().
- Regulator setting (applicable to HAL_PWR_EnterSTOPMode() only):
  - PWR_MAINREGULATOR_ON
  - PWR_LOWPOWERREGULATOR_ON
- Exit (interrupt or event-triggered, specified when entering STOP mode):
  - PWR_STOPENTRY_WFI: enter Stop mode with WFI instruction
  - PWR_STOPENTRY_WFE: enter Stop mode with WFE instruction
- WFI Exit:
  - Any EXTI Line (Internal or External) configured in Interrupt mode.
  - Some specific communication peripherals (USART, LPUART, I2C) interrupts when programmed in wakeup mode.
- WFE Exit:
  - Any EXTI Line (Internal or External) configured in Event mode.

When exiting Stop 0 and Stop 1 modes, the MCU is either in Run mode or in Low-power Run mode depending on the LPR bit setting.

Standby mode

The Standby mode offers two options:

- option a) all clocks off except LSI and LSE, RRS bit set (keeps voltage regulator in low power mode). SRAM and registers contents are lost except for the SRAM2 content, the RTC registers, RTC backup registers and Standby circuitry.
- option b) all clocks off except LSI and LSE, RRS bit cleared (voltage regulator then disabled). SRAM and register contents are lost except for the RTC registers, RTC backup registers and Standby circuitry.
  - Entry:
    - The Standby mode is entered thru HAL_PWR_EnterSTANDBYMode() API. SRAM1 and register contents are lost except for registers in the Backup domain and Standby circuitry. SRAM2 content can be preserved if the bit RRS is set in PWR_CR3 register. To enable this feature, the user can resort to HAL_PWREx_EnableSRAM2ContentRetention() API to set RRS bit.
  - Exit:
    - WKUP pin rising edge, RTC alarm or wakeup, tamper event, time-stamp event, external reset in NRST pin, IWDG reset.

After waking up from Standby mode, program execution restarts in the same way as after a Reset.

Shutdown mode

In Shutdown mode, voltage regulator is disabled, all clocks are off except LSE, RRS bit is cleared. SRAM and registers contents are lost except for backup domain registers.

- Entry: The Shutdown mode is entered thru HAL_PWREx_EnterSHUTDOWNMode() API.
- Exit:
  - WKUP pin rising edge, RTC alarm or wakeup, tamper event, time-stamp event, external reset in NRST pin.

After waking up from Shutdown mode, program execution restarts in the same way as after a Reset.

Auto-wakeup (AWU) from low-power mode

The MCU can be woken up from low-power mode by an RTC Alarm event, an RTC Wakeup event, a tamper event or a time-stamp event, without depending on an external interrupt (Auto-wakeup mode).

- RTC auto-wakeup (AWU) from the Stop, Standby and Shutdown modes
  - To wake up from the Stop mode with an RTC alarm event, it is necessary to configure the RTC to generate the RTC alarm using the HAL_RTC_SetAlarm_IT() function.
  - To wake up from the Stop mode with an RTC Tamper or time stamp event, it is necessary to configure the RTC to detect the tamper or time stamp event using the HAL_RTCEx_SetTimeStamp_IT() or HAL_RTCEx_SetTamper_IT() functions.
  - To wake up from the Stop mode with an RTC WakeUp event, it is necessary to configure the RTC to generate the RTC WakeUp event using the HAL_RTCEx_SetWakeUpTimer_IT() function.

This section contains the following APIs:

- ***HAL_PWR_ConfigPVD***
- ***HAL_PWR_EnablePVD***
- ***HAL_PWR_DisablePVD***
- ***HAL_PWR_EnableWakeUpPin***
- ***HAL_PWR_DisableWakeUpPin***
- ***HAL_PWR_EnterSLEEPMode***
- ***HAL_PWR_EnterSTOPMode***
- ***HAL_PWR_EnterSTANDBYMode***
- ***HAL_PWR_EnableSleepOnExit***
- ***HAL_PWR_DisableSleepOnExit***
- ***HAL_PWR_EnableSEVOnPend***
- ***HAL_PWR_DisableSEVOnPend***
- ***HAL_PWR_PVDCallback***

42.2.3 Detailed description of functions

HAL_PWR_DeInit

Function name

void HAL_PWR_DeInit (void)

Function description

Deinitialize the HAL PWR peripheral registers to their default reset values.

Return values

- **None:**

HAL_PWR_EnableBkUpAccess

Function name

void HAL_PWR_EnableBkUpAccess (void)

Function description

Enable access to the backup domain (RTC registers, RTC backup data registers).

Return values

- **None:**

Notes

- After reset, the backup domain is protected against possible unwanted write accesses.
- RTCSEL that sets the RTC clock source selection is in the RTC back-up domain. In order to set or modify the RTC clock, the backup domain access must be disabled.
- LSEON bit that switches on and off the LSE crystal belongs as well to the back-up domain.

HAL_PWR_DisableBkUpAccess

Function name

void HAL_PWR_DisableBkUpAccess (void)

Function description

Disable access to the backup domain (RTC registers, RTC backup data registers).

Return values

- **None:**

HAL_PWR_ConfigPVD

Function name

HAL_StatusTypeDef HAL_PWR_ConfigPVD (PWR_PVDTypeDef * sConfigPVD)

Function description

Configure the voltage threshold detected by the Power Voltage Detector (PVD).

Parameters

- **sConfigPVD:** pointer to a PWR_PVDTypeDef structure that contains the PVD configuration information.

Return values

- **None:**

Notes

- Refer to the electrical characteristics of your device datasheet for more details about the voltage thresholds corresponding to each detection level.

HAL_PWR_EnablePVD

Function name

void HAL_PWR_EnablePVD (void)

Function description

Enable the Power Voltage Detector (PVD).

Return values

- **None:**

HAL_PWR_DisablePVD

Function name

void HAL_PWR_DisablePVD (void)

Function description

Disable the Power Voltage Detector (PVD).

Return values

- **None:**

HAL_PWR_EnableWakeUpPin

Function name

void HAL_PWR_EnableWakeUpPin (uint32_t WakeUpPinPolarity)

Function description

Enable the WakeUp PINx functionality.

Parameters

- **WakeUpPinPolarity:** Specifies which Wake-Up pin to enable. This parameter can be one of the following legacy values which set the default polarity i.e. detection on high level (rising edge):
  - PWR_WAKEUP_PIN1, PWR_WAKEUP_PIN2, PWR_WAKEUP_PIN3, PWR_WAKEUP_PIN4, PWR_WAKEUP_PIN5

  or one of the following value where the user can explicitly specify the enabled pin and the chosen polarity:
  - PWR_WAKEUP_PIN1_HIGH or PWR_WAKEUP_PIN1_LOW
  - PWR_WAKEUP_PIN2_HIGH or PWR_WAKEUP_PIN2_LOW
  - PWR_WAKEUP_PIN3_HIGH or PWR_WAKEUP_PIN3_LOW
  - PWR_WAKEUP_PIN4_HIGH or PWR_WAKEUP_PIN4_LOW
  - PWR_WAKEUP_PIN5_HIGH or PWR_WAKEUP_PIN5_LOW

Return values

- **None:**

Notes

- PWR_WAKEUP_PINx and PWR_WAKEUP_PINx_HIGH are equivalent.

HAL_PWR_DisableWakeUpPin

Function name

void HAL_PWR_DisableWakeUpPin (uint32_t WakeUpPinx)

Function description

Disable the WakeUp PINx functionality.

Parameters

- **WakeUpPinx:** Specifies the Power Wake-Up pin to disable. This parameter can be one of the following values:
  - PWR_WAKEUP_PIN1, PWR_WAKEUP_PIN2, PWR_WAKEUP_PIN3, PWR_WAKEUP_PIN4, PWR_WAKEUP_PIN5

Return values

- **None:**

HAL_PWR_EnterSLEEPMode

Function name

void HAL_PWR_EnterSLEEPMode (uint32_t Regulator, uint8_t SLEEPEntry)

Function description

Enter Sleep or Low-power Sleep mode.

Parameters

- **Regulator:** Specifies the regulator state in Sleep/Low-power Sleep mode. This parameter can be one of the following values:
  - PWR_MAINREGULATOR_ON Sleep mode (regulator in main mode)
  - PWR_LOWPOWERREGULATOR_ON Low-power Sleep mode (regulator in low-power mode)
- **SLEEPEntry:** Specifies if Sleep mode is entered with WFI or WFE instruction. This parameter can be one of the following values:
  - PWR_SLEEPENTRY_WFI enter Sleep or Low-power Sleep mode with WFI instruction
  - PWR_SLEEPENTRY_WFE enter Sleep or Low-power Sleep mode with WFE instruction

Return values

- **None:**

Notes

- In Sleep/Low-power Sleep mode, all I/O pins keep the same state as in Run mode.
- Low-power Sleep mode is entered from Low-power Run mode. Therefore, if not yet in Low-power Run mode before calling HAL_PWR_EnterSLEEPMode() with Regulator set to PWR_LOWPOWERREGULATOR_ON, the user can optionally configure the Flash in power-down monde in setting the SLEEP_PD bit in FLASH_ACR register. Additionally, the clock frequency must be reduced below 2 MHz. Setting SLEEP_PD in FLASH_ACR then appropriately reducing the clock frequency must be done before calling HAL_PWR_EnterSLEEPMode() API.
- When exiting Low-power Sleep mode, the MCU is in Low-power Run mode. To move in Run mode, the user must resort to HAL_PWREx_DisableLowPowerRunMode() API.
- When WFI entry is used, tick interrupt have to be disabled if not desired as the interrupt wake up source.

HAL_PWR_EnterSTOPMode

Function name

void HAL_PWR_EnterSTOPMode (uint32_t Regulator, uint8_t STOPEntry)

Function description

Enter Stop mode.

Parameters

- **Regulator:** Specifies the regulator state in Stop mode. This parameter can be one of the following values:
  - PWR_MAINREGULATOR_ON Stop 0 mode (main regulator ON)
  - PWR_LOWPOWERREGULATOR_ON Stop 1 mode (low power regulator ON)
- **STOPEntry:** Specifies Stop 0 or Stop 1 mode is entered with WFI or WFE instruction. This parameter can be one of the following values:
  - PWR_STOPENTRY_WFI Enter Stop 0 or Stop 1 mode with WFI instruction.
  - PWR_STOPENTRY_WFE Enter Stop 0 or Stop 1 mode with WFE instruction.

Return values

- **None:**

Notes

- This API is named HAL_PWR_EnterSTOPMode to ensure compatibility with legacy code running on devices where only "Stop mode" is mentioned with main or low power regulator ON.
- In Stop mode, all I/O pins keep the same state as in Run mode.
- All clocks in the VCORE domain are stopped; the PLL, the HSI and the HSE oscillators are disabled. Some peripherals with the wakeup capability (I2Cx, USARTx and LPUART) can switch on the HSI to receive a frame, and switch off the HSI after receiving the frame if it is not a wakeup frame. In this case, the HSI clock is propagated only to the peripheral requesting it. SRAM1, SRAM2 and register contents are preserved. The BOR is available. The voltage regulator can be configured either in normal (Stop 0) or low-power mode (Stop 1).
- When exiting Stop 0 or Stop 1 mode by issuing an interrupt or a wakeup event, the HSI RC oscillator is selected as system clock.
- When the voltage regulator operates in low power mode (Stop 1), an additional startup delay is incurred when waking up. By keeping the internal regulator ON during Stop mode (Stop 0), the consumption is higher although the startup time is reduced.

HAL_PWR_EnterSTANDBYMode

Function name

void HAL_PWR_EnterSTANDBYMode (void)

Function description

Enter Standby mode.

Return values

- **None:**

Notes

- In Standby mode, the PLL, the HSI and the HSE oscillators are switched off. The voltage regulator is disabled, except when SRAM2 content is preserved in which case the regulator is in low-power mode. SRAM1 and register contents are lost except for registers in the Backup domain and Standby circuitry. SRAM2 content can be preserved if the bit RRS is set in PWR_CR3 register. To enable this feature, the user can resort to HAL_PWREx_EnableSRAM2ContentRetention() API to set RRS bit. The BOR is available.
- The I/Os can be configured either with a pull-up or pull-down or can be kept in analog state. HAL_PWREx_EnableGPIOPullUp() and HAL_PWREx_EnableGPIOPullDown() respectively enable Pull Up and Pull Down state, HAL_PWREx_DisableGPIOPullUp() and HAL_PWREx_DisableGPIOPullDown() disable the same. These states are effective in Standby mode only if APC bit is set through HAL_PWREx_EnablePullUpPullDownConfig() API.

HAL_PWR_EnableSleepOnExit

Function name

void HAL_PWR_EnableSleepOnExit (void)

Function description

Indicate Sleep-On-Exit when returning from Handler mode to Thread mode.

Return values

- **None:**

Notes

- Set SLEEPONEXIT bit of SCR register. When this bit is set, the processor re-enters SLEEP mode when an interruption handling is over. Setting this bit is useful when the processor is expected to run only on interruptions handling.

HAL_PWR_DisableSleepOnExit

Function name

void HAL_PWR_DisableSleepOnExit (void)

Function description

Disable Sleep-On-Exit feature when returning from Handler mode to Thread mode.

Return values

- **None:**

Notes

- Clear SLEEPONEXIT bit of SCR register. When this bit is set, the processor re-enters SLEEP mode when an interruption handling is over.

HAL_PWR_EnableSEVOnPend

Function name

void HAL_PWR_EnableSEVOnPend (void)

Function description

Enable CORTEX M4 SEVONPEND bit.

Return values

- **None:**

Notes

- Set SEVONPEND bit of SCR register. When this bit is set, this causes WFE to wake up when an interrupt moves from inactive to pended.

HAL_PWR_DisableSEVOnPend

Function name

void HAL_PWR_DisableSEVOnPend (void)

Function description

Disable CORTEX M4 SEVONPEND bit.

Return values

- **None:**

Notes

- Clear SEVONPEND bit of SCR register. When this bit is set, this causes WFE to wake up when an interrupt moves from inactive to pended.

HAL_PWR_PVDCallback

Function name

void HAL_PWR_PVDCallback (void)

Function description

PWR PVD interrupt callback.

Return values

- **None:**

42.3 PWR Firmware driver defines

The following section lists the various define and macros of the module.

42.3.1 PWR

PWR

PWR Exported Macros

__HAL_PWR_GET_FLAG

Description:

- Check whether or not a specific PWR flag is set.

Parameters:

- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - PWR_FLAG_WUF1 Wake Up Flag 1. Indicates that a wakeup event was received from the WKUP pin 1.
  - PWR_FLAG_WUF2 Wake Up Flag 2. Indicates that a wakeup event was received from the WKUP pin 2.
  - PWR_FLAG_WUF3 Wake Up Flag 3. Indicates that a wakeup event was received from the WKUP pin 3.
  - PWR_FLAG_WUF4 Wake Up Flag 4. Indicates that a wakeup event was received from the WKUP pin 4.
  - PWR_FLAG_WUF5 Wake Up Flag 5. Indicates that a wakeup event was received from the WKUP pin 5.
  - PWR_FLAG_SB StandBy Flag. Indicates that the system entered StandBy mode.
  - PWR_FLAG_WUFI Wake-Up Flag Internal. Set when a wakeup is detected on the internal wakeup line.
  - PWR_FLAG_REGLPS Low Power Regulator Started. Indicates whether or not the low-power regulator is ready.
  - PWR_FLAG_REGLPF Low Power Regulator Flag. Indicates whether the regulator is ready in main mode or is in low-power mode.
  - PWR_FLAG_VOSF Voltage Scaling Flag. Indicates whether the regulator is ready in the selected voltage range or is still changing to the required voltage level.
  - PWR_FLAG_PVDO Power Voltage Detector Output. Indicates whether VDD voltage is below or above the selected PVD threshold.
  - PWR_FLAG_PVMO3 Peripheral Voltage Monitoring Output 3. Indicates whether VDDA voltage is is below or above PVM3 threshold.
  - PWR_FLAG_PVMO4 Peripheral Voltage Monitoring Output 4. Indicates whether VDDA voltage is is below or above PVM4 threshold.

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_PWR_CLEAR_FLAG

Description:

- Clear a specific PWR flag.

Parameters:

- __FLAG__: specifies the flag to clear. This parameter can be one of the following values:
  - PWR_FLAG_WUF1 Wake Up Flag 1. Indicates that a wakeup event was received from the WKUP pin 1.
  - PWR_FLAG_WUF2 Wake Up Flag 2. Indicates that a wakeup event was received from the WKUP pin 2.
  - PWR_FLAG_WUF3 Wake Up Flag 3. Indicates that a wakeup event was received from the WKUP pin 3.
  - PWR_FLAG_WUF4 Wake Up Flag 4. Indicates that a wakeup event was received from the WKUP pin 4.
  - PWR_FLAG_WUF5 Wake Up Flag 5. Indicates that a wakeup event was received from the WKUP pin 5.
  - PWR_FLAG_WU Encompasses all five Wake Up Flags.
  - PWR_FLAG_SB Standby Flag. Indicates that the system entered Standby mode.

Return value:

- None

__HAL_PWR_PVD_EXTI_ENABLE_IT

Description:

- Enable the PVD Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVD_EXTI_DISABLE_IT

Description:

- Disable the PVD Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVD_EXTI_ENABLE_EVENT

Description:

- Enable the PVD Event Line.

Return value:

- None

__HAL_PWR_PVD_EXTI_DISABLE_EVENT

Description:

- Disable the PVD Event Line.

Return value:

- None

__HAL_PWR_PVD_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the PVD Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the PVD Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the PVD Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the PVD Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the PVD Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the PVD Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVD_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Return value:

- None

__HAL_PWR_PVD_EXTI_GET_FLAG

Description:

- Check whether or not the PVD EXTI interrupt flag is set.

Return value:

- EXTI: PVD Line Status.

__HAL_PWR_PVD_EXTI_CLEAR_FLAG

Description:

- Clear the PVD EXTI interrupt flag.

Return value:

- None

Programmable Voltage Detection levels

PWR_PVDLEVEL_0

PVD threshold around 2.0 V

PWR_PVDLEVEL_1

PVD threshold around 2.2 V

PWR_PVDLEVEL_2

PVD threshold around 2.4 V

PWR_PVDLEVEL_3

PVD threshold around 2.5 V

PWR_PVDLEVEL_4

PVD threshold around 2.6 V

PWR_PVDLEVEL_5

PVD threshold around 2.8 V

PWR_PVDLEVEL_6

PVD threshold around 2.9 V

PWR_PVDLEVEL_7

External input analog voltage (compared internally to VREFINT)

PWR PVD event line

PWR_EVENT_LINE_PVD

Event line 16 Connected to the PVD Event Line

PWR PVD external interrupt line

PWR_EXTI_LINE_PVD

External interrupt line 16 Connected to the PVD EXTI Line

PWR PVD interrupt and event mode

PWR_PVD_MODE_NORMAL

Basic mode is used

PWR_PVD_MODE_IT_RISING

External Interrupt Mode with Rising edge trigger detection

PWR_PVD_MODE_IT_FALLING

External Interrupt Mode with Falling edge trigger detection

PWR_PVD_MODE_IT_RISING_FALLING

External Interrupt Mode with Rising/Falling edge trigger detection

PWR_PVD_MODE_EVENT_RISING

Event Mode with Rising edge trigger detection

PWR_PVD_MODE_EVENT_FALLING

Event Mode with Falling edge trigger detection

PWR_PVD_MODE_EVENT_RISING_FALLING

Event Mode with Rising/Falling edge trigger detection

PWR PVD Mode Mask

PVD_MODE_IT

Mask for interruption yielded by PVD threshold crossing

PVD_MODE_EVT

Mask for event yielded by PVD threshold crossing

PVD_RISING_EDGE

Mask for rising edge set as PVD trigger

PVD_FALLING_EDGE

Mask for falling edge set as PVD trigger

PWR regulator mode

PWR_MAINREGULATOR_ON

Regulator in main mode

PWR_LOWPOWERREGULATOR_ON

Regulator in low-power mode

PWR SLEEP mode entry

PWR_SLEEPENTRY_WFI

Wait For Interruption instruction to enter Sleep mode

PWR_SLEEPENTRY_WFE

Wait For Event instruction to enter Sleep mode

PWR STOP mode entry

PWR_STOPENTRY_WFI

Wait For Interruption instruction to enter Stop mode

PWR_STOPENTRY_WFE

Wait For Event instruction to enter Stop mode

43 HAL PWR Extension Driver

43.1 PWREx Firmware driver registers structures

43.1.1 PWR_PVMTypeDef

PWR_PVMTypeDef is defined in the stm32g4xx_hal_pwr_ex.h

Data Fields

- ***uint32_t PVMType***
- ***uint32_t Mode***

Field Documentation

- ***uint32_t PWR_PVMTypeDef::PVMType***

  PVMType: Specifies which voltage is monitored and against which threshold. This parameter can be a value of ***PWREx_PVM_Type***.
- ***uint32_t PWR_PVMTypeDef::Mode***

  Mode: Specifies the operating mode for the selected pins. This parameter can be a value of ***PWREx_PVM_Mode***.

43.2 PWREx Firmware driver API description

The following section lists the various functions of the PWREx library.

43.2.1 Extended Peripheral Initialization and de-initialization functions

This section contains the following APIs:

- ***HAL_PWREx_GetVoltageRange***
- ***HAL_PWREx_ControlVoltageScaling***
- ***HAL_PWREx_EnableBatteryCharging***
- ***HAL_PWREx_DisableBatteryCharging***
- ***HAL_PWREx_EnableInternalWakeUpLine***
- ***HAL_PWREx_DisableInternalWakeUpLine***
- ***HAL_PWREx_EnableGPIOPullUp***
- ***HAL_PWREx_DisableGPIOPullUp***
- ***HAL_PWREx_EnableGPIOPullDown***
- ***HAL_PWREx_DisableGPIOPullDown***
- ***HAL_PWREx_EnablePullUpPullDownConfig***
- ***HAL_PWREx_DisablePullUpPullDownConfig***
- ***HAL_PWREx_EnableSRAM2ContentRetention***
- ***HAL_PWREx_DisableSRAM2ContentRetention***
- ***HAL_PWREx_EnablePVM1***
- ***HAL_PWREx_DisablePVM1***
- ***HAL_PWREx_EnablePVM2***
- ***HAL_PWREx_DisablePVM2***
- ***HAL_PWREx_EnablePVM3***
- ***HAL_PWREx_DisablePVM3***
- ***HAL_PWREx_EnablePVM4***
- ***HAL_PWREx_DisablePVM4***
- ***HAL_PWREx_ConfigPVM***
- ***HAL_PWREx_EnableLowPowerRunMode***
- ***HAL_PWREx_DisableLowPowerRunMode***

- *HAL_PWREx_EnterSTOP0Mode*
- *HAL_PWREx_EnterSTOP1Mode*
- *HAL_PWREx_EnterSHUTDOWNMode*
- *HAL_PWREx_PVD_PVM_IRQHandler*
- *HAL_PWREx_PVM1Callback*
- *HAL_PWREx_PVM2Callback*
- *HAL_PWREx_PVM3Callback*
- *HAL_PWREx_PVM4Callback*

- *HAL_PWREx_EnableUCPDDeadBattery*
- *HAL_PWREx_DisableUCPDDeadBattery*

43.2.2 Detailed description of functions

HAL_PWREx_GetVoltageRange

Function name

uint32_t HAL_PWREx_GetVoltageRange (void)

Function description

Return Voltage Scaling Range.

Return values

- **VOS:** bit field (PWR_REGULATOR_VOLTAGE_SCALE1 or PWR_REGULATOR_VOLTAGE_SCALE2 or PWR_REGULATOR_VOLTAGE_SCALE1_BOOST when applicable)

HAL_PWREx_ControlVoltageScaling

Function name

HAL_StatusTypeDef HAL_PWREx_ControlVoltageScaling (uint32_t VoltageScaling)

Function description

Configure the main internal regulator output voltage.

Parameters

- **VoltageScaling:** specifies the regulator output voltage to achieve a tradeoff between performance and power consumption. This parameter can be one of the following values:
  - PWR_REGULATOR_VOLTAGE_SCALE1_BOOST when available, Regulator voltage output range 1 boost mode, typical output voltage at 1.28 V, system frequency up to 170 MHz.
  - PWR_REGULATOR_VOLTAGE_SCALE1 Regulator voltage output range 1 mode, typical output voltage at 1.2 V, system frequency up to 150 MHz.
  - PWR_REGULATOR_VOLTAGE_SCALE2 Regulator voltage output range 2 mode, typical output voltage at 1.0 V, system frequency up to 26 MHz.

Return values

- **HAL:** Status

Notes

- When moving from Range 1 to Range 2, the system frequency must be decreased to a value below 26 MHz before calling HAL_PWREx_ControlVoltageScaling() API. When moving from Range 2 to Range 1, the system frequency can be increased to a value up to 150 MHz after calling HAL_PWREx_ControlVoltageScaling() API. When moving from Range 1 to Boost Mode Range 1, the system frequency can be increased to a value up to 170 MHz after calling HAL_PWREx_ControlVoltageScaling() API.
- When moving from Range 2 to Range 1, the API waits for VOSF flag to be cleared before returning the status. If the flag is not cleared within 50 microseconds, HAL_TIMEOUT status is reported.

HAL_PWREx_EnableBatteryCharging

Function name

void HAL_PWREx_EnableBatteryCharging (uint32_t ResistorSelection)

Function description

Enable battery charging.

Parameters

- **ResistorSelection:** specifies the resistor impedance. This parameter can be one of the following values:
  - PWR_BATTERY_CHARGING_RESISTOR_5 5 kOhms resistor
  - PWR_BATTERY_CHARGING_RESISTOR_1_5 1.5 kOhms resistor

Return values

- **None:**

HAL_PWREx_DisableBatteryCharging

Function name

void HAL_PWREx_DisableBatteryCharging (void)

Function description

Disable battery charging.

Return values

- **None:**

HAL_PWREx_EnableInternalWakeUpLine

Function name

void HAL_PWREx_EnableInternalWakeUpLine (void)

Function description

Enable Internal Wake-up Line.

Return values

- **None:**

HAL_PWREx_DisableInternalWakeUpLine

Function name

void HAL_PWREx_DisableInternalWakeUpLine (void)

Function description

Disable Internal Wake-up Line.

Return values

- **None:**

HAL_PWREx_EnableGPIOPullUp

Function name

HAL_StatusTypeDef HAL_PWREx_EnableGPIOPullUp (uint32_t GPIO, uint32_t GPIONumber)

Function description

Enable GPIO pull-up state in Standby and Shutdown modes.

Parameters

- **GPIO:** Specify the IO port. This parameter can be PWR_GPIO_A, ..., PWR_GPIO_G (or PWR_GPIO_I depending on the devices) to select the GPIO peripheral.
- **GPIONumber:** Specify the I/O pins numbers. This parameter can be one of the following values: PWR_GPIO_BIT_0, ..., PWR_GPIO_BIT_15 (except for the port where less I/O pins are available) or the logical OR of several of them to set several bits for a given port in a single API call.

Return values

- **HAL:** Status

Notes

- Set the relevant PUy bits of PWR_PUCRx register to configure the I/O in pull-up state in Standby and Shutdown modes.
- This state is effective in Standby and Shutdown modes only if APC bit is set through HAL_PWREx_EnablePullUpPullDownConfig() API.
- The configuration is lost when exiting the Shutdown mode due to the power-on reset, maintained when exiting the Standby mode.
- To avoid any conflict at Standby and Shutdown modes exits, the corresponding PDy bit of PWR_PDCRx register is cleared unless it is reserved.
- Even if a PUy bit to set is reserved, the other PUy bits entered as input parameter at the same time are set.

HAL_PWREx_DisableGPIOPullUp

Function name

HAL_StatusTypeDef HAL_PWREx_DisableGPIOPullUp (uint32_t GPIO, uint32_t GPIONumber)

Function description

Disable GPIO pull-up state in Standby mode and Shutdown modes.

Parameters

- **GPIO:** Specifies the IO port. This parameter can be PWR_GPIO_A, ..., PWR_GPIO_G (or PWR_GPIO_I depending on the devices) to select the GPIO peripheral.
- **GPIONumber:** Specify the I/O pins numbers. This parameter can be one of the following values: PWR_GPIO_BIT_0, ..., PWR_GPIO_BIT_15 (except for the port where less I/O pins are available) or the logical OR of several of them to reset several bits for a given port in a single API call.

Return values

- **HAL:** Status

Notes

- Reset the relevant PUy bits of PWR_PUCRx register used to configure the I/O in pull-up state in Standby and Shutdown modes.
- Even if a PUy bit to reset is reserved, the other PUy bits entered as input parameter at the same time are reset.

HAL_PWREx_EnableGPIOPullDown

Function name

HAL_StatusTypeDef HAL_PWREx_EnableGPIOPullDown (uint32_t GPIO, uint32_t GPIONumber)

Function description

Enable GPIO pull-down state in Standby and Shutdown modes.

Parameters

- **GPIO:** Specify the IO port. This parameter can be PWR_GPIO_A..PWR_GPIO_G (or PWR_GPIO_I depending on the devices) to select the GPIO peripheral.
- **GPIONumber:** Specify the I/O pins numbers. This parameter can be one of the following values: PWR_GPIO_BIT_0, ..., PWR_GPIO_BIT_15 (except for the port where less I/O pins are available) or the logical OR of several of them to set several bits for a given port in a single API call.

Return values

- **HAL:** Status

Notes

- Set the relevant PDy bits of PWR_PDCRx register to configure the I/O in pull-down state in Standby and Shutdown modes.
- This state is effective in Standby and Shutdown modes only if APC bit is set through HAL_PWREx_EnablePullUpPullDownConfig() API.
- The configuration is lost when exiting the Shutdown mode due to the power-on reset, maintained when exiting the Standby mode.
- To avoid any conflict at Standby and Shutdown modes exits, the corresponding PUy bit of PWR_PUCRx register is cleared unless it is reserved.
- Even if a PDy bit to set is reserved, the other PDy bits entered as input parameter at the same time are set.

HAL_PWREx_DisableGPIOPullDown

Function name

HAL_StatusTypeDef HAL_PWREx_DisableGPIOPullDown (uint32_t GPIO, uint32_t GPIONumber)

Function description

Disable GPIO pull-down state in Standby and Shutdown modes.

Parameters

- **GPIO:** Specifies the IO port. This parameter can be PWR_GPIO_A..PWR_GPIO_G (or PWR_GPIO_I depending on the devices) to select the GPIO peripheral.
- **GPIONumber:** Specify the I/O pins numbers. This parameter can be one of the following values: PWR_GPIO_BIT_0, ..., PWR_GPIO_BIT_15 (except for the port where less I/O pins are available) or the logical OR of several of them to reset several bits for a given port in a single API call.

Return values

- **HAL:** Status

Notes

- Reset the relevant PDy bits of PWR_PDCRx register used to configure the I/O in pull-down state in Standby and Shutdown modes.
- Even if a PDy bit to reset is reserved, the other PDy bits entered as input parameter at the same time are reset.

HAL_PWREx_EnablePullUpPullDownConfig

Function name

void HAL_PWREx_EnablePullUpPullDownConfig (void)

Function description

Enable pull-up and pull-down configuration.

Return values

- **None:**

Notes

- When APC bit is set, the I/O pull-up and pull-down configurations defined in PWR_PUCRx and PWR_PDCRx registers are applied in Standby and Shutdown modes.
- Pull-up set by PUy bit of PWR_PUCRx register is not activated if the corresponding PDy bit of PWR_PDCRx register is also set (pull-down configuration priority is higher). HAL_PWREx_EnableGPIOPullUp() and HAL_PWREx_EnableGPIOPullDown() API's ensure there is no conflict when setting PUy or PDy bit.

HAL_PWREx_DisablePullUpPullDownConfig

Function name

void HAL_PWREx_DisablePullUpPullDownConfig (void)

Function description

Disable pull-up and pull-down configuration.

Return values

- **None:**

Notes

- When APC bit is cleared, the I/O pull-up and pull-down configurations defined in PWR_PUCRx and PWR_PDCRx registers are not applied in Standby and Shutdown modes.

HAL_PWREx_EnableSRAM2ContentRetention

Function name

void HAL_PWREx_EnableSRAM2ContentRetention (void)

Function description

Enable SRAM2 content retention in Standby mode.

Return values

- **None:**

Notes

- When RRS bit is set, SRAM2 is powered by the low-power regulator in Standby mode and its content is kept.

HAL_PWREx_DisableSRAM2ContentRetention

Function name

void HAL_PWREx_DisableSRAM2ContentRetention (void)

Function description

Disable SRAM2 content retention in Standby mode.

Return values

- **None:**

Notes

- When RRS bit is reset, SRAM2 is powered off in Standby mode and its content is lost.

HAL_PWREx_EnablePVM1

Function name

void HAL_PWREx_EnablePVM1 (void)

Function description

Enable the Power Voltage Monitoring 1: VDDA versus FASTCOMP minimum voltage.

Return values

- **None:**

HAL_PWREx_DisablePVM1

Function name

void HAL_PWREx_DisablePVM1 (void)

Function description

Disable the Power Voltage Monitoring 1: VDDA versus FASTCOMP minimum voltage.

Return values

- **None:**

HAL_PWREx_EnablePVM2

Function name

void HAL_PWREx_EnablePVM2 (void)

Function description

Enable the Power Voltage Monitoring 2: VDDA versus FASTDAC minimum voltage.

Return values

- **None:**

HAL_PWREx_DisablePVM2

Function name

void HAL_PWREx_DisablePVM2 (void)

Function description

Disable the Power Voltage Monitoring 2: VDDA versus FASTDAC minimum voltage.

Return values

- **None:**

HAL_PWREx_EnablePVM3

Function name

void HAL_PWREx_EnablePVM3 (void)

Function description

Enable the Power Voltage Monitoring 3: VDDA versus ADC minimum voltage 1.62V.

Return values

- **None:**

HAL_PWREx_DisablePVM3

Function name

void HAL_PWREx_DisablePVM3 (void)

Function description

Disable the Power Voltage Monitoring 3: VDDA versus ADC minimum voltage 1.62V.

Return values

- **None:**

HAL_PWREx_EnablePVM4

Function name

void HAL_PWREx_EnablePVM4 (void)

Function description

Enable the Power Voltage Monitoring 4: VDDA versus OPAMP/DAC minimum voltage 1.8V.

Return values

- **None:**

HAL_PWREx_DisablePVM4

Function name

void HAL_PWREx_DisablePVM4 (void)

Function description

Disable the Power Voltage Monitoring 4: VDDA versus OPAMP/DAC minimum voltage 1.8V.

Return values

- **None:**

HAL_PWREx_ConfigPVM

Function name

HAL_StatusTypeDef HAL_PWREx_ConfigPVM (PWR_PVMTypeDef * sConfigPVM)

Function description

Configure the Peripheral Voltage Monitoring (PVM).

Parameters

- **sConfigPVM:** pointer to a PWR_PVMTypeDef structure that contains the PVM configuration information.

Return values

- **HAL:** status

Notes

- The API configures a single PVM according to the information contained in the input structure. To configure several PVMs, the API must be singly called for each PVM used.
- Refer to the electrical characteristics of your device datasheet for more details about the voltage thresholds corresponding to each detection level and to each monitored supply.

HAL_PWREx_EnableLowPowerRunMode

Function name

void HAL_PWREx_EnableLowPowerRunMode (void)

Function description

Enter Low-power Run mode.

Return values

- **None:**

Notes

- In Low-power Run mode, all I/O pins keep the same state as in Run mode.
- When Regulator is set to PWR_LOWPOWERREGULATOR_ON, the user can optionally configure the Flash in power-down monde in setting the RUN_PD bit in FLASH_ACR register. Additionally, the clock frequency must be reduced below 2 MHz. Setting RUN_PD in FLASH_ACR then appropriately reducing the clock frequency must be done before calling HAL_PWREx_EnableLowPowerRunMode() API.

HAL_PWREx_DisableLowPowerRunMode

Function name

HAL_StatusTypeDef HAL_PWREx_DisableLowPowerRunMode (void)

Function description

Exit Low-power Run mode.

Return values

- **HAL:** Status

Notes

- Before HAL_PWREx_DisableLowPowerRunMode() completion, the function checks that REGLPF has been properly reset (otherwise, HAL_PWREx_DisableLowPowerRunMode returns HAL_TIMEOUT status). The system clock frequency can then be increased above 2 MHz.

HAL_PWREx_EnterSTOP0Mode

Function name

void HAL_PWREx_EnterSTOP0Mode (uint8_t STOPEntry)

Function description

Enter Stop 0 mode.

Parameters

- **STOPEntry:** specifies if Stop mode in entered with WFI or WFE instruction. This parameter can be one of the following values:
  - PWR_STOPENTRY_WFI Enter Stop mode with WFI instruction
  - PWR_STOPENTRY_WFE Enter Stop mode with WFE instruction

Return values

- **None:**

Notes

- In Stop 0 mode, main and low voltage regulators are ON.
- In Stop 0 mode, all I/O pins keep the same state as in Run mode.
- All clocks in the VCORE domain are stopped; the PLL, the HSI and the HSE oscillators are disabled. Some peripherals with the wakeup capability (I2Cx, USARTx and LPUART) can switch on the HSI to receive a frame, and switch off the HSI after receiving the frame if it is not a wakeup frame. In this case, the HSI clock is propagated only to the peripheral requesting it. SRAM1, SRAM2 and register contents are preserved. The BOR is available.
- When exiting Stop 0 mode by issuing an interrupt or a wakeup event, the HSI RC oscillator is selected as system clock if STOPWUCK bit in RCC_CFGR register is set; the HSI oscillator is selected if STOPWUCK is cleared.
- By keeping the internal regulator ON during Stop 0 mode, the consumption is higher although the startup time is reduced.

HAL_PWREx_EnterSTOP1Mode

Function name

void HAL_PWREx_EnterSTOP1Mode (uint8_t STOPEntry)

Function description

Enter Stop 1 mode.

Parameters

- **STOPEntry:** specifies if Stop mode in entered with WFI or WFE instruction. This parameter can be one of the following values:
  - PWR_STOPENTRY_WFI Enter Stop mode with WFI instruction
  - PWR_STOPENTRY_WFE Enter Stop mode with WFE instruction

Return values

- **None:**

Notes

- In Stop 1 mode, only low power voltage regulator is ON.
- In Stop 1 mode, all I/O pins keep the same state as in Run mode.
- All clocks in the VCORE domain are stopped; the PLL, the HSI and the HSE oscillators are disabled. Some peripherals with the wakeup capability (I2Cx, USARTx and LPUART) can switch on the HSI to receive a frame, and switch off the HSI after receiving the frame if it is not a wakeup frame. In this case, the HSI clock is propagated only to the peripheral requesting it. SRAM1, SRAM2 and register contents are preserved. The BOR is available.
- When exiting Stop 1 mode by issuing an interrupt or a wakeup event, the HSI RC oscillator is selected as system clock if STOPWUCK bit in RCC_CFGR register is set.
- Due to low power mode, an additional startup delay is incurred when waking up from Stop 1 mode.

HAL_PWREx_EnterSHUTDOWNMode

Function name

void HAL_PWREx_EnterSHUTDOWNMode (void)

Function description

Enter Shutdown mode.

Return values

- **None:**

Notes

- In Shutdown mode, the PLL, the HSI, the LSI and the HSE oscillators are switched off. The voltage regulator is disabled and Vcore domain is powered off. SRAM1, SRAM2 and registers contents are lost except for registers in the Backup domain. The BOR is not available.
- The I/Os can be configured either with a pull-up or pull-down or can be kept in analog state.

HAL_PWREx_PVD_PVM_IRQHandler

Function name

void HAL_PWREx_PVD_PVM_IRQHandler (void)

Function description

This function handles the PWR PVD/PVMx interrupt request.

Return values

- **None:**

Notes

- This API should be called under the PVD_PVM_IRQHandler().

HAL_PWREx_PVM1Callback

Function name

void HAL_PWREx_PVM1Callback (void)

Function description

PWR PVM1 interrupt callback.

Return values

- **None:**

HAL_PWREx_PVM2Callback

Function name

void HAL_PWREx_PVM2Callback (void)

Function description

PWR PVM2 interrupt callback.

Return values

- **None:**

HAL_PWREx_PVM3Callback

Function name

void HAL_PWREx_PVM3Callback (void)

Function description

PWR PVM3 interrupt callback.

Return values

- **None:**

HAL_PWREx_PVM4Callback

Function name

void HAL_PWREx_PVM4Callback (void)

Function description

PWR PVM4 interrupt callback.

Return values

- **None:**

HAL_PWREx_EnableUCPDStandbyMode

Function name

void HAL_PWREx_EnableUCPDStandbyMode (void)

Function description

Enable UCPD configuration memorization in Standby.

Return values

- **None:**

HAL_PWREx_DisableUCPDStandbyMode

Function name

void HAL_PWREx_DisableUCPDStandbyMode (void)

Function description

Disable UCPD configuration memorization in Standby.

Return values

- **None:**

Notes

- This function must be called on exiting the Standby mode and before any UCPD configuration update.

HAL_PWREx_EnableUCPDDeadBattery

Function name

void HAL_PWREx_EnableUCPDDeadBattery (void)

Function description

Enable the USB Type-C dead battery pull-down behavior on UCPDx_CC1 and UCPDx_CC2 pins.

Return values

- **None:**

HAL_PWREx_DisableUCPDDeadBattery

Function name

void HAL_PWREx_DisableUCPDDeadBattery (void)

Function description

Disable the USB Type-C dead battery pull-down behavior on UCPDx_CC1 and UCPDx_CC2 pins.

Return values

- **None:**

Notes

- After exiting reset, the USB Type-C dead battery behavior will be enabled, which may have a pull-down effect on CC1 and CC2 pins. It is recommended to disable it in all cases, either to stop this pull-down or to hand over control to the UCPD (which should therefore be initialized before doing the disable).

43.3 PWREx Firmware driver defines

The following section lists the various define and macros of the module.

43.3.1 PWREx

PWREx

PWR Extended Exported Macros

__HAL_PWR_PVM1_EXTI_ENABLE_IT

Description:

- Enable the PVM1 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM1_EXTI_DISABLE_IT

Description:

- Disable the PVM1 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM1_EXTI_ENABLE_EVENT

Description:

- Enable the PVM1 Event Line.

Return value:

- None

__HAL_PWR_PVM1_EXTI_DISABLE_EVENT

Description:

- Disable the PVM1 Event Line.

Return value:

- None

__HAL_PWR_PVM1_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the PVM1 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the PVM1 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the PVM1 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the PVM1 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- PVM1 EXTI line configuration: set rising & falling edge trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the PVM1 Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVM1_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Return value:

- None

__HAL_PWR_PVM1_EXTI_GET_FLAG

Description:

- Check whether the specified PVM1 EXTI interrupt flag is set or not.

Return value:

- EXTI: PVM1 Line Status.

__HAL_PWR_PVM1_EXTI_CLEAR_FLAG

Description:

- Clear the PVM1 EXTI flag.

Return value:

- None

__HAL_PWR_PVM2_EXTI_ENABLE_IT

Description:

- Enable the PVM2 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM2_EXTI_DISABLE_IT

Description:

- Disable the PVM2 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM2_EXTI_ENABLE_EVENT

Description:

- Enable the PVM2 Event Line.

Return value:

- None

__HAL_PWR_PVM2_EXTI_DISABLE_EVENT

Description:

- Disable the PVM2 Event Line.

Return value:

- None

__HAL_PWR_PVM2_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the PVM2 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the PVM2 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the PVM2 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the PVM2 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- PVM2 EXTI line configuration: set rising & falling edge trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the PVM2 Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVM2_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Return value:

- None

__HAL_PWR_PVM2_EXTI_GET_FLAG

Description:

- Check whether the specified PVM2 EXTI interrupt flag is set or not.

Return value:

- EXTI: PVM2 Line Status.

__HAL_PWR_PVM2_EXTI_CLEAR_FLAG

Description:

- Clear the PVM2 EXTI flag.

Return value:

- None

__HAL_PWR_PVM3_EXTI_ENABLE_IT

Description:

- Enable the PVM3 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM3_EXTI_DISABLE_IT

Description:

- Disable the PVM3 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM3_EXTI_ENABLE_EVENT

Description:

- Enable the PVM3 Event Line.

Return value:

- None

__HAL_PWR_PVM3_EXTI_DISABLE_EVENT

Description:

- Disable the PVM3 Event Line.

Return value:

- None

__HAL_PWR_PVM3_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the PVM3 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the PVM3 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the PVM3 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the PVM3 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- PVM3 EXTI line configuration: set rising & falling edge trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the PVM3 Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVM3_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Return value:

- None

__HAL_PWR_PVM3_EXTI_GET_FLAG

Description:

- Check whether the specified PVM3 EXTI interrupt flag is set or not.

Return value:

- EXTI: PVM3 Line Status.

__HAL_PWR_PVM3_EXTI_CLEAR_FLAG

Description:

- Clear the PVM3 EXTI flag.

Return value:

- None

__HAL_PWR_PVM4_EXTI_ENABLE_IT

Description:

- Enable the PVM4 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM4_EXTI_DISABLE_IT

Description:

- Disable the PVM4 Extended Interrupt Line.

Return value:

- None

__HAL_PWR_PVM4_EXTI_ENABLE_EVENT

Description:

- Enable the PVM4 Event Line.

Return value:

- None

__HAL_PWR_PVM4_EXTI_DISABLE_EVENT

Description:

- Disable the PVM4 Event Line.

Return value:

- None

__HAL_PWR_PVM4_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the PVM4 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the PVM4 Extended Interrupt Rising Trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the PVM4 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the PVM4 Extended Interrupt Falling Trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- PVM4 EXTI line configuration: set rising & falling edge trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the PVM4 Extended Interrupt Rising & Falling Trigger.

Return value:

- None

__HAL_PWR_PVM4_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on selected EXTI line.

Return value:

- None

__HAL_PWR_PVM4_EXTI_GET_FLAG

Description:

- Check whether or not the specified PVM4 EXTI interrupt flag is set.

Return value:

- EXTI: PVM4 Line Status.

__HAL_PWR_PVM4_EXTI_CLEAR_FLAG

Description:

- Clear the PVM4 EXTI flag.

Return value:

- None

__HAL_PWR_VOLTAGESCALING_CONFIG

Description:

- Configure the main internal regulator output voltage.

Parameters:

- __REGULATOR__: specifies the regulator output voltage to achieve a tradeoff between performance and power consumption. This parameter can be one of the following values:
  - PWR_REGULATOR_VOLTAGE_SCALE1_BOOST Regulator voltage output range 1 mode, typical output voltage at 1.28 V, system frequency up to 170 MHz.
  - PWR_REGULATOR_VOLTAGE_SCALE1 Regulator voltage output range 1 mode, typical output voltage at 1.2 V, system frequency up to 150 MHz.
  - PWR_REGULATOR_VOLTAGE_SCALE2 Regulator voltage output range 2 mode, typical output voltage at 1.0 V, system frequency up to 26 MHz.

Return value:

- None

Notes:

- This macro is similar to HAL_PWREx_ControlVoltageScaling() API but doesn't check whether or not VOSF flag is cleared when moving from range 2 to range 1. User may resort to __HAL_PWR_GET_FLAG() macro to check VOSF bit resetting.

PWR Status Flags

PWR_FLAG_WUF1

Wakeup event on wakeup pin 1

PWR_FLAG_WUF2

Wakeup event on wakeup pin 2

PWR_FLAG_WUF3

Wakeup event on wakeup pin 3

PWR_FLAG_WUF4

Wakeup event on wakeup pin 4

PWR_FLAG_WUF5

Wakeup event on wakeup pin 5

PWR_FLAG_WU

Encompass wakeup event on all wakeup pins

PWR_FLAG_SB

Standby flag

PWR_FLAG_WUFI

Wakeup on internal wakeup line

PWR_FLAG_REGLPS

Low-power regulator start flag

PWR_FLAG_REGLPF

Low-power regulator flag

PWR_FLAG_VOSF

Voltage scaling flag

PWR_FLAG_PVDO

Power Voltage Detector output flag

PWR_FLAG_PVMO1

Power Voltage Monitoring 1 output flag

PWR_FLAG_PVMO2

Power Voltage Monitoring 2 output flag

PWR_FLAG_PVMO3

Power Voltage Monitoring 3 output flag

PWR_FLAG_PVMO4

Power Voltage Monitoring 4 output flag

PWR PVM event lines

PWR_EVENT_LINE_PVM1

Event line 35 Connected to the PVM1 EXTI Line

PWR_EVENT_LINE_PVM2

Event line 36 Connected to the PVM2 EXTI Line

PWR_EVENT_LINE_PVM3

Event line 37 Connected to the PVM3 EXTI Line

PWR_EVENT_LINE_PVM4

Event line 38 Connected to the PVM4 EXTI Line

PWR PVM external interrupts lines

PWR_EXTI_LINE_PVM1

External interrupt line 35 Connected to the PVM1 EXTI Line

PWR_EXTI_LINE_PVM2

External interrupt line 36 Connected to the PVM2 EXTI Line

PWR_EXTI_LINE_PVM3

External interrupt line 37 Connected to the PVM3 EXTI Line

PWR_EXTI_LINE_PVM4

External interrupt line 38 Connected to the PVM4 EXTI Line

PWR PVM interrupt and event mode

PWR_PVM_MODE_NORMAL

basic mode is used

PWR_PVM_MODE_IT_RISING

External Interrupt Mode with Rising edge trigger detection

PWR_PVM_MODE_IT_FALLING

External Interrupt Mode with Falling edge trigger detection

PWR_PVM_MODE_IT_RISING_FALLING

External Interrupt Mode with Rising/Falling edge trigger detection

PWR_PVM_MODE_EVENT_RISING

Event Mode with Rising edge trigger detection

PWR_PVM_MODE_EVENT_FALLING

Event Mode with Falling edge trigger detection

PWR_PVM_MODE_EVENT_RISING_FALLING

Event Mode with Rising/Falling edge trigger detection

PWR PVM Mode Mask

PVM_MODE_IT

Mask for interruption yielded by PVM threshold crossing

PVM_MODE_EVT

Mask for event yielded by PVM threshold crossing

PVM_RISING_EDGE

Mask for rising edge set as PVM trigger

PVM_FALLING_EDGE

Mask for falling edge set as PVM trigger

Peripheral Voltage Monitoring type

PWR_PVM_1

Peripheral Voltage Monitoring 1 enable: VDDUSB versus 1.2 V (applicable when USB feature is supported)

PWR_PVM_2

Peripheral Voltage Monitoring 2 enable: VDDIO2 versus 0.9 V (applicable when VDDIO2 is present on device)

PWR_PVM_3

Peripheral Voltage Monitoring 3 enable: VDDA versus 1.62 V

PWR_PVM_4

Peripheral Voltage Monitoring 4 enable: VDDA versus 2.2 V

PWR Regulator voltage scale

PWR_REGULATOR_VOLTAGE_SCALE1_BOOST

Voltage scaling range 1 boost mode

PWR_REGULATOR_VOLTAGE_SCALE1

Voltage scaling range 1 normal mode

PWR_REGULATOR_VOLTAGE_SCALE2

Voltage scaling range 2

PWR Extended Flag Setting Time Out Value

PWR_FLAG_SETTING_DELAY_US

Time out value for REGLPF and VOSF flags setting

PWR battery charging

PWR_BATTERY_CHARGING_DISABLE

PWR_BATTERY_CHARGING_ENABLE

PWR battery charging resistor selection

PWR_BATTERY_CHARGING_RESISTOR_5

VBAT charging through a 5 kOhms resistor

PWR_BATTERY_CHARGING_RESISTOR_1_5

VBAT charging through a 1.5 kOhms resistor

PWR wake-up pins

PWR_WAKEUP_PIN1

Wakeup pin 1 (with high level polarity)

PWR_WAKEUP_PIN2

Wakeup pin 2 (with high level polarity)

PWR_WAKEUP_PIN3

Wakeup pin 3 (with high level polarity)

PWR_WAKEUP_PIN4

Wakeup pin 4 (with high level polarity)

PWR_WAKEUP_PIN5

Wakeup pin 5 (with high level polarity)

PWR_WAKEUP_PIN1_HIGH

Wakeup pin 1 (with high level polarity)

PWR_WAKEUP_PIN2_HIGH

Wakeup pin 2 (with high level polarity)

PWR_WAKEUP_PIN3_HIGH

Wakeup pin 3 (with high level polarity)

PWR_WAKEUP_PIN4_HIGH

Wakeup pin 4 (with high level polarity)

PWR_WAKEUP_PIN5_HIGH

Wakeup pin 5 (with high level polarity)

PWR_WAKEUP_PIN1_LOW

Wakeup pin 1 (with low level polarity)

PWR_WAKEUP_PIN2_LOW

Wakeup pin 2 (with low level polarity)

PWR_WAKEUP_PIN3_LOW

Wakeup pin 3 (with low level polarity)

PWR_WAKEUP_PIN4_LOW

Wakeup pin 4 (with low level polarity)

PWR_WAKEUP_PIN5_LOW

Wakeup pin 5 (with low level polarity)

Shift to apply to retrieve polarity information from PWR_WAKEUP_PINy_xxx constants

PWR_WUP_POLARITY_SHIFT

Internal constant used to retrieve wakeup pin polariry

44 HAL QSPI Generic Driver

44.1 QSPI Firmware driver registers structures

44.1.1 QSPI_InitTypeDef

QSPI_InitTypeDef is defined in the stm32g4xx_hal_qspi.h

Data Fields

- ***uint32_t ClockPrescaler***
- ***uint32_t FifoThreshold***
- ***uint32_t SampleShifting***
- ***uint32_t FlashSize***
- ***uint32_t ChipSelectHighTime***
- ***uint32_t ClockMode***
- ***uint32_t FlashID***
- ***uint32_t DualFlash***

Field Documentation

- *uint32_t QSPI_HandleTypeDef::Timeout*

44.1.3 QSPI_CommandTypeDef

QSPI_CommandTypeDef is defined in the stm32g4xx_hal_qspi.h

Data Fields

- *uint32_t Instruction*
- *uint32_t Address*
- *uint32_t AlternateBytes*
- *uint32_t AddressSize*
- *uint32_t AlternateBytesSize*
- *uint32_t DummyCycles*
- *uint32_t InstructionMode*
- *uint32_t AddressMode*
- *uint32_t AlternateByteMode*
- *uint32_t DataMode*
- *uint32_t NbData*
- *uint32_t DdrMode*
- *uint32_t DdrHoldHalfCycle*
- *uint32_t SIOOMode*

Field Documentation

- *uint32_t QSPI_CommandTypeDef::Instruction*
- *uint32_t QSPI_CommandTypeDef::Address*
- *uint32_t QSPI_CommandTypeDef::AlternateBytes*
- *uint32_t QSPI_CommandTypeDef::AddressSize*
- *uint32_t QSPI_CommandTypeDef::AlternateBytesSize*
- *uint32_t QSPI_CommandTypeDef::DummyCycles*
- *uint32_t QSPI_CommandTypeDef::InstructionMode*
- *uint32_t QSPI_CommandTypeDef::AddressMode*
- *uint32_t QSPI_CommandTypeDef::AlternateByteMode*
- *uint32_t QSPI_CommandTypeDef::DataMode*
- *uint32_t QSPI_CommandTypeDef::NbData*
- *uint32_t QSPI_CommandTypeDef::DdrMode*
- *uint32_t QSPI_CommandTypeDef::DdrHoldHalfCycle*
- *uint32_t QSPI_CommandTypeDef::SIOOMode*

44.1.4 QSPI_AutoPollingTypeDef

QSPI_AutoPollingTypeDef is defined in the stm32g4xx_hal_qspi.h

Data Fields

- ***uint32_t Match***
- ***uint32_t Mask***
- ***uint32_t Interval***
- ***uint32_t StatusBytesSize***
- ***uint32_t MatchMode***
- ***uint32_t AutomaticStop***

Field Documentation

- ***uint32_t QSPI_AutoPollingTypeDef::Match***
- ***uint32_t QSPI_AutoPollingTypeDef::Mask***
- ***uint32_t QSPI_AutoPollingTypeDef::Interval***
- ***uint32_t QSPI_AutoPollingTypeDef::StatusBytesSize***
- ***uint32_t QSPI_AutoPollingTypeDef::MatchMode***
- ***uint32_t QSPI_AutoPollingTypeDef::AutomaticStop***

44.1.5 QSPI_MemoryMappedTypeDef

QSPI_MemoryMappedTypeDef is defined in the stm32g4xx_hal_qspi.h

Data Fields

- ***uint32_t TimeOutPeriod***
- ***uint32_t TimeOutActivation***

Field Documentation

- ***uint32_t QSPI_MemoryMappedTypeDef::TimeOutPeriod***
- ***uint32_t QSPI_MemoryMappedTypeDef::TimeOutActivation***

44.2 QSPI Firmware driver API description

The following section lists the various functions of the QSPI library.

44.2.1 How to use this driver

Initialization

1. As prerequisite, fill in the HAL_QSPI_MspInit() :
   - Enable QuadSPI clock interface with __HAL_RCC_QSPI_CLK_ENABLE().
   - Reset QuadSPI Peripheral with __HAL_RCC_QSPI_FORCE_RESET() and __HAL_RCC_QSPI_RELEASE_RESET().
   - Enable the clocks for the QuadSPI GPIOS with __HAL_RCC_GPIOx_CLK_ENABLE().
   - Configure these QuadSPI pins in alternate mode using HAL_GPIO_Init().
   - If interrupt mode is used, enable and configure QuadSPI global interrupt with HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ().
   - If DMA mode is used, enable the clocks for the QuadSPI DMA channel with __HAL_RCC_DMAx_CLK_ENABLE(), configure DMA with HAL_DMA_Init(), link it with QuadSPI handle using __HAL_LINKDMA(), enable and configure DMA channel global interrupt with HAL_NVIC_SetPriority() and HAL_NVIC_EnableIRQ().
2. Configure the flash size, the clock prescaler, the fifo threshold, the clock mode, the sample shifting and the CS high time using the HAL_QSPI_Init() function.

Indirect functional mode

1. Configure the command sequence using the HAL_QSPI_Command() or HAL_QSPI_Command_IT() functions :
   - Instruction phase : the mode used and if present the instruction opcode.
   - Address phase : the mode used and if present the size and the address value.
   - Alternate-bytes phase : the mode used and if present the size and the alternate bytes values.
   - Dummy-cycles phase : the number of dummy cycles (mode used is same as data phase).
   - Data phase : the mode used and if present the number of bytes.
   - Double Data Rate (DDR) mode : the activation (or not) of this mode and the delay if activated.
   - Sending Instruction Only Once (SIOO) mode : the activation (or not) of this mode.
2. If no data is required for the command, it is sent directly to the memory :
   - In polling mode, the output of the function is done when the transfer is complete.
   - In interrupt mode, HAL_QSPI_CmdCpltCallback() will be called when the transfer is complete.
3. For the indirect write mode, use HAL_QSPI_Transmit(), HAL_QSPI_Transmit_DMA() or HAL_QSPI_Transmit_IT() after the command configuration :
   - In polling mode, the output of the function is done when the transfer is complete.
   - In interrupt mode, HAL_QSPI_FifoThresholdCallback() will be called when the fifo threshold is reached and HAL_QSPI_TxCpltCallback() will be called when the transfer is complete.
   - In DMA mode, HAL_QSPI_TxHalfCpltCallback() will be called at the half transfer and HAL_QSPI_TxCpltCallback() will be called when the transfer is complete.
4. For the indirect read mode, use HAL_QSPI_Receive(), HAL_QSPI_Receive_DMA() or HAL_QSPI_Receive_IT() after the command configuration :
   - In polling mode, the output of the function is done when the transfer is complete.
   - In interrupt mode, HAL_QSPI_FifoThresholdCallback() will be called when the fifo threshold is reached and HAL_QSPI_RxCpltCallback() will be called when the transfer is complete.
   - In DMA mode, HAL_QSPI_RxHalfCpltCallback() will be called at the half transfer and HAL_QSPI_RxCpltCallback() will be called when the transfer is complete.

Auto-polling functional mode

1. Configure the command sequence and the auto-polling functional mode using the HAL_QSPI_AutoPolling() or HAL_QSPI_AutoPolling_IT() functions :
   - Instruction phase : the mode used and if present the instruction opcode.
   - Address phase : the mode used and if present the size and the address value.
   - Alternate-bytes phase : the mode used and if present the size and the alternate bytes values.
   - Dummy-cycles phase : the number of dummy cycles (mode used is same as data phase).
   - Data phase : the mode used.
   - Double Data Rate (DDR) mode : the activation (or not) of this mode and the delay if activated.
   - Sending Instruction Only Once (SIOO) mode : the activation (or not) of this mode.
   - The size of the status bytes, the match value, the mask used, the match mode (OR/AND), the polling interval and the automatic stop activation.
2. After the configuration :
   - In polling mode, the output of the function is done when the status match is reached. The automatic stop is activated to avoid an infinite loop.
   - In interrupt mode, HAL_QSPI_StatusMatchCallback() will be called each time the status match is reached.

Memory-mapped functional mode

1. Configure the command sequence and the memory-mapped functional mode using the HAL_QSPI_MemoryMapped() functions :
   – Instruction phase : the mode used and if present the instruction opcode.
   – Address phase : the mode used and the size.
   – Alternate-bytes phase : the mode used and if present the size and the alternate bytes values.
   – Dummy-cycles phase : the number of dummy cycles (mode used is same as data phase).
   – Data phase : the mode used.
   – Double Data Rate (DDR) mode : the activation (or not) of this mode and the delay if activated.
   – Sending Instruction Only Once (SIOO) mode : the activation (or not) of this mode.
   – The timeout activation and the timeout period.
2. After the configuration, the QuadSPI will be used as soon as an access on the AHB is done on the address range. HAL_QSPI_TimeOutCallback() will be called when the timeout expires.

Errors management and abort functionality

1. HAL_QSPI_GetError() function gives the error raised during the last operation.
2. HAL_QSPI_Abort() and HAL_QSPI_AbortIT() functions aborts any on-going operation and flushes the fifo :
   – In polling mode, the output of the function is done when the transfer complete bit is set and the busy bit cleared.
   – In interrupt mode, HAL_QSPI_AbortCpltCallback() will be called when the transfer complete bit is set.

Control functions

1. HAL_QSPI_GetState() function gives the current state of the HAL QuadSPI driver.
2. HAL_QSPI_SetTimeout() function configures the timeout value used in the driver.
3. HAL_QSPI_SetFifoThreshold() function configures the threshold on the Fifo of the QSPI IP.
4. HAL_QSPI_GetFifoThreshold() function gives the current of the Fifo's threshold
5. HAL_QSPI_SetFlashID() function configures the index of the flash memory to be accessed.

Callback registration

The compilation define USE_HAL_QSPI_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_QSPI_RegisterCallback() to register a user callback, it allows to register following callbacks:

- ErrorCallback : callback when error occurs.
- AbortCpltCallback : callback when abort is completed.
- FifoThresholdCallback : callback when the fifo threshold is reached.
- CmdCpltCallback : callback when a command without data is completed.
- RxCpltCallback : callback when a reception transfer is completed.
- TxCpltCallback : callback when a transmission transfer is completed.
- RxHalfCpltCallback : callback when half of the reception transfer is completed.
- TxHalfCpltCallback : callback when half of the transmission transfer is completed.
- StatusMatchCallback : callback when a status match occurs.
- TimeOutCallback : callback when the timeout perioed expires.
- MspInitCallback : QSPI MspInit.
- MspDeInitCallback : QSPI MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function. Use function @ref HAL_QSPI_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
- ErrorCallback : callback when error occurs.
- AbortCpltCallback : callback when abort is completed.
- FifoThresholdCallback : callback when the fifo threshold is reached.

- CmdCpltCallback : callback when a command without data is completed.
- RxCpltCallback : callback when a reception transfer is completed.
- TxCpltCallback : callback when a transmission transfer is completed.
- RxHalfCpltCallback : callback when half of the reception transfer is completed.
- TxHalfCpltCallback : callback when half of the transmission transfer is completed.
- StatusMatchCallback : callback when a status match occurs.
- TimeOutCallback : callback when the timeout perioed expires.
- MspInitCallback : QSPI MspInit.
- MspDeInitCallback : QSPI MspDeInit. This function) takes as parameters the HAL peripheral handle and the Callback ID. By default, after the @ref HAL_QSPI_Init and if the state is HAL_QSPI_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_QSPI_Init and @ref HAL_QSPI_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_QSPI_Init and @ref HAL_QSPI_DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand) Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_QSPI_RegisterCallback before calling @ref HAL_QSPI_DeInit or @ref HAL_QSPI_Init function. When The compilation define USE_HAL_QSPI_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

Workarounds linked to Silicon Limitation

1. Workarounds Implemented inside HAL Driver
   – Extra data written in the FIFO at the end of a read transfer

44.2.2 Initialization and Configuration functions

This subsection provides a set of functions allowing to :

- Initialize the QuadSPI.
- De-initialize the QuadSPI.

This section contains the following APIs:

- ***HAL_QSPI_Init***
- ***HAL_QSPI_DeInit***
- ***HAL_QSPI_MspInit***
- ***HAL_QSPI_MspDeInit***

44.2.3 IO operation functions

This subsection provides a set of functions allowing to :

- Handle the interrupts.
- Handle the command sequence.
- Transmit data in blocking, interrupt or DMA mode.
- Receive data in blocking, interrupt or DMA mode.
- Manage the auto-polling functional mode.
- Manage the memory-mapped functional mode.

This section contains the following APIs:

- ***HAL_QSPI_IRQHandler***
- ***HAL_QSPI_Command***
- ***HAL_QSPI_Command_IT***
- ***HAL_QSPI_Transmit***
- ***HAL_QSPI_Receive***
- ***HAL_QSPI_Transmit_IT***
- ***HAL_QSPI_Receive_IT***

- *HAL_QSPI_Transmit_DMA*
- *HAL_QSPI_Receive_DMA*
- *HAL_QSPI_AutoPolling*
- *HAL_QSPI_AutoPolling_IT*
- *HAL_QSPI_MemoryMapped*
- *HAL_QSPI_ErrorCallback*
- *HAL_QSPI_AbortCpltCallback*
- *HAL_QSPI_CmdCpltCallback*
- *HAL_QSPI_RxCpltCallback*
- *HAL_QSPI_TxCpltCallback*
- *HAL_QSPI_RxHalfCpltCallback*
- *HAL_QSPI_TxHalfCpltCallback*
- *HAL_QSPI_FifoThresholdCallback*
- *HAL_QSPI_StatusMatchCallback*
- *HAL_QSPI_TimeOutCallback*

44.2.4 Peripheral Control and State functions

This subsection provides a set of functions allowing to :

- Check in run-time the state of the driver.
- Check the error code set during last operation.
- Abort any operation.

This section contains the following APIs:

- *HAL_QSPI_GetState*
- *HAL_QSPI_GetError*
- *HAL_QSPI_Abort*
- *HAL_QSPI_Abort_IT*
- *HAL_QSPI_SetTimeout*
- *HAL_QSPI_SetFifoThreshold*
- *HAL_QSPI_GetFifoThreshold*
- *HAL_QSPI_SetFlashID*

44.2.5 Detailed description of functions

HAL_QSPI_Init

Function name

HAL_StatusTypeDef HAL_QSPI_Init (QSPI_HandleTypeDef * hqspi)

Function description

Initialize the QSPI mode according to the specified parameters in the QSPI_InitTypeDef and initialize the associated handle.

Parameters

- **hqspi:** : QSPI handle

Return values

- **HAL:** status

HAL_QSPI_DeInit

Function name

HAL_StatusTypeDef HAL_QSPI_DeInit (QSPI_HandleTypeDef * hqspi)

Function description

De-Initialize the QSPI peripheral.

Parameters

- **hqspi:** : QSPI handle

Return values

- **HAL:** status

HAL_QSPI_MspInit

Function name

void HAL_QSPI_MspInit (QSPI_HandleTypeDef * hqspi)

Function description

Initialize the QSPI MSP.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_MspDeInit

Function name

void HAL_QSPI_MspDeInit (QSPI_HandleTypeDef * hqspi)

Function description

DeInitialize the QSPI MSP.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_IRQHandler

Function name

void HAL_QSPI_IRQHandler (QSPI_HandleTypeDef * hqspi)

Function description

Handle QSPI interrupt request.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_Command

Function name

HAL_StatusTypeDef HAL_QSPI_Command (QSPI_HandleTypeDef * hqspi, QSPI_CommandTypeDef * cmd, uint32_t Timeout)

Function description

Set the command configuration.

Parameters

- **hqspi:** : QSPI handle
- **cmd:** : structure that contains the command configuration information
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read or Write Modes

HAL_QSPI_Transmit

Function name

HAL_StatusTypeDef HAL_QSPI_Transmit (QSPI_HandleTypeDef * hqspi, uint8_t * pData, uint32_t Timeout)

Function description

Transmit an amount of data in blocking mode.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode

HAL_QSPI_Receive

Function name

HAL_StatusTypeDef HAL_QSPI_Receive (QSPI_HandleTypeDef * hqspi, uint8_t * pData, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode

HAL_QSPI_Command_IT

Function name

HAL_StatusTypeDef HAL_QSPI_Command_IT (QSPI_HandleTypeDef * hqspi, QSPI_CommandTypeDef * cmd)

Function description

Set the command configuration in interrupt mode.

Parameters

- **hqspi:** : QSPI handle
- **cmd:** : structure that contains the command configuration information

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read or Write Modes

HAL_QSPI_Transmit_IT

Function name

HAL_StatusTypeDef HAL_QSPI_Transmit_IT (QSPI_HandleTypeDef * hqspi, uint8_t * pData)

Function description

Send an amount of data in non-blocking mode with interrupt.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode

HAL_QSPI_Receive_IT

Function name

HAL_StatusTypeDef HAL_QSPI_Receive_IT (QSPI_HandleTypeDef * hqspi, uint8_t * pData)

Function description

Receive an amount of data in non-blocking mode with interrupt.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode

HAL_QSPI_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_QSPI_Transmit_DMA (QSPI_HandleTypeDef * hqspi, uint8_t * pData)

Function description

Send an amount of data in non-blocking mode with DMA.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Write Mode
- If DMA peripheral access is configured as halfword, the number of data and the fifo threshold should be aligned on halfword
- If DMA peripheral access is configured as word, the number of data and the fifo threshold should be aligned on word

HAL_QSPI_Receive_DMA

Function name

HAL_StatusTypeDef HAL_QSPI_Receive_DMA (QSPI_HandleTypeDef * hqspi, uint8_t * pData)

Function description

Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hqspi:** : QSPI handle
- **pData:** : pointer to data buffer.

Return values

- **HAL:** status

Notes

- This function is used only in Indirect Read Mode
- If DMA peripheral access is configured as halfword, the number of data and the fifo threshold should be aligned on halfword
- If DMA peripheral access is configured as word, the number of data and the fifo threshold should be aligned on word

HAL_QSPI_AutoPolling

Function name

HAL_StatusTypeDef HAL_QSPI_AutoPolling (QSPI_HandleTypeDef * hqspi, QSPI_CommandTypeDef * cmd, QSPI_AutoPollingTypeDef * cfg, uint32_t Timeout)

Function description

Configure the QSPI Automatic Polling Mode in blocking mode.

Parameters

- **hqspi:** : QSPI handle
- **cmd:** : structure that contains the command configuration information.
- **cfg:** : structure that contains the polling configuration information.
- **Timeout:** : Timeout duration

Return values

- **HAL:** status

Notes

- This function is used only in Automatic Polling Mode

HAL_QSPI_AutoPolling_IT

Function name

HAL_StatusTypeDef HAL_QSPI_AutoPolling_IT (QSPI_HandleTypeDef * hqspi, QSPI_CommandTypeDef * cmd, QSPI_AutoPollingTypeDef * cfg)

Function description

Configure the QSPI Automatic Polling Mode in non-blocking mode.

Parameters

- **hqspi:** : QSPI handle
- **cmd:** : structure that contains the command configuration information.
- **cfg:** : structure that contains the polling configuration information.

Return values

- **HAL:** status

Notes

- This function is used only in Automatic Polling Mode

HAL_QSPI_MemoryMapped

Function name

HAL_StatusTypeDef HAL_QSPI_MemoryMapped (QSPI_HandleTypeDef * hqspi, QSPI_CommandTypeDef * cmd, QSPI_MemoryMappedTypeDef * cfg)

Function description

Configure the Memory Mapped mode.

Parameters

- **hqspi:** : QSPI handle
- **cmd:** : structure that contains the command configuration information.
- **cfg:** : structure that contains the memory mapped configuration information.

Return values

- **HAL:** status

Notes

- This function is used only in Memory mapped Mode

HAL_QSPI_ErrorCallback

Function name

void HAL_QSPI_ErrorCallback (QSPI_HandleTypeDef * hqspi)

Function description

Transfer Error callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_AbortCpltCallback

Function name

void HAL_QSPI_AbortCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Abort completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_FifoThresholdCallback

Function name

void HAL_QSPI_FifoThresholdCallback (QSPI_HandleTypeDef * hqspi)

Function description

FIFO Threshold callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_CmdCpltCallback

Function name

void HAL_QSPI_CmdCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Command completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_RxCpltCallback

Function name

void HAL_QSPI_RxCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Rx Transfer completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_TxCpltCallback

Function name

void HAL_QSPI_TxCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Tx Transfer completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_RxHalfCpltCallback

Function name

void HAL_QSPI_RxHalfCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Rx Half Transfer completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_TxHalfCpltCallback

Function name

void HAL_QSPI_TxHalfCpltCallback (QSPI_HandleTypeDef * hqspi)

Function description

Tx Half Transfer completed callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_StatusMatchCallback

Function name

void HAL_QSPI_StatusMatchCallback (QSPI_HandleTypeDef * hqspi)

Function description

Status Match callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_TimeOutCallback

Function name

void HAL_QSPI_TimeOutCallback (QSPI_HandleTypeDef * hqspi)

Function description

Timeout callback.

Parameters

- **hqspi:** : QSPI handle

Return values

- **None:**

HAL_QSPI_GetState

Function name

HAL_QSPI_StateTypeDef HAL_QSPI_GetState (QSPI_HandleTypeDef * hqspi)

Function description

Return the QSPI handle state.

Parameters

- **hqspi:** : QSPI handle

Return values

- **HAL:** state

HAL_QSPI_GetError

Function name

uint32_t HAL_QSPI_GetError (QSPI_HandleTypeDef * hqspi)

Function description

Return the QSPI error code.

Parameters

- **hqspi:** : QSPI handle

Return values

- **QSPI:** Error Code

HAL_QSPI_Abort

Function name

HAL_StatusTypeDef HAL_QSPI_Abort (QSPI_HandleTypeDef * hqspi)

Function description

Abort the current transmission.

Parameters

- **hqspi:** : QSPI handle

Return values

- **HAL:** status

HAL_QSPI_Abort_IT

Function name

HAL_StatusTypeDef HAL_QSPI_Abort_IT (QSPI_HandleTypeDef * hqspi)

Function description

Abort the current transmission (non-blocking function)

Parameters

- **hqspi:** : QSPI handle

Return values

- **HAL:** status

HAL_QSPI_SetTimeout

Function name

void HAL_QSPI_SetTimeout (QSPI_HandleTypeDef * hqspi, uint32_t Timeout)

Function description

Set QSPI timeout.

Parameters

- **hqspi:** : QSPI handle.
- **Timeout:** : Timeout for the QSPI memory access.

Return values

- **None:**

HAL_QSPI_SetFifoThreshold

Function name

HAL_StatusTypeDef HAL_QSPI_SetFifoThreshold (QSPI_HandleTypeDef * hqspi, uint32_t Threshold)

Function description

Set QSPI Fifo threshold.

Parameters

- **hqspi:** : QSPI handle.
- **Threshold:** : Threshold of the Fifo (value between 1 and 16).

Return values

- **HAL:** status

HAL_QSPI_GetFifoThreshold

Function name

uint32_t HAL_QSPI_GetFifoThreshold (QSPI_HandleTypeDef * hqspi)

Function description

Get QSPI Fifo threshold.

Parameters

- **hqspi:** : QSPI handle.

Return values

- **Fifo:** threshold (value between 1 and 16)

HAL_QSPI_SetFlashID

Function name

HAL_StatusTypeDef HAL_QSPI_SetFlashID (QSPI_HandleTypeDef * hqspi, uint32_t FlashID)

Function description

Set FlashID.

Parameters

- **hqspi:** : QSPI handle.
- **FlashID:** : Index of the flash memory to be accessed. This parameter can be a value of QSPI Flash Select.

Return values

- **HAL:** status

Notes

- The FlashID is ignored when dual flash mode is enabled.

44.3 QSPI Firmware driver defines

The following section lists the various define and macros of the module.

44.3.1 QSPI

QSPI

QSPI Address Mode

QSPI_ADDRESS_NONE

No address

QSPI_ADDRESS_1_LINE

Address on a single line

QSPI_ADDRESS_2_LINES

Address on two lines

QSPI_ADDRESS_4_LINES

Address on four lines

QSPI Address Size

QSPI_ADDRESS_8_BITS

8-bit address

QSPI_ADDRESS_16_BITS

16-bit address

QSPI_ADDRESS_24_BITS

24-bit address

QSPI_ADDRESS_32_BITS

32-bit address

QSPI Alternate Bytes Mode

QSPI_ALTERNATE_BYTES_NONE

No alternate bytes

QSPI_ALTERNATE_BYTES_1_LINE

Alternate bytes on a single line

QSPI_ALTERNATE_BYTES_2_LINES

Alternate bytes on two lines

QSPI_ALTERNATE_BYTES_4_LINES

Alternate bytes on four lines

QSPI Alternate Bytes Size

QSPI_ALTERNATE_BYTES_8_BITS

8-bit alternate bytes

QSPI_ALTERNATE_BYTES_16_BITS

16-bit alternate bytes

QSPI_ALTERNATE_BYTES_24_BITS

24-bit alternate bytes

QSPI_ALTERNATE_BYTES_32_BITS

32-bit alternate bytes

QSPI Automatic Stop

QSPI_AUTOMATIC_STOP_DISABLE

AutoPolling stops only with abort or QSPI disabling

QSPI_AUTOMATIC_STOP_ENABLE

AutoPolling stops as soon as there is a match

QSPI ChipSelect High Time

QSPI_CS_HIGH_TIME_1_CYCLE

nCS stay high for at least 1 clock cycle between commands

QSPI_CS_HIGH_TIME_2_CYCLE

nCS stay high for at least 2 clock cycles between commands

QSPI_CS_HIGH_TIME_3_CYCLE

nCS stay high for at least 3 clock cycles between commands

QSPI_CS_HIGH_TIME_4_CYCLE

nCS stay high for at least 4 clock cycles between commands

QSPI_CS_HIGH_TIME_5_CYCLE

nCS stay high for at least 5 clock cycles between commands

QSPI_CS_HIGH_TIME_6_CYCLE

nCS stay high for at least 6 clock cycles between commands

QSPI_CS_HIGH_TIME_7_CYCLE

nCS stay high for at least 7 clock cycles between commands

QSPI_CS_HIGH_TIME_8_CYCLE

nCS stay high for at least 8 clock cycles between commands

QSPI Clock Mode

QSPI_CLOCK_MODE_0

Clk stays low while nCS is released

QSPI_CLOCK_MODE_3

Clk goes high while nCS is released

QSPI Data Mode

QSPI_DATA_NONE

No data

QSPI_DATA_1_LINE

Data on a single line

QSPI_DATA_2_LINES

Data on two lines

QSPI_DATA_4_LINES

Data on four lines

QSPI DDR Data Output Delay

QSPI_DDR_HHC_ANALOG_DELAY

Delay the data output using analog delay in DDR mode

QSPI_DDR_HHC_HALF_CLK_DELAY

Delay the data output by one quarter of QUADSPI output clock in DDR mode

QSPI DDR Mode

QSPI_DDR_MODE_DISABLE

Double data rate mode disabled

QSPI_DDR_MODE_ENABLE

Double data rate mode enabled

QSPI Dual Flash Mode

QSPI_DUALFLASH_ENABLE

Dual-flash mode enabled

QSPI_DUALFLASH_DISABLE

Dual-flash mode disabled

QSPI Error Code

HAL_QSPI_ERROR_NONE

No error

HAL_QSPI_ERROR_TIMEOUT

Timeout error

HAL_QSPI_ERROR_TRANSFER

Transfer error

HAL_QSPI_ERROR_DMA

DMA transfer error

HAL_QSPI_ERROR_INVALID_PARAM

Invalid parameters error

QSPI Exported Macros

__HAL_QSPI_RESET_HANDLE_STATE

Description:

- Reset QSPI handle state.

Parameters:

- __HANDLE__: : QSPI handle.

Return value:

- None

__HAL_QSPI_ENABLE

Description:

- Enable the QSPI peripheral.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.

Return value:

- None

__HAL_QSPI_DISABLE

Description:

- Disable the QSPI peripheral.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.

Return value:

- None

__HAL_QSPI_ENABLE_IT

Description:

- Enable the specified QSPI interrupt.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.
- __INTERRUPT__: : specifies the QSPI interrupt source to enable. This parameter can be one of the following values:
  - QSPI_IT_TO: QSPI Timeout interrupt
  - QSPI_IT_SM: QSPI Status match interrupt
  - QSPI_IT_FT: QSPI FIFO threshold interrupt
  - QSPI_IT_TC: QSPI Transfer complete interrupt
  - QSPI_IT_TE: QSPI Transfer error interrupt

Return value:

- None

__HAL_QSPI_DISABLE_IT

Description:

- Disable the specified QSPI interrupt.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.
- __INTERRUPT__: : specifies the QSPI interrupt source to disable. This parameter can be one of the following values:
  - QSPI_IT_TO: QSPI Timeout interrupt
  - QSPI_IT_SM: QSPI Status match interrupt
  - QSPI_IT_FT: QSPI FIFO threshold interrupt
  - QSPI_IT_TC: QSPI Transfer complete interrupt
  - QSPI_IT_TE: QSPI Transfer error interrupt

Return value:

- None

__HAL_QSPI_GET_IT_SOURCE

Description:

- Check whether the specified QSPI interrupt source is enabled or not.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.
- __INTERRUPT__: : specifies the QSPI interrupt source to check. This parameter can be one of the following values:
  - QSPI_IT_TO: QSPI Timeout interrupt
  - QSPI_IT_SM: QSPI Status match interrupt
  - QSPI_IT_FT: QSPI FIFO threshold interrupt
  - QSPI_IT_TC: QSPI Transfer complete interrupt
  - QSPI_IT_TE: QSPI Transfer error interrupt

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_QSPI_GET_FLAG

Description:

- Check whether the selected QSPI flag is set or not.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.
- __FLAG__: : specifies the QSPI flag to check. This parameter can be one of the following values:
  - QSPI_FLAG_BUSY: QSPI Busy flag
  - QSPI_FLAG_TO: QSPI Timeout flag
  - QSPI_FLAG_SM: QSPI Status match flag
  - QSPI_FLAG_FT: QSPI FIFO threshold flag
  - QSPI_FLAG_TC: QSPI Transfer complete flag
  - QSPI_FLAG_TE: QSPI Transfer error flag

Return value:

- None

__HAL_QSPI_CLEAR_FLAG

Description:

- Clears the specified QSPI's flag status.

Parameters:

- __HANDLE__: : specifies the QSPI Handle.
- __FLAG__: : specifies the QSPI clear register flag that needs to be set This parameter can be one of the following values:
  - QSPI_FLAG_TO: QSPI Timeout flag
  - QSPI_FLAG_SM: QSPI Status match flag
  - QSPI_FLAG_TC: QSPI Transfer complete flag
  - QSPI_FLAG_TE: QSPI Transfer error flag

Return value:

- None

QSPI Flags

QSPI_FLAG_BUSY

Busy flag: operation is ongoing

QSPI_FLAG_TO

Timeout flag: timeout occurs in memory-mapped mode

QSPI_FLAG_SM

Status match flag: received data matches in autopolling mode

QSPI_FLAG_FT

Fifo threshold flag: Fifo threshold reached or data left after read from memory is complete

QSPI_FLAG_TC

Transfer complete flag: programmed number of data have been transferred or the transfer has been aborted

QSPI_FLAG_TE

Transfer error flag: invalid address is being accessed

QSPI Flash Select

QSPI_FLASH_ID_1

FLASH 1 selected

QSPI_FLASH_ID_2

FLASH 2 selected

QSPI Instruction Mode

QSPI_INSTRUCTION_NONE

No instruction

QSPI_INSTRUCTION_1_LINE

Instruction on a single line

QSPI_INSTRUCTION_2_LINES

Instruction on two lines

QSPI_INSTRUCTION_4_LINES

Instruction on four lines

QSPI Interrupts

QSPI_IT_TO

Interrupt on the timeout flag

QSPI_IT_SM

Interrupt on the status match flag

QSPI_IT_FT

Interrupt on the fifo threshold flag

QSPI_IT_TC

Interrupt on the transfer complete flag

QSPI_IT_TE

Interrupt on the transfer error flag

QSPI Match Mode

QSPI_MATCH_MODE_AND

AND match mode between unmasked bits

QSPI_MATCH_MODE_OR

OR match mode between unmasked bits

QSPI Sample Shifting

QSPI_SAMPLE_SHIFTING_NONE

No clock cycle shift to sample data

QSPI_SAMPLE_SHIFTING_HALFCYCLE

1/2 clock cycle shift to sample data

QSPI Send Instruction Mode

QSPI_SIOO_INST_EVERY_CMD

Send instruction on every transaction

QSPI_SIOO_INST_ONLY_FIRST_CMD

Send instruction only for the first command

QSPI Timeout Activation

QSPI_TIMEOUT_COUNTER_DISABLE

Timeout counter disabled, nCS remains active

QSPI_TIMEOUT_COUNTER_ENABLE

Timeout counter enabled, nCS released when timeout expires

QSPI Timeout definition

HAL_QSPI_TIMEOUT_DEFAULT_VALUE

45 HAL RCC Generic Driver

45.1 RCC Firmware driver registers structures

45.1.1 RCC_PLLInitTypeDef

RCC_PLLInitTypeDef is defined in the stm32g4xx_hal_rcc.h

Data Fields

- ***uint32_t PLLState***
- ***uint32_t PLLSource***
- ***uint32_t PLLM***
- ***uint32_t PLLN***
- ***uint32_t PLLP***
- ***uint32_t PLLQ***
- ***uint32_t PLLR***

Field Documentation

- ***uint32_t RCC_PLLInitTypeDef::PLLState***
  The new state of the PLL. This parameter can be a value of ***RCC_PLL_Config***
- ***uint32_t RCC_PLLInitTypeDef::PLLSource***
  RCC_PLLSource: PLL entry clock source. This parameter must be a value of ***RCC_PLL_Clock_Source***
- ***uint32_t RCC_PLLInitTypeDef::PLLM***
  PLLM: Division factor for PLL VCO input clock. This parameter must be a value of ***RCC_PLLM_Clock_Divider***
- ***uint32_t RCC_PLLInitTypeDef::PLLN***
  PLLN: Multiplication factor for PLL VCO output clock. This parameter must be a number between Min_Data = 8 and Max_Data = 127
- ***uint32_t RCC_PLLInitTypeDef::PLLP***
  PLLP: Division factor for ADC clock. This parameter must be a value of ***RCC_PLLP_Clock_Divider***
- ***uint32_t RCC_PLLInitTypeDef::PLLQ***
  PLLQ: Division factor for SAI, I2S, USB, FDCAN and QUADSPI clocks. This parameter must be a value of ***RCC_PLLQ_Clock_Divider***
- ***uint32_t RCC_PLLInitTypeDef::PLLR***
  PLLR: Division for the main system clock. User have to set the PLLR parameter correctly to not exceed max frequency 170MHZ. This parameter must be a value of ***RCC_PLLR_Clock_Divider***

45.1.2 RCC_OscInitTypeDef

RCC_OscInitTypeDef is defined in the stm32g4xx_hal_rcc.h

Data Fields

- ***uint32_t OscillatorType***
- ***uint32_t HSEState***
- ***uint32_t LSEState***
- ***uint32_t HSIState***
- ***uint32_t HSICalibrationValue***
- ***uint32_t LSIState***
- ***uint32_t HSI48State***
- ***RCC_PLLInitTypeDef PLL***

Field Documentation

- ***uint32_t RCC_OscInitTypeDef::OscillatorType***
  The oscillators to be configured. This parameter can be a value of ***RCC_Oscillator_Type***

- ***uint32_t RCC_OscInitTypeDef::HSEState***
  The new state of the HSE. This parameter can be a value of ***RCC_HSE_Config***
- ***uint32_t RCC_OscInitTypeDef::LSEState***
  The new state of the LSE. This parameter can be a value of ***RCC_LSE_Config***
- ***uint32_t RCC_OscInitTypeDef::HSIState***
  The new state of the HSI. This parameter can be a value of ***RCC_HSI_Config***
- ***uint32_t RCC_OscInitTypeDef::HSICalibrationValue***
  The calibration trimming value (default is RCC_HSICALIBRATION_DEFAULT). This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF
- ***uint32_t RCC_OscInitTypeDef::LSIState***
  The new state of the LSI. This parameter can be a value of ***RCC_LSI_Config***
- ***uint32_t RCC_OscInitTypeDef::HSI48State***
  The new state of the HSI48. This parameter can be a value of ***RCC_HSI48_Config***
- ***RCC_PLLInitTypeDef RCC_OscInitTypeDef::PLL***
  Main PLL structure parameters

45.1.3 RCC_ClkInitTypeDef

RCC_ClkInitTypeDef is defined in the stm32g4xx_hal_rcc.h

Data Fields

- ***uint32_t ClockType***
- ***uint32_t SYSCLKSource***
- ***uint32_t AHBCLKDivider***
- ***uint32_t APB1CLKDivider***
- ***uint32_t APB2CLKDivider***

Field Documentation

- ***uint32_t RCC_ClkInitTypeDef::ClockType***
  The clock to be configured. This parameter can be a value of ***RCC_System_Clock_Type***
- ***uint32_t RCC_ClkInitTypeDef::SYSCLKSource***
  The clock source used as system clock (SYSCLK). This parameter can be a value of ***RCC_System_Clock_Source***
- ***uint32_t RCC_ClkInitTypeDef::AHBCLKDivider***
  The AHB clock (HCLK) divider. This clock is derived from the system clock (SYSCLK). This parameter can be a value of ***RCC_AHB_Clock_Source***
- ***uint32_t RCC_ClkInitTypeDef::APB1CLKDivider***
  The APB1 clock (PCLK1) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_APB1_APB2_Clock_Source***
- ***uint32_t RCC_ClkInitTypeDef::APB2CLKDivider***
  The APB2 clock (PCLK2) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_APB1_APB2_Clock_Source***

45.2 RCC Firmware driver API description

The following section lists the various functions of the RCC library.

45.2.1 RCC specific features

After reset the device is running from High Speed Internal oscillator (16 MHz) with Flash 0 wait state. Flash prefetch buffer, D-Cache and I-Cache are disabled, and all peripherals are off except internal SRAM, Flash and JTAG.

- There is no prescaler on High speed (AHBs) and Low speed (APBs) busses: all peripherals mapped on these busses are running at HSI speed.
- The clock for all peripherals is switched off, except the SRAM and FLASH.
- All GPIOs are in analog mode, except the JTAG pins which are assigned to be used for debug purpose.

Once the device started from reset, the user application has to:

- Configure the clock source to be used to drive the System clock (if the application needs higher frequency/ performance)
- Configure the System clock frequency and Flash settings
- Configure the AHB and APB busses prescalers
- Enable the clock for the peripheral(s) to be used
- Configure the clock source(s) for peripherals which clocks are not derived from the System clock (USB, RNG, USART, LPUART, FDCAN, some TIMERs, UCPD, I2S, I2C, LPTIM, ADC, QSPI)

45.2.2 Initialization and de-initialization functions

This section provides functions allowing to configure the internal and external oscillators (HSE, HSI, LSE, LSI, PLL, CSS and MCO) and the System busses clocks (SYSCLK, AHB, APB1 and APB2).

Internal/external clock and PLL configuration

- HSI (high-speed internal): 16 MHz factory-trimmed RC used directly or through the PLL as System clock source.
- LSI (low-speed internal): 32 KHz low consumption RC used as IWDG and/or RTC clock source.
- HSE (high-speed external): 4 to 48 MHz crystal oscillator used directly or through the PLL as System clock source. Can be used also optionally as RTC clock source.
- LSE (low-speed external): 32.768 KHz oscillator used optionally as RTC clock source.
- PLL (clocked by HSI, HSE) providing up to three independent output clocks:
  - The first output is used to generate the high speed system clock (up to 170 MHz).
  - The second output is used to generate the clock for the USB (48 MHz), the QSPI (<= 48 MHz), the FDCAN, the SAI and the I2S.
  - The third output is used to generate a clock for ADC
- CSS (Clock security system): once enabled, if a HSE clock failure occurs (HSE used directly or through PLL as System clock source), the System clock is automatically switched to HSI and an interrupt is generated if enabled. The interrupt is linked to the Cortex-M4 NMI (Non-Maskable Interrupt) exception vector.
- MCO (microcontroller clock output): used to output LSI, HSI, LSE, HSE, main PLL clock, system clock or RC48 clock (through a configurable prescaler) on PA8 pin.

System, AHB and APB busses clocks configuration

- Several clock sources can be used to drive the System clock (SYSCLK): HSI, HSE and main PLL. The AHB clock (HCLK) is derived from System clock through configurable prescaler and used to clock the CPU, memory and peripherals mapped on AHB bus (DMA, GPIO...). APB1 (PCLK1) and APB2 (PCLK2) clocks are derived from AHB clock through configurable prescalers and used to clock the peripherals mapped on these busses. You can use "HAL_RCC_GetSysClockFreq()" function to retrieve the frequencies of these clocks.

Note: All the peripheral clocks are derived from the System clock (SYSCLK) except:

- *RTC: the RTC clock can be derived either from the LSI, LSE or HSE clock divided by 2 to 31. You have to use __HAL_RCC_RTC_ENABLE() and HAL_RCCEx_PeriphCLKConfig() function to configure this clock.*
- *USB FS and RNG: USB FS requires a frequency equal to 48 MHz to work correctly, while the RNG peripheral requires a frequency equal or lower than to 48 MHz. This clock is derived of the main PLL through PLLQ divider. You have to enable the peripheral clock and use HAL_RCCEx_PeriphCLKConfig() function to configure this clock.*
- *IWDG clock which is always the LSI clock.*
- The maximum frequency of the SYSCLK, HCLK, PCLK1 and PCLK2 is 170 MHz. The clock source frequency should be adapted depending on the device voltage range as listed in the Reference Manual "Clock source frequency versus voltage scaling" chapter.

This section contains the following APIs:

- ***HAL_RCC_DeInit***
- ***HAL_RCC_OscConfig***
- ***HAL_RCC_ClockConfig***

45.2.3 Peripheral Control functions

This subsection provides a set of functions allowing to:

- Ouput clock to MCO pin.
- Retrieve current clock frequencies.
- Enable the Clock Security System.

This section contains the following APIs:

- ***HAL_RCC_MCOConfig***
- ***HAL_RCC_GetSysClockFreq***
- ***HAL_RCC_GetHCLKFreq***
- ***HAL_RCC_GetPCLK1Freq***
- ***HAL_RCC_GetPCLK2Freq***
- ***HAL_RCC_GetOscConfig***
- ***HAL_RCC_GetClockConfig***
- ***HAL_RCC_EnableCSS***
- ***HAL_RCC_EnableLSECSS***
- ***HAL_RCC_DisableLSECSS***
- ***HAL_RCC_NMI_IRQHandler***
- ***HAL_RCC_CSSCallback***

45.2.4 Detailed description of functions

HAL_RCC_DeInit

Function name

HAL_StatusTypeDef HAL_RCC_DeInit (void)

Function description

Reset the RCC clock configuration to the default reset state.

Return values

- **HAL:** status

Notes

- The default reset state of the clock configuration is given below: HSI ON and used as system clock sourceHSE, PLL OFFAHB, APB1 and APB2 prescaler set to 1.CSS, MCO1 OFFAll interrupts disabledAll interrupt and reset flags cleared
- This function doesn't modify the configuration of the Peripheral clocksLSI, LSE and RTC clocks

HAL_RCC_OscConfig

Function name

HAL_StatusTypeDef HAL_RCC_OscConfig (RCC_OscInitTypeDef * RCC_OscInitStruct)

Function description

Initialize the RCC Oscillators according to the specified parameters in the RCC_OscInitTypeDef.

Parameters

- **RCC_OscInitStruct:** pointer to an RCC_OscInitTypeDef structure that contains the configuration information for the RCC Oscillators.

Return values

- **HAL:** status

Notes

- The PLL is not disabled when used as system clock.
- Transitions LSE Bypass to LSE On and LSE On to LSE Bypass are not supported by this macro. User should request a transition to LSE Off first and then LSE On or LSE Bypass.
- Transition HSE Bypass to HSE On and HSE On to HSE Bypass are not supported by this macro. User should request a transition to HSE Off first and then HSE On or HSE Bypass.

HAL_RCC_ClockConfig

Function name

HAL_StatusTypeDef HAL_RCC_ClockConfig (RCC_ClkInitTypeDef * RCC_ClkInitStruct, uint32_t FLatency)

Function description

Initialize the CPU, AHB and APB busses clocks according to the specified parameters in the RCC_ClkInitStruct.

Parameters

- **RCC_ClkInitStruct:** pointer to an RCC_OscInitTypeDef structure that contains the configuration information for the RCC peripheral.
- **FLatency:** FLASH Latency This parameter can be one of the following values:
  - FLASH_LATENCY_0 FLASH 0 Latency cycle
  - FLASH_LATENCY_1 FLASH 1 Latency cycle
  - FLASH_LATENCY_2 FLASH 2 Latency cycles
  - FLASH_LATENCY_3 FLASH 3 Latency cycles
  - FLASH_LATENCY_4 FLASH 4 Latency cycles
  - FLASH_LATENCY_5 FLASH 5 Latency cycles
  - FLASH_LATENCY_6 FLASH 6 Latency cycles
  - FLASH_LATENCY_7 FLASH 7 Latency cycles
  - FLASH_LATENCY_8 FLASH 8 Latency cycles
  - FLASH_LATENCY_9 FLASH 9 Latency cycles
  - FLASH_LATENCY_10 FLASH 10 Latency cycles
  - FLASH_LATENCY_11 FLASH 11 Latency cycles
  - FLASH_LATENCY_12 FLASH 12 Latency cycles
  - FLASH_LATENCY_13 FLASH 13 Latency cycles
  - FLASH_LATENCY_14 FLASH 14 Latency cycles
  - FLASH_LATENCY_15 FLASH 15 Latency cycles

Return values

- **None:**

Notes

- The SystemCoreClock CMSIS variable is used to store System Clock Frequency and updated by HAL_RCC_GetHCLKFreq() function called within this function
- The HSI is used by default as system clock source after startup from Reset, wake-up from STANDBY mode. After restart from Reset, the HSI frequency is set to its default value 16 MHz.
- The HSI can be selected as system clock source after from STOP modes or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled).
- A switch from one clock source to another occurs only if the target clock source is ready (clock stable after startup delay or PLL locked). If a clock source which is not yet ready is selected, the switch will occur when the clock source is ready.
- You can use HAL_RCC_GetClockConfig() function to know which clock is currently used as system clock source.
- Depending on the device voltage range, the software has to set correctly HPRE[3:0] bits to ensure that HCLK not exceed the maximum allowed frequency (for more details refer to section above "Initialization/de-initialization functions")

HAL_RCC_MCOConfig

Function name

void HAL_RCC_MCOConfig (uint32_t RCC_MCOx, uint32_t RCC_MCOSource, uint32_t RCC_MCODiv)

Function description

Select the clock source to output on MCO pin(PA8).

Parameters

- **RCC_MCOx:** specifies the output direction for the clock source. For STM32G4xx family this parameter can have only one value:
  - RCC_MCO1 Clock source to output on MCO1 pin(PA8).
- **RCC_MCOSource:** specifies the clock source to output. This parameter can be one of the following values:
  - RCC_MCO1SOURCE_NOCLOCK MCO output disabled, no clock on MCO
  - RCC_MCO1SOURCE_SYSCLK system clock selected as MCO source
  - RCC_MCO1SOURCE_HSI HSI clock selected as MCO source
  - RCC_MCO1SOURCE_HSE HSE clock selected as MCO sourcee
  - RCC_MCO1SOURCE_PLLCLK main PLL clock selected as MCO source
  - RCC_MCO1SOURCE_LSI LSI clock selected as MCO source
  - RCC_MCO1SOURCE_LSE LSE clock selected as MCO source
  - RCC_MCO1SOURCE_HSI48 HSI48 clock selected as MCO source for devices with HSI48
- **RCC_MCODiv:** specifies the MCO prescaler. This parameter can be one of the following values:
  - RCC_MCODIV_1 no division applied to MCO clock
  - RCC_MCODIV_2 division by 2 applied to MCO clock
  - RCC_MCODIV_4 division by 4 applied to MCO clock
  - RCC_MCODIV_8 division by 8 applied to MCO clock
  - RCC_MCODIV_16 division by 16 applied to MCO clock

Return values

- **None:**

Notes

- PA8 should be configured in alternate function mode.

HAL_RCC_EnableCSS

Function name

void HAL_RCC_EnableCSS (void)

Function description

Enable the Clock Security System.

Return values

- **None:**

Notes

- If a failure is detected on the HSE oscillator clock, this oscillator is automatically disabled and an interrupt is generated to inform the software about the failure (Clock Security System Interrupt, CSSI), allowing the MCU to perform rescue operations. The CSSI is linked to the Cortex-M4 NMI (Non-Maskable Interrupt) exception vector.
- The Clock Security System can only be cleared by reset.

HAL_RCC_EnableLSECSS

Function name

void HAL_RCC_EnableLSECSS (void)

Function description

Enable the LSE Clock Security System.

Return values

- **None:**

Notes

- If a failure is detected on the external 32 kHz oscillator, the LSE clock is no longer supplied to the RTC but no hardware action is made to the registers. If enabled, an interrupt will be generated and handle through RCC LSE CSS external interrupt line
- The Clock Security System can only be cleared by reset or after a LSE failure detection.

HAL_RCC_DisableLSECSS

Function name

void HAL_RCC_DisableLSECSS (void)

Function description

Disable the LSE Clock Security System.

Return values

- **None:**

Notes

- After LSE failure detection, the software must disable LSECSSON
- The Clock Security System can only be cleared by reset otherwise.

HAL_RCC_GetSysClockFreq

Function name

uint32_t HAL_RCC_GetSysClockFreq (void)

Function description

Return the SYSCLK frequency.

Return values

- **SYSCLK:** frequency

Notes

- The system frequency computed by this function is not the real frequency in the chip. It is calculated based on the predefined constant and the selected clock source:
- If SYSCLK source is HSI, function returns values based on HSI_VALUE(*)
- If SYSCLK source is HSE, function returns values based on HSE_VALUE(**)
- If SYSCLK source is PLL, function returns values based on HSE_VALUE(**), HSI_VALUE(*) Value multiplied/divided by the PLL factors.
- (*) HSI_VALUE is a constant defined in stm32g4xx_hal_conf.h file (default value 16 MHz) but the real value may vary depending on the variations in voltage and temperature.
- (**) HSE_VALUE is a constant defined in stm32g4xx_hal_conf.h file (default value 8 MHz), user has to ensure that HSE_VALUE is same as the real frequency of the crystal used. Otherwise, this function may have wrong result.
- The result of this function could be not correct when using fractional value for HSE crystal.
- This function can be used by the user application to compute the baudrate for the communication peripherals or configure other parameters.
- Each time SYSCLK changes, this function must be called to update the right SYSCLK value. Otherwise, any configuration based on this function will be incorrect.

HAL_RCC_GetHCLKFreq

Function name

uint32_t HAL_RCC_GetHCLKFreq (void)

Function description

Return the HCLK frequency.

Return values

- **HCLK:** frequency in Hz

Notes

- Each time HCLK changes, this function must be called to update the right HCLK value. Otherwise, any configuration based on this function will be incorrect.
- The SystemCoreClock CMSIS variable is used to store System Clock Frequency.

HAL_RCC_GetPCLK1Freq

Function name

uint32_t HAL_RCC_GetPCLK1Freq (void)

Function description

Return the PCLK1 frequency.

Return values

- **PCLK1:** frequency in Hz

Notes

- Each time PCLK1 changes, this function must be called to update the right PCLK1 value. Otherwise, any configuration based on this function will be incorrect.

HAL_RCC_GetPCLK2Freq

Function name

uint32_t HAL_RCC_GetPCLK2Freq (void)

Function description

Return the PCLK2 frequency.

Return values

- **PCLK2:** frequency in Hz

Notes

- Each time PCLK2 changes, this function must be called to update the right PCLK2 value. Otherwise, any configuration based on this function will be incorrect.

HAL_RCC_GetOscConfig

Function name

void HAL_RCC_GetOscConfig (RCC_OscInitTypeDef * RCC_OscInitStruct)

Function description

Configure the RCC_OscInitStruct according to the internal RCC configuration registers.

Parameters

- **RCC_OscInitStruct:** pointer to an RCC_OscInitTypeDef structure that will be configured.

Return values

- **None:**

HAL_RCC_GetClockConfig

Function name

void HAL_RCC_GetClockConfig (RCC_ClkInitTypeDef * RCC_ClkInitStruct, uint32_t * pFLatency)

Function description

Configure the RCC_ClkInitStruct according to the internal RCC configuration registers.

Parameters

- **RCC_ClkInitStruct:** pointer to an RCC_ClkInitTypeDef structure that will be configured.
- **pFLatency:** Pointer on the Flash Latency.

Return values

- **None:**

HAL_RCC_NMI_IRQHandler

Function name

void HAL_RCC_NMI_IRQHandler (void)

Function description

Handle the RCC Clock Security System interrupt request.

Return values

- **None:**

Notes

- This API should be called under the NMI_Handler().

HAL_RCC_CSSCallback

Function name

void HAL_RCC_CSSCallback (void)

Function description

RCC Clock Security System interrupt callback.

Return values

- **none:**

RCC Backup Domain Reset

__HAL_RCC_BACKUPRESET_FORCE

Description:

- Macros to force or release the Backup domain reset.

Return value:

- None

Notes:

- This function resets the RTC peripheral (including the backup registers) and the RTC clock source selection in RCC_CSR register. The BKPSRAM is not affected by this reset.

__HAL_RCC_BACKUPRESET_RELEASE

RCC Exported Macros

__HAL_RCC_HSI_ENABLE

Description:

- Macros to enable or disable the Internal High Speed 16MHz oscillator (HSI).

Return value:

- None

Notes:

- The HSI is stopped by hardware when entering STOP and STANDBY modes. It is used (enabled by hardware) as system clock source after startup from Reset, wakeup from STOP and STANDBY mode, or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled). HSI can not be stopped if it is used as system clock source. In this case, you have to select another source of the system clock then stop the HSI. After enabling the HSI, the application software should wait on HSIRDY flag to be set indicating that HSI clock is stable and can be used as system clock source. This parameter can be: ENABLE or DISABLE. When the HSI is stopped, HSIRDY flag goes low after 6 HSI oscillator clock cycles.

__HAL_RCC_HSI_DISABLE

__HAL_RCC_HSI_CALIBRATIONVALUE_ADJUST

Description:

- Macro to adjust the Internal High Speed 16MHz oscillator (HSI) calibration value.

Parameters:

- __HSICALIBRATIONVALUE__: specifies the calibration trimming value (default is RCC_HSICALIBRATION_DEFAULT). This parameter must be a number between 0 and 0x7F.

Return value:

- None

Notes:

- The calibration is used to compensate for the variations in voltage and temperature that influence the frequency of the internal HSI RC.

__HAL_RCC_HSISTOP_ENABLE

Description:

- Macros to enable or disable the force of the Internal High Speed oscillator (HSI) in STOP mode to be quickly available as kernel clock for USARTs and I2Cs.

Return value:

- None

Notes:

- Keeping the HSI ON in STOP mode allows to avoid slowing down the communication speed because of the HSI startup time. The enable of this function has not effect on the HSION bit. This parameter can be: ENABLE or DISABLE.

__HAL_RCC_HSISTOP_DISABLE

__HAL_RCC_LSI_ENABLE

Description:

- Macros to enable or disable the Internal Low Speed oscillator (LSI).

Return value:

- None

Notes:

- After enabling the LSI, the application software should wait on LSIRDY flag to be set indicating that LSI clock is stable and can be used to clock the IWDG and/or the RTC. LSI can not be disabled if the IWDG is running. When the LSI is stopped, LSIRDY flag goes low after 6 LSI oscillator clock cycles.

__HAL_RCC_LSI_DISABLE

__HAL_RCC_HSE_CONFIG

Description:

- Macro to configure the External High Speed oscillator (HSE).

Parameters:

- __STATE__: specifies the new state of the HSE. This parameter can be one of the following values:
  - RCC_HSE_OFF Turn OFF the HSE oscillator, HSERDY flag goes low after 6 HSE oscillator clock cycles.
  - RCC_HSE_ON Turn ON the HSE oscillator.
  - RCC_HSE_BYPASS HSE oscillator bypassed with external clock.

Return value:

- None

Notes:

- Transition HSE Bypass to HSE On and HSE On to HSE Bypass are not supported by this macro. User should request a transition to HSE Off first and then HSE On or HSE Bypass. After enabling the HSE (RCC_HSE_ON or RCC_HSE_Bypass), the application software should wait on HSERDY flag to be set indicating that HSE clock is stable and can be used to clock the PLL and/or system clock. HSE state can not be changed if it is used directly or through the PLL as system clock. In this case, you have to select another source of the system clock then change the HSE state (ex. disable it). The HSE is stopped by hardware when entering STOP and STANDBY modes. This function reset the CSSON bit, so if the clock security system(CSS) was previously enabled you have to enable it again after calling this function.

__HAL_RCC_LSE_CONFIG

Description:

- Macro to configure the External Low Speed oscillator (LSE).

Parameters:

- __STATE__: specifies the new state of the LSE. This parameter can be one of the following values:
  - RCC_LSE_OFF Turn OFF the LSE oscillator, LSERDY flag goes low after 6 LSE oscillator clock cycles.
  - RCC_LSE_ON Turn ON the LSE oscillator.
  - RCC_LSE_BYPASS LSE oscillator bypassed with external clock.

Return value:

- None

Notes:

- Transitions LSE Bypass to LSE On and LSE On to LSE Bypass are not supported by this macro. User should request a transition to LSE Off first and then LSE On or LSE Bypass. As the LSE is in the Backup domain and write access is denied to this domain after reset, you have to enable write access using HAL_PWR_EnableBkUpAccess() function before to configure the LSE (to be done once after reset). After enabling the LSE (RCC_LSE_ON or RCC_LSE_BYPASS), the application software should wait on LSERDY flag to be set indicating that LSE clock is stable and can be used to clock the RTC.

__HAL_RCC_HSI48_ENABLE

Description:

- Macros to enable or disable the Internal High Speed 48MHz oscillator (HSI48).

Return value:

- None

Notes:

- The HSI48 is stopped by hardware when entering STOP and STANDBY modes. After enabling the HSI48, the application software should wait on HSI48RDY flag to be set indicating that HSI48 clock is stable. This parameter can be: ENABLE or DISABLE.

__HAL_RCC_HSI48_DISABLE

__HAL_RCC_RTC_CONFIG

Description:

- Macros to configure the RTC clock (RTCCLK).

Parameters:

- __RTC_CLKSOURCE__: specifies the RTC clock source. This parameter can be one of the following values:
  - RCC_RTCCLKSOURCE_NONE No clock selected as RTC clock.
  - RCC_RTCCLKSOURCE_LSE LSE selected as RTC clock.
  - RCC_RTCCLKSOURCE_LSI LSI selected as RTC clock.
  - RCC_RTCCLKSOURCE_HSE_DIV32 HSE clock divided by 32 selected

Return value:

- None

Notes:

- As the RTC clock configuration bits are in the Backup domain and write access is denied to this domain after reset, you have to enable write access using the Power Backup Access macro before to configure the RTC clock source (to be done once after reset). Once the RTC clock is configured it cannot be changed unless the Backup domain is reset using __HAL_RCC_BACKUPRESET_FORCE() macro, or by a Power On Reset (POR).
- If the LSE or LSI is used as RTC clock source, the RTC continues to work in STOP and STANDBY modes, and can be used as wakeup source. However, when the HSE clock is used as RTC clock source, the RTC cannot be used in STOP and STANDBY modes. The maximum input clock frequency for RTC is 1MHz (when using HSE as RTC clock source).

__HAL_RCC_GET_RTC_SOURCE

Description:

- Macro to get the RTC clock source.

Return value:

- The: returned value can be one of the following:
  - RCC_RTCCLKSOURCE_NONE No clock selected as RTC clock.
  - RCC_RTCCLKSOURCE_LSE LSE selected as RTC clock.
  - RCC_RTCCLKSOURCE_LSI LSI selected as RTC clock.
  - RCC_RTCCLKSOURCE_HSE_DIV32 HSE clock divided by 32 selected

__HAL_RCC_PLL_ENABLE

Description:

- Macros to enable or disable the main PLL.

Return value:

- None

Notes:

- After enabling the main PLL, the application software should wait on PLLRDY flag to be set indicating that PLL clock is stable and can be used as system clock source. The main PLL can not be disabled if it is used as system clock source The main PLL is disabled by hardware when entering STOP and STANDBY modes.

__HAL_RCC_PLL_DISABLE

__HAL_RCC_PLL_PLLSOURCE_CONFIG

Description:

- Macro to configure the PLL clock source.

Parameters:

- __PLLSOURCE__: specifies the PLL entry clock source. This parameter can be one of the following values:
  - RCC_PLLSOURCE_NONE No clock selected as PLL clock entry
  - RCC_PLLSOURCE_HSI HSI oscillator clock selected as PLL clock entry
  - RCC_PLLSOURCE_HSE HSE oscillator clock selected as PLL clock entry

Return value:

- None

Notes:

- This function must be used only when the main PLL is disabled.

__HAL_RCC_PLL_PLLM_CONFIG

Description:

- Macro to configure the PLL source division factor M.

Parameters:

- __PLLM__: specifies the division factor for PLL VCO input clock This parameter must be a value of

Return value:

- None

Notes:

- This function must be used only when the main PLL is disabled.
- You have to set the PLLM parameter correctly to ensure that the VCO input frequency ranges from 2.66 to 8 MHz. It is recommended to select a frequency of 8 MHz to limit PLL jitter.

__HAL_RCC_PLL_CONFIG

Description:

- Macro to configure the main PLL clock source, multiplication and division factors.

Parameters:

- __PLLSOURCE__: specifies the PLL entry clock source. This parameter can be one of the following values:
  - RCC_PLLSOURCE_NONE No clock selected as PLL clock entry
  - RCC_PLLSOURCE_HSI HSI oscillator clock selected as PLL clock entry
  - RCC_PLLSOURCE_HSE HSE oscillator clock selected as PLL clock entry
- __PLLM__: specifies the division factor for PLL VCO input clock. This parameter must be a value of
- __PLLN__: specifies the multiplication factor for PLL VCO output clock. This parameter must be a number between 8 and 127.
- __PLLP__: specifies the division factor for SAI clock. This parameter must be a number in the range (2 to 31).
- __PLLQ__: specifies the division factor for OTG FS, SDMMC1 and RNG clocks. This parameter must be in the range (2, 4, 6 or 8).
- __PLLR__: specifies the division factor for the main system clock.

Return value:

- None

Notes:

- This macro must be used only when the main PLL is disabled. This macro preserves the PLL's output clocks enable state.
- You have to set the PLLM parameter correctly to ensure that the VCO input frequency ranges from 2.66 to 8 MHz. It is recommended to select a frequency of 8 MHz to limit PLL jitter.
- You have to set the PLLN parameter correctly to ensure that the VCO output frequency is between 64 and 344 MHz.
- If the USB OTG FS is used in your application, you have to set the PLLQ parameter correctly to have 48 MHz clock for the USB. However, the SDMMC1 and RNG need a frequency lower than or equal to 48 MHz to work correctly.
- You have to set the PLLR parameter correctly to not exceed 170MHZ. This parameter must be in the range (2, 4, 6 or 8).

__HAL_RCC_GET_PLL_OSCSOURCE

Description:

- Macro to get the oscillator used as PLL clock source.

Return value:

- The: oscillator used as PLL clock source. The returned value can be one of the following:
  - RCC_PLLSOURCE_NONE: No oscillator is used as PLL clock source.
  - RCC_PLLSOURCE_HSI: HSI oscillator is used as PLL clock source.
  - RCC_PLLSOURCE_HSE: HSE oscillator is used as PLL clock source.

__HAL_RCC_PLLCLKOUT_ENABLE

Description:

- Enable or disable each clock output (RCC_PLL_SYSCLK, RCC_PLL_48M1CLK, RCC_PLL_ADCCLK)

Parameters:

- __PLLCLOCKOUT__: specifies the PLL clock to be output. This parameter can be one or a combination of the following values:
  - RCC_PLL_ADCCLK This clock is used to generate a clock on ADC.
  - RCC_PLL_48M1CLK This Clock is used to generate the clock for the USB (48 MHz), FDCAN (<=48 MHz) and QSPI (<=48 MHz).
  - RCC_PLL_SYSCLK This Clock is used to generate the high speed system clock (up to 170MHz)

Return value:

- None

Notes:

- Enabling/disabling clock outputs RCC_PLL_ADCCLK and RCC_PLL_48M1CLK can be done at anytime without the need to stop the PLL in order to save power. But RCC_PLL_SYSCLK cannot be stopped if used as System Clock.

__HAL_RCC_PLLCLKOUT_DISABLE

__HAL_RCC_GET_PLLCLKOUT_CONFIG

Description:

- Get clock output enable status (RCC_PLL_SYSCLK, RCC_PLL_48M1CLK, RCC_PLL_SAI3CLK)

Parameters:

- __PLLCLOCKOUT__: specifies the output PLL clock to be checked. This parameter can be one of the following values:
  - RCC_PLL_ADCCLK This clock is used to generate a clock on ADC.
  - RCC_PLL_48M1CLK This Clock is used to generate the clock for the USB (48 MHz), FDCAN (<=48 MHz) and QSPI (<=48 MHz).
  - RCC_PLL_SYSCLK This Clock is used to generate the high speed system clock (up to 170MHz)

Return value:

- SET: / RESET

__HAL_RCC_SYSCLK_CONFIG

Description:

- Macro to configure the system clock source.

Parameters:

- __SYSCLKSOURCE__: specifies the system clock source. This parameter can be one of the following values:
  - RCC_SYSCLKSOURCE_HSI: HSI oscillator is used as system clock source.
  - RCC_SYSCLKSOURCE_HSE: HSE oscillator is used as system clock source.
  - RCC_SYSCLKSOURCE_PLLCLK: PLL output is used as system clock source.

Return value:

- None

__HAL_RCC_GET_SYSCLK_SOURCE

Description:

- Macro to get the clock source used as system clock.

Return value:

- The: clock source used as system clock. The returned value can be one of the following:
  - RCC_SYSCLKSOURCE_STATUS_HSI: HSI used as system clock.
  - RCC_SYSCLKSOURCE_STATUS_HSE: HSE used as system clock.
  - RCC_SYSCLKSOURCE_STATUS_PLLCLK: PLL used as system clock.

__HAL_RCC_LSEDRIVE_CONFIG

Description:

- Macro to configure the External Low Speed oscillator (LSE) drive capability.

Parameters:

- __LSEDRIVE__: specifies the new state of the LSE drive capability. This parameter can be one of the following values:
  - RCC_LSEDRIVE_LOW LSE oscillator low drive capability.
  - RCC_LSEDRIVE_MEDIUMLOW LSE oscillator medium low drive capability.
  - RCC_LSEDRIVE_MEDIUMHIGH LSE oscillator medium high drive capability.
  - RCC_LSEDRIVE_HIGH LSE oscillator high drive capability.

Return value:

- None

Notes:

- As the LSE is in the Backup domain and write access is denied to this domain after reset, you have to enable write access using HAL_PWR_EnableBkUpAccess() function before to configure the LSE (to be done once after reset).

__HAL_RCC_MCO1_CONFIG

Description:

- Macro to configure the MCO clock.

Parameters:

- __MCOCLKSOURCE__: specifies the MCO clock source. This parameter can be one of the following values:
  - RCC_MCO1SOURCE_NOCLOCK MCO output disabled
  - RCC_MCO1SOURCE_SYSCLK System clock selected as MCO source
  - RCC_MCO1SOURCE_HSI HSI clock selected as MCO source
  - RCC_MCO1SOURCE_HSE HSE clock selected as MCO sourcee
  - RCC_MCO1SOURCE_PLLCLK Main PLL clock selected as MCO source
  - RCC_MCO1SOURCE_LSI LSI clock selected as MCO source
  - RCC_MCO1SOURCE_LSE LSE clock selected as MCO source
  - RCC_MCO1SOURCE_HSI48 HSI48 clock selected as MCO source for devices with HSI48
- __MCODIV__: specifies the MCO clock prescaler. This parameter can be one of the following values:
  - RCC_MCODIV_1 MCO clock source is divided by 1
  - RCC_MCODIV_2 MCO clock source is divided by 2
  - RCC_MCODIV_4 MCO clock source is divided by 4
  - RCC_MCODIV_8 MCO clock source is divided by 8
  - RCC_MCODIV_16 MCO clock source is divided by 16

__HAL_RCC_ENABLE_IT

Description:

- Enable RCC interrupt (Perform Byte access to RCC_CIR[14:8] bits to enable the selected interrupts).

Parameters:

- __INTERRUPT__: specifies the RCC interrupt sources to be enabled. This parameter can be any combination of the following values:
  - RCC_IT_LSIRDY LSI ready interrupt
  - RCC_IT_LSERDY LSE ready interrupt
  - RCC_IT_HSIRDY HSI ready interrupt
  - RCC_IT_HSERDY HSE ready interrupt
  - RCC_IT_PLLRDY Main PLL ready interrupt
  - RCC_IT_LSECSS LSE Clock security system interrupt
  - RCC_IT_HSI48RDY HSI48 ready interrupt for devices with HSI48

Return value:

- None

__HAL_RCC_DISABLE_IT

Description:

- Disable RCC interrupt (Perform Byte access to RCC_CIR[14:8] bits to disable the selected interrupts).

Parameters:

- __INTERRUPT__: specifies the RCC interrupt sources to be disabled. This parameter can be any combination of the following values:
  - RCC_IT_LSIRDY LSI ready interrupt
  - RCC_IT_LSERDY LSE ready interrupt
  - RCC_IT_HSIRDY HSI ready interrupt
  - RCC_IT_HSERDY HSE ready interrupt
  - RCC_IT_PLLRDY Main PLL ready interrupt
  - RCC_IT_LSECSS LSE Clock security system interrupt
  - RCC_IT_HSI48RDY HSI48 ready interrupt for devices with HSI48

Return value:

- None

__HAL_RCC_CLEAR_IT

Description:

- Clear the RCC's interrupt pending bits (Perform Byte access to RCC_CIR[23:16] bits to clear the selected interrupt pending bits.

Parameters:

- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be any combination of the following values:
  - RCC_IT_LSIRDY LSI ready interrupt
  - RCC_IT_LSERDY LSE ready interrupt
  - RCC_IT_HSIRDY HSI ready interrupt
  - RCC_IT_HSERDY HSE ready interrupt
  - RCC_IT_PLLRDY Main PLL ready interrupt
  - RCC_IT_CSS HSE Clock security system interrupt
  - RCC_IT_LSECSS LSE Clock security system interrupt
  - RCC_IT_HSI48RDY HSI48 ready interrupt for devices with HSI48

Return value:

- None

__HAL_RCC_GET_IT

Description:

- Check whether the RCC interrupt has occurred or not.

Parameters:

- __INTERRUPT__: specifies the RCC interrupt source to check. This parameter can be one of the following values:
  - RCC_IT_LSIRDY LSI ready interrupt
  - RCC_IT_LSERDY LSE ready interrupt
  - RCC_IT_HSIRDY HSI ready interrupt
  - RCC_IT_HSERDY HSE ready interrupt
  - RCC_IT_PLLRDY Main PLL ready interrupt
  - RCC_IT_CSS HSE Clock security system interrupt
  - RCC_IT_LSECSS LSE Clock security system interrupt
  - RCC_IT_HSI48RDY HSI48 ready interrupt for devices with HSI48

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_RCC_CLEAR_RESET_FLAGS

Description:

- Set RMVF bit to clear the reset flags.

Return value:

- None

__HAL_RCC_GET_FLAG

Description:

- Check whether the selected RCC flag is set or not.

Parameters:

- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - RCC_FLAG_HSIRDY HSI oscillator clock ready
  - RCC_FLAG_HSERDY HSE oscillator clock ready
  - RCC_FLAG_PLLRDY Main PLL clock ready
  - RCC_FLAG_HSI48RDY HSI48 clock ready for devices with HSI48
  - RCC_FLAG_LSERDY LSE oscillator clock ready
  - RCC_FLAG_LSECSSD Clock security system failure on LSE oscillator detection
  - RCC_FLAG_LSIRDY LSI oscillator clock ready
  - RCC_FLAG_BORRST BOR reset
  - RCC_FLAG_OBLRST OBLRST reset
  - RCC_FLAG_PINRST Pin reset
  - RCC_FLAG_SFTRST Software reset
  - RCC_FLAG_IWDGRST Independent Watchdog reset
  - RCC_FLAG_WWDGRST Window Watchdog reset
  - RCC_FLAG_LPWRRST Low Power reset

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

  Specifies RTC clock source. This parameter can be a value of ***RCC_RTC_Clock_Source***

46.1.2 RCC_CRSInitTypeDef

RCC_CRSInitTypeDef is defined in the stm32g4xx_hal_rcc_ex.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t Source***
- ***uint32_t Polarity***
- ***uint32_t ReloadValue***
- ***uint32_t ErrorLimitValue***
- ***uint32_t HSI48CalibrationValue***

Field Documentation

- ***uint32_t RCC_CRSInitTypeDef::Prescaler***
  Specifies the division factor of the SYNC signal. This parameter can be a value of ***RCCEx_CRS_SynchroDivider***
- ***uint32_t RCC_CRSInitTypeDef::Source***
  Specifies the SYNC signal source. This parameter can be a value of ***RCCEx_CRS_SynchroSource***
- ***uint32_t RCC_CRSInitTypeDef::Polarity***
  Specifies the input polarity for the SYNC signal source. This parameter can be a value of ***RCCEx_CRS_SynchroPolarity***
- ***uint32_t RCC_CRSInitTypeDef::ReloadValue***
  Specifies the value to be loaded in the frequency error counter with each SYNC event. It can be calculated in using macro **__HAL_RCC_CRS_RELOADVALUE_CALCULATE(__FTARGET__, __FSYNC__)** This parameter must be a number between 0 and 0xFFFF or a value of ***RCCEx_CRS_ReloadValueDefault*** .

- ***uint32_t RCC_CRSInitTypeDef::ErrorLimitValue***

  Specifies the value to be used to evaluate the captured frequency error value. This parameter must be a number between 0 and 0xFF or a value of ***RCCEx_CRS_ErrorLimitDefault***
- ***uint32_t RCC_CRSInitTypeDef::HSI48CalibrationValue***

  Specifies a user-programmable trimming value to the HSI48 oscillator. This parameter must be a number between 0 and 0x7F or a value of ***RCCEx_CRS_HSI48CalibrationDefault***

46.1.3 RCC_CRSSynchroInfoTypeDef

RCC_CRSSynchroInfoTypeDef is defined in the stm32g4xx_hal_rcc_ex.h

Data Fields

- ***uint32_t ReloadValue***
- ***uint32_t HSI48CalibrationValue***
- ***uint32_t FreqErrorCapture***
- ***uint32_t FreqErrorDirection***

Field Documentation

- ***uint32_t RCC_CRSSynchroInfoTypeDef::ReloadValue***

  Specifies the value loaded in the Counter reload value. This parameter must be a number between 0 and 0xFFFF
- ***uint32_t RCC_CRSSynchroInfoTypeDef::HSI48CalibrationValue***

  Specifies value loaded in HSI48 oscillator smooth trimming. This parameter must be a number between 0 and 0x7F
- ***uint32_t RCC_CRSSynchroInfoTypeDef::FreqErrorCapture***

  Specifies the value loaded in the .FECAP, the frequency error counter value latched in the time of the last SYNC event. This parameter must be a number between 0 and 0xFFFF
- ***uint32_t RCC_CRSSynchroInfoTypeDef::FreqErrorDirection***

  Specifies the value loaded in the .FEDIR, the counting direction of the frequency error counter latched in the time of the last SYNC event. It shows whether the actual frequency is below or above the target. This parameter must be a value of ***RCCEx_CRS_FreqErrorDirection***

46.2 RCCEx Firmware driver API description

The following section lists the various functions of the RCCEx library.

46.2.1 Extended Peripheral Control functions

This subsection provides a set of functions allowing to control the RCC Clocks frequencies.

Note: *Important note: Care must be taken when HAL_RCCEx_PeriphCLKConfig() is used to select the RTC clock source; in this case the Backup domain will be reset in order to modify the RTC Clock source, as consequence RTC registers (including the backup registers) are set to their reset values.*

This section contains the following APIs:

- ***HAL_RCCEx_PeriphCLKConfig***
- ***HAL_RCCEx_GetPeriphCLKConfig***
- ***HAL_RCCEx_GetPeriphCLKFreq***

46.2.2 Extended clock management functions

This subsection provides a set of functions allowing to control the activation or deactivation of LSE CSS, Low speed clock output and clock after wake-up from STOP mode.

This section contains the following APIs:

- ***HAL_RCCEx_EnableLSECSS***
- ***HAL_RCCEx_DisableLSECSS***
- ***HAL_RCCEx_EnableLSECSS_IT***
- ***HAL_RCCEx_LSECSS_IRQHandler***
- ***HAL_RCCEx_LSECSS_Callback***

- *HAL_RCCEx_EnableLSCO*
- *HAL_RCCEx_DisableLSCO*

46.2.3 Extended Clock Recovery System Control functions

For devices with Clock Recovery System feature (CRS), RCC Extention HAL driver can be used as follows:

1. In System clock config, HSI48 needs to be enabled
2. Enable CRS clock in IP MSP init which will use CRS functions
3. Call CRS functions as follows:
   a. Prepare synchronization configuration necessary for HSI48 calibration
      - Default values can be set for frequency Error Measurement (reload and error limit) and also HSI48 oscillator smooth trimming.
      - Macro __HAL_RCC_CRS_RELOADVALUE_CALCULATE can be also used to calculate directly reload value with target and sychronization frequencies values

   b. Call function HAL_RCCEx_CRSConfig which
      - Resets CRS registers to their default values.
      - Configures CRS registers with synchronization configuration
      - Enables automatic calibration and frequency error counter feature Note: When using USB LPM (Link Power Management) and the device is in Sleep mode, the periodic USB SOF will not be generated by the host. No SYNC signal will therefore be provided to the CRS to calibrate the HSI48 on the run. To guarantee the required clock precision after waking up from Sleep mode, the LSE or reference clock on the GPIOs should be used as SYNC signal.

   c. A polling function is provided to wait for complete synchronization
      - Call function HAL_RCCEx_CRSWaitSynchronization()
      - According to CRS status, user can decide to adjust again the calibration or continue application if synchronization is OK
4. User can retrieve information related to synchronization in calling function HAL_RCCEx_CRSGetSynchronizationInfo()
5. Regarding synchronization status and synchronization information, user can try a new calibration in changing synchronization configuration and call again HAL_RCCEx_CRSConfig. Note: When the SYNC event is detected during the downcounting phase (before reaching the zero value), it means that the actual frequency is lower than the target (and so, that the TRIM value should be incremented), while when it is detected during the upcounting phase it means that the actual frequency is higher (and that the TRIM value should be decremented).
6. In interrupt mode, user can resort to the available macros (__HAL_RCC_CRS_XXX_IT). Interrupts will go through CRS Handler (CRS_IRQn/CRS_IRQHandler)
   – Call function HAL_RCCEx_CRSConfig()
   – Enable CRS_IRQn (thanks to NVIC functions)
   – Enable CRS interrupt (__HAL_RCC_CRS_ENABLE_IT)
   – Implement CRS status management in the following user callbacks called from HAL_RCCEx_CRS_IRQHandler():
      - HAL_RCCEx_CRS_SyncOkCallback()
      - HAL_RCCEx_CRS_SyncWarnCallback()
      - HAL_RCCEx_CRS_ExpectedSyncCallback()
      - HAL_RCCEx_CRS_ErrorCallback()
7. To force a SYNC EVENT, user can use the function HAL_RCCEx_CRSSoftwareSynchronizationGenerate(). This function can be called before calling HAL_RCCEx_CRSConfig (for instance in Systick handler)

This section contains the following APIs:

- *HAL_RCCEx_CRSConfig*
- *HAL_RCCEx_CRSSoftwareSynchronizationGenerate*
- *HAL_RCCEx_CRSGetSynchronizationInfo*
- *HAL_RCCEx_CRSWaitSynchronization*
- *HAL_RCCEx_CRS_IRQHandler*

- *HAL_RCCEx_CRS_SyncOkCallback*
- *HAL_RCCEx_CRS_SyncWarnCallback*
- *HAL_RCCEx_CRS_ExpectedSyncCallback*
- *HAL_RCCEx_CRS_ErrorCallback*

46.2.4 Detailed description of functions

HAL_RCCEx_PeriphCLKConfig

Function name

HAL_StatusTypeDef HAL_RCCEx_PeriphCLKConfig (RCC_PeriphCLKInitTypeDef * PeriphClkInit)

Function description

Initialize the RCC extended peripherals clocks according to the specified parameters in the RCC_PeriphCLKInitTypeDef.

Parameters

- **PeriphClkInit:** pointer to an RCC_PeriphCLKInitTypeDef structure that contains a field PeriphClockSelection which can be a combination of the following values:
  - RCC_PERIPHCLK_RTC RTC peripheral clock
  - RCC_PERIPHCLK_USART1 USART1 peripheral clock
  - RCC_PERIPHCLK_USART2 USART2 peripheral clock
  - RCC_PERIPHCLK_USART3 USART3 peripheral clock
  - RCC_PERIPHCLK_UART4 UART4 peripheral clock (only for devices with UART4)
  - RCC_PERIPHCLK_UART5 UART5 peripheral clock (only for devices with UART5)
  - RCC_PERIPHCLK_LPUART1 LPUART1 peripheral clock
  - RCC_PERIPHCLK_I2C1 I2C1 peripheral clock
  - RCC_PERIPHCLK_I2C2 I2C2 peripheral clock
  - RCC_PERIPHCLK_I2C3 I2C3 peripheral clock
  - RCC_PERIPHCLK_I2C4 I2C4 peripheral clock (only for devices with I2C4)
  - RCC_PERIPHCLK_LPTIM1 LPTIM1 peripheral clock
  - RCC_PERIPHCLK_SAI1 SAI1 peripheral clock
  - RCC_PERIPHCLK_I2S I2S peripheral clock
  - RCC_PERIPHCLK_FDCAN FDCAN peripheral clock (only for devices with FDCAN)
  - RCC_PERIPHCLK_RNG RNG peripheral clock
  - RCC_PERIPHCLK_USB USB peripheral clock (only for devices with USB)
  - RCC_PERIPHCLK_ADC12 ADC1 and ADC2 peripheral clock
  - RCC_PERIPHCLK_ADC345 ADC3, ADC4 and ADC5 peripheral clock (only for devices with ADC3, ADC4, ADC5)
  - RCC_PERIPHCLK_QSPI QuadSPI peripheral clock (only for devices with QuadSPI)

Return values

- **HAL:** status

Notes

- Care must be taken when HAL_RCCEx_PeriphCLKConfig() is used to select the RTC clock source: in this case the access to Backup domain is enabled.

HAL_RCCEx_GetPeriphCLKConfig

Function name

void HAL_RCCEx_GetPeriphCLKConfig (RCC_PeriphCLKInitTypeDef * PeriphClkInit)

Function description

Get the RCC_ClkInitStruct according to the internal RCC configuration registers.

Parameters

- **PeriphClkInit:** pointer to an RCC_PeriphCLKInitTypeDef structure that returns the configuration information for the Extended Peripherals clocks(USART1, USART2, USART3, UART4, UART5, LPUART1, I2C1, I2C2, I2C3, I2C4, LPTIM1, SAI1, I2Sx, FDCANx, USB, RNG, ADCx, RTC, QSPI).

Return values

- **None:**

HAL_RCCEx_GetPeriphCLKFreq

Function name

uint32_t HAL_RCCEx_GetPeriphCLKFreq (uint32_t PeriphClk)

Function description

Return the peripheral clock frequency for peripherals with clock source from PLL.

Parameters

- **PeriphClk:** Peripheral clock identifier This parameter can be one of the following values:
  - RCC_PERIPHCLK_USART1 USART1 peripheral clock
  - RCC_PERIPHCLK_USART2 USART2 peripheral clock
  - RCC_PERIPHCLK_USART3 USART3 peripheral clock
  - RCC_PERIPHCLK_UART4 UART4 peripheral clock (only for devices with UART4)
  - RCC_PERIPHCLK_UART5 UART5 peripheral clock (only for devices with UART5)
  - RCC_PERIPHCLK_LPUART1 LPUART1 peripheral clock
  - RCC_PERIPHCLK_I2C1 I2C1 peripheral clock
  - RCC_PERIPHCLK_I2C2 I2C2 peripheral clock
  - RCC_PERIPHCLK_I2C3 I2C3 peripheral clock
  - RCC_PERIPHCLK_I2C4 I2C4 peripheral clock (only for devices with I2C4)
  - RCC_PERIPHCLK_LPTIM1 LPTIM1 peripheral clock
  - RCC_PERIPHCLK_SAI1 SAI1 peripheral clock
  - RCC_PERIPHCLK_I2S SPI peripheral clock
  - RCC_PERIPHCLK_FDCAN FDCAN peripheral clock (only for devices with FDCAN)
  - RCC_PERIPHCLK_RNG RNG peripheral clock
  - RCC_PERIPHCLK_USB USB peripheral clock (only for devices with USB)
  - RCC_PERIPHCLK_ADC12 ADC1 and ADC2 peripheral clock
  - RCC_PERIPHCLK_ADC345 ADC3, ADC4 and ADC5 peripheral clock (only for devices with ADC3, ADC4, ADC5)
  - RCC_PERIPHCLK_QSPI QSPI peripheral clock (only for devices with QSPI)
  - RCC_PERIPHCLK_RTC RTC peripheral clock

Return values

- **Frequency:** in Hz

Notes

- Return 0 if peripheral clock identifier not managed by this API

HAL_RCCEx_EnableLSECSS

Function name

void HAL_RCCEx_EnableLSECSS (void)

Function description

Enable the LSE Clock Security System.

Return values

- **None:**

Notes

- Prior to enable the LSE Clock Security System, LSE oscillator is to be enabled with HAL_RCC_OscConfig() and the LSE oscillator clock is to be selected as RTC clock with HAL_RCCEx_PeriphCLKConfig().

HAL_RCCEx_DisableLSECSS

Function name

void HAL_RCCEx_DisableLSECSS (void)

Function description

Disable the LSE Clock Security System.

Return values

- **None:**

Notes

- LSE Clock Security System can only be disabled after a LSE failure detection.

HAL_RCCEx_EnableLSECSS_IT

Function name

void HAL_RCCEx_EnableLSECSS_IT (void)

Function description

Enable the LSE Clock Security System Interrupt & corresponding EXTI line.

Return values

- **None:**

Notes

- LSE Clock Security System Interrupt is mapped on RTC EXTI line 19

HAL_RCCEx_LSECSS_IRQHandler

Function name

void HAL_RCCEx_LSECSS_IRQHandler (void)

Function description

Handle the RCC LSE Clock Security System interrupt request.

Return values

- **None:**

HAL_RCCEx_LSECSS_Callback

Function name

void HAL_RCCEx_LSECSS_Callback (void)

Function description

RCCEx LSE Clock Security System interrupt callback.

Return values

- **none:**

HAL_RCCEx_EnableLSCO

Function name

void HAL_RCCEx_EnableLSCO (uint32_t LSCOSource)

Function description

Select the Low Speed clock source to output on LSCO pin (PA2).

Parameters

- **LSCOSource:** specifies the Low Speed clock source to output. This parameter can be one of the following values:
  - RCC_LSCOSOURCE_LSI LSI clock selected as LSCO source
  - RCC_LSCOSOURCE_LSE LSE clock selected as LSCO source

Return values

- **None:**

HAL_RCCEx_DisableLSCO

Function name

void HAL_RCCEx_DisableLSCO (void)

Function description

Disable the Low Speed clock output.

Return values

- **None:**

HAL_RCCEx_CRSConfig

Function name

void HAL_RCCEx_CRSConfig (RCC_CRSInitTypeDef * pInit)

Function description

Start automatic synchronization for polling mode.

Parameters

- **pInit:** Pointer on RCC_CRSInitTypeDef structure

Return values

- **None:**

HAL_RCCEx_CRSSoftwareSynchronizationGenerate

Function name

void HAL_RCCEx_CRSSoftwareSynchronizationGenerate (void)

Function description

Generate the software synchronization event.

Return values

- **None:**

HAL_RCCEx_CRSGetSynchronizationInfo

Function name

void HAL_RCCEx_CRSGetSynchronizationInfo (RCC_CRSSynchroInfoTypeDef * pSynchroInfo)

Function description

Return synchronization info.

Parameters

- **pSynchroInfo:** Pointer on RCC_CRSSynchroInfoTypeDef structure

Return values

- **None:**

HAL_RCCEx_CRSWaitSynchronization

Function name

uint32_t HAL_RCCEx_CRSWaitSynchronization (uint32_t Timeout)

Function description

Wait for CRS Synchronization status.

Parameters

- **Timeout:** Duration of the timeout

Return values

- **Combination:** of Synchronization status This parameter can be a combination of the following values:
  - RCC_CRS_TIMEOUT
  - RCC_CRS_SYNCOK
  - RCC_CRS_SYNCWARN
  - RCC_CRS_SYNCERR
  - RCC_CRS_SYNCMISS
  - RCC_CRS_TRIMOVF

Notes

- Timeout is based on the maximum time to receive a SYNC event based on synchronization frequency.
- If Timeout set to HAL_MAX_DELAY, HAL_TIMEOUT will be never returned.

HAL_RCCEx_CRS_IRQHandler

Function name

void HAL_RCCEx_CRS_IRQHandler (void)

Function description

Handle the Clock Recovery System interrupt request.

Return values

- **None:**

HAL_RCCEx_CRS_SyncOkCallback

Function name

void HAL_RCCEx_CRS_SyncOkCallback (void)

Function description

RCCEx Clock Recovery System SYNCOK interrupt callback.

Return values

- **none:**

HAL_RCCEx_CRS_SyncWarnCallback

Function name

void HAL_RCCEx_CRS_SyncWarnCallback (void)

Function description

RCCEx Clock Recovery System SYNCWARN interrupt callback.

Return values

- **none:**

HAL_RCCEx_CRS_ExpectedSyncCallback

Function name

void HAL_RCCEx_CRS_ExpectedSyncCallback (void)

Function description

RCCEx Clock Recovery System Expected SYNC interrupt callback.

Return values

- **none:**

HAL_RCCEx_CRS_ErrorCallback

Function name

void HAL_RCCEx_CRS_ErrorCallback (uint32_t Error)

Function description

RCCEx Clock Recovery System Error interrupt callback.

Parameters

- **Error:** Combination of Error status. This parameter can be a combination of the following values:
  - RCC_CRS_SYNCERR
  - RCC_CRS_SYNCMISS
  - RCC_CRS_TRIMOVF

Return values

- **none:**

46.3 RCCEx Firmware driver defines

The following section lists the various define and macros of the module.

46.3.1 RCCEx

RCCEx

ADC12 Clock Source

RCC_ADC12CLKSOURCE_NONE

RCC_ADC12CLKSOURCE_PLL

RCC_ADC12CLKSOURCE_SYSCLK

ADC345 Clock Source

RCC_ADC345CLKSOURCE_NONE

RCC_ADC345CLKSOURCE_PLL

RCC_ADC345CLKSOURCE_SYSCLK

RCCEx CRS ErrorLimitDefault

RCC_CRS_ERRORLIMIT_DEFAULT

Default Frequency error limit

RCCEx CRS Extended Features

__HAL_RCC_CRS_FREQ_ERROR_COUNTER_ENABLE

Description:

- Enable the oscillator clock for frequency error counter.

Return value:

- None

Notes:

- when the CEN bit is set the CRS_CFGR register becomes write-protected.

__HAL_RCC_CRS_FREQ_ERROR_COUNTER_DISABLE

Description:

- Disable the oscillator clock for frequency error counter.

Return value:

- None

__HAL_RCC_CRS_AUTOMATIC_CALIB_ENABLE

Description:

- Enable the automatic hardware adjustement of TRIM bits.

Return value:

- None

Notes:

- When the AUTOTRIMEN bit is set the CRS_CFGR register becomes write-protected.

__HAL_RCC_CRS_AUTOMATIC_CALIB_DISABLE

Description:

- Enable or disable the automatic hardware adjustement of TRIM bits.

Return value:

- None

__HAL_RCC_CRS_RELOADVALUE_CALCULATE

Description:

- Macro to calculate reload value to be set in CRS register according to target and sync frequencies.

Parameters:

- __FTARGET__: Target frequency (value in Hz)
- __FSYNC__: Synchronization signal frequency (value in Hz)

Return value:

- None

Notes:

- The RELOAD value should be selected according to the ratio between the target frequency and the frequency of the synchronization source after prescaling. It is then decreased by one in order to reach the expected synchronization on the zero value. The formula is the following: RELOAD = (fTARGET / fSYNC) -1

RCCEx CRS Flags

RCC_CRS_FLAG_SYNCOK

SYNC event OK flag

RCC_CRS_FLAG_SYNCWARN

SYNC warning flag

RCC_CRS_FLAG_ERR

Error flag

RCC_CRS_FLAG_ESYNC

Expected SYNC flag

RCC_CRS_FLAG_SYNCERR

SYNC error

RCC_CRS_FLAG_SYNCMISS

SYNC missed

RCC_CRS_FLAG_TRIMOVF

Trimming overflow or underflow

RCCEx CRS FreqErrorDirection

RCC_CRS_FREQERRORDIR_UP

Upcounting direction, the actual frequency is above the target

RCC_CRS_FREQERRORDIR_DOWN

Downcounting direction, the actual frequency is below the target

RCCEx CRS HSI48CalibrationDefault

RCC_CRS_HSI48CALIBRATION_DEFAULT

The default value is 32, which corresponds to the middle of the trimming interval. The trimming step is around 67 kHz between two consecutive TRIM steps. A higher TRIM value corresponds to a higher output frequency

RCCEx CRS Interrupt Sources

RCC_CRS_IT_SYNCOK

SYNC event OK

RCC_CRS_IT_SYNCWARN

SYNC warning

RCC_CRS_IT_ERR

Error

RCC_CRS_IT_ESYNC

Expected SYNC

RCC_CRS_IT_SYNCERR

SYNC error

RCC_CRS_IT_SYNCMISS

SYNC missed

RCC_CRS_IT_TRIMOVF

Trimming overflow or underflow

RCCEx CRS ReloadValueDefault

RCC_CRS_RELOADVALUE_DEFAULT

The reset value of the RELOAD field corresponds to a target frequency of 48 MHz and a synchronization signal frequency of 1 kHz (SOF signal from USB).

RCCEx CRS Status

RCC_CRS_NONE

RCC_CRS_TIMEOUT

RCC_CRS_SYNCOK

RCC_CRS_SYNCWARN

RCC_CRS_SYNCERR

RCC_CRS_SYNCMISS

RCC_CRS_TRIMOVF

RCCEx CRS SynchroDivider

RCC_CRS_SYNC_DIV1

Synchro Signal not divided (default)

RCC_CRS_SYNC_DIV2

Synchro Signal divided by 2

RCC_CRS_SYNC_DIV4

Synchro Signal divided by 4

RCC_CRS_SYNC_DIV8

Synchro Signal divided by 8

RCC_CRS_SYNC_DIV16

Synchro Signal divided by 16

RCC_CRS_SYNC_DIV32

Synchro Signal divided by 32

RCC_CRS_SYNC_DIV64

Synchro Signal divided by 64

RCC_CRS_SYNC_DIV128

Synchro Signal divided by 128

RCCEx CRS SynchroPolarity

RCC_CRS_SYNC_POLARITY_RISING

Synchro Active on rising edge (default)

RCC_CRS_SYNC_POLARITY_FALLING

Synchro Active on falling edge

RCCEx CRS SynchroSource

RCC_CRS_SYNC_SOURCE_GPIO

Synchro Signal source GPIO

RCC_CRS_SYNC_SOURCE_LSE

Synchro Signal source LSE

RCC_CRS_SYNC_SOURCE_USB

Synchro Signal source USB SOF (default)

RCCEx Exported Macros

__HAL_RCC_USART1_CONFIG

Description:

- Macro to configure the USART1 clock (USART1CLK).

Parameters:

- __USART1_CLKSOURCE__: specifies the USART1 clock source. This parameter can be one of the following values:
  - RCC_USART1CLKSOURCE_PCLK2 PCLK2 selected as USART1 clock
  - RCC_USART1CLKSOURCE_HSI HSI selected as USART1 clock
  - RCC_USART1CLKSOURCE_SYSCLK System Clock selected as USART1 clock
  - RCC_USART1CLKSOURCE_LSE LSE selected as USART1 clock

Return value:

- None

__HAL_RCC_GET_USART1_SOURCE

Description:

- Macro to get the USART1 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_USART1CLKSOURCE_PCLK2 PCLK2 selected as USART1 clock
  - RCC_USART1CLKSOURCE_HSI HSI selected as USART1 clock
  - RCC_USART1CLKSOURCE_SYSCLK System Clock selected as USART1 clock
  - RCC_USART1CLKSOURCE_LSE LSE selected as USART1 clock

__HAL_RCC_USART2_CONFIG

Description:

- Macro to configure the USART2 clock (USART2CLK).

Parameters:

- __USART2_CLKSOURCE__: specifies the USART2 clock source. This parameter can be one of the following values:
  - RCC_USART2CLKSOURCE_PCLK1 PCLK1 selected as USART2 clock
  - RCC_USART2CLKSOURCE_HSI HSI selected as USART2 clock
  - RCC_USART2CLKSOURCE_SYSCLK System Clock selected as USART2 clock
  - RCC_USART2CLKSOURCE_LSE LSE selected as USART2 clock

Return value:

- None

__HAL_RCC_GET_USART2_SOURCE

Description:

- Macro to get the USART2 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_USART2CLKSOURCE_PCLK1 PCLK1 selected as USART2 clock
  - RCC_USART2CLKSOURCE_HSI HSI selected as USART2 clock
  - RCC_USART2CLKSOURCE_SYSCLK System Clock selected as USART2 clock
  - RCC_USART2CLKSOURCE_LSE LSE selected as USART2 clock

__HAL_RCC_USART3_CONFIG

Description:

- Macro to configure the USART3 clock (USART3CLK).

Parameters:

- __USART3_CLKSOURCE__: specifies the USART3 clock source. This parameter can be one of the following values:
  - RCC_USART3CLKSOURCE_PCLK1 PCLK1 selected as USART3 clock
  - RCC_USART3CLKSOURCE_HSI HSI selected as USART3 clock
  - RCC_USART3CLKSOURCE_SYSCLK System Clock selected as USART3 clock
  - RCC_USART3CLKSOURCE_LSE LSE selected as USART3 clock

Return value:

- None

__HAL_RCC_GET_USART3_SOURCE

Description:

- Macro to get the USART3 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_USART3CLKSOURCE_PCLK1 PCLK1 selected as USART3 clock
  - RCC_USART3CLKSOURCE_HSI HSI selected as USART3 clock
  - RCC_USART3CLKSOURCE_SYSCLK System Clock selected as USART3 clock
  - RCC_USART3CLKSOURCE_LSE LSE selected as USART3 clock

__HAL_RCC_UART4_CONFIG

Description:

- Macro to configure the UART4 clock (UART4CLK).

Parameters:

- __UART4_CLKSOURCE__: specifies the UART4 clock source. This parameter can be one of the following values:
  - RCC_UART4CLKSOURCE_PCLK1 PCLK1 selected as UART4 clock
  - RCC_UART4CLKSOURCE_HSI HSI selected as UART4 clock
  - RCC_UART4CLKSOURCE_SYSCLK System Clock selected as UART4 clock
  - RCC_UART4CLKSOURCE_LSE LSE selected as UART4 clock

Return value:

- None

__HAL_RCC_GET_UART4_SOURCE

Description:

- Macro to get the UART4 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_UART4CLKSOURCE_PCLK1 PCLK1 selected as UART4 clock
  - RCC_UART4CLKSOURCE_HSI HSI selected as UART4 clock
  - RCC_UART4CLKSOURCE_SYSCLK System Clock selected as UART4 clock
  - RCC_UART4CLKSOURCE_LSE LSE selected as UART4 clock

__HAL_RCC_UART5_CONFIG

Description:

- Macro to configure the UART5 clock (UART5CLK).

Parameters:

- __UART5_CLKSOURCE__: specifies the UART5 clock source. This parameter can be one of the following values:
  - RCC_UART5CLKSOURCE_PCLK1 PCLK1 selected as UART5 clock
  - RCC_UART5CLKSOURCE_HSI HSI selected as UART5 clock
  - RCC_UART5CLKSOURCE_SYSCLK System Clock selected as UART5 clock
  - RCC_UART5CLKSOURCE_LSE LSE selected as UART5 clock

Return value:

- None

__HAL_RCC_GET_UART5_SOURCE

Description:

- Macro to get the UART5 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_UART5CLKSOURCE_PCLK1 PCLK1 selected as UART5 clock
  - RCC_UART5CLKSOURCE_HSI HSI selected as UART5 clock
  - RCC_UART5CLKSOURCE_SYSCLK System Clock selected as UART5 clock
  - RCC_UART5CLKSOURCE_LSE LSE selected as UART5 clock

__HAL_RCC_LPUART1_CONFIG

Description:

- Macro to configure the LPUART1 clock (LPUART1CLK).

Parameters:

- __LPUART1_CLKSOURCE__: specifies the LPUART1 clock source. This parameter can be one of the following values:
  - RCC_LPUART1CLKSOURCE_PCLK1 PCLK1 selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_HSI HSI selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_SYSCLK System Clock selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_LSE LSE selected as LPUART1 clock

Return value:

- None

__HAL_RCC_GET_LPUART1_SOURCE

Description:

- Macro to get the LPUART1 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_LPUART1CLKSOURCE_PCLK1 PCLK1 selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_HSI HSI selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_SYSCLK System Clock selected as LPUART1 clock
  - RCC_LPUART1CLKSOURCE_LSE LSE selected as LPUART1 clock

__HAL_RCC_I2C1_CONFIG

Description:

- Macro to configure the I2C1 clock (I2C1CLK).

Parameters:

- __I2C1_CLKSOURCE__: specifies the I2C1 clock source. This parameter can be one of the following values:
  - RCC_I2C1CLKSOURCE_PCLK1 PCLK1 selected as I2C1 clock
  - RCC_I2C1CLKSOURCE_HSI HSI selected as I2C1 clock
  - RCC_I2C1CLKSOURCE_SYSCLK System Clock selected as I2C1 clock

Return value:

- None

__HAL_RCC_GET_I2C1_SOURCE

Description:

- Macro to get the I2C1 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_I2C1CLKSOURCE_PCLK1 PCLK1 selected as I2C1 clock
  - RCC_I2C1CLKSOURCE_HSI HSI selected as I2C1 clock
  - RCC_I2C1CLKSOURCE_SYSCLK System Clock selected as I2C1 clock

__HAL_RCC_I2C2_CONFIG

Description:

- Macro to configure the I2C2 clock (I2C2CLK).

Parameters:

- __I2C2_CLKSOURCE__: specifies the I2C2 clock source. This parameter can be one of the following values:
  - RCC_I2C2CLKSOURCE_PCLK1 PCLK1 selected as I2C2 clock
  - RCC_I2C2CLKSOURCE_HSI HSI selected as I2C2 clock
  - RCC_I2C2CLKSOURCE_SYSCLK System Clock selected as I2C2 clock

Return value:

- None

__HAL_RCC_GET_I2C2_SOURCE

Description:

- Macro to get the I2C2 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_I2C2CLKSOURCE_PCLK1 PCLK1 selected as I2C2 clock
  - RCC_I2C2CLKSOURCE_HSI HSI selected as I2C2 clock
  - RCC_I2C2CLKSOURCE_SYSCLK System Clock selected as I2C2 clock

__HAL_RCC_I2C3_CONFIG

Description:

- Macro to configure the I2C3 clock (I2C3CLK).

Parameters:

- __I2C3_CLKSOURCE__: specifies the I2C3 clock source. This parameter can be one of the following values:
  - RCC_I2C3CLKSOURCE_PCLK1 PCLK1 selected as I2C3 clock
  - RCC_I2C3CLKSOURCE_HSI HSI selected as I2C3 clock
  - RCC_I2C3CLKSOURCE_SYSCLK System Clock selected as I2C3 clock

Return value:

- None

__HAL_RCC_GET_I2C3_SOURCE

Description:

- Macro to get the I2C3 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_I2C3CLKSOURCE_PCLK1 PCLK1 selected as I2C3 clock
  - RCC_I2C3CLKSOURCE_HSI HSI selected as I2C3 clock
  - RCC_I2C3CLKSOURCE_SYSCLK System Clock selected as I2C3 clock

__HAL_RCC_I2C4_CONFIG

Description:

- Macro to configure the I2C4 clock (I2C4CLK).

Parameters:

- __I2C4_CLKSOURCE__: specifies the I2C4 clock source. This parameter can be one of the following values:
  - RCC_I2C4CLKSOURCE_PCLK1 PCLK1 selected as I2C4 clock
  - RCC_I2C4CLKSOURCE_HSI HSI selected as I2C4 clock
  - RCC_I2C4CLKSOURCE_SYSCLK System Clock selected as I2C4 clock

Return value:

- None

__HAL_RCC_GET_I2C4_SOURCE

Description:

- Macro to get the I2C4 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_I2C4CLKSOURCE_PCLK1 PCLK1 selected as I2C4 clock
  - RCC_I2C4CLKSOURCE_HSI HSI selected as I2C4 clock
  - RCC_I2C4CLKSOURCE_SYSCLK System Clock selected as I2C4 clock

__HAL_RCC_LPTIM1_CONFIG

Description:

- Macro to configure the LPTIM1 clock (LPTIM1CLK).

Parameters:

- __LPTIM1_CLKSOURCE__: specifies the LPTIM1 clock source. This parameter can be one of the following values:
  - RCC_LPTIM1CLKSOURCE_PCLK1 PCLK1 selected as LPTIM1 clock
  - RCC_LPTIM1CLKSOURCE_LSI HSI selected as LPTIM1 clock
  - RCC_LPTIM1CLKSOURCE_HSI LSI selected as LPTIM1 clock
  - RCC_LPTIM1CLKSOURCE_LSE LSE selected as LPTIM1 clock

Return value:

- None

__HAL_RCC_GET_LPTIM1_SOURCE

Description:

- Macro to get the LPTIM1 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_LPTIM1CLKSOURCE_PCLK1 PCLK1 selected as LPUART1 clock
  - RCC_LPTIM1CLKSOURCE_LSI HSI selected as LPUART1 clock
  - RCC_LPTIM1CLKSOURCE_HSI System Clock selected as LPUART1 clock
  - RCC_LPTIM1CLKSOURCE_LSE LSE selected as LPUART1 clock

__HAL_RCC_SAI1_CONFIG

Description:

- Macro to configure the SAI1 clock source.

Parameters:

- __SAI1_CLKSOURCE__: defines the SAI1 clock source. This clock is derived from the HSI, system PLL, System Clock or external clock. This parameter can be one of the following values:
  - RCC_SAI1CLKSOURCE_SYSCLK SAI1 clock = System Clock
  - RCC_SAI1CLKSOURCE_PLL SAI1 clock = PLL "Q" clock
  - RCC_SAI1CLKSOURCE_EXT SAI1 clock = EXT
  - RCC_SAI1CLKSOURCE_HSI SAI1 clock = HSI

Return value:

- None

__HAL_RCC_GET_SAI1_SOURCE

Description:

- Macro to get the SAI1 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_SAI1CLKSOURCE_SYSCLK SAI1 clock = System Clock
  - RCC_SAI1CLKSOURCE_PLL SAI1 clock = PLL "Q" clock
  - RCC_SAI1CLKSOURCE_EXT SAI1 clock = EXT
  - RCC_SAI1CLKSOURCE_HSI SAI1 clock = HSI

__HAL_RCC_I2S_CONFIG

Description:

- Macro to configure the I2S clock source.

Parameters:

- __I2S_CLKSOURCE__: defines the I2S clock source. This clock is derived from the HSI, system PLL, System Clock or external clock. This parameter can be one of the following values:
  - RCC_I2SCLKSOURCE_SYSCLK I2S clock = System Clock
  - RCC_I2SCLKSOURCE_PLL I2S clock = PLL "Q" clock
  - RCC_I2SCLKSOURCE_EXT I2S clock = EXT
  - RCC_I2SCLKSOURCE_HSI I2S clock = HSI

Return value:

- None

__HAL_RCC_GET_I2S_SOURCE

Description:

- Macro to get the I2S clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_I2SCLKSOURCE_SYSCLK I2S clock = System Clock
  - RCC_I2SCLKSOURCE_PLL I2S clock = PLL "Q" clock
  - RCC_I2SCLKSOURCE_EXT I2S clock = EXT
  - RCC_I2SCLKSOURCE_HSI I2S clock = HSI

__HAL_RCC_FDCAN_CONFIG

Description:

- Macro to configure the FDCAN clock source.

Parameters:

- __FDCAN_CLKSOURCE__: defines the FDCAN clock source. This clock is derived from the HSE, system PLL or PCLK1. This parameter can be one of the following values:
  - RCC_FDCANCLKSOURCE_HSE FDCAN clock = HSE
  - RCC_FDCANCLKSOURCE_PLL FDCAN clock = PLL "Q" clock
  - RCC_FDCANCLKSOURCE_PCLK1 FDCAN clock = PCLK1

Return value:

- None

__HAL_RCC_GET_FDCAN_SOURCE

Description:

- Macro to get the FDCAN clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_FDCANCLKSOURCE_HSE FDCAN clock = HSE
  - RCC_FDCANCLKSOURCE_PLL FDCAN clock = PLL "Q" clock
  - RCC_FDCANCLKSOURCE_PCLK1 FDCAN clock = PCLK1

__HAL_RCC_RNG_CONFIG

Description:

- Macro to configure the RNG clock.

Parameters:

- __RNG_CLKSOURCE__: specifies the RNG clock source. This parameter can be one of the following values:
  - RCC_RNGCLKSOURCE_HSI48 HSI48 selected as RNG clock for devices with HSI48
  - RCC_RNGCLKSOURCE_PLL PLL Clock selected as RNG clock

Return value:

- None

Notes:

- USB and RNG peripherals share the same 48MHz clock source.

__HAL_RCC_GET_RNG_SOURCE

Description:

- Macro to get the RNG clock.

Return value:

- The: clock source can be one of the following values:
  - RCC_RNGCLKSOURCE_HSI48 HSI48 selected as RNG clock for devices with HSI48
  - RCC_RNGCLKSOURCE_PLL PLL "Q" clock selected as RNG clock

__HAL_RCC_USB_CONFIG

Description:

- Macro to configure the USB clock (USBCLK).

Parameters:

- __USB_CLKSOURCE__: specifies the USB clock source. This parameter can be one of the following values:
  - RCC_USBCLKSOURCE_HSI48 HSI48 selected as 48MHz clock for devices with HSI48
  - RCC_USBCLKSOURCE_PLL PLL "Q" clock (PLL48M1CLK) selected as USB clock

Return value:

- None

Notes:

- USB, RNG peripherals share the same 48MHz clock source.

__HAL_RCC_GET_USB_SOURCE

Description:

- Macro to get the USB clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_USBCLKSOURCE_HSI48 HSI48 selected as 48MHz clock for devices with HSI48
  - RCC_USBCLKSOURCE_PLL PLL "Q" clock (PLL48M1CLK) selected as USB clock

__HAL_RCC_ADC12_CONFIG

Description:

- Macro to configure the ADC12 interface clock.

Parameters:

- __ADC12_CLKSOURCE__: specifies the ADC12 digital interface clock source. This parameter can be one of the following values:
  - RCC_ADC12CLKSOURCE_NONE No clock selected as ADC12 clock
  - RCC_ADC12CLKSOURCE_PLL PLL Clock selected as ADC12 clock
  - RCC_ADC12CLKSOURCE_SYSCLK System Clock selected as ADC12 clock

Return value:

- None

__HAL_RCC_GET_ADC12_SOURCE

Description:

- Macro to get the ADC12 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_ADC12CLKSOURCE_NONE No clock selected as ADC12 clock
  - RCC_ADC12CLKSOURCE_PLL PLL Clock selected as ADC12 clock
  - RCC_ADC12CLKSOURCE_SYSCLK System Clock selected as ADC12 clock

__HAL_RCC_ADC345_CONFIG

Description:

- Macro to configure the ADC345 interface clock.

Parameters:

- __ADC345_CLKSOURCE__: specifies the ADC345 digital interface clock source. This parameter can be one of the following values:
  - RCC_ADC345CLKSOURCE_NONE No clock selected as ADC345 clock
  - RCC_ADC345CLKSOURCE_PLL PLL Clock selected as ADC345 clock
  - RCC_ADC345CLKSOURCE_SYSCLK System Clock selected as ADC345 clock

Return value:

- None

__HAL_RCC_GET_ADC345_SOURCE

Description:

- Macro to get the ADC345 clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_ADC345CLKSOURCE_NONE No clock selected as ADC345 clock
  - RCC_ADC345CLKSOURCE_PLL PLL Clock selected as ADC345 clock
  - RCC_ADC345CLKSOURCE_SYSCLK System Clock selected as ADC345 clock

__HAL_RCC_QSPI_CONFIG

Description:

- Macro to configure the QuadSPI clock.

Parameters:

- __QSPI_CLKSOURCE__: specifies the QuadSPI clock source. This parameter can be one of the following values:
  - RCC_QSPICLKSOURCE_SYSCLK System Clock selected as QuadSPI clock
  - RCC_QSPICLKSOURCE_HSI HSI clock selected as QuadSPI clock
  - RCC_QSPICLKSOURCE_PLL PLL Q divider clock selected as QuadSPI clock

Return value:

- None

__HAL_RCC_GET_QSPI_SOURCE

Description:

- Macro to get the QuadSPI clock source.

Return value:

- The: clock source can be one of the following values:
  - RCC_QSPICLKSOURCE_SYSCLK System Clock selected as QuadSPI clock
  - RCC_QSPICLKSOURCE_HSI HSI clock selected as QuadSPI clock
  - RCC_QSPICLKSOURCE_PLL PLL Q divider clock selected as QuadSPI clock

__HAL_RCC_LSECSS_EXTI_ENABLE_IT

Description:

- Enable the RCC LSE CSS Extended Interrupt Line.

Return value:

- None

__HAL_RCC_LSECSS_EXTI_DISABLE_IT

Description:

- Disable the RCC LSE CSS Extended Interrupt Line.

Return value:

- None

__HAL_RCC_LSECSS_EXTI_ENABLE_EVENT

Description:

- Enable the RCC LSE CSS Event Line.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_DISABLE_EVENT

Description:

- Disable the RCC LSE CSS Event Line.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable the RCC LSE CSS Extended Interrupt Falling Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable the RCC LSE CSS Extended Interrupt Falling Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_ENABLE_RISING_EDGE

Description:

- Enable the RCC LSE CSS Extended Interrupt Rising Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_DISABLE_RISING_EDGE

Description:

- Disable the RCC LSE CSS Extended Interrupt Rising Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable the RCC LSE CSS Extended Interrupt Rising & Falling Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable the RCC LSE CSS Extended Interrupt Rising & Falling Trigger.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_GET_FLAG

Description:

- Check whether the specified RCC LSE CSS EXTI interrupt flag is set or not.

Return value:

- EXTI: RCC LSE CSS Line Status.

__HAL_RCC_LSECSS_EXTI_CLEAR_FLAG

Description:

- Clear the RCC LSE CSS EXTI flag.

Return value:

- None.

__HAL_RCC_LSECSS_EXTI_GENERATE_SWIT

Description:

- Generate a Software interrupt on the RCC LSE CSS EXTI line.

Return value:

- None.

__HAL_RCC_CRS_ENABLE_IT

Description:

- Enable the specified CRS interrupts.

Parameters:

- __INTERRUPT__: specifies the CRS interrupt sources to be enabled. This parameter can be any combination of the following values:
  - RCC_CRS_IT_SYNCOK SYNC event OK interrupt
  - RCC_CRS_IT_SYNCWARN SYNC warning interrupt
  - RCC_CRS_IT_ERR Synchronization or trimming error interrupt
  - RCC_CRS_IT_ESYNC Expected SYNC interrupt

Return value:

- None

__HAL_RCC_CRS_DISABLE_IT

Description:

- Disable the specified CRS interrupts.

Parameters:

- __INTERRUPT__: specifies the CRS interrupt sources to be disabled. This parameter can be any combination of the following values:
  - RCC_CRS_IT_SYNCOK SYNC event OK interrupt
  - RCC_CRS_IT_SYNCWARN SYNC warning interrupt
  - RCC_CRS_IT_ERR Synchronization or trimming error interrupt
  - RCC_CRS_IT_ESYNC Expected SYNC interrupt

Return value:

- None

__HAL_RCC_CRS_GET_IT_SOURCE

Description:

- Check whether the CRS interrupt has occurred or not.

Parameters:

- __INTERRUPT__: specifies the CRS interrupt source to check. This parameter can be one of the following values:
  - RCC_CRS_IT_SYNCOK SYNC event OK interrupt
  - RCC_CRS_IT_SYNCWARN SYNC warning interrupt
  - RCC_CRS_IT_ERR Synchronization or trimming error interrupt
  - RCC_CRS_IT_ESYNC Expected SYNC interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

RCC_CRS_IT_ERROR_MASK

Description:

- Clear the CRS interrupt pending bits.

Parameters:

- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be any combination of the following values:
  - RCC_CRS_IT_SYNCOK SYNC event OK interrupt
  - RCC_CRS_IT_SYNCWARN SYNC warning interrupt
  - RCC_CRS_IT_ERR Synchronization or trimming error interrupt
  - RCC_CRS_IT_ESYNC Expected SYNC interrupt
  - RCC_CRS_IT_TRIMOVF Trimming overflow or underflow interrupt
  - RCC_CRS_IT_SYNCERR SYNC error interrupt
  - RCC_CRS_IT_SYNCMISS SYNC missed interrupt

__HAL_RCC_CRS_CLEAR_IT

__HAL_RCC_CRS_GET_FLAG

Description:

- Check whether the specified CRS flag is set or not.

Parameters:

- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - RCC_CRS_FLAG_SYNCOK SYNC event OK
  - RCC_CRS_FLAG_SYNCWARN SYNC warning
  - RCC_CRS_FLAG_ERR Error
  - RCC_CRS_FLAG_ESYNC Expected SYNC
  - RCC_CRS_FLAG_TRIMOVF Trimming overflow or underflow
  - RCC_CRS_FLAG_SYNCERR SYNC error
  - RCC_CRS_FLAG_SYNCMISS SYNC missed

Return value:

- The: new state of _FLAG_ (TRUE or FALSE).

RCC_CRS_FLAG_ERROR_MASK

Description:

- Clear the CRS specified FLAG.

Parameters:

- __FLAG__: specifies the flag to clear. This parameter can be one of the following values:
  - RCC_CRS_FLAG_SYNCOK SYNC event OK
  - RCC_CRS_FLAG_SYNCWARN SYNC warning
  - RCC_CRS_FLAG_ERR Error
  - RCC_CRS_FLAG_ESYNC Expected SYNC
  - RCC_CRS_FLAG_TRIMOVF Trimming overflow or underflow
  - RCC_CRS_FLAG_SYNCERR SYNC error
  - RCC_CRS_FLAG_SYNCMISS SYNC missed

Return value:

- None

Notes:

- RCC_CRS_FLAG_ERR clears RCC_CRS_FLAG_TRIMOVF, RCC_CRS_FLAG_SYNCERR, RCC_CRS_FLAG_SYNCMISS and consequently RCC_CRS_FLAG_ERR

47.2 RNG Firmware driver API description

The following section lists the various functions of the RNG library.

47.2.1 How to use this driver

The RNG HAL driver can be used as follows:

1. Enable the RNG controller clock using __HAL_RCC_RNG_CLK_ENABLE() macro in HAL_RNG_MspInit().
2. Activate the RNG peripheral using HAL_RNG_Init() function.
3. Wait until the 32 bit Random Number Generator contains a valid random data using (polling/interrupt) mode.
4. Get the 32 bit random number using HAL_RNG_GenerateRandomNumber() function.

47.2.2 Callback registration

The compilation define USE_HAL_RNG_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_RNG_RegisterCallback() to register a user callback. Function @ref HAL_RNG_RegisterCallback() allows to register following callbacks:

- ErrorCallback : RNG Error Callback.
- MspInitCallback : RNG MspInit.
- MspDeInitCallback : RNG MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_RNG_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. @ref HAL_RNG_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- ErrorCallback : RNG Error Callback.
- MspInitCallback : RNG MspInit.
- MspDeInitCallback : RNG MspDeInit.

For specific callback ReadyDataCallback, use dedicated register callbacks: respectively @ref HAL_RNG_RegisterReadyDataCallback() , @ref HAL_RNG_UnRegisterReadyDataCallback().

By default, after the @ref HAL_RNG_Init() and when the state is HAL_RNG_STATE_RESET all callbacks are set to the corresponding weak (surcharged) functions: example @ref HAL_RNG_ErrorCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_RNG_Init() and @ref HAL_RNG_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_RNG_Init() and @ref HAL_RNG_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_RNG_STATE_READY state only. Exception done MspInit/ MspDeInit that can be registered/unregistered in HAL_RNG_STATE_READY or HAL_RNG_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_RNG_RegisterCallback() before calling @ref HAL_RNG_DeInit() or @ref HAL_RNG_Init() function.

When The compilation define USE_HAL_RNG_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak (surcharged) callbacks are used.

47.2.3 Initialization and configuration functions

This section provides functions allowing to:

- Initialize the RNG according to the specified parameters in the RNG_InitTypeDef and create the associated handle
- DeInitialize the RNG peripheral
- Initialize the RNG MSP
- DeInitialize RNG MSP

This section contains the following APIs:

- ***HAL_RNG_Init***
- ***HAL_RNG_DeInit***
- ***HAL_RNG_MspInit***
- ***HAL_RNG_MspDeInit***

47.2.4 Peripheral Control functions

This section provides functions allowing to:

- Get the 32 bit Random number
- Get the 32 bit Random number with interrupt enabled
- Handle RNG interrupt request

This section contains the following APIs:

- ***HAL_RNG_GenerateRandomNumber***
- ***HAL_RNG_GenerateRandomNumber_IT***
- ***HAL_RNG_IRQHandler***

- *HAL_RNG_ReadLastRandomNumber*
- *HAL_RNG_ReadyDataCallback*
- *HAL_RNG_ErrorCallback*

47.2.5 Peripheral State functions

This subsection permits to get in run-time the status of the peripheral and the data flow.
This section contains the following APIs:

- *HAL_RNG_GetState*
- *HAL_RNG_GetError*

47.2.6 Detailed description of functions

HAL_RNG_Init

Function name

HAL_StatusTypeDef HAL_RNG_Init (RNG_HandleTypeDef * hrng)

Function description

Initializes the RNG peripheral and creates the associated handle.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **HAL:** status

HAL_RNG_DeInit

Function name

HAL_StatusTypeDef HAL_RNG_DeInit (RNG_HandleTypeDef * hrng)

Function description

DeInitializes the RNG peripheral.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **HAL:** status

HAL_RNG_MspInit

Function name

void HAL_RNG_MspInit (RNG_HandleTypeDef * hrng)

Function description

Initializes the RNG MSP.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **None:**

HAL_RNG_MspDeInit

Function name

void HAL_RNG_MspDeInit (RNG_HandleTypeDef * hrng)

Function description

DeInitializes the RNG MSP.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **None:**

HAL_RNG_GenerateRandomNumber

Function name

HAL_StatusTypeDef HAL_RNG_GenerateRandomNumber (RNG_HandleTypeDef * hrng, uint32_t * random32bit)

Function description

Generates a 32-bit random number.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.
- **random32bit:** pointer to generated random number variable if successful.

Return values

- **HAL:** status

Notes

- This function checks value of RNG_FLAG_DRDY flag to know if valid random number is available in the DR register (RNG_FLAG_DRDY flag set whenever a random number is available through the RNG_DR register). After transitioning from 0 to 1 (random number available), RNG_FLAG_DRDY flag remains high until output buffer becomes empty after reading four words from the RNG_DR register, i.e. further function calls will immediately return a new u32 random number (additional words are available and can be read by the application, till RNG_FLAG_DRDY flag remains high).
- When no more random number data is available in DR register, RNG_FLAG_DRDY flag is automatically cleared.

HAL_RNG_GenerateRandomNumber_IT

Function name

HAL_StatusTypeDef HAL_RNG_GenerateRandomNumber_IT (RNG_HandleTypeDef * hrng)

Function description

Generates a 32-bit random number in interrupt mode.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **HAL:** status

HAL_RNG_ReadLastRandomNumber

Function name

uint32_t HAL_RNG_ReadLastRandomNumber (RNG_HandleTypeDef * hrng)

Function description

Read latest generated random number.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **random:** value

HAL_RNG_IRQHandler

Function name

void HAL_RNG_IRQHandler (RNG_HandleTypeDef * hrng)

Function description

Handles RNG interrupt request.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **None:**

Notes

- In the case of a clock error, the RNG is no more able to generate random numbers because the PLL48CLK clock is not correct. User has to check that the clock controller is correctly configured to provide the RNG clock and clear the CEIS bit using __HAL_RNG_CLEAR_IT(). The clock error has no impact on the previously generated random numbers, and the RNG_DR register contents can be used.
- In the case of a seed error, the generation of random numbers is interrupted as long as the SECS bit is '1'. If a number is available in the RNG_DR register, it must not be used because it may not have enough entropy. In this case, it is recommended to clear the SEIS bit using __HAL_RNG_CLEAR_IT(), then disable and enable the RNG peripheral to reinitialize and restart the RNG.
- User-written HAL_RNG_ErrorCallback() API is called once whether SEIS or CEIS are set.

HAL_RNG_ErrorCallback

Function name

void HAL_RNG_ErrorCallback (RNG_HandleTypeDef * hrng)

Function description

RNG error callbacks.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **None:**

HAL_RNG_ReadyDataCallback

Function name

void HAL_RNG_ReadyDataCallback (RNG_HandleTypeDef * hrng, uint32_t random32bit)

Function description

Data Ready callback in non-blocking mode.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.
- **random32bit:** generated random number.

Return values

- **None:**

Notes

- When RNG_FLAG_DRDY flag value is set, first random number has been read from DR register in IRQ Handler and is provided as callback parameter. Depending on valid data available in the conditioning output buffer, additional words can be read by the application from DR register till DRDY bit remains high.

HAL_RNG_GetState

Function name

HAL_RNG_StateTypeDef HAL_RNG_GetState (RNG_HandleTypeDef * hrng)

Function description

Returns the RNG state.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure that contains the configuration information for RNG.

Return values

- **HAL:** state

HAL_RNG_GetError

Function name

uint32_t HAL_RNG_GetError (RNG_HandleTypeDef * hrng)

Function description

Return the RNG handle error code.

Parameters

- **hrng:** pointer to a RNG_HandleTypeDef structure.

Return values

- **RNG:** Error Code

47.3 RNG Firmware driver defines

The following section lists the various define and macros of the module.

47.3.1 RNG

RNG

RNG Error Definition

HAL_RNG_ERROR_NONE

No error

HAL_RNG_ERROR_TIMEOUT

Timeout error

HAL_RNG_ERROR_BUSY

Busy error

HAL_RNG_ERROR_SEED

Seed error

HAL_RNG_ERROR_CLOCK

Clock error

RNG Interrupt definition

RNG_IT_DRDY

Data Ready interrupt

RNG_IT_CEI

Clock error interrupt

RNG_IT_SEI

Seed error interrupt

RNG Flag definition

RNG_FLAG_DRDY

Data ready

RNG_FLAG_CECS

Clock error current status

RNG_FLAG_SECS

Seed error current status

RNG Clock Error Detection

RNG_CED_ENABLE

Clock error detection Enabled

RNG_CED_DISABLE

Clock error detection Disabled

RNG Exported Macros

__HAL_RNG_RESET_HANDLE_STATE

Description:

- Reset RNG handle state.

Parameters:

- __HANDLE__: RNG Handle

Return value:

- None

__HAL_RNG_ENABLE

Description:

- Enables the RNG peripheral.

Parameters:

- __HANDLE__: RNG Handle

Return value:

- None

__HAL_RNG_DISABLE

Description:

- Disables the RNG peripheral.

Parameters:

- __HANDLE__: RNG Handle

Return value:

- None

__HAL_RNG_GET_FLAG

Description:

- Check the selected RNG flag status.

Parameters:

- __HANDLE__: RNG Handle
- __FLAG__: RNG flag This parameter can be one of the following values:
  - RNG_FLAG_DRDY: Data ready
  - RNG_FLAG_CECS: Clock error current status
  - RNG_FLAG_SECS: Seed error current status

Return value:

- The: new state of __FLAG__ (SET or RESET).

__HAL_RNG_CLEAR_FLAG

Description:

- Clears the selected RNG flag status.

Parameters:

- __HANDLE__: RNG handle
- __FLAG__: RNG flag to clear

Return value:

- None

Notes:

- WARNING: This is a dummy macro for HAL code alignment, flags RNG_FLAG_DRDY, RNG_FLAG_CECS and RNG_FLAG_SECS are read-only.

__HAL_RNG_ENABLE_IT

Description:

- Enables the RNG interrupts.

Parameters:

- __HANDLE__: RNG Handle

Return value:

- None

__HAL_RNG_DISABLE_IT

Description:

- Disables the RNG interrupts.

Parameters:

- __HANDLE__: RNG Handle

Return value:

- None

__HAL_RNG_GET_IT

Description:

- Checks whether the specified RNG interrupt has occurred or not.

Parameters:

- __HANDLE__: RNG Handle
- __INTERRUPT__: specifies the RNG interrupt status flag to check. This parameter can be one of the following values:
  - RNG_IT_DRDY: Data ready interrupt
  - RNG_IT_CEI: Clock error interrupt
  - RNG_IT_SEI: Seed error interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_RNG_CLEAR_IT

Description:

- Clear the RNG interrupt status flags.

Parameters:

- __HANDLE__: RNG Handle
- __INTERRUPT__: specifies the RNG interrupt status flag to clear. This parameter can be one of the following values:
  - RNG_IT_CEI: Clock error interrupt
  - RNG_IT_SEI: Seed error interrupt

Return value:

- None

Notes:

- RNG_IT_DRDY flag is read-only, reading RNG_DR register automatically clears RNG_IT_DRDY.

48 HAL RTC Generic Driver

48.1 RTC Firmware driver registers structures

48.1.1 RTC_InitTypeDef

RTC_InitTypeDef is defined in the stm32g4xx_hal_rtc.h

Data Fields

- ***uint32_t HourFormat***
- ***uint32_t AsynchPrediv***
- ***uint32_t SynchPrediv***
- ***uint32_t OutPut***
- ***uint32_t OutPutRemap***
- ***uint32_t OutPutPolarity***
- ***uint32_t OutPutType***
- ***uint32_t OutPutPullUp***

Field Documentation

- ***uint32_t RTC_InitTypeDef::HourFormat***

  Specifies the RTC Hour Format. This parameter can be a value of ***RTC_Hour_Formats***
- ***uint32_t RTC_InitTypeDef::AsynchPrediv***

  Specifies the RTC Asynchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7F
- ***uint32_t RTC_InitTypeDef::SynchPrediv***

  Specifies the RTC Synchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FFF
- ***uint32_t RTC_InitTypeDef::OutPut***

  Specifies which signal will be routed to the RTC output. This parameter can be a value of ***RTCEx_Output_selection_Definitions***
- ***uint32_t RTC_InitTypeDef::OutPutRemap***

  Specifies the remap for RTC output. This parameter can be a value of ***RTC_Output_ALARM_OUT_Remap***
- ***uint32_t RTC_InitTypeDef::OutPutPolarity***

  Specifies the polarity of the output signal. This parameter can be a value of ***RTC_Output_Polarity_Definitions***
- ***uint32_t RTC_InitTypeDef::OutPutType***

  Specifies the RTC Output Pin mode. This parameter can be a value of ***RTC_Output_Type_ALARM_OUT***
- ***uint32_t RTC_InitTypeDef::OutPutPullUp***

  Specifies the RTC Output Pull-Up mode. This parameter can be a value of ***RTC_Output_PullUp_ALARM_OUT***

48.1.2 RTC_TimeTypeDef

RTC_TimeTypeDef is defined in the stm32g4xx_hal_rtc.h

Data Fields

- ***uint8_t Hours***
- ***uint8_t Minutes***
- ***uint8_t Seconds***
- ***uint8_t TimeFormat***
- ***uint32_t SubSeconds***
- ***uint32_t SecondFraction***
- ***uint32_t DayLightSaving***

- ***uint32_t StoreOperation***

Field Documentation

- ***uint8_t RTC_TimeTypeDef::Hours***

  Specifies the RTC Time Hour. This parameter must be a number between Min_Data = 0 and Max_Data = 12 if the RTC_HourFormat_12 is selected. This parameter must be a number between Min_Data = 0 and Max_Data = 23 if the RTC_HourFormat_24 is selected
- ***uint8_t RTC_TimeTypeDef::Minutes***

  Specifies the RTC Time Minutes. This parameter must be a number between Min_Data = 0 and Max_Data = 59
- ***uint8_t RTC_TimeTypeDef::Seconds***

  Specifies the RTC Time Seconds. This parameter must be a number between Min_Data = 0 and Max_Data = 59
- ***uint8_t RTC_TimeTypeDef::TimeFormat***

  Specifies the RTC AM/PM Time. This parameter can be a value of ***RTC_AM_PM_Definitions***
- ***uint32_t RTC_TimeTypeDef::SubSeconds***

  Specifies the RTC_SSR RTC Sub Second register content. This parameter corresponds to a time unit range between [0-1] Second with [1 Sec / SecondFraction +1] granularity
- ***uint32_t RTC_TimeTypeDef::SecondFraction***

  Specifies the range or granularity of Sub Second register content corresponding to Synchronous pre-scaler factor value (PREDIV_S) This parameter corresponds to a time unit range between [0-1] Second with [1 Sec / SecondFraction +1] granularity. This field will be used only by HAL_RTC_GetTime function
- ***uint32_t RTC_TimeTypeDef::DayLightSaving***

  Specifies RTC_DayLightSaveOperation: the value of hour adjustment. This parameter can be a value of ***RTC_DayLightSaving_Definitions***
- ***uint32_t RTC_TimeTypeDef::StoreOperation***

  Specifies RTC_StoreOperation value to be written in the BKP bit in CR register to store the operation. This parameter can be a value of ***RTC_StoreOperation_Definitions***

48.1.3 RTC_DateTypeDef

RTC_DateTypeDef is defined in the stm32g4xx_hal_rtc.h

Data Fields

- ***uint8_t WeekDay***
- ***uint8_t Month***
- ***uint8_t Date***
- ***uint8_t Year***

Field Documentation

- ***uint8_t RTC_DateTypeDef::WeekDay***

  Specifies the RTC Date WeekDay. This parameter can be a value of ***RTC_WeekDay_Definitions***
- ***uint8_t RTC_DateTypeDef::Month***

  Specifies the RTC Date Month (in BCD format). This parameter can be a value of ***RTC_Month_Date_Definitions***
- ***uint8_t RTC_DateTypeDef::Date***

  Specifies the RTC Date. This parameter must be a number between Min_Data = 1 and Max_Data = 31
- ***uint8_t RTC_DateTypeDef::Year***

  Specifies the RTC Date Year. This parameter must be a number between Min_Data = 0 and Max_Data = 99

48.1.4 RTC_AlarmTypeDef

RTC_AlarmTypeDef is defined in the stm32g4xx_hal_rtc.h

Data Fields

- ***RTC_TimeTypeDef AlarmTime***
- ***uint32_t AlarmMask***
- ***uint32_t AlarmSubSecondMask***

- ***uint32_t AlarmDateWeekDaySel***
- ***uint8_t AlarmDateWeekDay***
- ***uint32_t Alarm***

Field Documentation

- ***RTC_TimeTypeDef RTC_AlarmTypeDef::AlarmTime***
  Specifies the RTC Alarm Time members
- ***uint32_t RTC_AlarmTypeDef::AlarmMask***
  Specifies the RTC Alarm Masks. This parameter can be a value of ***RTC_AlarmMask_Definitions***
- ***uint32_t RTC_AlarmTypeDef::AlarmSubSecondMask***
  Specifies the RTC Alarm SubSeconds Masks. This parameter can be a value of ***RTC_Alarm_Sub_Seconds_Masks_Definitions***
- ***uint32_t RTC_AlarmTypeDef::AlarmDateWeekDaySel***
  Specifies the RTC Alarm is on Date or WeekDay. This parameter can be a value of ***RTC_AlarmDateWeekDay_Definitions***
- ***uint8_t RTC_AlarmTypeDef::AlarmDateWeekDay***
  Specifies the RTC Alarm Date/WeekDay. If the Alarm Date is selected, this parameter must be set to a value in the 1-31 range. If the Alarm WeekDay is selected, this parameter can be a value of ***RTC_WeekDay_Definitions***
- ***uint32_t RTC_AlarmTypeDef::Alarm***
  Specifies the alarm . This parameter can be a value of ***RTC_Alarms_Definitions***

48.1.5 RTC_HandleTypeDef

RTC_HandleTypeDef is defined in the stm32g4xx_hal_rtc.h

Data Fields

- ***RTC_TypeDef * Instance***
- ***RTC_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_RTCStateTypeDef State***

Field Documentation

- ***RTC_TypeDef* RTC_HandleTypeDef::Instance***
  Legacy register base address. Not used anymore, the driver directly uses cmsis base address
- ***RTC_InitTypeDef RTC_HandleTypeDef::Init***
  RTC required parameters
- ***HAL_LockTypeDef RTC_HandleTypeDef::Lock***
  RTC locking object
- ***__IO HAL_RTCStateTypeDef RTC_HandleTypeDef::State***
  Time communication state

48.2 RTC Firmware driver API description

The following section lists the various functions of the RTC library.

48.2.1 RTC Operating Condition

The real-time clock (RTC) and the RTC backup registers can be powered from the VBAT voltage when the main VDD supply is powered off. To retain the content of the RTC backup registers and supply the RTC when VDD is turned off, VBAT pin can be connected to an optional standby voltage supplied by a battery or by another source.

48.2.2 Backup Domain Reset

The backup domain reset sets all RTC registers and the RCC_BDCR register to their reset values. A backup domain reset is generated when one of the following events occurs:

1. Software reset, triggered by setting the BDRST bit in the RCC Backup domain control register (RCC_BDCR).

2. VDD or VBAT power on, if both supplies have previously been powered off.
3. Tamper detection event resets all data backup registers.

48.2.3 Backup Domain Access

After reset, the backup domain (RTC registers and RTC backup data registers) is protected against possible unwanted write accesses.

To enable access to the RTC Domain and RTC registers, proceed as follows:

- Enable the Power Controller (PWR) APB1 interface clock using the __HAL_RCC_PWR_CLK_ENABLE() function.
- Enable access to RTC domain using the HAL_PWR_EnableBkUpAccess() function.
- Select the RTC clock source using the __HAL_RCC_RTC_CONFIG() function.
- Enable RTC Clock using the __HAL_RCC_RTC_ENABLE() function.

To enable access to the RTC Domain and RTC registers, proceed as follows:

1. Call the function HAL_RCCEx_PeriphCLKConfig with RCC_PERIPHCLK_RTC for PeriphClockSelection and select RTCClockSelection (LSE, LSI or HSEdiv32)
2. Enable RTC Clock using the __HAL_RCC_RTC_ENABLE() macro.

48.2.4 How to use RTC Driver

- Enable the RTC domain access (see description in the section above).
- Configure the RTC Prescaler (Asynchronous and Synchronous) and RTC hour format using the HAL_RTC_Init() function.

Time and Date configuration

- To configure the RTC Calendar (Time and Date) use the HAL_RTC_SetTime() and HAL_RTC_SetDate() functions.
- To read the RTC Calendar, use the HAL_RTC_GetTime() and HAL_RTC_GetDate() functions.

Alarm configuration

- To configure the RTC Alarm use the HAL_RTC_SetAlarm() function. You can also configure the RTC Alarm with interrupt mode using the HAL_RTC_SetAlarm_IT() function.
- To read the RTC Alarm, use the HAL_RTC_GetAlarm() function.

48.2.5 RTC and low power modes

The MCU can be woken up from a low power mode by an RTC alternate function.

The RTC alternate functions are the RTC alarms (Alarm A and Alarm B), RTC wakeup, RTC tamper event detection and RTC time stamp event detection. These RTC alternate functions can wake up the system from the Stop and Standby low power modes.

The system can also wake up from low power modes without depending on an external interrupt (Auto-wakeup mode), by using the RTC alarm or the RTC wakeup events.

The RTC provides a programmable time base for waking up from the Stop or Standby mode at regular intervals. Wakeup from STOP and STANDBY modes is possible only when the RTC clock source is LSE or LSI.

Callback registration

The compilation define USE_RTC_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Function @ref HAL_RTC_RegisterCallback() to register an interrupt callback.

Function @ref HAL_RTC_RegisterCallback() allows to register following callbacks:

- AlarmAEventCallback : RTC Alarm A Event callback.
- AlarmBEventCallback : RTC Alarm B Event callback.
- TimeStampEventCallback : RTC TimeStamp Event callback.
- WakeUpTimerEventCallback : RTC WakeUpTimer Event callback.
- Tamper1EventCallback : RTC Tamper 1 Event callback.

- Tamper2EventCallback : RTC Tamper 2 Event callback.
- Tamper3EventCallback : RTC Tamper 3 Event callback.
- Tamper4EventCallback : RTC Tamper 4 Event callback.
- Tamper5EventCallback : RTC Tamper 5 Event callback.
- Tamper6EventCallback : RTC Tamper 6 Event callback.
- Tamper7EventCallback : RTC Tamper 7 Event callback.
- Tamper8EventCallback : RTC Tamper 8 Event callback.
- InternalTamper1EventCallback : RTC InternalTamper 1 Event callback.
- InternalTamper2EventCallback : RTC InternalTamper 2 Event callback.
- InternalTamper3EventCallback : RTC InternalTamper 3 Event callback.
- InternalTamper5EventCallback : RTC InternalTamper 5 Event callback.
- InternalTamper8EventCallback : RTC InternalTamper 8 Event callback. #if defined (__ARM_FEATURE_CMSE) && (__ARM_FEATURE_CMSE == 3U)
- AlarmAEventCallback_S : RTC Alarm A Event callback_S
- AlarmBEventCallback_S : RTC Alarm B Event callback_S.
- TimeStampEventCallback_S : RTC TimeStampEvent callback_S.
- WakeUpTimerEventCallback_S : RTC WakeUpTimerEvent callback_S.
- Tamper1EventCallback_S : RTC Tamper 1 Event callback_S.
- Tamper2EventCallback_S : RTC Tamper 2 Event callback_S.
- Tamper3EventCallback_S : RTC Tamper 3 Event callback_S.
- Tamper4EventCallback_S : RTC Tamper 4 Event callback_S.
- Tamper5EventCallback_S : RTC Tamper 5 Event callback_S.
- Tamper6EventCallback_S : RTC Tamper 6 Event callback_S.
- Tamper7EventCallback_S : RTC Tamper 7 Event callback_S.
- Tamper8EventCallback_S : RTC Tamper 8 Event callback_S.
- InternalTamper1EventCallback_S : RTC InternalTamper 1 Event callback_S.
- InternalTamper2EventCallback_S : RTC InternalTamper 2 Event callback_S.
- InternalTamper3EventCallback_S : RTC InternalTamper 3 Event callback_S.
- InternalTamper5EventCallback_S : RTC InternalTamper 5 Event callback_S.
- InternalTamper8EventCallback_S : RTC InternalTamper 8 Event callback_S. #endif
- MspInitCallback : RTC MspInit callback.
- MspDeInitCallback : RTC MspDeInit callback.

This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_RTC_UnRegisterCallback() to reset a callback to the default weak function. @ref HAL_RTC_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- AlarmAEventCallback : RTC Alarm A Event callback.
- AlarmBEventCallback : RTC Alarm B Event callback.
- TimeStampEventCallback : RTC TimeStamp Event callback.
- WakeUpTimerEventCallback : RTC WakeUpTimer Event callback.
- Tamper1EventCallback : RTC Tamper 1 Event callback.
- Tamper2EventCallback : RTC Tamper 2 Event callback.
- Tamper3EventCallback : RTC Tamper 3 Event callback.
- Tamper4EventCallback : RTC Tamper 4 Event callback.
- Tamper5EventCallback : RTC Tamper 5 Event callback.
- Tamper6EventCallback : RTC Tamper 6 Event callback.
- Tamper7EventCallback : RTC Tamper 7 Event callback.
- Tamper8EventCallback : RTC Tamper 8 Event callback.
- InternalTamper1EventCallback : RTC Internal Tamper 1 Event callback.

- InternalTamper2EventCallback : RTC Internal Tamper 2 Event callback.
- InternalTamper3EventCallback : RTC Internal Tamper 3 Event callback.
- InternalTamper4EventCallback : RTC Internal Tamper 4 Event callback.
- InternalTamper5EventCallback : RTC Internal Tamper 5 Event callback.
- InternalTamper6EventCallback : RTC Internal Tamper 6 Event callback.
- InternalTamper8EventCallback : RTC Internal Tamper 8 Event callback. #if defined (__ARM_FEATURE_CMSE) && (__ARM_FEATURE_CMSE == 3U)
- AlarmAEventCallback_S : RTC Alarm A Event callback secure.
- AlarmBEventCallback_S : RTC Alarm B Event callback secure.
- TimeStampEventCallback_S : RTC TimeStamp Event callback secure.
- WakeUpTimerEventCallback_S : RTC WakeUpTimer Event callback secure.
- Tamper1EventCallback_S : RTC Tamper 1 Event callback secure.
- Tamper2EventCallback_S : RTC Tamper 2 Event callback secure.
- Tamper3EventCallback_S : RTC Tamper 3 Event callback secure.
- Tamper4EventCallback_S : RTC Tamper 4 Event callback secure.
- Tamper5EventCallback_S : RTC Tamper 5 Event callback secure.
- Tamper6EventCallback_S : RTC Tamper 6 Event callback secure.
- Tamper7EventCallback_S : RTC Tamper 7 Event callback secure.
- Tamper8EventCallback_S : RTC Tamper 8 Event callback secure.
- InternalTamper1EventCallback_S : RTC Internal Tamper 1 Event callback secure.
- InternalTamper2EventCallback_S : RTC Internal Tamper 2 Event callback secure.
- InternalTamper3EventCallback_S : RTC Internal Tamper 3 Event callback secure.
- InternalTamper4EventCallback_S : RTC Internal Tamper 4 Event callback secure.
- InternalTamper5EventCallback_S : RTC Internal Tamper 5 Event callback secure.
- InternalTamper6EventCallback_S : RTC Internal Tamper 6 Event callback secure.
- InternalTamper8EventCallback_S : RTC Internal Tamper 8 Event callback secure. #endif
- MspInitCallback : RTC MspInit callback.
- MspDeInitCallback : RTC MspDeInit callback.

By default, after the @ref HAL_RTC_Init() and when the state is HAL_RTC_STATE_RESET, all callbacks are set to the corresponding weak functions : examples @ref AlarmAEventCallback(), @ref TimeStampEventCallback(). Exception done for MspInit and MspDeInit callbacks that are reset to the legacy weak function in the @ref HAL_RTC_Init()/@ref HAL_RTC_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, @ref HAL_RTC_Init()/@ref HAL_RTC_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand)

Callbacks can be registered/unregistered in HAL_RTC_STATE_READY state only. Exception done MspInit/MspDeInit that can be registered/unregistered in HAL_RTC_STATE_READY or HAL_RTC_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_RTC_RegisterCallback() before calling @ref HAL_RTC_DeInit() or @ref HAL_RTC_Init() function.

When The compilation define USE_HAL_RTC_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

48.2.6 Initialization and de-initialization functions

This section provides functions allowing to initialize and configure the RTC Prescaler (Synchronous and Asynchronous), RTC Hour format, disable RTC registers Write protection, enter and exit the RTC initialization mode, RTC registers synchronization check and reference clock detection enable.

1. The RTC Prescaler is programmed to generate the RTC 1Hz time base. It is split into 2 programmable prescalers to minimize power consumption.
   – A 7-bit asynchronous prescaler and a 15-bit synchronous prescaler.
   – When both prescalers are used, it is recommended to configure the asynchronous prescaler to a high value to minimize power consumption.

2. All RTC registers are Write protected. Writing to the RTC registers is enabled by writing a key into the Write Protection register, RTC_WPR.
3. To configure the RTC Calendar, user application should enter initialization mode. In this mode, the calendar counter is stopped and its value can be updated. When the initialization sequence is complete, the calendar restarts counting after 4 RTCCLK cycles.
4. To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.The HAL_RTC_WaitForSynchro() function implements the above software sequence (RSF clear and RSF check).

This section contains the following APIs:

- ***HAL_RTC_Init***
- ***HAL_RTC_DeInit***
- ***HAL_RTC_MspInit***
- ***HAL_RTC_MspDeInit***

48.2.7 RTC Time and Date functions

This section provides functions allowing to configure Time and Date features

This section contains the following APIs:

- ***HAL_RTC_SetTime***
- ***HAL_RTC_GetTime***
- ***HAL_RTC_SetDate***
- ***HAL_RTC_GetDate***

48.2.8 RTC Alarm functions

This section provides functions allowing to configure Alarm feature

This section contains the following APIs:

- ***HAL_RTC_SetAlarm***
- ***HAL_RTC_SetAlarm_IT***
- ***HAL_RTC_DeactivateAlarm***
- ***HAL_RTC_GetAlarm***
- ***HAL_RTC_AlarmIRQHandler***
- ***HAL_RTC_AlarmAEventCallback***
- ***HAL_RTC_PollForAlarmAEvent***

48.2.9 Peripheral Control functions

This subsection provides functions allowing to

- Wait for RTC Time and Date Synchronization

This section contains the following APIs:

- ***HAL_RTC_WaitForSynchro***

48.2.10 Peripheral State functions

This subsection provides functions allowing to

- Get RTC state

This section contains the following APIs:

- ***HAL_RTC_GetState***

48.2.11 Detailed description of functions

HAL_RTC_Init

Function name

HAL_StatusTypeDef HAL_RTC_Init (RTC_HandleTypeDef * hrtc)

Function description

Initialize the RTC peripheral.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTC_DeInit

Function name

HAL_StatusTypeDef HAL_RTC_DeInit (RTC_HandleTypeDef * hrtc)

Function description

DeInitialize the RTC peripheral.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- This function does not reset the RTC Backup Data registers.

HAL_RTC_MspInit

Function name

void HAL_RTC_MspInit (RTC_HandleTypeDef * hrtc)

Function description

Initialize the RTC MSP.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTC_MspDeInit

Function name

void HAL_RTC_MspDeInit (RTC_HandleTypeDef * hrtc)

Function description

DeInitialize the RTC MSP.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTC_SetTime

Function name

HAL_StatusTypeDef HAL_RTC_SetTime (RTC_HandleTypeDef * hrtc, RTC_TimeTypeDef * sTime, uint32_t Format)

Function description

Set RTC current time.

Parameters

- **hrtc:** RTC handle
- **sTime:** Pointer to Time structure
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

HAL_RTC_GetTime

Function name

HAL_StatusTypeDef HAL_RTC_GetTime (RTC_HandleTypeDef * hrtc, RTC_TimeTypeDef * sTime, uint32_t Format)

Function description

Get RTC current time.

Parameters

- **hrtc:** RTC handle
- **sTime:** Pointer to Time structure with Hours, Minutes and Seconds fields returned with input format (BIN or BCD), also SubSeconds field returning the RTC_SSR register content and SecondFraction field the Synchronous pre-scaler factor to be used for second fraction ratio computation.
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

Notes

- You can use SubSeconds and SecondFraction (sTime structure fields returned) to convert SubSeconds value in second fraction ratio with time unit following generic formula: Second fraction ratio * time_unit= [(SecondFraction-SubSeconds)/(SecondFraction+1)] * time_unit This conversion can be performed only if no shift operation is pending (ie. SHFP=0) when PREDIV_S >= SS
- You must call HAL_RTC_GetDate() after HAL_RTC_GetTime() to unlock the values in the higher-order calendar shadow registers to ensure consistency between the time and date values. Reading RTC current time locks the values in calendar shadow registers until Current date is read to ensure consistency between the time and date values.

HAL_RTC_SetDate

Function name

HAL_StatusTypeDef HAL_RTC_SetDate (RTC_HandleTypeDef * hrtc, RTC_DateTypeDef * sDate, uint32_t Format)

Function description

Set RTC current date.

Parameters

- **hrtc:** RTC handle
- **sDate:** Pointer to date structure
- **Format:** specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

HAL_RTC_GetDate

Function name

HAL_StatusTypeDef HAL_RTC_GetDate (RTC_HandleTypeDef * hrtc, RTC_DateTypeDef * sDate, uint32_t Format)

Function description

Get RTC current date.

Parameters

- **hrtc:** RTC handle
- **sDate:** Pointer to Date structure
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

Notes

- You must call HAL_RTC_GetDate() after HAL_RTC_GetTime() to unlock the values in the higher-order calendar shadow registers to ensure consistency between the time and date values. Reading RTC current time locks the values in calendar shadow registers until Current date is read.

HAL_RTC_SetAlarm

Function name

HAL_StatusTypeDef HAL_RTC_SetAlarm (RTC_HandleTypeDef * hrtc, RTC_AlarmTypeDef * sAlarm, uint32_t Format)

Function description

Set the specified RTC Alarm.

Parameters

- **hrtc:** RTC handle
- **sAlarm:** Pointer to Alarm structure
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

HAL_RTC_SetAlarm_IT

Function name

HAL_StatusTypeDef HAL_RTC_SetAlarm_IT (RTC_HandleTypeDef * hrtc, RTC_AlarmTypeDef * sAlarm, uint32_t Format)

Function description

Set the specified RTC Alarm with Interrupt.

Parameters

- **hrtc:** RTC handle
- **sAlarm:** Pointer to Alarm structure
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (Use the HAL_RTC_DeactivateAlarm()).
- The HAL_RTC_SetTime() must be called before enabling the Alarm feature.

HAL_RTC_DeactivateAlarm

Function name

HAL_StatusTypeDef HAL_RTC_DeactivateAlarm (RTC_HandleTypeDef * hrtc, uint32_t Alarm)

Function description

Deactivate the specified RTC Alarm.

Parameters

- **hrtc:** RTC handle
- **Alarm:** Specifies the Alarm. This parameter can be one of the following values:
  - RTC_ALARM_A: AlarmA
  - RTC_ALARM_B: AlarmB

Return values

- **HAL:** status

HAL_RTC_GetAlarm

Function name

HAL_StatusTypeDef HAL_RTC_GetAlarm (RTC_HandleTypeDef * hrtc, RTC_AlarmTypeDef * sAlarm, uint32_t Alarm, uint32_t Format)

Function description

Get the RTC Alarm value and masks.

Parameters

- **hrtc:** RTC handle
- **sAlarm:** Pointer to Date structure
- **Alarm:** Specifies the Alarm. This parameter can be one of the following values:
  - RTC_ALARM_A: AlarmA
  - RTC_ALARM_B: AlarmB
- **Format:** Specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

HAL_RTC_AlarmIRQHandler

Function name

void HAL_RTC_AlarmIRQHandler (RTC_HandleTypeDef * hrtc)

Function description

Handle Alarm interrupt request.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTC_PollForAlarmAEvent

Function name

HAL_StatusTypeDef HAL_RTC_PollForAlarmAEvent (RTC_HandleTypeDef * hrtc, uint32_t Timeout)

Function description

Handle AlarmA Polling request.

Parameters

- **hrtc:** RTC handle
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTC_AlarmAEventCallback

Function name

void HAL_RTC_AlarmAEventCallback (RTC_HandleTypeDef * hrtc)

Function description

Alarm A callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTC_WaitForSynchro

Function name

HAL_StatusTypeDef HAL_RTC_WaitForSynchro (RTC_HandleTypeDef * hrtc)

Function description

Wait until the RTC Time and Date registers (RTC_TR and RTC_DR) are synchronized with RTC APB clock.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- The RTC Resynchronization mode is write protected, use the __HAL_RTC_WRITEPROTECTION_DISABLE() before calling this function.
- To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.

HAL_RTC_GetState

Function name

HAL_RTCStateTypeDef HAL_RTC_GetState (RTC_HandleTypeDef * hrtc)

Function description

Return the RTC handle state.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** state

RTC_EnterInitMode

Function name

HAL_StatusTypeDef RTC_EnterInitMode (RTC_HandleTypeDef * hrtc)

Function description

Enter the RTC Initialization mode.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- The RTC Initialization mode is write protected, use the __HAL_RTC_WRITEPROTECTION_DISABLE() before calling this function.

RTC_ExitInitMode

Function name

HAL_StatusTypeDef RTC_ExitInitMode (RTC_HandleTypeDef * hrtc)

Function description

Exit the RTC Initialization mode.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

RTC_ByteToBcd2

Function name

uint8_t RTC_ByteToBcd2 (uint8_t Value)

Function description

Convert a 2 digit decimal to BCD format.

Parameters

- **Value:** Byte to be converted

Return values

- **Converted:** byte

RTC_Bcd2ToByte

Function name

uint8_t RTC_Bcd2ToByte (uint8_t Value)

Function description

Convert from 2 digit BCD to Binary.

Parameters

- **Value:** BCD value to be converted

Return values

- **Converted:** word

48.3 RTC Firmware driver defines

The following section lists the various define and macros of the module.

48.3.1 RTC

RTC

RTC AlarmDateWeekDay Definitions

RTC_ALARMDATEWEEKDAYSEL_DATE

RTC_ALARMDATEWEEKDAYSEL_WEEKDAY

RTC AlarmMask Definitions

RTC_ALARMMASK_NONE

RTC_ALARMMASK_DATEWEEKDAY

RTC_ALARMMASK_HOURS

RTC_ALARMMASK_MINUTES

RTC_ALARMMASK_SECONDS

RTC_ALARMMASK_ALL

RTC Alarms Definitions

RTC_ALARM_A

RTC_ALARM_B

RTC Alarm Sub Seconds Masks Definitions

RTC_ALARMSUBSECONDMASK_ALL

All Alarm SS fields are masked. There is no comparison on sub seconds for Alarm

RTC_ALARMSUBSECONDMASK_SS14_1

SS[14:1] not used in Alarm comparison. Only SS[0] is compared.

RTC_ALARMSUBSECONDMASK_SS14_2

SS[14:2] not used in Alarm comparison. Only SS[1:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_3

SS[14:3] not used in Alarm comparison. Only SS[2:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_4

SS[14:4] not used in Alarm comparison. Only SS[3:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_5

SS[14:5] not used in Alarm comparison. Only SS[4:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_6

SS[14:6] not used in Alarm comparison. Only SS[5:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_7

SS[14:7] not used in Alarm comparison. Only SS[6:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_8

SS[14:8] not used in Alarm comparison. Only SS[7:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_9

SS[14:9] not used in Alarm comparison. Only SS[8:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_10

SS[14:10] not used in Alarm comparison. Only SS[9:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_11

SS[14:11] not used in Alarm comparison. Only SS[10:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_12

SS[14:12] not used in Alarm comparison.Only SS[11:0] are compared

RTC_ALARMSUBSECONDMASK_SS14_13

SS[14:13] not used in Alarm comparison. Only SS[12:0] are compared

RTC_ALARMSUBSECONDMASK_SS14

SS[14] not used in Alarm comparison. Only SS[13:0] are compared

RTC_ALARMSUBSECONDMASK_NONE

SS[14:0] are compared and must match to activate alarm.

RTC AM PM Definitions

RTC_HOURFORMAT12_AM

RTC_HOURFORMAT12_PM

RTC Clear Flags Definitions

RTC_CLEAR_ITSF

Clear Internal Time-stamp flag

RTC_CLEAR_TSOVF

Clear Time-stamp overflow flag

RTC_CLEAR_TSF

Clear Time-stamp flag

RTC_CLEAR_WUTF

Clear Wakeup timer flag

RTC_CLEAR_ALRBF

Clear Alarm B flag

RTC_CLEAR_ALRAF

Clear Alarm A flag

RTC DayLightSaving Definitions

RTC_DAYLIGHTSAVING_SUB1H

RTC_DAYLIGHTSAVING_ADD1H

RTC_DAYLIGHTSAVING_NONE

RTC Exported Macros

__HAL_RTC_RESET_HANDLE_STATE

Description:

- Reset RTC handle state.

Parameters:

- __HANDLE__: RTC handle.

Return value:

- None

__HAL_RTC_WRITEPROTECTION_DISABLE

Description:

- Disable the write protection for RTC registers.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_WRITEPROTECTION_ENABLE

Description:

- Enable the write protection for RTC registers.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_DAYLIGHT_SAVING_TIME_ADD1H

Description:

- Add 1 hour (summer time change).

Parameters:

- __HANDLE__: specifies the RTC handle.
- __BKP__: Backup This parameter can be:
  - RTC_STOREOPERATION_RESET
  - RTC_STOREOPERATION_SET

Return value:

- None

__HAL_RTC_DAYLIGHT_SAVING_TIME_SUB1H

Description:

- Subtract 1 hour (winter time change).

Parameters:

- __HANDLE__: specifies the RTC handle.
- __BKP__: Backup This parameter can be:
  - RTC_STOREOPERATION_RESET
  - RTC_STOREOPERATION_SET

Return value:

- None

__HAL_RTC_ALARMA_ENABLE

Description:

- Enable the RTC ALARMA peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_ALARMA_DISABLE

Description:

- Disable the RTC ALARMA peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_ALARMB_ENABLE

Description:

- Enable the RTC ALARMB peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_ALARMB_DISABLE

Description:

- Disable the RTC ALARMB peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_ALARM_ENABLE_IT

Description:

- Enable the RTC Alarm interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Alarm interrupt sources to be enabled or disabled. This parameter can be any combination of the following values:
  - RTC_IT_ALRA Alarm A interrupt
  - RTC_IT_ALRB Alarm B interrupt

Return value:

- None

__HAL_RTC_ALARM_DISABLE_IT

Description:

- Disable the RTC Alarm interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Alarm interrupt sources to be enabled or disabled. This parameter can be any combination of the following values:
  - RTC_IT_ALRA Alarm A interrupt
  - RTC_IT_ALRB Alarm B interrupt

Return value:

- None

__HAL_RTC_ALARM_GET_IT

Description:

- Check whether the specified RTC Alarm interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Alarm interrupt sources to check. This parameter can be:
  - RTC_IT_ALRA Alarm A interrupt
  - RTC_IT_ALRB Alarm B interrupt

Return value:

- None

__HAL_RTC_ALARM_GET_IT_SOURCE

Description:

- Check whether the specified RTC Alarm interrupt has been enabled or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Alarm interrupt sources to check. This parameter can be:
  - RTC_IT_ALRA Alarm A interrupt
  - RTC_IT_ALRB Alarm B interrupt

Return value:

- None

__HAL_RTC_ALARM_GET_FLAG

Description:

- Get the selected RTC Alarms flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Alarm Flag sources to check. This parameter can be:
  - RTC_FLAG_ALRAF
  - RTC_FLAG_ALRBF
  - RTC_FLAG_ALRAWF
  - RTC_FLAG_ALRBWF

Return value:

- None

__HAL_RTC_ALARM_CLEAR_FLAG

Description:

- Clear the RTC Alarms pending flags.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Alarm Flag sources to clear. This parameter can be:
  - RTC_FLAG_ALRAF
  - RTC_FLAG_ALRBF

Return value:

- None

__HAL_RTC_ALARM_EXTI_ENABLE_IT

Description:

- Enable interrupt on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_DISABLE_IT

Description:

- Disable interrupt on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_ENABLE_EVENT

Description:

- Enable event on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_DISABLE_EVENT

Description:

- Disable event on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_ENABLE_FALLING_EDGE

Description:

- Enable falling edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_DISABLE_FALLING_EDGE

Description:

- Disable falling edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_ENABLE_RISING_EDGE

Description:

- Enable rising edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_DISABLE_RISING_EDGE

Description:

- Disable rising edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_ENABLE_RISING_FALLING_EDGE

Description:

- Enable rising & falling edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_DISABLE_RISING_FALLING_EDGE

Description:

- Disable rising & falling edge trigger on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_RISING_IT

Description:

- set rising edge interrupt on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_FALLING_IT

Description:

- set rising edge interrupt on the RTC Alarm associated Exti line.

Return value:

- None

__HAL_RTC_ALARM_EXTI_CLEAR_IT

Description:

- clear interrupt on the RTC Alarm associated Exti line.

Return value:

- None

49 HAL RTC Extension Driver

49.1 RTCEx Firmware driver registers structures

49.1.1 RTC_TamperTypeDef

RTC_TamperTypeDef is defined in the stm32g4xx_hal_rtc_ex.h

Data Fields

- ***uint32_t Tamper***
- ***uint32_t Trigger***
- ***uint32_t NoErase***
- ***uint32_t MaskFlag***
- ***uint32_t Filter***
- ***uint32_t SamplingFrequency***
- ***uint32_t PrechargeDuration***
- ***uint32_t TamperPullUp***
- ***uint32_t TimeStampOnTamperDetection***

Field Documentation

- ***uint32_t RTC_TamperTypeDef::Tamper***
  Specifies the Tamper Pin. This parameter can be a value of ***RTCEx_Tamper_Pins***
- ***uint32_t RTC_TamperTypeDef::Trigger***
  Specifies the Tamper Trigger. This parameter can be a value of ***RTCEx_Tamper_Trigger***
- ***uint32_t RTC_TamperTypeDef::NoErase***
  Specifies the Tamper no erase mode. This parameter can be a value of ***RTCEx_Tamper_EraseBackUp***
- ***uint32_t RTC_TamperTypeDef::MaskFlag***
  Specifies the Tamper Flag masking. This parameter can be a value of ***RTCEx_Tamper_MaskFlag***
- ***uint32_t RTC_TamperTypeDef::Filter***
  Specifies the TAMP Filter Tamper. This parameter can be a value of ***RTCEx_Tamper_Filter***
- ***uint32_t RTC_TamperTypeDef::SamplingFrequency***
  Specifies the sampling frequency. This parameter can be a value of ***RTCEx_Tamper_Sampling_Frequencies***
- ***uint32_t RTC_TamperTypeDef::PrechargeDuration***
  Specifies the Precharge Duration . This parameter can be a value of ***RTCEx_Tamper_Pin_Precharge_Duration***
- ***uint32_t RTC_TamperTypeDef::TamperPullUp***
  Specifies the Tamper PullUp . This parameter can be a value of ***RTCEx_Tamper_Pull_UP***
- ***uint32_t RTC_TamperTypeDef::TimeStampOnTamperDetection***
  Specifies the TimeStampOnTamperDetection. This parameter can be a value of ***RTCEx_Tamper_TimeStampOnTamperDetection***

49.1.2 RTC_InternalTamperTypeDef

RTC_InternalTamperTypeDef is defined in the stm32g4xx_hal_rtc_ex.h

Data Fields

- ***uint32_t IntTamper***
- ***uint32_t TimeStampOnTamperDetection***

Field Documentation

- ***uint32_t RTC_InternalTamperTypeDef::IntTamper***
  Specifies the Internal Tamper Pin. This parameter can be a value of ***RTCEx_Internal_Tamper_Pins***

- ***uint32_t RTC_InternalTamperTypeDef::TimeStampOnTamperDetection***
  Specifies the TimeStampOnTamperDetection. This parameter can be a value of ***RTCEx_Tamper_TimeStampOnTamperDetection***

49.2 RTCEx Firmware driver API description

The following section lists the various functions of the RTCEx library.

49.2.1 How to use this driver

- Enable the RTC domain access.
- Configure the RTC Prescaler (Asynchronous and Synchronous) and RTC hour format using the HAL_RTC_Init() function.

RTC Wakeup configuration

- To configure the RTC Wakeup Clock source and Counter use the HAL_RTCEx_SetWakeUpTimer() function. You can also configure the RTC Wakeup timer with interrupt mode using the HAL_RTCEx_SetWakeUpTimer_IT() function.
- To read the RTC WakeUp Counter register, use the HAL_RTCEx_GetWakeUpTimer() function.

Outputs configuration

The RTC has 2 different outputs:

- RTC_ALARM: this output is used to manage the RTC Alarm A, Alarm B and WaKeUp signals. To output the selected RTC signal, use the HAL_RTC_Init() function.
- RTC_CALIB: this output is 512Hz signal or 1Hz. To enable the RTC_CALIB, use the HAL_RTCEx_SetCalibrationOutPut() function.
- Two pins can be used as RTC_ALARM or RTC_CALIB (PC13, PB2) managed on the RTC_OR register.
- When the RTC_CALIB or RTC_ALARM output is selected, the RTC_OUT pin is automatically configured in output alternate function.

Smooth digital Calibration configuration

- Configure the RTC Original Digital Calibration Value and the corresponding calibration cycle period (32s,16s and 8s) using the HAL_RTCEx_SetSmoothCalib() function.

TimeStamp configuration

- Enable the RTC TimeStamp using the HAL_RTCEx_SetTimeStamp() function. You can also configure the RTC TimeStamp with interrupt mode using the HAL_RTCEx_SetTimeStamp_IT() function.
- To read the RTC TimeStamp Time and Date register, use the HAL_RTCEx_GetTimeStamp() function.

Internal TimeStamp configuration

- Enable the RTC internal TimeStamp using the HAL_RTCEx_SetInternalTimeStamp() function. User has to check internal timestamp occurrence using __HAL_RTC_INTERNAL_TIMESTAMP_GET_FLAG.
- To read the RTC TimeStamp Time and Date register, use the HAL_RTCEx_GetTimeStamp() function.

Tamper configuration

- Enable the RTC Tamper and configure the Tamper filter count, trigger Edge or Level according to the Tamper filter (if equal to 0 Edge else Level) value, sampling frequency, NoErase, MaskFlag, precharge or discharge and Pull-UP using the HAL_RTCEx_SetTamper() function. You can configure RTC Tamper with interrupt mode using HAL_RTCEx_SetTamper_IT() function.
- The default configuration of the Tamper erases the backup registers. To avoid erase, enable the NoErase field on the RTC_TAMPCR register.
- If you do not intend to have tamper using RTC clock, you can bypass its initialization by setting ClockEnable init field to RTC_CLOCK_DISABLE.

- Enable Internal tamper using HAL_RTCEx_SetInternalTamper. IT mode can be chosen using setting Interrupt field.

Backup Data Registers configuration

- To write to the RTC Backup Data registers, use the HAL_RTCEx_BKUPWrite() function.
- To read the RTC Backup Data registers, use the HAL_RTCEx_BKUPRead() function.

49.2.2 RTC TimeStamp and Tamper functions

This section provides functions allowing to configure TimeStamp feature

This section contains the following APIs:

- ***HAL_RTCEx_SetTimeStamp***
- ***HAL_RTCEx_SetTimeStamp_IT***
- ***HAL_RTCEx_DeactivateTimeStamp***
- ***HAL_RTCEx_SetInternalTimeStamp***
- ***HAL_RTCEx_DeactivateInternalTimeStamp***
- ***HAL_RTCEx_GetTimeStamp***
- ***HAL_RTCEx_TimeStampEventCallback***
- ***HAL_RTCEx_TimeStampIRQHandler***
- ***HAL_RTCEx_PollForTimeStampEvent***

49.2.3 RTC Wake-up functions

This section provides functions allowing to configure Wake-up feature

This section contains the following APIs:

- ***HAL_RTCEx_SetWakeUpTimer***
- ***HAL_RTCEx_SetWakeUpTimer_IT***
- ***HAL_RTCEx_DeactivateWakeUpTimer***
- ***HAL_RTCEx_GetWakeUpTimer***
- ***HAL_RTCEx_WakeUpTimerIRQHandler***
- ***HAL_RTCEx_WakeUpTimerEventCallback***
- ***HAL_RTCEx_PollForWakeUpTimerEvent***

49.2.4 Extended Peripheral Control functions

This subsection provides functions allowing to

- Write a data in a specified RTC Backup data register
- Read a data in a specified RTC Backup data register
- Set the Coarse calibration parameters.
- Deactivate the Coarse calibration parameters
- Set the Smooth calibration parameters.
- Configure the Synchronization Shift Control Settings.
- Configure the Calibration Pinout (RTC_CALIB) Selection (1Hz or 512Hz).
- Deactivate the Calibration Pinout (RTC_CALIB) Selection (1Hz or 512Hz).
- Enable the RTC reference clock detection.
- Disable the RTC reference clock detection.
- Enable the Bypass Shadow feature.
- Disable the Bypass Shadow feature.

This section contains the following APIs:

- ***HAL_RTCEx_SetSmoothCalib***
- ***HAL_RTCEx_SetSynchroShift***
- ***HAL_RTCEx_SetCalibrationOutPut***
- ***HAL_RTCEx_DeactivateCalibrationOutPut***

- *HAL_RTCEx_SetRefClock*
- *HAL_RTCEx_DeactivateRefClock*
- *HAL_RTCEx_EnableBypassShadow*
- *HAL_RTCEx_DisableBypassShadow*

49.2.5 Extended features functions

This section provides functions allowing to:

- RTC Alarm B callback
- RTC Poll for Alarm B request

This section contains the following APIs:

- *HAL_RTCEx_AlarmBEventCallback*
- *HAL_RTCEx_PollForAlarmBEvent*

49.2.6 Tamper functions

- Before calling any tamper or internal tamper function, you have to call first HAL_RTC_Init() function.
- In that ine you can select to output tamper event on RTC pin.
- Enable the Tamper and configure the Tamper filter count, trigger Edge or Level according to the Tamper filter (if equal to 0 Edge else Level) value, sampling frequency, NoErase, MaskFlag, precharge or discharge and Pull-UP, timestamp using the HAL_RTCEx_SetTamper() function. You can configure Tamper with interrupt mode using HAL_RTCEx_SetTamper_IT() function.
- The default configuration of the Tamper erases the backup registers. To avoid erase, enable the NoErase field on the TAMP_TAMPCR register.
- Enable Internal Tamper and configure it with interrupt, timestamp using the HAL_RTCEx_SetInternalTamper() function.

This section contains the following APIs:

- *HAL_RTCEx_SetTamper*
- *HAL_RTCEx_SetTamper_IT*
- *HAL_RTCEx_DeactivateTamper*
- *HAL_RTCEx_PollForTamperEvent*
- *HAL_RTCEx_SetInternalTamper*
- *HAL_RTCEx_SetInternalTamper_IT*
- *HAL_RTCEx_DeactivateInternalTamper*
- *HAL_RTCEx_PollForInternalTamperEvent*
- *HAL_RTCEx_TamperIRQHandler*
- *HAL_RTCEx_Tamper1EventCallback*
- *HAL_RTCEx_Tamper2EventCallback*
- *HAL_RTCEx_Tamper3EventCallback*
- *HAL_RTCEx_InternalTamper3EventCallback*
- *HAL_RTCEx_InternalTamper4EventCallback*
- *HAL_RTCEx_InternalTamper5EventCallback*
- *HAL_RTCEx_InternalTamper6EventCallback*

49.2.7 Extended RTC Backup register functions

- Before calling any tamper or internal tamper function, you have to call first HAL_RTC_Init() function.
- In that ine you can select to output tamper event on RTC pin.

This subsection provides functions allowing to

- Write a data in a specified RTC Backup data register
- Read a data in a specified RTC Backup data register

This section contains the following APIs:

- *HAL_RTCEx_BKUPWrite*
- *HAL_RTCEx_BKUPRead*

49.2.8 Detailed description of functions

HAL_RTCEx_SetTimeStamp

Function name

HAL_StatusTypeDef HAL_RTCEx_SetTimeStamp (RTC_HandleTypeDef * hrtc, uint32_t TimeStampEdge, uint32_t RTC_TimeStampPin)

Function description

Set TimeStamp.

Parameters

- **hrtc:** RTC handle
- **TimeStampEdge:** Specifies the pin edge on which the TimeStamp is activated. This parameter can be one of the following values:
  - RTC_TIMESTAMPEDGE_RISING: the Time stamp event occurs on the rising edge of the related pin.
  - RTC_TIMESTAMPEDGE_FALLING: the Time stamp event occurs on the falling edge of the related pin.
- **RTC_TimeStampPin:** specifies the RTC TimeStamp Pin. This parameter can be one of the following values:
  - RTC_TIMESTAMPPIN_DEFAULT: PC13 is selected as RTC TimeStamp Pin. The RTC TimeStamp Pin is per default PC13, but for reasons of compatibility, this parameter is required.

Return values

- **HAL:** status

Notes

- This API must be called before enabling the TimeStamp feature.

HAL_RTCEx_SetTimeStamp_IT

Function name

HAL_StatusTypeDef HAL_RTCEx_SetTimeStamp_IT (RTC_HandleTypeDef * hrtc, uint32_t TimeStampEdge, uint32_t RTC_TimeStampPin)

Function description

Set TimeStamp with Interrupt.

Parameters

- **hrtc:** RTC handle
- **TimeStampEdge:** Specifies the pin edge on which the TimeStamp is activated. This parameter can be one of the following values:
  - RTC_TIMESTAMPEDGE_RISING: the Time stamp event occurs on the rising edge of the related pin.
  - RTC_TIMESTAMPEDGE_FALLING: the Time stamp event occurs on the falling edge of the related pin.
- **RTC_TimeStampPin:** Specifies the RTC TimeStamp Pin. This parameter can be one of the following values:
  - RTC_TIMESTAMPPIN_DEFAULT: PC13 is selected as RTC TimeStamp Pin. The RTC TimeStamp Pin is per default PC13, but for reasons of compatibility, this parameter is required.

Return values

- **HAL:** status

Notes

- This API must be called before enabling the TimeStamp feature.

HAL_RTCEx_DeactivateTimeStamp

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateTimeStamp (RTC_HandleTypeDef * hrtc)

Function description

Deactivate TimeStamp.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_SetInternalTimeStamp

Function name

HAL_StatusTypeDef HAL_RTCEx_SetInternalTimeStamp (RTC_HandleTypeDef * hrtc)

Function description

Set Internal TimeStamp.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- This API must be called before enabling the internal TimeStamp feature.

HAL_RTCEx_DeactivateInternalTimeStamp

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateInternalTimeStamp (RTC_HandleTypeDef * hrtc)

Function description

Deactivate Internal TimeStamp.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_GetTimeStamp

Function name

HAL_StatusTypeDef HAL_RTCEx_GetTimeStamp (RTC_HandleTypeDef * hrtc, RTC_TimeTypeDef * sTimeStamp, RTC_DateTypeDef * sTimeStampDate, uint32_t Format)

Function description

Get the RTC TimeStamp value.

Parameters

- **hrtc:** RTC handle
- **sTimeStamp:** Pointer to Time structure
- **sTimeStampDate:** Pointer to Date structure
- **Format:** specifies the format of the entered parameters. This parameter can be one of the following values:
  - RTC_FORMAT_BIN: Binary data format
  - RTC_FORMAT_BCD: BCD data format

Return values

- **HAL:** status

HAL_RTCEx_TimeStampIRQHandler

Function name

void HAL_RTCEx_TimeStampIRQHandler (RTC_HandleTypeDef * hrtc)

Function description

Handle TimeStamp interrupt request.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_PollForTimeStampEvent

Function name

HAL_StatusTypeDef HAL_RTCEx_PollForTimeStampEvent (RTC_HandleTypeDef * hrtc, uint32_t Timeout)

Function description

Handle TimeStamp polling request.

Parameters

- **hrtc:** RTC handle
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTCEx_TimeStampEventCallback

Function name

void HAL_RTCEx_TimeStampEventCallback (RTC_HandleTypeDef * hrtc)

Function description

TimeStamp callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_SetWakeUpTimer

Function name

HAL_StatusTypeDef HAL_RTCEx_SetWakeUpTimer (RTC_HandleTypeDef * hrtc, uint32_t WakeUpCounter, uint32_t WakeUpClock)

Function description

Set wake up timer.

Parameters

- **hrtc:** RTC handle
- **WakeUpCounter:** Wake up counter
- **WakeUpClock:** Wake up clock

Return values

- **HAL:** status

HAL_RTCEx_SetWakeUpTimer_IT

Function name

HAL_StatusTypeDef HAL_RTCEx_SetWakeUpTimer_IT (RTC_HandleTypeDef * hrtc, uint32_t WakeUpCounter, uint32_t WakeUpClock)

Function description

Set wake up timer with interrupt.

Parameters

- **hrtc:** RTC handle
- **WakeUpCounter:** Wake up counter
- **WakeUpClock:** Wake up clock

Return values

- **HAL:** status

HAL_RTCEx_DeactivateWakeUpTimer

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateWakeUpTimer (RTC_HandleTypeDef * hrtc)

Function description

Deactivate wake up timer counter.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_GetWakeUpTimer

Function name

uint32_t HAL_RTCEx_GetWakeUpTimer (RTC_HandleTypeDef * hrtc)

Function description

Get wake up timer counter.

Parameters

- **hrtc:** RTC handle

Return values

- **Counter:** value

HAL_RTCEx_WakeUpTimerIRQHandler

Function name

void HAL_RTCEx_WakeUpTimerIRQHandler (RTC_HandleTypeDef * hrtc)

Function description

Handle Wake Up Timer interrupt request.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_WakeUpTimerEventCallback

Function name

void HAL_RTCEx_WakeUpTimerEventCallback (RTC_HandleTypeDef * hrtc)

Function description

Wake Up Timer callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_PollForWakeUpTimerEvent

Function name

HAL_StatusTypeDef HAL_RTCEx_PollForWakeUpTimerEvent (RTC_HandleTypeDef * hrtc, uint32_t Timeout)

Function description

Handle Wake Up Timer Polling.

Parameters

- **hrtc:** RTC handle
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTCEx_SetSmoothCalib

Function name

HAL_StatusTypeDef HAL_RTCEx_SetSmoothCalib (RTC_HandleTypeDef * hrtc, uint32_t SmoothCalibPeriod, uint32_t SmoothCalibPlusPulses, uint32_t SmoothCalibMinusPulsesValue)

Function description

Set the Smooth calibration parameters.

Parameters

- **hrtc:** RTC handle
- **SmoothCalibPeriod:** Select the Smooth Calibration Period. This parameter can be can be one of the following values :
  - RTC_SMOOTHCALIB_PERIOD_32SEC: The smooth calibration period is 32s.
  - RTC_SMOOTHCALIB_PERIOD_16SEC: The smooth calibration period is 16s.
  - RTC_SMOOTHCALIB_PERIOD_8SEC: The smooth calibration period is 8s.
- **SmoothCalibPlusPulses:** Select to Set or reset the CALP bit. This parameter can be one of the following values:
  - RTC_SMOOTHCALIB_PLUSPULSES_SET: Add one RTCCLK pulse every 2*11 pulses.
  - RTC_SMOOTHCALIB_PLUSPULSES_RESET: No RTCCLK pulses are added.
- **SmoothCalibMinusPulsesValue:** Select the value of CALM[8:0] bits. This parameter can be one any value from 0 to 0x000001FF.

Return values

- **HAL:** status

Notes

- To deactivate the smooth calibration, the field SmoothCalibPlusPulses must be equal to SMOOTHCALIB_PLUSPULSES_RESET and the field SmoothCalibMinusPulsesValue must be equal to 0.

HAL_RTCEx_SetSynchroShift

Function name

HAL_StatusTypeDef HAL_RTCEx_SetSynchroShift (RTC_HandleTypeDef * hrtc, uint32_t ShiftAdd1S, uint32_t ShiftSubFS)

Function description

Configure the Synchronization Shift Control Settings.

Parameters

- **hrtc:** RTC handle
- **ShiftAdd1S:** Select to add or not 1 second to the time calendar. This parameter can be one of the following values:
  - RTC_SHIFTADD1S_SET: Add one second to the clock calendar.
  - RTC_SHIFTADD1S_RESET: No effect.
- **ShiftSubFS:** Select the number of Second Fractions to substitute. This parameter can be one any value from 0 to 0x7FFF.

Return values

- **HAL:** status

Notes

- When REFCKON is set, firmware must not write to Shift control register.

HAL_RTCEx_SetCalibrationOutPut

Function name

HAL_StatusTypeDef HAL_RTCEx_SetCalibrationOutPut (RTC_HandleTypeDef * hrtc, uint32_t CalibOutput)

Function description

Configure the Calibration Pinout (RTC_CALIB) Selection (1Hz or 512Hz).

Parameters

- **hrtc:** RTC handle
- **CalibOutput:** Select the Calibration output Selection . This parameter can be one of the following values:
  - RTC_CALIBOUTPUT_512HZ: A signal has a regular waveform at 512Hz.
  - RTC_CALIBOUTPUT_1HZ: A signal has a regular waveform at 1Hz.

Return values

- **HAL:** status

HAL_RTCEx_DeactivateCalibrationOutPut

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateCalibrationOutPut (RTC_HandleTypeDef * hrtc)

Function description

Deactivate the Calibration Pinout (RTC_CALIB) Selection (1Hz or 512Hz).

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_SetRefClock

Function name

HAL_StatusTypeDef HAL_RTCEx_SetRefClock (RTC_HandleTypeDef * hrtc)

Function description

Enable the RTC reference clock detection.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_DeactivateRefClock

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateRefClock (RTC_HandleTypeDef * hrtc)

Function description

Disable the RTC reference clock detection.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

HAL_RTCEx_EnableBypassShadow

Function name

HAL_StatusTypeDef HAL_RTCEx_EnableBypassShadow (RTC_HandleTypeDef * hrtc)

Function description

Enable the Bypass Shadow feature.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- When the Bypass Shadow is enabled the calendar value are taken directly from the Calendar counter.

HAL_RTCEx_DisableBypassShadow

Function name

HAL_StatusTypeDef HAL_RTCEx_DisableBypassShadow (RTC_HandleTypeDef * hrtc)

Function description

Disable the Bypass Shadow feature.

Parameters

- **hrtc:** RTC handle

Return values

- **HAL:** status

Notes

- When the Bypass Shadow is enabled the calendar value are taken directly from the Calendar counter.

HAL_RTCEx_AlarmBEventCallback

Function name

void HAL_RTCEx_AlarmBEventCallback (RTC_HandleTypeDef * hrtc)

Function description

Alarm B callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_PollForAlarmBEvent

Function name

HAL_StatusTypeDef HAL_RTCEx_PollForAlarmBEvent (RTC_HandleTypeDef * hrtc, uint32_t Timeout)

Function description

Handle Alarm B Polling request.

Parameters

- **hrtc:** RTC handle
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTCEx_SetTamper

Function name

HAL_StatusTypeDef HAL_RTCEx_SetTamper (RTC_HandleTypeDef * hrtc, RTC_TamperTypeDef * sTamper)

Function description

Set Tamper.

Parameters

- **hrtc:** RTC handle
- **sTamper:** Pointer to Tamper Structure.

Return values

- **HAL:** status

HAL_RTCEx_SetTamper_IT

Function name

HAL_StatusTypeDef HAL_RTCEx_SetTamper_IT (RTC_HandleTypeDef * hrtc, RTC_TamperTypeDef * sTamper)

Function description

Set Tamper in IT mode.

Parameters

- **hrtc:** RTC handle
- **sTamper:** Pointer to Tamper Structure.

Return values

- **HAL:** status

HAL_RTCEx_DeactivateTamper

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateTamper (RTC_HandleTypeDef * hrtc, uint32_t Tamper)

Function description

Deactivate Tamper.

Parameters

- **hrtc:** RTC handle
- **Tamper:** Selected tamper pin. This parameter can be a combination of the following values:
  - RTC_TAMPER_1
  - RTC_TAMPER_2

Return values

- **HAL:** status

HAL_RTCEx_PollForTamperEvent

Function name

HAL_StatusTypeDef HAL_RTCEx_PollForTamperEvent (RTC_HandleTypeDef * hrtc, uint32_t Tamper, uint32_t Timeout)

Function description

Tamper event polling.

Parameters

- **hrtc:** RTC handle
- **Tamper:** Selected tamper pin. This parameter can be a combination of the following values:
  - RTC_TAMPER_1
  - RTC_TAMPER_2
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTCEx_SetInternalTamper

Function name

HAL_StatusTypeDef HAL_RTCEx_SetInternalTamper (RTC_HandleTypeDef * hrtc, RTC_InternalTamperTypeDef * sIntTamper)

Function description

Set Internal Tamper in interrupt mode.

Parameters

- **hrtc:** RTC handle
- **sIntTamper:** Pointer to Internal Tamper Structure.

Return values

- **HAL:** status

HAL_RTCEx_SetInternalTamper_IT

Function name

HAL_StatusTypeDef HAL_RTCEx_SetInternalTamper_IT (RTC_HandleTypeDef * hrtc, RTC_InternalTamperTypeDef * sIntTamper)

Function description

Set Internal Tamper.

Parameters

- **hrtc:** RTC handle
- **sIntTamper:** Pointer to Internal Tamper Structure.

Return values

- **HAL:** status

HAL_RTCEx_DeactivateInternalTamper

Function name

HAL_StatusTypeDef HAL_RTCEx_DeactivateInternalTamper (RTC_HandleTypeDef * hrtc, uint32_t IntTamper)

Function description

Deactivate Internal Tamper.

Parameters

- **hrtc:** RTC handle
- **IntTamper:** Selected internal tamper event. This parameter can be any combination of existing internal tampers.

Return values

- **HAL:** status

HAL_RTCEx_PollForInternalTamperEvent

Function name

HAL_StatusTypeDef HAL_RTCEx_PollForInternalTamperEvent (RTC_HandleTypeDef * hrtc, uint32_t IntTamper, uint32_t Timeout)

Function description

Internal Tamper event polling.

Parameters

- **hrtc:** RTC handle
- **IntTamper:** selected tamper. This parameter can be any combination of existing internal tampers.
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_RTCEx_TamperIRQHandler

Function name

void HAL_RTCEx_TamperIRQHandler (RTC_HandleTypeDef * hrtc)

Function description

Handle Tamper interrupt request.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_Tamper1EventCallback

Function name

void HAL_RTCEx_Tamper1EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Tamper 1 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_Tamper2EventCallback

Function name

void HAL_RTCEx_Tamper2EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Tamper 2 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_Tamper3EventCallback

Function name

void HAL_RTCEx_Tamper3EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Tamper 3 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_InternalTamper3EventCallback

Function name

void HAL_RTCEx_InternalTamper3EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Internal Tamper 3 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_InternalTamper4EventCallback

Function name

void HAL_RTCEx_InternalTamper4EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Internal Tamper 4 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_InternalTamper5EventCallback

Function name

void HAL_RTCEx_InternalTamper5EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Internal Tamper 5 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_InternalTamper6EventCallback

Function name

void HAL_RTCEx_InternalTamper6EventCallback (RTC_HandleTypeDef * hrtc)

Function description

Internal Tamper 6 callback.

Parameters

- **hrtc:** RTC handle

Return values

- **None:**

HAL_RTCEx_BKUPWrite

Function name

void HAL_RTCEx_BKUPWrite (RTC_HandleTypeDef * hrtc, uint32_t BackupRegister, uint32_t Data)

Function description

Write a data in a specified TAMP Backup data register.

Parameters

- **hrtc:** RTC handle
- **BackupRegister:** RTC Backup data Register number. This parameter can be: RTC_BKP_DRx where x can be from 0 to 19 to specify the register.
- **Data:** Data to be written in the specified TAMP Backup data register.

Return values

- **None:**

HAL_RTCEx_BKUPRead

Function name

uint32_t HAL_RTCEx_BKUPRead (RTC_HandleTypeDef * hrtc, uint32_t BackupRegister)

Function description

Reads data from the specified TAMP Backup data Register.

Parameters

- **hrtc:** RTC handle
- **BackupRegister:** RTC Backup data Register number. This parameter can be: RTC_BKP_DRx where x can be from 0 to RTC_BACKUP_NB to specify the register.

Return values

- **Read:** value

RTC Calibration

__HAL_RTC_CALIBRATION_OUTPUT_ENABLE

Description:

- Enable the RTC calibration output.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_CALIBRATION_OUTPUT_DISABLE

Description:

- Disable the calibration output.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_CLOCKREF_DETECTION_ENABLE

Description:

- Enable the clock reference detection.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_CLOCKREF_DETECTION_DISABLE

Description:

- Disable the clock reference detection.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_SHIFT_GET_FLAG

Description:

- Get the selected RTC shift operations flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC shift operation Flag is pending or not. This parameter can be:
  - RTC_FLAG_SHPF

Return value:

- None

RTCEx Calib Output selection Definitions

RTC_CALIBOUTPUT_512HZ

RTC_CALIBOUTPUT_1HZ

RTCEx Exported Macros

__HAL_RTC_CLEAR_FLAG

Description:

- Clear the specified RTC pending flag.

Parameters:

- __HANDLE__: specifies the RTC Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - RTC_CLEAR_ITSF Clear Internal Time-stamp flag
  - RTC_CLEAR_TSOVF Clear Time-stamp overflow flag
  - RTC_CLEAR_TSF Clear Time-stamp flag
  - RTC_CLEAR_WUTF Clear Wakeup timer flag
  - RTC_CLEAR_ALRBF Clear Alarm B flag
  - RTC_CLEAR_ALRAF Clear Alarm A flag

Return value:

- None

__HAL_RTC_GET_FLAG

Description:

- Check whether the specified RTC flag is set or not.

Parameters:

- __HANDLE__: specifies the RTC Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - RTC_FLAG_RECALPF Recalibration pending Flag
  - RTC_FLAG_INITF Initialization flag
  - RTC_FLAG_RSF Registers synchronization flag
  - RTC_FLAG_INITS Initialization status flag
  - RTC_FLAG_SHPF Shift operation pending flag
  - RTC_FLAG_WUTWF Wakeup timer write flag
  - RTC_FLAG_ALRBWF Alarm B write flag
  - RTC_FLAG_ALRAWF Alarm A write flag
  - RTC_FLAG_ITSF Internal Time-stamp flag
  - RTC_FLAG_TSOVF Time-stamp overflow flag
  - RTC_FLAG_TSF Time-stamp flag
  - RTC_FLAG_WUTF Wakeup timer flag
  - RTC_FLAG_ALRBF Alarm B flag
  - RTC_FLAG_ALRAF Alarm A flag

Return value:

- None

RTC_SMOOTHCALIB_PLUSPULSES_RESET

The number of RTCCLK pulses subbstited during a 32-second window = CALM[8:0]

RTCEx tamper

__HAL_RTC_TAMPER_ENABLE

Description:

- Enable the TAMP Tamper input detection.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __TAMPER__: specifies the RTC Tamper source to be enabled. This parameter can be any combination of the following values:
  - RTC_TAMPER_ALL: All tampers
  - RTC_TAMPER_1: Tamper1
  - RTC_TAMPER_2: Tamper2

Return value:

- None

__HAL_RTC_TAMPER_DISABLE

Description:

- Disable the TAMP Tamper input detection.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __TAMPER__: specifies the RTC Tamper sources to be enabled. This parameter can be any combination of the following values:
  - RTC_TAMPER_ALL: All tampers
  - RTC_TAMPER_1: Tamper1
  - RTC_TAMPER_2: Tamper2

__HAL_RTC_TAMPER_ENABLE_IT

Description:

- Enable the TAMP Tamper interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Tamper interrupt sources to be enabled. This parameter can be any combination of the following values:
  - RTC_IT_TAMP_ALL: All tampers interrupts
  - RTC_IT_TAMP_1: Tamper1 interrupt
  - RTC_IT_TAMP_2: Tamper2 interrupt

Return value:

- None

__HAL_RTC_TAMPER_DISABLE_IT

Description:

- Disable the TAMP Tamper interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Tamper interrupt sources to be disabled. This parameter can be any combination of the following values:
  - RTC_IT_TAMP_ALL: All tampers interrupts
  - RTC_IT_TAMP_1: Tamper1 interrupt
  - RTC_IT_TAMP_2: Tamper2 interrupt

Return value:

- None

__HAL_RTC_TAMPER_GET_IT

Description:

- Check whether the specified TAMP Tamper interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Tamper interrupt to check. This parameter can be:
  - RTC_IT_TAMP_ALL: All tampers interrupts
  - RTC_IT_TAMP_1: Tamper1 interrupt
  - RTC_IT_TAMP_2: Tamper2 interrupt

Return value:

- None

__HAL_RTC_TAMPER_GET_IT_SOURCE

Description:

- Check whether the specified TAMP Tamper interrupt has been enabled or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Tamper interrupt source to check. This parameter can be:
  - RTC_IT_TAMP_ALL: All tampers interrupts
  - RTC_IT_TAMP_1: Tamper1 interrupt
  - RTC_IT_TAMP_2: Tamper2 interrupt

Return value:

- None

__HAL_RTC_TAMPER_GET_FLAG

Description:

- Get the selected TAMP Tampers flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Tamper Flag is pending or not. This parameter can be:
  - RTC_FLAG_TAMP_ALL: All tampers flag
  - RTC_FLAG_TAMP_1: Tamper1 flag
  - RTC_FLAG_TAMP_2: Tamper2 flag

Return value:

- None

__HAL_RTC_TAMPER_CLEAR_FLAG

Description:

- Clear the TAMP Tampers pending flags.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Tamper Flag to clear. This parameter can be:
  - RTC_FLAG_TAMP_ALL: All tampers flag
  - RTC_FLAG_TAMP_1: Tamper1 flag
  - RTC_FLAG_TAMP_2: Tamper2 flag

Return value:

- None

__HAL_RTC_TAMPER_EXTI_ENABLE_IT

Description:

- Enable interrupt on the RTC Tamper associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_DISABLE_IT

Description:

- Disable interrupt on the RTC Tamper associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_RISING_IT

Description:

- Enable interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_FALLING_IT

Description:

- Enable interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_CLEAR_IT

Description:

- Clear the interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_ENABLE_EVENT

Description:

- Enable event on the RTC Tamper associated Exti line.

Return value:

- None

__HAL_RTC_TAMPER_EXTI_DISABLE_EVENT

Description:

- Disable event on the RTC Tamper associated Exti line.

Return value:

- None

RTCEx Tamper EraseBackUp

RTC Timestamp

__HAL_RTC_TIMESTAMP_ENABLE

Description:

- Enable the RTC TimeStamp peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_TIMESTAMP_DISABLE

Description:

- Disable the RTC TimeStamp peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_TIMESTAMP_ENABLE_IT

Description:

- Enable the RTC TimeStamp interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC TimeStamp interrupt source to be enabled. This parameter can be:
  - RTC_IT_TS TimeStamp interrupt

Return value:

- None

__HAL_RTC_TIMESTAMP_DISABLE_IT

Description:

- Disable the RTC TimeStamp interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC TimeStamp interrupt source to be disabled. This parameter can be:
  - RTC_IT_TS TimeStamp interrupt

Return value:

- None

__HAL_RTC_TIMESTAMP_GET_IT

Description:

- Check whether the specified RTC TimeStamp interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC TimeStamp interrupt to check. This parameter can be:
  - RTC_IT_TS TimeStamp interrupt

Return value:

- None

__HAL_RTC_TIMESTAMP_GET_IT_SOURCE

Description:

- Check whether the specified RTC Time Stamp interrupt has been enabled or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Time Stamp interrupt source to check. This parameter can be:
  - RTC_IT_TS TimeStamp interrupt

Return value:

- None

__HAL_RTC_TIMESTAMP_GET_FLAG

Description:

- Get the selected RTC TimeStamps flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC TimeStamp Flag is pending or not. This parameter can be:
  - RTC_FLAG_TSF
  - RTC_FLAG_TSOVF

Return value:

- None

__HAL_RTC_TIMESTAMP_CLEAR_FLAG

Description:

- Clear the RTC Time Stamps pending flags.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC TimeStamp Flag to clear. This parameter can be:
  - RTC_FLAG_TSF
  - RTC_FLAG_TSOVF

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_ENABLE_IT

Description:

- Enable interrupt on the RTC Timestamp associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_DISABLE_IT

Description:

- Disable interrupt on the RTC Timestamp associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_RISING_IT

Description:

- set the rising edge for interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_FALLING_IT

Description:

- set the falling edge for interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_CLEAR_IT

Description:

- Clear the interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_CLEAR_FLAG

Description:

- Clear the interrupt on the RTC Timestamp associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_ENABLE_EVENT

Description:

- Enable event on the RTC Timestamp associated Exti line.

Return value:

- None

__HAL_RTC_TIMESTAMP_EXTI_DISABLE_EVENT

Description:

- Disable event on the RTC Timestamp associated Exti line.

Return value:

- None

__HAL_RTC_INTERNAL_TIMESTAMP_ENABLE

Description:

- Enable the RTC internal TimeStamp peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_INTERNAL_TIMESTAMP_DISABLE

Description:

- Disable the RTC internal TimeStamp peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_INTERNAL_TIMESTAMP_GET_FLAG

Description:

- Get the selected RTC Internal Time Stamps flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Internal Time Stamp Flag is pending or not. This parameter can be:
  - RTC_FLAG_ITSF

Return value:

- None

__HAL_RTC_INTERNAL_TIMESTAMP_CLEAR_FLAG

Description:

- Clear the RTC Internal Time Stamps pending flags.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC Internal Time Stamp Flag source to clear. This parameter can be:
  - RTC_FLAG_ITSF

Return value:

- None

__HAL_RTC_TAMPTS_ENABLE

Description:

- Enable the RTC TimeStamp on Tamper detection.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_TAMPTS_DISABLE

Description:

- Disable the RTC TimeStamp on Tamper detection.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_TAMPOE_ENABLE

Description:

- Enable the RTC Tamper detection output.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_TAMPOE_DISABLE

Description:

- Disable the RTC Tamper detection output.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

RTCEx TimeStamp Pin Selection

RTC_TIMESTAMPPIN_DEFAULT

RTCEx Time Stamp Edges definition

RTC_TIMESTAMPEDGE_RISING

RTC_TIMESTAMPEDGE_FALLING

RTC WakeUp Timer

__HAL_RTC_WAKEUPTIMER_ENABLE

Description:

- Enable the RTC WakeUp Timer peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_DISABLE

Description:

- Disable the RTC WakeUp Timer peripheral.

Parameters:

- __HANDLE__: specifies the RTC handle.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_ENABLE_IT

Description:

- Enable the RTC WakeUpTimer interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC WakeUpTimer interrupt sources to be enabled. This parameter can be:
  - RTC_IT_WUT WakeUpTimer interrupt

Return value:

- None

__HAL_RTC_WAKEUPTIMER_DISABLE_IT

Description:

- Disable the RTC WakeUpTimer interrupt.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC WakeUpTimer interrupt sources to be disabled. This parameter can be:
  - RTC_IT_WUT WakeUpTimer interrupt

Return value:

- None

__HAL_RTC_WAKEUPTIMER_GET_IT

Description:

- Check whether the specified RTC WakeUpTimer interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC WakeUpTimer interrupt to check. This parameter can be:
  - RTC_IT_WUT WakeUpTimer interrupt

Return value:

- None

__HAL_RTC_WAKEUPTIMER_GET_IT_SOURCE

Description:

- Check whether the specified RTC Wake Up timer interrupt has been enabled or not.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __INTERRUPT__: specifies the RTC Wake Up timer interrupt sources to check. This parameter can be:
  - RTC_IT_WUT WakeUpTimer interrupt

Return value:

- None

__HAL_RTC_WAKEUPTIMER_GET_FLAG

Description:

- Get the selected RTC WakeUpTimers flag status.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC WakeUpTimer Flag is pending or not. This parameter can be:
  - RTC_FLAG_WUTF
  - RTC_FLAG_WUTWF

Return value:

- None

__HAL_RTC_WAKEUPTIMER_CLEAR_FLAG

Description:

- Clear the RTC Wake Up timers pending flags.

Parameters:

- __HANDLE__: specifies the RTC handle.
- __FLAG__: specifies the RTC WakeUpTimer Flag to clear. This parameter can be:
  - RTC_FLAG_WUTF

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_ENABLE_IT

Description:

- Enable interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_DISABLE_IT

Description:

- Disable interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_RISING_IT

Description:

- set the rising edge for interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_FALLING_IT

Description:

- set the falling edge for interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_CLEAR_IT

Description:

- Clear the interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_CLEAR_FLAG

Description:

- Clear the interrupt on the RTC WakeUp Timer associated Exti line.

Return value:

- None

__HAL_RTC_WAKEUPTIMER_EXTI_ENABLE_EVENT

Description:

- Enable event on the RTC WakeUp Timer associated Exti line.

Return value:

- None.

__HAL_RTC_WAKEUPTIMER_EXTI_DISABLE_EVENT

Description:

- Disable event on the RTC WakeUp Timer associated Exti line.

Return value:

- None.

50 HAL SAI Generic Driver

50.1 SAI Firmware driver registers structures

50.1.1 SAI_PdmInitTypeDef

SAI_PdmInitTypeDef is defined in the stm32g4xx_hal_sai.h

Data Fields

- ***FunctionalState Activation***
- ***uint32_t MicPairsNbr***
- ***uint32_t ClockEnable***

Field Documentation

- ***FunctionalState SAI_PdmInitTypeDef::Activation***
  Enable/disable PDM interface
- ***uint32_t SAI_PdmInitTypeDef::MicPairsNbr***
  Specifies the number of microphone pairs used. This parameter must be a number between Min_Data = 1 and Max_Data = 3.
- ***uint32_t SAI_PdmInitTypeDef::ClockEnable***
  Specifies which clock must be enabled. This parameter can be a values combination of ***SAI_PDM_ClockEnable***

50.1.2 SAI_InitTypeDef

SAI_InitTypeDef is defined in the stm32g4xx_hal_sai.h

Data Fields

- ***uint32_t AudioMode***
- ***uint32_t Synchro***
- ***uint32_t SynchroExt***
- ***uint32_t MckOutput***
- ***uint32_t OutputDrive***
- ***uint32_t NoDivider***
- ***uint32_t FIFOThreshold***
- ***uint32_t AudioFrequency***
- ***uint32_t Mckdiv***
- ***uint32_t MckOverSampling***
- ***uint32_t MonoStereoMode***
- ***uint32_t CompandingMode***
- ***uint32_t TriState***
- ***SAI_PdmInitTypeDef PdmInit***
- ***uint32_t Protocol***
- ***uint32_t DataSize***
- ***uint32_t FirstBit***
- ***uint32_t ClockStrobing***

Field Documentation

- ***uint32_t SAI_InitTypeDef::AudioMode***
  Specifies the SAI Block audio Mode. This parameter can be a value of ***SAI_Block_Mode***
- ***uint32_t SAI_InitTypeDef::Synchro***
  Specifies SAI Block synchronization This parameter can be a value of ***SAI_Block_Synchronization***

- ***uint32_t SAI_InitTypeDef::SynchroExt***

  Specifies SAI external output synchronization, this setup is common for BlockA and BlockB This parameter can be a value of ***SAI_Block_SyncExt***

  Note:

  – If both audio blocks of same SAI are used, this parameter has to be set to the same value for each audio block
- ***uint32_t SAI_InitTypeDef::MckOutput***

  Specifies whether master clock output will be generated or not. This parameter can be a value of ***SAI_Block_MckOutput***
- ***uint32_t SAI_InitTypeDef::OutputDrive***

  Specifies when SAI Block outputs are driven. This parameter can be a value of ***SAI_Block_Output_Drive***

  Note:

  – This value has to be set before enabling the audio block but after the audio block configuration.
- ***uint32_t SAI_InitTypeDef::NoDivider***

  Specifies whether master clock will be divided or not. This parameter can be a value of ***SAI_Block_NoDivider***

  Note:

  – If bit NODIV in the SAI_xCR1 register is cleared, the frame length should be aligned to a number equal to a power of 2, from 8 to 256. If bit NODIV in the SAI_xCR1 register is set, the frame length can take any of the values from 8 to 256.
- ***uint32_t SAI_InitTypeDef::FIFOThreshold***

  Specifies SAI Block FIFO threshold. This parameter can be a value of ***SAI_Block_Fifo_Threshold***
- ***uint32_t SAI_InitTypeDef::AudioFrequency***

  Specifies the audio frequency sampling. This parameter can be a value of ***SAI_Audio_Frequency***
- ***uint32_t SAI_InitTypeDef::Mckdiv***

  Specifies the master clock divider. This parameter must be a number between Min_Data = 0 and Max_Data = 63.

  Note:

  – This parameter is used only if AudioFrequency is set to SAI_AUDIO_FREQUENCY_MCKDIV otherwise it is internally computed.
- ***uint32_t SAI_InitTypeDef::MckOverSampling***

  Specifies the master clock oversampling. This parameter can be a value of ***SAI_Block_Mck_OverSampling***
- ***uint32_t SAI_InitTypeDef::MonoStereoMode***

  Specifies if the mono or stereo mode is selected. This parameter can be a value of ***SAI_Mono_Stereo_Mode***
- ***uint32_t SAI_InitTypeDef::CompandingMode***

  Specifies the companding mode type. This parameter can be a value of ***SAI_Block_Companding_Mode***
- ***uint32_t SAI_InitTypeDef::TriState***

  Specifies the companding mode type. This parameter can be a value of ***SAI_TRIState_Management***
- ***SAI_PdmInitTypeDef SAI_InitTypeDef::PdmInit***

  Specifies the PDM configuration.
- ***uint32_t SAI_InitTypeDef::Protocol***

  Specifies the SAI Block protocol. This parameter can be a value of ***SAI_Block_Protocol***
- ***uint32_t SAI_InitTypeDef::DataSize***

  Specifies the SAI Block data size. This parameter can be a value of ***SAI_Block_Data_Size***
- ***uint32_t SAI_InitTypeDef::FirstBit***

  Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of ***SAI_Block_MSB_LSB_transmission***

- ***uint32_t SAI_InitTypeDef::ClockStrobing***

  Specifies the SAI Block clock strobing edge sensitivity. This parameter can be a value of ***SAI_Block_Clock_Strobing***

50.1.3 SAI_FrameInitTypeDef

SAI_FrameInitTypeDef is defined in the stm32g4xx_hal_sai.h

Data Fields

- ***uint32_t FrameLength***
- ***uint32_t ActiveFrameLength***
- ***uint32_t FSDefinition***
- ***uint32_t FSPolarity***
- ***uint32_t FSOffset***

Field Documentation

- ***uint32_t SAI_FrameInitTypeDef::FrameLength***

  Specifies the Frame length, the number of SCK clocks for each audio frame. This parameter must be a number between Min_Data = 8 and Max_Data = 256.

  Note:

  – If master clock MCLK_x pin is declared as an output, the frame length should be aligned to a number equal to power of 2 in order to keep in an audio frame, an integer number of MCLK pulses by bit Clock.

- ***uint32_t SAI_FrameInitTypeDef::ActiveFrameLength***

  Specifies the Frame synchronization active level length. This Parameter specifies the length in number of bit clock (SCK + 1) of the active level of FS signal in audio frame. This parameter must be a number between Min_Data = 1 and Max_Data = 128

- ***uint32_t SAI_FrameInitTypeDef::FSDefinition***

  Specifies the Frame synchronization definition. This parameter can be a value of ***SAI_Block_FS_Definition***

- ***uint32_t SAI_FrameInitTypeDef::FSPolarity***

  Specifies the Frame synchronization Polarity. This parameter can be a value of ***SAI_Block_FS_Polarity***

- ***uint32_t SAI_FrameInitTypeDef::FSOffset***

  Specifies the Frame synchronization Offset. This parameter can be a value of ***SAI_Block_FS_Offset***

50.1.4 SAI_SlotInitTypeDef

SAI_SlotInitTypeDef is defined in the stm32g4xx_hal_sai.h

Data Fields

- ***uint32_t FirstBitOffset***
- ***uint32_t SlotSize***
- ***uint32_t SlotNumber***
- ***uint32_t SlotActive***

Field Documentation

- ***uint32_t SAI_SlotInitTypeDef::FirstBitOffset***

  Specifies the position of first data transfer bit in the slot. This parameter must be a number between Min_Data = 0 and Max_Data = 24

- ***uint32_t SAI_SlotInitTypeDef::SlotSize***

  Specifies the Slot Size. This parameter can be a value of ***SAI_Block_Slot_Size***

- ***uint32_t SAI_SlotInitTypeDef::SlotNumber***

  Specifies the number of slot in the audio frame. This parameter must be a number between Min_Data = 1 and Max_Data = 16

- ***uint32_t SAI_SlotInitTypeDef::SlotActive***

  Specifies the slots in audio frame that will be activated. This parameter can be a value of ***SAI_Block_Slot_Active***

50.1.5 __SAI_HandleTypeDef

__SAI_HandleTypeDef is defined in the stm32g4xx_hal_sai.h

Data Fields

- ***SAI_Block_TypeDef * Instance***
- ***SAI_InitTypeDef Init***
- ***SAI_FrameInitTypeDef FrameInit***
- ***SAI_SlotInitTypeDef SlotInit***
- ***uint8_t * pBuffPtr***
- ***uint16_t XferSize***
- ***uint16_t XferCount***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***SAIcallback mutecallback***
- ***void(* InterruptServiceRoutine***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_SAI_StateTypeDef State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***SAI_Block_TypeDef* __SAI_HandleTypeDef::Instance***
  SAI Blockx registers base address
- ***SAI_InitTypeDef __SAI_HandleTypeDef::Init***
  SAI communication parameters
- ***SAI_FrameInitTypeDef __SAI_HandleTypeDef::FrameInit***
  SAI Frame configuration parameters
- ***SAI_SlotInitTypeDef __SAI_HandleTypeDef::SlotInit***
  SAI Slot configuration parameters
- ***uint8_t* __SAI_HandleTypeDef::pBuffPtr***
  Pointer to SAI transfer Buffer
- ***uint16_t __SAI_HandleTypeDef::XferSize***
  SAI transfer size
- ***uint16_t __SAI_HandleTypeDef::XferCount***
  SAI transfer counter
- ***DMA_HandleTypeDef* __SAI_HandleTypeDef::hdmatx***
  SAI Tx DMA handle parameters
- ***DMA_HandleTypeDef* __SAI_HandleTypeDef::hdmarx***
  SAI Rx DMA handle parameters
- ***SAIcallback __SAI_HandleTypeDef::mutecallback***
  SAI mute callback
- ***void(* __SAI_HandleTypeDef::InterruptServiceRoutine)(struct __SAI_HandleTypeDef *hsai)***
- ***HAL_LockTypeDef __SAI_HandleTypeDef::Lock***
  SAI locking object
- ***__IO HAL_SAI_StateTypeDef __SAI_HandleTypeDef::State***
  SAI communication state
- ***__IO uint32_t __SAI_HandleTypeDef::ErrorCode***
  SAI Error code

50.2 SAI Firmware driver API description

The following section lists the various functions of the SAI library.

50.2.1 How to use this driver

The SAI HAL driver can be used as follows:

1. Declare a SAI_HandleTypeDef handle structure (eg. SAI_HandleTypeDef hsai).
2. Initialize the SAI low level resources by implementing the HAL_SAI_MspInit() API:
   a. Enable the SAI interface clock.
   b. SAI pins configuration:
      - Enable the clock for the SAI GPIOs.
      - Configure these SAI pins as alternate function pull-up.
   c. NVIC configuration if you need to use interrupt process (HAL_SAI_Transmit_IT() and HAL_SAI_Receive_IT() APIs):
      - Configure the SAI interrupt priority.
      - Enable the NVIC SAI IRQ handle.
   d. DMA Configuration if you need to use DMA process (HAL_SAI_Transmit_DMA() and HAL_SAI_Receive_DMA() APIs):
      - Declare a DMA handle structure for the Tx/Rx stream.
      - Enable the DMAx interface clock.
      - Configure the declared DMA handle structure with the required Tx/Rx parameters.
      - Configure the DMA Tx/Rx Stream.
      - Associate the initialized DMA handle to the SAI DMA Tx/Rx handle.
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx Stream.
3. The initialization can be done by two ways
   a. Expert mode : Initialize the structures Init, FrameInit and SlotInit and call HAL_SAI_Init().
   b. Simplified mode : Initialize the high part of Init Structure and call HAL_SAI_InitProtocol().

Note: The specific SAI interrupts (FIFO request and Overrun underrun interrupt) will be managed using the macros __HAL_SAI_ENABLE_IT() and __HAL_SAI_DISABLE_IT() inside the transmit and receive process.

Note: Make sure that SAI clock source is configured:

- *SYSCLK or*
- *PLLQ output or*
- *HSI or*
- *External clock source which is configured after setting correctly the define constant EXTERNAL_CLOCK_VALUE in the stm32g4xx_hal_conf.h file.*

Note: In master Tx mode: enabling the audio block immediately generates the bit clock for the external slaves even if there is no data in the FIFO, However FS signal generation is conditioned by the presence of data in the FIFO.

Note: In master Rx mode: enabling the audio block immediately generates the bit clock and FS signal for the external slaves.

Note: It is mandatory to respect the following conditions in order to avoid bad SAI behavior:

- *First bit Offset <= (SLOT size - Data size)*
- *Data size <= SLOT size*
- *Number of SLOT x SLOT size = Frame length*
- *The number of slots should be even when SAI_FS_CHANNEL_IDENTIFICATION is selected.*

Note: PDM interface can be activated through HAL_SAI_Init function. Please note that PDM interface is only available for SAI1 sub-block A. PDM microphone delays can be tuned with HAL_SAIEx_ConfigPdmMicDelay function.

Three operation modes are available within this driver :

Polling mode IO operation

- Send an amount of data in blocking mode using HAL_SAI_Transmit()
- Receive an amount of data in blocking mode using HAL_SAI_Receive()

Interrupt mode IO operation

- Send an amount of data in non-blocking mode using HAL_SAI_Transmit_IT()

- At transmission end of transfer HAL_SAI_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SAI_TxCpltCallback()
- Receive an amount of data in non-blocking mode using HAL_SAI_Receive_IT()
- At reception end of transfer HAL_SAI_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SAI_RxCpltCallback()
- In case of flag error, HAL_SAI_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_SAI_ErrorCallback()

DMA mode IO operation

- Send an amount of data in non-blocking mode (DMA) using HAL_SAI_Transmit_DMA()
- At transmission end of transfer HAL_SAI_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SAI_TxCpltCallback()
- Receive an amount of data in non-blocking mode (DMA) using HAL_SAI_Receive_DMA()
- At reception end of transfer HAL_SAI_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SAI_RxCpltCallback()
- In case of flag error, HAL_SAI_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_SAI_ErrorCallback()
- Pause the DMA Transfer using HAL_SAI_DMAPause()
- Resume the DMA Transfer using HAL_SAI_DMAResume()
- Stop the DMA Transfer using HAL_SAI_DMAStop()

SAI HAL driver additional function list

Below the list the others API available SAI HAL driver :

- HAL_SAI_EnableTxMuteMode(): Enable the mute in tx mode
- HAL_SAI_DisableTxMuteMode(): Disable the mute in tx mode
- HAL_SAI_EnableRxMuteMode(): Enable the mute in Rx mode
- HAL_SAI_DisableRxMuteMode(): Disable the mute in Rx mode
- HAL_SAI_FlushRxFifo(): Flush the rx fifo.
- HAL_SAI_Abort(): Abort the current transfer

SAI HAL driver macros list

Below the list of most used macros in SAI HAL driver :

- __HAL_SAI_ENABLE(): Enable the SAI peripheral
- __HAL_SAI_DISABLE(): Disable the SAI peripheral
- __HAL_SAI_ENABLE_IT(): Enable the specified SAI interrupts
- __HAL_SAI_DISABLE_IT(): Disable the specified SAI interrupts
- __HAL_SAI_GET_IT_SOURCE(): Check if the specified SAI interrupt source is enabled or disabled
- __HAL_SAI_GET_FLAG(): Check whether the specified SAI flag is set or not

Callback registration

The compilation define USE_HAL_SAI_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use functions HAL_SAI_RegisterCallback() to register a user callback.

Function HAL_SAI_RegisterCallback() allows to register following callbacks:

- RxCpltCallback : SAI receive complete.
- RxHalfCpltCallback : SAI receive half complete.
- TxCpltCallback : SAI transmit complete.
- TxHalfCpltCallback : SAI transmit half complete.
- ErrorCallback : SAI error.
- MspInitCallback : SAI MspInit.
- MspDeInitCallback : SAI MspDeInit.

This function takes as parameters the HAL peripheral handle, the callback ID and a pointer to the user callback function.

Use function HAL_SAI_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. HAL_SAI_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the callback ID.

This function allows to reset following callbacks:

- RxCpltCallback : SAI receive complete.
- RxHalfCpltCallback : SAI receive half complete.
- TxCpltCallback : SAI transmit complete.
- TxHalfCpltCallback : SAI transmit half complete.
- ErrorCallback : SAI error.
- MspInitCallback : SAI MspInit.
- MspDeInitCallback : SAI MspDeInit.

By default, after the HAL_SAI_Init and if the state is HAL_SAI_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions: examples HAL_SAI_RxCpltCallback(), HAL_SAI_ErrorCallback(). Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the HAL_SAI_Init and HAL_SAI_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the HAL_SAI_Init and HAL_SAI_DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using HAL_SAI_RegisterCallback before calling HAL_SAI_DeInit or HAL_SAI_Init function.

When the compilation define USE_HAL_SAI_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

50.2.2 Initialization and de-initialization functions

This subsection provides a set of functions allowing to initialize and de-initialize the SAIx peripheral:

- User must implement HAL_SAI_MspInit() function in which he configures all related peripherals resources (CLOCK, GPIO, DMA, IT and NVIC).
- Call the function HAL_SAI_Init() to configure the selected device with the selected configuration:
  - Mode (Master/slave TX/RX)
  - Protocol
  - Data Size
  - MCLK Output
  - Audio frequency
  - FIFO Threshold
  - Frame Config
  - Slot Config
  - PDM Config
- Call the function HAL_SAI_DeInit() to restore the default configuration of the selected SAI peripheral.

This section contains the following APIs:

- ***HAL_SAI_InitProtocol***
- ***HAL_SAI_Init***
- ***HAL_SAI_DeInit***
- ***HAL_SAI_MspInit***
- ***HAL_SAI_MspDeInit***

50.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the SAI data transfers.

- There are two modes of transfer:
  - Blocking mode : The communication is performed in the polling mode. The status of all data processing is returned by the same function after finishing transfer.
  - No-Blocking mode : The communication is performed using Interrupts or DMA. These functions return the status of the transfer startup. The end of the data processing will be indicated through the dedicated SAI IRQ when using Interrupt mode or the DMA IRQ when using DMA mode.
- Blocking mode functions are :
  - HAL_SAI_Transmit()
  - HAL_SAI_Receive()
- Non Blocking mode functions with Interrupt are :
  - HAL_SAI_Transmit_IT()
  - HAL_SAI_Receive_IT()
- Non Blocking mode functions with DMA are :
  - HAL_SAI_Transmit_DMA()
  - HAL_SAI_Receive_DMA()
- A set of Transfer Complete Callbacks are provided in non Blocking mode:
  - HAL_SAI_TxCpltCallback()
  - HAL_SAI_RxCpltCallback()
  - HAL_SAI_ErrorCallback()

This section contains the following APIs:

- ***HAL_SAI_Transmit***
- ***HAL_SAI_Receive***
- ***HAL_SAI_Transmit_IT***
- ***HAL_SAI_Receive_IT***
- ***HAL_SAI_DMAPause***
- ***HAL_SAI_DMAResume***
- ***HAL_SAI_DMAStop***
- ***HAL_SAI_Abort***
- ***HAL_SAI_Transmit_DMA***
- ***HAL_SAI_Receive_DMA***
- ***HAL_SAI_EnableTxMuteMode***
- ***HAL_SAI_DisableTxMuteMode***
- ***HAL_SAI_EnableRxMuteMode***
- ***HAL_SAI_DisableRxMuteMode***
- ***HAL_SAI_IRQHandler***

- ***HAL_SAI_ErrorCallback***

50.2.4 Peripheral State and Errors functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- ***HAL_SAI_GetState***
- ***HAL_SAI_GetError***

50.2.5 Detailed description of functions

HAL_SAI_InitProtocol

Function name

HAL_StatusTypeDef HAL_SAI_InitProtocol (SAI_HandleTypeDef * hsai, uint32_t protocol, uint32_t datasize, uint32_t nbslot)

Function description

Initialize the structure FrameInit, SlotInit and the low part of Init according to the specified parameters and call the function HAL_SAI_Init to initialize the SAI block.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **protocol:** one of the supported protocol SAI Supported protocol
- **datasize:** one of the supported datasize SAI protocol data size the configuration information for SAI module.
- **nbslot:** Number of slot.

Return values

- **HAL:** status

HAL_SAI_Init

Function name

HAL_StatusTypeDef HAL_SAI_Init (SAI_HandleTypeDef * hsai)

Function description

Initialize the SAI according to the specified parameters.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_DeInit

Function name

HAL_StatusTypeDef HAL_SAI_DeInit (SAI_HandleTypeDef * hsai)

Function description

DeInitialize the SAI peripheral.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_MspInit

Function name

void HAL_SAI_MspInit (SAI_HandleTypeDef * hsai)

Function description

Initialize the SAI MSP.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_MspDeInit

Function name

void HAL_SAI_MspDeInit (SAI_HandleTypeDef * hsai)

Function description

DeInitialize the SAI MSP.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_Transmit

Function name

HAL_StatusTypeDef HAL_SAI_Transmit (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Transmit an amount of data in blocking mode.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SAI_Receive

Function name

HAL_StatusTypeDef HAL_SAI_Receive (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be received
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SAI_Transmit_IT

Function name

HAL_StatusTypeDef HAL_SAI_Transmit_IT (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_SAI_Receive_IT

Function name

HAL_StatusTypeDef HAL_SAI_Receive_IT (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be received

Return values

- **HAL:** status

HAL_SAI_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_SAI_Transmit_DMA (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with DMA.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent

Return values

- **HAL:** status

HAL_SAI_Receive_DMA

Function name

HAL_StatusTypeDef HAL_SAI_Receive_DMA (SAI_HandleTypeDef * hsai, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be received

Return values

- **HAL:** status

HAL_SAI_DMAPause

Function name

HAL_StatusTypeDef HAL_SAI_DMAPause (SAI_HandleTypeDef * hsai)

Function description

Pause the audio stream playing from the Media.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_DMAResume

Function name

HAL_StatusTypeDef HAL_SAI_DMAResume (SAI_HandleTypeDef * hsai)

Function description

Resume the audio stream playing from the Media.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_DMAStop

Function name

HAL_StatusTypeDef HAL_SAI_DMAStop (SAI_HandleTypeDef * hsai)

Function description

Stop the audio stream playing from the Media.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_Abort

Function name

HAL_StatusTypeDef HAL_SAI_Abort (SAI_HandleTypeDef * hsai)

Function description

Abort the current transfer and disable the SAI.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_EnableTxMuteMode

Function name

HAL_StatusTypeDef HAL_SAI_EnableTxMuteMode (SAI_HandleTypeDef * hsai, uint16_t val)

Function description

Enable the Tx mute mode.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **val:** value sent during the mute SAI Block Mute Value

Return values

- **HAL:** status

HAL_SAI_DisableTxMuteMode

Function name

HAL_StatusTypeDef HAL_SAI_DisableTxMuteMode (SAI_HandleTypeDef * hsai)

Function description

Disable the Tx mute mode.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_EnableRxMuteMode

Function name

HAL_StatusTypeDef HAL_SAI_EnableRxMuteMode (SAI_HandleTypeDef * hsai, SAIcallback callback, uint16_t counter)

Function description

Enable the Rx mute detection.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.
- **callback:** function called when the mute is detected.
- **counter:** number a data before mute detection max 63.

Return values

- **HAL:** status

HAL_SAI_DisableRxMuteMode

Function name

HAL_StatusTypeDef HAL_SAI_DisableRxMuteMode (SAI_HandleTypeDef * hsai)

Function description

Disable the Rx mute detection.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** status

HAL_SAI_IRQHandler

Function name

void HAL_SAI_IRQHandler (SAI_HandleTypeDef * hsai)

Function description

Handle SAI interrupt request.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_TxHalfCpltCallback

Function name

void HAL_SAI_TxHalfCpltCallback (SAI_HandleTypeDef * hsai)

Function description

Tx Transfer Half completed callback.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_TxCpltCallback

Function name

void HAL_SAI_TxCpltCallback (SAI_HandleTypeDef * hsai)

Function description

Tx Transfer completed callback.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_RxHalfCpltCallback

Function name

void HAL_SAI_RxHalfCpltCallback (SAI_HandleTypeDef * hsai)

Function description

Rx Transfer half completed callback.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_RxCpltCallback

Function name

void HAL_SAI_RxCpltCallback (SAI_HandleTypeDef * hsai)

Function description

Rx Transfer completed callback.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_ErrorCallback

Function name

void HAL_SAI_ErrorCallback (SAI_HandleTypeDef * hsai)

Function description

SAI error callback.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **None:**

HAL_SAI_GetState

Function name

HAL_SAI_StateTypeDef HAL_SAI_GetState (SAI_HandleTypeDef * hsai)

Function description

Return the SAI handle state.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for SAI module.

Return values

- **HAL:** state

HAL_SAI_GetError

Function name

uint32_t HAL_SAI_GetError (SAI_HandleTypeDef * hsai)

Function description

Return the SAI error code.

Parameters

- **hsai:** pointer to a SAI_HandleTypeDef structure that contains the configuration information for the specified SAI Block.

Return values

- **SAI:** Error Code

50.3 SAI Firmware driver defines

The following section lists the various define and macros of the module.

50.3.1 SAI

HAL_SAI_ERROR_TIMEOUT

Timeout error

HAL_SAI_ERROR_DMA

DMA error

SAI Exported Macros

__HAL_SAI_RESET_HANDLE_STATE

Description:

- Reset SAI handle state.

Parameters:

- __HANDLE__: specifies the SAI Handle.

Return value:

- None

__HAL_SAI_ENABLE_IT

Description:

- Enable the specified SAI interrupts.

Parameters:

- __HANDLE__: specifies the SAI Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - SAI_IT_OVRUDR: Overrun underrun interrupt enable
  - SAI_IT_MUTEDET: Mute detection interrupt enable
  - SAI_IT_WCKCFG: Wrong Clock Configuration interrupt enable
  - SAI_IT_FREQ: FIFO request interrupt enable
  - SAI_IT_CNRDY: Codec not ready interrupt enable
  - SAI_IT_AFSDET: Anticipated frame synchronization detection interrupt enable
  - SAI_IT_LFSDET: Late frame synchronization detection interrupt enable

Return value:

- None

__HAL_SAI_DISABLE_IT

Description:

- Disable the specified SAI interrupts.

Parameters:

- __HANDLE__: specifies the SAI Handle.
- __INTERRUPT__: specifies the interrupt source to enable or disable. This parameter can be one of the following values:
  - SAI_IT_OVRUDR: Overrun underrun interrupt enable
  - SAI_IT_MUTEDET: Mute detection interrupt enable
  - SAI_IT_WCKCFG: Wrong Clock Configuration interrupt enable
  - SAI_IT_FREQ: FIFO request interrupt enable
  - SAI_IT_CNRDY: Codec not ready interrupt enable
  - SAI_IT_AFSDET: Anticipated frame synchronization detection interrupt enable
  - SAI_IT_LFSDET: Late frame synchronization detection interrupt enable

Return value:

- None

__HAL_SAI_GET_IT_SOURCE

Description:

- Check whether the specified SAI interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the SAI Handle.
- __INTERRUPT__: specifies the SAI interrupt source to check. This parameter can be one of the following values:
  - SAI_IT_OVRUDR: Overrun underrun interrupt enable
  - SAI_IT_MUTEDET: Mute detection interrupt enable
  - SAI_IT_WCKCFG: Wrong Clock Configuration interrupt enable
  - SAI_IT_FREQ: FIFO request interrupt enable
  - SAI_IT_CNRDY: Codec not ready interrupt enable
  - SAI_IT_AFSDET: Anticipated frame synchronization detection interrupt enable
  - SAI_IT_LFSDET: Late frame synchronization detection interrupt enable

Return value:

- The: new state of __INTERRUPT__ (TRUE or FALSE).

__HAL_SAI_GET_FLAG

Description:

- Check whether the specified SAI flag is set or not.

Parameters:

- __HANDLE__: specifies the SAI Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - SAI_FLAG_OVRUDR: Overrun underrun flag.
  - SAI_FLAG_MUTEDET: Mute detection flag.
  - SAI_FLAG_WCKCFG: Wrong Clock Configuration flag.
  - SAI_FLAG_FREQ: FIFO request flag.
  - SAI_FLAG_CNRDY: Codec not ready flag.
  - SAI_FLAG_AFSDET: Anticipated frame synchronization detection flag.
  - SAI_FLAG_LFSDET: Late frame synchronization detection flag.

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_SAI_CLEAR_FLAG

Description:

- Clear the specified SAI pending flag.

Parameters:

- __HANDLE__: specifies the SAI Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - SAI_FLAG_OVRUDR: Clear Overrun underrun
  - SAI_FLAG_MUTEDET: Clear Mute detection
  - SAI_FLAG_WCKCFG: Clear Wrong Clock Configuration
  - SAI_FLAG_FREQ: Clear FIFO request
  - SAI_FLAG_CNRDY: Clear Codec not ready
  - SAI_FLAG_AFSDET: Clear Anticipated frame synchronization detection
  - SAI_FLAG_LFSDET: Clear Late frame synchronization detection

Return value:

- None

__HAL_SAI_ENABLE

Description:

- Enable SAI.

Parameters:

- __HANDLE__: specifies the SAI Handle.

Return value:

- None

__HAL_SAI_DISABLE

Description:

- Disable SAI.

Parameters:

- __HANDLE__: specifies the SAI Handle.

Return value:

- None

51 HAL SAI Extension Driver

51.1 SAIEx Firmware driver registers structures

51.1.1 SAIEx_PdmMicDelayParamTypeDef

SAIEx_PdmMicDelayParamTypeDef is defined in the stm32g4xx_hal_sai_ex.h

Data Fields

- ***uint32_t MicPair***
- ***uint32_t LeftDelay***
- ***uint32_t RightDelay***

Field Documentation

- ***uint32_t SAIEx_PdmMicDelayParamTypeDef::MicPair***

  Specifies which pair of microphones is selected. This parameter must be a number between Min_Data = 1 and Max_Data = 3.
- ***uint32_t SAIEx_PdmMicDelayParamTypeDef::LeftDelay***

  Specifies the delay in PDM clock unit to apply on left microphone. This parameter must be a number between Min_Data = 0 and Max_Data = 7.
- ***uint32_t SAIEx_PdmMicDelayParamTypeDef::RightDelay***

  Specifies the delay in PDM clock unit to apply on right microphone. This parameter must be a number between Min_Data = 0 and Max_Data = 7.

51.2 SAIEx Firmware driver API description

The following section lists the various functions of the SAIEx library.

51.2.1 Extended features functions

This section provides functions allowing to:

- Modify PDM microphone delays

This section contains the following APIs:

- ***HAL_SAIEx_ConfigPdmMicDelay***

51.2.2 Detailed description of functions

HAL_SAIEx_ConfigPdmMicDelay

Function name

HAL_StatusTypeDef HAL_SAIEx_ConfigPdmMicDelay (SAI_HandleTypeDef * hsai, SAIEx_PdmMicDelayParamTypeDef * pdmMicDelay)

Function description

Configure PDM microphone delays.

Parameters

- **hsai:** SAI handle.
- **pdmMicDelay:** Microphone delays configuration.

Return values

- **HAL:** status

52 HAL SMARTCARD Generic Driver

52.1 SMARTCARD Firmware driver registers structures

52.1.1 SMARTCARD_InitTypeDef

SMARTCARD_InitTypeDef is defined in the stm32g4xx_hal_smartcard.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t StopBits***
- ***uint16_t Parity***
- ***uint16_t Mode***
- ***uint16_t CLKPolarity***
- ***uint16_t CLKPhase***
- ***uint16_t CLKLastBit***
- ***uint16_t OneBitSampling***
- ***uint8_t Prescaler***
- ***uint8_t GuardTime***
- ***uint16_t NACKEnable***
- ***uint32_t TimeOutEnable***
- ***uint32_t TimeOutValue***
- ***uint8_t BlockLength***
- ***uint8_t AutoRetryCount***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t SMARTCARD_InitTypeDef::BaudRate***

  Configures the SmartCard communication baud rate. The baud rate register is computed using the following formula: Baud Rate Register = ((usart_ker_ckpres) / ((hsmartcard->Init.BaudRate))) where usart_ker_ckpres is the USART input clock divided by a prescaler

- ***uint32_t SMARTCARD_InitTypeDef::WordLength***

  Specifies the number of data bits transmitted or received in a frame. This parameter ***SMARTCARD_Word_Length*** can only be set to 9 (8 data + 1 parity bits).

- ***uint32_t SMARTCARD_InitTypeDef::StopBits***

  Specifies the number of stop bits. This parameter can be a value of ***SMARTCARD_Stop_Bits***.

- ***uint16_t SMARTCARD_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***SMARTCARD_Parity***

  Note:

  – The parity is enabled by default (PCE is forced to 1). Since the WordLength is forced to 8 bits + parity, M is forced to 1 and the parity bit is the 9th bit.

- ***uint16_t SMARTCARD_InitTypeDef::Mode***

  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***SMARTCARD_Mode***

- ***uint16_t SMARTCARD_InitTypeDef::CLKPolarity***

  Specifies the steady state of the serial clock. This parameter can be a value of ***SMARTCARD_Clock_Polarity***

- ***uint16_t SMARTCARD_InitTypeDef::CLKPhase***

  Specifies the clock transition on which the bit capture is made. This parameter can be a value of ***SMARTCARD_Clock_Phase***

- ***uint16_t SMARTCARD_InitTypeDef::CLKLastBit***

  Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of ***SMARTCARD_Last_Bit***
- ***uint16_t SMARTCARD_InitTypeDef::OneBitSampling***

  Specifies whether a single sample or three samples' majority vote is selected. Selecting the single sample method increases the receiver tolerance to clock deviations. This parameter can be a value of ***SMARTCARD_OneBit_Sampling***.
- ***uint8_t SMARTCARD_InitTypeDef::Prescaler***

  Specifies the SmartCard Prescaler. This parameter can be any value from 0x01 to 0x1F. Prescaler value is multiplied by 2 to give the division factor of the source clock frequency
- ***uint8_t SMARTCARD_InitTypeDef::GuardTime***

  Specifies the SmartCard Guard Time applied after stop bits.
- ***uint16_t SMARTCARD_InitTypeDef::NACKEnable***

  Specifies whether the SmartCard NACK transmission is enabled in case of parity error. This parameter can be a value of ***SMARTCARD_NACK_Enable***
- ***uint32_t SMARTCARD_InitTypeDef::TimeOutEnable***

  Specifies whether the receiver timeout is enabled. This parameter can be a value of ***SMARTCARD_Timeout_Enable***
- ***uint32_t SMARTCARD_InitTypeDef::TimeOutValue***

  Specifies the receiver time out value in number of baud blocks: it is used to implement the Character Wait Time (CWT) and Block Wait Time (BWT). It is coded over 24 bits.
- ***uint8_t SMARTCARD_InitTypeDef::BlockLength***

  Specifies the SmartCard Block Length in T=1 Reception mode. This parameter can be any value from 0x0 to 0xFF
- ***uint8_t SMARTCARD_InitTypeDef::AutoRetryCount***

  Specifies the SmartCard auto-retry count (number of retries in receive and transmit mode). When set to 0, retransmission is disabled. Otherwise, its maximum value is 7 (before signalling an error)
- ***uint32_t SMARTCARD_InitTypeDef::ClockPrescaler***

  Specifies the prescaler value used to divide the USART clock source. This parameter can be a value of ***SMARTCARD_ClockPrescaler***.

52.1.2 SMARTCARD_AdvFeatureInitTypeDef

SMARTCARD_AdvFeatureInitTypeDef is defined in the stm32g4xx_hal_smartcard.h

Data Fields

- ***uint32_t AdvFeatureInit***
- ***uint32_t TxPinLevelInvert***
- ***uint32_t RxPinLevelInvert***
- ***uint32_t DataInvert***
- ***uint32_t Swap***
- ***uint32_t OverrunDisable***
- ***uint32_t DMADisableonRxError***
- ***uint32_t MSBFirst***
- ***uint16_t TxCompletionIndication***

Field Documentation

- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::AdvFeatureInit***

  Specifies which advanced SMARTCARD features is initialized. Several advanced features may be initialized at the same time. This parameter can be a value of ***SMARTCARDEx_Advanced_Features_Initialization_Type***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::TxPinLevelInvert***

  Specifies whether the TX pin active level is inverted. This parameter can be a value of ***SMARTCARD_Tx_Inv***

- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::RxPinLevelInvert***
  Specifies whether the RX pin active level is inverted. This parameter can be a value of ***SMARTCARD_Rx_Inv***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::DataInvert***
  Specifies whether data are inverted (positive/direct logic vs negative/inverted logic). This parameter can be a value of ***SMARTCARD_Data_Inv***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::Swap***
  Specifies whether TX and RX pins are swapped. This parameter can be a value of ***SMARTCARD_Rx_Tx_Swap***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::OverrunDisable***
  Specifies whether the reception overrun detection is disabled. This parameter can be a value of ***SMARTCARD_Overrun_Disable***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::DMADisableonRxError***
  Specifies whether the DMA is disabled in case of reception error. This parameter can be a value of ***SMARTCARD_DMA_Disable_on_Rx_Error***
- ***uint32_t SMARTCARD_AdvFeatureInitTypeDef::MSBFirst***
  Specifies whether MSB is sent first on UART line. This parameter can be a value of ***SMARTCARD_MSB_First***
- ***uint16_t SMARTCARD_AdvFeatureInitTypeDef::TxCompletionIndication***
  Specifies which transmission completion indication is used: before (when relevant flag is available) or once guard time period has elapsed. This parameter can be a value of ***SMARTCARDEx_Transmission_Completion_Indication***.

52.1.3 __SMARTCARD_HandleTypeDef

__SMARTCARD_HandleTypeDef is defined in the stm32g4xx_hal_smartcard.h

Data Fields

- ***USART_TypeDef * Instance***
- ***SMARTCARD_InitTypeDef Init***
- ***SMARTCARD_AdvFeatureInitTypeDef AdvancedInit***
- ***uint8_t * pTxBuffPtr***
- ***uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***
- ***uint8_t * pRxBuffPtr***
- ***uint16_t RxXferSize***
- ***__IO uint16_t RxXferCount***
- ***uint16_t NbRxDataToProcess***
- ***uint16_t NbTxDataToProcess***
- ***uint32_t FifoMode***
- ***void(* RxISR***
- ***void(* TxISR***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_SMARTCARD_StateTypeDef gState***

  SmartCard state information related to global Handle management and also related to Tx operations. This parameter can be a value of **HAL_SMARTCARD_StateTypeDef**
- ***__IO HAL_SMARTCARD_StateTypeDef __SMARTCARD_HandleTypeDef::RxState***
  SmartCard state information related to Rx operations. This parameter can be a value of **HAL_SMARTCARD_StateTypeDef**
- ***__IO uint32_t __SMARTCARD_HandleTypeDef::ErrorCode***
  SmartCard Error code

52.2 SMARTCARD Firmware driver API description

The following section lists the various functions of the SMARTCARD library.

52.2.1 How to use this driver

The SMARTCARD HAL driver can be used as follows:

1. Declare a SMARTCARD_HandleTypeDef handle structure (eg. SMARTCARD_HandleTypeDef hsmartcard).
2. Associate a USART to the SMARTCARD handle hsmartcard.

3. Initialize the SMARTCARD low level resources by implementing the HAL_SMARTCARD_MspInit() API:
   - Enable the USARTx interface clock.
   - USART pins configuration:
     - Enable the clock for the USART GPIOs.
     - Configure the USART pins (TX as alternate function pull-up, RX as alternate function Input).
   - NVIC configuration if you need to use interrupt process (HAL_SMARTCARD_Transmit_IT() and HAL_SMARTCARD_Receive_IT() APIs):
     - Configure the USARTx interrupt priority.
     - Enable the NVIC USART IRQ handle.
   - DMA Configuration if you need to use DMA process (HAL_SMARTCARD_Transmit_DMA() and HAL_SMARTCARD_Receive_DMA() APIs):
     - Declare a DMA handle structure for the Tx/Rx channel.
     - Enable the DMAx interface clock.
     - Configure the declared DMA handle structure with the required Tx/Rx parameters.
     - Configure the DMA Tx/Rx channel.
     - Associate the initialized DMA handle to the SMARTCARD DMA Tx/Rx handle.
     - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
4. Program the Baud Rate, Parity, Mode(Receiver/Transmitter), clock enabling/disabling and accordingly, the clock parameters (parity, phase, last bit), prescaler value, guard time and NACK on transmission error enabling or disabling in the hsmartcard handle Init structure.
5. If required, program SMARTCARD advanced features (TX/RX pins swap, TimeOut, auto-retry counter,...) in the hsmartcard handle AdvancedInit structure.
6. Initialize the SMARTCARD registers by calling the HAL_SMARTCARD_Init() API:
   - This API configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_SMARTCARD_MspInit() API.

Note: The specific SMARTCARD interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_SMARTCARD_ENABLE_IT() and __HAL_SMARTCARD_DISABLE_IT() inside the transmit and receive process.

Three operation modes are available within this driver :

Polling mode IO operation

- Send an amount of data in blocking mode using HAL_SMARTCARD_Transmit()
- Receive an amount of data in blocking mode using HAL_SMARTCARD_Receive()

Interrupt mode IO operation

- Send an amount of data in non-blocking mode using HAL_SMARTCARD_Transmit_IT()
- At transmission end of transfer HAL_SMARTCARD_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_TxCpltCallback()
- Receive an amount of data in non-blocking mode using HAL_SMARTCARD_Receive_IT()
- At reception end of transfer HAL_SMARTCARD_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_RxCpltCallback()
- In case of transfer Error, HAL_SMARTCARD_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_ErrorCallback()

DMA mode IO operation

- Send an amount of data in non-blocking mode (DMA) using HAL_SMARTCARD_Transmit_DMA()
- At transmission end of transfer HAL_SMARTCARD_TxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_TxCpltCallback()
- Receive an amount of data in non-blocking mode (DMA) using HAL_SMARTCARD_Receive_DMA()

- At reception end of transfer HAL_SMARTCARD_RxCpltCallback() is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_RxCpltCallback()
- In case of transfer Error, HAL_SMARTCARD_ErrorCallback() function is executed and user can add his own code by customization of function pointer HAL_SMARTCARD_ErrorCallback()

SMARTCARD HAL driver macros list

Below the list of most used macros in SMARTCARD HAL driver.

- __HAL_SMARTCARD_GET_FLAG : Check whether or not the specified SMARTCARD flag is set
- __HAL_SMARTCARD_CLEAR_FLAG : Clear the specified SMARTCARD pending flag
- __HAL_SMARTCARD_ENABLE_IT: Enable the specified SMARTCARD interrupt
- __HAL_SMARTCARD_DISABLE_IT: Disable the specified SMARTCARD interrupt
- __HAL_SMARTCARD_GET_IT_SOURCE: Check whether or not the specified SMARTCARD interrupt is enabled

Note: You can refer to the SMARTCARD HAL driver header file for more useful macros

52.2.2 Callback registration

The compilation define USE_HAL_SMARTCARD_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_SMARTCARD_RegisterCallback() to register a user callback. Function @ref HAL_SMARTCARD_RegisterCallback() allows to register following callbacks:

- TxCpltCallback : Tx Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : SMARTCARD MspInit.
- MspDeInitCallback : SMARTCARD MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_SMARTCARD_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. @ref HAL_SMARTCARD_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxCpltCallback : Tx Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : SMARTCARD MspInit.
- MspDeInitCallback : SMARTCARD MspDeInit.

By default, after the @ref HAL_SMARTCARD_Init() and when the state is HAL_SMARTCARD_STATE_RESET all callbacks are set to the corresponding weak (surcharged) functions: examples @ref HAL_SMARTCARD_TxCpltCallback(), @ref HAL_SMARTCARD_RxCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_SMARTCARD_Init() and @ref HAL_SMARTCARD_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_SMARTCARD_Init() and @ref HAL_SMARTCARD_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_SMARTCARD_STATE_READY state only. Exception done MspInit/MspDeInit that can be registered/unregistered in HAL_SMARTCARD_STATE_READY or HAL_SMARTCARD_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_SMARTCARD_RegisterCallback() before calling @ref HAL_SMARTCARD_DeInit() or @ref HAL_SMARTCARD_Init() function.

When The compilation define USE_HAL_SMARTCARD_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak (surcharged) callbacks are used.

52.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx associated to the SmartCard.

- These parameters can be configured:
  - Baud Rate
  - Parity: parity should be enabled, frame Length is fixed to 8 bits plus parity
  - Receiver/transmitter modes
  - Synchronous mode (and if enabled, phase, polarity and last bit parameters)
  - Prescaler value
  - Guard bit time
  - NACK enabling or disabling on transmission error
- The following advanced features can be configured as well:
  - TX and/or RX pin level inversion
  - data logical level inversion
  - RX and TX pins swap
  - RX overrun detection disabling
  - DMA disabling on RX error
  - MSB first on communication line
  - Time out enabling (and if activated, timeout value)
  - Block length
  - Auto-retry counter

The HAL_SMARTCARD_Init() API follows the USART synchronous configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- ***HAL_SMARTCARD_Init***
- ***HAL_SMARTCARD_DeInit***
- ***HAL_SMARTCARD_MspInit***
- ***HAL_SMARTCARD_MspDeInit***

52.2.4 IO operation functions

This subsection provides a set of functions allowing to manage the SMARTCARD data transfers.

Smartcard is a single wire half duplex communication protocol. The Smartcard interface is designed to support asynchronous protocol Smartcards as defined in the ISO 7816-3 standard. The USART should be configured as:

- 8 bits plus parity: where M=1 and PCE=1 in the USART_CR1 register
- 1.5 stop bits when transmitting and receiving: where STOP=11 in the USART_CR2 register.

- There are two modes of transfer:
  - Blocking mode: The communication is performed in polling mode. The HAL status of all data processing is returned by the same function after finishing transfer.
  - Non-Blocking mode: The communication is performed using Interrupts or DMA, the relevant API's return the HAL status. The end of the data processing will be indicated through the dedicated SMARTCARD IRQ when using Interrupt mode or the DMA IRQ when using DMA mode.
  - The HAL_SMARTCARD_TxCpltCallback(), HAL_SMARTCARD_RxCpltCallback() user callbacks will be executed respectively at the end of the Transmit or Receive process The HAL_SMARTCARD_ErrorCallback() user callback will be executed when a communication error is detected.
- Blocking mode APIs are :
  - HAL_SMARTCARD_Transmit()
  - HAL_SMARTCARD_Receive()
- Non Blocking mode APIs with Interrupt are :
  - HAL_SMARTCARD_Transmit_IT()
  - HAL_SMARTCARD_Receive_IT()
  - HAL_SMARTCARD_IRQHandler()
- Non Blocking mode functions with DMA are :
  - HAL_SMARTCARD_Transmit_DMA()
  - HAL_SMARTCARD_Receive_DMA()
- A set of Transfer Complete Callbacks are provided in non Blocking mode:
  - HAL_SMARTCARD_TxCpltCallback()
  - HAL_SMARTCARD_RxCpltCallback()
  - HAL_SMARTCARD_ErrorCallback()

1. Non-Blocking mode transfers could be aborted using Abort API's :
   - HAL_SMARTCARD_Abort()
   - HAL_SMARTCARD_AbortTransmit()
   - HAL_SMARTCARD_AbortReceive()
   - HAL_SMARTCARD_Abort_IT()
   - HAL_SMARTCARD_AbortTransmit_IT()
   - HAL_SMARTCARD_AbortReceive_IT()
2. For Abort services based on interrupts (HAL_SMARTCARD_Abortxxx_IT), a set of Abort Complete Callbacks are provided:
   - HAL_SMARTCARD_AbortCpltCallback()
   - HAL_SMARTCARD_AbortTransmitCpltCallback()
   - HAL_SMARTCARD_AbortReceiveCpltCallback()
3. In Non-Blocking mode transfers, possible errors are split into 2 categories. Errors are handled as follows :
   - Error is considered as Recoverable and non blocking : Transfer could go till end, but error severity is to be evaluated by user : this concerns Frame Error, Parity Error or Noise Error in Interrupt mode reception . Received character is then retrieved and stored in Rx buffer, Error code is set to allow user to identify error type, and HAL_SMARTCARD_ErrorCallback() user callback is executed. Transfer is kept ongoing on SMARTCARD side. If user wants to abort it, Abort services should be called by user.
   - Error is considered as Blocking : Transfer could not be completed properly and is aborted. This concerns Frame Error in Interrupt mode tranmission, Overrun Error in Interrupt mode reception and all errors in DMA mode. Error code is set to allow user to identify error type, and HAL_SMARTCARD_ErrorCallback() user callback is executed.

This section contains the following APIs:

- ***HAL_SMARTCARD_Transmit***
- ***HAL_SMARTCARD_Receive***
- ***HAL_SMARTCARD_Transmit_IT***
- ***HAL_SMARTCARD_Receive_IT***
- ***HAL_SMARTCARD_Transmit_DMA***

- *HAL_SMARTCARD_Receive_DMA*
- *HAL_SMARTCARD_Abort*
- *HAL_SMARTCARD_AbortTransmit*
- *HAL_SMARTCARD_AbortReceive*
- *HAL_SMARTCARD_Abort_IT*
- *HAL_SMARTCARD_AbortTransmit_IT*
- *HAL_SMARTCARD_AbortReceive_IT*
- *HAL_SMARTCARD_IRQHandler*
- *HAL_SMARTCARD_TxCpltCallback*
- *HAL_SMARTCARD_RxCpltCallback*
- *HAL_SMARTCARD_ErrorCallback*
- *HAL_SMARTCARD_AbortCpltCallback*
- *HAL_SMARTCARD_AbortTransmitCpltCallback*
- *HAL_SMARTCARD_AbortReceiveCpltCallback*

52.2.5 Peripheral State and Errors functions

This subsection provides a set of functions allowing to return the State of SmartCard handle and also return Peripheral Errors occurred during communication process

- HAL_SMARTCARD_GetState() API can be helpful to check in run-time the state of the SMARTCARD peripheral.
- HAL_SMARTCARD_GetError() checks in run-time errors that could occur during communication.

This section contains the following APIs:

- *HAL_SMARTCARD_GetState*
- *HAL_SMARTCARD_GetError*

52.2.6 Detailed description of functions

HAL_SMARTCARD_Init

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Init (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Initialize the SMARTCARD mode according to the specified parameters in the SMARTCARD_HandleTypeDef and initialize the associated handle.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

HAL_SMARTCARD_DeInit

Function name

HAL_StatusTypeDef HAL_SMARTCARD_DeInit (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

DeInitialize the SMARTCARD peripheral.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

HAL_SMARTCARD_MspInit

Function name

void HAL_SMARTCARD_MspInit (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Initialize the SMARTCARD MSP.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_MspDeInit

Function name

void HAL_SMARTCARD_MspDeInit (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

DeInitialize the SMARTCARD MSP.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_Transmit

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Transmit (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Send an amount of data in blocking mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be sent.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When FIFO mode is enabled, writing a data in the TDR register adds one data to the TXFIFO. Write operations to the TDR register are performed when TXFNF flag is set. From hardware perspective, TXFNF flag and TXE are mapped on the same bit-field.

HAL_SMARTCARD_Receive

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Receive (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be received.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When FIFO mode is enabled, the RXFNE flag is set as long as the RXFIFO is not empty. Read operations from the RDR register are performed when RXFNE flag is set. From hardware perspective, RXFNE flag and RXNE are mapped on the same bit-field.

HAL_SMARTCARD_Transmit_IT

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Transmit_IT (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be sent.

Return values

- **HAL:** status

Notes

- When FIFO mode is disabled, USART interrupt is generated whenever USART_TDR register is empty, i.e one interrupt per data to transmit.
- When FIFO mode is enabled, USART interrupt is generated whenever TXFIFO threshold reached. In that case the interrupt rate depends on TXFIFO threshold configuration.
- This function sets the hsmartcard->TxIsr function pointer according to the FIFO mode (data transmission processing depends on FIFO mode).

HAL_SMARTCARD_Receive_IT

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Receive_IT (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be received.

Return values

- **HAL:** status

Notes

- When FIFO mode is disabled, USART interrupt is generated whenever USART_RDR register can be read, i.e one interrupt per data to receive.
- When FIFO mode is enabled, USART interrupt is generated whenever RXFIFO threshold reached. In that case the interrupt rate depends on RXFIFO threshold configuration.
- This function sets the hsmartcard->RxIsr function pointer according to the FIFO mode (data reception processing depends on FIFO mode).

HAL_SMARTCARD_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Transmit_DMA (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be sent.

Return values

- **HAL:** status

HAL_SMARTCARD_Receive_DMA

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Receive_DMA (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **pData:** pointer to data buffer.
- **Size:** amount of data to be received.

Return values

- **HAL:** status

Notes

- The SMARTCARD-associated USART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).

HAL_SMARTCARD_Abort

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Abort (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_SMARTCARD_AbortTransmit

Function name

HAL_StatusTypeDef HAL_SMARTCARD_AbortTransmit (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing Transmit transfer (blocking mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_SMARTCARD_AbortReceive

Function name

HAL_StatusTypeDef HAL_SMARTCARD_AbortReceive (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing Receive transfer (blocking mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_SMARTCARD_Abort_IT

Function name

HAL_StatusTypeDef HAL_SMARTCARD_Abort_IT (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_SMARTCARD_AbortTransmit_IT

Function name

HAL_StatusTypeDef HAL_SMARTCARD_AbortTransmit_IT (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing Transmit transfer (Interrupt mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_SMARTCARD_AbortReceive_IT

Function name

HAL_StatusTypeDef HAL_SMARTCARD_AbortReceive_IT (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Abort ongoing Receive transfer (Interrupt mode).

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable SMARTCARD Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_SMARTCARD_IRQHandler

Function name

void HAL_SMARTCARD_IRQHandler (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Handle SMARTCARD interrupt requests.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_TxCpltCallback

Function name

void HAL_SMARTCARD_TxCpltCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Tx Transfer completed callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_RxCpltCallback

Function name

void HAL_SMARTCARD_RxCpltCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Rx Transfer completed callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_ErrorCallback

Function name

void HAL_SMARTCARD_ErrorCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD error callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_AbortCpltCallback

Function name

void HAL_SMARTCARD_AbortCpltCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD Abort Complete callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_AbortTransmitCpltCallback

Function name

void HAL_SMARTCARD_AbortTransmitCpltCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD Abort Complete callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_AbortReceiveCpltCallback

Function name

void HAL_SMARTCARD_AbortReceiveCpltCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD Abort Receive Complete callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARD_GetState

Function name

HAL_SMARTCARD_StateTypeDef HAL_SMARTCARD_GetState (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Return the SMARTCARD handle state.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **SMARTCARD:** handle state

HAL_SMARTCARD_GetError

Function name

uint32_t HAL_SMARTCARD_GetError (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Return the SMARTCARD handle error code.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **SMARTCARD:** handle Error Code

52.3 SMARTCARD Firmware driver defines

The following section lists the various define and macros of the module.

52.3.1 SMARTCARD

SMARTCARD

SMARTCARD Clock Prescaler

SMARTCARD_PRESCALER_DIV1

fclk_pres = fclk

SMARTCARD_PRESCALER_DIV2

fclk_pres = fclk/2

SMARTCARD_PRESCALER_DIV4

fclk_pres = fclk/4

SMARTCARD_PRESCALER_DIV6

fclk_pres = fclk/6

SMARTCARD_PRESCALER_DIV8

fclk_pres = fclk/8

SMARTCARD_PRESCALER_DIV10

fclk_pres = fclk/10

SMARTCARD_PRESCALER_DIV12

fclk_pres = fclk/12

SMARTCARD_PRESCALER_DIV16

fclk_pres = fclk/16

SMARTCARD_PRESCALER_DIV32

fclk_pres = fclk/32

SMARTCARD_PRESCALER_DIV64

fclk_pres = fclk/64

SMARTCARD_PRESCALER_DIV128

fclk_pres = fclk/128

SMARTCARD_PRESCALER_DIV256

fclk_pres = fclk/256

SMARTCARD Clock Phase

SMARTCARD_PHASE_1EDGE

SMARTCARD frame phase on first clock transition

SMARTCARD_PHASE_2EDGE

SMARTCARD frame phase on second clock transition

SMARTCARD Clock Polarity

SMARTCARD_POLARITY_LOW

SMARTCARD frame low polarity

SMARTCARD_POLARITY_HIGH

SMARTCARD frame high polarity

SMARTCARD advanced feature Binary Data inversion

SMARTCARD_ADVFEATURE_DATAINV_DISABLE

Binary data inversion disable

SMARTCARD_ADVFEATURE_DATAINV_ENABLE

Binary data inversion enable

SMARTCARD advanced feature DMA Disable on Rx Error

Receiver TimeOut error

SMARTCARD Exported Macros

__HAL_SMARTCARD_RESET_HANDLE_STATE

Description:

- Reset SMARTCARD handle states.

Parameters:

- __HANDLE__: SMARTCARD handle.

Return value:

- None

__HAL_SMARTCARD_FLUSH_DRREGISTER

Description:

- Flush the Smartcard Data registers.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_CLEAR_FLAG

Description:

- Clear the specified SMARTCARD pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - SMARTCARD_CLEAR_PEF Parity error clear flag
  - SMARTCARD_CLEAR_FEF Framing error clear flag
  - SMARTCARD_CLEAR_NEF Noise detected clear flag
  - SMARTCARD_CLEAR_OREF OverRun error clear flag
  - SMARTCARD_CLEAR_IDLEF Idle line detected clear flag
  - SMARTCARD_CLEAR_TCF Transmission complete clear flag
  - SMARTCARD_CLEAR_TCBGTF Transmission complete before guard time clear flag
  - SMARTCARD_CLEAR_RTOF Receiver timeout clear flag
  - SMARTCARD_CLEAR_EOBF End of block clear flag
  - SMARTCARD_CLEAR_TXFECF TXFIFO empty Clear flag

Return value:

- None

__HAL_SMARTCARD_CLEAR_PEFLAG

Description:

- Clear the SMARTCARD PE pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_CLEAR_FEFLAG

Description:

- Clear the SMARTCARD FE pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_CLEAR_NEFLAG

Description:

- Clear the SMARTCARD NE pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_CLEAR_OREFLAG

Description:

- Clear the SMARTCARD ORE pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_CLEAR_IDLEFLAG

Description:

- Clear the SMARTCARD IDLE pending flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_GET_FLAG

Description:

- Check whether the specified Smartcard flag is set or not.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - SMARTCARD_FLAG_TCBGT Transmission complete before guard time flag (when flag available)
  - SMARTCARD_FLAG_REACK Receive enable acknowledge flag
  - SMARTCARD_FLAG_TEACK Transmit enable acknowledge flag
  - SMARTCARD_FLAG_BUSY Busy flag
  - SMARTCARD_FLAG_EOBF End of block flag
  - SMARTCARD_FLAG_RTOF Receiver timeout flag
  - SMARTCARD_FLAG_TXE Transmit data register empty flag
  - SMARTCARD_FLAG_TC Transmission complete flag
  - SMARTCARD_FLAG_RXNE Receive data register not empty flag
  - SMARTCARD_FLAG_IDLE Idle line detection flag
  - SMARTCARD_FLAG_ORE Overrun error flag
  - SMARTCARD_FLAG_NE Noise error flag
  - SMARTCARD_FLAG_FE Framing error flag
  - SMARTCARD_FLAG_PE Parity error flag
  - SMARTCARD_FLAG_TXFNF TXFIFO not full flag
  - SMARTCARD_FLAG_RXFNE RXFIFO not empty flag
  - SMARTCARD_FLAG_TXFE TXFIFO Empty flag
  - SMARTCARD_FLAG_RXFF RXFIFO Full flag
  - SMARTCARD_FLAG_RXFT SMARTCARD RXFIFO threshold flag
  - SMARTCARD_FLAG_TXFT SMARTCARD TXFIFO threshold flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_SMARTCARD_ENABLE_IT

Description:

- Enable the specified SmartCard interrupt.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __INTERRUPT__: specifies the SMARTCARD interrupt to enable. This parameter can be one of the following values:
  - SMARTCARD_IT_EOB End of block interrupt
  - SMARTCARD_IT_RTO Receive timeout interrupt
  - SMARTCARD_IT_TXE Transmit data register empty interrupt
  - SMARTCARD_IT_TC Transmission complete interrupt
  - SMARTCARD_IT_TCBGT Transmission complete before guard time interrupt (when interruption available)
  - SMARTCARD_IT_RXNE Receive data register not empty interrupt
  - SMARTCARD_IT_IDLE Idle line detection interrupt
  - SMARTCARD_IT_PE Parity error interrupt
  - SMARTCARD_IT_ERR Error interrupt(frame error, noise error, overrun error)
  - SMARTCARD_IT_TXFNF TX FIFO not full interruption
  - SMARTCARD_IT_RXFNE RXFIFO not empty interruption
  - SMARTCARD_IT_RXFF RXFIFO full interruption
  - SMARTCARD_IT_TXFE TXFIFO empty interruption
  - SMARTCARD_IT_RXFT RXFIFO threshold reached interruption
  - SMARTCARD_IT_TXFT TXFIFO threshold reached interruption

Return value:

- None

__HAL_SMARTCARD_DISABLE_IT

Description:

- Disable the specified SmartCard interrupt.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __INTERRUPT__: specifies the SMARTCARD interrupt to disable. This parameter can be one of the following values:
  - SMARTCARD_IT_EOB End of block interrupt
  - SMARTCARD_IT_RTO Receive timeout interrupt
  - SMARTCARD_IT_TXE Transmit data register empty interrupt
  - SMARTCARD_IT_TC Transmission complete interrupt
  - SMARTCARD_IT_TCBGT Transmission complete before guard time interrupt (when interruption available)
  - SMARTCARD_IT_RXNE Receive data register not empty interrupt
  - SMARTCARD_IT_IDLE Idle line detection interrupt
  - SMARTCARD_IT_PE Parity error interrupt
  - SMARTCARD_IT_ERR Error interrupt(frame error, noise error, overrun error)
  - SMARTCARD_IT_TXFNF TX FIFO not full interruption
  - SMARTCARD_IT_RXFNE RXFIFO not empty interruption
  - SMARTCARD_IT_RXFF RXFIFO full interruption
  - SMARTCARD_IT_TXFE TXFIFO empty interruption
  - SMARTCARD_IT_RXFT RXFIFO threshold reached interruption
  - SMARTCARD_IT_TXFT TXFIFO threshold reached interruption

Return value:

- None

__HAL_SMARTCARD_GET_IT

Description:

- Check whether the specified SmartCard interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __INTERRUPT__: specifies the SMARTCARD interrupt to check. This parameter can be one of the following values:
  - SMARTCARD_IT_EOB End of block interrupt
  - SMARTCARD_IT_RTO Receive timeout interrupt
  - SMARTCARD_IT_TXE Transmit data register empty interrupt
  - SMARTCARD_IT_TC Transmission complete interrupt
  - SMARTCARD_IT_TCBGT Transmission complete before guard time interrupt (when interruption available)
  - SMARTCARD_IT_RXNE Receive data register not empty interrupt
  - SMARTCARD_IT_IDLE Idle line detection interrupt
  - SMARTCARD_IT_PE Parity error interrupt
  - SMARTCARD_IT_ERR Error interrupt(frame error, noise error, overrun error)
  - SMARTCARD_IT_TXFNF TX FIFO not full interruption
  - SMARTCARD_IT_RXFNE RXFIFO not empty interruption
  - SMARTCARD_IT_RXFF RXFIFO full interruption
  - SMARTCARD_IT_TXFE TXFIFO empty interruption
  - SMARTCARD_IT_RXFT RXFIFO threshold reached interruption
  - SMARTCARD_IT_TXFT TXFIFO threshold reached interruption

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_SMARTCARD_GET_IT_SOURCE

Description:

- Check whether the specified SmartCard interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __INTERRUPT__: specifies the SMARTCARD interrupt source to check. This parameter can be one of the following values:
  - SMARTCARD_IT_EOB End of block interrupt
  - SMARTCARD_IT_RTO Receive timeout interrupt
  - SMARTCARD_IT_TXE Transmit data register empty interrupt
  - SMARTCARD_IT_TC Transmission complete interrupt
  - SMARTCARD_IT_TCBGT Transmission complete before guard time interrupt (when interruption available)
  - SMARTCARD_IT_RXNE Receive data register not empty interrupt
  - SMARTCARD_IT_IDLE Idle line detection interrupt
  - SMARTCARD_IT_PE Parity error interrupt
  - SMARTCARD_IT_ERR Error interrupt(frame error, noise error, overrun error)
  - SMARTCARD_IT_TXFNF TX FIFO not full interruption
  - SMARTCARD_IT_RXFNE RXFIFO not empty interruption
  - SMARTCARD_IT_RXFF RXFIFO full interruption
  - SMARTCARD_IT_TXFE TXFIFO empty interruption
  - SMARTCARD_IT_RXFT RXFIFO threshold reached interruption
  - SMARTCARD_IT_TXFT TXFIFO threshold reached interruption

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_SMARTCARD_CLEAR_IT

Description:

- Clear the specified SMARTCARD ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt. This parameter can be one of the following values:
  - SMARTCARD_CLEAR_PEF Parity error clear flag
  - SMARTCARD_CLEAR_FEF Framing error clear flag
  - SMARTCARD_CLEAR_NEF Noise detected clear flag
  - SMARTCARD_CLEAR_OREF OverRun error clear flag
  - SMARTCARD_CLEAR_IDLEF Idle line detection clear flag
  - SMARTCARD_CLEAR_TXFECF TXFIFO empty Clear Flag
  - SMARTCARD_CLEAR_TCF Transmission complete clear flag
  - SMARTCARD_CLEAR_TCBGTF Transmission complete before guard time clear flag (when flag available)
  - SMARTCARD_CLEAR_RTOF Receiver timeout clear flag
  - SMARTCARD_CLEAR_EOBF End of block clear flag

Return value:

- None

__HAL_SMARTCARD_SEND_REQ

Description:

- Set a specific SMARTCARD request flag.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.
- __REQ__: specifies the request flag to set This parameter can be one of the following values:
  - SMARTCARD_RXDATA_FLUSH_REQUEST Receive data flush Request
  - SMARTCARD_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_SMARTCARD_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the SMARTCARD one bit sample method.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the SMARTCARD one bit sample method.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_ENABLE

Description:

- Enable the USART associated to the SMARTCARD Handle.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

__HAL_SMARTCARD_DISABLE

Description:

- Disable the USART associated to the SMARTCARD Handle.

Parameters:

- __HANDLE__: specifies the SMARTCARD Handle.

Return value:

- None

SMARTCARD interruptions flags mask

SMARTCARD_IT_MASK

SMARTCARD interruptions flags mask

SMARTCARD_CR_MASK

SMARTCARD control register mask

SMARTCARD_CR_POS

SMARTCARD control register position

SMARTCARD_ISR_MASK

SMARTCARD ISR register mask

SMARTCARD_ISR_POS

SMARTCARD ISR register position

SMARTCARD Last Bit

SMARTCARD_LASTBIT_DISABLE

SMARTCARD frame last data bit clock pulse not output to SCLK pin

SMARTCARD_LASTBIT_ENABLE

SMARTCARD frame last data bit clock pulse output to SCLK pin

SMARTCARD Transfer Mode

SMARTCARD_MODE_RX

SMARTCARD RX mode

SMARTCARD_MODE_TX

SMARTCARD TX mode

SMARTCARD_MODE_TX_RX

SMARTCARD RX and TX mode

SMARTCARD advanced feature MSB first

SMARTCARD_ADVFEATURE_MSBFIRST_DISABLE

Most significant bit sent/received first disable

SMARTCARD_ADVFEATURE_MSBFIRST_ENABLE

Most significant bit sent/received first enable

SMARTCARD NACK Enable

SMARTCARD_NACK_DISABLE

SMARTCARD NACK transmission disabled

SMARTCARD_NACK_ENABLE

SMARTCARD NACK transmission enabled

SMARTCARD One Bit Sampling Method

SMARTCARD_ONE_BIT_SAMPLE_DISABLE

SMARTCARD frame one-bit sample disabled

SMARTCARD_ONE_BIT_SAMPLE_ENABLE

SMARTCARD frame one-bit sample enabled

SMARTCARD advanced feature Overrun Disable

SMARTCARD_ADVFEATURE_OVERRUN_ENABLE

RX overrun enable

SMARTCARD_ADVFEATURE_OVERRUN_DISABLE

RX overrun disable

SMARTCARD Parity

SMARTCARD_PARITY_EVEN

SMARTCARD frame even parity

SMARTCARD_PARITY_ODD

SMARTCARD frame odd parity

SMARTCARD Request Parameters

SMARTCARD_RXDATA_FLUSH_REQUEST

Receive data flush request

SMARTCARD_TXDATA_FLUSH_REQUEST

Transmit data flush request

SMARTCARD advanced feature RX pin active level inversion

SMARTCARD_ADVFEATURE_RXINV_DISABLE

RX pin active level inversion disable

SMARTCARD_ADVFEATURE_RXINV_ENABLE

RX pin active level inversion enable

SMARTCARD advanced feature RX TX pins swap

SMARTCARD_ADVFEATURE_SWAP_DISABLE

TX/RX pins swap disable

SMARTCARD_ADVFEATURE_SWAP_ENABLE

TX/RX pins swap enable

SMARTCARD State Code Definition

HAL_SMARTCARD_STATE_RESET

Peripheral is not initialized Value is allowed for gState and RxState

HAL_SMARTCARD_STATE_READY

Peripheral Initialized and ready for use Value is allowed for gState and RxState

HAL_SMARTCARD_STATE_BUSY

an internal process is ongoing Value is allowed for gState only

HAL_SMARTCARD_STATE_BUSY_TX

Data Transmission process is ongoing Value is allowed for gState only

HAL_SMARTCARD_STATE_BUSY_RX

Data Reception process is ongoing Value is allowed for RxState only

HAL_SMARTCARD_STATE_BUSY_TX_RX

Data Transmission and Reception process is ongoing Not to be used for neither gState nor RxState. Value is result of combination (Or) between gState and RxState values

HAL_SMARTCARD_STATE_TIMEOUT

Timeout state Value is allowed for gState only

HAL_SMARTCARD_STATE_ERROR

Error Value is allowed for gState only

SMARTCARD Number of Stop Bits

SMARTCARD_STOPBITS_0_5

SMARTCARD frame with 0.5 stop bit

SMARTCARD_STOPBITS_1_5

SMARTCARD frame with 1.5 stop bits

SMARTCARD Timeout Enable

SMARTCARD_TIMEOUT_DISABLE

SMARTCARD receiver timeout disabled

SMARTCARD_TIMEOUT_ENABLE

SMARTCARD receiver timeout enabled

SMARTCARD advanced feature TX pin active level inversion

SMARTCARD_ADVFEATURE_TXINV_DISABLE

TX pin active level inversion disable

SMARTCARD_ADVFEATURE_TXINV_ENABLE

TX pin active level inversion enable

SMARTCARD Word Length

SMARTCARD_WORDLENGTH_9B

SMARTCARD frame length

53 HAL SMARTCARD Extension Driver

53.1 SMARTCARDEx Firmware driver API description

The following section lists the various functions of the SMARTCARDEx library.

53.1.1 SMARTCARD peripheral extended features

The Extended SMARTCARD HAL driver can be used as follows:

1. After having configured the SMARTCARD basic features with HAL_SMARTCARD_Init(), then program SMARTCARD advanced features if required (TX/RX pins swap, TimeOut, auto-retry counter,...) in the hsmartcard AdvancedInit structure.
2. FIFO mode enabling/disabling and RX/TX FIFO threshold programming.

Note: When SMARTCARD operates in FIFO mode, FIFO mode must be enabled prior starting RX/TX transfers. Also RX/TX FIFO thresholds must be configured prior starting RX/TX transfers.

53.1.2 Peripheral Control functions

This subsection provides a set of functions allowing to initialize the SMARTCARD.

- HAL_SMARTCARDEx_BlockLength_Config() API allows to configure the Block Length on the fly
- HAL_SMARTCARDEx_TimeOut_Config() API allows to configure the receiver timeout value on the fly
- HAL_SMARTCARDEx_EnableReceiverTimeOut() API enables the receiver timeout feature
- HAL_SMARTCARDEx_DisableReceiverTimeOut() API disables the receiver timeout feature

This section contains the following APIs:

- ***HAL_SMARTCARDEx_BlockLength_Config***
- ***HAL_SMARTCARDEx_TimeOut_Config***
- ***HAL_SMARTCARDEx_EnableReceiverTimeOut***
- ***HAL_SMARTCARDEx_DisableReceiverTimeOut***

53.1.3 IO operation functions

This subsection provides a set of FIFO mode related callback functions.

1. TX/RX Fifos Callbacks:
   - HAL_SMARTCARDEx_RxFifoFullCallback()
   - HAL_SMARTCARDEx_TxFifoEmptyCallback()

This section contains the following APIs:

- ***HAL_SMARTCARDEx_RxFifoFullCallback***
- ***HAL_SMARTCARDEx_TxFifoEmptyCallback***

53.1.4 Peripheral FIFO Control functions

This subsection provides a set of functions allowing to control the SMARTCARD FIFO feature.

- HAL_SMARTCARDEx_EnableFifoMode() API enables the FIFO mode
- HAL_SMARTCARDEx_DisableFifoMode() API disables the FIFO mode
- HAL_SMARTCARDEx_SetTxFifoThreshold() API sets the TX FIFO threshold
- HAL_SMARTCARDEx_SetRxFifoThreshold() API sets the RX FIFO threshold

This section contains the following APIs:

- ***HAL_SMARTCARDEx_EnableFifoMode***
- ***HAL_SMARTCARDEx_DisableFifoMode***
- ***HAL_SMARTCARDEx_SetTxFifoThreshold***
- ***HAL_SMARTCARDEx_SetRxFifoThreshold***

53.1.5 Detailed description of functions

HAL_SMARTCARDEx_BlockLength_Config

Function name

void HAL_SMARTCARDEx_BlockLength_Config (SMARTCARD_HandleTypeDef * hsmartcard, uint8_t BlockLength)

Function description

Update on the fly the SMARTCARD block length in RTOR register.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **BlockLength:** SMARTCARD block length (8-bit long at most)

Return values

- **None:**

HAL_SMARTCARDEx_TimeOut_Config

Function name

void HAL_SMARTCARDEx_TimeOut_Config (SMARTCARD_HandleTypeDef * hsmartcard, uint32_t TimeOutValue)

Function description

Update on the fly the receiver timeout value in RTOR register.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.
- **TimeOutValue:** receiver timeout value in number of baud blocks. The timeout value must be less or equal to 0x0FFFFFFFF.

Return values

- **None:**

HAL_SMARTCARDEx_EnableReceiverTimeOut

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_EnableReceiverTimeOut (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Enable the SMARTCARD receiver timeout feature.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

HAL_SMARTCARDEx_DisableReceiverTimeOut

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_DisableReceiverTimeOut (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Disable the SMARTCARD receiver timeout feature.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **HAL:** status

HAL_SMARTCARDEx_RxFifoFullCallback

Function name

void HAL_SMARTCARDEx_RxFifoFullCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD RX Fifo full callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARDEx_TxFifoEmptyCallback

Function name

void HAL_SMARTCARDEx_TxFifoEmptyCallback (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

SMARTCARD TX Fifo empty callback.

Parameters

- **hsmartcard:** Pointer to a SMARTCARD_HandleTypeDef structure that contains the configuration information for the specified SMARTCARD module.

Return values

- **None:**

HAL_SMARTCARDEx_EnableFifoMode

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_EnableFifoMode (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Enable the FIFO mode.

Parameters

- **hsmartcard:** SMARTCARD handle.

Return values

- **HAL:** status

HAL_SMARTCARDEx_DisableFifoMode

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_DisableFifoMode (SMARTCARD_HandleTypeDef * hsmartcard)

Function description

Disable the FIFO mode.

Parameters

- **hsmartcard:** SMARTCARD handle.

Return values

- **HAL:** status

HAL_SMARTCARDEx_SetTxFifoThreshold

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_SetTxFifoThreshold (SMARTCARD_HandleTypeDef * hsmartcard, uint32_t Threshold)

Function description

Set the TXFIFO threshold.

Parameters

- **hsmartcard:** SMARTCARD handle.
- **Threshold:** TX FIFO threshold value This parameter can be one of the following values:
  - SMARTCARD_TXFIFO_THRESHOLD_1_8
  - SMARTCARD_TXFIFO_THRESHOLD_1_4
  - SMARTCARD_TXFIFO_THRESHOLD_1_2
  - SMARTCARD_TXFIFO_THRESHOLD_3_4
  - SMARTCARD_TXFIFO_THRESHOLD_7_8
  - SMARTCARD_TXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_SMARTCARDEx_SetRxFifoThreshold

Function name

HAL_StatusTypeDef HAL_SMARTCARDEx_SetRxFifoThreshold (SMARTCARD_HandleTypeDef * hsmartcard, uint32_t Threshold)

Function description

Set the RXFIFO threshold.

Parameters

- **hsmartcard:** SMARTCARD handle.
- **Threshold:** RX FIFO threshold value This parameter can be one of the following values:
  - SMARTCARD_RXFIFO_THRESHOLD_1_8
  - SMARTCARD_RXFIFO_THRESHOLD_1_4
  - SMARTCARD_RXFIFO_THRESHOLD_1_2
  - SMARTCARD_RXFIFO_THRESHOLD_3_4
  - SMARTCARD_RXFIFO_THRESHOLD_7_8
  - SMARTCARD_RXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

53.2 SMARTCARDEx Firmware driver defines

The following section lists the various define and macros of the module.

53.2.1 SMARTCARDEx

SMARTCARDEx

SMARTCARD advanced feature initialization type

SMARTCARD_ADVFEATURE_NO_INIT

No advanced feature initialization

SMARTCARD_ADVFEATURE_TXINVERT_INIT

TX pin active level inversion

SMARTCARD_ADVFEATURE_RXINVERT_INIT

RX pin active level inversion

SMARTCARD_ADVFEATURE_DATAINVERT_INIT

Binary data inversion

SMARTCARD_ADVFEATURE_SWAP_INIT

TX/RX pins swap

SMARTCARD_ADVFEATURE_RXOVERRUNDISABLE_INIT

RX overrun disable

SMARTCARD_ADVFEATURE_DMADISABLEONERROR_INIT

DMA disable on Reception Error

SMARTCARD_ADVFEATURE_MSBFIRST_INIT

Most significant bit sent/received first

SMARTCARD_ADVFEATURE_TXCOMPLETION

TX completion indication before of after guard time

SMARTCARD FIFO mode

SMARTCARD_FIFOMODE_DISABLE

FIFO mode disable

SMARTCARD_FIFOMODE_ENABLE

FIFO mode enable

SMARTCARD Flags

SMARTCARD_FLAG_TCBGT

SMARTCARD transmission complete before guard time completion

SMARTCARD_FLAG_REACK

SMARTCARD receive enable acknowledge flag

SMARTCARD_FLAG_TEACK

SMARTCARD transmit enable acknowledge flag

SMARTCARD_FLAG_BUSY

SMARTCARD busy flag

SMARTCARD_FLAG_EOBF

SMARTCARD end of block flag

SMARTCARD_FLAG_RTOF

SMARTCARD receiver timeout flag

SMARTCARD_FLAG_TXE

SMARTCARD transmit data register empty

SMARTCARD_FLAG_TXFNF

SMARTCARD TXFIFO not full

SMARTCARD_FLAG_TC

SMARTCARD transmission complete

SMARTCARD_FLAG_RXNE

SMARTCARD read data register not empty

SMARTCARD_FLAG_RXFNE

SMARTCARD RXFIFO not empty

SMARTCARD_FLAG_IDLE

SMARTCARD idle line detection

SMARTCARD_FLAG_ORE

SMARTCARD overrun error

SMARTCARD_FLAG_NE

SMARTCARD noise error

SMARTCARD_FLAG_FE

SMARTCARD frame error

SMARTCARD_FLAG_PE

SMARTCARD parity error

SMARTCARD_FLAG_TXFE

SMARTCARD TXFIFO Empty flag

SMARTCARD_FLAG_RXFF

SMARTCARD RXFIFO Full flag

SMARTCARD_FLAG_RXFT

SMARTCARD RXFIFO threshold flag

SMARTCARD_FLAG_TXFT

SMARTCARD TXFIFO threshold flag

SMARTCARD Interrupts Definition

SMARTCARD_IT_PE

SMARTCARD parity error interruption

SMARTCARD_IT_TXE

SMARTCARD transmit data register empty interruption

SMARTCARD_IT_TXFNF

SMARTCARD TX FIFO not full interruption

SMARTCARD_IT_TC

SMARTCARD transmission complete interruption

SMARTCARD_IT_RXNE

SMARTCARD read data register not empty interruption

SMARTCARD_IT_RXFNE

SMARTCARD RXFIFO not empty interruption

SMARTCARD_IT_IDLE

SMARTCARD idle line detection interruption

SMARTCARD_IT_ERR

SMARTCARD error interruption

SMARTCARD_IT_ORE

SMARTCARD overrun error interruption

SMARTCARD_IT_NE

SMARTCARD noise error interruption

SMARTCARD_IT_FE

SMARTCARD frame error interruption

SMARTCARD_IT_EOB

SMARTCARD end of block interruption

SMARTCARD_IT_RTO

SMARTCARD receiver timeout interruption

SMARTCARD_IT_TCBGT

SMARTCARD transmission complete before guard time completion interruption

SMARTCARD_IT_RXFF

SMARTCARD RXFIFO full interruption

SMARTCARD_IT_TXFE

SMARTCARD TXFIFO empty interruption

SMARTCARD_IT_RXFT

SMARTCARD RXFIFO threshold reached interruption

SMARTCARD_IT_TXFT

SMARTCARD TXFIFO threshold reached interruption

SMARTCARD Interruption Clear Flags

SMARTCARD_CLEAR_PEF

SMARTCARD parity error clear flag

SMARTCARD_CLEAR_FEF

SMARTCARD framing error clear flag

SMARTCARD_CLEAR_NEF

SMARTCARD noise error detected clear flag

SMARTCARD_CLEAR_OREF

SMARTCARD overrun error clear flag

SMARTCARD_CLEAR_IDLEF

SMARTCARD idle line detected clear flag

SMARTCARD_CLEAR_TXFECF

TXFIFO empty Clear Flag

SMARTCARD_CLEAR_TCF

SMARTCARD transmission complete clear flag

SMARTCARD_CLEAR_TCBGTF

SMARTCARD transmission complete before guard time completion clear flag

SMARTCARD_CLEAR_RTOF

SMARTCARD receiver time out clear flag

SMARTCARD_CLEAR_EOBF

SMARTCARD end of block clear flag

SMARTCARD RXFIFO threshold level

SMARTCARD_RXFIFO_THRESHOLD_1_8

RXFIFO FIFO reaches 1/8 of its depth

SMARTCARD_RXFIFO_THRESHOLD_1_4

RXFIFO FIFO reaches 1/4 of its depth

SMARTCARD_RXFIFO_THRESHOLD_1_2

RXFIFO FIFO reaches 1/2 of its depth

SMARTCARD_RXFIFO_THRESHOLD_3_4

RXFIFO FIFO reaches 3/4 of its depth

SMARTCARD_RXFIFO_THRESHOLD_7_8

RXFIFO FIFO reaches 7/8 of its depth

SMARTCARD_RXFIFO_THRESHOLD_8_8

RXFIFO FIFO becomes full

SMARTCARD Transmission Completion Indication

SMARTCARD_TCBGT

SMARTCARD transmission complete before guard time

SMARTCARD_TC

SMARTCARD transmission complete (flag raised when guard time has elapsed)

SMARTCARD TXFIFO threshold level

SMARTCARD_TXFIFO_THRESHOLD_1_8

TXFIFO reaches 1/8 of its depth

SMARTCARD_TXFIFO_THRESHOLD_1_4

TXFIFO reaches 1/4 of its depth

SMARTCARD_TXFIFO_THRESHOLD_1_2

TXFIFO reaches 1/2 of its depth

SMARTCARD_TXFIFO_THRESHOLD_3_4

TXFIFO reaches 3/4 of its depth

SMARTCARD_TXFIFO_THRESHOLD_7_8

TXFIFO reaches 7/8 of its depth

SMARTCARD_TXFIFO_THRESHOLD_8_8

TXFIFO becomes empty

54 HAL SMBUS Generic Driver

54.1 SMBUS Firmware driver registers structures

54.1.1 SMBUS_InitTypeDef

SMBUS_InitTypeDef is defined in the stm32g4xx_hal_smbus.h

Data Fields

- ***uint32_t Timing***
- ***uint32_t AnalogFilter***
- ***uint32_t OwnAddress1***
- ***uint32_t AddressingMode***
- ***uint32_t DualAddressMode***
- ***uint32_t OwnAddress2***
- ***uint32_t OwnAddress2Masks***
- ***uint32_t GeneralCallMode***
- ***uint32_t NoStretchMode***
- ***uint32_t PacketErrorCheckMode***
- ***uint32_t PeripheralMode***
- ***uint32_t SMBusTimeout***

Field Documentation

- ***uint32_t SMBUS_InitTypeDef::Timing***

  Specifies the SMBUS_TIMINGR_register value. This parameter calculated by referring to SMBUS initialization section in Reference manual
- ***uint32_t SMBUS_InitTypeDef::AnalogFilter***

  Specifies if Analog Filter is enable or not. This parameter can be a value of ***SMBUS_Analog_Filter***
- ***uint32_t SMBUS_InitTypeDef::OwnAddress1***

  Specifies the first device own address. This parameter can be a 7-bit or 10-bit address.
- ***uint32_t SMBUS_InitTypeDef::AddressingMode***

  Specifies if 7-bit or 10-bit addressing mode for master is selected. This parameter can be a value of ***SMBUS_addressing_mode***
- ***uint32_t SMBUS_InitTypeDef::DualAddressMode***

  Specifies if dual addressing mode is selected. This parameter can be a value of ***SMBUS_dual_addressing_mode***
- ***uint32_t SMBUS_InitTypeDef::OwnAddress2***

  Specifies the second device own address if dual addressing mode is selected This parameter can be a 7-bit address.
- ***uint32_t SMBUS_InitTypeDef::OwnAddress2Masks***

  Specifies the acknoledge mask address second device own address if dual addressing mode is selected This parameter can be a value of ***SMBUS_own_address2_masks***.
- ***uint32_t SMBUS_InitTypeDef::GeneralCallMode***

  Specifies if general call mode is selected. This parameter can be a value of ***SMBUS_general_call_addressing_mode***.
- ***uint32_t SMBUS_InitTypeDef::NoStretchMode***

  Specifies if nostretch mode is selected. This parameter can be a value of ***SMBUS_nostretch_mode***
- ***uint32_t SMBUS_InitTypeDef::PacketErrorCheckMode***

  Specifies if Packet Error Check mode is selected. This parameter can be a value of ***SMBUS_packet_error_check_mode***

- ***uint32_t SMBUS_InitTypeDef::PeripheralMode***
  Specifies which mode of Periphal is selected. This parameter can be a value of ***SMBUS_peripheral_mode***
- ***uint32_t SMBUS_InitTypeDef::SMBusTimeout***
  Specifies the content of the 32 Bits SMBUS_TIMEOUT_register value. (Enable bits and different timeout values) This parameter calculated by referring to SMBUS initialization section in Reference manual

54.1.2 SMBUS_HandleTypeDef

SMBUS_HandleTypeDef is defined in the stm32g4xx_hal_smbus.h

Data Fields

- ***I2C_TypeDef * Instance***
- ***SMBUS_InitTypeDef Init***
- ***uint8_t * pBuffPtr***
- ***uint16_t XferSize***
- ***__IO uint16_t XferCount***
- ***__IO uint32_t XferOptions***
- ***__IO uint32_t PreviousState***
- ***HAL_LockTypeDef Lock***
- ***__IO uint32_t State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***I2C_TypeDef* SMBUS_HandleTypeDef::Instance***
  SMBUS registers base address
- ***SMBUS_InitTypeDef SMBUS_HandleTypeDef::Init***
  SMBUS communication parameters
- ***uint8_t* SMBUS_HandleTypeDef::pBuffPtr***
  Pointer to SMBUS transfer buffer
- ***uint16_t SMBUS_HandleTypeDef::XferSize***
  SMBUS transfer size
- ***__IO uint16_t SMBUS_HandleTypeDef::XferCount***
  SMBUS transfer counter
- ***__IO uint32_t SMBUS_HandleTypeDef::XferOptions***
  SMBUS transfer options
- ***__IO uint32_t SMBUS_HandleTypeDef::PreviousState***
  SMBUS communication Previous state
- ***HAL_LockTypeDef SMBUS_HandleTypeDef::Lock***
  SMBUS locking object
- ***__IO uint32_t SMBUS_HandleTypeDef::State***
  SMBUS communication state
- ***__IO uint32_t SMBUS_HandleTypeDef::ErrorCode***
  SMBUS Error code

54.2 SMBUS Firmware driver API description

The following section lists the various functions of the SMBUS library.

54.2.1 How to use this driver

The SMBUS HAL driver can be used as follows:

1. Declare a SMBUS_HandleTypeDef handle structure, for example: SMBUS_HandleTypeDef hsmbus;

2. Initialize the SMBUS low level resources by implementing the @ref HAL_SMBUS_MspInit() API:
   a. Enable the SMBUSx interface clock
   b. SMBUS pins configuration
      - Enable the clock for the SMBUS GPIOs
      - Configure SMBUS pins as alternate function open-drain
   c. NVIC configuration if you need to use interrupt process
      - Configure the SMBUSx interrupt priority
      - Enable the NVIC SMBUS IRQ Channel
3. Configure the Communication Clock Timing, Bus Timeout, Own Address1, Master Addressing mode, Dual Addressing mode, Own Address2, Own Address2 Mask, General call, Nostretch mode, Peripheral mode and Packet Error Check mode in the hsmbus Init structure.
4. Initialize the SMBUS registers by calling the @ref HAL_SMBUS_Init() API:
   – These API's configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized @ref HAL_SMBUS_MspInit(&hsmbus) API.
5. To check if target device is ready for communication, use the function @ref HAL_SMBUS_IsDeviceReady()
6. For SMBUS IO operations, only one mode of operations is available within this driver

Interrupt mode IO operation

- Transmit in master/host SMBUS mode an amount of data in non-blocking mode using @ref HAL_SMBUS_Master_Transmit_IT()
  – At transmission end of transfer @ref HAL_SMBUS_MasterTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_MasterTxCpltCallback()
- Receive in master/host SMBUS mode an amount of data in non-blocking mode using @ref HAL_SMBUS_Master_Receive_IT()
  – At reception end of transfer @ref HAL_SMBUS_MasterRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_MasterRxCpltCallback()
- Abort a master/host SMBUS process communication with Interrupt using @ref HAL_SMBUS_Master_Abort_IT()
  – The associated previous transfer callback is called at the end of abort process
  – mean @ref HAL_SMBUS_MasterTxCpltCallback() in case of previous state was master transmit
  – mean @ref HAL_SMBUS_MasterRxCpltCallback() in case of previous state was master receive
- Enable/disable the Address listen mode in slave/device or host/slave SMBUS mode using @ref HAL_SMBUS_EnableListen_IT() @ref HAL_SMBUS_DisableListen_IT()
  – When address slave/device SMBUS match, @ref HAL_SMBUS_AddrCallback() is executed and user can add his own code to check the Address Match Code and the transmission direction request by master/host (Write/Read).
  – At Listen mode end @ref HAL_SMBUS_ListenCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_ListenCpltCallback()
- Transmit in slave/device SMBUS mode an amount of data in non-blocking mode using @ref HAL_SMBUS_Slave_Transmit_IT()
  – At transmission end of transfer @ref HAL_SMBUS_SlaveTxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_SlaveTxCpltCallback()
- Receive in slave/device SMBUS mode an amount of data in non-blocking mode using @ref HAL_SMBUS_Slave_Receive_IT()
  – At reception end of transfer @ref HAL_SMBUS_SlaveRxCpltCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_SlaveRxCpltCallback()
- Enable/Disable the SMBUS alert mode using @ref HAL_SMBUS_EnableAlert_IT() @ref HAL_SMBUS_DisableAlert_IT()
  – When SMBUS Alert is generated @ref HAL_SMBUS_ErrorCallback() is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_ErrorCallback() to check the Alert Error Code using function @ref HAL_SMBUS_GetError()
- Get HAL state machine or error values using @ref HAL_SMBUS_GetState() or @ref HAL_SMBUS_GetError()

- In case of transfer Error, @ref HAL_SMBUS_ErrorCallback() function is executed and user can add his own code by customization of function pointer @ref HAL_SMBUS_ErrorCallback() to check the Error Code using function @ref HAL_SMBUS_GetError()

SMBUS HAL driver macros list

Below the list of most used macros in SMBUS HAL driver.

- @ref __HAL_SMBUS_ENABLE: Enable the SMBUS peripheral
- @ref __HAL_SMBUS_DISABLE: Disable the SMBUS peripheral
- @ref __HAL_SMBUS_GET_FLAG: Check whether the specified SMBUS flag is set or not
- @ref __HAL_SMBUS_CLEAR_FLAG: Clear the specified SMBUS pending flag
- @ref __HAL_SMBUS_ENABLE_IT: Enable the specified SMBUS interrupt
- @ref __HAL_SMBUS_DISABLE_IT: Disable the specified SMBUS interrupt

Callback registration

The compilation flag USE_HAL_SMBUS_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_SMBUS_RegisterCallback() or @ref HAL_SMBUS_RegisterAddrCallback() to register an interrupt callback.

Function @ref HAL_SMBUS_RegisterCallback() allows to register following callbacks:

- MasterTxCpltCallback : callback for Master transmission end of transfer.
- MasterRxCpltCallback : callback for Master reception end of transfer.
- SlaveTxCpltCallback : callback for Slave transmission end of transfer.
- SlaveRxCpltCallback : callback for Slave reception end of transfer.
- ListenCpltCallback : callback for end of listen mode.
- ErrorCallback : callback for error detection.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

For specific callback AddrCallback use dedicated register callbacks : @ref HAL_SMBUS_RegisterAddrCallback.

Use function @ref HAL_SMBUS_UnRegisterCallback to reset a callback to the default weak function. @ref HAL_SMBUS_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- MasterTxCpltCallback : callback for Master transmission end of transfer.
- MasterRxCpltCallback : callback for Master reception end of transfer.
- SlaveTxCpltCallback : callback for Slave transmission end of transfer.
- SlaveRxCpltCallback : callback for Slave reception end of transfer.
- ListenCpltCallback : callback for end of listen mode.
- ErrorCallback : callback for error detection.
- MspInitCallback : callback for Msp Init.
- MspDeInitCallback : callback for Msp DeInit.

For callback AddrCallback use dedicated register callbacks : @ref HAL_SMBUS_UnRegisterAddrCallback.

By default, after the @ref HAL_SMBUS_Init() and when the state is @ref HAL_I2C_STATE_RESET all callbacks are set to the corresponding weak functions: examples @ref HAL_SMBUS_MasterTxCpltCallback(), @ref HAL_SMBUS_MasterRxCpltCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the @ref HAL_SMBUS_Init()/ @ref HAL_SMBUS_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the @ref HAL_SMBUS_Init()/ @ref HAL_SMBUS_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in @ref HAL_I2C_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in @ref HAL_I2C_STATE_READY or @ref HAL_I2C_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using @ref HAL_SMBUS_RegisterCallback() before calling @ref HAL_SMBUS_DeInit() or @ref HAL_SMBUS_Init() function.

When the compilation flag USE_HAL_SMBUS_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

Note: You can refer to the SMBUS HAL driver header file for more useful macros

54.2.2 Initialization and de-initialization functions

This subsection provides a set of functions allowing to initialize and deinitialize the SMBUSx peripheral:

- User must Implement HAL_SMBUS_MspInit() function in which he configures all related peripherals resources (CLOCK, GPIO, IT and NVIC).
- Call the function HAL_SMBUS_Init() to configure the selected device with the selected configuration:
  - Clock Timing
  - Bus Timeout
  - Analog Filer mode
  - Own Address 1
  - Addressing mode (Master, Slave)
  - Dual Addressing mode
  - Own Address 2
  - Own Address 2 Mask
  - General call mode
  - Nostretch mode
  - Packet Error Check mode
  - Peripheral mode
- Call the function HAL_SMBUS_DeInit() to restore the default configuration of the selected SMBUSx peripheral.
- Enable/Disable Analog/Digital filters with HAL_SMBUS_ConfigAnalogFilter() and HAL_SMBUS_ConfigDigitalFilter().

This section contains the following APIs:

- ***HAL_SMBUS_Init***
- ***HAL_SMBUS_DeInit***
- ***HAL_SMBUS_MspInit***
- ***HAL_SMBUS_MspDeInit***
- ***HAL_SMBUS_ConfigAnalogFilter***
- ***HAL_SMBUS_ConfigDigitalFilter***

54.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the SMBUS data transfers.

1. Blocking mode function to check if device is ready for usage is :
   - HAL_SMBUS_IsDeviceReady()
2. There is only one mode of transfer:
   - Non-Blocking mode : The communication is performed using Interrupts. These functions return the status of the transfer startup. The end of the data processing will be indicated through the dedicated SMBUS IRQ when using Interrupt mode.
3. Non-Blocking mode functions with Interrupt are :
   - HAL_SMBUS_Master_Transmit_IT()
   - HAL_SMBUS_Master_Receive_IT()
   - HAL_SMBUS_Slave_Transmit_IT()
   - HAL_SMBUS_Slave_Receive_IT()
   - HAL_SMBUS_EnableListen_IT() or alias HAL_SMBUS_EnableListen_IT()
   - HAL_SMBUS_DisableListen_IT()
   - HAL_SMBUS_EnableAlert_IT()
   - HAL_SMBUS_DisableAlert_IT()

4. A set of Transfer Complete Callbacks are provided in non-Blocking mode:
   - HAL_SMBUS_MasterTxCpltCallback()
   - HAL_SMBUS_MasterRxCpltCallback()
   - HAL_SMBUS_SlaveTxCpltCallback()
   - HAL_SMBUS_SlaveRxCpltCallback()
   - HAL_SMBUS_AddrCallback()
   - HAL_SMBUS_ListenCpltCallback()
   - HAL_SMBUS_ErrorCallback()

This section contains the following APIs:

- ***HAL_SMBUS_Master_Transmit_IT***
- ***HAL_SMBUS_Master_Receive_IT***
- ***HAL_SMBUS_Master_Abort_IT***
- ***HAL_SMBUS_Slave_Transmit_IT***
- ***HAL_SMBUS_Slave_Receive_IT***
- ***HAL_SMBUS_EnableListen_IT***
- ***HAL_SMBUS_DisableListen_IT***
- ***HAL_SMBUS_EnableAlert_IT***
- ***HAL_SMBUS_DisableAlert_IT***
- ***HAL_SMBUS_IsDeviceReady***

54.2.4 Peripheral State and Errors functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- ***HAL_SMBUS_GetState***
- ***HAL_SMBUS_GetError***

54.2.5 Detailed description of functions

HAL_SMBUS_Init

Function name

HAL_StatusTypeDef HAL_SMBUS_Init (SMBUS_HandleTypeDef * hsmbus)

Function description

Initialize the SMBUS according to the specified parameters in the SMBUS_InitTypeDef and initialize the associated handle.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **HAL:** status

HAL_SMBUS_DeInit

Function name

HAL_StatusTypeDef HAL_SMBUS_DeInit (SMBUS_HandleTypeDef * hsmbus)

Function description

DeInitialize the SMBUS peripheral.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **HAL:** status

HAL_SMBUS_MspInit

Function name

void HAL_SMBUS_MspInit (SMBUS_HandleTypeDef * hsmbus)

Function description

Initialize the SMBUS MSP.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_MspDeInit

Function name

void HAL_SMBUS_MspDeInit (SMBUS_HandleTypeDef * hsmbus)

Function description

DeInitialize the SMBUS MSP.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_ConfigAnalogFilter

Function name

HAL_StatusTypeDef HAL_SMBUS_ConfigAnalogFilter (SMBUS_HandleTypeDef * hsmbus, uint32_t AnalogFilter)

Function description

Configure Analog noise filter.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **AnalogFilter:** This parameter can be one of the following values:
  - SMBUS_ANALOGFILTER_ENABLE
  - SMBUS_ANALOGFILTER_DISABLE

Return values

- **HAL:** status

HAL_SMBUS_ConfigDigitalFilter

Function name

HAL_StatusTypeDef HAL_SMBUS_ConfigDigitalFilter (SMBUS_HandleTypeDef * hsmbus, uint32_t DigitalFilter)

Function description

Configure Digital noise filter.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **DigitalFilter:** Coefficient of digital noise filter between Min_Data=0x00 and Max_Data=0x0F.

Return values

- **HAL:** status

HAL_SMBUS_IsDeviceReady

Function name

HAL_StatusTypeDef HAL_SMBUS_IsDeviceReady (SMBUS_HandleTypeDef * hsmbus, uint16_t DevAddress, uint32_t Trials, uint32_t Timeout)

Function description

Check if target device is ready for communication.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **Trials:** Number of trials
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SMBUS_Master_Transmit_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_Master_Transmit_IT (SMBUS_HandleTypeDef * hsmbus, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Transmit in master/host SMBUS mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of SMBUS XferOptions definition

Return values

- **HAL:** status

HAL_SMBUS_Master_Receive_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_Master_Receive_IT (SMBUS_HandleTypeDef * hsmbus, uint16_t DevAddress, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Receive in master/host SMBUS mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of SMBUS XferOptions definition

Return values

- **HAL:** status

HAL_SMBUS_Master_Abort_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_Master_Abort_IT (SMBUS_HandleTypeDef * hsmbus, uint16_t DevAddress)

Function description

Abort a master/host SMBUS process communication with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **DevAddress:** Target device address: The device 7 bits address value in datasheet must be shifted to the left before calling the interface

Return values

- **HAL:** status

Notes

- This abort can be called only if state is ready

HAL_SMBUS_Slave_Transmit_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_Slave_Transmit_IT (SMBUS_HandleTypeDef * hsmbus, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Transmit in slave/device SMBUS mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of SMBUS XferOptions definition

Return values

- **HAL:** status

HAL_SMBUS_Slave_Receive_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_Slave_Receive_IT (SMBUS_HandleTypeDef * hsmbus, uint8_t * pData, uint16_t Size, uint32_t XferOptions)

Function description

Receive in slave/device SMBUS mode an amount of data in non-blocking mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **pData:** Pointer to data buffer
- **Size:** Amount of data to be sent
- **XferOptions:** Options of Transfer, value of SMBUS XferOptions definition

Return values

- **HAL:** status

HAL_SMBUS_EnableAlert_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_EnableAlert_IT (SMBUS_HandleTypeDef * hsmbus)

Function description

Enable the SMBUS alert mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUSx peripheral.

Return values

- **HAL:** status

HAL_SMBUS_DisableAlert_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_DisableAlert_IT (SMBUS_HandleTypeDef * hsmbus)

Function description

Disable the SMBUS alert mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUSx peripheral.

Return values

- **HAL:** status

HAL_SMBUS_EnableListen_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_EnableListen_IT (SMBUS_HandleTypeDef * hsmbus)

Function description

Enable the Address listen mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **HAL:** status

HAL_SMBUS_DisableListen_IT

Function name

HAL_StatusTypeDef HAL_SMBUS_DisableListen_IT (SMBUS_HandleTypeDef * hsmbus)

Function description

Disable the Address listen mode with Interrupt.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **HAL:** status

HAL_SMBUS_EV_IRQHandler

Function name

void HAL_SMBUS_EV_IRQHandler (SMBUS_HandleTypeDef * hsmbus)

Function description

Handle SMBUS event interrupt request.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_ER_IRQHandler

Function name

void HAL_SMBUS_ER_IRQHandler (SMBUS_HandleTypeDef * hsmbus)

Function description

Handle SMBUS error interrupt request.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_MasterTxCpltCallback

Function name

void HAL_SMBUS_MasterTxCpltCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

Master Tx Transfer completed callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_MasterRxCpltCallback

Function name

void HAL_SMBUS_MasterRxCpltCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

Master Rx Transfer completed callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_SlaveTxCpltCallback

Function name

void HAL_SMBUS_SlaveTxCpltCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

Slave Tx Transfer completed callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_SlaveRxCpltCallback

Function name

void HAL_SMBUS_SlaveRxCpltCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

Slave Rx Transfer completed callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_AddrCallback

Function name

void HAL_SMBUS_AddrCallback (SMBUS_HandleTypeDef * hsmbus, uint8_t TransferDirection, uint16_t AddrMatchCode)

Function description

Slave Address Match callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.
- **TransferDirection:** Master request Transfer Direction (Write/Read)
- **AddrMatchCode:** Address Match Code

Return values

- **None:**

HAL_SMBUS_ListenCpltCallback

Function name

void HAL_SMBUS_ListenCpltCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

Listen Complete callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_ErrorCallback

Function name

void HAL_SMBUS_ErrorCallback (SMBUS_HandleTypeDef * hsmbus)

Function description

SMBUS error callback.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **None:**

HAL_SMBUS_GetState

Function name

uint32_t HAL_SMBUS_GetState (SMBUS_HandleTypeDef * hsmbus)

Function description

Return the SMBUS handle state.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **HAL:** state

HAL_SMBUS_GetError

Function name

uint32_t HAL_SMBUS_GetError (SMBUS_HandleTypeDef * hsmbus)

Function description

Return the SMBUS error code.

Parameters

- **hsmbus:** Pointer to a SMBUS_HandleTypeDef structure that contains the configuration information for the specified SMBUS.

Return values

- **SMBUS:** Error Code

54.3 SMBUS Firmware driver defines

The following section lists the various define and macros of the module.

54.3.1 SMBUS

SMBUS

SMBUS addressing mode

SMBUS_ADDRESSINGMODE_7BIT

SMBUS_ADDRESSINGMODE_10BIT

SMBUS Analog Filter

SMBUS_ANALOGFILTER_ENABLE

SMBUS_ANALOGFILTER_DISABLE

SMBUS dual addressing mode

SMBUS_DUALADDRESS_DISABLE

SMBUS_DUALADDRESS_ENABLE

SMBUS Error Code definition

HAL_SMBUS_ERROR_NONE

No error

HAL_SMBUS_ERROR_BERR

BERR error

HAL_SMBUS_ERROR_ARLO

ARLO error

HAL_SMBUS_ERROR_ACKF

ACKF error

HAL_SMBUS_ERROR_OVR

OVR error

HAL_SMBUS_ERROR_HALTIMEOUT

Timeout error

HAL_SMBUS_ERROR_BUSTIMEOUT

Bus Timeout error

HAL_SMBUS_ERROR_ALERT

Alert error

HAL_SMBUS_ERROR_PECERR

PEC error

HAL_SMBUS_ERROR_INVALID_PARAM

Invalid Parameters error

SMBUS Exported Macros

__HAL_SMBUS_RESET_HANDLE_STATE

Description:

- Reset SMBUS handle state.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.

Return value:

- None

__HAL_SMBUS_ENABLE_IT

Description:

- Enable the specified SMBUS interrupts.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.
- __INTERRUPT__: specifies the interrupt source to enable. This parameter can be one of the following values:
  - SMBUS_IT_ERRI Errors interrupt enable
  - SMBUS_IT_TCI Transfer complete interrupt enable
  - SMBUS_IT_STOPI STOP detection interrupt enable
  - SMBUS_IT_NACKI NACK received interrupt enable
  - SMBUS_IT_ADDRI Address match interrupt enable
  - SMBUS_IT_RXI RX interrupt enable
  - SMBUS_IT_TXI TX interrupt enable

Return value:

- None

__HAL_SMBUS_DISABLE_IT

Description:

- Disable the specified SMBUS interrupts.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.
- __INTERRUPT__: specifies the interrupt source to disable. This parameter can be one of the following values:
  - SMBUS_IT_ERRI Errors interrupt enable
  - SMBUS_IT_TCI Transfer complete interrupt enable
  - SMBUS_IT_STOPI STOP detection interrupt enable
  - SMBUS_IT_NACKI NACK received interrupt enable
  - SMBUS_IT_ADDRI Address match interrupt enable
  - SMBUS_IT_RXI RX interrupt enable
  - SMBUS_IT_TXI TX interrupt enable

Return value:

- None

__HAL_SMBUS_GET_IT_SOURCE

Description:

- Check whether the specified SMBUS interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.
- __INTERRUPT__: specifies the SMBUS interrupt source to check. This parameter can be one of the following values:
  - SMBUS_IT_ERRI Errors interrupt enable
  - SMBUS_IT_TCI Transfer complete interrupt enable
  - SMBUS_IT_STOPI STOP detection interrupt enable
  - SMBUS_IT_NACKI NACK received interrupt enable
  - SMBUS_IT_ADDRI Address match interrupt enable
  - SMBUS_IT_RXI RX interrupt enable
  - SMBUS_IT_TXI TX interrupt enable

Return value:

- The: new state of __IT__ (SET or RESET).

SMBUS_FLAG_MASK

Description:

- Check whether the specified SMBUS flag is set or not.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - SMBUS_FLAG_TXE Transmit data register empty
  - SMBUS_FLAG_TXIS Transmit interrupt status
  - SMBUS_FLAG_RXNE Receive data register not empty
  - SMBUS_FLAG_ADDR Address matched (slave mode)
  - SMBUS_FLAG_AF NACK received flag
  - SMBUS_FLAG_STOPF STOP detection flag
  - SMBUS_FLAG_TC Transfer complete (master mode)
  - SMBUS_FLAG_TCR Transfer complete reload
  - SMBUS_FLAG_BERR Bus error
  - SMBUS_FLAG_ARLO Arbitration lost
  - SMBUS_FLAG_OVR Overrun/Underrun
  - SMBUS_FLAG_PECERR PEC error in reception
  - SMBUS_FLAG_TIMEOUT Timeout or Tlow detection flag
  - SMBUS_FLAG_ALERT SMBus alert
  - SMBUS_FLAG_BUSY Bus busy
  - SMBUS_FLAG_DIR Transfer direction (slave mode)

Return value:

- The: new state of __FLAG__ (SET or RESET).

__HAL_SMBUS_GET_FLAG

__HAL_SMBUS_CLEAR_FLAG

Description:

- Clear the SMBUS pending flags which are cleared by writing 1 in a specific bit.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.
- __FLAG__: specifies the flag to clear. This parameter can be any combination of the following values:
  - SMBUS_FLAG_ADDR Address matched (slave mode)
  - SMBUS_FLAG_AF NACK received flag
  - SMBUS_FLAG_STOPF STOP detection flag
  - SMBUS_FLAG_BERR Bus error
  - SMBUS_FLAG_ARLO Arbitration lost
  - SMBUS_FLAG_OVR Overrun/Underrun
  - SMBUS_FLAG_PECERR PEC error in reception
  - SMBUS_FLAG_TIMEOUT Timeout or Tlow detection flag
  - SMBUS_FLAG_ALERT SMBus alert

Return value:

- None

__HAL_SMBUS_ENABLE

Description:

- Enable the specified SMBUS peripheral.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.

Return value:

- None

__HAL_SMBUS_DISABLE

Description:

- Disable the specified SMBUS peripheral.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.

Return value:

- None

__HAL_SMBUS_GENERATE_NACK

Description:

- Generate a Non-Acknowledge SMBUS peripheral in Slave mode.

Parameters:

- __HANDLE__: specifies the SMBUS Handle.

Return value:

- None

55 HAL SPI Generic Driver

55.1 SPI Firmware driver registers structures

55.1.1 SPI_InitTypeDef

SPI_InitTypeDef is defined in the stm32g4xx_hal_spi.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t Direction***
- ***uint32_t DataSize***
- ***uint32_t CLKPolarity***
- ***uint32_t CLKPhase***
- ***uint32_t NSS***
- ***uint32_t BaudRatePrescaler***
- ***uint32_t FirstBit***
- ***uint32_t TIMode***
- ***uint32_t CRCCalculation***
- ***uint32_t CRCPolynomial***
- ***uint32_t CRCLength***
- ***uint32_t NSSPMode***

Field Documentation

- ***uint32_t SPI_InitTypeDef::Mode***
  Specifies the SPI operating mode. This parameter can be a value of ***SPI_Mode***
- ***uint32_t SPI_InitTypeDef::Direction***
  Specifies the SPI bidirectional mode state. This parameter can be a value of ***SPI_Direction***
- ***uint32_t SPI_InitTypeDef::DataSize***
  Specifies the SPI data size. This parameter can be a value of ***SPI_Data_Size***
- ***uint32_t SPI_InitTypeDef::CLKPolarity***
  Specifies the serial clock steady state. This parameter can be a value of ***SPI_Clock_Polarity***
- ***uint32_t SPI_InitTypeDef::CLKPhase***
  Specifies the clock active edge for the bit capture. This parameter can be a value of ***SPI_Clock_Phase***
- ***uint32_t SPI_InitTypeDef::NSS***
  Specifies whether the NSS signal is managed by hardware (NSS pin) or by software using the SSI bit. This parameter can be a value of ***SPI_Slave_Select_management***
- ***uint32_t SPI_InitTypeDef::BaudRatePrescaler***
  Specifies the Baud Rate prescaler value which will be used to configure the transmit and receive SCK clock. This parameter can be a value of ***SPI_BaudRate_Prescaler***
  Note:
  – The communication clock is derived from the master clock. The slave clock does not need to be set.
- ***uint32_t SPI_InitTypeDef::FirstBit***
  Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of ***SPI_MSB_LSB_transmission***
- ***uint32_t SPI_InitTypeDef::TIMode***
  Specifies if the TI mode is enabled or not. This parameter can be a value of ***SPI_TI_mode***
- ***uint32_t SPI_InitTypeDef::CRCCalculation***
  Specifies if the CRC calculation is enabled or not. This parameter can be a value of ***SPI_CRC_Calculation***

- ***uint32_t SPI_InitTypeDef::CRCPolynomial***
  Specifies the polynomial used for the CRC calculation. This parameter must be an odd number between Min_Data = 1 and Max_Data = 65535
- ***uint32_t SPI_InitTypeDef::CRCLength***
  Specifies the CRC Length used for the CRC calculation. CRC Length is only used with Data8 and Data16, not other data size This parameter can be a value of ***SPI_CRC_length***
- ***uint32_t SPI_InitTypeDef::NSSPMode***
  Specifies whether the NSSP signal is enabled or not . This parameter can be a value of ***SPI_NSSP_Mode*** This mode is activated by the NSSP bit in the SPIx_CR2 register and it takes effect only if the SPI interface is configured as Motorola SPI master (FRF=0) with capture on the first edge (SPIx_CR1 CPHA = 0, CPOL setting is ignored)..

55.1.2 __SPI_HandleTypeDef

__SPI_HandleTypeDef is defined in the stm32g4xx_hal_spi.h

Data Fields

- ***SPI_TypeDef * Instance***
- ***SPI_InitTypeDef Init***
- ***uint8_t * pTxBuffPtr***
- ***uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***
- ***uint8_t * pRxBuffPtr***
- ***uint16_t RxXferSize***
- ***__IO uint16_t RxXferCount***
- ***uint32_t CRCSize***
- ***void(* RxISR***
- ***void(* TxISR***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_SPI_StateTypeDef State***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***SPI_TypeDef* __SPI_HandleTypeDef::Instance***
  SPI registers base address
- ***SPI_InitTypeDef __SPI_HandleTypeDef::Init***
  SPI communication parameters
- ***uint8_t* __SPI_HandleTypeDef::pTxBuffPtr***
  Pointer to SPI Tx transfer Buffer
- ***uint16_t __SPI_HandleTypeDef::TxXferSize***
  SPI Tx Transfer size
- ***__IO uint16_t __SPI_HandleTypeDef::TxXferCount***
  SPI Tx Transfer Counter
- ***uint8_t* __SPI_HandleTypeDef::pRxBuffPtr***
  Pointer to SPI Rx transfer Buffer
- ***uint16_t __SPI_HandleTypeDef::RxXferSize***
  SPI Rx Transfer size
- ***__IO uint16_t __SPI_HandleTypeDef::RxXferCount***
  SPI Rx Transfer Counter
- ***uint32_t __SPI_HandleTypeDef::CRCSize***
  SPI CRC size used for the transfer

- ***void(* __SPI_HandleTypeDef::RxISR)(struct __SPI_HandleTypeDef *hspi)***
  function pointer on Rx ISR
- ***void(* __SPI_HandleTypeDef::TxISR)(struct __SPI_HandleTypeDef *hspi)***
  function pointer on Tx ISR
- ***DMA_HandleTypeDef* __SPI_HandleTypeDef::hdmatx***
  SPI Tx DMA Handle parameters
- ***DMA_HandleTypeDef* __SPI_HandleTypeDef::hdmarx***
  SPI Rx DMA Handle parameters
- ***HAL_LockTypeDef __SPI_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_SPI_StateTypeDef __SPI_HandleTypeDef::State***
  SPI communication state
- ***__IO uint32_t __SPI_HandleTypeDef::ErrorCode***
  SPI Error code

55.2 SPI Firmware driver API description

The following section lists the various functions of the SPI library.

55.2.1 How to use this driver

The SPI HAL driver can be used as follows:

1. Declare a SPI_HandleTypeDef handle structure, for example: SPI_HandleTypeDef hspi;
2. Initialize the SPI low level resources by implementing the HAL_SPI_MspInit() API:
   a. Enable the SPIx interface clock
   b. SPI pins configuration
      - Enable the clock for the SPI GPIOs
      - Configure these SPI pins as alternate function push-pull
   c. NVIC configuration if you need to use interrupt process
      - Configure the SPIx interrupt priority
      - Enable the NVIC SPI IRQ handle
   d. DMA Configuration if you need to use DMA process
      - Declare a DMA_HandleTypeDef handle structure for the transmit or receive Stream/Channel
      - Enable the DMAx clock
      - Configure the DMA handle parameters
      - Configure the DMA Tx or Rx Stream/Channel
      - Associate the initialized hdma_tx(or _rx) handle to the hspi DMA Tx or Rx handle
      - Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx or Rx Stream/Channel
3. Program the Mode, BidirectionalMode , Data size, Baudrate Prescaler, NSS management, Clock polarity and phase, FirstBit and CRC configuration in the hspi Init structure.
4. Initialize the SPI registers by calling the HAL_SPI_Init() API:
   – This API configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_SPI_MspInit() API.

Circular mode restriction:

1. The DMA circular mode cannot be used when the SPI is configured in these modes:
   a. Master 2Lines RxOnly
   b. Master 1Line Rx
2. The CRC feature is not managed when the DMA circular mode is enabled
3. When the SPI DMA Pause/Stop features are used, we must use the following APIs the HAL_SPI_DMAPause()/ HAL_SPI_DMAStop() only under the SPI callbacks

Master Receive mode restriction:

1. In Master unidirectional receive-only mode (MSTR =1, BIDIMODE=0, RXONLY=1) or bidirectional receive mode (MSTR=1, BIDIMODE=1, BIDIOE=0), to ensure that the SPI does not initiate a new transfer the following procedure has to be respected:
   a. HAL_SPI_DeInit()
   b. HAL_SPI_Init()

Callback registration:

1. The compilation flag USE_HAL_SPI_REGISTER_CALLBACKS when set to 1U allows the user to configure dynamically the driver callbacks. Use Functions HAL_SPI_RegisterCallback() to register an interrupt callback. Function HAL_SPI_RegisterCallback() allows to register following callbacks:
   – TxCpltCallback : SPI Tx Completed callback
   – RxCpltCallback : SPI Rx Completed callback
   – TxRxCpltCallback : SPI TxRx Completed callback
   – TxHalfCpltCallback : SPI Tx Half Completed callback
   – RxHalfCpltCallback : SPI Rx Half Completed callback
   – TxRxHalfCpltCallback : SPI TxRx Half Completed callback
   – ErrorCallback : SPI Error callback
   – AbortCpltCallback : SPI Abort callback
   – MspInitCallback : SPI Msp Init callback
   – MspDeInitCallback : SPI Msp DeInit callback This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.
2. Use function HAL_SPI_UnRegisterCallback to reset a callback to the default weak function. HAL_SPI_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:
   – TxCpltCallback : SPI Tx Completed callback
   – RxCpltCallback : SPI Rx Completed callback
   – TxRxCpltCallback : SPI TxRx Completed callback
   – TxHalfCpltCallback : SPI Tx Half Completed callback
   – RxHalfCpltCallback : SPI Rx Half Completed callback
   – TxRxHalfCpltCallback : SPI TxRx Half Completed callback
   – ErrorCallback : SPI Error callback
   – AbortCpltCallback : SPI Abort callback
   – MspInitCallback : SPI Msp Init callback
   – MspDeInitCallback : SPI Msp DeInit callback

By default, after the HAL_SPI_Init() and when the state is HAL_SPI_STATE_RESET all callbacks are set to the corresponding weak functions: examples HAL_SPI_MasterTxCpltCallback(), HAL_SPI_MasterRxCpltCallback(). Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functions in the HAL_SPI_Init()/ HAL_SPI_DeInit() only when these callbacks are null (not registered beforehand). If MspInit or MspDeInit are not null, the HAL_SPI_Init()/ HAL_SPI_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand) whatever the state.

Callbacks can be registered/unregistered in HAL_SPI_STATE_READY state only. Exception done MspInit/ MspDeInit functions that can be registered/unregistered in HAL_SPI_STATE_READY or HAL_SPI_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. Then, the user first registers the MspInit/MspDeInit user callbacks using HAL_SPI_RegisterCallback() before calling HAL_SPI_DeInit() or HAL_SPI_Init() function.

When the compilation define USE_HAL_PPP_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

Using the HAL it is not possible to reach all supported SPI frequency with the different SPI Modes, the following table resume the max SPI frequency reached with data size 8bits/16bits, according to frequency of the APBx Peripheral Clock (fPCLK) used by the SPI instance.

55.2.2 Initialization and de-initialization functions

This subsection provides a set of functions allowing to initialize and de-initialize the SPIx peripheral:

- User must implement HAL_SPI_MspInit() function in which he configures all related peripherals resources (CLOCK, GPIO, DMA, IT and NVIC).
- Call the function HAL_SPI_Init() to configure the selected device with the selected configuration:
  - Mode
  - Direction
  - Data Size
  - Clock Polarity and Phase
  - NSS Management
  - BaudRate Prescaler
  - FirstBit
  - TIMode
  - CRC Calculation
  - CRC Polynomial if CRC enabled
  - CRC Length, used only with Data8 and Data16
  - FIFO reception threshold
- Call the function HAL_SPI_DeInit() to restore the default configuration of the selected SPIx peripheral.

This section contains the following APIs:

- ***HAL_SPI_Init***
- ***HAL_SPI_DeInit***
- ***HAL_SPI_MspInit***
- ***HAL_SPI_MspDeInit***

55.2.3 IO operation functions

This subsection provides a set of functions allowing to manage the SPI data transfers.

The SPI supports master and slave mode :

1. There are two modes of transfer:
   - Blocking mode: The communication is performed in polling mode. The HAL status of all data processing is returned by the same function after finishing transfer.
   - No-Blocking mode: The communication is performed using Interrupts or DMA, These APIs return the HAL status. The end of the data processing will be indicated through the dedicated SPI IRQ when using Interrupt mode or the DMA IRQ when using DMA mode. The HAL_SPI_TxCpltCallback(), HAL_SPI_RxCpltCallback() and HAL_SPI_TxRxCpltCallback() user callbacks will be executed respectively at the end of the transmit or Receive process The HAL_SPI_ErrorCallback()user callback will be executed when a communication error is detected
2. APIs provided for these 2 transfer modes (Blocking mode or Non blocking mode using either Interrupt or DMA) exist for 1Line (simplex) and 2Lines (full duplex) modes.

This section contains the following APIs:

- ***HAL_SPI_Transmit***
- ***HAL_SPI_Receive***
- ***HAL_SPI_TransmitReceive***
- ***HAL_SPI_Transmit_IT***
- ***HAL_SPI_Receive_IT***
- ***HAL_SPI_TransmitReceive_IT***
- ***HAL_SPI_Transmit_DMA***
- ***HAL_SPI_Receive_DMA***
- ***HAL_SPI_TransmitReceive_DMA***
- ***HAL_SPI_Abort***
- ***HAL_SPI_Abort_IT***
- ***HAL_SPI_DMAPause***
- ***HAL_SPI_DMAResume***
- ***HAL_SPI_DMAStop***

- *HAL_SPI_IRQHandler*
- *HAL_SPI_TxCpltCallback*
- *HAL_SPI_RxCpltCallback*
- *HAL_SPI_TxRxCpltCallback*
- *HAL_SPI_TxHalfCpltCallback*
- *HAL_SPI_RxHalfCpltCallback*
- *HAL_SPI_TxRxHalfCpltCallback*
- *HAL_SPI_ErrorCallback*
- *HAL_SPI_AbortCpltCallback*

55.2.4 Peripheral State and Errors functions

This subsection provides a set of functions allowing to control the SPI.

- HAL_SPI_GetState() API can be helpful to check in run-time the state of the SPI peripheral
- HAL_SPI_GetError() check in run-time Errors occurring during communication

This section contains the following APIs:

- *HAL_SPI_GetState*
- *HAL_SPI_GetError*

55.2.5 Detailed description of functions

HAL_SPI_Init

Function name

HAL_StatusTypeDef HAL_SPI_Init (SPI_HandleTypeDef * hspi)

Function description

Initialize the SPI according to the specified parameters in the SPI_InitTypeDef and initialize the associated handle.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **HAL:** status

HAL_SPI_DeInit

Function name

HAL_StatusTypeDef HAL_SPI_DeInit (SPI_HandleTypeDef * hspi)

Function description

De-Initialize the SPI peripheral.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **HAL:** status

HAL_SPI_MspInit

Function name

void HAL_SPI_MspInit (SPI_HandleTypeDef * hspi)

Function description

Initialize the SPI MSP.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_MspDeInit

Function name

void HAL_SPI_MspDeInit (SPI_HandleTypeDef * hspi)

Function description

De-Initialize the SPI MSP.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_Transmit

Function name

HAL_StatusTypeDef HAL_SPI_Transmit (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Transmit an amount of data in blocking mode.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be sent
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SPI_Receive

Function name

HAL_StatusTypeDef HAL_SPI_Receive (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be received
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SPI_TransmitReceive

Function name

HAL_StatusTypeDef HAL_SPI_TransmitReceive (SPI_HandleTypeDef * hspi, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size, uint32_t Timeout)

Function description

Transmit and Receive an amount of data in blocking mode.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pTxData:** pointer to transmission data buffer
- **pRxData:** pointer to reception data buffer
- **Size:** amount of data to be sent and received
- **Timeout:** Timeout duration

Return values

- **HAL:** status

HAL_SPI_Transmit_IT

Function name

HAL_StatusTypeDef HAL_SPI_Transmit_IT (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with Interrupt.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be sent

Return values

- **HAL:** status

HAL_SPI_Receive_IT

Function name

HAL_StatusTypeDef HAL_SPI_Receive_IT (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with Interrupt.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be sent

Return values

- **HAL:** status

HAL_SPI_TransmitReceive_IT

Function name

HAL_StatusTypeDef HAL_SPI_TransmitReceive_IT (SPI_HandleTypeDef * hspi, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Transmit and Receive an amount of data in non-blocking mode with Interrupt.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pTxData:** pointer to transmission data buffer
- **pRxData:** pointer to reception data buffer
- **Size:** amount of data to be sent and received

Return values

- **HAL:** status

HAL_SPI_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_SPI_Transmit_DMA (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size)

Function description

Transmit an amount of data in non-blocking mode with DMA.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be sent

Return values

- **HAL:** status

HAL_SPI_Receive_DMA

Function name

HAL_StatusTypeDef HAL_SPI_Receive_DMA (SPI_HandleTypeDef * hspi, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pData:** pointer to data buffer
- **Size:** amount of data to be sent

Return values

- **HAL:** status

Notes

- In case of MASTER mode and SPI_DIRECTION_2LINES direction, hdmatx shall be defined.
- When the CRC feature is enabled the pData Length must be Size + 1.

HAL_SPI_TransmitReceive_DMA

Function name

HAL_StatusTypeDef HAL_SPI_TransmitReceive_DMA (SPI_HandleTypeDef * hspi, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Transmit and Receive an amount of data in non-blocking mode with DMA.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.
- **pTxData:** pointer to transmission data buffer
- **pRxData:** pointer to reception data buffer
- **Size:** amount of data to be sent

Return values

- **HAL:** status

Notes

- When the CRC feature is enabled the pRxData Length must be Size + 1

HAL_SPI_DMAPause

Function name

HAL_StatusTypeDef HAL_SPI_DMAPause (SPI_HandleTypeDef * hspi)

Function description

Pause the DMA Transfer.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for the specified SPI module.

Return values

- **HAL:** status

HAL_SPI_DMAResume

Function name

HAL_StatusTypeDef HAL_SPI_DMAResume (SPI_HandleTypeDef * hspi)

Function description

Resume the DMA Transfer.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for the specified SPI module.

Return values

- **HAL:** status

HAL_SPI_DMAStop

Function name

HAL_StatusTypeDef HAL_SPI_DMAStop (SPI_HandleTypeDef * hspi)

Function description

Stop the DMA Transfer.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for the specified SPI module.

Return values

- **HAL:** status

HAL_SPI_Abort

Function name

HAL_StatusTypeDef HAL_SPI_Abort (SPI_HandleTypeDef * hspi)

Function description

Abort ongoing transfer (blocking mode).

Parameters

- **hspi:** SPI handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer (Tx and Rx), started in Interrupt or DMA mode. This procedure performs following operations : Disable SPI Interrupts (depending of transfer direction)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_SPI_Abort_IT

Function name

HAL_StatusTypeDef HAL_SPI_Abort_IT (SPI_HandleTypeDef * hspi)

Function description

Abort ongoing transfer (Interrupt mode).

Parameters

- **hspi:** SPI handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer (Tx and Rx), started in Interrupt or DMA mode. This procedure performs following operations : Disable SPI Interrupts (depending of transfer direction)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_SPI_IRQHandler

Function name

void HAL_SPI_IRQHandler (SPI_HandleTypeDef * hspi)

Function description

Handle SPI interrupt request.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for the specified SPI module.

Return values

- **None:**

HAL_SPI_TxCpltCallback

Function name

void HAL_SPI_TxCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Tx Transfer completed callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_RxCpltCallback

Function name

void HAL_SPI_RxCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Rx Transfer completed callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_TxRxCpltCallback

Function name

void HAL_SPI_TxRxCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Tx and Rx Transfer completed callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_TxHalfCpltCallback

Function name

void HAL_SPI_TxHalfCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Tx Half Transfer completed callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_RxHalfCpltCallback

Function name

void HAL_SPI_RxHalfCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Rx Half Transfer completed callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_TxRxHalfCpltCallback

Function name

void HAL_SPI_TxRxHalfCpltCallback (SPI_HandleTypeDef * hspi)

Function description

Tx and Rx Half Transfer callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_ErrorCallback

Function name

void HAL_SPI_ErrorCallback (SPI_HandleTypeDef * hspi)

Function description

SPI error callback.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **None:**

HAL_SPI_AbortCpltCallback

Function name

void HAL_SPI_AbortCpltCallback (SPI_HandleTypeDef * hspi)

Function description

SPI Abort Complete callback.

Parameters

- **hspi:** SPI handle.

Return values

- **None:**

HAL_SPI_GetState

Function name

HAL_SPI_StateTypeDef HAL_SPI_GetState (SPI_HandleTypeDef * hspi)

Function description

Return the SPI handle state.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **SPI:** state

HAL_SPI_GetError

Function name

uint32_t HAL_SPI_GetError (SPI_HandleTypeDef * hspi)

Function description

Return the SPI error code.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for SPI module.

Return values

- **SPI:** error code in bitmap format

55.3 SPI Firmware driver defines

SPI Exported Macros

__HAL_SPI_RESET_HANDLE_STATE

Description:

- Reset SPI handle state.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_ENABLE_IT

Description:

- Enable the specified SPI interrupts.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.
- __INTERRUPT__: specifies the interrupt source to enable. This parameter can be one of the following values:
  - SPI_IT_TXE: Tx buffer empty interrupt enable
  - SPI_IT_RXNE: RX buffer not empty interrupt enable
  - SPI_IT_ERR: Error interrupt enable

Return value:

- None

__HAL_SPI_DISABLE_IT

Description:

- Disable the specified SPI interrupts.

Parameters:

- __HANDLE__: specifies the SPI handle. This parameter can be SPIx where x: 1, 2, or 3 to select the SPI peripheral.
- __INTERRUPT__: specifies the interrupt source to disable. This parameter can be one of the following values:
  - SPI_IT_TXE: Tx buffer empty interrupt enable
  - SPI_IT_RXNE: RX buffer not empty interrupt enable
  - SPI_IT_ERR: Error interrupt enable

Return value:

- None

__HAL_SPI_GET_IT_SOURCE

Description:

- Check whether the specified SPI interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.
- __INTERRUPT__: specifies the SPI interrupt source to check. This parameter can be one of the following values:
  - SPI_IT_TXE: Tx buffer empty interrupt enable
  - SPI_IT_RXNE: RX buffer not empty interrupt enable
  - SPI_IT_ERR: Error interrupt enable

Return value:

- The: new state of __IT__ (TRUE or FALSE).

__HAL_SPI_GET_FLAG

Description:

- Check whether the specified SPI flag is set or not.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - SPI_FLAG_RXNE: Receive buffer not empty flag
  - SPI_FLAG_TXE: Transmit buffer empty flag
  - SPI_FLAG_CRCERR: CRC error flag
  - SPI_FLAG_MODF: Mode fault flag
  - SPI_FLAG_OVR: Overrun flag
  - SPI_FLAG_BSY: Busy flag
  - SPI_FLAG_FRE: Frame format error flag
  - SPI_FLAG_FTLVL: SPI fifo transmission level
  - SPI_FLAG_FRLVL: SPI fifo reception level

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_SPI_CLEAR_CRCERRFLAG

Description:

- Clear the SPI CRCERR pending flag.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_CLEAR_MODFFLAG

Description:

- Clear the SPI MODF pending flag.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_CLEAR_OVRFLAG

Description:

- Clear the SPI OVR pending flag.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_CLEAR_FREFLAG

Description:

- Clear the SPI FRE pending flag.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_ENABLE

Description:

- Enable the SPI peripheral.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

__HAL_SPI_DISABLE

Description:

- Disable the SPI peripheral.

Parameters:

- __HANDLE__: specifies the SPI Handle. This parameter can be SPI where x: 1, 2, or 3 to select the SPI peripheral.

Return value:

- None

56 HAL SPI Extension Driver

56.1 SPIEx Firmware driver API description

The following section lists the various functions of the SPIEx library.

56.1.1 IO operation functions

This subsection provides a set of extended functions to manage the SPI data transfers.

1. Rx data flush function:
   – HAL_SPIEx_FlushRxFifo()

This section contains the following APIs:

- ***HAL_SPIEx_FlushRxFifo***

56.1.2 Detailed description of functions

HAL_SPIEx_FlushRxFifo

Function name

HAL_StatusTypeDef HAL_SPIEx_FlushRxFifo (SPI_HandleTypeDef * hspi)

Function description

Flush the RX fifo.

Parameters

- **hspi:** pointer to a SPI_HandleTypeDef structure that contains the configuration information for the specified SPI module.

Return values

- **HAL:** status

57 HAL SRAM Generic Driver

57.1 SRAM Firmware driver registers structures

57.1.1 SRAM_HandleTypeDef

SRAM_HandleTypeDef is defined in the stm32g4xx_hal_sram.h

Data Fields

- ***FMC_NORSRAM_TypeDef * Instance***
- ***FMC_NORSRAM_EXTENDED_TypeDef * Extended***
- ***FMC_NORSRAM_InitTypeDef Init***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_SRAM_StateTypeDef State***
- ***DMA_HandleTypeDef * hdma***

Field Documentation

- ***FMC_NORSRAM_TypeDef* SRAM_HandleTypeDef::Instance***
  Register base address
- ***FMC_NORSRAM_EXTENDED_TypeDef* SRAM_HandleTypeDef::Extended***
  Extended mode register base address
- ***FMC_NORSRAM_InitTypeDef SRAM_HandleTypeDef::Init***
  SRAM device control configuration parameters
- ***HAL_LockTypeDef SRAM_HandleTypeDef::Lock***
  SRAM locking object
- ***__IO HAL_SRAM_StateTypeDef SRAM_HandleTypeDef::State***
  SRAM device access state
- ***DMA_HandleTypeDef* SRAM_HandleTypeDef::hdma***
  Pointer DMA handler

57.2 SRAM Firmware driver API description

The following section lists the various functions of the SRAM library.

57.2.1 How to use this driver

This driver is a generic layered driver which contains a set of APIs used to control SRAM memories. It uses the FMC layer functions to interface with SRAM devices. The following sequence should be followed to configure the FMC to interface with SRAM/PSRAM memories:

1. Declare a SRAM_HandleTypeDef handle structure, for example: SRAM_HandleTypeDef hsram; and:
   – Fill the SRAM_HandleTypeDef handle "Init" field with the allowed values of the structure member.
   – Fill the SRAM_HandleTypeDef handle "Instance" field with a predefined base register instance for NOR or SRAM device
   – Fill the SRAM_HandleTypeDef handle "Extended" field with a predefined base register instance for NOR or SRAM extended mode
2. Declare two FMC_NORSRAM_TimingTypeDef structures, for both normal and extended mode timings; for example: FMC_NORSRAM_TimingTypeDef Timing and FMC_NORSRAM_TimingTypeDef ExTiming; and fill its fields with the allowed values of the structure member.

3. Initialize the SRAM Controller by calling the function HAL_SRAM_Init(). This function performs the following sequence:
   a. MSP hardware layer configuration using the function HAL_SRAM_MspInit()
   b. Control register configuration using the FMC NORSRAM interface function FMC_NORSRAM_Init()
   c. Timing register configuration using the FMC NORSRAM interface function FMC_NORSRAM_Timing_Init()
   d. Extended mode Timing register configuration using the FMC NORSRAM interface function FMC_NORSRAM_Extended_Timing_Init()
   e. Enable the SRAM device using the macro __FMC_NORSRAM_ENABLE()
4. At this stage you can perform read/write accesses from/to the memory connected to the NOR/SRAM Bank. You can perform either polling or DMA transfer using the following APIs:
   – HAL_SRAM_Read()/HAL_SRAM_Write() for polling read/write access
   – HAL_SRAM_Read_DMA()/HAL_SRAM_Write_DMA() for DMA read/write transfer
5. You can also control the SRAM device by calling the control APIs HAL_SRAM_WriteOperation_Enable()/ HAL_SRAM_WriteOperation_Disable() to respectively enable/disable the SRAM write operation
6. You can continuously monitor the SRAM device HAL state by calling the function HAL_SRAM_GetState()

Callback registration

The compilation define USE_HAL_SRAM_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks. Use Functions @ref HAL_SRAM_RegisterCallback() to register a user callback, it allows to register following callbacks:

- MspInitCallback : SRAM MspInit.
- MspDeInitCallback : SRAM MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function. Use function @ref HAL_SRAM_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. It allows to reset following callbacks:
- MspInitCallback : SRAM MspInit.
- MspDeInitCallback : SRAM MspDeInit. This function) takes as parameters the HAL peripheral handle and the Callback ID. By default, after the @ref HAL_SRAM_Init and if the state is HAL_SRAM_STATE_RESET all callbacks are reset to the corresponding legacy weak (surcharged) functions. Exception done for MspInit and MspDeInit callbacks that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_SRAM_Init and @ref HAL_SRAM_DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_SRAM_Init and @ref HAL_SRAM_DeInit keep and use the user MspInit/MspDeInit callbacks (registered beforehand) Callbacks can be registered/unregistered in READY state only. Exception done for MspInit/MspDeInit callbacks that can be registered/unregistered in READY or RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_SRAM_RegisterCallback before calling @ref HAL_SRAM_DeInit or @ref HAL_SRAM_Init function. When The compilation define USE_HAL_SRAM_REGISTER_CALLBACKS is set to 0 or not defined, the callback registering feature is not available and weak (surcharged) callbacks are used.

57.2.2 SRAM Initialization and de_initialization functions

This section provides functions allowing to initialize/de-initialize the SRAM memory

This section contains the following APIs:

- ***HAL_SRAM_Init***
- ***HAL_SRAM_DeInit***
- ***HAL_SRAM_MspInit***
- ***HAL_SRAM_MspDeInit***
- ***HAL_SRAM_DMA_XferCpltCallback***
- ***HAL_SRAM_DMA_XferErrorCallback***

57.2.3 SRAM Input and Output functions

This section provides functions allowing to use and control the SRAM memory

This section contains the following APIs:

- *HAL_SRAM_Read_8b*
- *HAL_SRAM_Write_8b*
- *HAL_SRAM_Read_16b*
- *HAL_SRAM_Write_16b*
- *HAL_SRAM_Read_32b*
- *HAL_SRAM_Write_32b*
- *HAL_SRAM_Read_DMA*
- *HAL_SRAM_Write_DMA*
- *HAL_SRAM_DMA_XferCpltCallback*
- *HAL_SRAM_DMA_XferErrorCallback*

57.2.4 SRAM Control functions

This subsection provides a set of functions allowing to control dynamically the SRAM interface.

This section contains the following APIs:

- *HAL_SRAM_WriteOperation_Enable*
- *HAL_SRAM_WriteOperation_Disable*

57.2.5 SRAM State functions

This subsection permits to get in run-time the status of the SRAM controller and the data flow.

This section contains the following APIs:

- *HAL_SRAM_GetState*

57.2.6 Detailed description of functions

HAL_SRAM_Init

Function name

HAL_StatusTypeDef HAL_SRAM_Init (SRAM_HandleTypeDef * hsram, FMC_NORSRAM_TimingTypeDef * Timing, FMC_NORSRAM_TimingTypeDef * ExtTiming)

Function description

Performs the SRAM device initialization sequence.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **Timing:** Pointer to SRAM control timing structure
- **ExtTiming:** Pointer to SRAM extended mode timing structure

Return values

- **HAL:** status

HAL_SRAM_DeInit

Function name

HAL_StatusTypeDef HAL_SRAM_DeInit (SRAM_HandleTypeDef * hsram)

Function description

Performs the SRAM device De-initialization sequence.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **HAL:** status

HAL_SRAM_MspInit

Function name

void HAL_SRAM_MspInit (SRAM_HandleTypeDef * hsram)

Function description

SRAM MSP Init.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **None:**

HAL_SRAM_MspDeInit

Function name

void HAL_SRAM_MspDeInit (SRAM_HandleTypeDef * hsram)

Function description

SRAM MSP DeInit.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **None:**

HAL_SRAM_Read_8b

Function name

HAL_StatusTypeDef HAL_SRAM_Read_8b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint8_t * pDstBuffer, uint32_t BufferSize)

Function description

Reads 8-bit buffer from SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to read start address
- **pDstBuffer:** Pointer to destination buffer
- **BufferSize:** Size of the buffer to read from memory

Return values

- **HAL:** status

HAL_SRAM_Write_8b

Function name

HAL_StatusTypeDef HAL_SRAM_Write_8b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint8_t * pSrcBuffer, uint32_t BufferSize)

Function description

Writes 8-bit buffer to SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to write start address
- **pSrcBuffer:** Pointer to source buffer to write
- **BufferSize:** Size of the buffer to write to memory

Return values

- **HAL:** status

HAL_SRAM_Read_16b

Function name

HAL_StatusTypeDef HAL_SRAM_Read_16b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint16_t * pDstBuffer, uint32_t BufferSize)

Function description

Reads 16-bit buffer from SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to read start address
- **pDstBuffer:** Pointer to destination buffer
- **BufferSize:** Size of the buffer to read from memory

Return values

- **HAL:** status

HAL_SRAM_Write_16b

Function name

HAL_StatusTypeDef HAL_SRAM_Write_16b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint16_t * pSrcBuffer, uint32_t BufferSize)

Function description

Writes 16-bit buffer to SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to write start address
- **pSrcBuffer:** Pointer to source buffer to write
- **BufferSize:** Size of the buffer to write to memory

Return values

- **HAL:** status

HAL_SRAM_Read_32b

Function name

HAL_StatusTypeDef HAL_SRAM_Read_32b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint32_t * pDstBuffer, uint32_t BufferSize)

Function description

Reads 32-bit buffer from SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to read start address
- **pDstBuffer:** Pointer to destination buffer
- **BufferSize:** Size of the buffer to read from memory

Return values

- **HAL:** status

HAL_SRAM_Write_32b

Function name

HAL_StatusTypeDef HAL_SRAM_Write_32b (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint32_t * pSrcBuffer, uint32_t BufferSize)

Function description

Writes 32-bit buffer to SRAM memory.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to write start address
- **pSrcBuffer:** Pointer to source buffer to write
- **BufferSize:** Size of the buffer to write to memory

Return values

- **HAL:** status

HAL_SRAM_Read_DMA

Function name

HAL_StatusTypeDef HAL_SRAM_Read_DMA (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint32_t * pDstBuffer, uint32_t BufferSize)

Function description

Reads a Words data from the SRAM memory using DMA transfer.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to read start address
- **pDstBuffer:** Pointer to destination buffer
- **BufferSize:** Size of the buffer to read from memory

Return values

- **HAL:** status

HAL_SRAM_Write_DMA

Function name

HAL_StatusTypeDef HAL_SRAM_Write_DMA (SRAM_HandleTypeDef * hsram, uint32_t * pAddress, uint32_t * pSrcBuffer, uint32_t BufferSize)

Function description

Writes a Words data buffer to SRAM memory using DMA transfer.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.
- **pAddress:** Pointer to write start address
- **pSrcBuffer:** Pointer to source buffer to write
- **BufferSize:** Size of the buffer to write to memory

Return values

- **HAL:** status

HAL_SRAM_DMA_XferCpltCallback

Function name

void HAL_SRAM_DMA_XferCpltCallback (DMA_HandleTypeDef * hdma)

Function description

DMA transfer complete callback.

Parameters

- **hdma:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **None:**

HAL_SRAM_DMA_XferErrorCallback

Function name

void HAL_SRAM_DMA_XferErrorCallback (DMA_HandleTypeDef * hdma)

Function description

DMA transfer complete error callback.

Parameters

- **hdma:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **None:**

HAL_SRAM_WriteOperation_Enable

Function name

HAL_StatusTypeDef HAL_SRAM_WriteOperation_Enable (SRAM_HandleTypeDef * hsram)

Function description

Enables dynamically SRAM write operation.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **HAL:** status

HAL_SRAM_WriteOperation_Disable

Function name

HAL_StatusTypeDef HAL_SRAM_WriteOperation_Disable (SRAM_HandleTypeDef * hsram)

Function description

Disables dynamically SRAM write operation.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **HAL:** status

HAL_SRAM_GetState

Function name

HAL_SRAM_StateTypeDef HAL_SRAM_GetState (SRAM_HandleTypeDef * hsram)

Function description

Returns the SRAM controller state.

Parameters

- **hsram:** pointer to a SRAM_HandleTypeDef structure that contains the configuration information for SRAM module.

Return values

- **HAL:** state

57.3 SRAM Firmware driver defines

The following section lists the various define and macros of the module.

57.3.1 SRAM

SRAM

SRAM Exported Macros

__HAL_SRAM_RESET_HANDLE_STATE

Description:

- Reset SRAM handle state.

Parameters:

- __HANDLE__: SRAM handle

Return value:

- None

58 HAL TIM Generic Driver

58.1 TIM Firmware driver registers structures

58.1.1 TIM_Base_InitTypeDef

TIM_Base_InitTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t CounterMode***
- ***uint32_t Period***
- ***uint32_t ClockDivision***
- ***uint32_t RepetitionCounter***
- ***uint32_t AutoReloadPreload***

Field Documentation

- ***uint32_t TIM_Base_InitTypeDef::Prescaler***

  Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF Macro **__HAL_TIM_CALC_PSC()** can be used to calculate prescaler value
- ***uint32_t TIM_Base_InitTypeDef::CounterMode***

  Specifies the counter mode. This parameter can be a value of ***TIM_Counter_Mode***
- ***uint32_t TIM_Base_InitTypeDef::Period***

  Specifies the period value to be loaded into the active Auto-Reload Register at the next update event. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF (or 0xFFEF if dithering is activated) Macros **__HAL_TIM_CALC_PERIOD()**, **__HAL_TIM_CALC_PERIOD_DITHER()**, **__HAL_TIM_CALC_PERIOD_BY_DELAY()**, **__HAL_TIM_CALC_PERIOD_DITHER_BY_DELAY()** can be used to calculate Period value
- ***uint32_t TIM_Base_InitTypeDef::ClockDivision***

  Specifies the clock division. This parameter can be a value of ***TIM_ClockDivision***
- ***uint32_t TIM_Base_InitTypeDef::RepetitionCounter***

  Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to:
  - the number of PWM periods in edge-aligned mode
  - the number of half PWM period in center-aligned mode GP timers: this parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF. Advanced timers: this parameter must be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.
- ***uint32_t TIM_Base_InitTypeDef::AutoReloadPreload***

  Specifies the auto-reload preload. This parameter can be a value of ***TIM_AutoReloadPreload***

58.1.2 TIM_OC_InitTypeDef

TIM_OC_InitTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t OCMode***
- ***uint32_t Pulse***
- ***uint32_t OCPolarity***
- ***uint32_t OCNPolarity***
- ***uint32_t OCFastMode***
- ***uint32_t OCIdleState***
- ***uint32_t OCNIdleState***

Field Documentation

- ***uint32_t TIM_OC_InitTypeDef::OCMode***

  Specifies the TIM mode. This parameter can be a value of ***TIM_Output_Compare_and_PWM_modes***
- ***uint32_t TIM_OC_InitTypeDef::Pulse***

  Specifies the pulse value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF (or 0xFFEF if dithering is activated) Macros **__HAL_TIM_CALC_PULSE()**, **__HAL_TIM_CALC_PULSE_DITHER()** can be used to calculate Pulse value
- ***uint32_t TIM_OC_InitTypeDef::OCPolarity***

  Specifies the output polarity. This parameter can be a value of ***TIM_Output_Compare_Polarity***
- ***uint32_t TIM_OC_InitTypeDef::OCNPolarity***

  Specifies the complementary output polarity. This parameter can be a value of ***TIM_Output_Compare_N_Polarity***

  Note:

  – This parameter is valid only for timer instances supporting break feature.
- ***uint32_t TIM_OC_InitTypeDef::OCFastMode***

  Specifies the Fast mode state. This parameter can be a value of ***TIM_Output_Fast_State***

  Note:

  – This parameter is valid only in PWM1 and PWM2 mode.
- ***uint32_t TIM_OC_InitTypeDef::OCIdleState***

  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_Output_Compare_Idle_State***

  Note:

  – This parameter is valid only for timer instances supporting break feature.
- ***uint32_t TIM_OC_InitTypeDef::OCNIdleState***

  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_Output_Compare_N_Idle_State***

  Note:

  – This parameter is valid only for timer instances supporting break feature.

58.1.3 TIM_OnePulse_InitTypeDef

TIM_OnePulse_InitTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t OCMode***
- ***uint32_t Pulse***
- ***uint32_t OCPolarity***
- ***uint32_t OCNPolarity***
- ***uint32_t OCIdleState***
- ***uint32_t OCNIdleState***
- ***uint32_t ICPolarity***
- ***uint32_t ICSelection***
- ***uint32_t ICFilter***

Field Documentation

- ***uint32_t TIM_OnePulse_InitTypeDef::OCMode***

  Specifies the TIM mode. This parameter can be a value of ***TIM_Output_Compare_and_PWM_modes***
- ***uint32_t TIM_OnePulse_InitTypeDef::Pulse***

  Specifies the pulse value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF (or 0xFFEF if dithering is activated) Macros **__HAL_TIM_CALC_PULSE()**, **__HAL_TIM_CALC_PULSE_DITHER()** can be used to calculate Pulse value
- ***uint32_t TIM_OnePulse_InitTypeDef::OCPolarity***

  Specifies the output polarity. This parameter can be a value of ***TIM_Output_Compare_Polarity***

- ***uint32_t TIM_OnePulse_InitTypeDef::OCNPolarity***
  Specifies the complementary output polarity. This parameter can be a value of ***TIM_Output_Compare_N_Polarity***
  Note:
  – This parameter is valid only for timer instances supporting break feature.
- ***uint32_t TIM_OnePulse_InitTypeDef::OCIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_Output_Compare_Idle_State***
  Note:
  – This parameter is valid only for timer instances supporting break feature.
- ***uint32_t TIM_OnePulse_InitTypeDef::OCNIdleState***
  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_Output_Compare_N_Idle_State***
  Note:
  – This parameter is valid only for timer instances supporting break feature.
- ***uint32_t TIM_OnePulse_InitTypeDef::ICPolarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Input_Capture_Polarity***
- ***uint32_t TIM_OnePulse_InitTypeDef::ICSelection***
  Specifies the input. This parameter can be a value of ***TIM_Input_Capture_Selection***
- ***uint32_t TIM_OnePulse_InitTypeDef::ICFilter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.4 TIM_IC_InitTypeDef

TIM_IC_InitTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t ICPolarity***
- ***uint32_t ICSelection***
- ***uint32_t ICPrescaler***
- ***uint32_t ICFilter***

Field Documentation

- ***uint32_t TIM_IC_InitTypeDef::ICPolarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Input_Capture_Polarity***
- ***uint32_t TIM_IC_InitTypeDef::ICSelection***
  Specifies the input. This parameter can be a value of ***TIM_Input_Capture_Selection***
- ***uint32_t TIM_IC_InitTypeDef::ICPrescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_Input_Capture_Prescaler***
- ***uint32_t TIM_IC_InitTypeDef::ICFilter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.5 TIM_Encoder_InitTypeDef

TIM_Encoder_InitTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t EncoderMode***
- ***uint32_t IC1Polarity***
- ***uint32_t IC1Selection***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t IC2Polarity***
- ***uint32_t IC2Selection***

- ***uint32_t IC2Prescaler***
- ***uint32_t IC2Filter***

Field Documentation

- ***uint32_t TIM_Encoder_InitTypeDef::EncoderMode***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Encoder_Mode***
- ***uint32_t TIM_Encoder_InitTypeDef::IC1Polarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Encoder_Input_Polarity***
- ***uint32_t TIM_Encoder_InitTypeDef::IC1Selection***
  Specifies the input. This parameter can be a value of ***TIM_Input_Capture_Selection***
- ***uint32_t TIM_Encoder_InitTypeDef::IC1Prescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_Input_Capture_Prescaler***
- ***uint32_t TIM_Encoder_InitTypeDef::IC1Filter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIM_Encoder_InitTypeDef::IC2Polarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Encoder_Input_Polarity***
- ***uint32_t TIM_Encoder_InitTypeDef::IC2Selection***
  Specifies the input. This parameter can be a value of ***TIM_Input_Capture_Selection***
- ***uint32_t TIM_Encoder_InitTypeDef::IC2Prescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_Input_Capture_Prescaler***
- ***uint32_t TIM_Encoder_InitTypeDef::IC2Filter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.6 TIM_ClockConfigTypeDef

TIM_ClockConfigTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t ClockSource***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPrescaler***
- ***uint32_t ClockFilter***

Field Documentation

- ***uint32_t TIM_ClockConfigTypeDef::ClockSource***
  TIM clock sources This parameter can be a value of ***TIM_Clock_Source***
- ***uint32_t TIM_ClockConfigTypeDef::ClockPolarity***
  TIM clock polarity This parameter can be a value of ***TIM_Clock_Polarity***
- ***uint32_t TIM_ClockConfigTypeDef::ClockPrescaler***
  TIM clock prescaler This parameter can be a value of ***TIM_Clock_Prescaler***
- ***uint32_t TIM_ClockConfigTypeDef::ClockFilter***
  TIM clock filter This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.7 TIM_ClearInputConfigTypeDef

TIM_ClearInputConfigTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t ClearInputState***
- ***uint32_t ClearInputSource***
- ***uint32_t ClearInputPolarity***
- ***uint32_t ClearInputPrescaler***

- ***uint32_t ClearInputFilter***

Field Documentation

- ***uint32_t TIM_ClearInputConfigTypeDef::ClearInputState***
  TIM clear Input state This parameter can be ENABLE or DISABLE
- ***uint32_t TIM_ClearInputConfigTypeDef::ClearInputSource***
  TIM clear Input sources This parameter can be a value of ***TIM_ClearInput_Source***
- ***uint32_t TIM_ClearInputConfigTypeDef::ClearInputPolarity***
  TIM Clear Input polarity This parameter can be a value of ***TIM_ClearInput_Polarity***
- ***uint32_t TIM_ClearInputConfigTypeDef::ClearInputPrescaler***
  TIM Clear Input prescaler This parameter must be 0: When OCRef clear feature is used with ETR source, ETR prescaler must be off
- ***uint32_t TIM_ClearInputConfigTypeDef::ClearInputFilter***
  TIM Clear Input filter This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.8 TIM_MasterConfigTypeDef

TIM_MasterConfigTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t MasterOutputTrigger***
- ***uint32_t MasterOutputTrigger2***
- ***uint32_t MasterSlaveMode***

Field Documentation

- ***uint32_t TIM_MasterConfigTypeDef::MasterOutputTrigger***
  Trigger output (TRGO) selection This parameter can be a value of ***TIM_Master_Mode_Selection***
- ***uint32_t TIM_MasterConfigTypeDef::MasterOutputTrigger2***
  Trigger output2 (TRGO2) selection This parameter can be a value of ***TIM_Master_Mode_Selection_2***
- ***uint32_t TIM_MasterConfigTypeDef::MasterSlaveMode***
  Master/slave mode selection This parameter can be a value of ***TIM_Master_Slave_Mode***
  Note:
  – When the Master/slave mode is enabled, the effect of an event on the trigger input (TRGI) is delayed to allow a perfect synchronization between the current timer and its slaves (through TRGO). It is not mandatory in case of timer synchronization mode.

58.1.9 TIM_SlaveConfigTypeDef

TIM_SlaveConfigTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t SlaveMode***
- ***uint32_t InputTrigger***
- ***uint32_t TriggerPolarity***
- ***uint32_t TriggerPrescaler***
- ***uint32_t TriggerFilter***

Field Documentation

- ***uint32_t TIM_SlaveConfigTypeDef::SlaveMode***
  Slave mode selection This parameter can be a value of ***TIM_Slave_Mode***
- ***uint32_t TIM_SlaveConfigTypeDef::InputTrigger***
  Input Trigger source This parameter can be a value of ***TIM_Trigger_Selection***
- ***uint32_t TIM_SlaveConfigTypeDef::TriggerPolarity***
  Input Trigger polarity This parameter can be a value of ***TIM_Trigger_Polarity***
- ***uint32_t TIM_SlaveConfigTypeDef::TriggerPrescaler***
  Input trigger prescaler This parameter can be a value of ***TIM_Trigger_Prescaler***

- ***uint32_t TIM_SlaveConfigTypeDef::TriggerFilter***
  Input trigger filter This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF

58.1.10 TIM_BreakDeadTimeConfigTypeDef

TIM_BreakDeadTimeConfigTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***uint32_t OffStateRunMode***
- ***uint32_t OffStateIDLEMode***
- ***uint32_t LockLevel***
- ***uint32_t DeadTime***
- ***uint32_t BreakState***
- ***uint32_t BreakPolarity***
- ***uint32_t BreakFilter***
- ***uint32_t BreakAFMode***
- ***uint32_t Break2State***
- ***uint32_t Break2Polarity***
- ***uint32_t Break2Filter***
- ***uint32_t Break2AFMode***
- ***uint32_t AutomaticOutput***

Field Documentation

- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::OffStateRunMode***
  TIM off state in run mode This parameter can be a value of ***TIM_OSSR_Off_State_Selection_for_Run_mode_state***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::OffStateIDLEMode***
  TIM off state in IDLE mode This parameter can be a value of ***TIM_OSSI_Off_State_Selection_for_Idle_mode_state***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::LockLevel***
  TIM Lock level This parameter can be a value of ***TIM_Lock_level***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::DeadTime***
  TIM dead Time This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::BreakState***
  TIM Break State This parameter can be a value of ***TIM_Break_Input_enable_disable***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::BreakPolarity***
  TIM Break input polarity This parameter can be a value of ***TIM_Break_Polarity***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::BreakFilter***
  Specifies the break input filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::BreakAFMode***
  Specifies the alternate function mode of the break input. This parameter can be a value of ***TIM_Break_Input_AF_Mode***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::Break2State***
  TIM Break2 State This parameter can be a value of ***TIM_Break2_Input_enable_disable***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::Break2Polarity***
  TIM Break2 input polarity This parameter can be a value of ***TIM_Break2_Polarity***
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::Break2Filter***
  TIM break2 input filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::Break2AFMode***
  Specifies the alternate function mode of the break2 input. This parameter can be a value of ***TIM_Break2_Input_AF_Mode***

- ***uint32_t TIM_BreakDeadTimeConfigTypeDef::AutomaticOutput***
  TIM Automatic Output Enable state This parameter can be a value of ***TIM_AOE_Bit_Set_Reset***

58.1.11 TIM_HandleTypeDef

TIM_HandleTypeDef is defined in the stm32g4xx_hal_tim.h

Data Fields

- ***TIM_TypeDef * Instance***
- ***TIM_Base_InitTypeDef Init***
- ***HAL_TIM_ActiveChannel Channel***
- ***DMA_HandleTypeDef * hdma***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_TIM_StateTypeDef State***
- ***__IO HAL_TIM_ChannelStateTypeDef ChannelState***
- ***__IO HAL_TIM_ChannelStateTypeDef ChannelNState***
- ***__IO HAL_TIM_DMABurstStateTypeDef DMABurstState***

Field Documentation

- ***TIM_TypeDef* TIM_HandleTypeDef::Instance***
  Register base address
- ***TIM_Base_InitTypeDef TIM_HandleTypeDef::Init***
  TIM Time Base required parameters
- ***HAL_TIM_ActiveChannel TIM_HandleTypeDef::Channel***
  Active channel
- ***DMA_HandleTypeDef* TIM_HandleTypeDef::hdma[7]***
  DMA Handlers array This array is accessed by a ***DMA_Handle_index***
- ***HAL_LockTypeDef TIM_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_TIM_StateTypeDef TIM_HandleTypeDef::State***
  TIM operation state
- ***__IO HAL_TIM_ChannelStateTypeDef TIM_HandleTypeDef::ChannelState[6]***
  TIM channel operation state
- ***__IO HAL_TIM_ChannelStateTypeDef TIM_HandleTypeDef::ChannelNState[4]***
  TIM complementary channel operation state
- ***__IO HAL_TIM_DMABurstStateTypeDef TIM_HandleTypeDef::DMABurstState***
  DMA burst operation state

58.2 TIM Firmware driver API description

The following section lists the various functions of the TIM library.

58.2.1 TIMER Generic features

The Timer features include:

1. 16-bit up, down, up/down auto-reload counter.
2. 16-bit programmable prescaler allowing dividing (also on the fly) the counter clock frequency either by any factor between 1 and 65536.
3. Up to 4 independent channels for:
   – Input Capture
   – Output Compare
   – PWM generation (Edge and Center-aligned Mode)
   – One-pulse mode output
4. Synchronization circuit to control the timer with external signals and to interconnect several timers together.
5. Supports incremental encoder for positioning purposes

58.2.2 How to use this driver

1. Initialize the TIM low level resources by implementing the following functions depending on the selected feature:
   - Time Base : HAL_TIM_Base_MspInit()
   - Input Capture : HAL_TIM_IC_MspInit()
   - Output Compare : HAL_TIM_OC_MspInit()
   - PWM generation : HAL_TIM_PWM_MspInit()
   - One-pulse mode output : HAL_TIM_OnePulse_MspInit()
   - Encoder mode output : HAL_TIM_Encoder_MspInit()
2. Initialize the TIM low level resources :
   a. Enable the TIM interface clock using __HAL_RCC_TIMx_CLK_ENABLE();
   b. TIM pins configuration
      - Enable the clock for the TIM GPIOs using the following function: __HAL_RCC_GPIOx_CLK_ENABLE();
      - Configure these TIM pins in Alternate function mode using HAL_GPIO_Init();
3. The external Clock can be configured, if needed (the default clock is the internal clock from the APBx), using the following function: HAL_TIM_ConfigClockSource, the clock configuration should be done before any start function.
4. Configure the TIM in the desired functioning mode using one of the Initialization function of this driver:
   - HAL_TIM_Base_Init: to use the Timer to generate a simple time base
   - HAL_TIM_OC_Init, HAL_TIM_OC_ConfigChannel and optionally HAL_TIMEx_OC_ConfigPulseOnCompare: to use the Timer to generate an Output Compare signal.
   - HAL_TIM_PWM_Init and HAL_TIM_PWM_ConfigChannel: to use the Timer to generate a PWM signal.
   - HAL_TIM_IC_Init and HAL_TIM_IC_ConfigChannel: to use the Timer to measure an external signal.
   - HAL_TIM_OnePulse_Init and HAL_TIM_OnePulse_ConfigChannel: to use the Timer in One Pulse Mode.
   - HAL_TIM_Encoder_Init: to use the Timer Encoder Interface.
5. Activate the TIM peripheral using one of the start functions depending from the feature used:
   - Time Base : HAL_TIM_Base_Start(), HAL_TIM_Base_Start_DMA(), HAL_TIM_Base_Start_IT()
   - Input Capture : HAL_TIM_IC_Start(), HAL_TIM_IC_Start_DMA(), HAL_TIM_IC_Start_IT()
   - Output Compare : HAL_TIM_OC_Start(), HAL_TIM_OC_Start_DMA(), HAL_TIM_OC_Start_IT()
   - PWM generation : HAL_TIM_PWM_Start(), HAL_TIM_PWM_Start_DMA(), HAL_TIM_PWM_Start_IT()
   - One-pulse mode output : HAL_TIM_OnePulse_Start(), HAL_TIM_OnePulse_Start_IT()
   - Encoder mode output : HAL_TIM_Encoder_Start(), HAL_TIM_Encoder_Start_DMA(), HAL_TIM_Encoder_Start_IT().
6. The DMA Burst is managed with the two following functions: HAL_TIM_DMABurst_WriteStart() HAL_TIM_DMABurst_ReadStart()

Callback registration

The compilation define USE_HAL_TIM_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_TIM_RegisterCallback() to register a callback. @ref HAL_TIM_RegisterCallback() takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_TIM_UnRegisterCallback() to reset a callback to the default weak function. @ref HAL_TIM_UnRegisterCallback takes as parameters the HAL peripheral handle, and the Callback ID.

These functions allow to register/unregister following callbacks:

- Base_MspInitCallback : TIM Base Msp Init Callback.
- Base_MspDeInitCallback : TIM Base Msp DeInit Callback.
- IC_MspInitCallback : TIM IC Msp Init Callback.
- IC_MspDeInitCallback : TIM IC Msp DeInit Callback.
- OC_MspInitCallback : TIM OC Msp Init Callback.

- OC_MspDeInitCallback : TIM OC Msp DeInit Callback.
- PWM_MspInitCallback : TIM PWM Msp Init Callback.
- PWM_MspDeInitCallback : TIM PWM Msp DeInit Callback.
- OnePulse_MspInitCallback : TIM One Pulse Msp Init Callback.
- OnePulse_MspDeInitCallback : TIM One Pulse Msp DeInit Callback.
- Encoder_MspInitCallback : TIM Encoder Msp Init Callback.
- Encoder_MspDeInitCallback : TIM Encoder Msp DeInit Callback.
- HallSensor_MspInitCallback : TIM Hall Sensor Msp Init Callback.
- HallSensor_MspDeInitCallback : TIM Hall Sensor Msp DeInit Callback.
- PeriodElapsedCallback : TIM Period Elapsed Callback.
- PeriodElapsedHalfCpltCallback : TIM Period Elapsed half complete Callback.
- TriggerCallback : TIM Trigger Callback.
- TriggerHalfCpltCallback : TIM Trigger half complete Callback.
- IC_CaptureCallback : TIM Input Capture Callback.
- IC_CaptureHalfCpltCallback : TIM Input Capture half complete Callback.
- OC_DelayElapsedCallback : TIM Output Compare Delay Elapsed Callback.
- PWM_PulseFinishedCallback : TIM PWM Pulse Finished Callback.
- PWM_PulseFinishedHalfCpltCallback : TIM PWM Pulse Finished half complete Callback.
- ErrorCallback : TIM Error Callback.
- CommutationCallback : TIM Commutation Callback.
- CommutationHalfCpltCallback : TIM Commutation half complete Callback.
- BreakCallback : TIM Break Callback.
- Break2Callback : TIM Break2 Callback.
- EncoderIndexCallback : TIM Encoder Index Callback.
- DirectionChangeCallback : TIM Direction Change Callback
- IndexErrorCallback : TIM Index Error Callback.
- TransitionErrorCallback : TIM Transition Error Callback

By default, after the Init and when the state is HAL_TIM_STATE_RESET all interrupt callbacks are set to the corresponding weak functions: examples @ref HAL_TIM_TriggerCallback(), @ref HAL_TIM_ErrorCallback().

Exception done for MspInit and MspDeInit functions that are reset to the legacy weak functionalities in the Init / DeInit only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the Init / DeInit keep and use the user MspInit / MspDeInit callbacks(registered beforehand)

Callbacks can be registered / unregistered in HAL_TIM_STATE_READY state only. Exception done MspInit / MspDeInit that can be registered / unregistered in HAL_TIM_STATE_READY or HAL_TIM_STATE_RESET state, thus registered(user) MspInit / DeInit callbacks can be used during the Init / DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_TIM_RegisterCallback() before calling DeInit or Init function.

When The compilation define USE_HAL_TIM_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and all callbacks are set to the corresponding weak functions.

58.2.3 Time Base functions

This section provides functions allowing to:

- Initialize and configure the TIM base.
- De-initialize the TIM base.
- Start the Time Base.
- Stop the Time Base.
- Start the Time Base and enable interrupt.
- Stop the Time Base and disable interrupt.
- Start the Time Base and enable DMA transfer.
- Stop the Time Base and disable DMA transfer.

This section contains the following APIs:

- *HAL_TIM_Base_Init*
- *HAL_TIM_Base_DeInit*
- *HAL_TIM_Base_MspInit*
- *HAL_TIM_Base_MspDeInit*
- *HAL_TIM_Base_Start*
- *HAL_TIM_Base_Stop*
- *HAL_TIM_Base_Start_IT*
- *HAL_TIM_Base_Stop_IT*
- *HAL_TIM_Base_Start_DMA*
- *HAL_TIM_Base_Stop_DMA*

58.2.4 TIM Output Compare functions

This section provides functions allowing to:

- Initialize and configure the TIM Output Compare.
- De-initialize the TIM Output Compare.
- Start the TIM Output Compare.
- Stop the TIM Output Compare.
- Start the TIM Output Compare and enable interrupt.
- Stop the TIM Output Compare and disable interrupt.
- Start the TIM Output Compare and enable DMA transfer.
- Stop the TIM Output Compare and disable DMA transfer.

This section contains the following APIs:

- *HAL_TIM_OC_Init*
- *HAL_TIM_OC_DeInit*
- *HAL_TIM_OC_MspInit*
- *HAL_TIM_OC_MspDeInit*
- *HAL_TIM_OC_Start*
- *HAL_TIM_OC_Stop*
- *HAL_TIM_OC_Start_IT*
- *HAL_TIM_OC_Stop_IT*
- *HAL_TIM_OC_Start_DMA*
- *HAL_TIM_OC_Stop_DMA*

58.2.5 TIM PWM functions

This section provides functions allowing to:

- Initialize and configure the TIM PWM.
- De-initialize the TIM PWM.
- Start the TIM PWM.
- Stop the TIM PWM.
- Start the TIM PWM and enable interrupt.
- Stop the TIM PWM and disable interrupt.
- Start the TIM PWM and enable DMA transfer.
- Stop the TIM PWM and disable DMA transfer.

This section contains the following APIs:

- *HAL_TIM_PWM_Init*
- *HAL_TIM_PWM_DeInit*
- *HAL_TIM_PWM_MspInit*
- *HAL_TIM_PWM_MspDeInit*
- *HAL_TIM_PWM_Start*

- *HAL_TIM_PWM_Stop*
- *HAL_TIM_PWM_Start_IT*
- *HAL_TIM_PWM_Stop_IT*
- *HAL_TIM_PWM_Start_DMA*
- *HAL_TIM_PWM_Stop_DMA*

58.2.6 TIM Input Capture functions

This section provides functions allowing to:

- Initialize and configure the TIM Input Capture.
- De-initialize the TIM Input Capture.
- Start the TIM Input Capture.
- Stop the TIM Input Capture.
- Start the TIM Input Capture and enable interrupt.
- Stop the TIM Input Capture and disable interrupt.
- Start the TIM Input Capture and enable DMA transfer.
- Stop the TIM Input Capture and disable DMA transfer.

This section contains the following APIs:

- *HAL_TIM_IC_Init*
- *HAL_TIM_IC_DeInit*
- *HAL_TIM_IC_MspInit*
- *HAL_TIM_IC_MspDeInit*
- *HAL_TIM_IC_Start*
- *HAL_TIM_IC_Stop*
- *HAL_TIM_IC_Start_IT*
- *HAL_TIM_IC_Stop_IT*
- *HAL_TIM_IC_Start_DMA*
- *HAL_TIM_IC_Stop_DMA*

58.2.7 TIM One Pulse functions

This section provides functions allowing to:

- Initialize and configure the TIM One Pulse.
- De-initialize the TIM One Pulse.
- Start the TIM One Pulse.
- Stop the TIM One Pulse.
- Start the TIM One Pulse and enable interrupt.
- Stop the TIM One Pulse and disable interrupt.
- Start the TIM One Pulse and enable DMA transfer.
- Stop the TIM One Pulse and disable DMA transfer.

This section contains the following APIs:

- *HAL_TIM_OnePulse_Init*
- *HAL_TIM_OnePulse_DeInit*
- *HAL_TIM_OnePulse_MspInit*
- *HAL_TIM_OnePulse_MspDeInit*
- *HAL_TIM_OnePulse_Start*
- *HAL_TIM_OnePulse_Stop*
- *HAL_TIM_OnePulse_Start_IT*
- *HAL_TIM_OnePulse_Stop_IT*

58.2.8 TIM Encoder functions

This section provides functions allowing to:

- Initialize and configure the TIM Encoder.
- De-initialize the TIM Encoder.
- Start the TIM Encoder.
- Stop the TIM Encoder.
- Start the TIM Encoder and enable interrupt.
- Stop the TIM Encoder and disable interrupt.
- Start the TIM Encoder and enable DMA transfer.
- Stop the TIM Encoder and disable DMA transfer.

This section contains the following APIs:

- ***HAL_TIM_Encoder_Init***
- ***HAL_TIM_Encoder_DeInit***
- ***HAL_TIM_Encoder_MspInit***
- ***HAL_TIM_Encoder_MspDeInit***
- ***HAL_TIM_Encoder_Start***
- ***HAL_TIM_Encoder_Stop***
- ***HAL_TIM_Encoder_Start_IT***
- ***HAL_TIM_Encoder_Stop_IT***
- ***HAL_TIM_Encoder_Start_DMA***
- ***HAL_TIM_Encoder_Stop_DMA***

58.2.9 TIM Callbacks functions

This section provides TIM callback functions:

- TIM Period elapsed callback
- TIM Output Compare callback
- TIM Input capture callback
- TIM Trigger callback
- TIM Error callback
- TIM Index callback
- TIM Direction change callback
- TIM Index error callback
- TIM Transition error callback

This section contains the following APIs:

- ***HAL_TIM_PeriodElapsedCallback***
- ***HAL_TIM_PeriodElapsedHalfCpltCallback***
- ***HAL_TIM_OC_DelayElapsedCallback***
- ***HAL_TIM_IC_CaptureCallback***
- ***HAL_TIM_IC_CaptureHalfCpltCallback***
- ***HAL_TIM_PWM_PulseFinishedCallback***
- ***HAL_TIM_PWM_PulseFinishedHalfCpltCallback***
- ***HAL_TIM_TriggerCallback***
- ***HAL_TIM_TriggerHalfCpltCallback***
- ***HAL_TIM_ErrorCallback***

58.2.10 Detailed description of functions

HAL_TIM_Base_Init

Function name

HAL_StatusTypeDef HAL_TIM_Base_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Time base Unit according to the specified parameters in the TIM_HandleTypeDef and initialize the associated handle.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_Base_DeInit() before HAL_TIM_Base_Init()

HAL_TIM_Base_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_Base_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM Base peripheral.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_Base_MspInit

Function name

void HAL_TIM_Base_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Base MSP.

Parameters

- **htim:** TIM Base handle

Return values

- **None:**

HAL_TIM_Base_MspDeInit

Function name

void HAL_TIM_Base_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Base MSP.

Parameters

- **htim:** TIM Base handle

Return values

- **None:**

HAL_TIM_Base_Start

Function name

HAL_StatusTypeDef HAL_TIM_Base_Start (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Base generation.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_Base_Stop

Function name

HAL_StatusTypeDef HAL_TIM_Base_Stop (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Base generation.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_Base_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_Base_Start_IT (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Base generation in interrupt mode.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_Base_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_Base_Stop_IT (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Base generation in interrupt mode.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_Base_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Base_Start_DMA (TIM_HandleTypeDef * htim, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Base generation in DMA mode.

Parameters

- **htim:** TIM Base handle
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to peripheral.

Return values

- **HAL:** status

HAL_TIM_Base_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Base_Stop_DMA (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Base generation in DMA mode.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** status

HAL_TIM_OC_Init

Function name

HAL_StatusTypeDef HAL_TIM_OC_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Output Compare according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_OC_DeInit() before HAL_TIM_OC_Init()

HAL_TIM_OC_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_OC_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM peripheral.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **HAL:** status

HAL_TIM_OC_MspInit

Function name

void HAL_TIM_OC_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Output Compare MSP.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **None:**

HAL_TIM_OC_MspDeInit

Function name

void HAL_TIM_OC_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Output Compare MSP.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **None:**

HAL_TIM_OC_Start

Function name

HAL_StatusTypeDef HAL_TIM_OC_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_OC_Stop

Function name

HAL_StatusTypeDef HAL_TIM_OC_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_OC_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_OC_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation in interrupt mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OC_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_OC_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in interrupt mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OC_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_OC_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Output Compare signal generation in DMA mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIM_OC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_OC_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in DMA mode.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Init

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM PWM Time Base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM PWM handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_PWM_DeInit() before HAL_TIM_PWM_Init()

HAL_TIM_PWM_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_PWM_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM peripheral.

Parameters

- **htim:** TIM PWM handle

Return values

- **HAL:** status

HAL_TIM_PWM_MspInit

Function name

void HAL_TIM_PWM_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM PWM MSP.

Parameters

- **htim:** TIM PWM handle

Return values

- **None:**

HAL_TIM_PWM_MspDeInit

Function name

void HAL_TIM_PWM_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM PWM MSP.

Parameters

- **htim:** TIM PWM handle

Return values

- **None:**

HAL_TIM_PWM_Start

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Stop

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation in interrupt mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation in interrupt mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_PWM_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM PWM signal generation in DMA mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIM_PWM_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_PWM_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM PWM signal generation in DMA mode.

Parameters

- **htim:** TIM PWM handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Init

Function name

HAL_StatusTypeDef HAL_TIM_IC_Init (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Input Capture Time base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_IC_DeInit() before HAL_TIM_IC_Init()

HAL_TIM_IC_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_IC_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM peripheral.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **HAL:** status

HAL_TIM_IC_MspInit

Function name

void HAL_TIM_IC_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Input Capture MSP.

Parameters

- **htim:** TIM Input Capture handle

Return values

- **None:**

HAL_TIM_IC_MspDeInit

Function name

void HAL_TIM_IC_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Input Capture MSP.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_IC_Start

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Input Capture measurement.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Stop

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Input Capture measurement in interrupt mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement in interrupt mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_IC_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_IC_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Input Capture measurement in DMA mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The destination Buffer address.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIM_IC_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_IC_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Input Capture measurement in DMA mode.

Parameters

- **htim:** TIM Input Capture handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_Init

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Init (TIM_HandleTypeDef * htim, uint32_t OnePulseMode)

Function description

Initializes the TIM One Pulse Time Base according to the specified parameters in the TIM_HandleTypeDef and initializes the associated handle.

Parameters

- **htim:** TIM One Pulse handle
- **OnePulseMode:** Select the One pulse mode. This parameter can be one of the following values:
  - TIM_OPMODE_SINGLE: Only one pulse will be generated.
  - TIM_OPMODE_REPETITIVE: Repetitive pulses will be generated.

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_OnePulse_DeInit() before HAL_TIM_OnePulse_Init()
- When the timer instance is initialized in One Pulse mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIM_OnePulse_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM One Pulse.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **HAL:** status

HAL_TIM_OnePulse_MspInit

Function name

void HAL_TIM_OnePulse_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM One Pulse MSP.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **None:**

HAL_TIM_OnePulse_MspDeInit

Function name

void HAL_TIM_OnePulse_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM One Pulse MSP.

Parameters

- **htim:** TIM One Pulse handle

Return values

- **None:**

HAL_TIM_OnePulse_Start

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Start (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_Stop

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Stop (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channels to be disable This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Start_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation in interrupt mode.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_Stop_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation in interrupt mode.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Init

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Init (TIM_HandleTypeDef * htim, TIM_Encoder_InitTypeDef * sConfig)

Function description

Initializes the TIM Encoder Interface and initialize the associated handle.

Parameters

- **htim:** TIM Encoder Interface handle
- **sConfig:** TIM Encoder Interface configuration structure

Return values

- **HAL:** status

Notes

- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode. Ex: call HAL_TIM_Encoder_DeInit() before HAL_TIM_Encoder_Init()
- Encoder mode and External clock mode 2 are not compatible and must not be selected together Ex: A call for HAL_TIM_Encoder_Init will erase the settings of HAL_TIM_ConfigClockSource using TIM_CLOCKSOURCE_ETRMODE2 and vice versa
- When the timer instance is initialized in Encoder mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIM_Encoder_DeInit

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM Encoder interface.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **HAL:** status

HAL_TIM_Encoder_MspInit

Function name

void HAL_TIM_Encoder_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Encoder Interface MSP.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **None:**

HAL_TIM_Encoder_MspDeInit

Function name

void HAL_TIM_Encoder_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Encoder Interface MSP.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **None:**

HAL_TIM_Encoder_Start

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Encoder Interface.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Start_IT

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Encoder Interface in interrupt mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface in interrupt mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_Encoder_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData1, uint32_t * pData2, uint16_t Length)

Function description

Starts the TIM Encoder Interface in DMA mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected
- **pData1:** The destination Buffer address for IC1.
- **pData2:** The destination Buffer address for IC2.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIM_Encoder_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIM_Encoder_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Encoder Interface in DMA mode.

Parameters

- **htim:** TIM Encoder Interface handle
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_ALL: TIM Channel 1 and TIM Channel 2 are selected

Return values

- **HAL:** status

HAL_TIM_IRQHandler

Function name

void HAL_TIM_IRQHandler (TIM_HandleTypeDef * htim)

Function description

This function handles TIM interrupts requests.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_OC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_OC_ConfigChannel (TIM_HandleTypeDef * htim, TIM_OC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM Output Compare Channels according to the specified parameters in the TIM_OC_InitTypeDef.

Parameters

- **htim:** TIM Output Compare handle
- **sConfig:** TIM Output Compare configuration structure
- **Channel:** TIM Channels to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_PWM_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_PWM_ConfigChannel (TIM_HandleTypeDef * htim, TIM_OC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM PWM channels according to the specified parameters in the TIM_OC_InitTypeDef.

Parameters

- **htim:** TIM PWM handle
- **sConfig:** TIM PWM configuration structure
- **Channel:** TIM Channels to be configured This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return values

- **HAL:** status

HAL_TIM_IC_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_IC_ConfigChannel (TIM_HandleTypeDef * htim, TIM_IC_InitTypeDef * sConfig, uint32_t Channel)

Function description

Initializes the TIM Input Capture Channels according to the specified parameters in the TIM_IC_InitTypeDef.

Parameters

- **htim:** TIM IC handle
- **sConfig:** TIM Input Capture configuration structure
- **Channel:** TIM Channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIM_OnePulse_ConfigChannel

Function name

HAL_StatusTypeDef HAL_TIM_OnePulse_ConfigChannel (TIM_HandleTypeDef * htim, TIM_OnePulse_InitTypeDef * sConfig, uint32_t OutputChannel, uint32_t InputChannel)

Function description

Initializes the TIM One Pulse Channels according to the specified parameters in the TIM_OnePulse_InitTypeDef.

Parameters

- **htim:** TIM One Pulse handle
- **sConfig:** TIM One Pulse configuration structure
- **OutputChannel:** TIM output channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
- **InputChannel:** TIM input Channel to configure This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

Notes

- To output a waveform with a minimum delay user can enable the fast mode by calling the __HAL_TIM_ENABLE_OCxFAST macro. Then CCx output is forced in response to the edge detection on TIx input, without taking in account the comparison.

HAL_TIM_ConfigOCrefClear

Function name

HAL_StatusTypeDef HAL_TIM_ConfigOCrefClear (TIM_HandleTypeDef * htim, TIM_ClearInputConfigTypeDef * sClearInputConfig, uint32_t Channel)

Function description

Configures the OCRef clear feature.

Parameters

- **htim:** TIM handle
- **sClearInputConfig:** pointer to a TIM_ClearInputConfigTypeDef structure that contains the OCREF clear feature and parameters for the TIM peripheral.
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5
  - TIM_CHANNEL_6: TIM Channel 6

Return values

- **HAL:** status

HAL_TIM_ConfigClockSource

Function name

HAL_StatusTypeDef HAL_TIM_ConfigClockSource (TIM_HandleTypeDef * htim, TIM_ClockConfigTypeDef * sClockSourceConfig)

Function description

Configures the clock source to be used.

Parameters

- **htim:** TIM handle
- **sClockSourceConfig:** pointer to a TIM_ClockConfigTypeDef structure that contains the clock source information for the TIM peripheral.

Return values

- **HAL:** status

HAL_TIM_ConfigTI1Input

Function name

HAL_StatusTypeDef HAL_TIM_ConfigTI1Input (TIM_HandleTypeDef * htim, uint32_t TI1_Selection)

Function description

Selects the signal connected to the TI1 input: direct from CH1_input or a XOR combination between CH1_input, CH2_input & CH3_input.

Parameters

- **htim:** TIM handle.
- **TI1_Selection:** Indicate whether or not channel 1 is connected to the output of a XOR gate. This parameter can be one of the following values:
  - TIM_TI1SELECTION_CH1: The TIMx_CH1 pin is connected to TI1 input
  - TIM_TI1SELECTION_XORCOMBINATION: The TIMx_CH1, CH2 and CH3 pins are connected to the TI1 input (XOR combination)

Return values

- **HAL:** status

HAL_TIM_SlaveConfigSynchro

Function name

HAL_StatusTypeDef HAL_TIM_SlaveConfigSynchro (TIM_HandleTypeDef * htim, TIM_SlaveConfigTypeDef * sSlaveConfig)

Function description

Configures the TIM in Slave mode.

Parameters

- **htim:** TIM handle.
- **sSlaveConfig:** pointer to a TIM_SlaveConfigTypeDef structure that contains the selected trigger (internal trigger input, filtered timer input or external trigger input) and the Slave mode (Disable, Reset, Gated, Trigger, External clock mode 1, Reset + Trigger, Gated + Reset).

Return values

- **HAL:** status

HAL_TIM_SlaveConfigSynchro_IT

Function name

HAL_StatusTypeDef HAL_TIM_SlaveConfigSynchro_IT (TIM_HandleTypeDef * htim, TIM_SlaveConfigTypeDef * sSlaveConfig)

Function description

Configures the TIM in Slave mode in interrupt mode.

Parameters

- **htim:** TIM handle.
- **sSlaveConfig:** pointer to a TIM_SlaveConfigTypeDef structure that contains the selected trigger (internal trigger input, filtered timer input or external trigger input) and the Slave mode (Disable, Reset, Gated, Trigger, External clock mode 1, Reset + Trigger, Gated + Reset).

Return values

- **HAL:** status

HAL_TIM_DMABurst_WriteStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_WriteStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength)

Function description

Configure the DMA Burst to transfer Data from the memory to the TIM peripheral.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data write This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR
  - TIM_DMABASE_CCR1
  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_26TRANSFER.

Return values

- **HAL:** status

Notes

- This function should be used only when BurstLength is equal to DMA data transfer length.

HAL_TIM_DMABurst_MultiWriteStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_MultiWriteStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength, uint32_t DataLength)

Function description

Configure the DMA Burst to transfer multiple Data from the memory to the TIM peripheral.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data write This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR
  - TIM_DMABASE_CCR1
  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_26TRANSFER.
- **DataLength:** Data length. This parameter can be one value between 1 and 0xFFFF.

Return values

- **HAL:** status

HAL_TIM_DMABurst_WriteStop

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_WriteStop (TIM_HandleTypeDef * htim, uint32_t BurstRequestSrc)

Function description

Stops the TIM DMA Burst mode.

Parameters

- **htim:** TIM handle
- **BurstRequestSrc:** TIM DMA Request sources to disable

Return values

- **HAL:** status

HAL_TIM_DMABurst_ReadStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_ReadStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength)

Function description

Configure the DMA Burst to transfer Data from the TIM peripheral to the memory.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data read This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR
  - TIM_DMABASE_CCR1
  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_26TRANSFER.

Return values

- **HAL:** status

Notes

- This function should be used only when BurstLength is equal to DMA data transfer length.

HAL_TIM_DMABurst_MultiReadStart

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_MultiReadStart (TIM_HandleTypeDef * htim, uint32_t BurstBaseAddress, uint32_t BurstRequestSrc, uint32_t * BurstBuffer, uint32_t BurstLength, uint32_t DataLength)

Function description

Configure the DMA Burst to transfer Data from the TIM peripheral to the memory.

Parameters

- **htim:** TIM handle
- **BurstBaseAddress:** TIM Base address from where the DMA will start the Data read This parameter can be one of the following values:
  - TIM_DMABASE_CR1
  - TIM_DMABASE_CR2
  - TIM_DMABASE_SMCR
  - TIM_DMABASE_DIER
  - TIM_DMABASE_SR
  - TIM_DMABASE_EGR
  - TIM_DMABASE_CCMR1
  - TIM_DMABASE_CCMR2
  - TIM_DMABASE_CCER
  - TIM_DMABASE_CNT
  - TIM_DMABASE_PSC
  - TIM_DMABASE_ARR
  - TIM_DMABASE_RCR
  - TIM_DMABASE_CCR1
  - TIM_DMABASE_CCR2
  - TIM_DMABASE_CCR3
  - TIM_DMABASE_CCR4
  - TIM_DMABASE_BDTR
  - TIM_DMABASE_CCMR3
  - TIM_DMABASE_CCR5
  - TIM_DMABASE_CCR6
  - TIM_DMABASE_DTR2
  - TIM_DMABASE_ECR
  - TIM_DMABASE_TISEL
  - TIM_DMABASE_AF1
  - TIM_DMABASE_AF2
  - TIM_DMABASE_OR
- **BurstRequestSrc:** TIM DMA Request sources This parameter can be one of the following values:
  - TIM_DMA_UPDATE: TIM update Interrupt source
  - TIM_DMA_CC1: TIM Capture Compare 1 DMA source
  - TIM_DMA_CC2: TIM Capture Compare 2 DMA source
  - TIM_DMA_CC3: TIM Capture Compare 3 DMA source
  - TIM_DMA_CC4: TIM Capture Compare 4 DMA source
  - TIM_DMA_COM: TIM Commutation DMA source
  - TIM_DMA_TRIGGER: TIM Trigger DMA source
- **BurstBuffer:** The Buffer address.
- **BurstLength:** DMA Burst length. This parameter can be one value between: TIM_DMABURSTLENGTH_1TRANSFER and TIM_DMABURSTLENGTH_26TRANSFER.
- **DataLength:** Data length. This parameter can be one value between 1 and 0xFFFF.

Return values

- **HAL:** status

HAL_TIM_DMABurst_ReadStop

Function name

HAL_StatusTypeDef HAL_TIM_DMABurst_ReadStop (TIM_HandleTypeDef * htim, uint32_t BurstRequestSrc)

Function description

Stop the DMA burst reading.

Parameters

- **htim:** TIM handle
- **BurstRequestSrc:** TIM DMA Request sources to disable.

Return values

- **HAL:** status

HAL_TIM_GenerateEvent

Function name

HAL_StatusTypeDef HAL_TIM_GenerateEvent (TIM_HandleTypeDef * htim, uint32_t EventSource)

Function description

Generate a software event.

Parameters

- **htim:** TIM handle
- **EventSource:** specifies the event source. This parameter can be one of the following values:
  - TIM_EVENTSOURCE_UPDATE: Timer update Event source
  - TIM_EVENTSOURCE_CC1: Timer Capture Compare 1 Event source
  - TIM_EVENTSOURCE_CC2: Timer Capture Compare 2 Event source
  - TIM_EVENTSOURCE_CC3: Timer Capture Compare 3 Event source
  - TIM_EVENTSOURCE_CC4: Timer Capture Compare 4 Event source
  - TIM_EVENTSOURCE_COM: Timer COM event source
  - TIM_EVENTSOURCE_TRIGGER: Timer Trigger Event source
  - TIM_EVENTSOURCE_BREAK: Timer Break event source
  - TIM_EVENTSOURCE_BREAK2: Timer Break2 event source

Return values

- **HAL:** status

Notes

- Basic timers can only generate an update event.
- TIM_EVENTSOURCE_COM is relevant only with advanced timer instances.
- TIM_EVENTSOURCE_BREAK and TIM_EVENTSOURCE_BREAK2 are relevant only for timer instances supporting break input(s).

HAL_TIM_ReadCapturedValue

Function name

uint32_t HAL_TIM_ReadCapturedValue (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Read the captured value from Capture Compare unit.

Parameters

- **htim:** TIM handle.
- **Channel:** TIM Channels to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **Captured:** value

HAL_TIM_PeriodElapsedCallback

Function name

void HAL_TIM_PeriodElapsedCallback (TIM_HandleTypeDef * htim)

Function description

Period elapsed callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_PeriodElapsedHalfCpltCallback

Function name

void HAL_TIM_PeriodElapsedHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Period elapsed half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_OC_DelayElapsedCallback

Function name

void HAL_TIM_OC_DelayElapsedCallback (TIM_HandleTypeDef * htim)

Function description

Output Compare callback in non-blocking mode.

Parameters

- **htim:** TIM OC handle

Return values

- **None:**

HAL_TIM_IC_CaptureCallback

Function name

void HAL_TIM_IC_CaptureCallback (TIM_HandleTypeDef * htim)

Function description

Input Capture callback in non-blocking mode.

Parameters

- **htim:** TIM IC handle

Return values

- **None:**

HAL_TIM_IC_CaptureHalfCpltCallback

Function name

void HAL_TIM_IC_CaptureHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Input Capture half complete callback in non-blocking mode.

Parameters

- **htim:** TIM IC handle

Return values

- **None:**

HAL_TIM_PWM_PulseFinishedCallback

Function name

void HAL_TIM_PWM_PulseFinishedCallback (TIM_HandleTypeDef * htim)

Function description

PWM Pulse finished callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_PWM_PulseFinishedHalfCpltCallback

Function name

void HAL_TIM_PWM_PulseFinishedHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

PWM Pulse finished half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_TriggerCallback

Function name

void HAL_TIM_TriggerCallback (TIM_HandleTypeDef * htim)

Function description

Hall Trigger detection callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_TriggerHalfCpltCallback

Function name

void HAL_TIM_TriggerHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Hall Trigger detection half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_ErrorCallback

Function name

void HAL_TIM_ErrorCallback (TIM_HandleTypeDef * htim)

Function description

Timer error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIM_Base_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_Base_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM Base handle state.

Parameters

- **htim:** TIM Base handle

Return values

- **HAL:** state

HAL_TIM_OC_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_OC_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM OC handle state.

Parameters

- **htim:** TIM Output Compare handle

Return values

- **HAL:** state

HAL_TIM_PWM_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_PWM_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM PWM handle state.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** state

HAL_TIM_IC_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_IC_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM Input Capture handle state.

Parameters

- **htim:** TIM IC handle

Return values

- **HAL:** state

HAL_TIM_OnePulse_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_OnePulse_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM One Pulse Mode handle state.

Parameters

- **htim:** TIM OPM handle

Return values

- **HAL:** state

HAL_TIM_Encoder_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIM_Encoder_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM Encoder Mode handle state.

Parameters

- **htim:** TIM Encoder Interface handle

Return values

- **HAL:** state

HAL_TIM_GetActiveChannel

Function name

HAL_TIM_ActiveChannel HAL_TIM_GetActiveChannel (TIM_HandleTypeDef * htim)

Function description

Return the TIM Encoder Mode handle state.

Parameters

- **htim:** TIM handle

Return values

- **Active:** channel

HAL_TIM_GetChannelState

Function name

HAL_TIM_ChannelStateTypeDef HAL_TIM_GetChannelState (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Return actual state of the TIM channel.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5
  - TIM_CHANNEL_6: TIM Channel 6

Return values

- **TIM:** Channel state

HAL_TIM_DMABurstState

Function name

HAL_TIM_DMABurstStateTypeDef HAL_TIM_DMABurstState (TIM_HandleTypeDef * htim)

Function description

Return actual state of a DMA burst operation.

Parameters

- **htim:** TIM handle

Return values

- **DMA:** burst state

TIM_Base_SetConfig

Function name

void TIM_Base_SetConfig (TIM_TypeDef * TIMx, TIM_Base_InitTypeDef * Structure)

Function description

Time Base configuration.

Parameters

- **TIMx:** TIM peripheral
- **Structure:** TIM Base configuration structure

Return values

- **None:**

TIM_TI1_SetConfig

Function name

void TIM_TI1_SetConfig (TIM_TypeDef * TIMx, uint32_t TIM_ICPolarity, uint32_t TIM_ICSelection, uint32_t TIM_ICFilter)

Function description

Configure the TI1 as Input.

Parameters

- **TIMx:** to select the TIM peripheral.
- **TIM_ICPolarity:** The Input Polarity. This parameter can be one of the following values:
  - TIM_ICPOLARITY_RISING
  - TIM_ICPOLARITY_FALLING
  - TIM_ICPOLARITY_BOTHEDGE
- **TIM_ICSelection:** specifies the input to be used. This parameter can be one of the following values:
  - TIM_ICSELECTION_DIRECTTI: TIM Input 1 is selected to be connected to IC1.
  - TIM_ICSELECTION_INDIRECTTI: TIM Input 1 is selected to be connected to IC2.
  - TIM_ICSELECTION_TRC: TIM Input 1 is selected to be connected to TRC.
- **TIM_ICFilter:** Specifies the Input Capture Filter. This parameter must be a value between 0x00 and 0x0F.

Return values

- **None:**

Notes

- TIM_ICFilter and TIM_ICPolarity are not used in INDIRECT mode as TI2FP1 (on channel2 path) is used as the input signal. Therefore CCMR1 must be protected against un-initialized filter and polarity values.

TIM_OC2_SetConfig

Function name

void TIM_OC2_SetConfig (TIM_TypeDef * TIMx, TIM_OC_InitTypeDef * OC_Config)

Function description

Timer Output Compare 2 configuration.

Parameters

- **TIMx:** to select the TIM peripheral
- **OC_Config:** The ouput configuration structure

Return values

- **None:**

TIM_ETR_SetConfig

Function name

void TIM_ETR_SetConfig (TIM_TypeDef * TIMx, uint32_t TIM_ExtTRGPrescaler, uint32_t TIM_ExtTRGPolarity, uint32_t ExtTRGFilter)

Function description

Configures the TIMx External Trigger (ETR).

Parameters

- **TIMx:** to select the TIM peripheral
- **TIM_ExtTRGPrescaler:** The external Trigger Prescaler. This parameter can be one of the following values:
  - TIM_ETRPRESCALER_DIV1: ETRP Prescaler OFF.
  - TIM_ETRPRESCALER_DIV2: ETRP frequency divided by 2.
  - TIM_ETRPRESCALER_DIV4: ETRP frequency divided by 4.
  - TIM_ETRPRESCALER_DIV8: ETRP frequency divided by 8.
- **TIM_ExtTRGPolarity:** The external Trigger Polarity. This parameter can be one of the following values:
  - TIM_ETRPOLARITY_INVERTED: active low or falling edge active.
  - TIM_ETRPOLARITY_NONINVERTED: active high or rising edge active.
- **ExtTRGFilter:** External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

- **None:**

TIM_DMADelayPulseHalfCplt

Function name

void TIM_DMADelayPulseHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Delay Pulse half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMAError

Function name

void TIM_DMAError (DMA_HandleTypeDef * hdma)

Function description

TIM DMA error callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMACaptureCplt

Function name

void TIM_DMACaptureCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Capture complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_DMACaptureHalfCplt

Function name

void TIM_DMACaptureHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Capture half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIM_CCxChannelCmd

Function name

void TIM_CCxChannelCmd (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ChannelState)

Function description

Enables or disables the TIM Capture Compare Channel x.

Parameters

- **TIMx:** to select the TIM peripheral
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected
- **ChannelState:** specifies the TIM Channel CCxE bit new state. This parameter can be: TIM_CCx_ENABLE or TIM_CCx_DISABLE.

Return values

- **None:**

58.3 TIM Firmware driver defines

The following section lists the various define and macros of the module.

58.3.1 TIM

TIM

TIM Automatic Output Enable

TIM_AUTOMATICOUTPUT_DISABLE

MOE can be set only by software

TIM_AUTOMATICOUTPUT_ENABLE

MOE can be set by software or automatically at the next update event (if none of the break inputs BRK and BRK2 is active)

TIM Auto-Reload Preload

TIM_AUTORELOAD_PRELOAD_DISABLE

TIMx_ARR register is not buffered

TIM_AUTORELOAD_PRELOAD_ENABLE

TIMx_ARR register is buffered

TIM Break2 Input Alternate Function Mode

TIM_BREAK2_AFMODE_INPUT

Break2 input BRK2 in input mode

TIM_BREAK2_AFMODE_BIDIRECTIONAL

Break2 input BRK2 in bidirectional mode

TIM Break input 2 Enable

TIM_BREAK2_DISABLE

Break input BRK2 is disabled

TIM_BREAK2_ENABLE

Break input BRK2 is enabled

TIM Break Input 2 Polarity

TIM_BREAK2POLARITY_LOW

Break input BRK2 is active low

TIM_BREAK2POLARITY_HIGH

Break input BRK2 is active high

TIM Break Input Alternate Function Mode

TIM_BREAK_AFMODE_INPUT

Break input BRK in input mode

TIM_BREAK_AFMODE_BIDIRECTIONAL

Break input BRK in bidirectional mode

TIM Break Input Enable

TIM_BREAK_ENABLE

Break input BRK is enabled

TIM_BREAK_DISABLE

Break input BRK is disabled

TIM Break Input Polarity

TIM_BREAKPOLARITY_LOW

Break input BRK is active low

TIM_BREAKPOLARITY_HIGH

Break input BRK is active high

TIM Break System

TIM_BREAK_SYSTEM_ECC

Enables and locks the ECC error signal with Break Input of TIM1/8/15/16/17/20

TIM_BREAK_SYSTEM_PVD

Enables and locks the PVD connection with TIM1/8/15/16/17/20 Break Input and also the PVDE and PLS bits of the Power Control Interface

TIM_BREAK_SYSTEM_SRAM_PARITY_ERROR

Enables and locks the SRAM_PARITY error signal with Break Input of TIM1/8/15/16/17/20

TIM_BREAK_SYSTEM_LOCKUP

Enables and locks the LOCKUP output of CortexM4 with Break Input of TIM1/8/15/16/17/20

TIM Channel

TIM_CHANNEL_1

Capture/compare channel 1 identifier

TIM_CHANNEL_2

Capture/compare channel 2 identifier

TIM_CHANNEL_3

Capture/compare channel 3 identifier

TIM_CHANNEL_4

Capture/compare channel 4 identifier

TIM_CHANNEL_5

Compare channel 5 identifier

TIM_CHANNEL_6

Compare channel 6 identifier

TIM_CHANNEL_ALL

Global Capture/compare channel identifier

TIM Clear Input Polarity

TIM_CLEARINPUTPOLARITY_INVERTED

Polarity for ETRx pin

TIM_CLEARINPUTPOLARITY_NONINVERTED

Polarity for ETRx pin

TIM Clear Input Prescaler

TIM_CLEARINPUTPRESCALER_DIV1

No prescaler is used

TIM_CLEARINPUTPRESCALER_DIV2

Prescaler for External ETR pin: Capture performed once every 2 events.

TIM_CLEARINPUTPRESCALER_DIV4

Prescaler for External ETR pin: Capture performed once every 4 events.

TIM_CLEARINPUTPRESCALER_DIV8

Prescaler for External ETR pin: Capture performed once every 8 events.

TIM Clear Input Source

TIM_CLEARINPUTSOURCE_NONE

OCREF_CLR is disabled

TIM_CLEARINPUTSOURCE_ETR

OCREF_CLR is connected to ETRF input

TIM_CLEARINPUTSOURCE_COMP1

OCREF_CLR_INT is connected to COMP1 output

TIM_CLEARINPUTSOURCE_COMP2

OCREF_CLR_INT is connected to COMP2 output

TIM_CLEARINPUTSOURCE_COMP3

OCREF_CLR_INT is connected to COMP3 output

TIM_CLEARINPUTSOURCE_COMP4

OCREF_CLR_INT is connected to COMP4 output

TIM_CLEARINPUTSOURCE_COMP5

OCREF_CLR_INT is connected to COMP5 output

TIM_CLEARINPUTSOURCE_COMP6

OCREF_CLR_INT is connected to COMP6 output

TIM_CLEARINPUTSOURCE_COMP7

OCREF_CLR_INT is connected to COMP7 output

TIM Clock Division

TIM_CLOCKDIVISION_DIV1

Clock division: tDTS=tCK_INT

TIM_CLOCKDIVISION_DIV2

Clock division: tDTS=2*tCK_INT

TIM_CLOCKDIVISION_DIV4

Clock division: tDTS=4*tCK_INT

TIM Clock Polarity

TIM_CLOCKPOLARITY_INVERTED

Polarity for ETRx clock sources

TIM_CLOCKPOLARITY_NONINVERTED

Polarity for ETRx clock sources

TIM_CLOCKPOLARITY_RISING

Polarity for TIx clock sources

TIM_CLOCKPOLARITY_FALLING

Polarity for TIx clock sources

TIM_CLOCKPOLARITY_BOTHEDGE

Polarity for TIx clock sources

TIM Clock Prescaler

TIM_CLOCKPRESCALER_DIV1

No prescaler is used

TIM_CLOCKPRESCALER_DIV2

Prescaler for External ETR Clock: Capture performed once every 2 events.

TIM_CLOCKPRESCALER_DIV4

Prescaler for External ETR Clock: Capture performed once every 4 events.

TIM_CLOCKPRESCALER_DIV8

Prescaler for External ETR Clock: Capture performed once every 8 events.

TIM Clock Source

TIM_CLOCKSOURCE_ETRMODE2

External clock source mode 2

TIM_CLOCKSOURCE_INTERNAL

Internal clock source

TIM_CLOCKSOURCE_ITR0

External clock source mode 1 (ITR0)

TIM_CLOCKSOURCE_ITR1

External clock source mode 1 (ITR1)

TIM_CLOCKSOURCE_ITR2

External clock source mode 1 (ITR2)

TIM_CLOCKSOURCE_ITR3

External clock source mode 1 (ITR3)

TIM_CLOCKSOURCE_TI1ED

External clock source mode 1 (TTI1FP1 + edge detect.)

TIM_CLOCKSOURCE_TI1

External clock source mode 1 (TTI1FP1)

TIM_CLOCKSOURCE_TI2

External clock source mode 1 (TTI2FP2)

TIM_CLOCKSOURCE_ETRMODE1

External clock source mode 1 (ETRF)

TIM_CLOCKSOURCE_ITR4

External clock source mode 1 (ITR4)

TIM_CLOCKSOURCE_ITR5

External clock source mode 1 (ITR5)

TIM_CLOCKSOURCE_ITR6

External clock source mode 1 (ITR6)

TIM_CLOCKSOURCE_ITR7

External clock source mode 1 (ITR7)

TIM_CLOCKSOURCE_ITR8

External clock source mode 1 (ITR8)

TIM_CLOCKSOURCE_ITR9

External clock source mode 1 (ITR9)

TIM_CLOCKSOURCE_ITR10

External clock source mode 1 (ITR10)

TIM_CLOCKSOURCE_ITR11

External clock source mode 1 (ITR11)

TIM Commutation Source

TIM_COMMUTATION_TRGI

When Capture/compare control bits are preloaded, they are updated by setting the COMG bit or when an rising edge occurs on trigger input

TIM_COMMUTATION_SOFTWARE

When Capture/compare control bits are preloaded, they are updated by setting the COMG bit

TIM Counter Mode

TIM_COUNTERMODE_UP

Counter used as up-counter

TIM_COUNTERMODE_DOWN

Counter used as down-counter

TIM_COUNTERMODE_CENTERALIGNED1

Center-aligned mode 1

TIM_COUNTERMODE_CENTERALIGNED2

Center-aligned mode 2

TIM_COUNTERMODE_CENTERALIGNED3

Center-aligned mode 3

TIM DMA Base Address

TIM_DMABASE_CR1

TIM DMA Burst Length

TIM_DMABURSTLENGTH_1TRANSFER

The transfer is done to 1 register starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_2TRANSFERS

The transfer is done to 2 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_3TRANSFERS

The transfer is done to 3 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_4TRANSFERS

The transfer is done to 4 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_5TRANSFERS

The transfer is done to 5 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_6TRANSFERS

The transfer is done to 6 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_7TRANSFERS

The transfer is done to 7 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_8TRANSFERS

The transfer is done to 8 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_9TRANSFERS

The transfer is done to 9 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_10TRANSFERS

The transfer is done to 10 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_11TRANSFERS

The transfer is done to 11 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_12TRANSFERS

The transfer is done to 12 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_13TRANSFERS

The transfer is done to 13 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_14TRANSFERS

The transfer is done to 14 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_15TRANSFERS

The transfer is done to 15 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_16TRANSFERS

The transfer is done to 16 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_17TRANSFERS

The transfer is done to 17 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_18TRANSFERS

The transfer is done to 18 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_19TRANSFERS

The transfer is done to 19 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_20TRANSFERS

The transfer is done to 20 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_21TRANSFERS

The transfer is done to 21 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_22TRANSFERS

The transfer is done to 22 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_23TRANSFERS

The transfer is done to 23 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_24TRANSFERS

The transfer is done to 24 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_25TRANSFERS

The transfer is done to 25 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM_DMABURSTLENGTH_26TRANSFERS

The transfer is done to 26 registers starting from TIMx_CR1 + TIMx_DCR.DBA

TIM DMA Sources

TIM_DMA_UPDATE

DMA request is triggered by the update event

TIM_DMA_CC1

DMA request is triggered by the capture/compare macth 1 event

TIM_DMA_CC2

DMA request is triggered by the capture/compare macth 2 event event

TIM_DMA_CC3

DMA request is triggered by the capture/compare macth 3 event event

TIM_DMA_CC4

DMA request is triggered by the capture/compare macth 4 event event

TIM_DMA_COM

DMA request is triggered by the commutation event

TIM_DMA_TRIGGER

DMA request is triggered by the trigger event

TIM Encoder Input Polarity

TIM_ENCODERINPUTPOLARITY_RISING

Encoder input with rising edge polarity

TIM_ENCODERINPUTPOLARITY_FALLING

Encoder input with falling edge polarity

TIM Encoder Mode

TIM_ENCODERMODE_TI1

Quadrature encoder mode 1, x2 mode, counts up/down on TI1FP1 edge depending on TI2FP2 level

TIM_ENCODERMODE_TI2

Quadrature encoder mode 2, x2 mode, counts up/down on TI2FP2 edge depending on TI1FP1 level.

TIM_ENCODERMODE_TI12

Quadrature encoder mode 3, x4 mode, counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input.

TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2

Encoder mode: Clock plus direction, x2 mode

TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1

Encoder mode: Clock plus direction, x1 mode, TI2FP2 edge sensitivity is set by CC2P

TIM_ENCODERMODE_DIRECTIONALCLOCK_X2

Encoder mode: Directional Clock, x2 mode

TIM_ENCODERMODE_DIRECTIONALCLOCK_X1_TI12

Encoder mode: Directional Clock, x1 mode, TI1FP1 and TI2FP2 edge sensitivity is set by CC1P and CC2P

TIM_ENCODERMODE_X1_TI1

Quadrature encoder mode: x1 mode, counting on TI1FP1 edges only, edge sensitivity is set by CC1P

TIM_ENCODERMODE_X1_TI2

Quadrature encoder mode: x1 mode, counting on TI2FP2 edges only, edge sensitivity is set by CC1P

TIM ETR Polarity

TIM_ETRPOLARITY_INVERTED

Polarity for ETR source

TIM_ETRPOLARITY_NONINVERTED

Polarity for ETR source

TIM ETR Prescaler

TIM_ETRPRESCALER_DIV1

No prescaler is used

TIM_ETRPRESCALER_DIV2

ETR input source is divided by 2

TIM_ETRPRESCALER_DIV4

ETR input source is divided by 4

TIM_ETRPRESCALER_DIV8

ETR input source is divided by 8

TIM Event Source

TIM_EVENTSOURCE_UPDATE

Reinitialize the counter and generates an update of the registers

TIM_EVENTSOURCE_CC1

A capture/compare event is generated on channel 1

TIM_EVENTSOURCE_CC2

A capture/compare event is generated on channel 2

TIM_EVENTSOURCE_CC3

A capture/compare event is generated on channel 3

TIM_EVENTSOURCE_CC4

A capture/compare event is generated on channel 4

TIM_EVENTSOURCE_COM

A commutation event is generated

TIM_EVENTSOURCE_TRIGGER

A trigger event is generated

TIM_EVENTSOURCE_BREAK

A break event is generated

TIM_EVENTSOURCE_BREAK2

A break 2 event is generated

TIM Exported Macros

__HAL_TIM_RESET_HANDLE_STATE

Description:

- Reset TIM handle state.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

__HAL_TIM_ENABLE

Description:

- Enable the TIM peripheral.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_MOE_ENABLE

Description:

- Enable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_DISABLE

Description:

- Disable the TIM peripheral.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

__HAL_TIM_MOE_DISABLE

Description:

- Disable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

Notes:

- The Main Output Enable of a timer instance is disabled only if all the CCx and CCxN channels have been disabled

__HAL_TIM_MOE_DISABLE_UNCONDITIONALLY

Description:

- Disable the TIM main Output.

Parameters:

- __HANDLE__: TIM handle

Return value:

- None

Notes:

- The Main Output Enable of a timer instance is disabled unconditionally

__HAL_TIM_ENABLE_IT

Description:

- Enable the specified TIM interrupt.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __INTERRUPT__: specifies the TIM interrupt source to enable. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_DISABLE_IT

Description:

- Disable the specified TIM interrupt.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __INTERRUPT__: specifies the TIM interrupt source to disable. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_ENABLE_DMA

Description:

- Enable the specified DMA request.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __DMA__: specifies the TIM DMA request to enable. This parameter can be one of the following values:
  - TIM_DMA_UPDATE: Update DMA request
  - TIM_DMA_CC1: Capture/Compare 1 DMA request
  - TIM_DMA_CC2: Capture/Compare 2 DMA request
  - TIM_DMA_CC3: Capture/Compare 3 DMA request
  - TIM_DMA_CC4: Capture/Compare 4 DMA request
  - TIM_DMA_COM: Commutation DMA request
  - TIM_DMA_TRIGGER: Trigger DMA request

Return value:

- None

__HAL_TIM_DISABLE_DMA

Description:

- Disable the specified DMA request.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __DMA__: specifies the TIM DMA request to disable. This parameter can be one of the following values:
  - TIM_DMA_UPDATE: Update DMA request
  - TIM_DMA_CC1: Capture/Compare 1 DMA request
  - TIM_DMA_CC2: Capture/Compare 2 DMA request
  - TIM_DMA_CC3: Capture/Compare 3 DMA request
  - TIM_DMA_CC4: Capture/Compare 4 DMA request
  - TIM_DMA_COM: Commutation DMA request
  - TIM_DMA_TRIGGER: Trigger DMA request

Return value:

- None

__HAL_TIM_GET_FLAG

Description:

- Check whether the specified TIM interrupt flag is set or not.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __FLAG__: specifies the TIM interrupt flag to check. This parameter can be one of the following values:
  - TIM_FLAG_UPDATE: Update interrupt flag
  - TIM_FLAG_CC1: Capture/Compare 1 interrupt flag
  - TIM_FLAG_CC2: Capture/Compare 2 interrupt flag
  - TIM_FLAG_CC3: Capture/Compare 3 interrupt flag
  - TIM_FLAG_CC4: Capture/Compare 4 interrupt flag
  - TIM_FLAG_CC5: Compare 5 interrupt flag
  - TIM_FLAG_CC6: Compare 6 interrupt flag
  - TIM_FLAG_COM: Commutation interrupt flag
  - TIM_FLAG_TRIGGER: Trigger interrupt flag
  - TIM_FLAG_BREAK: Break interrupt flag
  - TIM_FLAG_BREAK2: Break 2 interrupt flag
  - TIM_FLAG_SYSTEM_BREAK: System Break interrupt flag
  - TIM_FLAG_CC1OF: Capture/Compare 1 overcapture flag
  - TIM_FLAG_CC2OF: Capture/Compare 2 overcapture flag
  - TIM_FLAG_CC3OF: Capture/Compare 3 overcapture flag
  - TIM_FLAG_CC4OF: Capture/Compare 4 overcapture flag
  - TIM_FLAG_IDX: Index interrupt flag
  - TIM_FLAG_DIR: Direction change interrupt flag
  - TIM_FLAG_IERR: Index error interrupt flag
  - TIM_FLAG_TERR: Transition error interrupt flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_TIM_CLEAR_FLAG

Description:

- Clear the specified TIM interrupt flag.

Parameters:

- __HANDLE__: specifies the TIM Handle.
- __FLAG__: specifies the TIM interrupt flag to clear. This parameter can be one of the following values:
  - TIM_FLAG_UPDATE: Update interrupt flag
  - TIM_FLAG_CC1: Capture/Compare 1 interrupt flag
  - TIM_FLAG_CC2: Capture/Compare 2 interrupt flag
  - TIM_FLAG_CC3: Capture/Compare 3 interrupt flag
  - TIM_FLAG_CC4: Capture/Compare 4 interrupt flag
  - TIM_FLAG_CC5: Compare 5 interrupt flag
  - TIM_FLAG_CC6: Compare 6 interrupt flag
  - TIM_FLAG_COM: Commutation interrupt flag
  - TIM_FLAG_TRIGGER: Trigger interrupt flag
  - TIM_FLAG_BREAK: Break interrupt flag
  - TIM_FLAG_BREAK2: Break 2 interrupt flag
  - TIM_FLAG_SYSTEM_BREAK: System Break interrupt flag
  - TIM_FLAG_CC1OF: Capture/Compare 1 overcapture flag
  - TIM_FLAG_CC2OF: Capture/Compare 2 overcapture flag
  - TIM_FLAG_CC3OF: Capture/Compare 3 overcapture flag
  - TIM_FLAG_CC4OF: Capture/Compare 4 overcapture flag
  - TIM_FLAG_IDX: Index interrupt flag
  - TIM_FLAG_DIR: Direction change interrupt flag
  - TIM_FLAG_IERR: Index error interrupt flag
  - TIM_FLAG_TERR: Transition error interrupt flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_TIM_GET_IT_SOURCE

Description:

- Check whether the specified TIM interrupt source is enabled or not.

Parameters:

- __HANDLE__: TIM handle
- __INTERRUPT__: specifies the TIM interrupt source to check. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- The: state of TIM_IT (SET or RESET).

__HAL_TIM_CLEAR_IT

Description:

- Clear the TIM interrupt pending bits.

Parameters:

- __HANDLE__: TIM handle
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - TIM_IT_UPDATE: Update interrupt
  - TIM_IT_CC1: Capture/Compare 1 interrupt
  - TIM_IT_CC2: Capture/Compare 2 interrupt
  - TIM_IT_CC3: Capture/Compare 3 interrupt
  - TIM_IT_CC4: Capture/Compare 4 interrupt
  - TIM_IT_COM: Commutation interrupt
  - TIM_IT_TRIGGER: Trigger interrupt
  - TIM_IT_BREAK: Break interrupt
  - TIM_IT_IDX: Index interrupt
  - TIM_IT_DIR: Direction change interrupt
  - TIM_IT_IERR: Index error interrupt
  - TIM_IT_TERR: Transition error interrupt

Return value:

- None

__HAL_TIM_UIFREMAP_ENABLE

Description:

- Force a continuous copy of the update interrupt flag (UIF) into the timer counter register (bit 31).

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None: mode.

Notes:

- This allows both the counter value and a potential roll-over condition signalled by the UIFCPY flag to be read in an atomic way.

__HAL_TIM_UIFREMAP_DISABLE

Description:

- Disable update interrupt flag (UIF) remapping.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None: mode.

__HAL_TIM_GET_UIFCPY

Description:

- Get update interrupt flag (UIF) copy status.

Parameters:

- __COUNTER__: Counter value.

Return value:

- The: state of UIFCPY (TRUE or FALSE). mode.

__HAL_TIM_IS_TIM_COUNTING_DOWN

Description:

- Indicates whether or not the TIM Counter is used as downcounter.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- False: (Counter used as upcounter) or True (Counter used as downcounter)

Notes:

- This macro is particularly useful to get the counting mode when the timer operates in Center-aligned mode or Encoder mode.

__HAL_TIM_SET_PRESCALER

Description:

- Set the TIM Prescaler on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __PRESC__: specifies the Prescaler new value.

Return value:

- None

__HAL_TIM_SET_COUNTER

Description:

- Set the TIM Counter Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __COUNTER__: specifies the Counter register new value.

Return value:

- None

__HAL_TIM_GET_COUNTER

Description:

- Get the TIM Counter Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- 16-bit: or 32-bit value of the timer counter register (TIMx_CNT)

__HAL_TIM_SET_AUTORELOAD

Description:

- Set the TIM Autoreload Register value on runtime without calling another time any Init function.

Parameters:

- __HANDLE__: TIM handle.
- __AUTORELOAD__: specifies the Counter register new value.

Return value:

- None

__HAL_TIM_GET_AUTORELOAD

Description:

- Get the TIM Autoreload Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- 16-bit: or 32-bit value of the timer auto-reload register(TIMx_ARR)

__HAL_TIM_SET_CLOCKDIVISION

Description:

- Set the TIM Clock Division value on runtime without calling another time any Init function.

Parameters:

- __HANDLE__: TIM handle.
- __CKD__: specifies the clock division value. This parameter can be one of the following value:
  - TIM_CLOCKDIVISION_DIV1: tDTS=tCK_INT
  - TIM_CLOCKDIVISION_DIV2: tDTS=2*tCK_INT
  - TIM_CLOCKDIVISION_DIV4: tDTS=4*tCK_INT

Return value:

- None

__HAL_TIM_GET_CLOCKDIVISION

Description:

- Get the TIM Clock Division value on runtime.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- The: clock division can be one of the following values:
  - TIM_CLOCKDIVISION_DIV1: tDTS=tCK_INT
  - TIM_CLOCKDIVISION_DIV2: tDTS=2*tCK_INT
  - TIM_CLOCKDIVISION_DIV4: tDTS=4*tCK_INT

__HAL_TIM_SET_ICPRESCALER

Description:

- Set the TIM Input Capture prescaler on runtime without calling another time

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- __ICPSC__: specifies the Input Capture4 prescaler new value. This parameter can be one of the following values:
  - TIM_ICPSC_DIV1: no prescaler
  - TIM_ICPSC_DIV2: capture is done once every 2 events
  - TIM_ICPSC_DIV4: capture is done once every 4 events
  - TIM_ICPSC_DIV8: capture is done once every 8 events

Return value:

- None

__HAL_TIM_GET_ICPRESCALER

Description:

- Get the TIM Input Capture prescaler on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: get input capture 1 prescaler value
  - TIM_CHANNEL_2: get input capture 2 prescaler value
  - TIM_CHANNEL_3: get input capture 3 prescaler value
  - TIM_CHANNEL_4: get input capture 4 prescaler value

Return value:

- The: input capture prescaler can be one of the following values:
  - TIM_ICPSC_DIV1: no prescaler
  - TIM_ICPSC_DIV2: capture is done once every 2 events
  - TIM_ICPSC_DIV4: capture is done once every 4 events
  - TIM_ICPSC_DIV8: capture is done once every 8 events

__HAL_TIM_SET_COMPARE

Description:

- Set the TIM Capture Compare Register value on runtime without calling another time ConfigChannel function.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected
- __COMPARE__: specifies the Capture Compare register new value.

Return value:

- None

__HAL_TIM_GET_COMPARE

Description:

- Get the TIM Capture Compare Register value on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channel associated with the capture compare register This parameter can be one of the following values:
  - TIM_CHANNEL_1: get capture/compare 1 register value
  - TIM_CHANNEL_2: get capture/compare 2 register value
  - TIM_CHANNEL_3: get capture/compare 3 register value
  - TIM_CHANNEL_4: get capture/compare 4 register value
  - TIM_CHANNEL_5: get capture/compare 5 register value
  - TIM_CHANNEL_6: get capture/compare 6 register value

Return value:

- 16-bit: or 32-bit value of the capture/compare register (TIMx_CCRy)

__HAL_TIM_ENABLE_OCxPRELOAD

Description:

- Set the TIM Output compare preload.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

__HAL_TIM_DISABLE_OCxPRELOAD

Description:

- Reset the TIM Output compare preload.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

__HAL_TIM_ENABLE_OCxFAST

Description:

- Enable fast mode for a given channel.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

Notes:

- When fast mode is enabled an active edge on the trigger input acts like a compare match on CCx output. Delay to sample the trigger input and to activate CCx output is reduced to 3 clock cycles. Fast mode acts only if the channel is configured in PWM1 or PWM2 mode.

__HAL_TIM_DISABLE_OCxFAST

Description:

- Disable fast mode for a given channel.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
  - TIM_CHANNEL_5: TIM Channel 5 selected
  - TIM_CHANNEL_6: TIM Channel 6 selected

Return value:

- None

Notes:

- When fast mode is disabled CCx output behaves normally depending on counter and CCRx values even when the trigger is ON. The minimum delay to activate CCx output when an active edge occurs on the trigger input is 5 clock cycles.

__HAL_TIM_URS_ENABLE

Description:

- Set the Update Request Source (URS) bit of the TIMx_CR1 register.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

Notes:

- When the URS bit of the TIMx_CR1 register is set, only counter overflow/underflow generates an update interrupt or DMA request (if enabled)

__HAL_TIM_URS_DISABLE

Description:

- Reset the Update Request Source (URS) bit of the TIMx_CR1 register.

Parameters:

- __HANDLE__: TIM handle.

Return value:

- None

Notes:

- When the URS bit of the TIMx_CR1 register is reset, any of the following events generate an update interrupt or DMA request (if enabled): _ Counter overflow underflow _ Setting the UG bit _ Update generation through the slave mode controller

__HAL_TIM_SET_CAPTUREPOLARITY

Description:

- Set the TIM Capture x input polarity on runtime.

Parameters:

- __HANDLE__: TIM handle.
- __CHANNEL__: TIM Channels to be configured. This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- __POLARITY__: Polarity for TIx source
  - TIM_INPUTCHANNELPOLARITY_RISING: Rising Edge
  - TIM_INPUTCHANNELPOLARITY_FALLING: Falling Edge
  - TIM_INPUTCHANNELPOLARITY_BOTHEDGE: Rising and Falling Edge

Return value:

- None

TIM Flag Definition

TIM_FLAG_UPDATE

Update interrupt flag

TIM_FLAG_CC1

Capture/Compare 1 interrupt flag

TIM_FLAG_CC2

Capture/Compare 2 interrupt flag

TIM_FLAG_CC3

Capture/Compare 3 interrupt flag

TIM_FLAG_CC4

Capture/Compare 4 interrupt flag

TIM_FLAG_CC5

Capture/Compare 5 interrupt flag

TIM_FLAG_CC6

Capture/Compare 6 interrupt flag

TIM_FLAG_COM

Commutation interrupt flag

TIM_FLAG_TRIGGER

Trigger interrupt flag

TIM_FLAG_BREAK

Break interrupt flag

TIM_FLAG_BREAK2

Break 2 interrupt flag

TIM_FLAG_SYSTEM_BREAK

System Break interrupt flag

TIM_FLAG_CC1OF

Capture 1 overcapture flag

TIM_FLAG_CC2OF

Capture 2 overcapture flag

TIM_FLAG_CC3OF

Capture 3 overcapture flag

TIM_FLAG_CC4OF

Capture 4 overcapture flag

TIM_FLAG_IDX

Encoder index flag

TIM_FLAG_DIR

Direction change flag

TIM_FLAG_IERR

Index error flag

TIM_FLAG_TERR

Transition error flag

Group Channel 5 and Channel 1, 2 or 3

TIM_GROUPCH5_NONE

TIM_GROUPCH5_OC1REFC

TIM_GROUPCH5_OC2REFC

TIM_GROUPCH5_OC3REFC

TIM Input Capture Polarity

TIM_ICPOLARITY_RISING

Capture triggered by rising edge on timer input

TIM_ICPOLARITY_FALLING

Capture triggered by falling edge on timer input

TIM_ICPOLARITY_BOTHEDGE

Capture triggered by both rising and falling edges on timer input

TIM Input Capture Prescaler

TIM_ICPSC_DIV1

Capture performed each time an edge is detected on the capture input

TIM_ICPSC_DIV2

Capture performed once every 2 events

TIM_ICPSC_DIV4

Capture performed once every 4 events

TIM_ICPSC_DIV8

Capture performed once every 8 events

TIM Input Capture Selection

TIM_ICSELECTION_DIRECTTI

TIM Input 1, 2, 3 or 4 is selected to be connected to IC1, IC2, IC3 or IC4, respectively

TIM_ICSELECTION_INDIRECTTI

TIM Input 1, 2, 3 or 4 is selected to be connected to IC2, IC1, IC4 or IC3, respectively

TIM_ICSELECTION_TRC

TIM Input 1, 2, 3 or 4 is selected to be connected to TRC

TIM Input Channel polarity

TIM_INPUTCHANNELPOLARITY_RISING

Polarity for TIx source

TIM_INPUTCHANNELPOLARITY_FALLING

Polarity for TIx source

TIM_INPUTCHANNELPOLARITY_BOTHEDGE

Polarity for TIx source

TIM interrupt Definition

TIM_IT_UPDATE

Update interrupt

TIM_IT_CC1

Capture/Compare 1 interrupt

TIM_IT_CC2

Capture/Compare 2 interrupt

TIM_IT_CC3

Capture/Compare 3 interrupt

TIM_IT_CC4

Capture/Compare 4 interrupt

TIM_IT_COM

Commutation interrupt

TIM_IT_TRIGGER

Trigger interrupt

TIM_IT_BREAK

Break interrupt

TIM_IT_IDX

Index interrupt

TIM_IT_DIR

Direction change interrupt

TIM_IT_IERR

Index error interrupt

TIM_IT_TERR

Transition error interrupt

TIM Lock level

TIM_LOCKLEVEL_OFF

LOCK OFF

TIM_LOCKLEVEL_1

LOCK Level 1

TIM_LOCKLEVEL_2

LOCK Level 2

TIM_LOCKLEVEL_3

LOCK Level 3

TIM Master Mode Selection

TIM_TRGO_RESET

TIMx_EGR.UG bit is used as trigger output (TRGO)

TIM_TRGO_ENABLE

TIMx_CR1.CEN bit is used as trigger output (TRGO)

TIM_TRGO_UPDATE

Update event is used as trigger output (TRGO)

TIM_TRGO_OC1

Capture or a compare match 1 is used as trigger output (TRGO)

TIM_TRGO_OC1REF

OC1REF signal is used as trigger output (TRGO)

TIM_TRGO_OC2REF

OC2REF signal is used as trigger output(TRGO)

TIM_TRGO_OC3REF

OC3REF signal is used as trigger output(TRGO)

TIM_TRGO_OC4REF

OC4REF signal is used as trigger output(TRGO)

TIM_TRGO_ENCODER_CLK

Encoder clock is used as trigger output(TRGO)

TIM Master Mode Selection 2 (TRGO2)

TIM_TRGO2_RESET

TIMx_EGR.UG bit is used as trigger output (TRGO2)

TIM_TRGO2_ENABLE

TIMx_CR1.CEN bit is used as trigger output (TRGO2)

TIM_TRGO2_UPDATE

Update event is used as trigger output (TRGO2)

TIM_TRGO2_OC1

Capture or a compare match 1 is used as trigger output (TRGO2)

TIM_TRGO2_OC1REF

OC1REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC2REF

OC2REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC3REF

OC3REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC4REF

OC4REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC5REF

OC5REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC6REF

OC6REF signal is used as trigger output (TRGO2)

TIM_TRGO2_OC4REF_RISINGFALLING

OC4REF rising or falling edges generate pulses on TRGO2

TIM_TRGO2_OC6REF_RISINGFALLING

OC6REF rising or falling edges generate pulses on TRGO2

TIM_TRGO2_OC4REF_RISING_OC6REF_RISING

OC4REF or OC6REF rising edges generate pulses on TRGO2

TIM_TRGO2_OC4REF_RISING_OC6REF_FALLING

OC4REF rising or OC6REF falling edges generate pulses on TRGO2

TIM_TRGO2_OC5REF_RISING_OC6REF_RISING

OC5REF or OC6REF rising edges generate pulses on TRGO2

TIM_TRGO2_OC5REF_RISING_OC6REF_FALLING

OC5REF or OC6REF rising edges generate pulses on TRGO2

TIM Master/Slave Mode

TIM_MASTERSLAVEMODE_ENABLE

No action

TIM_MASTERSLAVEMODE_DISABLE

Master/slave mode is selected

TIM One Pulse Mode

TIM_OPMODE_SINGLE

Counter stops counting at the next update event

TIM_OPMODE_REPETITIVE

Counter is not stopped at update event

TIM OSSI OffState Selection for Idle mode state

TIM_OSSI_ENABLE

When inactive, OC/OCN outputs are enabled (still controlled by the timer)

TIM_OSSI_DISABLE

When inactive, OC/OCN outputs are disabled (not controlled any longer by the timer)

TIM OSSR OffState Selection for Run mode state

TIM_OSSR_ENABLE

When inactive, OC/OCN outputs are enabled (still controlled by the timer)

TIM_OSSR_DISABLE

When inactive, OC/OCN outputs are disabled (not controlled any longer by the timer)

TIM Output Compare and PWM Modes

TIM_OCMODE_TIMING

Frozen

TIM_OCMODE_ACTIVE

Set channel to active level on match

TIM_OCMODE_INACTIVE

Set channel to inactive level on match

TIM_OCMODE_TOGGLE

Toggle

TIM_OCMODE_PWM1

PWM mode 1

TIM_OCMODE_PWM2

PWM mode 2

TIM_OCMODE_FORCED_ACTIVE

Force active level

TIM_OCMODE_FORCED_INACTIVE

Force inactive level

TIM_OCMODE_RETRIGERRABLE_OPM1

Retrigerrable OPM mode 1

TIM_OCMODE_RETRIGERRABLE_OPM2

Retrigerrable OPM mode 2

TIM_OCMODE_COMBINED_PWM1

Combined PWM mode 1

TIM_OCMODE_COMBINED_PWM2

Combined PWM mode 2

TIM_OCMODE_ASSYMETRIC_PWM1

Asymmetric PWM mode 1

TIM_OCMODE_ASSYMETRIC_PWM2

Asymmetric PWM mode 2

TIM_OCMODE_PULSE_ON_COMPARE

Pulse on compare (CH3&CH4 only)

TIM_OCMODE_DIRECTION_OUTPUT

Direction output (CH3&CH4 only)

TIM Output Compare Idle State

TIM_OCIDLESTATE_SET

Output Idle state: OCx=1 when MOE=0

TIM_OCIDLESTATE_RESET

Output Idle state: OCx=0 when MOE=0

TIM Complementary Output Compare Idle State

TIM_OCNIDLESTATE_SET

Complementary output Idle state: OCxN=1 when MOE=0

TIM_OCNIDLESTATE_RESET

Complementary output Idle state: OCxN=0 when MOE=0

TIM Complementary Output Compare Polarity

TIM_OCNPOLARITY_HIGH

Capture/Compare complementary output polarity

TIM_OCNPOLARITY_LOW

Capture/Compare complementary output polarity

TIM Complementary Output Compare State

TIM_OUTPUTNSTATE_DISABLE

OCxN is disabled

TIM_OUTPUTNSTATE_ENABLE

OCxN is enabled

TIM Output Compare Polarity

TIM_OCPOLARITY_HIGH

Capture/Compare output polarity

TIM_OCPOLARITY_LOW

Capture/Compare output polarity

TIM Output Compare State

TIM_OUTPUTSTATE_DISABLE

Capture/Compare 1 output disabled

TIM_OUTPUTSTATE_ENABLE

Capture/Compare 1 output enabled

TIM Output Fast State

TIM_OCFAST_DISABLE

Output Compare fast disable

TIM_OCFAST_ENABLE

Output Compare fast enable

TIM Slave mode

TIM_SLAVEMODE_DISABLE

Slave mode disabled

TIM_SLAVEMODE_RESET

Reset Mode

TIM_SLAVEMODE_GATED

Gated Mode

TIM_SLAVEMODE_TRIGGER

Trigger Mode

TIM_SLAVEMODE_EXTERNAL1

External Clock Mode 1

TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Combined reset + trigger mode

TIM_SLAVEMODE_COMBINED_GATEDRESET

Combined gated + reset mode

TIM TI1 Input Selection

TIM_TI1SELECTION_CH1

The TIMx_CH1 pin is connected to TI1 input

TIM_TI1SELECTION_XORCOMBINATION

The TIMx_CH1, CH2 and CH3 pins are connected to the TI1 input (XOR combination)

TIM Trigger Polarity

TIM_TRIGGERPOLARITY_INVERTED

Polarity for ETRx trigger sources

TIM_TRIGGERPOLARITY_NONINVERTED

Polarity for ETRx trigger sources

TIM_TRIGGERPOLARITY_RISING

Polarity for TIxFPx or TI1_ED trigger sources

TIM_TRIGGERPOLARITY_FALLING

Polarity for TIxFPx or TI1_ED trigger sources

TIM_TRIGGERPOLARITY_BOTHEDGE

Polarity for TIxFPx or TI1_ED trigger sources

TIM Trigger Prescaler

TIM_TRIGGERPRESCALER_DIV1

No prescaler is used

TIM_TRIGGERPRESCALER_DIV2

Prescaler for External ETR Trigger: Capture performed once every 2 events.

TIM_TRIGGERPRESCALER_DIV4

Prescaler for External ETR Trigger: Capture performed once every 4 events.

TIM_TRIGGERPRESCALER_DIV8

Prescaler for External ETR Trigger: Capture performed once every 8 events.

TIM Trigger Selection

TIM_TS_ITR0

Internal Trigger 0 (ITR0)

TIM_TS_ITR1

Internal Trigger 1 (ITR1)

TIM_TS_ITR2

Internal Trigger 2 (ITR2)

TIM_TS_ITR3

Internal Trigger 3 (ITR3)

TIM_TS_TI1F_ED

TI1 Edge Detector (TI1F_ED)

TIM_TS_TI1FP1

Filtered Timer Input 1 (TI1FP1)

TIM_TS_TI2FP2

Filtered Timer Input 2 (TI2FP2)

TIM_TS_ETRF

Filtered External Trigger input (ETRF)

TIM_TS_ITR4

Internal Trigger 4 (ITR9)

TIM_TS_ITR5

Internal Trigger 5 (ITR5)

TIM_TS_ITR6

Internal Trigger 6 (ITR6)

TIM_TS_ITR7

Internal Trigger 7 (ITR7)

TIM_TS_ITR8

Internal Trigger 8 (ITR8)

TIM_TS_ITR9

Internal Trigger 9 (ITR9)

TIM_TS_ITR10

Internal Trigger 10 (ITR10)

TIM_TS_ITR11

Internal Trigger 11 (ITR11)

TIM_TS_NONE

No trigger selected

TIM Update Interrupt Flag Remap

TIM_UIFREMAP_DISABLE

Update interrupt flag remap disabled

TIM_UIFREMAP_ENABLE

Update interrupt flag remap enabled

59 HAL TIM Extension Driver

59.1 TIMEx Firmware driver registers structures

59.1.1 TIM_HallSensor_InitTypeDef

TIM_HallSensor_InitTypeDef is defined in the stm32g4xx_hal_tim_ex.h

Data Fields

- ***uint32_t IC1Polarity***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t Commutation_Delay***

Field Documentation

- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Polarity***
  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_Input_Capture_Polarity***
- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Prescaler***
  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_Input_Capture_Prescaler***
- ***uint32_t TIM_HallSensor_InitTypeDef::IC1Filter***
  Specifies the input capture filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***uint32_t TIM_HallSensor_InitTypeDef::Commutation_Delay***
  Specifies the pulse value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF

59.1.2 TIMEx_BreakInputConfigTypeDef

TIMEx_BreakInputConfigTypeDef is defined in the stm32g4xx_hal_tim_ex.h

Data Fields

- ***uint32_t Source***
- ***uint32_t Enable***
- ***uint32_t Polarity***

Field Documentation

- ***uint32_t TIMEx_BreakInputConfigTypeDef::Source***
  Specifies the source of the timer break input. This parameter can be a value of ***TIMEx_Break_Input_Source***
- ***uint32_t TIMEx_BreakInputConfigTypeDef::Enable***
  Specifies whether or not the break input source is enabled. This parameter can be a value of ***TIMEx_Break_Input_Source_Enable***
- ***uint32_t TIMEx_BreakInputConfigTypeDef::Polarity***
  Specifies the break input source polarity. This parameter can be a value of ***TIMEx_Break_Input_Source_Polarity***

59.1.3 TIMEx_EncoderIndexConfigTypeDef

TIMEx_EncoderIndexConfigTypeDef is defined in the stm32g4xx_hal_tim_ex.h

Data Fields

- ***uint32_t Polarity***
- ***uint32_t Prescaler***
- ***uint32_t Filter***
- ***FunctionalState FirstIndexEnable***
- ***uint32_t Position***

- ***uint32_t Direction***

Field Documentation

- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Polarity***
  TIM Encoder index polarity. This parameter can be a value of ***TIMEx_Encoder_Index_Polarity***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Prescaler***
  TIM Encoder index prescaler. This parameter can be a value of ***TIMEx_Encoder_Index_Prescaler***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Filter***
  TIM Encoder index filter. This parameter can be a number between Min_Data = 0x0 and Max_Data = 0xF
- ***FunctionalState TIMEx_EncoderIndexConfigTypeDef::FirstIndexEnable***
  Specifies whether or not the encoder first index is enabled. This parameter value can be ENABLE or DISABLE.
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Position***
  Specifies in which AB input configuration the index event resets the counter. This parameter can be a value of ***TIMEx_Encoder_Index_Position***
- ***uint32_t TIMEx_EncoderIndexConfigTypeDef::Direction***
  Specifies in which counter direction the index event resets the counter. This parameter can be a value of ***TIMEx_Encoder_Index_Direction***

59.2 TIMEx Firmware driver API description

The following section lists the various functions of the TIMEx library.

59.2.1 TIMER Extended features

The Timer Extended features include:

1. Complementary outputs with programmable dead-time for :
   – Output Compare
   – PWM generation (Edge and Center-aligned Mode)
   – One-pulse mode output
2. Synchronization circuit to control the timer with external signals and to interconnect several timers together.
3. Break input to put the timer output signals in reset state or in a known state.
4. Supports incremental (quadrature) encoder and hall-sensor circuitry for positioning purposes
5. In case of Pulse on compare, configure pulse length and delay
6. Encoder index configuration

59.2.2 How to use this driver

1. Initialize the TIM low level resources by implementing the following functions depending on the selected feature:
   – Hall Sensor output : HAL_TIMEx_HallSensor_MspInit()
2. Initialize the TIM low level resources :
   a. Enable the TIM interface clock using __HAL_RCC_TIMx_CLK_ENABLE();
   b. TIM pins configuration
      ◦ Enable the clock for the TIM GPIOs using the following function: __HAL_RCC_GPIOx_CLK_ENABLE();
      ◦ Configure these TIM pins in Alternate function mode using HAL_GPIO_Init();
3. The external Clock can be configured, if needed (the default clock is the internal clock from the APBx), using the following function: HAL_TIM_ConfigClockSource, the clock configuration should be done before any start function.
4. Configure the TIM in the desired functioning mode using one of the initialization function of this driver:
   – HAL_TIMEx_HallSensor_Init() and HAL_TIMEx_ConfigCommutEvent(): to use the Timer Hall Sensor Interface and the commutation event with the corresponding Interrupt and DMA request if needed (Note that One Timer is used to interface with the Hall sensor Interface and another Timer should be used to use the commutation event).

5. In case of Pulse On Compare:
   – HAL_TIMEx_OC_ConfigPulseOnCompare(): to configure pulse width and prescaler
6. Activate the TIM peripheral using one of the start functions:
   – Complementary Output Compare : HAL_TIMEx_OCN_Start(), HAL_TIMEx_OCN_Start_DMA(), HAL_TIMEx_OCN_Start_IT()
   – Complementary PWM generation : HAL_TIMEx_PWMN_Start(), HAL_TIMEx_PWMN_Start_DMA(), HAL_TIMEx_PWMN_Start_IT()
   – Complementary One-pulse mode output : HAL_TIMEx_OnePulseN_Start(), HAL_TIMEx_OnePulseN_Start_IT()
   – Hall Sensor output : HAL_TIMEx_HallSensor_Start(), HAL_TIMEx_HallSensor_Start_DMA(), HAL_TIMEx_HallSensor_Start_IT().

59.2.3 Timer Hall Sensor functions

This section provides functions allowing to:

- Initialize and configure TIM HAL Sensor.
- De-initialize TIM HAL Sensor.
- Start the Hall Sensor Interface.
- Stop the Hall Sensor Interface.
- Start the Hall Sensor Interface and enable interrupts.
- Stop the Hall Sensor Interface and disable interrupts.
- Start the Hall Sensor Interface and enable DMA transfers.
- Stop the Hall Sensor Interface and disable DMA transfers.

This section contains the following APIs:

- ***HAL_TIMEx_HallSensor_Init***
- ***HAL_TIMEx_HallSensor_DeInit***
- ***HAL_TIMEx_HallSensor_MspInit***
- ***HAL_TIMEx_HallSensor_MspDeInit***
- ***HAL_TIMEx_HallSensor_Start***
- ***HAL_TIMEx_HallSensor_Stop***
- ***HAL_TIMEx_HallSensor_Start_IT***
- ***HAL_TIMEx_HallSensor_Stop_IT***
- ***HAL_TIMEx_HallSensor_Start_DMA***
- ***HAL_TIMEx_HallSensor_Stop_DMA***

59.2.4 Timer Complementary Output Compare functions

This section provides functions allowing to:

- Start the Complementary Output Compare/PWM.
- Stop the Complementary Output Compare/PWM.
- Start the Complementary Output Compare/PWM and enable interrupts.
- Stop the Complementary Output Compare/PWM and disable interrupts.
- Start the Complementary Output Compare/PWM and enable DMA transfers.
- Stop the Complementary Output Compare/PWM and disable DMA transfers.

This section contains the following APIs:

- ***HAL_TIMEx_OCN_Start***
- ***HAL_TIMEx_OCN_Stop***
- ***HAL_TIMEx_OCN_Start_IT***
- ***HAL_TIMEx_OCN_Stop_IT***
- ***HAL_TIMEx_OCN_Start_DMA***
- ***HAL_TIMEx_OCN_Stop_DMA***

59.2.5 Timer Complementary PWM functions

This section provides functions allowing to:

- Start the Complementary PWM.
- Stop the Complementary PWM.
- Start the Complementary PWM and enable interrupts.
- Stop the Complementary PWM and disable interrupts.
- Start the Complementary PWM and enable DMA transfers.
- Stop the Complementary PWM and disable DMA transfers.
- Start the Complementary Input Capture measurement.
- Stop the Complementary Input Capture.
- Start the Complementary Input Capture and enable interrupts.
- Stop the Complementary Input Capture and disable interrupts.
- Start the Complementary Input Capture and enable DMA transfers.
- Stop the Complementary Input Capture and disable DMA transfers.
- Start the Complementary One Pulse generation.
- Stop the Complementary One Pulse.
- Start the Complementary One Pulse and enable interrupts.
- Stop the Complementary One Pulse and disable interrupts.

This section contains the following APIs:

- ***HAL_TIMEx_PWMN_Start***
- ***HAL_TIMEx_PWMN_Stop***
- ***HAL_TIMEx_PWMN_Start_IT***
- ***HAL_TIMEx_PWMN_Stop_IT***
- ***HAL_TIMEx_PWMN_Start_DMA***
- ***HAL_TIMEx_PWMN_Stop_DMA***

59.2.6 Timer Complementary One Pulse functions

This section provides functions allowing to:

- Start the Complementary One Pulse generation.
- Stop the Complementary One Pulse.
- Start the Complementary One Pulse and enable interrupts.
- Stop the Complementary One Pulse and disable interrupts.

This section contains the following APIs:

- ***HAL_TIMEx_OnePulseN_Start***
- ***HAL_TIMEx_OnePulseN_Stop***
- ***HAL_TIMEx_OnePulseN_Start_IT***
- ***HAL_TIMEx_OnePulseN_Stop_IT***

59.2.7 Peripheral Control functions

This section provides functions allowing to:

- Configure the commutation event in case of use of the Hall sensor interface.
- Configure Output channels for OC and PWM mode.
- Configure Complementary channels, break features and dead time.
- Configure Master synchronization.
- Configure timer remapping capabilities.
- Select timer input source.
- Enable or disable channel grouping.
- Configure Pulse on compare.
- Configure Encoder index.

This section contains the following APIs:

- *HAL_TIMEx_ConfigCommutEvent*
- *HAL_TIMEx_ConfigCommutEvent_IT*
- *HAL_TIMEx_ConfigCommutEvent_DMA*
- *HAL_TIMEx_MasterConfigSynchronization*
- *HAL_TIMEx_ConfigBreakDeadTime*
- *HAL_TIMEx_ConfigBreakInput*
- *HAL_TIMEx_RemapConfig*
- *HAL_TIMEx_TISelection*
- *HAL_TIMEx_GroupChannel5*
- *HAL_TIMEx_DisarmBreakInput*
- *HAL_TIMEx_ReArmBreakInput*
- *HAL_TIMEx_DitheringEnable*
- *HAL_TIMEx_DitheringDisable*
- *HAL_TIMEx_OC_ConfigPulseOnCompare*
- *HAL_TIMEx_ConfigSlaveModePreload*
- *HAL_TIMEx_EnableSlaveModePreload*
- *HAL_TIMEx_DisableSlaveModePreload*
- *HAL_TIMEx_EnableDeadTimePreload*
- *HAL_TIMEx_DisableDeadTimePreload*
- *HAL_TIMEx_ConfigDeadTime*
- *HAL_TIMEx_ConfigAsymmetricalDeadTime*
- *HAL_TIMEx_EnableAsymmetricalDeadTime*
- *HAL_TIMEx_DisableAsymmetricalDeadTime*
- *HAL_TIMEx_ConfigEncoderIndex*
- *HAL_TIMEx_EnableEncoderIndex*
- *HAL_TIMEx_DisableEncoderIndex*
- *HAL_TIMEx_EnableEncoderFirstIndex*
- *HAL_TIMEx_DisableEncoderFirstIndex*

59.2.8 Extended Callbacks functions

This section provides Extended TIM callback functions:

- Timer Commutation callback
- Timer Break callback

This section contains the following APIs:

- *HAL_TIMEx_CommutCallback*
- *HAL_TIMEx_CommutHalfCpltCallback*
- *HAL_TIMEx_BreakCallback*
- *HAL_TIMEx_Break2Callback*
- *HAL_TIMEx_EncoderIndexCallback*
- *HAL_TIMEx_DirectionChangeCallback*
- *HAL_TIMEx_IndexErrorCallback*
- *HAL_TIMEx_TransitionErrorCallback*

59.2.9 Extended Peripheral State functions

This subsection permits to get in run-time the status of the peripheral and the data flow.

This section contains the following APIs:

- *HAL_TIMEx_HallSensor_GetState*
- *HAL_TIMEx_GetChannelNState*

59.2.10 Detailed description of functions

HAL_TIMEx_HallSensor_Init

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Init (TIM_HandleTypeDef * htim, TIM_HallSensor_InitTypeDef * sConfig)

Function description

Initializes the TIM Hall Sensor Interface and initialize the associated handle.

Parameters

- **htim:** TIM Hall Sensor Interface handle
- **sConfig:** TIM Hall Sensor configuration structure

Return values

- **HAL:** status

Notes

- When the timer instance is initialized in Hall Sensor Interface mode, timer channels 1 and channel 2 are reserved and cannot be used for other purpose.

HAL_TIMEx_HallSensor_DeInit

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_DeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes the TIM Hall Sensor interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_MspInit

Function name

void HAL_TIMEx_HallSensor_MspInit (TIM_HandleTypeDef * htim)

Function description

Initializes the TIM Hall Sensor MSP.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **None:**

HAL_TIMEx_HallSensor_MspDeInit

Function name

void HAL_TIMEx_HallSensor_MspDeInit (TIM_HandleTypeDef * htim)

Function description

DeInitializes TIM Hall Sensor MSP.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **None:**

HAL_TIMEx_HallSensor_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Hall Sensor Interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall sensor Interface.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start_IT (TIM_HandleTypeDef * htim)

Function description

Starts the TIM Hall Sensor Interface in interrupt mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop_IT (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall Sensor Interface in interrupt mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Start_DMA (TIM_HandleTypeDef * htim, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Hall Sensor Interface in DMA mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle
- **pData:** The destination Buffer address.
- **Length:** The length of data to be transferred from TIM peripheral to memory.

Return values

- **HAL:** status

HAL_TIMEx_HallSensor_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_HallSensor_Stop_DMA (TIM_HandleTypeDef * htim)

Function description

Stops the TIM Hall Sensor Interface in DMA mode.

Parameters

- **htim:** TIM Hall Sensor Interface handle

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the TIM Output Compare signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM OC handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OCN_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM Output Compare signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIMEx_OCN_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_OCN_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM Output Compare signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM Output Compare handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Starts the PWM signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the PWM signal generation in interrupt mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Start_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Start_DMA (TIM_HandleTypeDef * htim, uint32_t Channel, uint32_t * pData, uint16_t Length)

Function description

Starts the TIM PWM signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected
- **pData:** The source Buffer address.
- **Length:** The length of data to be transferred from memory to TIM peripheral

Return values

- **HAL:** status

HAL_TIMEx_PWMN_Stop_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_PWMN_Stop_DMA (TIM_HandleTypeDef * htim, uint32_t Channel)

Function description

Stops the TIM PWM signal generation in DMA mode on the complementary output.

Parameters

- **htim:** TIM handle
- **Channel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected
  - TIM_CHANNEL_3: TIM Channel 3 selected
  - TIM_CHANNEL_4: TIM Channel 4 selected

Return values

- **HAL:** status

HAL_TIMEx_OnePulseN_Start

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Start (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation on the complementary output.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIMEx_OnePulseN_Stop

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Stop (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation on the complementary output.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIMEx_OnePulseN_Start_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Start_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Starts the TIM One Pulse signal generation in interrupt mode on the complementary channel.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channel to be enabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIMEx_OnePulseN_Stop_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_OnePulseN_Stop_IT (TIM_HandleTypeDef * htim, uint32_t OutputChannel)

Function description

Stops the TIM One Pulse signal generation in interrupt mode on the complementary channel.

Parameters

- **htim:** TIM One Pulse handle
- **OutputChannel:** TIM Channel to be disabled This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1 selected
  - TIM_CHANNEL_2: TIM Channel 2 selected

Return values

- **HAL:** status

HAL_TIMEx_ConfigCommutEvent

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR4: Internal trigger 4 selected (*)
  - TIM_TS_ITR5: Internal trigger 5 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR9: Internal trigger 9 selected (*)
  - TIM_TS_ITR10: Internal trigger 10 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed

  (*) Value not defined in all devices.
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.

HAL_TIMEx_ConfigCommutEvent_IT

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent_IT (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence with interrupt.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR4: Internal trigger 4 selected (*)
  - TIM_TS_ITR5: Internal trigger 5 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR9: Internal trigger 9 selected (*)
  - TIM_TS_ITR10: Internal trigger 10 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed

  (*) Value not defined in all devices.
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.

HAL_TIMEx_ConfigCommutEvent_DMA

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigCommutEvent_DMA (TIM_HandleTypeDef * htim, uint32_t InputTrigger, uint32_t CommutationSource)

Function description

Configure the TIM commutation event sequence with DMA.

Parameters

- **htim:** TIM handle
- **InputTrigger:** the Internal trigger corresponding to the Timer Interfacing with the Hall sensor This parameter can be one of the following values:
  - TIM_TS_ITR0: Internal trigger 0 selected
  - TIM_TS_ITR1: Internal trigger 1 selected
  - TIM_TS_ITR2: Internal trigger 2 selected
  - TIM_TS_ITR3: Internal trigger 3 selected
  - TIM_TS_ITR4: Internal trigger 4 selected (*)
  - TIM_TS_ITR5: Internal trigger 5 selected
  - TIM_TS_ITR6: Internal trigger 6 selected
  - TIM_TS_ITR7: Internal trigger 7 selected
  - TIM_TS_ITR8: Internal trigger 8 selected
  - TIM_TS_ITR9: Internal trigger 9 selected (*)
  - TIM_TS_ITR10: Internal trigger 10 selected
  - TIM_TS_ITR11: Internal trigger 11 selected
  - TIM_TS_NONE: No trigger is needed

  (*) Value not defined in all devices.
- **CommutationSource:** the Commutation Event source This parameter can be one of the following values:
  - TIM_COMMUTATION_TRGI: Commutation source is the TRGI of the Interface Timer
  - TIM_COMMUTATION_SOFTWARE: Commutation source is set by software using the COMG bit

Return values

- **HAL:** status

Notes

- This function is mandatory to use the commutation event in order to update the configuration at each commutation detection on the TRGI input of the Timer, the typical use of this feature is with the use of another Timer(interface Timer) configured in Hall sensor interface, this interface Timer will generate the commutation at its TRGO output (connected to Timer used in this function) each time the TI1 of the Interface Timer detect a commutation at its input TI1.
- The user should configure the DMA in his own software, in This function only the COMDE bit is set

HAL_TIMEx_MasterConfigSynchronization

Function name

HAL_StatusTypeDef HAL_TIMEx_MasterConfigSynchronization (TIM_HandleTypeDef * htim, TIM_MasterConfigTypeDef * sMasterConfig)

Function description

Configures the TIM in master mode.

Parameters

- **htim:** TIM handle.
- **sMasterConfig:** pointer to a TIM_MasterConfigTypeDef structure that contains the selected trigger output (TRGO) and the Master/Slave mode.

Return values

- **HAL:** status

HAL_TIMEx_ConfigBreakDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigBreakDeadTime (TIM_HandleTypeDef * htim, TIM_BreakDeadTimeConfigTypeDef * sBreakDeadTimeConfig)

Function description

Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).

Parameters

- **htim:** TIM handle
- **sBreakDeadTimeConfig:** pointer to a TIM_ConfigBreakDeadConfigTypeDef structure that contains the BDTR Register configuration information for the TIM peripheral.

Return values

- **HAL:** status

Notes

- Interrupts can be generated when an active level is detected on the break input, the break 2 input or the system break input. Break interrupt can be enabled by calling the __HAL_TIM_ENABLE_IT macro.

HAL_TIMEx_ConfigBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigBreakInput (TIM_HandleTypeDef * htim, uint32_t BreakInput, TIMEx_BreakInputConfigTypeDef * sBreakInputConfig)

Function description

Configures the break input source.

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to configure This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input
- **sBreakInputConfig:** Break input source configuration

Return values

- **HAL:** status

HAL_TIMEx_GroupChannel5

Function name

HAL_StatusTypeDef HAL_TIMEx_GroupChannel5 (TIM_HandleTypeDef * htim, uint32_t Channels)

Function description

Group channel 5 and channel 1, 2 or 3.

Parameters

- **htim:** TIM handle.
- **Channels:** specifies the reference signal(s) the OC5REF is combined with. This parameter can be any combination of the following values: TIM_GROUPCH5_NONE: No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC TIM_GROUPCH5_OC1REFC: OC1REFC is the logical AND of OC1REFC and OC5REF TIM_GROUPCH5_OC2REFC: OC2REFC is the logical AND of OC2REFC and OC5REF TIM_GROUPCH5_OC3REFC: OC3REFC is the logical AND of OC3REFC and OC5REF

Return values

- **HAL:** status

HAL_TIMEx_RemapConfig

Function name

HAL_StatusTypeDef HAL_TIMEx_RemapConfig (TIM_HandleTypeDef * htim, uint32_t Remap)

Function description

Configures the TIMx Remapping input capabilities.

Parameters

- **htim:** TIM handle.

- **Remap:** specifies the TIM remapping source. For TIM1, the parameter can take one of the following values:
  - TIM_TIM1_ETR_GPIO TIM1 ETR is connected to GPIO
  - TIM_TIM1_ETR_COMP1 TIM1 ETR is connected to COMP1 output
  - TIM_TIM1_ETR_COMP2 TIM1 ETR is connected to COMP2 output
  - TIM_TIM1_ETR_COMP3 TIM1 ETR is connected to COMP3 output
  - TIM_TIM1_ETR_COMP4 TIM1 ETR is connected to COMP4 output
  - TIM_TIM1_ETR_COMP5 TIM1 ETR is connected to COMP5 output (*)
  - TIM_TIM1_ETR_COMP6 TIM1 ETR is connected to COMP6 output (*)
  - TIM_TIM1_ETR_COMP7 TIM1 ETR is connected to COMP7 output (*)
  - TIM_TIM1_ETR_ADC1_AWD1 TIM1 ETR is connected to ADC1 AWD1
  - TIM_TIM1_ETR_ADC1_AWD2 TIM1 ETR is connected to ADC1 AWD2
  - TIM_TIM1_ETR_ADC1_AWD3 TIM1 ETR is connected to ADC1 AWD3
  - TIM_TIM1_ETR_ADC4_AWD1 TIM1 ETR is connected to ADC4 AWD1 (*)
  - TIM_TIM1_ETR_ADC4_AWD2 TIM1 ETR is connected to ADC4 AWD2 (*)
  - TIM_TIM1_ETR_ADC4_AWD3 TIM1 ETR is connected to ADC4 AWD3 (*)

  For TIM2, the parameter can take one of the following values:
  - TIM_TIM2_ETR_GPIO TIM2 ETR is connected to GPIO
  - TIM_TIM2_ETR_COMP1 TIM2 ETR is connected to COMP1 output
  - TIM_TIM2_ETR_COMP2 TIM2 ETR is connected to COMP2 output
  - TIM_TIM2_ETR_COMP3 TIM2 ETR is connected to COMP3 output
  - TIM_TIM2_ETR_COMP4 TIM2 ETR is connected to COMP4 output
  - TIM_TIM2_ETR_COMP5 TIM2 ETR is connected to COMP5 output (*)
  - TIM_TIM2_ETR_COMP6 TIM2 ETR is connected to COMP6 output (*)
  - TIM_TIM2_ETR_COMP7 TIM2 ETR is connected to COMP7 output (*)
  - TIM_TIM2_ETR_TIM3_ETR TIM2 ETR is connected to TIM3 ETR pin
  - TIM_TIM2_ETR_TIM4_ETR TIM2 ETR is connected to TIM4 ETR pin
  - TIM_TIM2_ETR_TIM5_ETR TIM2 ETR is connected to TIM5 ETR pin (*)
  - TIM_TIM2_ETR_LSE

  For TIM3, the parameter can take one of the following values:
  - TIM_TIM3_ETR_GPIO TIM3 ETR is connected to GPIO
  - TIM_TIM3_ETR_COMP1 TIM3 ETR is connected to COMP1 output
  - TIM_TIM3_ETR_COMP2 TIM3 ETR is connected to COMP2 output
  - TIM_TIM3_ETR_COMP3 TIM3 ETR is connected to COMP3 output
  - TIM_TIM3_ETR_COMP4 TIM3 ETR is connected to COMP4 output
  - TIM_TIM3_ETR_COMP5 TIM3 ETR is connected to COMP5 output (*)
  - TIM_TIM3_ETR_COMP6 TIM3 ETR is connected to COMP6 output (*)
  - TIM_TIM3_ETR_COMP7 TIM3 ETR is connected to COMP7 output (*)
  - TIM_TIM3_ETR_TIM2_ETR TIM3 ETR is connected to TIM2 ETR pin
  - TIM_TIM3_ETR_TIM4_ETR TIM3 ETR is connected to TIM4 ETR pin
  - TIM_TIM3_ETR_ADC2_AWD1 TIM3 ETR is connected to ADC2 AWD1
  - TIM_TIM3_ETR_ADC2_AWD2 TIM3 ETR is connected to ADC2 AWD2
  - TIM_TIM3_ETR_ADC2_AWD3 TIM3 ETR is connected to ADC2 AWD3

  For TIM4, the parameter can take one of the following values:
  - TIM_TIM4_ETR_GPIO TIM4 ETR is connected to GPIO
  - TIM_TIM4_ETR_COMP1 TIM4 ETR is connected to COMP1 output
  - TIM_TIM4_ETR_COMP2 TIM4 ETR is connected to COMP2 output
  - TIM_TIM4_ETR_COMP3 TIM4 ETR is connected to COMP3 output
  - TIM_TIM4_ETR_COMP4 TIM4 ETR is connected to COMP4 output
  - TIM_TIM4_ETR_COMP5 TIM4 ETR is connected to COMP5 output (*)
  - TIM_TIM4_ETR_COMP6 TIM4 ETR is connected to COMP6 output (*)
  - TIM_TIM4_ETR_COMP7 TIM4 ETR is connected to COMP7 output (*)

- (**) Register not available in all devices.

Return values

- **HAL:** status

HAL_TIMEx_TISelection

Function name

HAL_StatusTypeDef HAL_TIMEx_TISelection (TIM_HandleTypeDef * htim, uint32_t TISelection, uint32_t Channel)

Function description

Select the timer input source.

Parameters

- **htim:** TIM handle.
- **Channel:** specifies the TIM Channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TI1 input channel
  - TIM_CHANNEL_2: TI2 input channel
  - TIM_CHANNEL_3: TI3 input channel
  - TIM_CHANNEL_4: TI4 input channel

- **TISelection:** specifies the timer input source For TIM1 this parameter can be one of the following values:
  - TIM_TIM1_TI1_GPIO: TIM1 TI1 is connected to GPIO
  - TIM_TIM1_TI1_COMP1: TIM1 TI1 is connected to COMP1 output
  - TIM_TIM1_TI1_COMP2: TIM1 TI1 is connected to COMP2 output
  - TIM_TIM1_TI1_COMP3: TIM1 TI1 is connected to COMP3 output
  - TIM_TIM1_TI1_COMP4: TIM1 TI1 is connected to COMP4 output

  For TIM2 this parameter can be one of the following values:
  - TIM_TIM2_TI1_GPIO: TIM2 TI1 is connected to GPIO
  - TIM_TIM2_TI1_COMP1: TIM2 TI1 is connected to COMP1 output
  - TIM_TIM2_TI1_COMP2: TIM2 TI1 is connected to COMP2 output
  - TIM_TIM2_TI1_COMP3: TIM2 TI1 is connected to COMP3 output
  - TIM_TIM2_TI1_COMP4: TIM2 TI1 is connected to COMP4 output
  - TIM_TIM2_TI1_COMP5: TIM2 TI1 is connected to COMP5 output (*)
  - TIM_TIM2_TI2_GPIO: TIM1 TI2 is connected to GPIO
  - TIM_TIM2_TI2_COMP1: TIM2 TI2 is connected to COMP1 output
  - TIM_TIM2_TI2_COMP2: TIM2 TI2 is connected to COMP2 output
  - TIM_TIM2_TI2_COMP3: TIM2 TI2 is connected to COMP3 output
  - TIM_TIM2_TI2_COMP4: TIM2 TI2 is connected to COMP4 output
  - TIM_TIM2_TI2_COMP6: TIM2 TI2 is connected to COMP6 output (*)
  - TIM_TIM2_TI3_GPIO: TIM2 TI3 is connected to GPIO
  - TIM_TIM2_TI3_COMP4: TIM2 TI3 is connected to COMP4 output
  - TIM_TIM2_TI4_GPIO: TIM2 TI4 is connected to GPIO
  - TIM_TIM2_TI4_COMP1: TIM2 TI4 is connected to COMP1 output
  - TIM_TIM2_TI4_COMP2: TIM2 TI4 is connected to COMP2 output

  For TIM3 this parameter can be one of the following values:
  - TIM_TIM3_TI1_GPIO: TIM3 TI1 is connected to GPIO
  - TIM_TIM3_TI1_COMP1: TIM3 TI1 is connected to COMP1 output
  - TIM_TIM3_TI1_COMP2: TIM3 TI1 is connected to COMP2 output
  - TIM_TIM3_TI1_COMP3: TIM3 TI1 is connected to COMP3 output
  - TIM_TIM3_TI1_COMP4: TIM3 TI1 is connected to COMP4 output
  - TIM_TIM3_TI1_COMP5: TIM3 TI1 is connected to COMP5 output (*)
  - TIM_TIM3_TI1_COMP6: TIM3 TI1 is connected to COMP6 output (*)
  - TIM_TIM3_TI1_COMP7: TIM3 TI1 is connected to COMP7 output (*)
  - TIM_TIM3_TI2_GPIO: TIM3 TI2 is connected to GPIO
  - TIM_TIM3_TI2_COMP1: TIM3 TI2 is connected to COMP1 output
  - TIM_TIM3_TI2_COMP2: TIM3 TI2 is connected to COMP2 output
  - TIM_TIM3_TI2_COMP3: TIM3 TI2 is connected to COMP3 output
  - TIM_TIM3_TI2_COMP4: TIM3 TI2 is connected to COMP4 output
  - TIM_TIM3_TI2_COMP5: TIM3 TI2 is connected to COMP5 output (*)
  - TIM_TIM3_TI2_COMP6: TIM3 TI2 is connected to COMP6 output (*)
  - TIM_TIM3_TI2_COMP7: TIM3 TI2 is connected to COMP7 output (*)
  - TIM_TIM3_TI3_GPIO: TIM3 TI3 is connected to GPIO
  - TIM_TIM3_TI3_COMP3: TIM3 TI3 is connected to COMP3 output

  For TIM4 this parameter can be one of the following values:
  - TIM_TIM4_TI1_GPIO: TIM4 TI1 is connected to GPIO
  - TIM_TIM4_TI1_COMP1: TIM4 TI1 is connected to COMP1 output
  - TIM_TIM4_TI1_COMP2: TIM4 TI1 is connected to COMP2 output
  - TIM_TIM4_TI1_COMP3: TIM4 TI1 is connected to COMP3 output
  - TIM_TIM4_TI1_COMP4: TIM4 TI1 is connected to COMP4 output
  - TIM_TIM4_TI1_COMP5: TIM4 TI1 is connected to COMP5 output (*)

- (**) Register not available in all devices.

Return values

- **HAL:** status

HAL_TIMEx_DisarmBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_DisarmBreakInput (TIM_HandleTypeDef * htim, uint32_t BreakInput)

Function description

Disarm the designated break input (when it operates in bidirectional mode).

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to disarm This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input

Return values

- **HAL:** status

Notes

- The break input can be disarmed only when it is configured in bidirectional mode and when when MOE is reset.
- Purpose is to be able to have the input voltage back to high-state, whatever the time constant on the output .

HAL_TIMEx_ReArmBreakInput

Function name

HAL_StatusTypeDef HAL_TIMEx_ReArmBreakInput (TIM_HandleTypeDef * htim, uint32_t BreakInput)

Function description

Arm the designated break input (when it operates in bidirectional mode).

Parameters

- **htim:** TIM handle.
- **BreakInput:** Break input to arm This parameter can be one of the following values:
  - TIM_BREAKINPUT_BRK: Timer break input
  - TIM_BREAKINPUT_BRK2: Timer break 2 input

Return values

- **HAL:** status

Notes

- Arming is possible at anytime, even if fault is present.
- Break input is automatically armed as soon as MOE bit is set.

HAL_TIMEx_DitheringEnable

Function name

HAL_StatusTypeDef HAL_TIMEx_DitheringEnable (TIM_HandleTypeDef * htim)

Function description

Enable dithering.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

Notes

- Main usage is PWM mode
- This function must be called when timer is stopped or disabled (CEN =0)
- If dithering is activated, pay attention to ARR, CCRx, CNT interpretation: CNT: only CNT[11:0] holds the non-dithered part for 16b timers (or CNT[26:0] for 32b timers)ARR: ARR[15:4] holds the non-dithered part, and ARR[3:0] the dither part for 16b timersCCRx: CCRx[15:4] holds the non-dithered part, and CCRx[3:0] the dither part for 16b timersARR and CCRx values are limited to 0xFFEF in dithering mode for 16b timers (corresponds to 4094 for the integer part and 15 for the dithered part).
- Macros __HAL_TIM_CALC_PERIOD_DITHER() __HAL_TIM_CALC_DELAY_DITHER() __HAL_TIM_CALC_PULSE_DITHER() can be used to calculate period (ARR) and delay (CCRx) value.
- Enabling dithering, modifies automatically values of registers ARR/CCRx to keep the same integer part. So it may be necessary to read ARR value or CCRx value with macros __HAL_TIM_GET_AUTORELOAD() __HAL_TIM_GET_COMPARE() and if necessary update Init structure field htim->Init.Period .

HAL_TIMEx_DitheringDisable

Function name

HAL_StatusTypeDef HAL_TIMEx_DitheringDisable (TIM_HandleTypeDef * htim)

Function description

Disable dithering.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

Notes

- This function must be called when timer is stopped or disabled (CEN =0)
- If dithering is activated, pay attention to ARR, CCRx, CNT interpretation: CNT: only CNT[11:0] holds the non-dithered part for 16b timers (or CNT[26:0] for 32b timers)ARR: ARR[15:4] holds the non-dithered part, and ARR[3:0] the dither part for 16b timersCCRx: CCRx[15:4] holds the non-dithered part, and CCRx[3:0] the dither part for 16b timersARR and CCRx values are limited to 0xFFEF in dithering mode (corresponds to 4094 for the integer part and 15 for the dithered part).
- Disabling dithering, modifies automatically values of registers ARR/CCRx to keep the same integer part. So it may be necessary to read ARR value or CCRx value with macros __HAL_TIM_GET_AUTORELOAD() __HAL_TIM_GET_COMPARE() and if necessary update Init structure field htim->Init.Period .

HAL_TIMEx_OC_ConfigPulseOnCompare

Function name

HAL_StatusTypeDef HAL_TIMEx_OC_ConfigPulseOnCompare (TIM_HandleTypeDef * htim, uint32_t PulseWidthPrescaler, uint32_t PulseWidth)

Function description

Initializes the pulse on compare pulse width and pulse prescaler.

Parameters

- **htim:** TIM Output Compare handle
- **PulseWidthPrescaler:** Pulse width prescaler This parameter can be a number between Min_Data = 0x0 and Max_Data = 0x7
- **PulseWidth:** Pulse width This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

Return values

- **HAL:** status

HAL_TIMEx_ConfigSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigSlaveModePreload (TIM_HandleTypeDef * htim, uint32_t Source)

Function description

Configure preload source of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle
- **Source:** Source of slave mode selection preload This parameter can be one of the following values:
  - TIM_SMS_PRELOAD_SOURCE_UPDATE: Timer update event is used as source of Slave Mode Selection preload
  - TIM_SMS_PRELOAD_SOURCE_INDEX: Timer index event is used as source of Slave Mode Selection preload

Return values

- **HAL:** status

HAL_TIMEx_EnableSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableSlaveModePreload (TIM_HandleTypeDef * htim)

Function description

Enable preload of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableSlaveModePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableSlaveModePreload (TIM_HandleTypeDef * htim)

Function description

Disable preload of Slave Mode Selection bitfield (SMS in SMCR register)

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_EnableDeadTimePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableDeadTimePreload (TIM_HandleTypeDef * htim)

Function description

Enable deadtime preload.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableDeadTimePreload

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableDeadTimePreload (TIM_HandleTypeDef * htim)

Function description

Disable deadtime preload.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_ConfigDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigDeadTime (TIM_HandleTypeDef * htim, uint32_t Deadtime)

Function description

Configure deadtime.

Parameters

- **htim:** TIM handle
- **Deadtime:** Deadtime value

Return values

- **HAL:** status

Notes

- This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

HAL_TIMEx_ConfigAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigAsymmetricalDeadTime (TIM_HandleTypeDef * htim, uint32_t FallingDeadtime)

Function description

Configure asymmetrical deadtime.

Parameters

- **htim:** TIM handle
- **FallingDeadtime:** Falling edge deadtime value

Return values

- **HAL:** status

Notes

- This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF

HAL_TIMEx_EnableAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableAsymmetricalDeadTime (TIM_HandleTypeDef * htim)

Function description

Enable asymmetrical deadtime.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableAsymmetricalDeadTime

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableAsymmetricalDeadTime (TIM_HandleTypeDef * htim)

Function description

Disable asymmetrical deadtime.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_ConfigEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_ConfigEncoderIndex (TIM_HandleTypeDef * htim, TIMEx_EncoderIndexConfigTypeDef * sEncoderIndexConfig)

Function description

Configures the encoder index.

Parameters

- **htim:** TIM handle.
- **sEncoderIndexConfig:** Encoder index configuration

Return values

- **HAL:** status

Notes

- warning in case of encoder mode clock plus direction TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X1 or TIM_ENCODERMODE_CLOCKPLUSDIRECTION_X2 Direction must be set to TIM_ENCODERINDEX_DIRECTION_UP_DOWN

HAL_TIMEx_EnableEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableEncoderIndex (TIM_HandleTypeDef * htim)

Function description

Enable encoder index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableEncoderIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableEncoderIndex (TIM_HandleTypeDef * htim)

Function description

Disable encoder index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_EnableEncoderFirstIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_EnableEncoderFirstIndex (TIM_HandleTypeDef * htim)

Function description

Enable encoder first index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_DisableEncoderFirstIndex

Function name

HAL_StatusTypeDef HAL_TIMEx_DisableEncoderFirstIndex (TIM_HandleTypeDef * htim)

Function description

Disable encoder first index.

Parameters

- **htim:** TIM handle

Return values

- **HAL:** status

HAL_TIMEx_CommutCallback

Function name

void HAL_TIMEx_CommutCallback (TIM_HandleTypeDef * htim)

Function description

Hall commutation changed callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_CommutHalfCpltCallback

Function name

void HAL_TIMEx_CommutHalfCpltCallback (TIM_HandleTypeDef * htim)

Function description

Hall commutation changed half complete callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_BreakCallback

Function name

void HAL_TIMEx_BreakCallback (TIM_HandleTypeDef * htim)

Function description

Hall Break detection callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_Break2Callback

Function name

void HAL_TIMEx_Break2Callback (TIM_HandleTypeDef * htim)

Function description

Hall Break2 detection callback in non blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_EncoderIndexCallback

Function name

void HAL_TIMEx_EncoderIndexCallback (TIM_HandleTypeDef * htim)

Function description

Encoder index callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_DirectionChangeCallback

Function name

void HAL_TIMEx_DirectionChangeCallback (TIM_HandleTypeDef * htim)

Function description

Direction change callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_IndexErrorCallback

Function name

void HAL_TIMEx_IndexErrorCallback (TIM_HandleTypeDef * htim)

Function description

Index error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_TransitionErrorCallback

Function name

void HAL_TIMEx_TransitionErrorCallback (TIM_HandleTypeDef * htim)

Function description

Transition error callback in non-blocking mode.

Parameters

- **htim:** TIM handle

Return values

- **None:**

HAL_TIMEx_HallSensor_GetState

Function name

HAL_TIM_StateTypeDef HAL_TIMEx_HallSensor_GetState (TIM_HandleTypeDef * htim)

Function description

Return the TIM Hall Sensor interface handle state.

Parameters

- **htim:** TIM Hall Sensor handle

Return values

- **HAL:** state

HAL_TIMEx_GetChannelNState

Function name

HAL_TIM_ChannelStateTypeDef HAL_TIMEx_GetChannelNState (TIM_HandleTypeDef * htim, uint32_t ChannelN)

Function description

Return actual state of the TIM complementary channel.

Parameters

- **htim:** TIM handle
- **ChannelN:** TIM Complementary channel This parameter can be one of the following values:
  - TIM_CHANNEL_1: TIM Channel 1
  - TIM_CHANNEL_2: TIM Channel 2
  - TIM_CHANNEL_3: TIM Channel 3
  - TIM_CHANNEL_4: TIM Channel 4

Return values

- **TIM:** Complementary channel state

TIMEx_DMACommutationCplt

Function name

void TIMEx_DMACommutationCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Commutation callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

TIMEx_DMACommutationHalfCplt

Function name

void TIMEx_DMACommutationHalfCplt (DMA_HandleTypeDef * hdma)

Function description

TIM DMA Commutation half complete callback.

Parameters

- **hdma:** pointer to DMA handle.

Return values

- **None:**

59.3 TIMEx Firmware driver defines

The following section lists the various define and macros of the module.

59.3.1 TIMEx

TIMEx

TIM Extended Break input

TIM_BREAKINPUT_BRK

TIM_BREAKINPUT_BRK2

TIM Extended Break input source

TIM_BREAKINPUTSOURCE_BKIN

TIM_BREAKINPUTSOURCE_COMP1

TIM_BREAKINPUTSOURCE_COMP2

TIM_BREAKINPUTSOURCE_COMP3

TIM_BREAKINPUTSOURCE_COMP4

TIM_BREAKINPUTSOURCE_COMP5

TIM_BREAKINPUTSOURCE_COMP6

TIM_BREAKINPUTSOURCE_COMP7

TIM Extended Break input source enabling

TIM_BREAKINPUTSOURCE_DISABLE

TIM_BREAKINPUTSOURCE_ENABLE

TIM Extended Break input polarity

TIM_BREAKINPUTSOURCE_POLARITY_LOW

TIM_BREAKINPUTSOURCE_POLARITY_HIGH

TIM Extended Encoder index direction

TIM_ENCODERINDEX_DIRECTION_UP_DOWN

Index resets the counter whatever the direction

TIM_ENCODERINDEX_DIRECTION_UP

Index resets the counter when up-counting only

TIM_ENCODERINDEX_DIRECTION_DOWN

Index resets the counter when down-counting only

TIM Extended Encoder index polarity

TIM_ENCODERINDEX_POLARITY_INVERTED

Polarity for ETRx pin

TIM_ENCODERINDEX_POLARITY_NONINVERTED

Polarity for ETRx pin

TIM Extended Encoder index position

TIM_ENCODERINDEX_POSITION_00

Encoder index position is AB=00

TIM_ENCODERINDEX_POSITION_01

Encoder index position is AB=01

TIM_ENCODERINDEX_POSITION_10

Encoder index position is AB=10

TIM_ENCODERINDEX_POSITION_11

Encoder index position is AB=11

TIM_ENCODERINDEX_POSITION_0

In directional clock mode or clock plus direction mode, index resets the counter when clock is 0

TIM_ENCODERINDEX_POSITION_1

In directional clock mode or clock plus direction mode, index resets the counter when clock is 1

TIM Extended Encodder index prescaler

TIM_ENCODERINDEX_PRESCALER_DIV1

No prescaler is used

TIM_ENCODERINDEX_PRESCALER_DIV2

Prescaler for External ETR pin: Capture performed once every 2 events.

TIM_ENCODERINDEX_PRESCALER_DIV4

Prescaler for External ETR pin: Capture performed once every 4 events.

TIM_ENCODERINDEX_PRESCALER_DIV8

Prescaler for External ETR pin: Capture performed once every 8 events.

TIM Extended Exported Macros

__HAL_TIM_CALC_PSC

Description:

- HELPER macro calculating the prescaler value to achieve the required counter clock frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CNTCLK__: counter clock frequency (in Hz)

Return value:

- Prescaler: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PSC(80000000, 1000000);

__HAL_TIM_CALC_PERIOD

Description:

- HELPER macro calculating the auto-reload value to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PERIOD(1000000, 0, 10000);

__HAL_TIM_CALC_PERIOD_DITHER

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_DITHER(1000000, 0, 10000); This macro should be used only if ditehring is already enabled

__HAL_TIM_CALC_PULSE

Description:

- HELPER macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PULSE(1000000, 0, 10);

__HAL_TIM_CALC_PULSE_DITHER

Description:

- HELPER macro calculating the compare value, with dithering feature enabled, to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PULSE_DITHER(1000000, 0, 10); This macro should be used only if ditehring is already enabled

__HAL_TIM_CALC_PERIOD_BY_DELAY

Description:

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_BY_DELAY(1000000, 0, 10, 20);

__HAL_TIM_CALC_PERIOD_DITHER_BY_DELAY

Description:

- HELPER macro calculating the auto-reload value, with dithering feature enabled, to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65519)

Notes:

- ex: __HAL_TIM_CALC_PERIOD_DITHER_BY_DELAY(1000000, 0, 10, 20); This macro should be used only if ditehring is already enabled

60 HAL UART Generic Driver

60.1 UART Firmware driver registers structures

60.1.1 UART_InitTypeDef

UART_InitTypeDef is defined in the stm32g4xx_hal_uart.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t Mode***
- ***uint32_t HwFlowCtl***
- ***uint32_t OverSampling***
- ***uint32_t OneBitSampling***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t UART_InitTypeDef::BaudRate***

  This member configures the UART communication baud rate. The baud rate register is computed using the following formula: LPUART: ======= Baud Rate Register = ((256 * lpuart_ker_ckpres) / ((huart->Init.BaudRate))) where lpuart_ker_ck_pres is the UART input clock divided by a prescaler UART: =====

  – If oversampling is 16 or in LIN mode, Baud Rate Register = ((uart_ker_ckpres) / ((huart->Init.BaudRate)))

  – If oversampling is 8, Baud Rate Register[15:4] = ((2 * uart_ker_ckpres) / ((huart->Init.BaudRate)))[15:4] Baud Rate Register[3] = 0 Baud Rate Register[2:0] = (((2 * uart_ker_ckpres) / ((huart->Init.BaudRate)))[3:0]) >> 1 where uart_ker_ck_pres is the UART input clock divided by a prescaler

- ***uint32_t UART_InitTypeDef::WordLength***

  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***UARTEx_Word_Length***.

- ***uint32_t UART_InitTypeDef::StopBits***

  Specifies the number of stop bits transmitted. This parameter can be a value of ***UART_Stop_Bits***.

- ***uint32_t UART_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***UART_Parity***

  Note:

  – When parity is enabled, the computed parity is inserted at the MSB position of the transmitted data (9th bit when the word length is set to 9 data bits; 8th bit when the word length is set to 8 data bits).

- ***uint32_t UART_InitTypeDef::Mode***

  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***UART_Mode***.

- ***uint32_t UART_InitTypeDef::HwFlowCtl***

  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***UART_Hardware_Flow_Control***.

- ***uint32_t UART_InitTypeDef::OverSampling***

  Specifies whether the Over sampling 8 is enabled or disabled, to achieve higher speed (up to f_PCLK/8). This parameter can be a value of ***UART_Over_Sampling***.

- ***uint32_t UART_InitTypeDef::OneBitSampling***

  Specifies whether a single sample or three samples' majority vote is selected. Selecting the single sample method increases the receiver tolerance to clock deviations. This parameter can be a value of ***UART_OneBit_Sampling***.

- ***uint32_t UART_InitTypeDef::ClockPrescaler***

  Specifies the prescaler value used to divide the UART clock source. This parameter can be a value of ***UART_ClockPrescaler***.

60.1.2 UART_AdvFeatureInitTypeDef

UART_AdvFeatureInitTypeDef is defined in the stm32g4xx_hal_uart.h

Data Fields

- ***uint32_t AdvFeatureInit***
- ***uint32_t TxPinLevelInvert***
- ***uint32_t RxPinLevelInvert***
- ***uint32_t DataInvert***
- ***uint32_t Swap***
- ***uint32_t OverrunDisable***
- ***uint32_t DMADisableonRxError***
- ***uint32_t AutoBaudRateEnable***
- ***uint32_t AutoBaudRateMode***
- ***uint32_t MSBFirst***

Field Documentation

- ***uint32_t UART_AdvFeatureInitTypeDef::AdvFeatureInit***

  Specifies which advanced UART features is initialized. Several Advanced Features may be initialized at the same time . This parameter can be a value of ***UART_Advanced_Features_Initialization_Type***.
- ***uint32_t UART_AdvFeatureInitTypeDef::TxPinLevelInvert***

  Specifies whether the TX pin active level is inverted. This parameter can be a value of ***UART_Tx_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::RxPinLevelInvert***

  Specifies whether the RX pin active level is inverted. This parameter can be a value of ***UART_Rx_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::DataInvert***

  Specifies whether data are inverted (positive/direct logic vs negative/inverted logic). This parameter can be a value of ***UART_Data_Inv***.
- ***uint32_t UART_AdvFeatureInitTypeDef::Swap***

  Specifies whether TX and RX pins are swapped. This parameter can be a value of ***UART_Rx_Tx_Swap***.
- ***uint32_t UART_AdvFeatureInitTypeDef::OverrunDisable***

  Specifies whether the reception overrun detection is disabled. This parameter can be a value of ***UART_Overrun_Disable***.
- ***uint32_t UART_AdvFeatureInitTypeDef::DMADisableonRxError***

  Specifies whether the DMA is disabled in case of reception error. This parameter can be a value of ***UART_DMA_Disable_on_Rx_Error***.
- ***uint32_t UART_AdvFeatureInitTypeDef::AutoBaudRateEnable***

  Specifies whether auto Baud rate detection is enabled. This parameter can be a value of ***UART_AutoBaudRate_Enable***.
- ***uint32_t UART_AdvFeatureInitTypeDef::AutoBaudRateMode***

  If auto Baud rate detection is enabled, specifies how the rate detection is carried out. This parameter can be a value of ***UART_AutoBaud_Rate_Mode***.
- ***uint32_t UART_AdvFeatureInitTypeDef::MSBFirst***

  Specifies whether MSB is sent first on UART line. This parameter can be a value of ***UART_MSB_First***.

60.1.3 __UART_HandleTypeDef

__UART_HandleTypeDef is defined in the stm32g4xx_hal_uart.h

Data Fields

- ***USART_TypeDef * Instance***
- ***UART_InitTypeDef Init***
- ***UART_AdvFeatureInitTypeDef AdvancedInit***

- ***uint8_t * pTxBuffPtr***
- ***uint16_t TxXferSize***
- ***__IO uint16_t TxXferCount***
- ***uint8_t * pRxBuffPtr***
- ***uint16_t RxXferSize***
- ***__IO uint16_t RxXferCount***
- ***uint16_t Mask***
- ***uint32_t FifoMode***
- ***uint16_t NbRxDataToProcess***
- ***uint16_t NbTxDataToProcess***
- ***void(* RxISR***
- ***void(* TxISR***
- ***DMA_HandleTypeDef * hdmatx***
- ***DMA_HandleTypeDef * hdmarx***
- ***HAL_LockTypeDef Lock***
- ***__IO HAL_UART_StateTypeDef gState***
- ***__IO HAL_UART_StateTypeDef RxState***
- ***__IO uint32_t ErrorCode***

Field Documentation

- ***USART_TypeDef* __UART_HandleTypeDef::Instance***
  UART registers base address
- ***UART_InitTypeDef __UART_HandleTypeDef::Init***
  UART communication parameters
- ***UART_AdvFeatureInitTypeDef __UART_HandleTypeDef::AdvancedInit***
  UART Advanced Features initialization parameters
- ***uint8_t* __UART_HandleTypeDef::pTxBuffPtr***
  Pointer to UART Tx transfer Buffer
- ***uint16_t __UART_HandleTypeDef::TxXferSize***
  UART Tx Transfer size
- ***__IO uint16_t __UART_HandleTypeDef::TxXferCount***
  UART Tx Transfer Counter
- ***uint8_t* __UART_HandleTypeDef::pRxBuffPtr***
  Pointer to UART Rx transfer Buffer
- ***uint16_t __UART_HandleTypeDef::RxXferSize***
  UART Rx Transfer size
- ***__IO uint16_t __UART_HandleTypeDef::RxXferCount***
  UART Rx Transfer Counter
- ***uint16_t __UART_HandleTypeDef::Mask***
  UART Rx RDR register mask
- ***uint32_t __UART_HandleTypeDef::FifoMode***
  Specifies if the FIFO mode is being used. This parameter can be a value of ***UARTEx_FIFO_mode***.
- ***uint16_t __UART_HandleTypeDef::NbRxDataToProcess***
  Number of data to process during RX ISR execution
- ***uint16_t __UART_HandleTypeDef::NbTxDataToProcess***
  Number of data to process during TX ISR execution
- ***void(* __UART_HandleTypeDef::RxISR)(struct __UART_HandleTypeDef *huart)***
  Function pointer on Rx IRQ handler
- ***void(* __UART_HandleTypeDef::TxISR)(struct __UART_HandleTypeDef *huart)***
  Function pointer on Tx IRQ handler

- ***DMA_HandleTypeDef* __UART_HandleTypeDef::hdmatx***
  UART Tx DMA Handle parameters
- ***DMA_HandleTypeDef* __UART_HandleTypeDef::hdmarx***
  UART Rx DMA Handle parameters
- ***HAL_LockTypeDef __UART_HandleTypeDef::Lock***
  Locking object
- ***__IO HAL_UART_StateTypeDef __UART_HandleTypeDef::gState***
  UART state information related to global Handle management and also related to Tx operations. This parameter can be a value of **HAL_UART_StateTypeDef**
- ***__IO HAL_UART_StateTypeDef __UART_HandleTypeDef::RxState***
  UART state information related to Rx operations. This parameter can be a value of **HAL_UART_StateTypeDef**
- ***__IO uint32_t __UART_HandleTypeDef::ErrorCode***
  UART Error code

60.2 UART Firmware driver API description

The following section lists the various functions of the UART library.

60.2.1 How to use this driver

The UART HAL driver can be used as follows:

1. Declare a UART_HandleTypeDef handle structure (eg. UART_HandleTypeDef huart).
2. Initialize the UART low level resources by implementing the HAL_UART_MspInit() API:
   – Enable the USARTx interface clock.
   – UART pins configuration:
     ◦ Enable the clock for the UART GPIOs.
     ◦ Configure these UART pins as alternate function pull-up.
   – NVIC configuration if you need to use interrupt process (HAL_UART_Transmit_IT() and HAL_UART_Receive_IT() APIs):
     ◦ Configure the USARTx interrupt priority.
     ◦ Enable the NVIC USART IRQ handle.
   – UART interrupts handling:

Note: The specific UART interrupts (Transmission complete interrupt, RXNE interrupt, RX/TX FIFOs related interrupts and Error Interrupts) are managed using the macros __HAL_UART_ENABLE_IT() and __HAL_UART_DISABLE_IT() inside the transmit and receive processes.

   – DMA Configuration if you need to use DMA process (HAL_UART_Transmit_DMA() and HAL_UART_Receive_DMA() APIs):
     ◦ Declare a DMA handle structure for the Tx/Rx channel.
     ◦ Enable the DMAx interface clock.
     ◦ Configure the declared DMA handle structure with the required Tx/Rx parameters.
     ◦ Configure the DMA Tx/Rx channel.
     ◦ Associate the initialized DMA handle to the UART DMA Tx/Rx handle.
     ◦ Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
3. Program the Baud Rate, Word Length, Stop Bit, Parity, Prescaler value , Hardware flow control and Mode (Receiver/Transmitter) in the huart handle Init structure.
4. If required, program UART advanced features (TX/RX pins swap, auto Baud rate detection,...) in the huart handle AdvancedInit structure.
5. For the UART asynchronous mode, initialize the UART registers by calling the HAL_UART_Init() API.
6. For the UART Half duplex mode, initialize the UART registers by calling the HAL_HalfDuplex_Init() API.
7. For the UART LIN (Local Interconnection Network) mode, initialize the UART registers by calling the HAL_LIN_Init() API.

8. For the UART Multiprocessor mode, initialize the UART registers by calling the HAL_MultiProcessor_Init() API.
9. For the UART RS485 Driver Enabled mode, initialize the UART registers by calling the HAL_RS485Ex_Init() API.

Note: These API's (HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init(), HAL_MultiProcessor_Init(), also configure the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_UART_MspInit() API.

60.2.2 Callback registration

The compilation define USE_HAL_UART_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_UART_RegisterCallback() to register a user callback. Function @ref HAL_UART_RegisterCallback() allows to register following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- WakeupCallback : Wakeup Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : UART MspInit.
- MspDeInitCallback : UART MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_UART_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. @ref HAL_UART_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- AbortTransmitCpltCallback : Abort Transmit Complete Callback.
- AbortReceiveCpltCallback : Abort Receive Complete Callback.
- WakeupCallback : Wakeup Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : UART MspInit.
- MspDeInitCallback : UART MspDeInit.

By default, after the @ref HAL_UART_Init() and when the state is HAL_UART_STATE_RESET all callbacks are set to the corresponding weak (surcharged) functions: examples @ref HAL_UART_TxCpltCallback(), @ref HAL_UART_RxHalfCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_UART_Init() and @ref HAL_UART_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_UART_Init() and @ref HAL_UART_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_UART_STATE_READY state only. Exception done MspInit/ MspDeInit that can be registered/unregistered in HAL_UART_STATE_READY or HAL_UART_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_UART_RegisterCallback() before calling @ref HAL_UART_DeInit() or @ref HAL_UART_Init() function.

When The compilation define USE_HAL_UART_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak (surcharged) callbacks are used.

60.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx or the UARTy in asynchronous mode.

- For the asynchronous mode the parameters below can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - Hardware flow control
  - Receiver/transmitter modes
  - Over Sampling Method
  - One-Bit Sampling Method
- For the asynchronous mode, the following advanced features can be configured as well:
  - TX and/or RX pin level inversion
  - data logical level inversion
  - RX and TX pins swap
  - RX overrun detection disabling
  - DMA disabling on RX error
  - MSB first on communication line
  - auto Baud rate detection

The HAL_UART_Init(), HAL_HalfDuplex_Init(), HAL_LIN_Init()and HAL_MultiProcessor_Init()API follow respectively the UART asynchronous, UART Half duplex, UART LIN mode and UART multiprocessor mode configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- ***HAL_UART_Init***
- ***HAL_HalfDuplex_Init***
- ***HAL_LIN_Init***
- ***HAL_MultiProcessor_Init***
- ***HAL_UART_DeInit***
- ***HAL_UART_MspInit***
- ***HAL_UART_MspDeInit***

60.2.4 IO operation functions

This section contains the following APIs:

- ***HAL_UART_Transmit***
- ***HAL_UART_Receive***
- ***HAL_UART_Transmit_IT***
- ***HAL_UART_Receive_IT***
- ***HAL_UART_Transmit_DMA***
- ***HAL_UART_Receive_DMA***
- ***HAL_UART_DMAPause***
- ***HAL_UART_DMAResume***
- ***HAL_UART_DMAStop***

- *HAL_UART_Abort*
- *HAL_UART_AbortTransmit*
- *HAL_UART_AbortReceive*
- *HAL_UART_Abort_IT*
- *HAL_UART_AbortTransmit_IT*
- *HAL_UART_AbortReceive_IT*
- *HAL_UART_IRQHandler*
- *HAL_UART_TxCpltCallback*
- *HAL_UART_TxHalfCpltCallback*
- *HAL_UART_RxCpltCallback*
- *HAL_UART_RxHalfCpltCallback*
- *HAL_UART_ErrorCallback*
- *HAL_UART_AbortCpltCallback*
- *HAL_UART_AbortTransmitCpltCallback*
- *HAL_UART_AbortReceiveCpltCallback*

60.2.5 Peripheral Control functions

This subsection provides a set of functions allowing to control the UART.

- HAL_UART_ReceiverTimeout_Config() API allows to configure the receiver timeout value on the fly
- HAL_UART_EnableReceiverTimeout() API enables the receiver timeout feature
- HAL_UART_DisableReceiverTimeout() API disables the receiver timeout feature
- HAL_MultiProcessor_EnableMuteMode() API enables mute mode
- HAL_MultiProcessor_DisableMuteMode() API disables mute mode
- HAL_MultiProcessor_EnterMuteMode() API enters mute mode
- UART_SetConfig() API configures the UART peripheral
- UART_AdvFeatureConfig() API optionally configures the UART advanced features
- UART_CheckIdleState() API ensures that TEACK and/or REACK are set after initialization
- HAL_HalfDuplex_EnableTransmitter() API disables receiver and enables transmitter
- HAL_HalfDuplex_EnableReceiver() API disables transmitter and enables receiver
- HAL_LIN_SendBreak() API transmits the break characters

This section contains the following APIs:

- *HAL_UART_ReceiverTimeout_Config*
- *HAL_UART_EnableReceiverTimeout*
- *HAL_UART_DisableReceiverTimeout*
- *HAL_MultiProcessor_EnableMuteMode*
- *HAL_MultiProcessor_DisableMuteMode*
- *HAL_MultiProcessor_EnterMuteMode*
- *HAL_HalfDuplex_EnableTransmitter*
- *HAL_HalfDuplex_EnableReceiver*
- *HAL_LIN_SendBreak*

60.2.6 Peripheral State and Error functions

This subsection provides functions allowing to :

- Return the UART handle state.
- Return the UART handle error code

This section contains the following APIs:

- *HAL_UART_GetState*
- *HAL_UART_GetError*

60.2.7 Detailed description of functions

HAL_UART_Init

Function name

HAL_StatusTypeDef HAL_UART_Init (UART_HandleTypeDef * huart)

Function description

Initialize the UART mode according to the specified parameters in the UART_InitTypeDef and initialize the associated handle.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_HalfDuplex_Init

Function name

HAL_StatusTypeDef HAL_HalfDuplex_Init (UART_HandleTypeDef * huart)

Function description

Initialize the half-duplex mode according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_LIN_Init

Function name

HAL_StatusTypeDef HAL_LIN_Init (UART_HandleTypeDef * huart, uint32_t BreakDetectLength)

Function description

Initialize the LIN mode according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.
- **BreakDetectLength:** Specifies the LIN break detection length. This parameter can be one of the following values:
  - UART_LINBREAKDETECTLENGTH_10B 10-bit break detection
  - UART_LINBREAKDETECTLENGTH_11B 11-bit break detection

Return values

- **HAL:** status

HAL_MultiProcessor_Init

Function name

HAL_StatusTypeDef HAL_MultiProcessor_Init (UART_HandleTypeDef * huart, uint8_t Address, uint32_t WakeUpMethod)

Function description

Initialize the multiprocessor mode according to the specified parameters in the UART_InitTypeDef and initialize the associated handle.

Parameters

- **huart:** UART handle.
- **Address:** UART node address (4-, 6-, 7- or 8-bit long).
- **WakeUpMethod:** Specifies the UART wakeup method. This parameter can be one of the following values:
  - UART_WAKEUPMETHOD_IDLELINE WakeUp by an idle line detection
  - UART_WAKEUPMETHOD_ADDRESSMARK WakeUp by an address mark

Return values

- **HAL:** status

Notes

- If the user resorts to idle line detection wake up, the Address parameter is useless and ignored by the initialization function.
- If the user resorts to address mark wake up, the address length detection is configured by default to 4 bits only. For the UART to be able to manage 6-, 7- or 8-bit long addresses detection, the API HAL_MultiProcessorEx_AddressLength_Set() must be called after HAL_MultiProcessor_Init().

HAL_UART_DeInit

Function name

HAL_StatusTypeDef HAL_UART_DeInit (UART_HandleTypeDef * huart)

Function description

DeInitialize the UART peripheral.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_MspInit

Function name

void HAL_UART_MspInit (UART_HandleTypeDef * huart)

Function description

Initialize the UART MSP.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_MspDeInit

Function name

void HAL_UART_MspDeInit (UART_HandleTypeDef * huart)

Function description

DeInitialize the UART MSP.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_Transmit

Function name

HAL_StatusTypeDef HAL_UART_Transmit (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Send an amount of data in blocking mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.
- When FIFO mode is enabled, writing a data in the TDR register adds one data to the TXFIFO. Write operations to the TDR register are performed when TXFNF flag is set. From hardware perspective, TXFNF flag and TXE are mapped on the same bit-field.

HAL_UART_Receive

Function name

HAL_StatusTypeDef HAL_UART_Receive (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.
- When FIFO mode is enabled, the RXFNE flag is set as long as the RXFIFO is not empty. Read operations from the RDR register are performed when RXFNE flag is set. From hardware perspective, RXFNE flag and RXNE are mapped on the same bit-field.

HAL_UART_Transmit_IT

Function name

HAL_StatusTypeDef HAL_UART_Transmit_IT (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.

HAL_UART_Receive_IT

Function name

HAL_StatusTypeDef HAL_UART_Receive_IT (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.

HAL_UART_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_UART_Transmit_DMA (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pData.

HAL_UART_Receive_DMA

Function name

HAL_StatusTypeDef HAL_UART_Receive_DMA (UART_HandleTypeDef * huart, uint8_t * pData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **huart:** UART handle.
- **pData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When the UART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pData.

HAL_UART_DMAPause

Function name

HAL_StatusTypeDef HAL_UART_DMAPause (UART_HandleTypeDef * huart)

Function description

Pause the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_DMAResume

Function name

HAL_StatusTypeDef HAL_UART_DMAResume (UART_HandleTypeDef * huart)

Function description

Resume the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_DMAStop

Function name

HAL_StatusTypeDef HAL_UART_DMAStop (UART_HandleTypeDef * huart)

Function description

Stop the DMA Transfer.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UART_Abort

Function name

HAL_StatusTypeDef HAL_UART_Abort (UART_HandleTypeDef * huart)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_AbortTransmit

Function name

HAL_StatusTypeDef HAL_UART_AbortTransmit (UART_HandleTypeDef * huart)

Function description

Abort ongoing Transmit transfer (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_AbortReceive

Function name

HAL_StatusTypeDef HAL_UART_AbortReceive (UART_HandleTypeDef * huart)

Function description

Abort ongoing Receive transfer (blocking mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_UART_Abort_IT

Function name

HAL_StatusTypeDef HAL_UART_Abort_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_AbortTransmit_IT

Function name

HAL_StatusTypeDef HAL_UART_AbortTransmit_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing Transmit transfer (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Tx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Tx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_AbortReceive_IT

Function name

HAL_StatusTypeDef HAL_UART_AbortReceive_IT (UART_HandleTypeDef * huart)

Function description

Abort ongoing Receive transfer (Interrupt mode).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing Rx transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable UART Interrupts (Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_UART_IRQHandler

Function name

void HAL_UART_IRQHandler (UART_HandleTypeDef * huart)

Function description

Handle UART interrupt request.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_TxHalfCpltCallback

Function name

void HAL_UART_TxHalfCpltCallback (UART_HandleTypeDef * huart)

Function description

Tx Half Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_TxCpltCallback

Function name

void HAL_UART_TxCpltCallback (UART_HandleTypeDef * huart)

Function description

Tx Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_RxHalfCpltCallback

Function name

void HAL_UART_RxHalfCpltCallback (UART_HandleTypeDef * huart)

Function description

Rx Half Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_RxCpltCallback

Function name

void HAL_UART_RxCpltCallback (UART_HandleTypeDef * huart)

Function description

Rx Transfer completed callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_ErrorCallback

Function name

void HAL_UART_ErrorCallback (UART_HandleTypeDef * huart)

Function description

UART error callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortCpltCallback

Function name

void HAL_UART_AbortCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortTransmitCpltCallback

Function name

void HAL_UART_AbortTransmitCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_AbortReceiveCpltCallback

Function name

void HAL_UART_AbortReceiveCpltCallback (UART_HandleTypeDef * huart)

Function description

UART Abort Receive Complete callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UART_ReceiverTimeout_Config

Function name

void HAL_UART_ReceiverTimeout_Config (UART_HandleTypeDef * huart, uint32_t TimeoutValue)

Function description

Update on the fly the receiver timeout value in RTOR register.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.
- **TimeoutValue:** receiver timeout value in number of baud blocks. The timeout value must be less or equal to 0x0FFFFFFFF.

Return values

- **None:**

HAL_UART_EnableReceiverTimeout

Function name

HAL_StatusTypeDef HAL_UART_EnableReceiverTimeout (UART_HandleTypeDef * huart)

Function description

Enable the UART receiver timeout feature.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_UART_DisableReceiverTimeout

Function name

HAL_StatusTypeDef HAL_UART_DisableReceiverTimeout (UART_HandleTypeDef * huart)

Function description

Disable the UART receiver timeout feature.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART module.

Return values

- **HAL:** status

HAL_LIN_SendBreak

Function name

HAL_StatusTypeDef HAL_LIN_SendBreak (UART_HandleTypeDef * huart)

Function description

Transmit break characters.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_EnableMuteMode

Function name

HAL_StatusTypeDef HAL_MultiProcessor_EnableMuteMode (UART_HandleTypeDef * huart)

Function description

Enable UART in mute mode (does not mean UART enters mute mode; to enter mute mode, HAL_MultiProcessor_EnterMuteMode() API must be called).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_DisableMuteMode

Function name

HAL_StatusTypeDef HAL_MultiProcessor_DisableMuteMode (UART_HandleTypeDef * huart)

Function description

Disable UART mute mode (does not mean the UART actually exits mute mode as it may not have been in mute mode at this very moment).

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessor_EnterMuteMode

Function name

void HAL_MultiProcessor_EnterMuteMode (UART_HandleTypeDef * huart)

Function description

Enter UART mute mode (means UART actually enters mute mode).

Parameters

- **huart:** UART handle.

Return values

- **None:**

Notes

- To exit from mute mode, HAL_MultiProcessor_DisableMuteMode() API must be called.

HAL_HalfDuplex_EnableTransmitter

Function name

HAL_StatusTypeDef HAL_HalfDuplex_EnableTransmitter (UART_HandleTypeDef * huart)

Function description

Enable the UART transmitter and disable the UART receiver.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_HalfDuplex_EnableReceiver

Function name

HAL_StatusTypeDef HAL_HalfDuplex_EnableReceiver (UART_HandleTypeDef * huart)

Function description

Enable the UART receiver and disable the UART transmitter.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status.

HAL_UART_GetState

Function name

HAL_UART_StateTypeDef HAL_UART_GetState (UART_HandleTypeDef * huart)

Function description

Return the UART handle state.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART.

Return values

- **HAL:** state

HAL_UART_GetError

Function name

uint32_t HAL_UART_GetError (UART_HandleTypeDef * huart)

Function description

Return the UART handle error code.

Parameters

- **huart:** Pointer to a UART_HandleTypeDef structure that contains the configuration information for the specified UART.

Return values

- **UART:** Error Code

UART_SetConfig

Function name

HAL_StatusTypeDef UART_SetConfig (UART_HandleTypeDef * huart)

Function description

Initialize the callbacks to their default values.

Parameters

- **huart:** UART handle.
- **huart:** UART handle.

Return values

- **none:** Configure the UART peripheral.
- **HAL:** status

UART_CheckIdleState

Function name

HAL_StatusTypeDef UART_CheckIdleState (UART_HandleTypeDef * huart)

Function description

Check the UART Idle State.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

UART_WaitOnFlagUntilTimeout

Function name

HAL_StatusTypeDef UART_WaitOnFlagUntilTimeout (UART_HandleTypeDef * huart, uint32_t Flag, FlagStatus Status, uint32_t Tickstart, uint32_t Timeout)

Function description

Handle UART Communication Timeout.

Parameters

- **huart:** UART handle.
- **Flag:** Specifies the UART flag to check
- **Status:** Flag status (SET or RESET)
- **Tickstart:** Tick start value
- **Timeout:** Timeout duration

Return values

- **HAL:** status

UART_AdvFeatureConfig

Function name

void UART_AdvFeatureConfig (UART_HandleTypeDef * huart)

Function description

Configure the UART peripheral advanced features.

Parameters

- **huart:** UART handle.

Return values

- **None:**

60.3 UART Firmware driver defines

The following section lists the various define and macros of the module.

60.3.1 UART

UART

UART Advanced Feature Initialization Type

UART_ADVFEATURE_NO_INIT

No advanced feature initialization

UART_ADVFEATURE_TXINVERT_INIT

TX pin active level inversion

UART_ADVFEATURE_RXINVERT_INIT

RX pin active level inversion

UART_ADVFEATURE_DATAINVERT_INIT

Binary data inversion

UART_ADVFEATURE_SWAP_INIT

TX/RX pins swap

UART_ADVFEATURE_RXOVERRUNDISABLE_INIT

RX overrun disable

UART_ADVFEATURE_DMADISABLEONERROR_INIT

DMA disable on Reception Error

UART_ADVFEATURE_AUTOBAUDRATE_INIT

Auto Baud rate detection initialization

UART_ADVFEATURE_MSBFIRST_INIT

Most significant bit sent/received first

UART Advanced Feature Auto BaudRate Enable

UART_ADVFEATURE_AUTOBAUDRATE_DISABLE

RX Auto Baud rate detection enable

UART_ADVFEATURE_AUTOBAUDRATE_ENABLE

RX Auto Baud rate detection disable

UART Advanced Feature AutoBaud Rate Mode

UART_ADVFEATURE_AUTOBAUDRATE_ONSTARTBIT

Auto Baud rate detection on start bit

UART_ADVFEATURE_AUTOBAUDRATE_ONFALLINGEDGE

Auto Baud rate detection on falling edge

UART_ADVFEATURE_AUTOBAUDRATE_ON0X7FFRAME

Auto Baud rate detection on 0x7F frame detection

UART_ADVFEATURE_AUTOBAUDRATE_ON0X55FRAME

Auto Baud rate detection on 0x55 frame detection

UART Clock Prescaler

UART_PRESCALER_DIV1

fclk_pres = fclk

UART_PRESCALER_DIV2

fclk_pres = fclk/2

UART_PRESCALER_DIV4

fclk_pres = fclk/4

UART_PRESCALER_DIV6

fclk_pres = fclk/6

UART_PRESCALER_DIV8

fclk_pres = fclk/8

UART_PRESCALER_DIV10

fclk_pres = fclk/10

UART_PRESCALER_DIV12

fclk_pres = fclk/12

UART_PRESCALER_DIV16

fclk_pres = fclk/16

UART_PRESCALER_DIV32

fclk_pres = fclk/32

UART_PRESCALER_DIV64

fclk_pres = fclk/64

UART_PRESCALER_DIV128

fclk_pres = fclk/128

UART_PRESCALER_DIV256

fclk_pres = fclk/256

UART Driver Enable Assertion Time LSB Position In CR1 Register

UART_CR1_DEAT_ADDRESS_LSB_POS

UART Driver Enable assertion time LSB position in CR1 register

UART Driver Enable DeAssertion Time LSB Position In CR1 Register

UART_CR1_DEDT_ADDRESS_LSB_POS

UART Driver Enable de-assertion time LSB position in CR1 register

UART Address-matching LSB Position In CR2 Register

UART_CR2_ADDRESS_LSB_POS

UART address-matching LSB position in CR2 register

UART Advanced Feature Binary Data Inversion

UART_ADVFEATURE_DATAINV_DISABLE

Binary data inversion disable

UART_ADVFEATURE_DATAINV_ENABLE

Binary data inversion enable

UART Advanced Feature DMA Disable On Rx Error

UART_ADVFEATURE_DMA_ENABLEONRXERROR

DMA enable on Reception Error

UART_ADVFEATURE_DMA_DISABLEONRXERROR

DMA disable on Reception Error

UART DMA Rx

UART_DMA_RX_DISABLE

UART DMA RX disabled

UART_DMA_RX_ENABLE

UART DMA RX enabled

UART DMA Tx

UART_DMA_TX_DISABLE

UART DMA TX disabled

UART_DMA_TX_ENABLE

UART DMA TX enabled

UART DriverEnable Polarity

UART_DE_POLARITY_HIGH

Driver enable signal is active high

UART_DE_POLARITY_LOW

Driver enable signal is active low

UART Error Definition

HAL_UART_ERROR_NONE

No error

HAL_UART_ERROR_PE

Parity error

HAL_UART_ERROR_NE

Noise error

HAL_UART_ERROR_FE

Frame error

HAL_UART_ERROR_ORE

Overrun error

HAL_UART_ERROR_DMA

DMA transfer error

HAL_UART_ERROR_RTO

Receiver Timeout error

UART Exported Macros

__HAL_UART_RESET_HANDLE_STATE

Description:

- Reset UART handle states.

Parameters:

- __HANDLE__: UART handle.

Return value:

- None

__HAL_UART_FLUSH_DRREGISTER

Description:

- Flush the UART Data registers.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_FLAG

Description:

- Clear the specified UART pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - UART_CLEAR_PEF Parity Error Clear Flag
  - UART_CLEAR_FEF Framing Error Clear Flag
  - UART_CLEAR_NEF Noise detected Clear Flag
  - UART_CLEAR_OREF Overrun Error Clear Flag
  - UART_CLEAR_IDLEF IDLE line detected Clear Flag
  - UART_CLEAR_TXFECF TXFIFO empty clear Flag
  - UART_CLEAR_TCF Transmission Complete Clear Flag
  - UART_CLEAR_RTOF Receiver Timeout clear flag
  - UART_CLEAR_LBDF LIN Break Detection Clear Flag
  - UART_CLEAR_CTSF CTS Interrupt Clear Flag
  - UART_CLEAR_CMF Character Match Clear Flag
  - UART_CLEAR_WUF Wake Up from stop mode Clear Flag

Return value:

- None

__HAL_UART_CLEAR_PEFLAG

Description:

- Clear the UART PE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_FEFLAG

Description:

- Clear the UART FE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_NEFLAG

Description:

- Clear the UART NE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_OREFLAG

Description:

- Clear the UART ORE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_IDLEFLAG

Description:

- Clear the UART IDLE pending flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_CLEAR_TXFECF

Description:

- Clear the UART TX FIFO empty clear flag.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_GET_FLAG

Description:

- Check whether the specified UART flag is set or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - UART_FLAG_TXFT TXFIFO threshold flag
  - UART_FLAG_RXFT RXFIFO threshold flag
  - UART_FLAG_RXFF RXFIFO Full flag
  - UART_FLAG_TXFE TXFIFO Empty flag
  - UART_FLAG_REACK Receive enable acknowledge flag
  - UART_FLAG_TEACK Transmit enable acknowledge flag
  - UART_FLAG_WUF Wake up from stop mode flag
  - UART_FLAG_RWU Receiver wake up flag (if the UART in mute mode)
  - UART_FLAG_SBKF Send Break flag
  - UART_FLAG_CMF Character match flag
  - UART_FLAG_BUSY Busy flag
  - UART_FLAG_ABRF Auto Baud rate detection flag
  - UART_FLAG_ABRE Auto Baud rate detection error flag
  - UART_FLAG_CTS CTS Change flag
  - UART_FLAG_LBDF LIN Break detection flag
  - UART_FLAG_TXE Transmit data register empty flag
  - UART_FLAG_TXFNF UART TXFIFO not full flag
  - UART_FLAG_TC Transmission Complete flag
  - UART_FLAG_RXNE Receive data register not empty flag
  - UART_FLAG_RXFNE UART RXFIFO not empty flag
  - UART_FLAG_RTOF Receiver Timeout flag
  - UART_FLAG_IDLE Idle Line detection flag
  - UART_FLAG_ORE Overrun Error flag
  - UART_FLAG_NE Noise Error flag
  - UART_FLAG_FE Framing Error flag
  - UART_FLAG_PE Parity Error flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_UART_ENABLE_IT

Description:

- Enable the specified UART interrupt.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to enable. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_WUF Wakeup from stop mode interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (frame error, noise error, overrun error)

Return value:

- None

__HAL_UART_DISABLE_IT

Description:

- Disable the specified UART interrupt.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to disable. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_WUF Wakeup from stop mode interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- None

__HAL_UART_GET_IT

Description:

- Check whether the specified UART interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt to check. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_WUF Wakeup from stop mode interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_UART_GET_IT_SOURCE

Description:

- Check whether the specified UART interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __INTERRUPT__: specifies the UART interrupt source to check. This parameter can be one of the following values:
  - UART_IT_RXFF RXFIFO Full interrupt
  - UART_IT_TXFE TXFIFO Empty interrupt
  - UART_IT_RXFT RXFIFO threshold interrupt
  - UART_IT_TXFT TXFIFO threshold interrupt
  - UART_IT_WUF Wakeup from stop mode interrupt
  - UART_IT_CM Character match interrupt
  - UART_IT_CTS CTS change interrupt
  - UART_IT_LBD LIN Break detection interrupt
  - UART_IT_TXE Transmit Data Register empty interrupt
  - UART_IT_TXFNF TX FIFO not full interrupt
  - UART_IT_TC Transmission complete interrupt
  - UART_IT_RXNE Receive Data register not empty interrupt
  - UART_IT_RXFNE RXFIFO not empty interrupt
  - UART_IT_RTO Receive Timeout interrupt
  - UART_IT_IDLE Idle line detection interrupt
  - UART_IT_PE Parity Error interrupt
  - UART_IT_ERR Error interrupt (Frame error, noise error, overrun error)

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_UART_CLEAR_IT

Description:

- Clear the specified UART ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt This parameter can be one of the following values:
  - UART_CLEAR_PEF Parity Error Clear Flag
  - UART_CLEAR_FEF Framing Error Clear Flag
  - UART_CLEAR_NEF Noise detected Clear Flag
  - UART_CLEAR_OREF Overrun Error Clear Flag
  - UART_CLEAR_IDLEF IDLE line detected Clear Flag
  - UART_CLEAR_RTOF Receiver timeout clear flag
  - UART_CLEAR_TXFECF TXFIFO empty Clear Flag
  - UART_CLEAR_TCF Transmission Complete Clear Flag
  - UART_CLEAR_LBDF LIN Break Detection Clear Flag
  - UART_CLEAR_CTSF CTS Interrupt Clear Flag
  - UART_CLEAR_CMF Character Match Clear Flag
  - UART_CLEAR_WUF Wake Up from stop mode Clear Flag

Return value:

- None

__HAL_UART_SEND_REQ

Description:

- Set a specific UART request flag.

Parameters:

- __HANDLE__: specifies the UART Handle.
- __REQ__: specifies the request flag to set This parameter can be one of the following values:
  - UART_AUTOBAUD_REQUEST Auto-Baud Rate Request
  - UART_SENDBREAK_REQUEST Send Break Request
  - UART_MUTE_MODE_REQUEST Mute Mode Request
  - UART_RXDATA_FLUSH_REQUEST Receive Data flush Request
  - UART_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_UART_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the UART one bit sample method.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the UART one bit sample method.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_ENABLE

Description:

- Enable UART.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_DISABLE

Description:

- Disable UART.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

__HAL_UART_HWCONTROL_CTS_ENABLE

Description:

- Enable CTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to enable CTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying CTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_CTS_DISABLE

Description:

- Disable CTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to disable CTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying CTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_RTS_ENABLE

Description:

- Enable RTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to enable RTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying RTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

__HAL_UART_HWCONTROL_RTS_DISABLE

Description:

- Disable RTS flow control.

Parameters:

- __HANDLE__: specifies the UART Handle.

Return value:

- None

Notes:

- This macro allows to disable RTS hardware flow control for a given UART instance, without need to call HAL_UART_Init() function. As involving direct access to UART registers, usage of this macro should be fully endorsed by user. As macro is expected to be used for modifying RTS Hw flow control feature activation, without need for USART instance Deinit/Init, following conditions for macro call should be fulfilled : UART instance should have already been initialised (through call of HAL_UART_Init())macro could only be called when corresponding UART instance is disabled (i.e. __HAL_UART_DISABLE(__HANDLE__)) and should be followed by an Enable macro (i.e. __HAL_UART_ENABLE(__HANDLE__)).

UART Status Flags

UART_FLAG_TXFT

UART TXFIFO threshold flag

UART_FLAG_RXFT

UART RXFIFO threshold flag

UART_FLAG_RXFF

UART RXFIFO Full flag

UART_FLAG_TXFE

UART TXFIFO Empty flag

UART_FLAG_REACK

UART receive enable acknowledge flag

UART_FLAG_TEACK

UART transmit enable acknowledge flag

UART_FLAG_WUF

UART wake-up from stop mode flag

UART_FLAG_RWU

UART receiver wake-up from mute mode flag

UART_FLAG_SBKF

UART send break flag

UART_FLAG_CMF

UART character match flag

UART_FLAG_BUSY

UART busy flag

UART_FLAG_ABRF

UART auto Baud rate flag

UART_FLAG_ABRE

UART auto Baud rate error

UART_FLAG_RTOF

UART receiver timeout flag

UART_FLAG_CTS

UART clear to send flag

UART_FLAG_CTSIF

UART clear to send interrupt flag

UART_FLAG_LBDF

61 HAL UART Extension Driver

61.1 UARTEx Firmware driver registers structures

61.1.1 UART_WakeUpTypeDef

UART_WakeUpTypeDef is defined in the stm32g4xx_hal_uart_ex.h

Data Fields

- ***uint32_t WakeUpEvent***
- ***uint16_t AddressLength***
- ***uint8_t Address***

Field Documentation

- ***uint32_t UART_WakeUpTypeDef::WakeUpEvent***

  Specifies which event will activate the Wakeup from Stop mode flag (WUF). This parameter can be a value of ***UART_WakeUp_from_Stop_Selection***. If set to UART_WAKEUP_ON_ADDRESS, the two other fields below must be filled up.
- ***uint16_t UART_WakeUpTypeDef::AddressLength***

  Specifies whether the address is 4 or 7-bit long. This parameter can be a value of ***UARTEx_WakeUp_Address_Length***.
- ***uint8_t UART_WakeUpTypeDef::Address***

  UART/USART node address (7-bit long max).

61.2 UARTEx Firmware driver API description

The following section lists the various functions of the UARTEx library.

61.2.1 UART peripheral extended features

61.2.2 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USARTx or the UARTy in asynchronous mode.

- For the asynchronous mode the parameters below can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - Hardware flow control
  - Receiver/transmitter modes
  - Over Sampling Method
  - One-Bit Sampling Method
- For the asynchronous mode, the following advanced features can be configured as well:
  - TX and/or RX pin level inversion
  - data logical level inversion
  - RX and TX pins swap
  - RX overrun detection disabling
  - DMA disabling on RX error
  - MSB first on communication line
  - auto Baud rate detection

The HAL_RS485Ex_Init() API follows the UART RS485 mode configuration procedures (details for the procedures are available in reference manual).

This section contains the following APIs:

- *HAL_RS485Ex_Init*

61.2.3 IO operation functions

This section contains the following APIs:

- *HAL_UARTEx_WakeupCallback*
- *HAL_UARTEx_RxFifoFullCallback*
- *HAL_UARTEx_TxFifoEmptyCallback*

61.2.4 Peripheral Control functions

This section provides the following functions:

- HAL_MultiProcessorEx_AddressLength_Set() API optionally sets the UART node address detection length to more than 4 bits for multiprocessor address mark wake up.
- HAL_UARTEx_StopModeWakeUpSourceConfig() API defines the wake-up from stop mode trigger: address match, Start Bit detection or RXNE bit status.
- HAL_UARTEx_EnableStopMode() API enables the UART to wake up the MCU from stop mode
- HAL_UARTEx_DisableStopMode() API disables the above functionality
- HAL_UARTEx_EnableFifoMode() API enables the FIFO mode
- HAL_UARTEx_DisableFifoMode() API disables the FIFO mode
- HAL_UARTEx_SetTxFifoThreshold() API sets the TX FIFO threshold
- HAL_UARTEx_SetRxFifoThreshold() API sets the RX FIFO threshold

This section contains the following APIs:

- *HAL_MultiProcessorEx_AddressLength_Set*
- *HAL_UARTEx_StopModeWakeUpSourceConfig*
- *HAL_UARTEx_EnableStopMode*
- *HAL_UARTEx_DisableStopMode*
- *HAL_UARTEx_EnableFifoMode*
- *HAL_UARTEx_DisableFifoMode*
- *HAL_UARTEx_SetTxFifoThreshold*
- *HAL_UARTEx_SetRxFifoThreshold*

61.2.5 Detailed description of functions

HAL_RS485Ex_Init

Function name

HAL_StatusTypeDef HAL_RS485Ex_Init (UART_HandleTypeDef * huart, uint32_t Polarity, uint32_t AssertionTime, uint32_t DeassertionTime)

Function description

Initialize the RS485 Driver enable feature according to the specified parameters in the UART_InitTypeDef and creates the associated handle.

Parameters

- **huart:** UART handle.
- **Polarity:** Select the driver enable polarity. This parameter can be one of the following values:
  - UART_DE_POLARITY_HIGH DE signal is active high
  - UART_DE_POLARITY_LOW DE signal is active low
- **AssertionTime:** Driver Enable assertion time: 5-bit value defining the time between the activation of the DE (Driver Enable) signal and the beginning of the start bit. It is expressed in sample time units (1/8 or 1/16 bit time, depending on the oversampling rate)
- **DeassertionTime:** Driver Enable deassertion time: 5-bit value defining the time between the end of the last stop bit, in a transmitted message, and the de-activation of the DE (Driver Enable) signal. It is expressed in sample time units (1/8 or 1/16 bit time, depending on the oversampling rate).

Return values

- **HAL:** status

HAL_UARTEx_WakeupCallback

Function name

void HAL_UARTEx_WakeupCallback (UART_HandleTypeDef * huart)

Function description

UART wakeup from Stop mode callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_RxFifoFullCallback

Function name

void HAL_UARTEx_RxFifoFullCallback (UART_HandleTypeDef * huart)

Function description

UART RX Fifo full callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_TxFifoEmptyCallback

Function name

void HAL_UARTEx_TxFifoEmptyCallback (UART_HandleTypeDef * huart)

Function description

UART TX Fifo empty callback.

Parameters

- **huart:** UART handle.

Return values

- **None:**

HAL_UARTEx_StopModeWakeUpSourceConfig

Function name

HAL_StatusTypeDef HAL_UARTEx_StopModeWakeUpSourceConfig (UART_HandleTypeDef * huart, UART_WakeUpTypeDef WakeUpSelection)

Function description

Set Wakeup from Stop mode interrupt flag selection.

Parameters

- **huart:** UART handle.
- **WakeUpSelection:** Address match, Start Bit detection or RXNE/RXFNE bit status. This parameter can be one of the following values:
  - UART_WAKEUP_ON_ADDRESS
  - UART_WAKEUP_ON_STARTBIT
  - UART_WAKEUP_ON_READDATA_NONEMPTY

Return values

- **HAL:** status

Notes

- It is the application responsibility to enable the interrupt used as usart_wkup interrupt source before entering low-power mode.

HAL_UARTEx_EnableStopMode

Function name

HAL_StatusTypeDef HAL_UARTEx_EnableStopMode (UART_HandleTypeDef * huart)

Function description

Enable UART Stop Mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

Notes

- The UART is able to wake up the MCU from Stop 1 mode as long as UART clock is HSI or LSE.

HAL_UARTEx_DisableStopMode

Function name

HAL_StatusTypeDef HAL_UARTEx_DisableStopMode (UART_HandleTypeDef * huart)

Function description

Disable UART Stop Mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_MultiProcessorEx_AddressLength_Set

Function name

HAL_StatusTypeDef HAL_MultiProcessorEx_AddressLength_Set (UART_HandleTypeDef * huart, uint32_t AddressLength)

Function description

By default in multiprocessor mode, when the wake up method is set to address mark, the UART handles only 4-bit long addresses detection; this API allows to enable longer addresses detection (6-, 7- or 8-bit long).

Parameters

- **huart:** UART handle.
- **AddressLength:** This parameter can be one of the following values:
  - UART_ADDRESS_DETECT_4B 4-bit long address
  - UART_ADDRESS_DETECT_7B 6-, 7- or 8-bit long address

Return values

- **HAL:** status

Notes

- Addresses detection lengths are: 6-bit address detection in 7-bit data mode, 7-bit address detection in 8-bit data mode, 8-bit address detection in 9-bit data mode.

HAL_UARTEx_EnableFifoMode

Function name

HAL_StatusTypeDef HAL_UARTEx_EnableFifoMode (UART_HandleTypeDef * huart)

Function description

Enable the FIFO mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UARTEx_DisableFifoMode

Function name

HAL_StatusTypeDef HAL_UARTEx_DisableFifoMode (UART_HandleTypeDef * huart)

Function description

Disable the FIFO mode.

Parameters

- **huart:** UART handle.

Return values

- **HAL:** status

HAL_UARTEx_SetTxFifoThreshold

Function name

HAL_StatusTypeDef HAL_UARTEx_SetTxFifoThreshold (UART_HandleTypeDef * huart, uint32_t Threshold)

Function description

Set the TXFIFO threshold.

Parameters

- **huart:** UART handle.
- **Threshold:** TX FIFO threshold value This parameter can be one of the following values:
  - UART_TXFIFO_THRESHOLD_1_8
  - UART_TXFIFO_THRESHOLD_1_4
  - UART_TXFIFO_THRESHOLD_1_2
  - UART_TXFIFO_THRESHOLD_3_4
  - UART_TXFIFO_THRESHOLD_7_8
  - UART_TXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_UARTEx_SetRxFifoThreshold

Function name

HAL_StatusTypeDef HAL_UARTEx_SetRxFifoThreshold (UART_HandleTypeDef * huart, uint32_t Threshold)

Function description

Set the RXFIFO threshold.

Parameters

- **huart:** UART handle.
- **Threshold:** RX FIFO threshold value This parameter can be one of the following values:
  - UART_RXFIFO_THRESHOLD_1_8
  - UART_RXFIFO_THRESHOLD_1_4
  - UART_RXFIFO_THRESHOLD_1_2
  - UART_RXFIFO_THRESHOLD_3_4
  - UART_RXFIFO_THRESHOLD_7_8
  - UART_RXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

61.3 UARTEx Firmware driver defines

The following section lists the various define and macros of the module.

61.3.1 UARTEx

UARTEx

UARTEx FIFO mode

UART_FIFOMODE_DISABLE

FIFO mode disable

UART_FIFOMODE_ENABLE

FIFO mode enable

UARTEx RXFIFO threshold level

UART_RXFIFO_THRESHOLD_1_8

RXFIFO FIFO reaches 1/8 of its depth

UART_RXFIFO_THRESHOLD_1_4

RXFIFO FIFO reaches 1/4 of its depth

UART_RXFIFO_THRESHOLD_1_2

RXFIFO FIFO reaches 1/2 of its depth

UART_RXFIFO_THRESHOLD_3_4

RXFIFO FIFO reaches 3/4 of its depth

UART_RXFIFO_THRESHOLD_7_8

RXFIFO FIFO reaches 7/8 of its depth

UART_RXFIFO_THRESHOLD_8_8

RXFIFO FIFO becomes full

UARTEx TXFIFO threshold level

UART_TXFIFO_THRESHOLD_1_8

TXFIFO reaches 1/8 of its depth

UART_TXFIFO_THRESHOLD_1_4

TXFIFO reaches 1/4 of its depth

UART_TXFIFO_THRESHOLD_1_2

TXFIFO reaches 1/2 of its depth

UART_TXFIFO_THRESHOLD_3_4

TXFIFO reaches 3/4 of its depth

UART_TXFIFO_THRESHOLD_7_8

TXFIFO reaches 7/8 of its depth

UART_TXFIFO_THRESHOLD_8_8

TXFIFO becomes empty

UARTEx WakeUp Address Length

UART_ADDRESS_DETECT_4B

4-bit long wake-up address

UART_ADDRESS_DETECT_7B

7-bit long wake-up address

UARTEx Word Length

UART_WORDLENGTH_7B

7-bit long UART frame

UART_WORDLENGTH_8B

8-bit long UART frame

UART_WORDLENGTH_9B

9-bit long UART frame

62 HAL USART Generic Driver

62.1 USART Firmware driver registers structures

62.1.1 USART_InitTypeDef

USART_InitTypeDef is defined in the stm32g4xx_hal_usart.h

Data Fields

- ***uint32_t BaudRate***
- ***uint32_t WordLength***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t Mode***
- ***uint32_t CLKPolarity***
- ***uint32_t CLKPhase***
- ***uint32_t CLKLastBit***
- ***uint32_t ClockPrescaler***

Field Documentation

- ***uint32_t USART_InitTypeDef::BaudRate***

  This member configures the Usart communication baud rate. The baud rate is computed using the following formula: Baud Rate Register[15:4] = ((2 * fclk_pres) / ((huart->Init.BaudRate)))[15:4] Baud Rate Register[3] = 0 Baud Rate Register[2:0] = (((2 * fclk_pres) / ((huart->Init.BaudRate)))[3:0]) >> 1 where fclk_pres is the USART input clock frequency (fclk) divided by a prescaler.

  Note:

  – Oversampling by 8 is systematically applied to achieve high baud rates.

- ***uint32_t USART_InitTypeDef::WordLength***

  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***USARTEx_Word_Length***.

- ***uint32_t USART_InitTypeDef::StopBits***

  Specifies the number of stop bits transmitted. This parameter can be a value of ***USART_Stop_Bits***.

- ***uint32_t USART_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***USART_Parity***

  Note:

  – When parity is enabled, the computed parity is inserted at the MSB position of the transmitted data (9th bit when the word length is set to 9 data bits; 8th bit when the word length is set to 8 data bits).

- ***uint32_t USART_InitTypeDef::Mode***

  Specifies whether the Receive or Transmit mode is enabled or disabled. This parameter can be a value of ***USART_Mode***.

- ***uint32_t USART_InitTypeDef::CLKPolarity***

  Specifies the steady state of the serial clock. This parameter can be a value of ***USART_Clock_Polarity***.

- ***uint32_t USART_InitTypeDef::CLKPhase***

  Specifies the clock transition on which the bit capture is made. This parameter can be a value of ***USART_Clock_Phase***.

- ***uint32_t USART_InitTypeDef::CLKLastBit***

  Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of ***USART_Last_Bit***.

- ***uint32_t USART_InitTypeDef::ClockPrescaler***

  Specifies the prescaler value used to divide the USART clock source. This parameter can be a value of ***USART_ClockPrescaler***.

62.1.2 __USART_HandleTypeDef

__USART_HandleTypeDef is defined in the stm32g4xx_hal_usart.h

Data Fields

  USART communication state
- ***__IO uint32_t __USART_HandleTypeDef::ErrorCode***
  USART Error code

62.2 USART Firmware driver API description

The following section lists the various functions of the USART library.

62.2.1 How to use this driver

The USART HAL driver can be used as follows:

1. Declare a USART_HandleTypeDef handle structure (eg. USART_HandleTypeDef husart).
2. Initialize the USART low level resources by implementing the HAL_USART_MspInit() API:
   – Enable the USARTx interface clock.
   – USART pins configuration:
     ◦ Enable the clock for the USART GPIOs.
     ◦ Configure these USART pins as alternate function pull-up.
   – NVIC configuration if you need to use interrupt process (HAL_USART_Transmit_IT(), HAL_USART_Receive_IT() and HAL_USART_TransmitReceive_IT() APIs):
     ◦ Configure the USARTx interrupt priority.
     ◦ Enable the NVIC USART IRQ handle.
   – USART interrupts handling:

Note: The specific USART interrupts (Transmission complete interrupt, RXNE interrupt and Error Interrupts) will be managed using the macros __HAL_USART_ENABLE_IT() and __HAL_USART_DISABLE_IT() inside the transmit and receive process.

   – DMA Configuration if you need to use DMA process (HAL_USART_Transmit_DMA() HAL_USART_Receive_DMA() and HAL_USART_TransmitReceive_DMA() APIs):
     ◦ Declare a DMA handle structure for the Tx/Rx channel.
     ◦ Enable the DMAx interface clock.
     ◦ Configure the declared DMA handle structure with the required Tx/Rx parameters.
     ◦ Configure the DMA Tx/Rx channel.
     ◦ Associate the initialized DMA handle to the USART DMA Tx/Rx handle.
     ◦ Configure the priority and enable the NVIC for the transfer complete interrupt on the DMA Tx/Rx channel.
3. Program the Baud Rate, Word Length, Stop Bit, Parity, and Mode (Receiver/Transmitter) in the husart handle Init structure.
4. Initialize the USART registers by calling the HAL_USART_Init() API:
   – This API configures also the low level Hardware GPIO, CLOCK, CORTEX...etc) by calling the customized HAL_USART_MspInit(&husart) API.

Note: To configure and enable/disable the USART to wake up the MCU from stop mode, resort to UART API's HAL_UARTEx_StopModeWakeUpSourceConfig(), HAL_UARTEx_EnableStopMode() and HAL_UARTEx_DisableStopMode() in casting the USART handle to UART type UART_HandleTypeDef.

62.2.2 Callback registration

The compilation define USE_HAL_USART_REGISTER_CALLBACKS when set to 1 allows the user to configure dynamically the driver callbacks.

Use Function @ref HAL_USART_RegisterCallback() to register a user callback. Function @ref HAL_USART_RegisterCallback() allows to register following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- TxRxCpltCallback : Tx Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : USART MspInit.
- MspDeInitCallback : USART MspDeInit. This function takes as parameters the HAL peripheral handle, the Callback ID and a pointer to the user callback function.

Use function @ref HAL_USART_UnRegisterCallback() to reset a callback to the default weak (surcharged) function. @ref HAL_USART_UnRegisterCallback() takes as parameters the HAL peripheral handle, and the Callback ID. This function allows to reset following callbacks:

- TxHalfCpltCallback : Tx Half Complete Callback.
- TxCpltCallback : Tx Complete Callback.
- RxHalfCpltCallback : Rx Half Complete Callback.
- RxCpltCallback : Rx Complete Callback.
- TxRxCpltCallback : Tx Rx Complete Callback.
- ErrorCallback : Error Callback.
- AbortCpltCallback : Abort Complete Callback.
- RxFifoFullCallback : Rx Fifo Full Callback.
- TxFifoEmptyCallback : Tx Fifo Empty Callback.
- MspInitCallback : USART MspInit.
- MspDeInitCallback : USART MspDeInit.

By default, after the @ref HAL_USART_Init() and when the state is HAL_USART_STATE_RESET all callbacks are set to the corresponding weak (surcharged) functions: examples @ref HAL_USART_TxCpltCallback(), @ref HAL_USART_RxHalfCpltCallback(). Exception done for MspInit and MspDeInit functions that are respectively reset to the legacy weak (surcharged) functions in the @ref HAL_USART_Init() and @ref HAL_USART_DeInit() only when these callbacks are null (not registered beforehand). If not, MspInit or MspDeInit are not null, the @ref HAL_USART_Init() and @ref HAL_USART_DeInit() keep and use the user MspInit/MspDeInit callbacks (registered beforehand).

Callbacks can be registered/unregistered in HAL_USART_STATE_READY state only. Exception done MspInit/MspDeInit that can be registered/unregistered in HAL_USART_STATE_READY or HAL_USART_STATE_RESET state, thus registered (user) MspInit/DeInit callbacks can be used during the Init/DeInit. In that case first register the MspInit/MspDeInit user callbacks using @ref HAL_USART_RegisterCallback() before calling @ref HAL_USART_DeInit() or @ref HAL_USART_Init() function.

When The compilation define USE_HAL_USART_REGISTER_CALLBACKS is set to 0 or not defined, the callback registration feature is not available and weak (surcharged) callbacks are used.

62.2.3 Initialization and Configuration functions

This subsection provides a set of functions allowing to initialize the USART in asynchronous and in synchronous modes.

- For the asynchronous mode only these parameters can be configured:
  - Baud Rate
  - Word Length
  - Stop Bit
  - Parity: If the parity is enabled, then the MSB bit of the data written in the data register is transmitted but is changed by the parity bit.
  - USART polarity
  - USART phase
  - USART LastBit
  - Receiver/transmitter modes

The HAL_USART_Init() function follows the USART synchronous configuration procedure (details for the procedure are available in reference manual).

This section contains the following APIs:

- ***HAL_USART_Init***
- ***HAL_USART_DeInit***
- ***HAL_USART_MspInit***
- ***HAL_USART_MspDeInit***

62.2.4 IO operation functions

This subsection provides a set of functions allowing to manage the USART synchronous data transfers.

The USART supports master mode only: it cannot receive or send data related to an input clock (SCLK is always an output).

1. There are two modes of transfer:
   - Blocking mode: The communication is performed in polling mode. The HAL status of all data processing is returned by the same function after finishing transfer.
   - No-Blocking mode: The communication is performed using Interrupts or DMA, These API's return the HAL status. The end of the data processing will be indicated through the dedicated USART IRQ when using Interrupt mode or the DMA IRQ when using DMA mode. The HAL_USART_TxCpltCallback(), HAL_USART_RxCpltCallback() and HAL_USART_TxRxCpltCallback() user callbacks will be executed respectively at the end of the transmit or Receive process The HAL_USART_ErrorCallback()user callback will be executed when a communication error is detected
2. Blocking mode API's are :
   - HAL_USART_Transmit() in simplex mode
   - HAL_USART_Receive() in full duplex receive only
   - HAL_USART_TransmitReceive() in full duplex mode
3. Non-Blocking mode API's with Interrupt are :
   - HAL_USART_Transmit_IT() in simplex mode
   - HAL_USART_Receive_IT() in full duplex receive only
   - HAL_USART_TransmitReceive_IT() in full duplex mode
   - HAL_USART_IRQHandler()
4. No-Blocking mode API's with DMA are :
   - HAL_USART_Transmit_DMA() in simplex mode
   - HAL_USART_Receive_DMA() in full duplex receive only
   - HAL_USART_TransmitReceive_DMA() in full duplex mode
   - HAL_USART_DMAPause()
   - HAL_USART_DMAResume()
   - HAL_USART_DMAStop()

5. A set of Transfer Complete Callbacks are provided in Non_Blocking mode:
   - HAL_USART_TxCpltCallback()
   - HAL_USART_RxCpltCallback()
   - HAL_USART_TxHalfCpltCallback()
   - HAL_USART_RxHalfCpltCallback()
   - HAL_USART_ErrorCallback()
   - HAL_USART_TxRxCpltCallback()
6. Non-Blocking mode transfers could be aborted using Abort API's :
   - HAL_USART_Abort()
   - HAL_USART_Abort_IT()
7. For Abort services based on interrupts (HAL_USART_Abort_IT), a Abort Complete Callbacks is provided:
   - HAL_USART_AbortCpltCallback()
8. In Non-Blocking mode transfers, possible errors are split into 2 categories. Errors are handled as follows :
   - Error is considered as Recoverable and non blocking : Transfer could go till end, but error severity is to be evaluated by user : this concerns Frame Error, Parity Error or Noise Error in Interrupt mode reception . Received character is then retrieved and stored in Rx buffer, Error code is set to allow user to identify error type, and HAL_USART_ErrorCallback() user callback is executed. Transfer is kept ongoing on USART side. If user wants to abort it, Abort services should be called by user.
   - Error is considered as Blocking : Transfer could not be completed properly and is aborted. This concerns Overrun Error In Interrupt mode reception and all errors in DMA mode. Error code is set to allow user to identify error type, and HAL_USART_ErrorCallback() user callback is executed.

This section contains the following APIs:

- ***HAL_USART_Transmit***
- ***HAL_USART_Receive***
- ***HAL_USART_TransmitReceive***
- ***HAL_USART_Transmit_IT***
- ***HAL_USART_Receive_IT***
- ***HAL_USART_TransmitReceive_IT***
- ***HAL_USART_Transmit_DMA***
- ***HAL_USART_Receive_DMA***
- ***HAL_USART_TransmitReceive_DMA***
- ***HAL_USART_DMAPause***
- ***HAL_USART_DMAResume***
- ***HAL_USART_DMAStop***
- ***HAL_USART_Abort***
- ***HAL_USART_Abort_IT***
- ***HAL_USART_IRQHandler***
- ***HAL_USART_TxCpltCallback***
- ***HAL_USART_TxHalfCpltCallback***
- ***HAL_USART_RxCpltCallback***
- ***HAL_USART_RxHalfCpltCallback***
- ***HAL_USART_TxRxCpltCallback***
- ***HAL_USART_ErrorCallback***
- ***HAL_USART_AbortCpltCallback***

62.2.5 Peripheral State and Error functions

This subsection provides functions allowing to :

- Return the USART handle state
- Return the USART handle error code

This section contains the following APIs:

- *HAL_USART_GetState*
- *HAL_USART_GetError*

62.2.6 Detailed description of functions

HAL_USART_Init

Function name

HAL_StatusTypeDef HAL_USART_Init (USART_HandleTypeDef * husart)

Function description

Initialize the USART mode according to the specified parameters in the USART_InitTypeDef and initialize the associated handle.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DeInit

Function name

HAL_StatusTypeDef HAL_USART_DeInit (USART_HandleTypeDef * husart)

Function description

DeInitialize the USART peripheral.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_MspInit

Function name

void HAL_USART_MspInit (USART_HandleTypeDef * husart)

Function description

Initialize the USART MSP.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_MspDeInit

Function name

void HAL_USART_MspDeInit (USART_HandleTypeDef * husart)

Function description

DeInitialize the USART MSP.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_Transmit

Function name

HAL_StatusTypeDef HAL_USART_Transmit (USART_HandleTypeDef * husart, uint8_t * pTxData, uint16_t Size, uint32_t Timeout)

Function description

Simplex send an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be sent.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive

Function name

HAL_StatusTypeDef HAL_USART_Receive (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size, uint32_t Timeout)

Function description

Receive an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pRxData:** Pointer to data buffer (u8 or u16 data elements).
- **Size:** Amount of data elements (u8 or u16) to be received.
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- To receive synchronous data, dummy data are simultaneously transmitted.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive (USART_HandleTypeDef * husart, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size, uint32_t Timeout)

Function description

Full-Duplex Send and Receive an amount of data in blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent (same amount to be received).
- **Timeout:** Timeout duration.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_Transmit_IT

Function name

HAL_StatusTypeDef HAL_USART_Transmit_IT (USART_HandleTypeDef * husart, uint8_t * pTxData, uint16_t Size)

Function description

Send an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive_IT

Function name

HAL_StatusTypeDef HAL_USART_Receive_IT (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size)

Function description

Receive an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pRxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- To receive synchronous data, dummy data are simultaneously transmitted.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive_IT

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive_IT (USART_HandleTypeDef * husart, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Full-Duplex Send and Receive an amount of data in interrupt mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent (same amount to be received).

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_Transmit_DMA

Function name

HAL_StatusTypeDef HAL_USART_Transmit_DMA (USART_HandleTypeDef * husart, uint8_t * pTxData, uint16_t Size)

Function description

Send an amount of data in DMA mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be sent.

Return values

- **HAL:** status

Notes

- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data is handled as a set of u16. In this case, Size must indicate the number of u16 provided through pTxData.

HAL_USART_Receive_DMA

Function name

HAL_StatusTypeDef HAL_USART_Receive_DMA (USART_HandleTypeDef * husart, uint8_t * pRxData, uint16_t Size)

Function description

Receive an amount of data in DMA mode.

Parameters

- **husart:** USART handle.
- **pRxData:** pointer to data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received.

Return values

- **HAL:** status

Notes

- When the USART parity is enabled (PCE = 1), the received data contain the parity bit (MSB position).
- The USART DMA transmit channel must be configured in order to generate the clock for the slave.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the received data is handled as a set of u16. In this case, Size must indicate the number of u16 available through pRxData.

HAL_USART_TransmitReceive_DMA

Function name

HAL_StatusTypeDef HAL_USART_TransmitReceive_DMA (USART_HandleTypeDef * husart, uint8_t * pTxData, uint8_t * pRxData, uint16_t Size)

Function description

Full-Duplex Transmit Receive an amount of data in non-blocking mode.

Parameters

- **husart:** USART handle.
- **pTxData:** pointer to TX data buffer (u8 or u16 data elements).
- **pRxData:** pointer to RX data buffer (u8 or u16 data elements).
- **Size:** amount of data elements (u8 or u16) to be received/sent.

Return values

- **HAL:** status

Notes

- When the USART parity is enabled (PCE = 1) the data received contain the parity bit.
- When UART parity is not enabled (PCE = 0), and Word Length is configured to 9 bits (M1-M0 = 01), the sent data and the received data are handled as sets of u16. In this case, Size must indicate the number of u16 available through pTxData and through pRxData.

HAL_USART_DMAPause

Function name

HAL_StatusTypeDef HAL_USART_DMAPause (USART_HandleTypeDef * husart)

Function description

Pause the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DMAResume

Function name

HAL_StatusTypeDef HAL_USART_DMAResume (USART_HandleTypeDef * husart)

Function description

Resume the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_DMAStop

Function name

HAL_StatusTypeDef HAL_USART_DMAStop (USART_HandleTypeDef * husart)

Function description

Stop the DMA Transfer.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USART_Abort

Function name

HAL_StatusTypeDef HAL_USART_Abort (USART_HandleTypeDef * husart)

Function description

Abort ongoing transfers (blocking mode).

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable USART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort (in case of transfer in DMA mode)Set handle State to READY
- This procedure is executed in blocking mode : when exiting function, Abort is considered as completed.

HAL_USART_Abort_IT

Function name

HAL_StatusTypeDef HAL_USART_Abort_IT (USART_HandleTypeDef * husart)

Function description

Abort ongoing transfers (Interrupt mode).

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- This procedure could be used for aborting any ongoing transfer started in Interrupt or DMA mode. This procedure performs following operations : Disable USART Interrupts (Tx and Rx)Disable the DMA transfer in the peripheral register (if enabled)Abort DMA transfer by calling HAL_DMA_Abort_IT (in case of transfer in DMA mode)Set handle State to READYAt abort completion, call user abort complete callback
- This procedure is executed in Interrupt mode, meaning that abort procedure could be considered as completed only when user abort complete callback is executed (not when exiting function).

HAL_USART_IRQHandler

Function name

void HAL_USART_IRQHandler (USART_HandleTypeDef * husart)

Function description

Handle USART interrupt request.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxHalfCpltCallback

Function name

void HAL_USART_TxHalfCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx Half Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxCpltCallback

Function name

void HAL_USART_TxCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_RxCpltCallback

Function name

void HAL_USART_RxCpltCallback (USART_HandleTypeDef * husart)

Function description

Rx Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_RxHalfCpltCallback

Function name

void HAL_USART_RxHalfCpltCallback (USART_HandleTypeDef * husart)

Function description

Rx Half Transfer completed callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_TxRxCpltCallback

Function name

void HAL_USART_TxRxCpltCallback (USART_HandleTypeDef * husart)

Function description

Tx/Rx Transfers completed callback for the non-blocking process.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_ErrorCallback

Function name

void HAL_USART_ErrorCallback (USART_HandleTypeDef * husart)

Function description

USART error callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_AbortCpltCallback

Function name

void HAL_USART_AbortCpltCallback (USART_HandleTypeDef * husart)

Function description

USART Abort Complete callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USART_GetState

Function name

HAL_USART_StateTypeDef HAL_USART_GetState (USART_HandleTypeDef * husart)

Function description

Return the USART handle state.

Parameters

- **husart:** pointer to a USART_HandleTypeDef structure that contains the configuration information for the specified USART.

Return values

- **USART:** handle state

HAL_USART_GetError

Function name

uint32_t HAL_USART_GetError (USART_HandleTypeDef * husart)

Function description

Return the USART error code.

Parameters

- **husart:** pointer to a USART_HandleTypeDef structure that contains the configuration information for the specified USART.

Return values

- **USART:** handle Error Code

62.3 USART Firmware driver defines

The following section lists the various define and macros of the module.

62.3.1 USART

USART

USART Clock

USART_CLOCK_DISABLE

USART clock disable

USART_CLOCK_ENABLE

USART clock enable

USART Clock Prescaler

USART_PRESCALER_DIV1

fclk_pres = fclk

USART_PRESCALER_DIV2

fclk_pres = fclk/2

USART_PRESCALER_DIV4

fclk_pres = fclk/4

USART_PRESCALER_DIV6

fclk_pres = fclk/6

USART_PRESCALER_DIV8

fclk_pres = fclk/8

USART_PRESCALER_DIV10

fclk_pres = fclk/10

USART_PRESCALER_DIV12

fclk_pres = fclk/12

USART_PRESCALER_DIV16

fclk_pres = fclk/16

USART_PRESCALER_DIV32

fclk_pres = fclk/32

USART_PRESCALER_DIV64

fclk_pres = fclk/64

USART_PRESCALER_DIV128

fclk_pres = fclk/128

USART_PRESCALER_DIV256

fclk_pres = fclk/256

USART Clock Phase

USART_PHASE_1EDGE

USART frame phase on first clock transition

USART_PHASE_2EDGE

USART frame phase on second clock transition

USART Clock Polarity

USART_POLARITY_LOW

Driver enable signal is active high

USART_POLARITY_HIGH

Driver enable signal is active low

USART Error Definition

HAL_USART_ERROR_NONE

No error

HAL_USART_ERROR_PE

Parity error

HAL_USART_ERROR_NE

Noise error

HAL_USART_ERROR_FE

Frame error

HAL_USART_ERROR_ORE

Overrun error

HAL_USART_ERROR_DMA

DMA transfer error

HAL_USART_ERROR_UDR

SPI slave underrun error

HAL_USART_ERROR_RTO

Receiver Timeout error

USART Exported Macros

__HAL_USART_RESET_HANDLE_STATE

Description:

- Reset USART handle state.

Parameters:

- __HANDLE__: USART handle.

Return value:

- None

__HAL_USART_GET_FLAG

Description:

- Check whether the specified USART flag is set or not.

Parameters:

- __HANDLE__: specifies the USART Handle
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - USART_FLAG_TXFT TXFIFO threshold flag
  - USART_FLAG_RXFT RXFIFO threshold flag
  - USART_FLAG_RXFF RXFIFO Full flag
  - USART_FLAG_TXFE TXFIFO Empty flag
  - USART_FLAG_REACK Receive enable acknowledge flag
  - USART_FLAG_TEACK Transmit enable acknowledge flag
  - USART_FLAG_BUSY Busy flag
  - USART_FLAG_UDR SPI slave underrun error flag
  - USART_FLAG_TXE Transmit data register empty flag
  - USART_FLAG_TXFNF TXFIFO not full flag
  - USART_FLAG_TC Transmission Complete flag
  - USART_FLAG_RXNE Receive data register not empty flag
  - USART_FLAG_RXFNE RXFIFO not empty flag
  - USART_FLAG_RTOF Receiver Timeout flag
  - USART_FLAG_IDLE Idle Line detection flag
  - USART_FLAG_ORE OverRun Error flag
  - USART_FLAG_NE Noise Error flag
  - USART_FLAG_FE Framing Error flag
  - USART_FLAG_PE Parity Error flag

Return value:

- The: new state of __FLAG__ (TRUE or FALSE).

__HAL_USART_CLEAR_FLAG

Description:

- Clear the specified USART pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __FLAG__: specifies the flag to check. This parameter can be any combination of the following values:
  - USART_CLEAR_PEF Parity Error Clear Flag
  - USART_CLEAR_FEF Framing Error Clear Flag
  - USART_CLEAR_NEF Noise detected Clear Flag
  - USART_CLEAR_OREF Overrun Error Clear Flag
  - USART_CLEAR_IDLEF IDLE line detected Clear Flag
  - USART_CLEAR_TXFECF TXFIFO empty clear Flag
  - USART_CLEAR_TCF Transmission Complete Clear Flag
  - USART_CLEAR_RTOF Receiver Timeout clear flag
  - USART_CLEAR_UDRF SPI slave underrun error Clear Flag

Return value:

- None

__HAL_USART_CLEAR_PEFLAG

Description:

- Clear the USART PE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_FEFLAG

Description:

- Clear the USART FE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_NEFLAG

Description:

- Clear the USART NE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_OREFLAG

Description:

- Clear the USART ORE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_IDLEFLAG

Description:

- Clear the USART IDLE pending flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_TXFECF

Description:

- Clear the USART TX FIFO empty clear flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_CLEAR_UDRFLAG

Description:

- Clear SPI slave underrun error flag.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ENABLE_IT

Description:

- Enable the specified USART interrupt.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to enable. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_PE Parity Error interrupt
  - USART_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_USART_DISABLE_IT

Description:

- Disable the specified USART interrupt.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to disable. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_PE Parity Error interrupt
  - USART_IT_ERR Error interrupt(Frame error, noise error, overrun error)

Return value:

- None

__HAL_USART_GET_IT

Description:

- Check whether the specified USART interrupt has occurred or not.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to check. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_ORE OverRun Error interrupt
  - USART_IT_NE Noise Error interrupt
  - USART_IT_FE Framing Error interrupt
  - USART_IT_PE Parity Error interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_USART_GET_IT_SOURCE

Description:

- Check whether the specified USART interrupt source is enabled or not.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __INTERRUPT__: specifies the USART interrupt source to check. This parameter can be one of the following values:
  - USART_IT_RXFF RXFIFO Full interrupt
  - USART_IT_TXFE TXFIFO Empty interrupt
  - USART_IT_RXFT RXFIFO threshold interrupt
  - USART_IT_TXFT TXFIFO threshold interrupt
  - USART_IT_TXE Transmit Data Register empty interrupt
  - USART_IT_TXFNF TX FIFO not full interrupt
  - USART_IT_TC Transmission complete interrupt
  - USART_IT_RXNE Receive Data register not empty interrupt
  - USART_IT_RXFNE RXFIFO not empty interrupt
  - USART_IT_IDLE Idle line detection interrupt
  - USART_IT_ORE OverRun Error interrupt
  - USART_IT_NE Noise Error interrupt
  - USART_IT_FE Framing Error interrupt
  - USART_IT_PE Parity Error interrupt

Return value:

- The: new state of __INTERRUPT__ (SET or RESET).

__HAL_USART_CLEAR_IT

Description:

- Clear the specified USART ISR flag, in setting the proper ICR register flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __IT_CLEAR__: specifies the interrupt clear register flag that needs to be set to clear the corresponding interrupt. This parameter can be one of the following values:
  - USART_CLEAR_PEF Parity Error Clear Flag
  - USART_CLEAR_FEF Framing Error Clear Flag
  - USART_CLEAR_NEF Noise detected Clear Flag
  - USART_CLEAR_OREF Overrun Error Clear Flag
  - USART_CLEAR_IDLEF IDLE line detected Clear Flag
  - USART_CLEAR_RTOF Receiver timeout clear flag
  - USART_CLEAR_TXFECF TXFIFO empty clear Flag
  - USART_CLEAR_TCF Transmission Complete Clear Flag

Return value:

- None

__HAL_USART_SEND_REQ

Description:

- Set a specific USART request flag.

Parameters:

- __HANDLE__: specifies the USART Handle.
- __REQ__: specifies the request flag to set. This parameter can be one of the following values:
  - USART_RXDATA_FLUSH_REQUEST Receive Data flush Request
  - USART_TXDATA_FLUSH_REQUEST Transmit data flush Request

Return value:

- None

__HAL_USART_ONE_BIT_SAMPLE_ENABLE

Description:

- Enable the USART one bit sample method.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ONE_BIT_SAMPLE_DISABLE

Description:

- Disable the USART one bit sample method.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_ENABLE

Description:

- Enable USART.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

__HAL_USART_DISABLE

Description:

- Disable USART.

Parameters:

- __HANDLE__: specifies the USART Handle.

Return value:

- None

USART Flags

USART_FLAG_TXFT

USART TXFIFO threshold flag

USART_FLAG_RXFT

USART RXFIFO threshold flag

USART_FLAG_RXFF

USART_CLEAR_RTOF

USART receiver timeout clear flag

USART Last Bit

USART_LASTBIT_DISABLE

USART frame last data bit clock pulse not output to SCLK pin

USART_LASTBIT_ENABLE

USART frame last data bit clock pulse output to SCLK pin

USART Mode

USART_MODE_RX

RX mode

USART_MODE_TX

TX mode

USART_MODE_TX_RX

RX and TX mode

USART Over Sampling

USART_OVERSAMPLING_16

Oversampling by 16

USART_OVERSAMPLING_8

Oversampling by 8

USART Parity

USART_PARITY_NONE

No parity

USART_PARITY_EVEN

Even parity

USART_PARITY_ODD

Odd parity

USART Request Parameters

USART_RXDATA_FLUSH_REQUEST

Receive Data flush Request

USART_TXDATA_FLUSH_REQUEST

Transmit data flush Request

USART Number of Stop Bits

USART_STOPBITS_0_5

USART frame with 0.5 stop bit

USART_STOPBITS_1

USART frame with 1 stop bit

USART_STOPBITS_1_5

USART frame with 1.5 stop bits

USART_STOPBITS_2

USART frame with 2 stop bits

63 HAL USART Extension Driver

63.1 USARTEx Firmware driver API description

The following section lists the various functions of the USARTEx library.

63.1.1 USART peripheral extended features

63.1.2 IO operation functions

This section contains the following APIs:

- ***HAL_USARTEx_RxFifoFullCallback***
- ***HAL_USARTEx_TxFifoEmptyCallback***

63.1.3 Peripheral Control functions

This section provides the following functions:

- HAL_USARTEx_EnableSPISlaveMode() API enables the SPI slave mode
- HAL_USARTEx_DisableSPISlaveMode() API disables the SPI slave mode
- HAL_USARTEx_ConfigNSS API configures the Slave Select input pin (NSS)
- HAL_USARTEx_EnableFifoMode() API enables the FIFO mode
- HAL_USARTEx_DisableFifoMode() API disables the FIFO mode
- HAL_USARTEx_SetTxFifoThreshold() API sets the TX FIFO threshold
- HAL_USARTEx_SetRxFifoThreshold() API sets the RX FIFO threshold

This section contains the following APIs:

- ***HAL_USARTEx_EnableSlaveMode***
- ***HAL_USARTEx_DisableSlaveMode***
- ***HAL_USARTEx_ConfigNSS***
- ***HAL_USARTEx_EnableFifoMode***
- ***HAL_USARTEx_DisableFifoMode***
- ***HAL_USARTEx_SetTxFifoThreshold***
- ***HAL_USARTEx_SetRxFifoThreshold***

63.1.4 Detailed description of functions

HAL_USARTEx_RxFifoFullCallback

Function name

void HAL_USARTEx_RxFifoFullCallback (USART_HandleTypeDef * husart)

Function description

USART RX Fifo full callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USARTEx_TxFifoEmptyCallback

Function name

void HAL_USARTEx_TxFifoEmptyCallback (USART_HandleTypeDef * husart)

Function description

USART TX Fifo empty callback.

Parameters

- **husart:** USART handle.

Return values

- **None:**

HAL_USARTEx_EnableSlaveMode

Function name

HAL_StatusTypeDef HAL_USARTEx_EnableSlaveMode (USART_HandleTypeDef * husart)

Function description

Enable the SPI slave mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

Notes

- When the USART operates in SPI slave mode, it handles data flow using the serial interface clock derived from the external SCLK signal provided by the external master SPI device.
- In SPI slave mode, the USART must be enabled before starting the master communications (or between frames while the clock is stable). Otherwise, if the USART slave is enabled while the master is in the middle of a frame, it will become desynchronized with the master.
- The data register of the slave needs to be ready before the first edge of the communication clock or before the end of the ongoing communication, otherwise the SPI slave will transmit zeros.

HAL_USARTEx_DisableSlaveMode

Function name

HAL_StatusTypeDef HAL_USARTEx_DisableSlaveMode (USART_HandleTypeDef * husart)

Function description

Disable the SPI slave mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_ConfigNSS

Function name

HAL_StatusTypeDef HAL_USARTEx_ConfigNSS (USART_HandleTypeDef * husart, uint32_t NSSConfig)

Function description

Configure the Slave Select input pin (NSS).

Parameters

- **husart:** USART handle.
- **NSSConfig:** NSS configuration. This parameter can be one of the following values:
  - USART_NSS_HARD
  - USART_NSS_SOFT

Return values

- **HAL:** status

Notes

- Software NSS management: SPI slave will always be selected and NSS input pin will be ignored.
- Hardware NSS management: the SPI slave selection depends on NSS input pin. The slave is selected when NSS is low and deselected when NSS is high.

HAL_USARTEx_EnableFifoMode

Function name

HAL_StatusTypeDef HAL_USARTEx_EnableFifoMode (USART_HandleTypeDef * husart)

Function description

Enable the FIFO mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_DisableFifoMode

Function name

HAL_StatusTypeDef HAL_USARTEx_DisableFifoMode (USART_HandleTypeDef * husart)

Function description

Disable the FIFO mode.

Parameters

- **husart:** USART handle.

Return values

- **HAL:** status

HAL_USARTEx_SetTxFifoThreshold

Function name

HAL_StatusTypeDef HAL_USARTEx_SetTxFifoThreshold (USART_HandleTypeDef * husart, uint32_t Threshold)

Function description

Set the TXFIFO threshold.

Parameters

- **husart:** USART handle.
- **Threshold:** TX FIFO threshold value This parameter can be one of the following values:
  - USART_TXFIFO_THRESHOLD_1_8
  - USART_TXFIFO_THRESHOLD_1_4
  - USART_TXFIFO_THRESHOLD_1_2
  - USART_TXFIFO_THRESHOLD_3_4
  - USART_TXFIFO_THRESHOLD_7_8
  - USART_TXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

HAL_USARTEx_SetRxFifoThreshold

Function name

HAL_StatusTypeDef HAL_USARTEx_SetRxFifoThreshold (USART_HandleTypeDef * husart, uint32_t Threshold)

Function description

Set the RXFIFO threshold.

Parameters

- **husart:** USART handle.
- **Threshold:** RX FIFO threshold value This parameter can be one of the following values:
  - USART_RXFIFO_THRESHOLD_1_8
  - USART_RXFIFO_THRESHOLD_1_4
  - USART_RXFIFO_THRESHOLD_1_2
  - USART_RXFIFO_THRESHOLD_3_4
  - USART_RXFIFO_THRESHOLD_7_8
  - USART_RXFIFO_THRESHOLD_8_8

Return values

- **HAL:** status

63.2 USARTEx Firmware driver defines

The following section lists the various define and macros of the module.

63.2.1 USARTEx

USARTEx

USARTEx FIFO mode

USART_FIFOMODE_DISABLE

FIFO mode disable

USART_FIFOMODE_ENABLE

FIFO mode enable

USARTEx RXFIFO threshold level

USART_RXFIFO_THRESHOLD_1_8

RXFIFO FIFO reaches 1/8 of its depth

USART_RXFIFO_THRESHOLD_1_4

RXFIFO FIFO reaches 1/4 of its depth

USART_RXFIFO_THRESHOLD_1_2

RXFIFO FIFO reaches 1/2 of its depth

USART_RXFIFO_THRESHOLD_3_4

RXFIFO FIFO reaches 3/4 of its depth

USART_RXFIFO_THRESHOLD_7_8

RXFIFO FIFO reaches 7/8 of its depth

USART_RXFIFO_THRESHOLD_8_8

RXFIFO FIFO becomes full

USARTEx Synchronous Slave mode enable

USART_SLAVEMODE_DISABLE

USART SPI Slave Mode Enable

USART_SLAVEMODE_ENABLE

USART SPI Slave Mode Disable

USARTEx Slave Select Management

USART_NSS_HARD

SPI slave selection depends on NSS input pin

USART_NSS_SOFT

SPI slave is always selected and NSS input pin is ignored

USARTEx TXFIFO threshold level

USART_TXFIFO_THRESHOLD_1_8

TXFIFO reaches 1/8 of its depth

USART_TXFIFO_THRESHOLD_1_4

TXFIFO reaches 1/4 of its depth

USART_TXFIFO_THRESHOLD_1_2

TXFIFO reaches 1/2 of its depth

USART_TXFIFO_THRESHOLD_3_4

TXFIFO reaches 3/4 of its depth

USART_TXFIFO_THRESHOLD_7_8

TXFIFO reaches 7/8 of its depth

USART_TXFIFO_THRESHOLD_8_8

TXFIFO becomes empty

USARTEx Word Length

USART_WORDLENGTH_7B

7-bit long USART frame

USART_WORDLENGTH_8B

8-bit long USART frame

USART_WORDLENGTH_9B

9-bit long USART frame

64 HAL WWDG Generic Driver

64.1 WWDG Firmware driver registers structures

64.1.1 WWDG_InitTypeDef

WWDG_InitTypeDef is defined in the stm32g4xx_hal_wwdg.h

Data Fields

- ***uint32_t Prescaler***
- ***uint32_t Window***
- ***uint32_t Counter***
- ***uint32_t EWIMode***

Field Documentation

- ***uint32_t WWDG_InitTypeDef::Prescaler***
  Specifies the prescaler value of the WWDG. This parameter can be a value of ***WWDG_Prescaler***
- ***uint32_t WWDG_InitTypeDef::Window***
  Specifies the WWDG window value to be compared to the downcounter. This parameter must be a number Min_Data = 0x40 and Max_Data = 0x7F
- ***uint32_t WWDG_InitTypeDef::Counter***
  Specifies the WWDG free-running downcounter value. This parameter must be a number between Min_Data = 0x40 and Max_Data = 0x7F
- ***uint32_t WWDG_InitTypeDef::EWIMode***
  Specifies if WWDG Early Wakeup Interupt is enable or not. This parameter can be a value of ***WWDG_EWI_Mode***

64.1.2 WWDG_HandleTypeDef

WWDG_HandleTypeDef is defined in the stm32g4xx_hal_wwdg.h

Data Fields

- ***WWDG_TypeDef * Instance***
- ***WWDG_InitTypeDef Init***

Field Documentation

- ***WWDG_TypeDef* WWDG_HandleTypeDef::Instance***
  Register base address
- ***WWDG_InitTypeDef WWDG_HandleTypeDef::Init***
  WWDG required parameters

64.2 WWDG Firmware driver API description

The following section lists the various functions of the WWDG library.

64.2.1 Initialization and Configuration functions

This section provides functions allowing to:

- Initialize and start the WWDG according to the specified parameters in the WWDG_InitTypeDef of associated handle.
- Initialize the WWDG MSP.

This section contains the following APIs:

- ***HAL_WWDG_Init***
- ***HAL_WWDG_MspInit***

64.2.2 IO operation functions

This section provides functions allowing to:

- Refresh the WWDG.
- Handle WWDG interrupt request and associated function callback.

This section contains the following APIs:

- ***HAL_WWDG_Refresh***
- ***HAL_WWDG_IRQHandler***
- ***HAL_WWDG_EarlyWakeupCallback***

64.2.3 Detailed description of functions

HAL_WWDG_Init

Function name

HAL_StatusTypeDef HAL_WWDG_Init (WWDG_HandleTypeDef * hwwdg)

Function description

Initialize the WWDG according to the specified.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **HAL:** status

HAL_WWDG_MspInit

Function name

void HAL_WWDG_MspInit (WWDG_HandleTypeDef * hwwdg)

Function description

Initialize the WWDG MSP.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

Notes

- When rewriting this function in user file, mechanism may be added to avoid multiple initialize when HAL_WWDG_Init function is called again to change parameters.

HAL_WWDG_Refresh

Function name

HAL_StatusTypeDef HAL_WWDG_Refresh (WWDG_HandleTypeDef * hwwdg)

Function description

Refresh the WWDG.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **HAL:** status

HAL_WWDG_IRQHandler

Function name

void HAL_WWDG_IRQHandler (WWDG_HandleTypeDef * hwwdg)

Function description

Handle WWDG interrupt request.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

Notes

- The Early Wakeup Interrupt (EWI) can be used if specific safety operations or data logging must be performed before the actual reset is generated. The EWI interrupt is enabled by calling HAL_WWDG_Init function with EWIMode set to WWDG_EWI_ENABLE. When the downcounter reaches the value 0x40, and EWI interrupt is generated and the corresponding Interrupt Service Routine (ISR) can be used to trigger specific actions (such as communications or data logging), before resetting the device.

HAL_WWDG_EarlyWakeupCallback

Function name

void HAL_WWDG_EarlyWakeupCallback (WWDG_HandleTypeDef * hwwdg)

Function description

WWDG Early Wakeup callback.

Parameters

- **hwwdg:** pointer to a WWDG_HandleTypeDef structure that contains the configuration information for the specified WWDG module.

Return values

- **None:**

64.3 WWDG Firmware driver defines

The following section lists the various define and macros of the module.

64.3.1 WWDG

WWDG

WWDG Early Wakeup Interrupt Mode

WWDG_EWI_DISABLE

EWI Disable

WWDG_EWI_ENABLE

EWI Enable

WWDG Exported Macros

__HAL_WWDG_ENABLE

Description:

- Enable the WWDG peripheral.

Parameters:

- __HANDLE__: WWDG handle

Return value:

- None

__HAL_WWDG_ENABLE_IT

Description:

- Enable the WWDG early wakeup interrupt.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the interrupt to enable. This parameter can be one of the following values:
  - WWDG_IT_EWI: Early wakeup interrupt

Return value:

- None

Notes:

- Once enabled this interrupt cannot be disabled except by a system reset.

__HAL_WWDG_GET_IT

Description:

- Check whether the selected WWDG interrupt has occurred or not.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the it to check. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt IT

Return value:

- The: new state of WWDG_FLAG (SET or RESET).

__HAL_WWDG_CLEAR_IT

Description:

- Clear the WWDG interrupt pending bits.

Parameters:

- __HANDLE__: WWDG handle
- __INTERRUPT__: specifies the interrupt pending bit to clear. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

__HAL_WWDG_GET_FLAG

Description:

- Check whether the specified WWDG flag is set or not.

Parameters:

- __HANDLE__: WWDG handle
- __FLAG__: specifies the flag to check. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

Return value:

- The: new state of WWDG_FLAG (SET or RESET).

__HAL_WWDG_CLEAR_FLAG

Description:

- Clear the WWDG's pending flags.

Parameters:

- __HANDLE__: WWDG handle
- __FLAG__: specifies the flag to clear. This parameter can be one of the following values:
  - WWDG_FLAG_EWIF: Early wakeup interrupt flag

Return value:

- None

__HAL_WWDG_GET_IT_SOURCE

Description:

- Check whether the specified WWDG interrupt source is enabled or not.

Parameters:

- __HANDLE__: WWDG Handle.
- __INTERRUPT__: specifies the WWDG interrupt source to check. This parameter can be one of the following values:
  - WWDG_IT_EWI: Early Wakeup Interrupt

Return value:

- state: of __INTERRUPT__ (TRUE or FALSE).

WWDG Flag definition

WWDG_FLAG_EWIF

WWDG counter clock = (PCLK1/4096)/128

65 LL ADC Generic Driver

65.1 ADC Firmware driver registers structures

65.1.1 LL_ADC_CommonInitTypeDef

LL_ADC_CommonInitTypeDef is defined in the stm32g4xx_ll_adc.h

Data Fields

- ***uint32_t CommonClock***
- ***uint32_t Multimode***
- ***uint32_t MultiDMATransfer***
- ***uint32_t MultiTwoSamplingDelay***

Field Documentation

- ***uint32_t LL_ADC_CommonInitTypeDef::CommonClock***

  Set parameter common to several ADC: Clock source and prescaler. This parameter can be a value of ***ADC_LL_EC_COMMON_CLOCK_SOURCE***

  Note:

  – On this STM32 serie, if ADC group injected is used, some clock ratio constraints between ADC clock and AHB clock must be respected. Refer to reference manual.

  This feature can be modified afterwards using unitary function **LL_ADC_SetCommonClock()**.
- ***uint32_t LL_ADC_CommonInitTypeDef::Multimode***

  Set ADC multimode configuration to operate in independent mode or multimode (for devices with several ADC instances). This parameter can be a value of ***ADC_LL_EC_MULTI_MODE***This feature can be modified afterwards using unitary function **LL_ADC_SetMultimode()**.
- ***uint32_t LL_ADC_CommonInitTypeDef::MultiDMATransfer***

  Set ADC multimode conversion data transfer: no transfer or transfer by DMA. This parameter can be a value of ***ADC_LL_EC_MULTI_DMA_TRANSFER***This feature can be modified afterwards using unitary function **LL_ADC_SetMultiDMATransfer()**.
- ***uint32_t LL_ADC_CommonInitTypeDef::MultiTwoSamplingDelay***

  Set ADC multimode delay between 2 sampling phases. This parameter can be a value of ***ADC_LL_EC_MULTI_TWOSMP_DELAY***This feature can be modified afterwards using unitary function **LL_ADC_SetMultiTwoSamplingDelay()**.

65.1.2 LL_ADC_InitTypeDef

LL_ADC_InitTypeDef is defined in the stm32g4xx_ll_adc.h

Data Fields

- ***uint32_t Resolution***
- ***uint32_t DataAlignment***
- ***uint32_t LowPowerMode***

Field Documentation

- ***uint32_t LL_ADC_InitTypeDef::Resolution***

  Set ADC resolution. This parameter can be a value of ***ADC_LL_EC_RESOLUTION***This feature can be modified afterwards using unitary function **LL_ADC_SetResolution()**.
- ***uint32_t LL_ADC_InitTypeDef::DataAlignment***

  Set ADC conversion data alignment. This parameter can be a value of ***ADC_LL_EC_DATA_ALIGN***This feature can be modified afterwards using unitary function **LL_ADC_SetDataAlignment()**.
- ***uint32_t LL_ADC_InitTypeDef::LowPowerMode***

  Set ADC low power mode. This parameter can be a value of ***ADC_LL_EC_LP_MODE***This feature can be modified afterwards using unitary function **LL_ADC_SetLowPowerMode()**.

65.1.3 LL_ADC_REG_InitTypeDef

LL_ADC_REG_InitTypeDef is defined in the stm32g4xx_ll_adc.h

Data Fields

- ***uint32_t TriggerSource***
- ***uint32_t SequencerLength***
- ***uint32_t SequencerDiscont***
- ***uint32_t ContinuousMode***
- ***uint32_t DMATransfer***
- ***uint32_t Overrun***

Field Documentation

- ***uint32_t LL_ADC_REG_InitTypeDef::TriggerSource***

  Set ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line). This parameter can be a value of ***ADC_LL_EC_REG_TRIGGER_SOURCE***

  Note:

  – On this STM32 serie, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 families having this setting set by HW default value). In case of need to modify trigger edge, use function **LL_ADC_REG_SetTriggerEdge()**.

  This feature can be modified afterwards using unitary function **LL_ADC_REG_SetTriggerSource()**.

- ***uint32_t LL_ADC_REG_InitTypeDef::SequencerLength***

  Set ADC group regular sequencer length. This parameter can be a value of ***ADC_LL_EC_REG_SEQ_SCAN_LENGTH***This feature can be modified afterwards using unitary function **LL_ADC_REG_SetSequencerLength()**.

- ***uint32_t LL_ADC_REG_InitTypeDef::SequencerDiscont***

  Set ADC group regular sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks. This parameter can be a value of ***ADC_LL_EC_REG_SEQ_DISCONT_MODE***

  Note:

  – This parameter has an effect only if group regular sequencer is enabled (scan length of 2 ranks or more).

  This feature can be modified afterwards using unitary function **LL_ADC_REG_SetSequencerDiscont()**.

- ***uint32_t LL_ADC_REG_InitTypeDef::ContinuousMode***

  Set ADC continuous conversion mode on ADC group regular, whether ADC conversions are performed in single mode (one conversion per trigger) or in continuous mode (after the first trigger, following conversions launched successively automatically). This parameter can be a value of ***ADC_LL_EC_REG_CONTINUOUS_MODE*** Note: It is not possible to enable both ADC group regular continuous mode and discontinuous mode.This feature can be modified afterwards using unitary function **LL_ADC_REG_SetContinuousMode()**.

- ***uint32_t LL_ADC_REG_InitTypeDef::DMATransfer***

  Set ADC group regular conversion data transfer: no transfer or transfer by DMA, and DMA requests mode. This parameter can be a value of ***ADC_LL_EC_REG_DMA_TRANSFER***This feature can be modified afterwards using unitary function **LL_ADC_REG_SetDMATransfer()**.

- ***uint32_t LL_ADC_REG_InitTypeDef::Overrun***

  Set ADC group regular behavior in case of overrun: data preserved or overwritten. This parameter can be a value of ***ADC_LL_EC_REG_OVR_DATA_BEHAVIOR***This feature can be modified afterwards using unitary function **LL_ADC_REG_SetOverrun()**.

65.1.4 LL_ADC_INJ_InitTypeDef

LL_ADC_INJ_InitTypeDef is defined in the stm32g4xx_ll_adc.h

Data Fields

- ***uint32_t TriggerSource***
- ***uint32_t SequencerLength***
- ***uint32_t SequencerDiscont***

- ***uint32_t TrigAuto***

Field Documentation

- ***uint32_t LL_ADC_INJ_InitTypeDef::TriggerSource***

  Set ADC group injected conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line). This parameter can be a value of ***ADC_LL_EC_INJ_TRIGGER_SOURCE***

  Note:

  – On this STM32 serie, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 families having this setting set by HW default value). In case of need to modify trigger edge, use function **LL_ADC_INJ_SetTriggerEdge()**.

  This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetTriggerSource()**.

- ***uint32_t LL_ADC_INJ_InitTypeDef::SequencerLength***

  Set ADC group injected sequencer length. This parameter can be a value of ***ADC_LL_EC_INJ_SEQ_SCAN_LENGTH***This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetSequencerLength()**.

- ***uint32_t LL_ADC_INJ_InitTypeDef::SequencerDiscont***

  Set ADC group injected sequencer discontinuous mode: sequence subdivided and scan conversions interrupted every selected number of ranks. This parameter can be a value of ***ADC_LL_EC_INJ_SEQ_DISCONT_MODE***

  Note:

  – This parameter has an effect only if group injected sequencer is enabled (scan length of 2 ranks or more).

  This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetSequencerDiscont()**.

- ***uint32_t LL_ADC_INJ_InitTypeDef::TrigAuto***

  Set ADC group injected conversion trigger: independent or from ADC group regular. This parameter can be a value of ***ADC_LL_EC_INJ_TRIG_AUTO*** Note: This parameter must be set to set to independent trigger if injected trigger source is set to an external trigger.This feature can be modified afterwards using unitary function **LL_ADC_INJ_SetTrigAuto()**.

65.2 ADC Firmware driver API description

The following section lists the various functions of the ADC library.

65.2.1 Detailed description of functions

LL_ADC_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_ADC_DMA_GetRegAddr (ADC_TypeDef * ADCx, uint32_t Register)

Function description

Function to help to configure DMA transfer from ADC: retrieve the ADC register address from ADC instance and a list of ADC registers intended to be used (most commonly) with DMA transfer.

Parameters

- **ADCx:** ADC instance
- **Register:** This parameter can be one of the following values:
  – LL_ADC_DMA_REG_REGULAR_DATA
  – LL_ADC_DMA_REG_REGULAR_DATA_MULTI (1)

  (1) Available on devices with several ADC instances.

Return values

- **ADC:** register address

Notes

- These ADC registers are data registers: when ADC conversion data is available in ADC data registers, ADC generates a DMA transfer request.
- This macro is intended to be used with LL DMA driver, refer to function "LL_DMA_ConfigAddresses()". Example: LL_DMA_ConfigAddresses(DMA1, LL_DMA_CHANNEL_1, LL_ADC_DMA_GetRegAddr(ADC1, LL_ADC_DMA_REG_REGULAR_DATA), (uint32_t)&< array or variable >, LL_DMA_DIRECTION_PERIPH_TO_MEMORY);
- For devices with several ADC: in multimode, some devices use a different data register outside of ADC instance scope (common data register). This macro manages this register difference, only ADC instance has to be set as parameter.

Reference Manual to LL API cross reference:

- DR RDATA LL_ADC_DMA_GetRegAddr
- CDR RDATA_MST LL_ADC_DMA_GetRegAddr
- CDR RDATA_SLV LL_ADC_DMA_GetRegAddr

LL_ADC_SetCommonClock

Function name

__STATIC_INLINE void LL_ADC_SetCommonClock (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t CommonClock)

Function description

Set parameter common to several ADC: Clock source and prescaler.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **CommonClock:** This parameter can be one of the following values:
  - LL_ADC_CLOCK_SYNC_PCLK_DIV1
  - LL_ADC_CLOCK_SYNC_PCLK_DIV2
  - LL_ADC_CLOCK_SYNC_PCLK_DIV4
  - LL_ADC_CLOCK_ASYNC_DIV1
  - LL_ADC_CLOCK_ASYNC_DIV2
  - LL_ADC_CLOCK_ASYNC_DIV4
  - LL_ADC_CLOCK_ASYNC_DIV6
  - LL_ADC_CLOCK_ASYNC_DIV8
  - LL_ADC_CLOCK_ASYNC_DIV10
  - LL_ADC_CLOCK_ASYNC_DIV12
  - LL_ADC_CLOCK_ASYNC_DIV16
  - LL_ADC_CLOCK_ASYNC_DIV32
  - LL_ADC_CLOCK_ASYNC_DIV64
  - LL_ADC_CLOCK_ASYNC_DIV128
  - LL_ADC_CLOCK_ASYNC_DIV256

Return values

- **None:**

Notes

- On this STM32 serie, if ADC group injected is used, some clock ratio constraints between ADC clock and AHB clock must be respected. Refer to reference manual.
- On this STM32 serie, setting of this feature is conditioned to ADC state: All ADC instances of the ADC common group must be disabled. This check can be done with function LL_ADC_IsEnabled() for each ADC instance or by using helper macro helper macro __LL_ADC_IS_ENABLED_ALL_COMMON_INSTANCE().

Reference Manual to LL API cross reference:

- CCR PRESC LL_ADC_SetCommonClock

LL_ADC_GetCommonClock

Function name

__STATIC_INLINE uint32_t LL_ADC_GetCommonClock (ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get parameter common to several ADC: Clock source and prescaler.

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_CLOCK_SYNC_PCLK_DIV1
  - LL_ADC_CLOCK_SYNC_PCLK_DIV2
  - LL_ADC_CLOCK_SYNC_PCLK_DIV4
  - LL_ADC_CLOCK_ASYNC_DIV1
  - LL_ADC_CLOCK_ASYNC_DIV2
  - LL_ADC_CLOCK_ASYNC_DIV4
  - LL_ADC_CLOCK_ASYNC_DIV6
  - LL_ADC_CLOCK_ASYNC_DIV8
  - LL_ADC_CLOCK_ASYNC_DIV10
  - LL_ADC_CLOCK_ASYNC_DIV12
  - LL_ADC_CLOCK_ASYNC_DIV16
  - LL_ADC_CLOCK_ASYNC_DIV32
  - LL_ADC_CLOCK_ASYNC_DIV64
  - LL_ADC_CLOCK_ASYNC_DIV128
  - LL_ADC_CLOCK_ASYNC_DIV256

LL_ADC_SetCommonPathInternalCh

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalCh (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR) The values not selected are removed from configuration.
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay is required for internal voltage reference and temperature sensor stabilization time. Refer to device datasheet. Refer to literal LL_ADC_DELAY_VREFINT_STAB_US. Refer to literal LL_ADC_DELAY_TEMPSENSOR_STAB_US.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.

Reference Manual to LL API cross reference:

LL_ADC_SetCommonPathInternalChAdd

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalChAdd (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)
- Stabilization time of measurement path to internal channel: After enabling internal paths, before starting ADC conversion, a delay is required for internal voltage reference and temperature sensor stabilization time. Refer to device datasheet. Refer to literal LL_ADC_DELAY_VREFINT_STAB_US. Refer to literal LL_ADC_DELAY_TEMPSENSOR_STAB_US.
- ADC internal channel sampling time constraint: For ADC conversion of internal channels, a sampling time minimum value is required. Refer to device datasheet.

LL_ADC_SetCommonPathInternalChRem

Function name

__STATIC_INLINE void LL_ADC_SetCommonPathInternalChRem (ADC_Common_TypeDef * ADCxy_COMMON, uint32_t PathInternal)

Function description

Set parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())
- **PathInternal:** This parameter can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Return values

- **None:**

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)

Reference Manual to LL API cross reference:

- CCR VSENSESEL LL_ADC_SetCommonPathInternalChRem
- CCR VBATSEL LL_ADC_SetCommonPathInternalChRem

LL_ADC_GetCommonPathInternalCh

Function name

__STATIC_INLINE uint32_t LL_ADC_GetCommonPathInternalCh (ADC_Common_TypeDef * ADCxy_COMMON)

Function description

Get parameter common to several ADC: measurement path to internal channels (VrefInt, temperature sensor, ...).

Parameters

- **ADCxy_COMMON:** ADC common instance (can be set directly from CMSIS definition or by using helper macro __LL_ADC_COMMON_INSTANCE())

Return values

- **Returned:** value can be a combination of the following values:
  - LL_ADC_PATH_INTERNAL_NONE
  - LL_ADC_PATH_INTERNAL_VREFINT
  - LL_ADC_PATH_INTERNAL_TEMPSENSOR
  - LL_ADC_PATH_INTERNAL_VBAT

Notes

- One or several values can be selected. Example: (LL_ADC_PATH_INTERNAL_VREFINT | LL_ADC_PATH_INTERNAL_TEMPSENSOR)

Reference Manual to LL API cross reference:

LL_ADC_SetCalibrationFactor

Function name

__STATIC_INLINE void LL_ADC_SetCalibrationFactor (ADC_TypeDef * ADCx, uint32_t SingleDiff, uint32_t CalibrationFactor)

Function description

Set ADC calibration factor in the mode single-ended or differential (for devices with differential mode available).

Parameters

- **ADCx:** ADC instance
- **SingleDiff:** This parameter can be one of the following values:
  - LL_ADC_SINGLE_ENDED
  - LL_ADC_DIFFERENTIAL_ENDED
  - LL_ADC_BOTH_SINGLE_DIFF_ENDED
- **CalibrationFactor:** Value between Min_Data=0x00 and Max_Data=0x7F

Return values

- **None:**

Notes

- This function is intended to set calibration parameters without having to perform a new calibration using LL_ADC_StartCalibration().
- For devices with differential mode available: Calibration of offset is specific to each of single-ended and differential modes (calibration factor must be specified for each of these differential modes, if used afterwards and if the application requires their calibration).
- In case of setting calibration factors of both modes single ended and differential (parameter LL_ADC_BOTH_SINGLE_DIFF_ENDED): both calibration factors must be concatenated. To perform this processing, use helper macro __LL_ADC_CALIB_FACTOR_SINGLE_DIFF().
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be enabled, without calibration on going, without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CALFACT CALFACT_S LL_ADC_SetCalibrationFactor
- CALFACT CALFACT_D LL_ADC_SetCalibrationFactor

LL_ADC_GetCalibrationFactor

Function name

__STATIC_INLINE uint32_t LL_ADC_GetCalibrationFactor (ADC_TypeDef * ADCx, uint32_t SingleDiff)

Function description

Get ADC calibration factor in the mode single-ended or differential (for devices with differential mode available).

Parameters

- **ADCx:** ADC instance
- **SingleDiff:** This parameter can be one of the following values:
  - LL_ADC_SINGLE_ENDED
  - LL_ADC_DIFFERENTIAL_ENDED

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x7F

Notes

- Calibration factors are set by hardware after performing a calibration run using function LL_ADC_StartCalibration().
- For devices with differential mode available: Calibration of offset is specific to each of single-ended and differential modes

Reference Manual to LL API cross reference:

- CALFACT CALFACT_S LL_ADC_GetCalibrationFactor
- CALFACT CALFACT_D LL_ADC_GetCalibrationFactor

LL_ADC_SetResolution

Function name

__STATIC_INLINE void LL_ADC_SetResolution (ADC_TypeDef * ADCx, uint32_t Resolution)

Function description

Set ADC resolution.

Parameters

- **ADCx:** ADC instance
- **Resolution:** This parameter can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Return values

- **None:**

Notes

- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR RES LL_ADC_SetResolution

LL_ADC_GetResolution

Function name

__STATIC_INLINE uint32_t LL_ADC_GetResolution (ADC_TypeDef * ADCx)

Function description

Get ADC resolution.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_RESOLUTION_12B
  - LL_ADC_RESOLUTION_10B
  - LL_ADC_RESOLUTION_8B
  - LL_ADC_RESOLUTION_6B

Reference Manual to LL API cross reference:

- CFGR RES LL_ADC_GetResolution

LL_ADC_SetDataAlignment

Function name

__STATIC_INLINE void LL_ADC_SetDataAlignment (ADC_TypeDef * ADCx, uint32_t DataAlignment)

Function description

Set ADC conversion data alignment.

Parameters

- **ADCx:** ADC instance
- **DataAlignment:** This parameter can be one of the following values:
  - LL_ADC_DATA_ALIGN_RIGHT
  - LL_ADC_DATA_ALIGN_LEFT

Return values

- **None:**

Notes

- Refer to reference manual for alignments formats dependencies to ADC resolutions.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR ALIGN LL_ADC_SetDataAlignment

LL_ADC_GetDataAlignment

Function name

__STATIC_INLINE uint32_t LL_ADC_GetDataAlignment (ADC_TypeDef * ADCx)

Function description

Get ADC conversion data alignment.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_DATA_ALIGN_RIGHT
  - LL_ADC_DATA_ALIGN_LEFT

Notes

- Refer to reference manual for alignments formats dependencies to ADC resolutions.

Reference Manual to LL API cross reference:

- CFGR ALIGN LL_ADC_GetDataAlignment

LL_ADC_SetLowPowerMode

Function name

__STATIC_INLINE void LL_ADC_SetLowPowerMode (ADC_TypeDef * ADCx, uint32_t LowPowerMode)

Function description

Set ADC low power mode.

Parameters

- **ADCx:** ADC instance
- **LowPowerMode:** This parameter can be one of the following values:
  - LL_ADC_LP_MODE_NONE
  - LL_ADC_LP_AUTOWAIT

Return values

- **None:**

Notes

- Description of ADC low power modes: ADC low power mode "auto wait": Dynamic low power mode, ADC conversions occurrences are limited to the minimum necessary in order to reduce power consumption. New ADC conversion starts only when the previous unitary conversion data (for ADC group regular) or previous sequence conversions data (for ADC group injected) has been retrieved by user software. In the meantime, ADC remains idle: does not performs any other conversion. This mode allows to automatically adapt the ADC conversions triggers to the speed of the software that reads the data. Moreover, this avoids risk of overrun for low frequency applications. How to use this low power mode: Do not use with interruption or DMA since these modes have to clear immediately the EOC flag to free the IRQ vector sequencer.Do use with polling: 1. Start conversion, 2. Later on, when conversion data is needed: poll for end of conversion to ensure that conversion is completed and retrieve ADC conversion data. This will trig another ADC conversion start. ADC low power mode "auto power-off" (feature available on this device if parameter LL_ADC_LP_AUTOPOWEROFF is available): the ADC automatically powers-off after a conversion and automatically wakes up when a new conversion is triggered (with startup time between trigger and start of sampling). This feature can be combined with low power mode "auto wait".
- With ADC low power mode "auto wait", the ADC conversion data read is corresponding to previous ADC conversion start, independently of delay during which ADC was idle. Therefore, the ADC conversion data may be outdated: does not correspond to the current voltage level on the selected ADC channel.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- CFGR AUTDLY LL_ADC_SetLowPowerMode

LL_ADC_GetLowPowerMode

Function name

__STATIC_INLINE uint32_t LL_ADC_GetLowPowerMode (ADC_TypeDef * ADCx)

Function description

Get ADC low power mode:

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_LP_MODE_NONE
  - LL_ADC_LP_AUTOWAIT

Notes

- Description of ADC low power modes: ADC low power mode "auto wait": Dynamic low power mode, ADC conversions occurrences are limited to the minimum necessary in order to reduce power consumption. New ADC conversion starts only when the previous unitary conversion data (for ADC group regular) or previous sequence conversions data (for ADC group injected) has been retrieved by user software. In the meantime, ADC remains idle: does not performs any other conversion. This mode allows to automatically adapt the ADC conversions triggers to the speed of the software that reads the data. Moreover, this avoids risk of overrun for low frequency applications. How to use this low power mode: Do not use with interruption or DMA since these modes have to clear immediately the EOC flag to free the IRQ vector sequencer.Do use with polling: 1. Start conversion, 2. Later on, when conversion data is needed: poll for end of conversion to ensure that conversion is completed and retrieve ADC conversion data. This will trig another ADC conversion start. ADC low power mode "auto power-off" (feature available on this device if parameter LL_ADC_LP_AUTOPOWEROFF is available): the ADC automatically powers-off after a conversion and automatically wakes up when a new conversion is triggered (with startup time between trigger and start of sampling). This feature can be combined with low power mode "auto wait".
- With ADC low power mode "auto wait", the ADC conversion data read is corresponding to previous ADC conversion start, independently of delay during which ADC was idle. Therefore, the ADC conversion data may be outdated: does not correspond to the current voltage level on the selected ADC channel.

Reference Manual to LL API cross reference:

- CFGR AUTDLY LL_ADC_GetLowPowerMode

LL_ADC_SetOffset

Function name

__STATIC_INLINE void LL_ADC_SetOffset (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t Channel, uint32_t OffsetLevel)

Function description

Set ADC selected offset number 1, 2, 3 or 4.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **Channel:** This parameter can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1 (8)
  - LL_ADC_CHANNEL_2 (8)
  - LL_ADC_CHANNEL_3 (8)
  - LL_ADC_CHANNEL_4 (8)
  - LL_ADC_CHANNEL_5 (8)
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (7)
  - LL_ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - LL_ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - LL_ADC_CHANNEL_VBAT (6)
  - LL_ADC_CHANNEL_VOPAMP1 (1)
  - LL_ADC_CHANNEL_VOPAMP2 (2)
  - LL_ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - LL_ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - LL_ADC_CHANNEL_VOPAMP4 (5)
  - LL_ADC_CHANNEL_VOPAMP5 (5)
  - LL_ADC_CHANNEL_VOPAMP6 (4)

  (1) On STM32G4, parameter available only on ADC instance: ADC1.
- (2) On STM32G4, parameter available only on ADC instance: ADC2.
- (3) On STM32G4, parameter available only on ADC instance: ADC3.
- (4) On STM32G4, parameter available only on ADC instance: ADC4.
- (5) On STM32G4, parameter available only on ADC instance: ADC5.
- (6) On STM32G4, parameter available only on ADC instances: ADC1, ADC3, ADC5.
- (7) On STM32G4, parameter available only on ADC instances: ADC1, ADC3, ADC4, ADC5.

- – On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution.
  –
- **OffsetLevel:** Value between Min_Data=0x000 and Max_Data=0xFFF

Return values

- **None:**

Notes

- This function set the 2 items of offset configuration: ADC channel to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)Offset level (offset to be subtracted from the raw converted data).
- Caution: Offset format is dependent to ADC resolution: offset has to be left-aligned on bit 11, the LSB (right bits) are set to 0.
- This function enables the offset, by default. It can be forced to disable state using function LL_ADC_SetOffsetState().
- If a channel is mapped on several offsets numbers, only the offset with the lowest value is considered for the subtraction.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.
- On STM32G4, some fast channels are available: fast analog inputs coming from GPIO pads (ADC_IN1..5).

LL_ADC_GetOffsetChannel

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetChannel (ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset number 1, 2, 3 or 4: Channel to which the offset programmed will be applied (independently of channel mapped on ADC group regular or group injected)

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - – LL_ADC_OFFSET_1
  - – LL_ADC_OFFSET_2
  - – LL_ADC_OFFSET_3
  - – LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_CHANNEL_0
  - LL_ADC_CHANNEL_1 (8)
  - LL_ADC_CHANNEL_2 (8)
  - LL_ADC_CHANNEL_3 (8)
  - LL_ADC_CHANNEL_4 (8)
  - LL_ADC_CHANNEL_5 (8)
  - LL_ADC_CHANNEL_6
  - LL_ADC_CHANNEL_7
  - LL_ADC_CHANNEL_8
  - LL_ADC_CHANNEL_9
  - LL_ADC_CHANNEL_10
  - LL_ADC_CHANNEL_11
  - LL_ADC_CHANNEL_12
  - LL_ADC_CHANNEL_13
  - LL_ADC_CHANNEL_14
  - LL_ADC_CHANNEL_15
  - LL_ADC_CHANNEL_16
  - LL_ADC_CHANNEL_17
  - LL_ADC_CHANNEL_18
  - LL_ADC_CHANNEL_VREFINT (7)
  - LL_ADC_CHANNEL_TEMPSENSOR_ADC1 (1)
  - LL_ADC_CHANNEL_TEMPSENSOR_ADC5 (5)
  - LL_ADC_CHANNEL_VBAT (6)
  - LL_ADC_CHANNEL_VOPAMP1 (1)
  - LL_ADC_CHANNEL_VOPAMP2 (2)
  - LL_ADC_CHANNEL_VOPAMP3_ADC2 (2)
  - LL_ADC_CHANNEL_VOPAMP3_ADC3 (3)
  - LL_ADC_CHANNEL_VOPAMP4 (5)
  - LL_ADC_CHANNEL_VOPAMP5 (5)
  - LL_ADC_CHANNEL_VOPAMP6 (4)

  (1) On STM32G4, parameter available only on ADC instance: ADC1.
- (2) On STM32G4, parameter available only on ADC instance: ADC2.
- (3) On STM32G4, parameter available only on ADC instance: ADC3.
- (4) On STM32G4, parameter available only on ADC instance: ADC4.
- (5) On STM32G4, parameter available only on ADC instance: ADC5.
- (6) On STM32G4, parameter available only on ADC instances: ADC1, ADC3, ADC5.
- (7) On STM32G4, parameter available only on ADC instances: ADC1, ADC3, ADC4, ADC5.
- – On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details. (8) On STM32G4, fast channel allows: 2.5 (sampling) + 12.5 (conversion) = 15 ADC clock cycles (fADC) to convert in 12-bit resolution. Other channels are slow channels allows: 6.5 (sampling) + 12.5 (conversion) = 19 ADC clock cycles (fADC) to convert in 12-bit resolution.
  - (1, 2, 3, 4, 5, 7) For ADC channel read back from ADC register, comparison with internal channel parameter to be done using helper macro __LL_ADC_CHANNEL_INTERNAL_TO_EXTERNAL().

Notes

- Usage of the returned channel number: To reinject this channel into another function LL_ADC_xxx: the returned channel number is only partly formatted on definition of literals LL_ADC_CHANNEL_x. Therefore, it has to be compared with parts of literals LL_ADC_CHANNEL_x or using helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB(). Then the selected literal LL_ADC_CHANNEL_x can be used as parameter for another function.To get the channel number in decimal format: process the returned value with the helper macro __LL_ADC_CHANNEL_TO_DECIMAL_NB().
- On STM32G4, some fast channels are available: fast analog inputs coming from GPIO pads (ADC_IN1..5).

Reference Manual to LL API cross reference:

- OFR2 OFFSET2_CH LL_ADC_GetOffsetChannel
- OFR3 OFFSET3_CH LL_ADC_GetOffsetChannel
- OFR4 OFFSET4_CH LL_ADC_GetOffsetChannel

LL_ADC_GetOffsetLevel

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetLevel (ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset number 1, 2, 3 or 4: Offset level (offset to be subtracted from the raw converted data).

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Value:** between Min_Data=0x000 and Max_Data=0xFFF

Notes

- Caution: Offset format is dependent to ADC resolution: offset has to be left-aligned on bit 11, the LSB (right bits) are set to 0.

Reference Manual to LL API cross reference:

- OFR1 OFFSET1 LL_ADC_GetOffsetLevel

LL_ADC_SetOffsetState

Function name

__STATIC_INLINE void LL_ADC_SetOffsetState (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetState)

Function description

Set for the ADC selected offset number 1, 2, 3 or 4: force offset state disable or enable without modifying offset channel or offset value.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetState:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_DISABLE
  - LL_ADC_OFFSET_ENABLE

Return values

- **None:**

Notes

- This function should be needed only in case of offset to be enabled-disabled dynamically, and should not be needed in other cases: function LL_ADC_SetOffset() automatically enables the offset.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

LL_ADC_SetOffsetSign

Function name

__STATIC_INLINE void LL_ADC_SetOffsetSign (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetSign)

Function description

Set for the ADC selected offset number 1, 2, 3 or 4: choose offset sign.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetSign:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_SIGN_NEGATIVE
  - LL_ADC_OFFSET_SIGN_POSITIVE

Return values

- **None:**

Notes

- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

LL_ADC_GetOffsetSign

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetSign (ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset number 1, 2, 3 or 4: offset sign if positive or negative.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OFFSET_SIGN_NEGATIVE
  - LL_ADC_OFFSET_SIGN_POSITIVE

Reference Manual to LL API cross reference:

- OFR1 OFFSETPOS LL_ADC_GetOffsetSign
- OFR2 OFFSETPOS LL_ADC_GetOffsetSign
- OFR3 OFFSETPOS LL_ADC_GetOffsetSign
- OFR4 OFFSETPOS LL_ADC_GetOffsetSign

LL_ADC_SetOffsetSaturation

Function name

__STATIC_INLINE void LL_ADC_SetOffsetSaturation (ADC_TypeDef * ADCx, uint32_t Offsety, uint32_t OffsetSaturation)

Function description

Set for the ADC selected offset number 1, 2, 3 or 4: choose offset saturation mode.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4
- **OffsetSaturation:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_SATURATION_ENABLE
  - LL_ADC_OFFSET_SATURATION_DISABLE

Return values

- **None:**

Notes

- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- OFR1 SATEN LL_ADC_SetOffsetSaturation
- OFR2 SATEN LL_ADC_SetOffsetSaturation
- OFR3 SATEN LL_ADC_SetOffsetSaturation
- OFR4 SATEN LL_ADC_SetOffsetSaturation

LL_ADC_GetOffsetSaturation

Function name

__STATIC_INLINE uint32_t LL_ADC_GetOffsetSaturation (ADC_TypeDef * ADCx, uint32_t Offsety)

Function description

Get for the ADC selected offset number 1, 2, 3 or 4: offset saturation if enabled or disabled.

Parameters

- **ADCx:** ADC instance
- **Offsety:** This parameter can be one of the following values:
  - LL_ADC_OFFSET_1
  - LL_ADC_OFFSET_2
  - LL_ADC_OFFSET_3
  - LL_ADC_OFFSET_4

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_OFFSET_SATURATION_ENABLE
  - LL_ADC_OFFSET_SATURATION_DISABLE

Reference Manual to LL API cross reference:

- OFR1 SATEN LL_ADC_GetOffsetSaturation
- OFR2 SATEN LL_ADC_GetOffsetSaturation

- OFR4 SATEN LL_ADC_GetOffsetSaturation

LL_ADC_SetGainCompensation

Function name

__STATIC_INLINE void LL_ADC_SetGainCompensation (ADC_TypeDef * ADCx, uint32_t GainCompensation)

Function description

Set ADC gain compensation.

Parameters

- **ADCx:** ADC instance
- **GainCompensation:** This parameter can be: 0 Gain compensation will be disabled and value set to 0 1 -> 16393 Gain compensation will be enabled with specified value

Return values

- **None:**

Notes

- This function set the gain compensation coefficient that is applied to raw converted data using the formula: DATA = DATA(raw) * (gain compensation coef) / 4096
- This function enables the gain compensation if given coefficient is above 0, otherwise it disables it.
- Gain compensation when enabled is appied to all channels.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- GCOMP GCOMPCOEFF LL_ADC_SetGainCompensation
- CFGR2 GCOMP LL_ADC_SetGainCompensation

LL_ADC_GetGainCompensation

Function name

__STATIC_INLINE uint32_t LL_ADC_GetGainCompensation (ADC_TypeDef * ADCx)

Function description

Get the ADC gain compensation value.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be: 0 Gain compensation is disabled 1 -> 16393 Gain compensation is enabled with returned value

Reference Manual to LL API cross reference:

- GCOMP GCOMPCOEFF LL_ADC_GetGainCompensation
- CFGR2 GCOMP LL_ADC_GetGainCompensation

LL_ADC_SetSamplingTimeCommonConfig

Function name

__STATIC_INLINE void LL_ADC_SetSamplingTimeCommonConfig (ADC_TypeDef * ADCx, uint32_t SamplingTimeCommonConfig)

Function description

Set ADC sampling time common configuration impacting settings of sampling time channel wise.

Parameters

- **ADCx:** ADC instance
- **SamplingTimeCommonConfig:** This parameter can be one of the following values:
  - LL_ADC_SAMPLINGTIME_COMMON_DEFAULT
  - LL_ADC_SAMPLINGTIME_COMMON_3C5_REPL_2C5

Return values

- **None:**

Notes

- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on either groups regular or injected.

Reference Manual to LL API cross reference:

- SMPR1 SMPPLUS LL_ADC_SetSamplingTimeCommonConfig

LL_ADC_GetSamplingTimeCommonConfig

Function name

__STATIC_INLINE uint32_t LL_ADC_GetSamplingTimeCommonConfig (ADC_TypeDef * ADCx)

Function description

Get ADC sampling time common configuration impacting settings of sampling time channel wise.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_SAMPLINGTIME_COMMON_DEFAULT
  - LL_ADC_SAMPLINGTIME_COMMON_3C5_REPL_2C5

Reference Manual to LL API cross reference:

- SMPR1 SMPPLUS LL_ADC_GetSamplingTimeCommonConfig

LL_ADC_REG_SetTriggerSource

Function name

__STATIC_INLINE void LL_ADC_REG_SetTriggerSource (ADC_TypeDef * ADCx, uint32_t TriggerSource)

Function description

Set ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance
- **TriggerSource:** This parameter can be one of the following values:
  - LL_ADC_REG_TRIG_SOFTWARE
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM1_CH1 (1)
  - LL_ADC_REG_TRIG_EXT_TIM1_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM1_CH3
  - LL_ADC_REG_TRIG_EXT_TIM2_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM2_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM2_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM2_CH3 (2)
  - LL_ADC_REG_TRIG_EXT_TIM3_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM3_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM3_CH4 (1)
  - LL_ADC_REG_TRIG_EXT_TIM4_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM4_CH4 (1)
  - LL_ADC_REG_TRIG_EXT_TIM6_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM7_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM8_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM8_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM8_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM15_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM20_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM20_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM20_CH1
  - LL_ADC_REG_TRIG_EXT_TIM20_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM20_CH3 (1)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG1
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG2 (2)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG3
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG4 (2)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG5
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG6
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG7
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG8
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG9
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG10
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE11 (1)
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE2 (2)
  - LL_ADC_REG_TRIG_EXT_LPTIM_OUT

  (1) On STM32G4 serie, parameter not available on all ADC instances: ADC1, ADC2.
- (2) On STM32G4 serie, parameter not available on all ADC instances: ADC3, ADC4, ADC5. On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details.

Return values

- **None:**

Notes

- On this STM32 serie, setting trigger source to external trigger also set trigger polarity to rising edge (default setting for compatibility with some ADC on other STM32 families having this setting set by HW default value). In case of need to modify trigger edge, use function LL_ADC_REG_SetTriggerEdge().
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR EXTSEL LL_ADC_REG_SetTriggerSource
- CFGR EXTEN LL_ADC_REG_SetTriggerSource

LL_ADC_REG_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetTriggerSource (ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger source: internal (SW start) or from external peripheral (timer event, external interrupt line).

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_TRIG_SOFTWARE
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM1_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM1_CH1 (1)
  - LL_ADC_REG_TRIG_EXT_TIM1_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM1_CH3
  - LL_ADC_REG_TRIG_EXT_TIM2_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM2_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM2_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM2_CH3 (2)
  - LL_ADC_REG_TRIG_EXT_TIM3_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM3_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM3_CH4 (1)
  - LL_ADC_REG_TRIG_EXT_TIM4_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM4_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM4_CH4 (1)
  - LL_ADC_REG_TRIG_EXT_TIM6_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM7_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM8_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM8_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM8_CH1 (2)
  - LL_ADC_REG_TRIG_EXT_TIM15_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM20_TRGO
  - LL_ADC_REG_TRIG_EXT_TIM20_TRGO2
  - LL_ADC_REG_TRIG_EXT_TIM20_CH1
  - LL_ADC_REG_TRIG_EXT_TIM20_CH2 (1)
  - LL_ADC_REG_TRIG_EXT_TIM20_CH3 (1)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG1
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG2 (2)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG3
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG4 (2)
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG5
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG6
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG7
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG8
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG9
  - LL_ADC_REG_TRIG_EXT_HRTIM_TRG10
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE11 (1)
  - LL_ADC_REG_TRIG_EXT_EXTI_LINE2 (2)
  - LL_ADC_REG_TRIG_EXT_LPTIM_OUT

  (1) On STM32G4 serie, parameter not available on all ADC instances: ADC1, ADC2.
- (2) On STM32G4 serie, parameter not available on all ADC instances: ADC3, ADC4, ADC5. On this STM32 serie, all ADCx are not available on all devices. Refer to device datasheet for more details.

Notes

- To determine whether group regular trigger source is internal (SW start) or external, without detail of which peripheral is selected as external trigger, (equivalent to "if(LL_ADC_REG_GetTriggerSource(ADC1) == LL_ADC_REG_TRIG_SOFTWARE)") use function LL_ADC_REG_IsTriggerSourceSWStart.
- Availability of parameters of trigger sources from timer depends on timers availability on the selected device.

Reference Manual to LL API cross reference:

- CFGR EXTSEL LL_ADC_REG_GetTriggerSource
- CFGR EXTEN LL_ADC_REG_GetTriggerSource

LL_ADC_REG_IsTriggerSourceSWStart

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_IsTriggerSourceSWStart (ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger source internal (SW start) or external.

Parameters

- **ADCx:** ADC instance

Return values

- **Value:** "0" if trigger source external trigger Value "1" if trigger source SW start.

Notes

- In case of group regular trigger source set to external trigger, to determine which peripheral is selected as external trigger, use function LL_ADC_REG_GetTriggerSource().

Reference Manual to LL API cross reference:

- CFGR EXTEN LL_ADC_REG_IsTriggerSourceSWStart

LL_ADC_REG_SetTriggerEdge

Function name

__STATIC_INLINE void LL_ADC_REG_SetTriggerEdge (ADC_TypeDef * ADCx, uint32_t ExternalTriggerEdge)

Function description

Set ADC group regular conversion trigger polarity.

Parameters

- **ADCx:** ADC instance
- **ExternalTriggerEdge:** This parameter can be one of the following values:
  - LL_ADC_REG_TRIG_EXT_RISING
  - LL_ADC_REG_TRIG_EXT_FALLING
  - LL_ADC_REG_TRIG_EXT_RISINGFALLING

Return values

- **None:**

Notes

- Applicable only for trigger source set to external trigger.
- On this STM32 serie, setting of this feature is conditioned to ADC state: ADC must be disabled or enabled without conversion on going on group regular.

Reference Manual to LL API cross reference:

- CFGR EXTEN LL_ADC_REG_SetTriggerEdge

LL_ADC_REG_GetTriggerEdge

Function name

__STATIC_INLINE uint32_t LL_ADC_REG_GetTriggerEdge (ADC_TypeDef * ADCx)

Function description

Get ADC group regular conversion trigger polarity.

Parameters

- **ADCx:** ADC instance

Return values

- **Returned:** value can be one of the following values:
  - LL_ADC_REG_TRIG_EXT_RISING
  - LL_ADC_REG_TRIG_EXT_FALLING
  - LL_ADC_REG_TRIG_EXT_RISINGFALLING

Notes

- Applicable only for trigger source set to external trigger.

Reference Manual to LL API cross reference:

- CFGR EXTEN LL_ADC_REG_GetTriggerEdge

LL_ADC_REG_SetSamplingMode

Function name

__STATIC_INLINE void LL_ADC_REG_SetSamplingMode (ADC_TypeDef * ADCx, uint32_t SamplingMode)

Function description

Set ADC sampling mode.

Parameters

- **ADCx:** ADC instance
- **SamplingMode:** This parameter can be one of the following values:
